The National Security Act of 1947 granted the Director of Central Intelligence a vaguely-worded responsibility for "protecting intelligence sources and methods from unauthorized disclosure." 470 The legislative history of this provision suggests that it was initially intended to allay concerns of the military services that the new CIA would not operate with adequate safeguards to protect the military intelligence secrets which would be shared with the CIA. 471 However, this authority was later read by the CIA to authorize infiltration of domestic groups in order to protect CIA personnel and facilities from possibly violent public demonstrations. It was also read to permit electronic surveillance and surreptitious entry to protect sensitive information.

The CIA undertook a series of specific security investigations within the United States, in some cases to find the source of news leaks and in others to determine whether government employees were involved in espionage or otherwise constituted "security risks." These investigations were directed at former CIA employees, employees of other government agencies, newsmen and other private, citizens in this country. 472 Among the techniques used were physical surveillance, mail and tax information coverage, electronic surveillance, and surreptitious entry. Attorney General Robert Kennedy appears to have authorized CIA wiretapping in one of these investigations. With this exception, however, there is no suggestion that the CIA's security investigations were specifically approved by the Attorney General. 473

The CIA Office of Security established two programs directed at protest demonstrations which involved the CIA in domestic affairs on the theory that doing so was necessary to safeguard CIA facilities in the United States. 474 Project MERRIMACK (1967 to 1973) involved the infiltration by CIA agents of Washington-based peace groups and Black activist groups. The stated purpose of the program was to obtain early warning of demonstrations and other physical threats to the CIA. However, the collection requirements were broadened to include general information about the leadership, funding, activities, and policies of the targeted groups.

Project RESISTANCE (1967 to 1973) was a broad effort to obtain general background information about radical groups across the country, particularly on campuses. The CIA justified this program as a means of predicting violence which might threaten CIA installations, recruiters, or contractors, and gathering information with which to evaluate applicants for CIA employment. Much of the reporting by CIA field offices to headquarters was from open sources such as newspapers. But additional information was obtained from cooperating police departments, campus officials, and other local authorities, some of whom in turn were using collection techniques such as informants.

These programs illustrated fundamental weaknesses and contradictions in the statutory definition of CIA authority in the 1947 Act. While the Director of Central Intelligence is charged with responsibility to protect intelligence "sources and methods," the

CIA is forbidden from exercising law enforcement and police powers and "internal security functions." The CIA never went to Congress for a clarification of this ambiguity, nor did it seek interpretation from the chief legal officer of the United States -- the Attorney General -- except on the rarest of occasions. 477

#### *d. NSA Monitoring*

The National Security Agency was created by Executive Order in 1952 to conduct "signals intelligence," including the interception and analysis of messages transmitted by electronic means, such as telephone calls and telegrams. 478 In contrast to the CIA, there has never been a statutory "charter" for NSA.

The executive directives which authorize NSA's activities prohibit the agency from monitoring communication between persons within the United States and communication concerning purely domestic affairs. The current NSA Director testified:

[The] mission of NSA is directed to foreign intelligence obtained from foreign electrical communications . . . . 479

However, NSA has interpreted "foreign communications" to include communication where one terminal is outside the United States. Under this interpretation, NSA has, for many years, intercepted communications between the United States and a foreign country even though the sender or receiver was an American. During the past decade, NSA increasingly broadened its interpretation of "foreign intelligence" to include economic and financial matters and "international terrorism." 480

The overall consequence, as in the case of CIA activities such as Project CHAOS, was to break down the distinction between "foreign" and "domestic" intelligence. For example, in the 1960s, NSA began adding to its "watch lists," at the request of various intelligence agencies, the names of Americans suspected of involvement in civil disturbance or drug activity which had some foreign aspects. Second, Operation Shamrock, which began as an effort to acquire the telegrams of certain foreign targets, expanded so that NSA obtained from at least two cable companies essentially all cables to or from the United States, including millions of the private communications of Americans.

#### *6. Intrusive Techniques*

As domestic intelligence activity increasingly broadened to cover domestic dissenters under many different programs, the government intensified the use of covert techniques which intruded upon individual privacy.

Informants were used to gather more information about more Americans, often targeting an individual because of his political views and "regardless of past or present involvement in disorders." 483 The CIA's mail opening program increasingly focused upon domestic groups, including "protest and peace organizations" which were covered at the FBI's request. 484 Similarly, NSA--largely in response to Army, CIA, and FBI pressures -- expanded its international interception program to include "information on U.S. organizations or individuals who are engaged in activities which may result in civil disturbances or otherwise subvert the national security of the United States." 485

During this period, Director Hoover ordered cutbacks on the FBI's use of a number of intrusive techniques. Frustration with Hoover's cutbacks was a substantial contributing factor to the effort in 1970 -- coordinated by White House Aide Tom Charles Huston and strongly supported by CIA Director Helms, NSA Director Gaylor and Hoover's Intelligence Division subordinates -- to obtain Presidential authorization for numerous illegal or questionable intelligence techniques.

#### *a. Warrantless Electronic Surveillance*

(1) Executive Branch Restrictions on Electronic Surveillance: 1965-1968 -- In March 1965, Attorney General Nicholas deB. Katzenbach established a new requirement for the FBI's intelligence operations: the Bureau had to obtain the written approval of the Attorney General prior to the implementation of an microphone surveillance. He also imposed a six month limitation on both wiretaps and microphone surveillances, after which time new requests had to be submitted for the Attorney General's re-authorization. 486

Upon Katzenbach's recommendation, President Johnson issued a directive in June 1965 forbidding all federal government wiretapping "except in conjunction with investigations related to national security." 487 This standard was reiterated by Attorney General Katzenbach, for both wiretapping and microphone surveillances three months later, and again in July 1966. 487a

While the procedures were tightened, the broad "national security" standard still allowed for questionable authorizations of electronic surveillance. In fact, Katzenbach told Director Hoover that he would "continue to approve all such requests in the future as I have in the past." He saw "no need to curtail any such activities in the national security field." 488

In line with that policy, Katzenbach approved FBI requests for wiretaps on the Student Non-Violent Coordinating Committee, 489 Students for a Democratic Society, 490 the editor of an anti-communist newsletter, 491 a Washington attorney with whom the editor was in frequent contact, 492 a Klan official, 493 and a leader of the black Revolutionary Action Movement. 494 According to FBI records, Katzenbach also initialed three memoranda informing him of microphone surveillances of Dr. Martin Luther King, Jr. 495

There were no similar electronic surveillance authorizations by Attorney General Ramsey Clark in cases involving purely domestic "national security" considerations. 496 Clark has stated that his policy was "to confine the area of approval to international activities directly related to the military security of the United States." 497

(2) Omnibus Crime Control Act of 1968. -- In response to a 1967 Supreme Court decision that required judicial warrants for the use of electronic surveillance in criminal cases, 498 Congress enacted the Omnibus Crime Control Act of 1968. This Act established warrant procedures for wiretapping and microphone surveillances, but it included a provision that neither it nor the Federal Communications Act of 1934 "shall limit the constitutional power of the President." 499 Although Congress did not purport to define the President's power, 500 the Act suggested five broad categories in which warrantless electronic surveillance might be permitted. The first three categories related to foreign intelligence and counterintelligence matters:

- (1) to protect the nation against actual or potential attack or other hostile acts of a foreign power;
- (2) to obtain foreign intelligence information deemed essential to the security of the United States; and
- (3) to protect national security information against foreign intelligence activities.

The last two categories dealt with domestic intelligence interests:

- (4) to protect the United States against overthrow of the government by force or other unlawful means,  
or
- (5) against any other clear and present danger to the structure or existence of the government.

Thus, although Congress suggested criteria for warrantless electronic surveillance for intelligence purposes, it left to the courts the task of defining the scope of the national security exception, if any, to the warrant requirement.

Between 1969 and 1972, the Nixon administration used these criteria to justify a number of questionable wiretaps. One New Left organization was tapped because, among other factors, its members desired to "take the radical politics they learned on campus and spread them among factory workers." 501 Four newsmen were wiretapped or bugged during this period, as were sixteen executive branch officials, one former executive official, and a relative of an executive official." 502 There were numerous wiretaps and some microphones used against the Black Panther Party and similar domestic groups. 503 Attorney Gen John Mitchell approved FBI requests for wiretaps on organizations involved in planning the November 1969 antiwar "March on Washington" including the moderate Vietnam Moratorium Committee. 503a

(a) Supreme Court Restrictions on National Security Electronic Surveillance: 1972. -- The issue of national security electronic surveillance was not addressed by the Supreme Court until 1972, when it held in the so-called Keith case that the President did not have the "constitutional power" to authorize warrantless electronic surveillance to protect the security of the nation from "domestic" threats. 504 The Court remained silent, however, on the legality of warrantless electronic surveillance where there was a 'significant connection with a foreign power, its agents or agencies." 505 As a result of this decision, the Justice Department eliminated as criteria for the use of warrantless electronic surveillance the two categories, described by Congress in the 1968 Act, dealing with domestic intelligence interests. 506

#### *b. CIA Mail Opening*

Although Director Hoover terminated the FBI's own mail opening programs in 1966, the Bureau's use of the CIA program continued. In 1969, upon the recommendation of the official in charge of the CIA's CHAOS program, the FBI began submitting names of domestic political radicals and black militants to the CIA for inclusion on its mail opening "Watch List." 507 By 1972, the FBI's list of targets for CIA mail opening included:

New Left activists, extremists, and other subversives.

Extremist and New Left organizations.

Protest and peace organizations, such as People's Coalition for Peace and Justice National Peace Action Committee, and Women's Strike for Peace.

Subversive and extremist groups, such as the Black Panthers, White Panthers, Black Nationalists and Liberation Groups, Students for a Democratic Society, Resist, Revolutionary Union, and other New Left Groups.

Traffic to and from Puerto Rico and the Virgin Islands showing anti-U.S. or subversive sympathies."

Thus, the mail opening program that began fourteen years earlier as a means of discovering hostile intelligence efforts in the United States had expanded to encompass communications of domestic dissidents of all types.

#### *c. Expansion of NSA Monitoring*

Although NSA began to intercept and disseminate the communications of selected Americans in the early 1960s, the systematic inclusion of a wide range of American names on the "Watch List" did not occur until 1967.

The Army Chief of Staff for Intelligence requested "any information on a continuing basis" that NSA might intercept concerning:

- A. Indications that foreign governments or individuals or organizations acting as agents of foreign governments are controlling or attempting to control or influence the activities of U.S. "peace" groups and "Black Power" organizations.
- B. Identities of foreign agencies exerting control or influence on U.S. organizations.
- C. Identities of individuals and organizations in U.S. in contact with agents of foreign governments.
- D. Instructions or advice being given to U.S. groups by agents of foreign governments. 509

Two years later, NSA issued an internal instruction intended to ensure the secrecy of the fact that it was monitoring and disseminating communications to and from Americans. 510 This memorandum described the "Watch List" program in terms which indicated that it had widened beyond its originally broad mandate. In addition to describing the program as covering foreigners who "are attempting" to "influence, coordinate or control" U.S. groups or individuals who "may foment civil disturbance or otherwise undermine the national security of the U.S.," the memorandum indicated that the program intercepted communications dealing with:

Information on U.S. organizations or individuals who are engaged in activities which may result in civil disturbances or otherwise subvert the national security of the U.S. 511

This standard, which was clearly outside the foreign intelligence mandate of NSA, resulted in sweeping coverage. Communications such as the following were intercepted, disseminated, and stored in Government files: discussion of a peace concert, the interest of the wife of a U.S. Senator in peace causes; a correspondent's report from Southeast Asia to his magazine in New York; an anti-war activist's request for a speaker in New York.

According to testimony before the Committee, the material which resulted from the "Watch List" was of little intelligence value; most intercepted communications were of a private or personal nature or involved rallies and demonstrations that were public knowledge. 512

#### *d. FBI Cutbacks*

The reasons for J. Edgar Hoover's cutback in 1966 on FBI use of several covert techniques are not clear. Hoover's former assistants have cited widely divergent factors.

Certainly by the mid-1960s, Hoover was highly sensitive to the possibility of damage to the FBI from public exposure of its most intrusive intelligence techniques. This sensitivity was reflected in a memorandum to Attorney General Katzenbach in September 1965, where Hoover referred to "the present atmosphere" of "Congressional and public alarm and opposition to any activity which could in any way be termed an invasion of privacy." 513 The FBI Director was particularly concerned about an inquiry by the Subcommittee on Administrative Practice and Procedure of the Senate Judiciary Committee chaired by Senator Edward Long.

(1) The Long Subcommittee Investigation. -- The Senate Subcommittee was primarily investigating electronic surveillance and mail cover. The Bureau was seen as a major subject of the inquiry, although the Internal Revenue Service and other Executive agencies also included.

In February 1965, President Johnson asked Attorney General Katzenbach to coordinate all matters relating to the investigation, and Katzenbach then met with senior FBI officials to discuss the problems it raised. 515 According to a memorandum by A. H. Belmont, one of the FBI Director's principal assistants, Katzenbach stated that he planned to see Senator Edward Long, the Subcommittee chairman, for the purpose of "impressing on him that the committee would not want to stumble by mistake into an area of extreme interest to the national security." According to Belmont, the Attorney General added that he "might have to resort to pressure from the President" and that he did not want the Subcommittee to "undermine the restricted and tightly controlled operations of the Bureau." FBI officials had assured Katzenbach that their activities were, indeed "tightly controlled" and restricted to "important security matters." 516

The following note on the memorandum of this meeting provides a sign of Director Hoover's attitude at that time:

I don't see what all the excitement is about. I would have no hesitancy in discontinuing all techniques -- technical coverage, microphones, trash covers, mail covers, etc. While it might handicap us I doubt they are as valuable as some believe and none warrant the FBI being used to justify them. 517

Several days later, according to a memorandum of the FBI Director, the Attorney General "advised that he had talked to Senator Long," and that the Senator "said he did not want to get into any national security area." 518 Katzenbach has confirmed that he "would have been concerned" in these circumstances about the Subcommittee's demands for information about "matters of a national security nature" and that he was "declining to provide such information" to Long. 519

Again in 1966, the FBI took steps to, in the words of Bureau official Cartha DeLoach, "neutralize" the "threat of being embarrassed by the Long Subcommittee." 520 This time the issue involved warrantless electronic surveillance by the FBI,

particularly in organized crime matters. DeLoach and another ranking Bureau official visited Senator Long to urge that he issue a statement that "the FBI had never participated in uncontrolled usage of wiretaps or microphones and that FBI usage of such devices had been completely justified in all instances." 521 The Bureau prepared such a statement for Senator Long to release as his own, which apparently was not used. 522 At another meeting with DeLoach, Senator Long agreed to make "a commitment that he would in no way embarrass the FBI." When the Subcommittee's Chief Counsel asked if a Bureau spokesman could appear and "make a simple statement," DeLoach replied that this would "open a Pandora's box, in so far as our enemies in the press were concerned." Senator Long then stated that he would call no FBI witnesses. 523

(2) Director Hoover's Restriction. -- The Director subsequently issued instructions that the number of warrantless wiretaps installed at any one time be cut in half. One of his subordinates speculated that this was done out of a concern that the Subcommittee's "inquiry might get into the use of that technique by the FBI." 524

In July 1966, after hundreds of FBI "black bag job" operations had been approved over many years, Director Hoover decided to eliminate warrantless surreptitious entries for purposes other than microphone installations. 525 In response to an Intelligence Division analysis that such break-ins were an "invaluable technique," although "clearly illegal," Hoover stated that "no more such techniques must be used." 526 Bureau subordinates took Hoover's "no more such techniques" language as an injunction against the Bureau's mail opening program as well. 527 Apparently, a termination order was issued to field offices by telephone. FBI mail-opening was suspended, although the Bureau continued to seek information from CIA's illegal mail-opening program until its suspension in 1973.

A year and a half before Hoover's cutbacks on wire-tapping, "black bag jobs," and mail-opening, he prohibited the FBI's use of other covert techniques such as mail covers and trash covers. 528

FBI intelligence officials persisted in requesting authority for "black bag" techniques. In 1967 Director Hoover ordered that "no such recommendations should be submitted." 529 At about this time, Attorney General Ramsey Clark was asked to approve a "breaking and entering" operation and declined to do so. 530 There was an apparently unauthorized surreptitious entry directed at a "domestic subversive target as late as April, 1968. 531 A proposal from the field to resume mail opening for foreign counterintelligence purposes was turned down by FBI officials in 1970. 532

## *7. Accountability and Control*

### *a. The Huston Plan: A Domestic Intelligence Network*

In 1970, pressures from the White House and from within the intelligence community led to the formulation of a plan for coordination and expansion of domestic intelligence activity. The so-called "Huston Plan" called for Presidential authorization of illegal intelligence techniques, expanded domestic intelligence collection, and centralized evaluation of domestic intelligence. President Nixon approved the plan and then, five days later, revoked his approval. Despite the revocation of official approval, many major aspects of the plan were implemented, and some techniques which the intelligence community asked for permission to implement had already been underway.

In 1970, there was an intensification of the social tension in America that had provided the impetus in the 1960s for ever-widening domestic intelligence operations. The spring invasion of Cambodia by United States forces triggered the most extensive campus demonstrations and student "strikes" in the history of the war in Southeast Asia. Domestic strife heightened even further when four students were killed by National Guardsmen at Kent State University. Within one twenty-four hour period, there were 400 bomb threats in New York City alone. To respond, White House Chief of Staff, H. R. Haldeman, assigned principal responsibility for domestic intelligence planning to staff assistant Tom Charles Huston. 533

Since June 1969, Huston had been in touch with the head of the FBI Domestic Intelligence Division, Assistant Director William C. Sullivan. Huston initially contacted Sullivan on President Nixon's behalf to request "all information possibly relating to foreign influences and financing of the New Left." 534 Huston also made similar requests to CIA, NSA, and the Defense Intelligence Agency. The quality of the data provided by these agencies, especially the FBI, had failed to satisfy Huston and Presidential assistant John Ehrlichman. 535 Thereafter, Huston's continued discussions with Assistant Director Sullivan convinced him that the restraints imposed upon domestic intelligence techniques by Director Hoover impeded the collection of important information about dissident activity. 536

(1) Intelligence Community Pressures. -- The interest of the White House in better intelligence about domestic protest activity coincided with growing dissatisfaction among the foreign intelligence agencies with the FBI Director's restrictions on their performance of foreign intelligence functions in America. 537

The CIA's concerns crystallized in March 1970 when -- as a result of a "flap" over the CIA's refusal to disclose information to the FBI -- Hoover issued an order that "direct liaison" at FBI headquarters with CIA "be terminated" and that "any contact with CIA in the future" was to take place "by letter only." 538 This order did not bar interagency communication; secure telephones were installed and working-level contacts continued. But the position of FBI "liaison agent" with CIA was eliminated. 539

CIA Director Helms subsequently attempted to reopen the question of FBI cooperation with CIA requests for installing electronic surveillances and covering mail. 540 Hoover replied that he agreed with Helms that there should be, expanded "exchange of information between our agencies concerning New Left and racial extremist matters." However, he refused the request for aid with electronic surveillance and mail coverage. Hoover cited the "widespread concern by the American public regarding the possible misuse of this type of coverage." Their use, in "domestic investigations" posed legal problems not encountered "in similar operations abroad." Hoover added, "The FBI's effectiveness has always depended in large measure on our capacity to retain the full confidence of the American people." 541

(2) The Interagency Committee Report. -- In the following months, Tom Charles Huston arranged a meeting between President Nixon and the directors of the FBI, CIA, NSA, and DIA on June 5, 1970. 542 The President's emphasis was upon improved coordination among the agencies to strengthen their capabilities to collect intelligence about "revolutionary activism" and "the support -- ideological and otherwise -- of foreign powers" for these activities. The talking paper prepared by Huston for the President to read at the meeting declared, "We are now confronted with a new and grave crisis in our country -- which we know too little about." 543

From this meeting emanated the Special Report of the Interagency Committee on Intelligence (Ad Hoc), prepared jointly by representatives of the FBI, CIA, NSA, and DIA, and submitted to the President a month later. 544 The report presented the President a series of options, and Huston recommended that the President approve the following:

- (1) "coverage by NSA of the communications of U.S. citizens using international facilities;"
- (2) "intensification" of "electronic surveillances and penetrations" directed at individuals and groups "who pose a major threat to the internal security" and at "foreign nationals" in the United States "of interest to the intelligence community;"
- (3) removal of restrictions on "legal" mail coverage and relaxation of "restrictions on covert coverage" [mail opening] on "selected targets of priority foreign intelligence and internal security interest;"
- (4) modification of "present restrictions" on "surreptitious entry" to allow "procurement of vitally needed foreign cryptographic material" and "to permit selective use" against "high priority internal security targets;"
- (5) relaxation of "present restrictions" on the "development of campus sources" to permit "expanded coverage of violence-prone and student-related groups;"
- (6) "increased" coverage by CIA "of American students (and others) traveling or living abroad;"
- (7) appointment of a "permanent committee consisting of the FBI, CIA, NSA, DIA, and the military counterintelligence agencies" to evaluate "domestic intelligence" and to carry out the other objectives specified in the report." 545

Huston also raised and dismissed questions about the legality of two collection techniques in particular. "Covert [mail opening] coverage is illegal, and there are serious risks involved," he wrote. "However, the advantages to be derived from its use outweigh the risks." 546 As for surreptitious entry, Huston advised:

Use of this technique is clearly illegal: it amounts to burglary. It is also highly risky and could result in great embarrassment if exposed. However, it is also the most fruitful tool and can produce the type of intelligence which cannot be obtained in any other fashion." 547

Huston testified that his recommendations "reflected what I understood to be the consensus of the working group" of intelligence officials on the interagency committee. 548

Just over a week later, the FBI, CIA, NSA, and DIA were advised by Huston that "the President has ... made the following decisions" to adopt all of Huston's recommendations. 549 Henceforth, with Presidential authority, the intelligence community could intercept the international communications of Americans; eavesdrop electronically on anyone deemed a "threat to the internal security;" read the mail of American citizens; break into the homes of anyone regarded as a security threat; and monitor the activities of student political groups at home and abroad.

There is no indication that the President was informed at this time that NSA was already covering the international communications of Americans and had been doing so for domestic intelligence purposes since at least 1967. Nor is there any indication that he was told that the CIA was opening the mail of Americans and sharing the contents with the FBI and the military for domestic intelligence purposes. In effect, the "Huston plan" supplied Presidential authority for operations previously undertaken in secret without such authorization. For instance, the plan gave FBI Assistant Director Sullivan the "support" from "responsible quarters" which he had believed necessary to resume the "black bag jobs" and mail-opening programs Director Hoover had terminated in 1966. 550

Nevertheless, the FBI Director was not satisfied with Huston's memorandum concerning the authorization of the plan. 551 Hoover went immediately to Attorney General Mitchell, who had not known of the prior deliberations or the President's "decisions." 552 In a memorandum, Director Hoover said he would implement the plan, but only with the explicit approval of the Attorney General or the President:

Despite my clear-cut and specific opposition to the lifting of the various investigative restraints referred to above and to the creation of a permanent interagency committee on domestic intelligence, the FBI is prepared to implement the instructions of the White House at your direction. Of course, we would continue to seek your specific authorization, where appropriate, to utilize the various sensitive investigative techniques involved in individual cases. 553

CIA Director Helms shortly thereafter indicated his support for the to the Attorney General, telling him "we had put our backs into exercise." 554 Nonetheless, Mitchell advised the President to withdraw his approval. 555 Huston was told to rescind his memorandum, and the White House Situation Room dispatched a message requesting its return. 556

(3) Implementation. -- The President's withdrawal of approval for the "Huston plan" did not, in fact, result in the termination of either the NSA program for covering the communications of Americans or the CIA mail-opening program. These programs continued without formal authorization which had been hoped for. 557 The directors of the CIA and NSA also continued to explore means of expanding their involvement in, and access to, domestic intelligence. 558 A new group, the Intelligence Evaluation Committee (IEC), was created by Attorney General Mitchell within the Justice Department to consider such expansion. 559 NSA, CIA, Army counterintelligence, and the FBI each sent representatives to the IEC. NSA Director Gayler provided the IEC with a statement of NSA's capabilities and procedures for supplying domestic intelligence. 561 Although the IEC merely evaluated raw intelligence data, over 90 percent of which came to it through the FBI, it had access to domestic intelligence from NSA coverage and the CIA's mail-opening and CHAOS programs, which was channeled to the FBI. 561

Two of the specific recommendations in the "Huston Plan" were thereafter implemented by the FBI -- the lowering of the age limit for campus informants from 21 to 18 and the resumption of "legal mail covers." 562 Two men who had participated in developing the "Huston Plan" were promoted to positions of greater influence within the Bureau. 563 More important the Bureau greatly intensified its domestic intelligence investigations in the fall of 1970 without using "clearly illegal" techniques. The Key Black Extremist Program was inaugurated and field offices were instructed to open approximately 10,500 new investigations, including investigations of all black student groups "regardless of their present or past involvement in disorders." All members of "militant New Left campus organizations" were also to be investigated even if they were not "known to be violence prone." The objective of these investigations was "to identify potential" as well as "actual extremists." 564

The chief of the Domestic Intelligence Division in 1970 said the "Huston Plan" had "nothing to do" with the FBI's expanded intelligence activities. Rather, both the "Huston Plan" and the Bureau intensification represented the same effort by FBI intelligence officials "to recommend the types of action and programs which they thought necessary to cope with the problem." 565 Brennan admits that "the FBI was getting a tremendous amount of pressure from the White House," although he attributes this pressure to demands from "a vast majority of the American people" who wanted to know "why something wasn't being done" about violence and disruption in the country. 566

#### *b. Political Intelligence*

The FBI practice of supplying political information to the White House and, on occasion, responding to White House requests for such information was established before 1964. However, under the administrations of President Lyndon Johnson and Richard Nixon, this practice grew to unprecedented dimensions. 567

(1) Name Check Requests. -- White House aides serving under Presidents Johnson and Nixon made numerous requests for "name checks" of FBI files to elicit all Bureau information on particular critics of each administration. Johnson aides requested such reports on critics of the escalating war in Vietnam. 568 President Johnson's assistants also requested name checks on members of the Senate staff of Presidential candidate Barry Goldwater in 1964, 569 on Justice and Treasury Department officials responsible for a phase of the criminal investigation of Johnson's former aide Bobby Baker, 569a on the authors of books critical of the Warren Commission report, 570 and on prominent newsmen. 571 President Nixon's aides asked for similar name checks on another newsmen, the Chairman of Americans for Democratic Action, and the producer of a film critical of the President. 572

According to a memorandum by Director Hoover, Vice President Spiro Agnew received ammunition from Bureau files that could be used in "destroying [the] credibility" of Southern Christian Leadership Conference leader Reverend Ralph Abernathy. 573

(2) Democratic National Convention, Atlantic City, 1964. -- On August 22, 1964, at the request of the White House, the FBI sent a "special squad" to the Democratic National Convention site in Atlantic City, New Jersey. The squad was assigned to assist the Secret Service in protecting President Lyndon Johnson and to ensure that the convention itself would not be marred by civil disruption.

But it went beyond these functions to report political intelligence to the White House. Approximately 30 Special Agents, headed by Assistant Director Cartha DeLoach, "were able to keep the White House fully apprised of all major developments during the Conventions' course" by means of "informant coverage, by use of various confidential techniques, by infiltration of key groups through use of undercover agents, and through utilization of agents using appropriate cover as reporters." 574 Among these "confidential techniques" were: a wiretap on the hotel room occupied by Dr. Martin Luther King, Jr., and microphone surveillance of a storefront serving as headquarters for the Student Nonviolent Coordinating Committee and another civil rights organization. 575

Neither of the electronic surveillances at Atlantic City were specifically authorized by the Attorney General. At that time, Justice Department procedures did not require the written approval of the Attorney General for bugs such as the one directed against SNCC in Atlantic City. Bureau officials apparently believed that the wiretap on King was justified as an extension of Robert Kennedy's October 10, 1963, approval for surveillance of King at his then-current address in Atlanta, Georgia, or at any future address to which he might move. 576 The only recorded reason for instituting the wiretap on Dr. King in Atlantic City, however, was set forth in an internal memorandum prepared shortly before the Convention:

Martin Luther King, Jr., head of the Southern Christian Leadership Conference (SCLC), an organization set up to promote integration which we are investigating to determine the extent of Communist Party (CP) influence on King and the SCLC, plans to attend and possibly may indulge in a hunger fast as a means of protest. 577

Walter Jenkins, an Administrative Assistant to President Johnson who was the recipient of information developed by the Bureau, stated that he was unaware that any of the intelligence was obtained by wiretapping or bugging. 578 DeLoach, moreover, has testified that he is uncertain whether he ever informed Jenkins of these sources. 579

Walter Jenkins, and presumably President Johnson, received a significant volume of information from the electronic surveillance at Atlantic City, much of it purely political and only tangentially related to possible civil disturbances. The most important single issue for President Johnson at the Atlantic City Convention was the seating challenge of the Mississippi Freedom Democratic Party to the regular Mississippi delegation. 580 From the electronic surveillances of King and SNCC, the White House was able to obtain the most intimate details of the plans of individuals supporting the MFDP's challenge unrelated to the possibility of violent demonstrations.

Jenkins received a steady stream of reports on political strategy in the struggle to seat the MFDP delegation and other political plans and discussions by the civil rights groups under surveillance. 581 Moreover, the 1975 Inspection Report stated that "several Congressmen, Senators, and Governors of States" were overheard on the King tap." 582

According to both Cartha DeLoach and Walter Jenkins, the Bureau's coverage in Atlantic City was not designed to serve political ends. DeLoach testified:

I was sent there to provide information . . . which could reflect on the orderly progress of the convention and the danger to distinguished individuals, and particularly the danger to the President of the United States, as exemplified by the many, many references [to possible civil disturbances] in the memoranda furnished Mr. Jenkins . . . . 583

Jenkins has stated that the mandate of the FBI's special unit did not encompass the gathering of political intelligence and speculated that the dissemination of any such intelligence was due to the inability of Bureau agents to distinguish dissident activities which represented a genuine potential for violence. 584 Jenkins did not believe the White House ever used the incidental political intelligence that was received. However, a document located at the Lyndon B. Johnson Presidential Library suggests that at least one political use was made of Mr. DeLoach's reports. 585

Thus, although it may have been implemented to prevent violence at the Convention site, the Bureau's coverage in Atlantic City -- which included two electronic surveillances -- undeniably provided useful political intelligence to the President as well. 586

(3) By-Product of Foreign Intelligence Coverage. -- Through the FBI's coverage of certain foreign officials in Washington, D.C., the Bureau was able to comply with President Johnson's request for reports of the contacts between members of Congress and foreign officials opposed to his Vietnam policy. According to a summary memorandum prepared by the FBI:

On March 14, 1966, then President Lyndon B. Johnson informed Mr. DeLoach [Cartha DeLoach, Assistant Director of the FBI] ... that the FBI should constantly keep abreast of the actions of [certain foreign officials] in making contact with Senators and Congressmen and any citizen of a prominent nature. The President stated he strongly felt that much of the protest concerning his Vietnam policy, particularly the hearings in the Senate, had been generated by [certain foreign officials]. 587

As a result of the President's request, the FBI prepared a chronological summary -- apparently based in part on existing electronic surveillances of the contacts of each Senator, Representative, or legislative staff member who communicated with selected foreign officials during the period July 1, 1964, to March 17, 1966. This 67-page summary was transmitted to the White House on March 21, 1966, with a note that certain foreign officials were "making more contacts" with four named Senators "than with other United States legislators." 588 A second summary, prepared on further contacts between Congressmen and foreign officials, was transmitted to the White House on May 13, 1966. From then until the end of the Johnson Administration in January 1969, biweekly additions to the second summary were regularly disseminated to the White House. 589

This practice was reinstituted during the Nixon Administration. On July 27, 1970, Larry Higby, Assistant to H. R. Haldeman, informed the Bureau that Haldeman "wanted any information possessed by the FBI relating to contacts between [certain foreign officials] and Members of Congress and its staff." Two days later, the Bureau provided the White House with a statistical compilation of such contacts from January 1, 1967, to the present. Unlike the case of the information provided to the Johnson White House, however, there is no indication in related Bureau records that President Nixon or his aides were concerned about critics of the President's policy. The Bureau's reports did not identify individual Senators; they provided overall statistics and two examples of foreign recruitment attempts (with names removed). 590

In at least one instance the FBI, at the request of the President and with the approval of the Attorney General, instituted an electronic surveillance of a foreign target for the express purpose of intercepting telephone conversations of an American citizen. An FBI memorandum states that shortly before the 1968 Presidential election, President Johnson became suspicious that the South Vietnamese were trying to sabotage his peace negotiations in the hope that Presidential candidate Nixon would win the election and then take a harder line toward North Vietnam. To determine the validity of this suspicion, the White House instructed the FBI to institute physical surveillance of Mrs. Anna Chennault, a prominent Republican, as well as electronic surveillance directed against a South Vietnamese target. 591

The electronic surveillance was authorized by Attorney General Ramsey Clark on October 29, 1968, installed the same day, and continued until January 6, 1969. 592 Thus, a "foreign" electronic surveillance was instituted to target indirectly an American citizen who could not be legitimately surveilled directly. Also as part of this investigation, President Johnson personally ordered a check of the long distance toll call records of Vice Presidential candidate Spiro Agnew. 593

(4) The Surveillance of Joseph Kraft (1969). -- There is no substantial indication of any genuine national security rationale for the electronic surveillance overseas of columnist Joseph Kraft in 1969. John Erlichman testified before the Senate Watergate Committee that the national security was involved, but did not elaborate further. 594

Beyond this general claim, however, there is little evidence that any national security issue was involved in the case. Former Deputy Attorney General and Acting FBI Director William Ruckelshaus testified that after reviewing the matter he "could never see any national security justification" for the surveillance of Kraft. Ruckelshaus stated that the Administration's "justification" for bugging Kraft's hotel room was that he was "asking questions of some members of the North Vietnamese Government." Ruckelshaus believed that this was not an adequate national security justification for placing "any kind of surveillance on an American citizen or newsman." 595 Mr. Kraft agreed he was in contact with North Vietnamese officials while he was abroad in 1969, but noted that this was a common practice among journalists and that "at the time" he never knowingly published any classified information. 596

The documentary record also reveals no national security justification for the FBI's electronic surveillance of Mr. Kraft overseas. The one memorandum which referred to "Possible Leaks of Information" by Kraft does not indicate that there clearly was a leak of national security significance or that Mr. Kraft was responsible for such a leak if it occurred. 597 Furthermore, the hotel room bug did not produce any evidence that Kraft received or published any classified information. 598

Similarly, there is no evidence of a national security justification for the physical surveillance and proposed electronic surveillance of Kraft in the fall of 1969. A Bureau memorandum suggests that the Attorney General requested some type of coverage of Kraft, 599 but the record reveals no purpose for this coverage. The physical surveillance was discontinued after five weeks because it had "not been productive." Apparently, the Attorney General himself was unconvinced that a genuine national security justification supported the Kraft surveillance: he refused to authorize the requested wiretap, and it was consequently never implemented. 600

(5) The "17" Wiretaps. -- The relative ease with which high administration officials could select improper intelligence targets was demonstrated by the "17" wiretaps on Executive officials and newsmen installed between 1969-1971 under the rationale of determining the source of leaks of sensitive information. 600a In three cases no national security claim was even advanced. While national security issues were at least arguably involved in the initiation of the other taps, the program continued in two instances against persons who left the government and took positions as advisors to Senator Edmund Muskie, then the leading Democratic Presidential prospect. 601

The records of these wiretaps were kept separate from the FBI's regular electronic surveillance files; 602 their duration in many cases went beyond the period then required for re-authorization by the Attorney General; and in some cases the Attorney General did not authorize the tap until after it had begun. 603 In 1971, the records were removed from the FBI's possession and sent to the White House.

Thus, misuse of the FBI had progressed by 1971 from the regular receipt by the White House of political "tid-bits" and occasional requests for name checks of Bureau files to the use of a full array of intelligence operations to serve the political interests of the administration. The final irony was that the Nixon administration came to distrust Director Hoover's reliability and, consequently, to develop a White House-based covert intelligence operation. 604

### *c. The Justice Department's Internal Security Division*

FBI intelligence reports flowed consistently to the Justice Department, especially to the IDIU established by Attorney General Clark in 1967 and to the Internal Security Division. Before 1971, the Justice Department provided little guidance to the FBI on the proper scope of domestic intelligence investigations. 605 For example, in response to a Bureau inquiry in 1964 about whether a group's activities came "within the criteria" of the employee security program or were "in violation of any other federal statute," 606 the Internal Security Division replied that there was "insufficient evidence" for prosecution and that the group's leaders were "becoming more cautious in their utterances." 607 Nevertheless, the FBI continued for years to investigate the group with the knowledge and approval of the Division.

(1) The "New" Internal Security Division. -- When Robert Mardian was appointed Assistant Attorney General in late 1970, the Internal Security Division assumed a more active posture. In fact, one of the alternatives to implementation of the "Huston Plan" suggested to Attorney General John Mitchell by White House aide John Dean was the invigoration of the Division. 608 This included Mardian's establishment of the IEC to prepare domestic intelligence estimates. Equally significant, however, was Mardian's preparation of a new Executive Order on federal employee security. The new order assigned to the moribund Subversive Activities Control Board the function of designating groups for what had been the "Attorney General's list" 609 This attempt to assign broad new functions by Executive fiat to a Board with limited statutory responsibilities clearly disregarded the desires of the Congress. 610

According to Mardian, there was a "problem" because the list had "not been updated for 17 years." He expected that the revitalized SACB would "deal specifically with the revolutionary/terrorist organizations which have recently become a part of our history." 611

Assistant Attorney General Mardian's views coincided with those of FBI Assistant Director Brennan, who had seen a need to compile massive data on the "New Left" for future employee security purposes. 612 Since FBI intelligence investigations were based in part on standards for the "Attorney General's list," the new Executive Order substantially redefined and expanded FBI authority. The new order included groups who advocated the use of force to deny individual rights under the "laws of any State" or to overthrow the government of "any State or subdivision thereof." 613 The new order also continued to use the term "subversive," although it was theoretically more restrictive than the previous standard for the Attorney General's list because it required "unlawful" advocacy.

Mardian made it clear that, under the order, the FBI was to provide intelligence to the Subversive Activities Control Board:

We have a new brand of radical in this country and we are trying to address ourselves to the new situation. With the investigative effort of the FBI, we hope to present petitions to the Board in accordance with requirement of the Executive Order. 614

FBI intelligence officials learned that the Internal Security Division intended to "initiate proceedings against the Black Panther Party, Progressive Labor Party, Young Socialist Alliance, and Ku Klux Klan." They also noted: "The language of Executive Order 11605 is very broad and generally coincides with the basis for our investigation of extremist groups." 615 Mardian had, in effect, provided a new and wider "charter" for FBI domestic intelligence. 616

(2) The Sullivan-Mardian Relationship. -- In 1971, Director Hoover expressed growing concern over the close relationship developing between his FBI subordinates in the Domestic Intelligence Division and the Internal Security Division under Mardian. For example, when FBI intelligence officials met with Mardian's principal deputy, A. William Olsen, to discuss "proposed changes in procedure" for the Attorney General's authorization of electronic surveillance, Hoover reiterated instructions that Bureau officials be "very careful in our dealings" with Mardian. Moreover, to have a source of legal advice independent of the Justice Department, the FBI Director created a new position of Assistant Director for Legal Counsel and required that he attend "at any time officials of the Department are being contacted on any policy consideration which affects the Bureau." 617

In the summer of 1971, William C. Sullivan openly challenged FBI Director Hoover, possibly counting on Mardian and Attorney General Mitchell to back him up and oust Hoover. 618 Sullivan charged in one memorandum to Hoover that other Bureau officials lacked "objectivity" and "independent thinking" and that "they said what they did because they thought this was what the Director wanted them to say." 619

Shortly thereafter, Director Hoover appointed W. Mark Felt, formerly Assistant Director for the Inspection Division, to a newly created position as Sullivan's superior. Apparently realizing that he was on his way out, Sullivan gave Assistant Attorney General Mardian the FBI's documents recording the authorization for, and dissemination of, information from the "17" wiretaps placed on Executive officials and newsmen in 1969-1971. The absence of these materials was not discovered by other FBI officials until after Sullivan was forced to resign in September 1971. 620 Mardian eventually took part in the transfer of these records to the White House. 621

Thus, the Attorney General's principal assistant for internal security collaborated with a ranking FBI official to conceal vital records, ultimately to be secreted away in the White House. This provides a striking example of the manner in which channels of legitimate authority within the Executive Branch can be abused.

#### *d. The FBI's Secret "Administrative Index"*

In the fall of 1971, the FBI confronted the prospect of the first serious Congressional curtailment of domestic intelligence investigations -- repeal of the Emergency Detention Act of 1950 -- and set a course of evasion of the will of Congress which continued, partly with Justice Department approval, until 1973.

An FBI Inspection Report viewed the prospect of the repeal without great alarm. In the event the Act was repealed, the FBI intended to continue as before under "the Government's inherent right to protect itself internally." 622 After the repeal took place, Bureau officials elaborated the following rationale for keeping the Security Index of "potentially dangerous subversives:"

Should this country come under attack from hostile forces, foreign *or domestic*, there is nothing to preclude the President from going before a joint session of Congress and requesting necessary authority to apprehend and detain those who would constitute a menace to national defense. At this point, it would be absolutely essential to have an immediate list, such as the SI, for use in making such apprehensions. 623 [Emphasis added.]

Thus, FBI officials hoped there would be a way to circumvent the repeal "in which the essence of the Security Index and emergency detention of dangerous individuals could be utilized under Presidential powers." 624

Assistant Director Dwight Dalbey, the FBI's Legal Counsel, recommended writing to the Attorney General for "a reassessment" in order to "protect" the Bureau in case "some spokesman of the extreme left" claimed that repeal of the Detention Act eliminated FBI authority for domestic intelligence activity. Dalbey agreed that, since the Act "could easily be put back in force should an emergency convince Congress of its need," the Bureau should "have on hand the necessary action information pertaining to individuals." 625 Thereupon, a letter was sent to Attorney General Mitchell proposing that the Bureau be allowed to "maintain an administrative index" of individuals who "pose a threat to the internal security of the country." Such an index would be an aid to the Bureau in discharging its "investigative responsibility." However, the letter made no reference to the theory prevailing within the FBI that the new "administrative index" would serve as the basis for a revived detention program in some future emergency. 625a

Thus, when the Attorney General replied that the repeal of the Act did not prohibit the FBI from compiling an "administrative index" to make "readily retrievable" the "results of its investigations," he did not deal with the question of whether the index would also serve as a round-up list for a future emergency. The Attorney General also stated that the Department did not "desire a copy" of the new index, abdicating even the minimal supervisory role performed previously by the Internal Security Division in its review of the names on the Security Index. 626 FBI officials realized that they were "now in a position to make a sole determination as to which individuals should be included in an index of subversive individuals." 627

There were two major consequences of the new system. First, the new "administrative index" (ADEX) was expanded to include an elastic category: "the new breed of subversive." 628 Second, the previous Reserve Index, which had never been disclosed to the Justice Department, was incorporated into the ADEX. It included "teachers, writers, lawyers, etc." who did not actively participate in subversive activity "but who were nevertheless influential in espousing their respective philosophies." It was estimated that the total case load under the ADEX would be "in excess of 23,000." 629

One of the FBI standards for placing someone on the ADEX list demonstrates the vast breadth of the list and the assumption that it could be used as the basis for detention in an emergency:

An individual who, although not a member of or participant in activities of revolutionary organizations or considered an activist in affiliated fronts, has exhibited a revolutionary ideology and is likely to seize upon the opportunity presented by national emergency to commit acts of espionage or sabotage, including acts of terrorism, assassination or any interference with or threat to the survival and effective operation of the national, state, and local governments and of the defense efforts. [Emphasis added.] 630

These criteria were supplied to the Justice Department in 1972, and the Attorney General did not question the fact that the ADEX was more than an administrative aid for conducting investigations, as he had previously been told. 631

A Bureau memorandum indicates that "representatives of the Department" in fact agreed with the view that there might be "circumstances" where it would be necessary "to quickly identify persons who were a threat to the national security" and that the President could then go to Congress "for emergency legislation permitting apprehension and detention." 632

Thus, although the Attorney General did not formally authorize the ADEX as a continuation of the previous detention list, there was informal Departmental knowledge that the FBI would proceed on that basis. One FBI official later recognized that the ADEX could be "interpreted as a means to circumvent repeal of the Emergency Detention Act." 633

#### *8. Reconsideration of FBI Authority*

In February 1971, the Subcommittee on Constitutional Rights of the Senate Judiciary Committee began a series of hearings on federal data banks and the Bill of Rights which marked a crucial turning point in the development of domestic intelligence policy. The Subcommittee, chaired by Senator Sam J. Ervin of North Carolina, reflected growing concern among Americans for the protection of "the privacy of the individual against the 'information power' of government." 634

Largely in response to this first serious Congressional inquiry into domestic intelligence policy, the Army curtailed its extensive surveillance of civilian political activity. The Senate inquiry also led, after Director Hoover's death in 1972, to reconsideration by the FBI of the legal basis for its domestic intelligence activities and eventually to a request to the Attorney General for clarification of its authority. 635

##### *a. Developments in 1972-1974*

There is no indication that FBI "guidelines" material or the FBI Manual provisions themselves were submitted to, or requested by, the Justice Department prior to 1972. 636 Indeed, when Deputy Attorney General Richard Kleindienst testified in February 1972 at the hearings on his nomination to be Attorney General, he stated that he was "not sure" what guidelines were used by the FBI. Kleindienst also stated that he believed FBI investigations were "restricted to criminal conduct or the likelihood of criminal conduct." 637 Director Hoover noted on a newspaper report of the testimony, "Prepare succinct memo to him on our guidelines." 638

After Hoover's death in 1972, a sharp split developed within the Domestic Intelligence Division over whether or not the Bureau should continue to rely on the various Executive Orders as a basis for its authority. 639

Acting Director Gray postponed making any formal decisions on this matter; he did not formally request advice from the Attorney General. 640 Meanwhile, the Domestic Intelligence Division proceeded on its own to revise the pertinent Manual sections and the ADEX standards. 641 The list was to be trimmed to those who were "an actual danger now," reducing the number of persons on the ADEX by two-thirds. 642

A revision of the FBI Manual was completed by May 1973. It was described as "a major step" away from "heavy reliance upon Presidential Directives" to an approach "based on existing Federal statutes. 643 Although field offices were instructed to "close" investigations not meeting the new criteria, headquarters did not want "a massive review on crash basis" of all existing cases. 644

After a series of regional conferences with field office supervisors, the standards were revised to allow greater flexibility. 645 For the first time in FBI history, a copy of the Manual section for "domestic subversive investigations" was sent to the Attorney General. 646

After Clarence M. Kelley was confirmed as FBI Director, he authorized a request for guidance from Attorney General Elliot Richardson. 647 Kelley advised that it "would be folly" to limit the Bureau to investigations only when a crime "has been committed," since the government had to "defend itself against revolutionary and terrorist efforts to destroy it." Consequently, he urged that the President exercise his "inherent Executive power to *expand* by further *defining* the FBI's investigative authority to enable it to develop advance information" about the plans of "terrorists and revolutionaries who seek to overthrow or destroy the Government." 648 [Emphasis added.]

Director Kelley's request initiated a process of reconsideration of FBI intelligence authority by the Attorney General. 649

The general study of FBI authority was superceded in December 1973 when Acting Attorney General Robert Bork, in consultation with Attorney General-designate William Saxbe, gave higher priority to a Departmental inquiry into the FBI's COINTELPRO practices. Responsibility for this inquiry was assigned to a committee headed by Assistant Attorney General Henry Peterson. 650

Even at this stage, the Bureau resisted efforts by the Department to look too deeply into its operations. Director Kelley advised the Acting Attorney General that the Department should exclude from its review the FBI's "extremely sensitive foreign intelligence collection techniques." 651

As a result, the Petersen committee's review of COINTELPRO did not consider anything more than a brief FBI prepared summary of foreign counterintelligence operations. 652 Moreover, the inquiry into domestic COINTELPRO cases was based mainly on short summaries of each incident compiled by FBI agents, with Department attorneys making only spot-checks of the underlying files to assure the accuracy of the summaries. Thus, the inquiry was unable to consider the complete story of COINTELPRO as reflected in the actual memoranda discussing the reasons for adopting particular tactics and the means by which they were implemented. 653

Thus, at the same time that the Bureau was seeking guidance and clarification of its authority, vestiges remained of its past resistance to outside scrutiny and its desire to rely on Executive authority, rather than statute, for the definition of its intelligence activities.

*b. Recent Domestic Intelligence Authority*

In the absence of any new standards imposed by statute, or by the Attorney General, the FBI continued to collect domestic intelligence under sweeping authorizations issued by the Justice Department in 1974 for investigations of "subversives," potential civil disturbances, and "potential crimes." These authorizations were explicitly based on conceptions of inherent Executive power, broader in theory than the FBI's own claim in 1973 that its authority could be found in the criminal statutes. Attorney General Levi has recently promulgated guidelines which stand as the first significant attempt by the Justice Department to set standards and limits for FBI domestic intelligence investigations. 655

(1) Executive Order 10450, As Amended. -- The Federal employee security program continued to serve as a basis for FBI domestic intelligence investigations. An internal Bureau memorandum stated that the Justice Department's instruction regarding the program:

specifically requires the FBI to check the names of all civil applicants and incumbents of the Executive Branch against our records. In order to meet this responsibility FBIHQ records must contain identities of all persons connected with subversive or extremist activities, together with necessary identifying information. 656

FBI field offices were instructed in mid-1974 to report to Bureau headquarters such data as the following:

Identities of subversive and/or extremist groups or movements (including front groups) with which subject has been identified, period of membership, positions held, and a summary of the type and extent of subversive or extremist activities engaged in by subject (e.g., attendance at meetings or other functions, fundraising or recruiting activities on behalf of the organization, contributions, etc.). 657

In June 1974, President Nixon formally abolished the "Attorney General's list" upon the recommendation of Attorney General Saxbe. However, the President's order retained a revised definition of the types of organizations, association [with] which would still be considered in evaluating prospective federal employees. 658 The Justice Department instructed the FBI that it should "detect organizations with a potential" for falling within the terms of the order and investigate "individuals who are active either as members of or as affiliates of" such organizations. The Department instructions added:

It is not necessary that a crime occur before the investigation is initiated, but only that a reasonable evaluation of the available information suggests that the activities of the organization may fall within the prescription of the Order....

*It is not possible to set definite parameters covering the initiation of investigations of potential organizations falling within the Order but once the investigation reaches a stage that offers a basis for determining that the activities are legal in nature, then the investigation should cease, but if the investigation suggests a determination that the organization is engaged in illegal activities or potentially illegal activities it should continue. [Emphasis added.]*

The Department applied "the same yardstick" to investigations of individuals "when information is received suggesting their involvement." 659

(2) Civil Disorders Intelligence. -- The Justice Department also instructed the FBI in 1974 that it should not, as the Bureau had suggested, limit its civil disturbance reporting "to those particular situations which are of such a serious nature that Federal military personnel may be called upon for assistance." The Department advised that this suggested "guideline" was "not practical" since, it "would place the burden on the Bureau" to make an initial decision as to "whether military personnel may ultimately be needed," and this responsibility rested "legally" with the President. Instead, the FBI was ordered to "continue" to report on

all significant incidents of civil unrest and should not be restricted to situations where, in the judgment of the Bureau, military personnel eventually may be used. 660

Moreover, under this authority the Bureau was also ordered to "continue" reporting on

all disturbances where there are indications that extremist organizations such as the Communist Party, Ku Klux Klan, or Black Panther Party are believed to be involved in efforts to instigate or exploit them.

The instructions specifically declared that the Bureau "should make timely reports of significant disturbances, even when no specific violation of Federal law is indicated." This was to be done, at least in part, through "liaison" with local law enforcement agencies. 661

Even after the Justice Department's IDIU dismantled its computerized data bank, its basic functions continued to be, performed by a Civil Disturbance Unit in the office of the Deputy Attorney General, and the FBI was under instructions to disseminate its civil disturbance reports to that Unit. 662

FBI officials considered these instructions "significant" because they gave it "an official, written mandate from the Department." The Department's desires were viewed as "consistent with what we have already been doing for the past several years," although the Bureau Manual was rewritten to "incorporate into it excerpts from the Department's letter." 663

(3) "Potential" Crimes. -- The FBI recently abolished completely the administrative index (ADEX) of persons considered "dangerous now." However, the Justice Department has advanced a theory to support broad power for the Executive Branch in investigating groups which represent a "potential threat to the public safety" or which have a "potential" for violating specific statutes. For example, the Department advised the FBI that the General Crimes Section of the Criminal Division had "recommended continued investigation" of one group on the basis of "potential violations" of the antiriot statutes. 665 These same instructions added that there need not be a "potential" for violation of any specific statute. 666

(4) Claim of Inherent Executive Power. -- The Department's theory of executive power was set forth in 1974 testimony before the House Internal Security Committee. According to Deputy Assistant Attorney General Kevin Maroney, "the primary basis" for FBI domestic intelligence authority rests in "the constitutional powers and responsibilities vested in the President under Article II of the Constitution." These powers were specified as: the President's duty undertaken in his oath of office to "preserve, protect, and defend the Constitution of the United States;" 667 the Chief Executive's duty to "take care that the laws be faithfully executed;" 668 the President's responsibilities as Commander-in-Chief of the military; and his "power to conduct our foreign relations." 669

The chairman of the Internal Security Committee, Rep. Richard H. Ichord, stated at that time that, except in limited areas, the Congress "has not directly imposed upon the FBI clearly defined duties in the acquisition, use, or dissemination of domestic or internal security intelligence." 670

Subsequently, the FBI Intelligence Division revised its 1972-1973 position on its legal authority, and in a paper completed in 1975 it returned to the view "that the intelligence-gathering activities of the FBI have had as their basis the intention of the President to delegate his Constitutional authority," as well as the statutes "pertaining to the national security." 671

The Attorney General has continued to assert the claim of inherent executive power to conduct warrantless electronic surveillance of American citizens, although this power has been exercised sparingly. 672 The Justice Department has also claimed that this inherent executive power permits warrantless surreptitious entries. 673 However, the Executive Branch has recently joined a bipartisan group of Senators and Representatives in sponsoring a legislative proposal requiring judicial warrants for all electronic surveillance by the FBI.

(5) Attorney General Levi's Guidelines. -- During 1975, the Congress and the Executive Branch began major efforts to review the field of domestic intelligence. A Presidential commission headed by Vice President Rockefeller inquired into the CIA's improper surveillance of Americans. 674 Attorney General Edward H. Levi established a committee in the Justice Department to develop "guidelines" for the FBI, 675 and the Justice Department began to work on draft legislation to require warrants for national security electronic surveillance. 676

These efforts have begun to bear fruit in recent months. President Ford has issued an Executive Order regulating foreign intelligence activities; 677 Attorney General Levi has promulgated several sets of "guidelines" for the FBI. 678 And the administration has endorsed a specific bill to establish a warrant procedure for all national security wiretaps and bugs in the United States. 679

These Executive initiatives are a major step forward in creating safeguards and establishing standards, but they are incomplete without legislation. 680 Among the issues left open by the President's Executive Order, for example, are: (1) the definition of the term "foreign subversion" used to characterize the counter-intelligence responsibilities of the CIA and the FBI; and (2) clarification of the vague provisions in the National Security Act of 1947 relating to the authority of the Director of Central Intelligence to protect "sources" and "methods;" and (3) amplification of the 1947 Act's prohibition against the CIA's exercise of "law enforcement powers" or "internal security functions."

Although they represent only a partial answer to the need for permanent restraints, the initiatives of the Executive Branch demonstrate a willingness to seriously consider the need for legislative action. The Attorney General has recognized that Executive "guidelines" are not enough to regulate, and authorize FBI intelligence activities. 681 The Committee's conclusions and recommendations in Part IV of this report indicate the areas most in need of legislative attention.

#### Footnotes:

1 Repressive practices during World War I included the formation of a volunteer auxiliary force, known as the American Protective League, which assisted the Justice Department and military intelligence in the investigation of "un American activities" and in the mass round-up of 50,000 persons to discover draft evaders. These so-called "slacker raids" of 1918 involved warrantless arrests without sufficient probable cause to believe that crime had been or was about to be committed (FBI intelligence Division memorandum, "An Analysis of FBI Domestic Security intelligence Investigations," 10/28/75.)

The American Protective League also contributed to the pressures which resulted in nearly 2,000 prosecutions for disloyal utterances and activities during World War I, a policy described by John Lord O'Brien, Attorney General Gregory's Special Assistant, as one of "wholesale repression and restraint of public opinion." (Zechariah Chafee, *Free Speech in the United States* (Cambridge: Harvard University Press, 1941) p. 69.)

Shortly after the war the Justice Department and the Bureau of Investigation jointly planned the notorious "Palmer Raids", named for Attorney General A. Mitchell Palmer who ordered the overnight round-up and detention of some 10,000 persons who were thought to be "anarchist" or "revolutionary" aliens subject to deportation. (William Preston, *Aliens and Dissenters* (Cambridge: Harvard University Press, 1963), chs. 7-8; Stanley Cohen, *A. Mitchell Palmer*, Politician (New York: Columbia University Press, 1963), chs. 11-12.)

2 See Attorney General Stone's full statement, p. 23.

3 See Joan Jensen, *The Price of Vigilance* (Chicago: Rand McNally 1968). one FBI official recalled later, "There were probably seven or eight such active organizations operating at full force during war day,; and it was not an uncommon experience for an Agent of this Bureau to call upon an individual in the Course Of his investigation, to find out that six or seven other Government agencies had been around to interview the party about the same matter." (Memorandum of IF. X. O'Donnell, Subject: Operations During World War 1, 10/4/38).

4 See footnote 1, p. 21.

5 Letter from Justice Harlan Fiske Stone to Jack Alexander, 9/21/37, cited in Alpheus T. Mason, *Harlan Fiske Stone: Pillar of the Law* (New York, Viking, 1956) p 149.

6 New York Times, 5/10/24.

7 Stone to Hoover. 5/13/24, quoted in Mason, *Harlan Fiske Stone*, at p. 151. Although Hoover had served as head of the General Intelligence Division of the Justice Department at the time of the "Palmer Raids" and became an Assistant Director of the Bureau in 1921, he persuaded Attorney General Stone and Roger Baldwin of the American Civil Liberties Union that he had played an "unwilling part" in the excesses of the past. and he agreed to disband the Bureau's "radical division." Baldwin advised Stone, "I think we were wrong in our estimate of his attitude." (Baldwin to Stone, 8/6/24, quoted in Donald Johnson, *The Challenge to American Freedoms* (University of Kentucky Press, 1963). pp, 174-175.)

In December 1924, Stone made Hoover Director of the Bureau of Investigation.

8 Memorandum from J. Edgar Hoover to Mr. Cowley, 5/10/34.

9 J. Edgar Hoover memorandum to the files, 8/24/36. This memorandum states that, earlier In the conversation, Director Hoover had told the President:

(i) Communists controlled or planned to take control of the West Coast longshoreman's union, the United Mine Workers Union and the Newspaper Guild (and using those unions would be "able at any time to paralyze the country");

(ii) "activities ... inspired by Communists" had recently taken place in the Government, "particularly in some of the Departments and the National Labor Relations Board"; and

(iii) The Communist Internationale had recently issued instructions for all Communists to "vote for President Roosevelt and against Governor Landon because of the fact that Governor Landon is opposed to class warfare."

These comments indicate that the Bureau had already begun some intelligence gathering on Communists and activities "inspired" by them prior to any Presidential order. In addition, Hoover's memorandum referred to prior intelligence collection on domestic right-wing figures Father Charles Coughlin and General Smedley Butler.

10 Hoover stated that Secretary of State Hall "at the President's suggestion, requested of me, the representative of the Department of Justice, to have investigation made of the subversive activities in this country, including communism and fascism." He added that "the Attorney General verbally directed me to proceed with this Investigation." (Memorandum from J. Edgar Hoover to E. A. Tamm, 9/10/36.)

11 Memorandum on "domestic intelligence," prepared by J. Edgar Hoover, enclosed with letter from Attorney General Cummings to Roosevelt, 10/20/38. Director Hoover met with the President who, according to Hoover's memorandum, "approved the plan which I had prepared and which had been sent to him by the Attorney General." (Memorandum to the files from J. Edgar Hoover, 11/7/38.)

12 Letter from Attorney General Cummings to the President, 10/20/38.

13 On 2/7/39, the Assistant to the the Attorney General wrote letters to the Secret Service, the Bureau of Internal Revenue, the Narcotics Bureau, the Customs Service, the Coast Guard, and the Postal Inspection Service stating that the FBI and military intelligence had "undertaken activities to investigate matters relating to espionage and subversive activities." (Letter from J. B. Keenan, Assistant to the Attorney General, to F. J. Wilson, Chief, Secret Service, 2/7/39.)

A letter from Attorney General Murphy to the Secretary of the Treasury shortly thereafter also referred to "subversive activities." (Letter from Attorney General Murphy to the Secretary of the Treasury, 2/16/39.)

However, a similar letter two days later referred only to matters "involving espionage, counterespionage, and sabotage," without mentioning "subversive activities." (Letter from Attorney General Murphy to the Secretary of the Treasury, 2/18/39.) This may have reflected a decision by Murphy to cease using "subversive activities" to describe FBI investigations. The record does not clarify the reason for his deletion of the phrase.

14 Memorandum from T. Edgar Hoover to Attorney General Murphy, 3/16/39. Murphy was aware that the FBI contemplated investigations of subversive activities, since Hoover enclosed his 1938 plan with -this memorandum.

15 Letter from Attorney General Murphy to the President, 6/17/39.

16 Confidential Memorandum from the President to Department Heads, 6/26/39.

17 Memorandum from Hoover to Murphy, 3/16/39, enclosing Hoover memorandum on "domestic intelligence," 10/20/38.

18 Memorandum from J. Edgar Hoover to Attorney General Murphy, 9/6/39.

19 Statement of the President, 9/6/39.

President Roosevelt never formally defined "subversive activities" - a term whose vagueness has proven a problem throughout the FBI's history. However, a hint as to his definition is contained in his remarks at a press conference on September 9, 1939. A national emergency had just been declared, and pursuant thereto, the President had issued an authorization for up to 150 extra FBI agents to handle "additional duties." In explaining that action, he stated he was concerned about "things that happened" before World War I, specifically "Sabotage" and "Propaganda by both belligerents" to "sway public opinion. . . . [I]t is to guard against that and the spread by any foreign nation of propaganda in this nation which would tend to be subversive - I believe that is the word - of our form of Government." (1939 Public Papers of Franklin D. Roosevelt, pp. 495-496.)

20 Confidential memorandum from President Roosevelt to Attorney General Jackson, 5/21/40. In May 1941, the Secretary of War and the Secretary of the Navy urged "a broadening of the investigative responsibility of the Federal Bureau of Investigation in the fields of subversive control of labor." (Memorandum from the Secretary of War and the Secretary of the Navy to the President, 5/29/41) The President replied that he was sending their letter to the Attorney General "with my general approval." (Memorandum from President Roosevelt to the Secretaries of War and Navy, 6/4/41.)

21 Attorney General's Order No. 3732, 9/25/42, p. 19. But see Delimitation Agreement between the FBI and Military Intelligence, 2/9/42, at footnote 56.

22 Statement of the President on "Police Cooperation," 1/8/43. A note in the President's handwriting added that the FBI was to receive information "relating to espionage and related matters." (Copy in FDR Library.)

23 Cummings to Roosevelt, 10/20/38.

24 Hoover memorandum, enclosed with letter from Cummings to Roosevelt, 10/20/38. Director Hoover's full point was that:

"In considering the steps to be taken for the expansion of the present structure of intelligence work, it is believed imperative that it be proceeded with, with the utmost degree of secrecy in order to avoid criticism or objections which might be raised to such an expansion by either ill-informed persons or individuals having some ulterior motive. The word 'espionage' has long been a word that has been repugnant to the American people and it is believed that the structure which is already in existence is much broader than espionage or counterespionage, but covers in a true sense real intelligence values to the three services interested, namely, the Navy, the Army, and the civilian branch of the Government - the Department of Justice. Consequently, it would seem undesirable to seek any special legislation which would draw attention to the fact that it was proposed to develop a special counterespionage drive of any great magnitude."

25 28 U.S.C. 533 (3).

26 The conflicts between the FBI and the State Department in 1939 are discussed at footnote 54.

27 Emergency Supplemental Appropriation Bill 1940, Hearings before the House Appropriations Committee, 11/30/39, pp. 303-307.

In fact, the FBI had established a General Intelligence Section in its Investigative Division shortly after the President's 1936 requests. Congress was not advised of the Bureau's activities undertaken prior to September 1939, nor of the President's earlier directives.

28 Justice Department Appropriation Bill. 1941, Hearings before the House Appropriations committee, 1/5/40, p. 151. The President's 1939 statement did not specifically say that the FBI had authority to investigate "subversive activities."

29 1939 Hearings, p. 307; First Deficiency Appropriation Bill, 1941, Hearings before the House Appropriations Committee 2/19/41, pp. 189-189.

30 H.J. Res. 571, 76th Cong., 2d Sess. (1940).

31 18 U.S.C. 2385, 2387.

32 18 U. S.C. 2386.

33 Letter from Attorney General Jackson to Senator Norris, 86 Cong. Rec. 5642-5643.

34 Proceedings of the Federal-State Conference on Law Enforcement Problems of National Defense, 8/5-6/40. Several months earlier, Attorney General Tuckson had warned federal prosecutors about the dangers of prosecuting "subversives" because of the lack of standards and the danger of overbreadth. (Robert H. Jackson. "The Federal Prosecutor," Journal of the American Judicature Society, 6/40, p. 18.)

35 Hoover memorandum to the files, 8/24/36.

36 Hoover memorandum, enclosed with Cummings to Roosevelt, 10/20/38, see p. 28.

37 Confidential memorandum from the President to Department heads, 6/26/39.

38 See pp. 34--35.

39 The above-mentioned directives were all contained in a memorandum from J. Edgar Hoover to FBI Field Offices, 9/2/39.

40 Memorandum from Clyde Tolson to J. Edgar Hoover, 10/30/39,

41 Internal FBI memorandum of E. A. Tamm, 11/9/39.

42 Memorandum from J. Edgar Hoover to FBI Field Offices, 6/15/40.

43 Director Hoover declared in 1940 that advocates of foreign "isms" had "succeeded in boring into every phase of American life, masquerading behind 'front' organizations. (Proceedings of the Federal-State Conference on Law Enforcement Problems of National Defense, August 5-6, 1940.) In his best-selling book on Communists, Hoover stated, "Infiltration is the method whereby Party members move into noncommunist organizations for the purpose of exercising influence for Communism. If control is secured, the organization becomes a communist front." (J. Edgar Hoover, Masters of Deceit (New York: Henry Holt, 1958), Ch. 16.)

44 Hoover memorandum, enclosed with Cummings to Roosevelt, 10/20/38.

45 Letter from Attorney General Cummings to the President (and enclosure), 1/30/37 (FDR Library).

46 Letter from Attorney General Cummings to the President (and enclosure), 8/11/37 (FDR Library).

47 Report of New York City field office. 10/22/41, summarized in Justice Department memorandum from S. Brodie to Assistant Attorney General Quinn, 10/10/47.

48 Report of Chicago field office. 12/29/44, summarized in Justice Department memorandum from S. Brodie to Assistant Attorney General Quinn, 10/9/47.

49 Justice Department memorandum re: Christian Front, 10/28/41.

50 Letter from Stephen Early, Secretary to the President, to J. Edgar Hoover, 5/21/40 (FDR Library)

51 omitted in original.

52 Memorandum from\* Stephen Early, secretary to the President, to J. Edgar Hoover, 6/17/40.

53 New York Times, 10/1/39, p. 38.

54 Memorandum from J. Edgar Hoover to Attorney General Murphy, 9/16/39. The "literally chisel" reference reflects concern with a State Department attempt to "coordinate" all domestic intelligence. It may explain why, after 1938, the FBI no longer relied for its intelligence authority on the statutory provision for FBI investigations of "official matters under control of . . . the Department of State." Director Hoover stated that the FBI required State Department authorization only where "the subject of a particular investigation enjoys any diplomatic status."

55 Note attached to letter from Col. J. M. Churchill, Army G-2, to Mr. E. A. Tamm, FBI, 5/16/39.

56 Delimitation of Investigative Duties of the Federal Bureau of Investigation, the Office of Naval Intelligence, and the Military Intelligence Division. 2/9/42.

57 Memorandum from Colonel Churchill, Counter Intelligence Branch, MID, to E. A. Tamm, FBI, 5/16/39.

58 Victor J. Johanson, "The Role of the Army in the Civilian Arena. 1920-1970," U.S. Army Intelligence Command Study (1971). The scope of wartime Army intelligence has been summarized as follows:

"It reported on radical labor groups, communists, Nazi sympathizers, and 'semi-radical' groups concerned with civil liberties and pacifism. The latter, well intentioned but impractical groups as one corps area intelligence officer labeled them, were playing into the hands of the more extreme and realistic radical elements. G-2 still believed that it had a right to investigate 'semi-radicals' because they undermined adherence to the established order by propaganda through newspapers, periodicals, schools, and churches." (Joan M. Jensen. "Military Surveillance of Civilians, 1917 1967," in Military Intelligence, Hearings before the Senate Subcommittee on Constitutional Rights (1974), pp. 174-175.)

59 Letter from Attorney General Cumming,; to the President, 10/20/38; letter from Attorney General Murphy to the President. 6/17/39. The confusion as to whether Attorney General Murphy, Attorney General Jackson and Attorney General Biddle defined the FBI's duties to cover investigation of "subversive activities" is indicated at footnotes 13, 21 and 34.

60 Memorandum from J. Edgar Hoover to Attorney General Jackson, 10/16/40.

61 Memorandum from J. Edgar Hoover to L.M.C. Smith, Chief, Neutrality Law Unit, 11/28/40.

62 Memorandum from M. F. McGuire, Assistant to the Attorney General, to J. Edgar Hoover and L. M. C. Smith, 4/21/41.

63 Memorandum from M. F. McGuire, Assistant to the Attorney General, to J. Edgar Hoover, 4/17/41.

64 The Custodial Detention Program should not be confused with the internment of Japanese Americans in 1942. The mass detention of Americans solely on the basis of race was exactly what the Program was designed to prevent, by making it possible for the government to decide in individual cases whether a Person should be arrested in the event of war. When the Program was implemented after Pearl Harbor, it was limited to dangerous enemy aliens only. FBI Director Hoover opposed the mass round-up of Japanese Americans.

65 Memorandum from Attorney General Biddle to Assistant Attorney General Cox and J. Edgar Hoover, Director, FBI, 7/16/43.

66 Memorandum for Attorney General Biddle to Assistant Attorney General Cox and J. Edgar Hoover, Director, FBI, 7/16/43.

67 Memorandum from J. Edgar Hoover to FBI Field Offices, Re: Dangerousness Classification, 8/14/43. This is the only document pertaining to Director Hoover's decision which appears in the material provided by the FBI to the Select Committee covering Bureau policies for the "Security Index." The FBI interpreted the Attorney General's order as applying only to "the dangerous classifications previously made by the ... Special War Policies Unit" of the Justice Department. (The full text of the Attorney General's order and the FBI directive appear in Hearings, Vol. 6, pp. 412-415.)

68 Confidential memorandum from President Roosevelt to Attorney General Jackson. 5/21/40.

69 47 U.S.C. 605. The Supreme Court held that this Act made wiretap-obtained evidence or the fruits thereof inadmissible in federal criminal cases. *Nardone v. United States*, 302 U.S. 379 (1937) ; 308 U.S. 338 (1939).

70 Letter from Attorney General Jackson to Rep. Hatton Summers, 3/19/41.

71 E.g., *United States v. Butenko*, 494 F.2d 593 (3d Cir. 1974), cert. denied sub nom. *Ivanov v. United States*, 419 U.S. 881 (1974). The Court of Appeals held in this case that warrantless wiretapping could only be justified on a theory of inherent Presidential power, and questioned the statutory interpretation relied upon since Attorney General Jackson's time. Until 1967, the Supreme Court did not rule that wiretapping violated the Fourth Amendment. [*Olmstead v. United States*, 275 U.S. 557 (1927) ; *Katz v. United States*, 389 U.S. 347 (1967).]

72 Hearings before the House Judiciary Committee, To Authorize Wiretapping, 77th Cong., 1st Sess. (1941), p. 112.

73 Congress continued to refrain from setting wiretap standards until 1968 when the Omnibus Crime Control Act was passed. The Act was limited to criminal cases and, once again, avoided the issue of intelligence wiretaps. [18 U.S.C. 2511 (3).]

74 Memorandum from Attorney General Biddle to J. Edgar Hoover, 11/19/41. Biddle advised Hoover that wiretaps (or "technical surveillances") would not be authorized unless there was "information leading to the conclusion that the activities of any particular individual or group are connected with espionage or are authorized sources outside of this country."

75 Memorandum from J. Edgar Hoover to Attorney General Biddle, 10/2/41; memorandum from Attorney General Biddle to J. Edgar Hoover, 10/22/41.

76 Memorandum from FBI to Select Committee, 3/26/76 and enclosures.

76a Memorandum from D. M. Ladd to Hoover, 5/23/45.

76b Hoover memorandum, 11/15/45; a memorandum headed "Summaries Delivered to the White House," lists over 175 reports sent to General Vaughn from this surveillance; memorandum from FBI to Select Committee, 3/26/76, and enclosures.

77 FBI memorandum from C. E. Hennrich to A. H. Belmont, 9/7/51.

78 Memorandum from the FBI to the Senate Select Committee, 9/23/75.

79 A 1944 Justice Department memorandum discussed the "admissibility of evidence obtained by trash covers and microphone surveillance," in response to a series of hypothetical questions submitted by the FBI. The memorandum concluded that evidence so obtained was admissible even if the microphone surveillance involved a trespass. (Memorandum from Alexander Holtzoff, Special Assistant to the Attorney General, to J. Edgar Hoover, 7/4/44; c.f., memorandum from Attorney General J. Howard McGrath to J. Edgar Hoover, 2/26/52.) See footnote 229 for the 1950s consideration of bugs by the Attorney General.

80 In early 1941, Director Hoover had had the following exchange with members of the House Appropriations Committee:

"Mr. LUDLOW. At the close of the present emergency, when peace comes, it would mean that much of this emergency work necessarily will be discontinued."

"Mr. HOOVER. That is correct.... If the national emergency should terminate, the structure dealing with national defense can immediately be discontinued or very materially curtailed according to the wishes of Congress." (First Deficiency Appropriation Bill, 1941, Hearings before the House Committee on Appropriations, 3/19/41, pp. 188-189.)

81 The Court held that the grave and probable danger posed by the Communist Party justified this restriction on free speech under the First Amendment:

"The formation by petitioners of such a highly organized conspiracy, with rigidly disciplined members subject to call when the leaders, these petitioners, felt that the time had come for action, coupled with the inflammable nature of world conditions, and the touch-and-go nature of our relations with countries with whom petitioners were in the very least ideologically attuned, convince us that their convictions were justified on this score." [*Dennis v. United States*, 341 U.S. 494 510-511].]

82 64 Stat. 987 (1950) The Subversive Activities Control Act's registration provision was held not to violate the First Amendment in 1961. (*Communist Party v. Subversive Activities Control Board*, 367 U.S. 1 (1961).) However, registration of Communists under the Act was later held to violate the Fifth Amendment privilege against self-incrimination. [*Albertson v. Subversive Activities Control Board*, 382 U.S. 70 (1965).] The Emergency Detention Act was repealed in 1971.

83 68 Stat. 775 (1954), 50 U.S.C. 841-844. The constitutionality of the Communist Control Act of 1954 has never been tested.

84 In light of the facts now known, the Supreme Court seems to have overstated the degree to which Congress had explicitly "charged" the FBI with intelligence responsibilities:

"Congress has devised an all-embracing program for resistance to the various forms of totalitarian aggression.... It has charged the Federal Bureau of Investigation and the Central Intelligence Agency with responsibility for intelligence concerning Communist seditious activities against our Government, and has denominated such activities as part of a world conspiracy." [*Pennsylvania v. Nelson*, 350 U.S. 497, 504-505 (1956).]

This decision held that the federal government had preempted state sedition laws, citing President Roosevelt's September 1939 statement on FBI authority and an address by FBI Director Hoover to state law enforcement officials in August 1940.

85 *Yates v United states*, 354 U.S. 298, 325 (1957).

86 Justice Douglas, who dissented on Fifth Amendment grounds, agreed with the majority on the First Amendment issue:

The Bill of Rights was designed to give fullest play to the exchange and dissemination of ideas that touch the politics, culture, and other aspects of our life. When an organization is used by a foreign power to make advances here, questions of security are raised beyond the ken of disputation and debate between the people resident here" [*Communist Party v. Subversive Activities Control Board*, 367 U.S. 1, 174 (1961).]

87 File memorandum of S. J. Spingarn, assistant counsel to the President, 7/22/50. (Spingarn Papers, Harry S. Truman Library.)

88 Executive Order 9835. 12 Fed. Reg. 1935 (1947).

89 Executive Order 10450, 18 Fed. Reg. 2489 (1953).

90 A report by a Canadian Royal Commission in June 1946 greatly influenced United States government policy. The Royal Commission stated that "a number of young Canadians, public servants and others, who begin with a desire to advance causes which they consider worthy, have been induced into joining study groups of the Communist Party. They are persuaded to keep this adherence secret. They have been led step by step along the ingenious psychological development course . . . until under the influence of sophisticated and unscrupulous leaders they have been persuaded to engage in illegal activities directed against the safety and interests of their own society." The Royal Commission recommended additional security measures, "to prevent the infiltration into positions of trust under the Government of persons likely to commit" such acts of espionage. (The Report of the Royal Commission, 6/27/46, pp. 82-83, 686-689.)

91 Memorandum from the FBI Director to the President's Temporary Commission on Employee Loyalty, 1/3/47.

92 President's Committee on Civil Rights, *To Secure These Rights* (1947), p. 52.

93 Executive order 9835, part I, section 2; cf. Executive Order 10450, Section 8 (a) (5).

94 In 1960, for instance, the Justice Department advised the FBI to continue investigating an organization not on the Attorney General's list in order to secure "additional information . . . relative to the criteria" of the employee security order. (memorandum from Assistant Attorney General I. Walter Yeagley to J. Edgar Hoover, 5/17/60.)

95 FBI "name checks" are authorized as one of the, "national agencies checks" required by Executive order 10450, section 3 (a).

96 FBI monograph, "The Menace of Communism in the United states Today", 7/29/55, pp. iv-v. See footnote 271.

97 The FBI official in charge of the Internal Security section of the Intelligence Division in the fifties and early sixties testified that the primary purpose of FBI investigations of communist "infiltration" was to advise the Attorney General so that he could determine whether a group should go on the Attorney General's list. He also testified that investigations for this purpose continued after the Attorney General ceased adding names of groups to the list. (F. J. Baumgardner testimony, 10/8/75, pp. 48-49.) See pp. 49-49 for discussion of the FBI's COMINFIL program.

98 Memoranda from the Attorney General to heads of Departments and Agencies, 4/29/53; 7/15/53; 9/28/53; 1/22/54. Groups designated prior to that time Included numerous defunct German and Japanese societies, Communist and Communist "front" organizations, the Socialist Workers Party, the Nationalist Party Of Puerto Rico, and several Ku Klux Klan organizations.

99 Executive Order 10450, section 8 (a) (5).

100 The FBI's field offices were supplied with such "thumb-nail sketches" or characterizations to supplement the Attorney General's list and the reports of the House Committee on Un-American Activities. (E.g., SAC Letter No. 60 34, 7/12/60.)

101 Executive Order 10450, section 8 (d).

102 The reference to a "full field investigation" where there was "derogatory information with respect to loyalty" did not, in the Truman order, say who would conduct the investigation. (Executive Order 9835, part I, section 4.)

103 Memoranda from J. Edgar Hoover to Attorney General Toni Clark, 3/1()/41 and 3/31/47.

104 File memorandum of George H. Elsey, 5/2/47. (Harry S. Truman Library.)

105 Memorandum from Clark Clifford to the President, 5/7/47.

106 Memorandum from Clark Clifford to the President, 5/9/47; letter from, President Truman to H. B. Mitchell, U.S. Civil Service Commission, 5/9/47, (Harry S. Truman Library.)

107 Memorandum from J. Edgar Hoover to Attorney General Clark, 5/12/47.

108 Memorandum from Clark Clifford to the President, 5/9/47. (Harry Truman Library.)

109 Eleanor Bontecou. The Federal Loyalty-Security Program (Ithaca : Cornell University Press, 1953), pp. 33-34.

110 Memorandum from J. R. Steelman, Assistant to the President, to the Attorney General, 11/3/47.

111 In a March 1949 directive on coordination of internal security President Truman approved the creation of the Interdepartmental Intelligence Conference ("IIC"). Memorandum by J. P. Coyne, Major Chronological Developments on the Subject of internal Security, 4/8/49 (Harry S. Truman Library), and NSC memorandum 17/4, 3/23/49.

112 NSC Memorandum 17/5, 6/15/49. The National Security Council was established by the National Security Act of 1947, which authorized the NSC to advise the President with respect to "the integration of domestic, foreign, and military policies" relating to the "national security." (section 101 of the National Security Act of 1947.) Under this authority, the NSC then approved a secret charter for the ICC, composed of the FBI Director (as chairman) and the heads of the three military intelligence agencies.

113 Delimitation of investigative Duties and Agreement for coordination, 2/23/49. A supplementary agreement required FBI and military intelligence officials in the field to "maintain close personal liaison," particularly to avoid "duplication in ... the use of informers." Where there was "doubt" as to whether another agency was interested in information, it "should be transmitted." (Supplemental Agreement No. 1 to the Delimitation Agreement, 6/2/49.)

114 Letter from Attorney General McGrath to Charles S. Murphy, Counsel to the President 7/11/50.

115 Statement of President Truman, 7/24/50.

115a One noted, "This is the most inscrutable Presidential statement I've seen in a long time." Another asked, "How in H-- did this get out?" A third replied, "Don't know -- I thought you were handling." Notes initialed D. Bell. SJS (S. J. Spingarn), and GWE (George W. Elsey), 7/24-25/50 (Elsey Papers, Harry S. Truman Library). Even before the statement was issued, one of these aides had warned the President's counsel that the Justice Department was attempting "an end run." [Memorandum from G. W. Elsey to Charles S. Murphy, Counsel to the President, 7/12/50. (Murphy Papers. Harry S. Truman Library .)]

116 See footnotes 19 and 22.

117 Letter from J. Edgar Hoover to Sherman Adams, Assistant to the President, 1/28/53, and attached memorandum on "FBI Liaison Activities," 1/26/53.

118 Statement of President Eisenhower, 12/15/53.

119 National Security Action Memorandum 161, Subject: U.S. Internal Security Programs, 6/9/62.

120 Memorandum from Attorney General Kennedy to J. Edgar Hoover, Chairmail, Interdepartmental Intelligence Conference, 3/5/64.

121 Memorandum from J. Edgar Hoover to Attorney General Clark, 3/5/46.

122 Memorandum from the FBI to the Senate Select Committee, 10/28/75. An indication of the breadth of the investigations is illustrated by the fact that the number of files far exceeded the Bureau's estimate of the "all time high" in Communist Party membership which was 80,000 in 1944 and steadily declined thereafter. (William C. Sullivan testimony, 11/1/75, pp. 33-34.)

123 Report to the House Committee on the Judiciary by the Comptroller General of the United States, 2/24/76, pp. 118--119.

124 Such investigations were conducted because the Communist Party had issued instructions that "sleepers" should leave the Party and go "underground," still maintaining secret links to the Party. (Memorandum from J. F. Bland to A. 11. Belmont, 7/30/58.)

"Refusal to cooperate" with an FBI agent's interview was "taken into consideration along with other facts" in determining whether to continue the investigation. (Memorandum from J. Edgar Hoover to Deputy Attorney General Peyton Ford, 6/28/51.)

125 1960 FBI Manual Section 87, p. 5.

126 1960 FBI Manual Section 87, p. 5.

127 The Supreme Court's last decision upholding a Smith Act conviction was *Scales v. United States*, 367 U.S. 203 (1961), which reiterated that there must be "advocacy of action." See *Yates v. United States*, 354 U.S. 298 (1957).

128 Memorandum from Assistant Attorney General Tompkins to Director, FBI, 3/15/56.

129 Memorandum from Assistant Attorney General Yeagley to Director, FBI, 5/17/60.

130 1960 FBI Manual Section 87, p. 5.

131 1960 FBI Manual Section 87, pp. 83-84.

132 1960 FBI Manual Section 87, pp. 5-11.

133 Annual Report of the Attorney General for Fiscal Year 1955, p. 195.

134 Annual Report for 1958, p. 338.

135 Annual Report for 1964, p. 375.

136 (Examples of such reports to the White House are set forth later, pp. 5153.) The Chief of the Internal Security Section of the FBI Intelligence Division in 1948-1966 testified that the Bureau "had to be certain" that a group's position did not coincide with the Communist line "just by accident." The FBI would not "open a case" until it had "specific information" that "the Communists were there" and were "influencing" the group to "assist the Communist movement." (F. J. Baumgardner testimony, 10/8/75 p. 47.)

137 Annual Report for 1955, p. 195.

138 For more detailed discussion of the FBI investigations of the NAACP and other civil rights groups see the Report on the Development of FBI Domestic intelligence investigations.

139 Report of Oklahoma City Field Office, 9/19/41. This report continued: "Nevertheless, there is a strong movement on the part of the Communists to *attempt* to dominate this group ... Consequently, the activities of the NAACP will be closely observed and scrutinized in the future." [Emphasis added.] This stress on Communist "attempts" rather than their actual achievements is typical of COMINFIL reports. The annual reports on the FBI's COMINFIL investigation of the NAACP indicate that the Communists consistently failed in these "attempts" at the national level, although the Bureau took credit for using covert tactics to prevent a Communist takeover of a major NAACP chapter. (Letter from J. Edgar Hoover to Attorney General-elect Robert F. Kennedy, 1/10/61 attached memorandum, subject: Communist Party, USA -- FBI Counterattack.)

140 Annual Report of the Attorney General for Fiscal Year 1959, pp. 247-249.

141 Memorandum from J. Edgar Hoover, Chairman, Interdepartmental Intelligence Conference, to McGeorge Bundy, Special Assistant to the President for National Security, 7/25/61, enclosing IIC Report, Status of Internal Security Programs.

142 William C. Sullivan testimony, 11/1/75, pp. 40-41.

143 1960 FBI Manual Section 122, p. 1.

144 SAC Letter No. 63-27, 6/11/63.

145 The FBI has denied that it ever conducted a "security-type investigation" of the Birch Society or Welch, but state the Boston field office "was instructed in 1959 to obtain background data" on Welch using public sources. (Memorandum from the FBI to the Senate Select Committee, 2/10/76.) A 1963 internal FBI memorandum stated that the Bureau "checked into the background of the Birch Society because of its scurrilous attack on President Eisenhower and other high Government officials." (Memorandum from F. J. Baumgardner to W. C. Sullivan, 5/29/63.) Reports were sent to the White House, see footnote 164.

146 Letter from Assistant Attorney General Tompkins to Sherman Adams, Assistant to the President, 11/22/54; letters from J. Edgar Hoover to Robert Cutler, Special Assistant to the President, 10/15/57, and 1/17/58. (Eisenhower Library.)

147 1960 FBI Manual Section 122, pp. 5--6.

148 1960 FBI Manual Section 122, pp. 5-6.

149 "Racial Tensions and Civil Rights," 3/1/56, statement. used by the FBI Director at Cabinet briefing, 3/9/56.

150 See p. 37 for discussion of White House wiretap requests in 1945-1948.

151 Letter from J. Edgar Hoover to George E. Allen, Director, Reconstruction Finance Corporation, 12/13/46. (Harry S. Truman Library.)

152 Letter from J. Edgar Hoover to Maj. Gen. Harry H. Vaughn, Military Aide to the President, 2/15/47. (Harry S. Truman Library.)

153 Letter from Hoover to Vaughn, 6/25/47. (Harry S. Truman Library.)

154 Letter from J. Edgar Hoover to Matthew J. Connelly, Secretary to the President, 1/27/50. (Harry S. Truman Library.)

155 Memorandum from J. Edgar Hoover to Attorney General Clark, 4/1/46. (Harry S. Truman Library.)

156 Letter from J. Edgar Hoover to 'Maj. Gen. Harry H. Vaughn, Military Aide to the President, 11/13/47. (Harry Truman Library.)

157 Letters from J. Edgar Hoover to Brig. Gen. Harry H. Vaughn, Military Aide to the President, 1/11/46 and 1/17/46. (Harry S. Truman Library.)

158 Letter from J. Edgar Hoover to George E. Allen, Director, Reconstruction Finance corporation, 5/29/49. (Harry S. Truman Library.)

159 Letter from J. Edgar Hoover to Dillon Anderson, Special Assistant to the President, 4/21/55. (Eisenhower Library.)

160 Letter from Hoover to Anderson, 3/6/56. (Eisenhower Library.)

198 Minutes of the President's Temporary Commission on Employee Loyalty, 1/17/47. (Harry S. Truman Library.)

199 Memorandum from Attorney General Clark to Mr. Vanech, Chairman, President's Temporary Commission, 2/14/47. (Truman Library.)

200 See finding (G) for a full discussion of the problem of FBI accountability.

201 Presidential Directive, Coordination of Federal Foreign Intelligence Activities 1/22/46, 11 Fed. Reg. 1337. Fears that a foreign intelligence agency would intrude into domestic matters went back to 1944, when General William Donovan head of the Office of Strategic Services (the CIA's wartime predecessor) proposed that OSS be transformed from a wartime basis to a permanent "central intelligence service." Donovan's plan was leaked to the Chicago Tribune, allegedly by FBI Director

Hoover, and it was denounced as a "super spy system" which would "pry into the lives of citizens at home." [Corey Ford, Donovan of the OSS (Boston: Little Brown, 1970), pp. 303-304.]

213 CIA Memorandum re: Project SETTER, undated (New Orleans) Memorandum from "Identity #13" to Deputy Director of Security, 10/9/57 (New Orleans) ; Rockefeller Commission Staff Summary of CIA Office Officer Interview, 3/18/75 (Hawaii).

214 Robert Andrews, Special Assistant to the General Counsel, Department Of Defense, testimony, 9/23/75, pp. 34- 40.

215 18 U.S.C. 1701-1703 (mail) ; 47 U.S.C. 605 (Federal Communications Act of 1934).

216 CIA memorandum "For the Record" from Thomas B. Abernathy, 8/21/61; Dr. Louis Tordella, former Deputy Director, National Security Agency, testimony 10/21/75, pp. 17-20.

217 High FBI officials decided to use the CIA mail opening program for "our internal security objectives" in 1958. They did not want the Bureau to "assume this coverage" itself because its "sensitive nature" created "inherent dangers" and due to its "complexity, size, and expense." Instead, the Bureau would hold CIA "responsible to share their coverage with us." (Memorandum from A. H. Belmont to Mr. Boardman, 1/22/58.) The initial FBI request to NSA involved "commercial and personal communications between persons in Cuba and tile United States." (Memorandum from W. R. Wannall to W. C. Sullivan, Assistant Director, Domestic Intelligence Division, 5/18/62.)

218 Abernathy memorandum, 8/21/61.

219 Memorandum from W. A. Branigan to W. C. Sullivan (attachment), 8/21/61.

220 Memorandum from W. A. Branigan to W. C. Sullivan, 2/15/62.

221 Select Committee Memorandum, Subject: Review of Documents at DOD Regarding LP MEDLEY 9/17/75 . ("LP MEDLEY" was the CIA's codename for this Program; the NSA codename was SHAMROCK.)

222 Secretary Forrestal's immediate successor, Louis Johnson, renewed the arrangement in 1949. To the knowledge of those interviewed by the Committee, this was the last instance in which the companies raised any question as to the authority for the arrangements. (Andrews, 9/23/75. pp. 34, 40.)

223 Richard Helms Testimony, 10/22/75, Hearings, Vol. 4, p. 84. Memorandum from Richard Helms to Sheffield Edwards, Director of Security, 5/17/54.

224 J. Edward Day Testimony, 10/22/75, Hearings Vol 4, p. 45. However, a contemporaneous CIA memorandum stated that "no relevant details" were withheld from Day when he was briefed in 1961 by CIA officials. (Memorandum from Richard Helms to Deputy Chief of the Counterintelligence Staff, 2/16/61.)

225 Helms, 10/22/75, Hearings, Vol. 4, pp, 87-89.

226 Letter from Attorney General Clark to President Truman, 7/17/46.

227 Memorandum from G. M. Elsey, Assistant Counsel to the President, to S. J. Spingarn; memorandum from Elsey to the President, 2/2/50, (Spingarn Papers. Harry S. Truman Library).

228 *Irvine v. California*, 347 U.S. 128 (1954).

229 Memorandum from Attorney General Brownell to J. Edgar Hoover, 5/20/54. In 1952 Attorney General J. Howard McGrath refused to authorize microphone surveillance involving trespass because it was "in the area of the Fourth Amendment." (Memorandum from Attorney General McGrath to J. Edgar Hoover, 2/26/52.)

230 See p. 105. (The Chief Counsel to the 'Select Committee disqualified himself from participating in Committee deliberations concerning either Mr. Katzenbach or former Assistant Attorney General Burke Marshall because of a previous attorney-client relationship with those two persons.)

231 Memorandum from J. Edgar Hoover to Deputy Attorney General Byron White, 5/4/61.

232 omitted in original.

233 In the course of an investigation, authorized by Attorney General Kennedy, into lobbying efforts on behalf of a foreign country regarding sugar quota legislation, FBI determined that Congressman Harold D. Cooley, chairman of the House Agriculture Committee, planned to meet with representatives of a foreign country in a hotel room. (FBI memorandum, 2/15/61 ; Memorandum from W.R. Wannall to W. C. Sullivan, 12/22/66.)

At the instruction of Director Hoover, the Bureau installed a microphone in the hotel room to record this meeting. (FBI memorandum, 2/15/61; Memorandum from D. E. Moore to A. 11. Belmont, 2/16/61.) The results of the meeting were subsequently disseminated to the Attorney General. (Memorandum from J. Edgar Hoover to Attorney General Kennedy, 2/18/61.)

A review of this case by FBI officials in 1966 concluded that "our files, contain no clear Indication that the Attorney General was specifically advised that a microphone surveillance was being utilized. . ." (Memorandum from Wannall to Sullivan, 12/21/66.) It was noted, however, that on the morning of February 17, 1961-- after the microphone was in place but all hour or two before the meeting actually occurred -- Director Hoover spoke with Attorney General Kennedy and, according to Hoover's contemporaneous memorandum, advised him that the Cooley meeting was to take place that day and that "we are trying to cover" it. (Memorandum from J. Edgar Hoover to Messrs. Tolson, Parsons, Mohr, Belmont, and DeLoach, 2/17/61.)

234 According to records compiled by the FBI, there was FBI microphone surveillance of one "black separatist group" in 1960; one "black separatist group" and one "black separatist group functionary" in 1961; two "black separatist groups," one "black separatist group functionary," and one "(white) racist organization" in 1962; and two "black separatist groups" and one "black separatist group functionary" in 1963. (Memorandum from FBI to Select Committee, 10/23/75.)

235 The Select Committee has determined that the FBI, on at least one occasion, maintained no records of the approval of a microphone surveillance authorized by an Assistant Director. (FBI Memorandum, 1/30/75, Subject: Special Squad at Democratic National Convention, Atlantic City, New Jersey, 8/22-28/64.)

236 Memorandum from the FBI to the Senate Select Committee, 10/17/75. This memorandum also states that, on the basis of the recollections of agents and a review of headquarters files, the FBI has "been able to identify" the following number of "surreptitious entries for microphone installations" in "internal security intelligence, and counterintelligence" investigations: 1960: 49; 1961: 63; 1962: 75; 1963: 79; and the following number of such entries "in criminal investigations" (as opposed to intelligence) 1960: 11; 1961: 69; 1962: 106; 1963: 84.

237 Memorandum from the FBI to the Senate Select Committee, 9/23/75.

238 Memorandum from W. C. Sullivan to C. D. DeLoach, 7/19/66. Subject: "Black Bag" Jobs. Initials on this memorandum indicate that it was prepared by F. J. Baumgardner, an FBI Intelligence Division Section Chief, and approved by J. A. Sizoo, principal deputy to Assistant Director W. C. Sullivan. This memorandum was located in Director Hoover's "Official and Confidential" files, and it appears that the memorandum was shifted from Hoover's "Personal Files" shortly before his death. (Helen Gandy deposition, 11/12/75, pp. 4-6.) The FBI compiled a list of the "domestic subversive" targets, based "upon recollections of Special Agents who have knowledge of such activities, and review of those files identified by recollection as being targets of surreptitious entries." The list states "at least fourteen domestic subversive targets were the subject of at least 238 entries from 1942 to April 1968. In addition, at least three domestic subversive targets were the subject of numerous entries from October 1952 to June 1966. . . . One white hate group was the target of an entry in March 1966." The Bureau admits that this list is "incomplete." (Memorandum from the FBI to the Senate Select Committee, 9/23/75.)

239 Deposition of William R. Branigan, Section Chief, FBI Intelligence Division, 10/9/75, pp. 13, 39, 40. Testimony of Assistant Director W. Raymond Wannall, FBI Intelligence Division, 10/24/75, Hearings, vol. 4, pp. 148-9.

240 Memorandum from San Francisco field office to FBI Headquarters, 3/11/60.

241 Memorandum from S. B. Donahoe to W. C. Sullivan, 9/15/61 ; Memorandum from San Francisco field office to FBI headquarters, 7/28/61.

242 Letter from Attorney General Clark to President Truman, 7/17/46.

243 Memorandum from Hoover to Brownell, 12/31/56.

244 Memorandum from Hoover to Kennedy, 10/9/63.

245 Memorandum from Hoover to Kennedy, 4/1/64.

246 Memorandum from Hoover to Kennedy, 2/24/64.

247 See Findings C and G and Committee Report on the FBI and Dr. Martin Luther King, Jr.

248 Memorandum from R. D. Cotter to W. C. Sullivan, 12/15/66. On the same day, and without specific authorization from the Attorney General, the FBI Placed a wiretap on Norman's residence. Attorney General Kennedy was informed of the wiretap two days later, and approved it the following day. (Memorandum from J. Edgar Hoover to Attorney General Kennedy, 6/29/61.) The tap continued for four days until Norman went on vacation. (Memorandum from S. B. Donahoe to W. C. Sullivan, 7/3/61.) At no time did this or any other aspect of the FBI's investigation produce any evidence that Norman had actually obtained classified information. An FBI summary stated: "The majority of those interviewed thought a competent, well-informed reporter could have written the article without having reviewed or received classified information." (Memorandum from Cotter to Sullivan, 12/15/66.)

249 Memorandum from J. Edgar Hoover to Attorney General Kennedy, 7/27/62.

250 Memorandum from J. Edgar Hoover to Attorney General Kennedy, 7/31/62. The tap on the secretary lasted three weeks, and the tap on Baldwin a month. Memoranda from W. R. Wannall to W. C. Sullivan, 8/13/62 and 8/28/62.

251 Unaddressed memorandum from A. H. Belmont, 1/9/63.

252 Memorandum from J. Edgar Hoover to Attorney General Kennedy, 10/19/62.

253 Unaddressed memorandum from "hwg" (Director Hoover's secretary was Helen W. Gandy), 1/9/63. This memorandum reads: "Mr. Belmont called to say (Courtney) Evans spoke to the Attorney General replacing the tech on [former FBI agent] again, and the Attorney General said by all means do this. Mr. Belmont has instructed New York to do so." (Assistant Director Courtney Evans was the FBI's normal liaison with Attorney General Kennedy.)

254 Memorandum from W. R. Wanall to W. C. Sullivan, 12/22/66. The Sugar Lobby investigation is also discussed at footnote 233.

255 Memorandum from A. H. Belmont to Mr. Parsons, 2/14/61.

256 Memorandum from J. Edgar Hoover to Attorney General Kennedy, 2/14/61.

257 Memorandum from Hoover to the Attorney General, 2/16/61.

258 Memorandum from Hoover to the Attorney General, 2/16/61.

259 According to a memorandum of a meeting between Attorney General Kennedy and Courtney Evans, Kennedy stated that "now the law was passed he did not feel there was justification for continuing this extensive investigation." (Memorandum from C. A. Evans to Mr. Parsons 4/14/61.) The investigation did discover possibly unlawful influence was being exerted by representatives of the foreign country involved, but it did not reveal that money was actually being passed to any Executive or congressional official. (Memorandum from Wannall to Sullivan, 12/22/66.)

260 FBI letterhead memoranda, 6/15, 18, 19/62.

261 Memorandum from J. Edgar Hoover to the Attorney General, 6/26/62.

262 The wiretap on the House Committee Clerk had "produced no information of value." While there is no indication that the other wiretaps, including five directed at foreign targets, produced evidence of actual payoff.,, they did reveal that possibly unlawful influence was again being exerted by the foreign government, and internal Bureau permission was obtained to continue them for sixty day.,; beyond the initial thirty-day period. (Memorandum from W. R. Wan nail to W. C. Sullivan, 8/16/62.)

263 A White House "briefing paper," prepared in February 1961, stated, "It is thought by some informed observers that the outcome of the sugar legislation which comes up for renewal in the U.S. Congress in March 1961 will be all-important to the

future of U.S./ (foreign country) relations." (Memorandum from Richard M. Bissell, Jr. to McGeorge Bundy, 2/17/61.) Another White House "briefing memorandum" in June 1962 stated, "The action taken by the House of Representatives in passing the House Agriculture Committee bill (The Cooley bill) has created a furor in the (foreign country) . . ." Officials of that country said that the legislation "would be disastrous" to its "economy." (Memorandum from William H. Brubeck to McGeorge Bundy and Myer Feldman, 6/23/62.) (JFK Library.)

264 See Finding on Political Abuse, pp. 233, 234. The wiretapping of American citizens in these instances could only serve "intelligence," rather than law enforcement purposes, since any criminal prosecution (i.e., for bribery) would have been "tainted" by the warrantless wiretaps. [Coplon v. United States, 185 F. 2d 629 (1950), 191 F. 2d 749 (1951).]

265 The circumstances indicating this possibility and the eventual determination that the allegation was unfounded are set forth in a memorandum from Director Hoover to Attorney General Kennedy in 1964. (Hoover to Kennedy, 5/4/64 and enclosure. (John F. Kennedy Library) )

266 The FBI requested the wiretap on the editor and an accompanying tap on a Washington attorney in contact with the editor because of its concern about possible "leaks" of information about FBI loyalty-security investigations of government officials. Director Hoover advised that publication of this "classified information" constituted "a danger to the internal security of the United States." (Memorandum from Hoover to Katzenbach, 4/19/65.) However, in 1964 Director Hoover had volunteered to Attorney General Kennedy information about the Publication of the book alleging impropriety. The author himself had supplied information about the book to the FBI. (Memoranda from Hoover to Attorney General Kennedy, 7/8/64 and 7/15/64.)

267 Testimony of William C. Sullivan, Assistant Director for the Domestic Intelligence Division (1961-1970) and Assistant to the Director (1970-1971), 11/1/75, pp. 42-43.

268 Memorandum from A. H. Belmont to L. V. Boardman, 8/28/56.

269 Memorandum from D. M. Ladd to J. Edgar Hoover, 2/27/46. According to this memorandum the underlying reason for such Bureau propaganda was to anticipate and counteract the "flood of propaganda from Leftist and so-called Liberal sources" which would "be encountered in the event of extensive arrests of Communists" if war with the Soviet Union broke out.

270 Belmont to Boardman, 8/28/56.

271 A Bureau monograph in mid-1955 "measured" the Communist Party threat as:

"Influence over the masses, ability to create controversy leading to confusion and disunity, penetration of specific channels in American life where public opinion is molded, and espionage and sabotage *potential*." [Emphasis supplied.] (Letter from J. Edgar Hoover to Dillon Anderson, Special Assistant to the President, 7/29/55, and enclosed FBI monograph, "The Menace of Communism in the United States Today," pp. iv-v.)

The FBI official who served as Director Hoover's liaison with the CIA in the 1950s stated that "the Communist Party provided a pool of talent for the Soviet [intelligence] services" in the "30s and into the 40s." During that period the Soviets recruited agents "from the Party" to penetrate "the U.S. Government" and "scientific circles." He added, however, that "primarily because of the action and counter-action taken by the FBI during the late 40s, the Soviet services changed their tactics and considerably reduced any programs or projects designed to recruit CP members, realizing or assuming that they were getting heavy attention from the Bureau." (Testimony of former FBI liason with CIA, 0/22/75, p. 32.)

272 Belmont to Boardman, 8/28/65.

273 Belmont to Boardman, 9/5/56; memorandum from FBI headquarters to SAC, New York, 9/6/56.

274 E.g., Yates v. United States, 354 U.S. 298 (1957).

275 Deposition of Supervisor, Internal Security Section, FBI Intelligence Division, 10/16/75, pp. 10, 14.

276 Memorandum from FBI Headquarters to New York field office, 3/31/60.

277 Memorandum from FBI Headquarters to San Francisco field office. 4/16/64.

278 Memorandum from FBI Headquarters to Cleveland field office, 11/6/64.

279 Forty-five actions were approved by FBI Headquarters tunder the SWP COINTELPRO from 1961 until it was discontinued in 1969. The SWP program Was then subsumed under the New Left COINTELPRO, see pp. 88-89.

280 Memorandum from Director, FBI, to New York field office, 10/12/61.

281 Memorandum from the Attorney General to Heads of Departments and Agencies, 4/29/53.

282 Report of the National Advisory Commission on Civil Disorders (1968), ch. 2; Report of the National Commission on the Causes and Prevention of Violence (1969) ; Report of the President's Commission on Campus Unrest (1970).

283 SAC letter 67-27, 5/3/66.

284 See p. 50.

285 1964 FBI Manual section 122, p. 1.

286 1965 FBI Manual section 122, pp. 6-8.

287 FBI Manual Section 122, revised 12/13/06, pp. 8-9.

288 Memorandum from FBI Headquarters to all SACs, 8/25/67.

289 Memorandum from FBI Headquarters to all SACs, 3/4/68.

290 SAC Letter 68-16, 3/12/68, Subject: Congress of Racial Equality.

290a SAC Letter 68-25, 4/30/68.

291 SAC Memorandum 1-72; 5/23/72, Subject: Reporting of Protest Demonstrations

292 Supervisor, FBI Intelligence Division, deposition, 10/28/75, pp. 7-8.

293 SAC Letter 68-21, 4/2/68. This directive did caution that "mere dissent and opposition to Governmental policies pursued in a legal constitutional manner" was "not sufficient to warrant inclusion in the Security Index." Moreover, "anti-Vietnam or peace group sentiments" were not, in themselves, supposed to "justify an investigation." The failure of this admonition to achieve its stated objective is discussed in the findings on "Overbreadth" and "Covert Action to Disrupt."

294 Memorandum from C. D. Brennan to W. C. Sullivan, 5/9/68.

295 Memorandum from FBI Headquarters to all SACs, 10/28/68, and enclosure, New Left Movement -- Report outline.

296 A further reason for collecting information on the New Left was put forward by Assistant Director[Brennan, head of the FBI intelligence Division in 1970-1971. Since New Left "leaders" had "publicly professed" their desire to overthrow the Government, the Bureau should file the names of anyone who "joined in membership" for "future reference" in case they ever "obtained a sensitive Government position." (Charles Brennan testimony, 9/25/75, Hearings Vol. 2, pp. 116-117.)

297 Memorandum from Minneapolis field office to FBI Headquarters, 4/1/70.

298 Memorandum from FBI Headquarters to Pittsburgh field office, 5/1/70.

299 Memorandum from Mobile field office to FBI Headquarters, 12/9/70.

309 1971 FBI manual, Section 122, p. 2.

310 Memorandum from FBI Executive Conference to Mr. Tolson, 10/29/70.

311 Memorandum from FBI Headquarters to all SACs. 11/4/70.

312 Memorandum from G. C. Moore to William C. Sullivan, 10/11/67. For Attorney General Clark's order, see pp. 83-84.

313 Memorandum from FBI to Select committee, 8/20/75 and enclosures.)

314 Memorandum from G. C. Moore to E. S. Miller, 9/8/72.

315 Memorandum from G. C. Moore to C. D. Brennan, 10/27/70.

316 Memorandum from Moore to Miller, 9/27/72. This program continued until 1973, when the FBI decided to rely on its regular extremist informants "for 'by-product' information on civil unrest." The most "productive" ghetto informants were "converted" into regular informants. (FBI Inspection Division Memorandum, 11/24/72; Memorandum from Director Clarence M. Kelley to all SACs, 7/31/73.)

317 Philadelphia Field Office memo 8/12/68, re Racial Informant.

318 FBI Manual Section 87.

319 Testimony of FBI Special Agent, 11/20/75, p. 55.

320 Staff review of informant report summaries.

321 Mary Jo Cook, testimony, 12/2/75, Hearings, Vol. 6, pp. 111, 119-120.

322 Report of Kansas City Field Office, 10/20/70.

323 Memorandum from New York Field Office to FBI Headquarters, 5/28/69.

324 Memorandum from Assistant Attorney General J. Walter Yeagley to J. Edgar Hoover, 3/3/69. This memorandum stated that the Department was considering "conducting a grand jury investigation" under the antiriot act and other statutes.

325 Memorandum from FBI Headquarters to all SACs, 4/17/70. This directive defined a "commune" as "a group of individuals residing in one location who practice communal living, i.e., they share income and adhere to the philosophy of a Marxist-Leninist-Maoist-oriented violent revolution."

326 SAC Letter 70-48, 9/15/70. This directive implemented one provision of the "Huston Plan," which had been disapproved as a domestic intelligence package. See pp. 113, 116.

327 See Memorandum for the Record from Milton B. Hyman, Office of the General Counsel, to the Army General Counsel, 1/23/71, in Military Surveillance, Hearings before the Subcommittee on Constitutional Rights, Committee on the Judiciary, United States Senate, 93rd Cong., 2nd Sess. (1974), p. 203.

228 Federal Data Banks, Computers and the Bill of Rights, Hearings before the Senate Subcommittee on Constitutional Rights (1971), at pp. 1120-1121.

329 Federal Data Banks. Hearings, at pp. 1123-1138.

330 President's Commission on Law Enforcement and Administration of Justice, The Challenge of Crime in a Free Society (1967), pp. 118-119.

331 Fred M. Vinson testimony, 1/27/76, p. 32.

332 Report of the National Advisory Commission on Civil Disorders (1968), p. 487 (Bantam Books ed.).

333 Report of the National Advisory Commission, p. 490.

334 SAC Letter 69-16, 3/11/69 . This order "recognized that with the graduation of senior classes, you will lose a certain percentage of your existing student informant coverage." But this would "not be accepted as an excuse for not developing the necessary information."

335 SAC Letter 69-44, 8/19/69.

336 Improper Police Intelligence Activities, A Report by the Extended March 1975 Cook County (Illinois) Grand Jury, 11/10/75.

337 Califano testimony, 1/27/76, pp. 6-9. Califano states in retrospect that the attempt to "predict violence" was "not a successful undertaking," that "advance intelligence about dissident groups" would not "have been of much help," and that what is "important" is "physical intelligence about geography, hospitals, power stations, etc." (Califano, 1/27/76, pp. 8, 11-12.)

338 In 1966, the Justice Department had started an informal "Summer Project," staffed by a handful of law students, to pull together data from the newspapers, the U.S. Attorneys, and "some Bureau material" for the purpose, according to former Assistant Attorney General Fred Vinson, Jr., of finding out "what's going on in the black community." (Vinson, 1/27/76 p. 33.)

339 Memorandum from Assistant Attorney General John Doar to Attorney General Clark, 9/27/67.

340 Memorandum from Messrs. Maroney, Nugent, McTiernan, and Turner to Attorney General Clark, 12/6/67.

341 Memorandum from Attorney General Clark to Assistant Attorneys General John Doar, Fred Vinson, Jr., Roger W. Wilkins, and J. Walter Yeagley, 12/18/67.

342 Memorandum from Attorney General Clark to Kevin T. Maroney, et al., 11/9/67.

343 Testimony of Kevin T. Maroney (Deputy Assistant Attorney General), 1/27/76, pp. 59-60.

344 Memorandum from Assistant Attorney General Yeagley to Deputy Attorney General Richard Kleindienst, 2/6/69.

345 Justice Department memorandum from James T. Devine, 9/10/70, Subject: Interdivisional Information Unit.

346 Statement of Deputy Attorney General Laurence H. Silberman, Justice Department, 1/14/75. According to this statement, a Justice Department inquiry in 1975 concluded that Leonard "initiated the transaction by requesting the CIA to check against its own sources whether any of the Individuals on the IDIU list were engaged in foreign travel, or received foreign assistance or funding."

347 Staff Memorandum for the Subcommittee on constitutional Rights, United States Senate, 9/14/71.

348 See detailed report on Martin Luther King, Jr.

349 Manual, Section 87.

350 The Bureau frequently disseminated reports on the NAACP to military intelligence because (as one report put it) of the latter's "interest in matters pertaining to infiltration of the NAACP." (Report from Los Angeles Field Office to FBI Headquarters, 11/5/65.) All the national officers and board members were listed, and any data in FBI files on their past "association" with "subversives" was included. Most of this information went back to the 1940's. (Report from New York Field Office to FBI Headquarters, 4/15/65.) When changes occurred in the NAACP's leadership and board, the Bureau once again went back to its files to dredge up "subversive" associations from the 1940's. (Report from New York Field Office to FBI Headquarters, 4/15/66.) Chapter member information was sometimes obtained by "pretext telephone call ... utilizing the pretext of being interested in joining that branch of the NAACP." (Memorandum from Los Angeles field office to FBI Headquarters, 11/5/65.) As discussed previously, the Bureau never found that the NAACP had abandoned its consistent anti-Communist policy. (See p. 49).

351 See examples of the exaggeration of Communist influence set forth in Findings on Political Abuse. Such distortion continues today. An FBI Intelligence Division Section Chief told the Committee that he could not "think of very many" major demonstrations in this country in recent years "that were not caused by" the Communist Party or the Socialist Workers Party. In response to questioning, the Section Chief listed eleven specific demonstrations since 1965. Three of these turned out to be principally SDS demonstrations, although some individual Communists did participate in one of them. Six others were organized by the National (or New) Mobilization Committee, which the Section Chief stated was subject to Communist and Socialist Workers Party "influence." But the Section Chief admitted that the mobilization Committee "probably" included a wide spectrum of persons from all elements of American society. (R. L. Shackelford deposition, 2/13/76, pp. 3-8.) The FBI has not alleged that the Socialist Workers Party is dominated or controlled by any foreign government. (Shackelford testimony, 2/6/76, pp. 73-77, 114.)

352 See Sections B-3 and C-2.

353 Memorandum from Director, FBI, to Assistant Attorney General Burke Marshall (Civil Rights Division), 12/4/62.

354 Memorandum from St. J. B. (St. John Barrett) to Burke Marshall, 6/18/63.

355 Memorandum from J. Edgar Hoover to Attorney General Robert Kennedy, 7/11/63.

356 Memorandum from Carl W. Gabel to Burke Marshall, 7/19/63. This memorandum described twenty-one such "racial matters" in ten states, including states outside the South such as Ohio, New Jersey, Pennsylvania, Indiana, and Nevada. While some of the items in this and later summaries related to violent or potentially violent protest demonstrations, they went beyond those limits to include entirely peaceful protest activity and group activities (such as conferences, meetings, leadership changes) unrelated to demonstrations. (Memoranda from Gabel to Marshall, 7/22 and 7/25, 8/2 and 8/22/63.) The Justice Department's role in expanding FBI Intelligence operations against the Klan is discussed at pp. \_\_\_\_

357 Telegram from Attorney General Kennedy to U.S. Attorneys, 5/27/63.

358 The basis for the inquiry was explained in the most general terms: "Keeping the Peace In this country is essentially the responsibility of the state government. Where lawless conditions arise, however, with similar characteristics from coast to coast, the matter is one of national concern even though there is no direct connection between the events and even though no Federal law is violated." (Text Of FBI Report on Recent Racial Disturbances, New York Times, 9/27/64.)

359 Memorandum from Attorney General Katzenbach to President Johnson, 8/17/65.

360 See p.. 71.

361 Remarks of the President, 7/29/67, in Report of the National Advisory Commission on Civil Disorders (1968), p. 537 (Bantam Books ed.)

362 Executive Order 11365 7/29/67.

363 Memorandum from C. D. DeLoach to Mr. Tolson, 8/1/67, Subject: Director's Testimony Before National Advisory Commission on Civil Disorders. This memorandum indicates that, following this testimony, Director Hoover ordered his subordinates to intensify their collection of intelligence about "vociferous rabble-rousers." The creation thereafter of a "Rabble Rouser Index" is discussed at pp. 89-90.

364 Memorandum from Attorney General Ramsey Clark to J. Edgar Hoover, 9/14/67.

365 Memorandum from Assistant Attorney General John Doar to Attorney General Clark, 9/27/67.

366 Memorandum from Clark to Hoover, 9/14/67.

367 Clark to Hoover, 9/14/67. The Department's establishment of a special unit for Intelligence evaluation Is discussed at pp. 115-116.

368 SAC Letter 67-72, 10/17/67. The scope of the "ghetto informant program" Is described at pp. 75-76.

369 Memorandum from Joseph Califano to the President, 1/18/68. Those present were Attorney General Clark, Deputy Attorney General Warren Christopher, Deputy Secretary of Defense Paul Nitze, Acting Army General Counsel Robert Jordan, and Presidential assistants Matthew Nimetz and Califano.

370 Memorandum from the Army General Counsel to the Under Secretary of the Army, 1/10/68. Former Army Chief of Staff Harold K. Johnson has said that there were several other meetings at the White House where the Army was urged to take a greater role in the civil disturbance collection effort. (Staff summary Of Harold K. Johnson Interview, 11/18/75.)

371 Federal Data Banks, Hearings, at p. 1137 on at least one occasion, Deputy Attorney General Warren Christopher thanked an Army intelligence officer for reports and daily summaries. (Letter from Deputy Assistant General Christopher to Maj. Gen. William P. Yarborough, Assistant Chief of Staff for Intelligence, 5/15/68.) The Justice Department's intelligence analysis unit received "army intelligence reports" during 1968 on persons and groups involved in "racial agitation." (Memorandum from Assistant Attorney General J. Walter Yeagley to Deputy Attorney General Richard G. Kleindienst. 2/6/69.)

372 Memorandum from Secretary of Defense Melvin Laird and Attorney General John N. Mitchell to the President, 4/1/69, Subject: Interdepartmental Action Plan for Civil Disturbances. This reflected a failure on the part of the Army General Counsel to persuade the Justice Department to relieve the Army of its domestic intelligence-gathering role. (Memorandum from Robert E. Jordan, Army General Counsel, to the Secretary of the Army, Subject: Review of Civil Disturbance Intelligence History, in Military Surveillance, Hearings, p. 296.)

373 Letter from Robert E. Lynch, Acting Adjutant General of the Army, to subordinate commands, 6/9/70, Subject: Collection, Reporting, Processing, and Storage of Civil Disturbance information.

See discussion of the termination of this program in Section III ["Terminations" Sub-finding under "Accountability and Control"].

374 Agreement Between the Federal Bureau of investigation and the Secret Service Concerning Presidential Protection, 2/3/65. The FBI was to report to Secret Service information about "subversives, ultra-rightists, racists and fascists" who expressed "strong or violent anti-U.S. sentiment" or made "statements indicating a propensity for violence and antipathy toward good order and government."

These reporting standards were modified in 1971 to require the FBI to refer to Secret Service: "Information concerning civil disturbances, anti-U.S. demonstrations or incidents or demonstrations against foreign diplomatic establishments;" and "Information concerning persons who may be considered potentially dangerous to individuals protected by the [Secret Service] because of their -- participation in groups engaging in activities inimical to the United States." With respect to organizations, the FBI reported information on their "officers," "size," "goals," "source of financial support," and other "background data." (Agreement Between the Federal Bureau of Investigation and the United States Secret Service Concerning Protective Responsibilities, 11/26/71.)

375 Investigative Guidelines: Title XI, Organized Crime Control Act of 1970, Regulation of Explosives.

376 FBI Inspection Report, Domestic Intelligence Division, August 17-September 9, 1971, pp. 224-38.

377 Memoranda from FBI headquarters to all SAC's, 9/2/64; 8/25/67; 5/9/68

378 See pp. 74-75.

379 Memorandum from J. H. Gale to Mr. Tolson, 7/30/64 (Gale was Assistant Director for the Inspection Division).

380 Memorandum from FBI Headquarters to all SACs, 9/2/64.

381 The average of 40 "White Hate" actions per year may be compared to an average of over 100 per year against the Communist Party from 1956-1971 (totalling 1636). Exhibit 11, Hearings, vol. 6, p. 371.

382 These techniques and those used against the other target groups referred to below are discussed in greater detail in the COINTELPRO detailed report and in the Covert Action section of the Findings, Part III, p. 211.

383 Memorandum from FBI Headquarters to all SACs, 8/25/67.

384 Memorandum from FBI Headquarters to all SACS. 3/4/68.

385 Memorandum from FBI Headquarters to SACS. 11/25/68.

386 The average was over 90 per year. (Exhibit 11. Hearings, Vol. 6, p. 371.)

387 Memorandum from C. D. Brennan to W. C. Sullivan, 5/9/68.

388 C. D. Brennan to W. C. Sullivan, 5/9/68.

389 Supervisor, FBI Intelligence Division, 10/28/75, p. 39.

390 Memorandum from FBI Headquarters to all SACS, 5/23/68.

391 Memorandum from FBI Headquarters to all SACS, 10/9/68.

392 Memorandum from FBI Headquarters to all SACS, 7/6/68.

393 Approximately 100 per year (Exhibit 11, Hearings, Vol. 6, P. 371.).

393a Memorandum from C. D. DeLoach to Mr. Tolson, 8/1/67. (At the meeting, a Commission member had asked the Bureau to "identify the number of militant Negroes and whites.")

394 Memorandum from C. D. Brennan to W. C. Sullivan, 8/3/67; SAC Letter 67-56, 9/12/67.

410 C. D. Brennan to W. C. Sullivan, 4/30/68.

411 C. D. Brennan to W. C. Sullivan, 4/30/68.

412 Memorandum from J. Edgar Hoover to J. Walter Yeagley, 5/1/68; Yeagley to Hoover, 6/17/68.

413 Among the criteria specifically approved by the Justice Department which went beyond the statutory standard of reasonable likelihood of espionage and sabotage were the expanded references to persons who have "anarchistic or revolutionary beliefs" and are "likely to seize upon the opportunity presented by a national emergency" to commit acts which constitute "interference with" the "effective operation of the national, state and local governments and of the defense effort." (Assistant Attorney General Frank M. Wozencraft, Office of Legal Counsel, to Assistant Attorney General J. Walter Yeagley, Internal Security Division, 9/9/68.) The standards as approved were transmitted to the FBI, and its Manual was revised accordingly. (Yeagley to Hoover, 9/19/68; Hoover to Yeagley, 9/26/68; FBI Manual, Section 87, p. 45, revised 10/14/68.) The FBI still maintained its Reserve Index, unbeknownst to the Department.

414 One of the express purposes was to use tax information to "expose" the Klan Members "within the Klan organization for] publicly by showing income beyond their means," (Memorandum from F. J. Baumgardner to W. C. Sullivan, 5/10/65.) Disclosure of tax information "publicly" or "within the Klan organization" is prohibited by statute.

415 Memorandum from D. O. Virdin to H. E. Snyder, 5/2/68. Subject: Inspection Of Returns by FBI

439 Liaison, 9/22/75, p. 52. "Central intelligence Agency operations in the United States,, FBI-CIA Memorandum of Understanding, 2/7/66.

440 Liaison, 9/22/75, p. 55

441 Liaison, 9/22/75, PI). \*57-58. These "internal security" aspects of the 1966 FBI-CIA agreement were not the only pre-CHAOS arrangements bringing the CIA into liaison with the FBI. For example, as early as 1963 the FBI Manual was revised to state that information concerning "proposed travel abroad" by domestic "subversives" was to be "furnished by the Bureau to the Department Of State" and the "Central Intelligence Agency:" and field offices were advised to recommend the "extent of foreign investigation" which was required. (FBI Manual Section 87, p. 33a, revised 4/15/63.)

442 President Ford's Executive Order 11905, 2/18/76. This order, discussed more fully in Part IV, Recommendations, in effect reinforces the 1966 FBI-CIA agreement and defines CIA counterintelligence duties abroad to include "foreign subversion" directed against the United States.

443 The National Security Council Intelligence Directives, or NSCIDs, have been promulgated by the National Security Council to provide the basic organization and direction of the intelligence agencies.

468 Rockefeller Commission Report, p. 23.

469 Agent 1. Contact Report, Volume 11, Agent 1 file.

470 50 U. S.C. 403 (d) (3).

471 Lawrence Houston testimony, Rockefeller Commission, 3/17/75, pp. 1654-1655.

472 Rockefeller Commission Report, pp. 162-166.

473 According to a "memorandum for the record" sent by CIA General Counsel Lawrence R. Houston to Deputy Attorney General William P. Rogers in 1954, an agreement was reached at that time allowing the CIA to investigate on its own any "actual or probable violation of criminal statutes" involving the CIA's "covert operations" and to determine for itself, without consulting the Justice Department, whether there were "possibilities for prosecution." The Justice Department would not be informed if the CIA decided that there should be no prosecution on the ground that it might lead to "revelation of highly classified information." (Memorandum from Houston to Rogers, 3/1/54, and enclosed memorandum from Houston to the Director of Central Intelligence, 2/23/54.)

This practice was reviewed and re-confirmed internally within the CIA on at least two subsequent occasions. (Memorandum from Houston to the Assistant to the Director, CIA, 1/6/60; memorandum from Houston to the Deputy Director of Central Intelligence, 6/10/64.) It was not terminated until 1975. (Memorandum from John S. Warner, CIA General Counsel, for the record, 1/31/75.)

474 These CIA activities, Projects MERRIMACK and RESISTANCE, were described in great detail by the Rockefeller Commission. (Rockefeller Commission Report. Chg. 12 and 13.)

477 The Rockefeller Commission Report describes two cases in which telephones of three newsmen were tapped ... [One] occurred in 1962, apparently with the knowledge and consent of Attorney General Kennedy." (Rockefeller Commission Report, p. 164.)

478 Memorandum from President Truman to Secretary of Defense, 10/24/52.

479 General Lew Allen testimony, 10/29/75, Hearings, Vol. 2, p. 6.

480 Allen, 10/29/75, Hearings, vol. 2, p. 11. The programs of NSA are discussed further in the succeeding section, "Intrusive Techniques," p. 183.

481 omitted in original.

482 omitted in original.

494 Memorandum from Hoover to Katzenbach, 3/3/65.

495 Memoranda from Hoover to Katzenbach, 5/17/65, 10/19/65, 12/1/65.

496 For example, Clark turned down FBI requests to wiretap the National Mobilization Committee Office for Demonstrations at the Democratic National Convention in Chicago in 1968. (Memoranda from Hoover to Clark 3/11/68, 3/22/68, 6/11/68). Clark decided that there was not "an adequate demonstration of a direct threat to the national security." (Clark to Hoover, 3/12/68) (These memoranda appear at Hearings, Vol. 6, pp. 740-755.

497 Clark has stated that he denied requests "to tap Abba Eban when he was on a visit to this country, an employee of the United Nations Secretariat, the Organization of Arab Students in the U.S., the Tanzanian Mission to the U.N., the office of the Agricultural Counselor at the Soviet Embassy and a correspondent of TASS." [Statement of Former Attorney General Ramsey Clark, Hearings before the Subcommittee on Administrative Practice and Procedure, Committee on the Judiciary, United States Senate (1974).]

498 *Katz v. United States*, 397 U.S. 347 (1967). This case explicitly left open the question of warrantless electronic surveillance in "situation(s) involving the national security." (397 U.S., at 358 n. 23.)

499 19 U. S.C. 2511 (3).

500 See *United States v. United States District Court*, 407 U.S. 297 (1972).

501 Memorandum from Hoover to Attorney General Mitchell, 3/16/70.

502 See Findings C and E, pp. 183 and 225.

503 For example, at one time in March 1971 the FBI was conducting one microphone surveillance of Black Panther Party leader Huey Newton, seven wiretaps of Black Panther Party offices including Newton's residence, one wiretap on another black extremist group, one wiretap on Jewish Defense League headquarters, one wiretap on a "New Left extremist group", and two wiretaps on "New Left extremist activities." (Memorandum from W. R. Wannall to C. D. Brennan, 3/29/71, printed in Hearings, Vol. II, pp. 270-271.)

503a Memoranda from Hoover to Attorney General Mitchell, 11/5/69 and 11/7/69. This and other aspects of electronic surveillance in this period are discussed in Findings C and E in greater detail, pp. 183 and 225.

504 United States v. United States District Court. 407 U.S. 297 (1972).

505 United States v. United States District Court, 407 U.S., at 309 (1972).

506 Memorandum from William Olson to Elliott Richardson, June 1973. Until 1975, however, the Justice Department stretched the term "connection with a foreign Power" to include domestic groups, such as the Jewish Defense League, whose protest actions against a foreign nation were believed to threaten the United States, relations with that nation. [Zweibon v. Mitchell, 516 F. 2d 594 (D.C. Cir. 1975).]

507 Memorandum from FBI/CIA Liaison Agent to D. J. Brennan, 1/16/69.

508 Routing Slip from J. Edgar Hoover to James Angleton (attachment), 3/10/72.

509 DOD Cable, Yarborough to Carter, 10/20/67.

510 NSA's name, for example, was to be kept off any of the disseminated "product."

511 MINARET Charter, 7/1/69.

512 W. R. Wannall (FBI Assistant Director for Intelligence), 10/3/75, p. 13. "The feeling is that there was very little in the way of good product as a result of our having supplied names to NSA."

513 Memorandum from Hoover to Katzenbach, 9/14/65. This memorandum dealt specifically with electronic surveillance and did not mention mail openings or "Black Bag Jobs." Hoover said the FBI had "discontinued" microphone surveillances (bugs), a restriction which Attorney General Katzenbach said went too far. (Katzenbach to Hoover 9/27/65.)

514 omitted in original.

515 Memorandum from A. H. Belmont to Mr. Tolson, 2/27/65. Katzenbach testimony, 12/3/75. Hearings, Vol. 6. p. 204.

516 Memorandum from A. H. Belmont to C. Tolson, 2/27/65.

517 Hoover Note on Belmont Memorandum to Tolson, 2/27/65.

518 Memorandum from Hoover to Tolson, et al., 3/2/65.

519 Katzenbach testimony, 12/3/75, Hearings, Vol. 6, pp. 205-206.

520 Memorandum from DeLoach to Tolson, 1/21/66.

521 Memorandum from DeLoach to Tolson, 1/10/66.

522 Memorandum from M. A. Tones to Robert Wick, 1/11/66.

523 Memorandum from DeLoach to Tolson, 1/21/66.

524 C. D. Brennan deposition, 9/23/75, p. 42.

525 According to FBI records and the recollections of Bureau agents, the following number of microphone surveillances involving "surreptitious entry" were installed in "internal security, intelligence, and counterintelligence" investigations: 1964: 80; 1965: 59; 1966: 4; 1967: 0; 1968: 9; 1969: 8; 1970: 15; 1971: 6; 1972: 22; 1973: 18; 1974: 9; 1975: 13. The similar figures for "criminal investigations" (including installations authorized by judicial warrant after 1968) are: 1964: 83; 1965: 41; 1966: 0; 1967: 0; 1968: 0; 1969: 3; 1970: 8; 1971: 7; 1972: 19; 1973: 27; 1974: 22; 1975: 11. (Memorandum from FBI to Select Committee, 10/17/75.)

526 Hoover note on memorandum from Sullivan to DeLoach, 7/19/66. This memorandum cited as a "prime example" of the utility of a "black bag jobs" a break-in to steal records of three high-ranking Klan officials relating to finances and membership which "we have been using most effectively to disrupt the organization."

527 Wannall, 10/13/75, pp. 45-46. There is to this day no formal order prohibiting FBI mail-opening, although Assistant Director Wannall contended that general FBI Manual instructions now applicable forbid any unlawful technique.

528 These techniques were not prohibited by law. Their use was banned in all cases, including serious criminal investigations and foreign counterintelligence matters. (memorandum from W. C. Sullivan to A. 11. Belmont, 9/30/64.) Mail covers, which may be used to identify from their exteriors certain letters which can then be opened with a judicial warrant, were reinstituted with Justice Department approval in 1971. (Memorandum from Hoover to Mitchell, 7/27/71; Memorandum from Assistant Attorney General Will Wilson to Hoover, 9/31/71.)

529 Memorandum from Hoover to Tolson and DeLoach, 1/6/67.

530 "Once Mr. Hoover, apparently at the request of the National Security Agency, bought approval to break and enter into a foreign mission at the United Nations to procure cryptographic materials to facilitate decoding of intercepted transmissions. The request was presented with some urgency, rejected and presented again on perhaps several occasions. it was never approved and constituted the only request of that kind." [Statement of former Attorney General Ramsey Clark, Hearings before the Senate Judiciary Subcommittee on Administrative Practice and Procedure, (1974).]

531 Memorandum from FBI to Senate Select Committee, 2/23/75.

532 Memorandum from W. A. Branigan to W. C. Sullivan, 3/31/70.

533 Memorandum from John R. Brown to H. R. Haldeman, 4/30/70.

534 Memorandum from Sullivan to DeLoach, 6/20/69; Memorandum from Huston to Hoover, 6/20/69.

535 Tom Charles Huston testimony, 5/23/75, p. 19.

536 Huston, 5/23/75, pp. 23, 28.

537 Helms deposition, 9/10/75, p. 3; Bennett deposition, 8/5/75, p. 12; Gayler deposition, 6/19/75, pp. 6-7. As early as 1963, the FBI Director had successfully opposed a proposal to the President's Foreign Intelligence Advisory Board by CIA Director John McCone for expanded domestic wiretapping for foreign Intelligence purposes. (Memorandum from W. C. Sullivan to C. D. DeLoach, 3/7/70). In 1969, CIA Director Richard Helms was told by the Bureau, when he asked it to institute electronic surveillance on behalf of the CIA, that he should "refer such requests directly to Attorney General for approval." (Memorandum from Sullivan to DeLoach, 3/30/70.) The administrators of NSA also failed to persuade Director Hoover to lift his restraints on foreign intelligence electronic surveillance. (Staff summary of Louis Tordella interview, 6/16/75.)

538 Note by Hoover on letter from Helms to Hoover. 2/26/70.

539 Former FBI Liaison with CIA testimony, 9/22/75, p. 3.

540 Memorandum from Sullivan to DeLoach, 3/30/70, pp. 1-2, 4.

541 Memorandum from Hoover to Helms, 3/31/70.

542 Huston deposition, 5/23/75, p. 32.

543 Presidential Talking Paper, 6/5/70, from the Nixon Papers.

544 The report was written by the Research Section of the FBI Domestic Intelligence Division on the basis of committee decisions and FBI Director Hoover's revisions (Staff Summary of Richard Cotter interview, 9/15/75.)

545 The seven recommendations were made in an attachment to a memorandum from Huston to Haldeman, 7/70.

546 Memorandum from Huston to Haldeman, 7/70.

547 Memorandum from Huston to Haldeman, 7/70. In using the word "burglary," Huston said he sought to "escalate the rhetoric ... to make it as bold as possible." He thought that, as a staff man, he should give the President "the worst possible interpretation of what the recommendation would result in." (Huston deposition. 5/22/75, p. 69.)

548 Huston deposition. 5/22/75, p. 8.

549 Memorandum from Tom Charles Huston to Intelligence Directors, 7/23/70.

550 Memorandum from Sullivan to DeLoach, 4/14/70.

551 An assistant to the head of the Defense Intelligence Agency recalls agreeing with his superior that the memorandum from Huston to the intelligence directors showed that the White House had "passed that one down about as low as they could go" and that the absence of signatures by the President or his top aides indicated "what a hot potato it was." (Staff summary of James Stillwell interview, 5/21/75.)

552 Mitchell testimony, 10/24/75, Hearings, Vol. 4, p. 122.

553 Memorandum from Hoover to Mitchell, 7/25/70.

554 Helms memorandum for the record, 7/28/70.

555 Mitchell, 10/24/75, Hearings, Vol. 4, p. 123.

556 Huston deposition, 5/23/75, p. 56; staff summary of David McManus interview, 7/1/75.

557 Director Helms thinks he told Attorney General Mitchell about the CIA mail program. Helms also believes President Nixon may have known about the program although Helms did not personally inform him. (Helms, 10/22/75, Hearings, Vol. 4, pp. 88-89.) Mitchell denied that Helms told him of a CIA mail opening program and testified that the President had no knowledge of the at least not as of the time we discussed the Huston Plan." (Mitchell, 9/24/75, Hearings, Vol. 4, pp. 120,138.)

558 In March 1971, NSA Director Noel Gayler and CIA Director Helms met with Attorney General Mitchell and Director Hoover. According to Hoover's memo of the meeting, it had been arranged by Helms to discuss "a broadening of operations, particularly of the very confidential type in covering intelligence both domestic and foreign." Hoover was again "not enthusiastic" because of "the hazards involved." Mitchell asked Helms and Gayler to prepare "an in-depth examination" of the collection methods they desired. (Memorandum for the files by J. Edgar Hoover, 4/12/71.) It was less than two months after this meeting that, according to a CIA memorandum, Director Helms briefed Mitchell on the program. (CIA memorandum for the record, 6/3/71.) Even before this meeting, NSA Director Gayler sent a memorandum to Attorney General Mitchell and Secretary Melvin Laird describing "NSA's Contribution to Domestic Intelligence." This memorandum refers to a discussion with both Mitchell and Laird on how NSA could assist with "intelligence bearing on domestic problems." The memorandum mentioned the monitoring of foreign support for subversive activities, as well as for drug trafficking, although it did not discuss specifically the NSA "Watch List" of Americans. (Memorandum from NSA Director Noel to the Secretary of Defense and the Attorney General, January 26, 1971.) NSA official Benson Buffham recorded that he personally showed this memorandum to Mitchell and had been told by the Military Assistant to Secretary Laird that the Secretary had read and agreed with it. (Memorandum for the by Benson K. Buffham, 2/3/71.)

559 Memorandum from Assistant Attorney General Robert Mardian to Attorney Mitchell, 12/4/70.

560 Memorandum from Gayler to Laird and Mitchell. 1/26/71.

561 For a discussion of the FBI as "consumer," see pp. 107-109.

562 The resumption of mail covers is discussed above at footnote 528. FBI field offices were instructed that they could recruit 18-21 year-old informers in September 1970. (SAC Letter No. 70-48, 9/15/70.) See. p. 76.

563 The head of the FBI Domestic Intelligence Division, William C. Sullivan, was promoted to be Assistant to the Director for all investigative and intelligence activities. His successor in charge of the Domestic Intelligence Division was Charles D. Brennan.

564 Executives Conference to Tolson, 10/29/70; Memorandum from FBI Headquarters to all SACs, 11/4/70.

565 Brennan deposition, 9/23/75, pp. 29-31.

566 Brennan testimony, 9/25/75, Hearings, Vol. 2, p. 108.

567 The involvement of the Central Intelligence Agency in improper activities for the White House is described in the Rockefeller Commission Report, Ch. 14.

568 Letter from J. Edgar Hoover to Marvin Watson, 6/4/65.

569 Memorandum from Hoover to Moyers, 10/27/64, cited in FBI summary memorandum, subject: Senator Barry Goldwater, 1/31/75.

569a Memorandum from DeLoach to Tolson, 1/17/67.

570 Memorandum from Hoover to Marvin Watson, 11/8/66.

571 See Finding on Political Abuse, p. 225.

572 Letter from J. Edgar Hoover to John D. Ehrlichman, 10/6/69, House Judiciary Committee Hearings, Statement of Information (1974), Book VII, P. 1111; Book VIII, p. 183 Director Hoover volunteered information from Bureau files to the Johnson White House on the author of a play satirizing the President. (Memorandum from Hoover to Watson, 1/9/67.)

573 Memorandum from Hoover to Tolson, et al., 5/18/70. Agnew admits having received such information, but denies having asked for it. (Staff summary of Spiro Agnew interview, 10/15/75.)

574 Memorandum from C. D. DeLoach to Mr. Mohr, 8/29/64.

575 DeLoach memorandum, 8/29/64; Cartha DeLoach testimony, 12/3/75, Hearings, Vol. 6, p. 177. A 1975 FBI Inspection Report has speculated that the SNCC bug may have been planted because the Bureau had information in 1964 that "an apparent member of the Communist Party, USA, was engaging in considerable activity, much in a leadership capacity in the Student Nonviolent Coordinating Committee." (FBI summary memorandum, 1/30/75.) It is unclear, however, whether this bug was even approved internally by FBI Headquarters, as ordinarily required by Bureau procedures. DeLoach stated in a contemporaneous memorandum that the microphone surveillance of SNCC was instituted "with Bureau approval." (Memorandum from DeLoach to Mohr, 8/29/64.) But the Inspection Report concluded that "a thorough review of Bureau records fails to locate any memorandum containing [internal] authorization for same." (FBI summary memorandum, 1/30/75.)

576 Mr. DeLoach cited the fact that In the summer of 1964 "there was an ongoing electronic surveillance on Dr. Martin Luther King . . . as authorized by Attorney General Kennedy." (Cartha DeLoach testimony, 11/26/75, p. 110) The Inspection Report noted that the Special Agent in Charge of the Newark office was instructed to institute the wiretap on the ground that "the Bureau had authority from the Attorney General to cover any residences which King may use with a technical installation." (FBI summary memorandum 1/30/75, Subject: "Special Squad at Democratic National Convention, Atlantic City, New Jersey, August 22-28, 1964. ")

577 Memorandum from W. C. Sullivan to A. H. Belmont, 8/21/64.

578 Staff summary of Walter Jenkins interview, 12/1/75.

579 DeLoach, 11/26/75. p. 114.

580 Theodore White, Making of the President 1964 (New York: Athenium. 1965). pp. 277-280. Walter Jenkins also confirmed this characterization. (Staff summary of Jenkins interview, 12/1/75).

581 Memorandum from DeLoach to Mohr, 8/29/64.

582 Memorandum from H. N. Bassett to Mr. Callahan, 1/29/75.

583 DeLoach, 11/26/75, p. 139.

584 Staff summary of Jenkins interview, 1/21/75.

585 Exhibit 68-2, Hearings, Vol. VI, p. 713.

586 FBI memoranda indicate that in 1968 Vice President Hubert Humphrey's Executive Assistant, Bill Connell, asked the Bureau to send a "special team" to the forthcoming Democratic National Convention, since President Johnson "allegedly told the Vice President that the FBI had been of great service to him and he had been given considerable information on a timely basis throughout the entire convention." (Memorandum from DeLoach to Tolson, 8/7/68). After talking with Connell, Director Hoover advised the SAC in Chicago that the Bureau was "not going to get into anything political but anything of extreme action or violence contemplated we want to let Connell know." (Memorandum from Hoover to Tolson, Pt al., 8/15/68.) Democratic Party Treasurer John Criswell made a similar request, stating that Postmaster General Marvin Watson "had informed him of the great service performed by the FBI during the last Democratic Convention." (Memorandum from DeLoach to Tolson, 8/22/68.)

587 FBI summary memorandum, 2/3/75.

588 FBI summary memorandum, 2/3/75.

589 FBI summary memorandum, 2/3/75.

590 FBI summary memorandum, 2/3/75. See Findings on Political Abuse.

591 FBI summary memorandum, 2/1/75.

592 Memorandum from Director, FBI to Attorney General, 10/29/68; memorandum from Director, FBI to Attorney General, 10/30/68; memorandum from Director, FBI to Attorney General, 3/27/69.

Attorney General Clark testified that he was unaware of any surveillance of Mrs. Chennault, (Clark, 12/3/75. Hearings, Vol. 6, pp. 251-252.) 593

593 See Findings on Political Abuse, p. 225.

594 John Ehrlichman testimony, Senate Watergate Committee, 7/24/73, p. 2535. According to the transcript of the White House tapes, President Nixon stated to John Dean on April 16, 1973:

"What I mean is I think in the case of the Kraft stuff what the FBI did, they were both fine. I have checked the facts. There were some done through private sources. Most of it was done through the Bureau after we got -- Hoover didn't want to do Kraft. What it involved apparently, John, was this: the leaks from NSC [National Security Council]. They were in Kraft and others columns and we were trying to plug the leaks and we had to get it done and finally we turned it over to Hoover. And then when the hullabaloo developed we just knocked it off altogether. (Submission of Recorded Presidential Conversations to the Committee on the Judiciary of the House of Representatives by President Richard Nixon, 4/30/74.) The President's statement was made in the context of 'coaching' John Dean on what to say to the Watergate Grand Jury.

595 William Ruckelshaus testimony before the Subcommittee on Administrative Practice and Procedure, 5/9/74, p. 320.

596 Kraft testified that Henry Kissinger, then the President's Special Adviser National Security, informed him that he had no knowledge of either the wire or the hotel room bug. Kraft also stated that former Attorney General Elliot Richardson indicated to him that "there was no justification for these activities." (Joseph Kraft testimony, Senate Subcommittee on Administrative Practice and Procedure, 5/10/74, p. 381.)

597 Letter from W. C. Sullivan to Mr. Hoover, 7/12/69.

598 While the summaries sent to Hoover by Sullivan did show that Kraft contacted North Vietnamese officials (Letter from Sullivan to Hoover, 7/12/69), the Bureau did not discover any improprieties or indiscretions on his part. When Ruckelshaus was asked if his review of these summaries revealed to him that engaged in any conduct while abroad that posed a danger to the national security he replied: "Absolutely not." (Ruckelshaus testimony before the Subcommittee on Administrative Practice and Procedure, 5/9/74, p. 320.)

599 Memorandum from W. C. Sullivan to Mr. DeLoach, 11/4/69.

600 Memorandum from Sullivan to DeLoach, 12/11/69.

600a For discussion of dissemination of political intelligence from the "17" wiretaps, see Finding on Political Abuse, p. 22-5.

601 Sen. Edmund Muskie testimony, Senate Foreign Relations committee, 9/10/73 Executive Session, pp. 50-51.

602 Memorandum from W. C. Sullivan to C. D. DeLoach, 5/11/69.

603 Report of the House Judiciary Committee, 9/20/74. pp. 146-154.

604 The creation of the "plumbers" unit in the White House led inexorably to Watergate. See Report of the House Judiciary Committee, 8/20/74, pp. 157-162, 166-170.

605 An example of a generalized Departmental Instruction is Attorney General Clark's order of September 1967 (see p. 79) regarding civil disorders.

606 Memorandum from FBI Director to Yeagley, 1/31/64.

607 Memorandum from Yeagley to FBI Director, 3/3/64. There was no reauthorization of the continuing investigation between 1966 and 1974.

608 Memorandum from Dean to Mitchell, 9/18/70.

609 Executive order 11605, 7/71.

610 By 1971, the SACB had the limited function of making findings that specific individuals and groups were Communist. Its registration of Communist had been declared unconstitutional. [Albertson v. Subversive Activities Control Board, 382 U.S. 70 (1965).]

611 Robert C. Mardian, address before the Atomic Energy Commission Security Conference, Washington, D.C. 10/27/71. Mardian added that the "problem" was that without an updated, formal list of subversive organizations, federal agencies were

required "to individually evaluate information regarding membership in allegedly subversive organizations based on raw data furnished by the Federal Bureau of Investigation or other governmental sources."

612 Brennan testimony, 9/25/75, Hearings, Vol. 2, 116-117.

613 Executive Order 11605, 7/71. By contrast, the prior order had been limited to groups seeking forcible violation of rights "under the Constitution of the United States" or seeking "to alter the form of government of the United States by unconstitutional means." Executive Order 10450 (1953).

614 Hearings on the appropriation for the Department of Justice before the House Subcommittee on Appropriations, 92nd Cong., 2nd Sess., (1972), p. 673

615 Inspection Report, FBI Domestic Intelligence Division, August 17-September 9, 1971.

616 The hostile Congressional reaction to this Order, which shifted duties by Executive fiat to a Board created by statute for other purposes, led to the death of the SACB when no appropriation was granted in 1972.

617 FBI Executives Conference Memorandum, 6/2/71. The first Assistant Director for Legal Counsel was Dwight Dalbey, who had for years been in charge of the legal training of Bureau agents. Dalbey's elevation early in 1971, and Hoover's requirement that he review all legal aspects of FBI policy, including intelligence matters, was a major change in Bureau procedure. (Memorandum from Hoover to All Bureau Officials and Supervisors, 3/8/71.)

618 FBI Summary of Interview with Robert Mardian, 5/10/73, pp. 1-3.

619 Memorandum from Sullivan to Hoover, 6/16/71.

620 Memorandum from T. J. Smith to E. S. Miller, 5/13/73, pp. 1, 8.

621 FBI Summary of Interview with Robert Mardian, 5/10/73, pp. 2-3. The Watergate Special Prosecutor investigated these events, and did not find sufficient evidence of criminal conduct to bring an indictment. However, they occurred at the time of intense White House pressure to develop a criminal prosecution against Daniel Ellsberg over the Pentagon Papers matter. The dismissal of charges against Ellsberg in 1973 was largely due to the belated discovery of the fact that Ellsberg had been overheard on a wiretap indicated in these records, which were withheld from the court, preventing its determination of the pertinency of the material to the Ellsberg case.

622 Inspection Report, Domestic Intelligence Division, 8/17-9/9/71, p. 98.

623 Memorandum from R. D. Cotter to E. S. Miller, 9/21/71.

624 Memorandum from Cotter to Miller, 9/17/71.

625 Memorandum from D. J. Dalbey to C. Tolson, 9/24/71.

625a Memorandum from Hoover to Mitchell, 9/30/71.

626 Memorandum from Mitchell to Hoover, 10/22/71.

627 Memorandum from T. J. Smith to E. S. Miller, 11/11/71. It was noted that in the past the Department had "frequently removed individuals" from the Security Index because of its strict "legal interpretation.

628 This new breed was described as follows:

"He may adhere to the old-line revolutionary concepts but he is unaffiliated with any organization. He may belong to or follow one New Left-type group today and another tomorrow. He may simply belong to the loosely knit group of revolutionaries who have no particular political philosophy but who continuously plot the overthrow of our Government. He is the nihilist who seeks only to destroy America."

"On the other hand, he may be one of the revolutionary black extremists who, while perhaps influenced by groups such as the Black Panther Party, is also unaffiliated either permanently or temporarily with any black organization but with a seething hatred of the white establishment will assassinate, explode, or otherwise destroy white America." (T. J. Smith to E. S. Miller, 11/11/71.)

629 Memorandum from T. J. Smith to E. S. Miller, 11/11/71.

630 Memorandum from FBI Headquarters to all SACs, 11/15/71.

631 Memorandum from Hoover to Mitchell, 2/10/72; cf. memorandum from Hoover to Mitchell, 9/30/71 for the previous statement.

632 Memorandum from T. J. Smith to E. S. Miller, 8/29/72.

633 Memorandum from Domestic Intelligence Division, Position Paper: Scope of Authority, Jurisdiction and Responsibility in Domestic Intelligence Investigations, 7/31/72.

634 Federal Data Banks, Hearings, Opening Statement of Senator Ervin, February 23, 1971, p. 1. Senator Ervin declared that a major objective of the inquiry was to look into "programs for taking official note of law-abiding people who are active politically or who participate in community activities on social and political issues." The problem, as Senator Ervin saw it, was that there were citizens who felt "intimidated" by these programs and were "fearful about exercising their rights under the First Amendment to sign petitions, or to speak and write freely on current issues of Government policy." The ranking minority member of the Subcommittee, Senator Roman Hruska, endorsed the need for a "penetrating and searching" inquiry. (Hearings, pp. 4, 7.)

635 Also during March 1971, an FBI office in Media, Pennsylvania was broken into; a substantial number of documents were removed and soon began to appear in the press. One of these was captioned COINTELPRO. The Bureau reacted by ordering its field offices to "discontinue" COINTELPRO operations "for security reasons because of their sensitivity." It was suggested, however, that "counter-intelligence action" would be considered "in exceptional instances" so long as there were "tight procedures to insure absolute secrecy." (Memorandum from Brennan to Sullivan, 4/27/71 ; Memorandum from FBI Headquarters to all SAC's, 4/28/71.) For actions taken thereafter, see COINTELPRO report.

636 After repeal of the Emergency Detention Act in the fall of 1971, the FBI's Assistant Director for Legal Counsel recommended that the Bureau's request for approval of its new ADEX also include a more general request for re-affirmation of FBI domestic intelligence authority to investigate "subversive activity." (Memorandum from D. J. Dalbey to Mr. Tolson, 9/24/71.) The letter to the Attorney General reviewed the line of "Presidential directives" from 1939 to 1951. (Memorandum from Hoover to Mitchell, 9/30/71.) The Attorney General replied with a general endorsement of FBI authority to investigate "subversive activities." (Memorandum from Mitchell to Hoover, 10/22/71.)

637 Richard Kleindienst testimony, Senate Judiciary Committee, 2/24/72, p. 64

638 FBI routing slip attached to Washington Post article, 2/24/72. The FBI's summary of its "guidelines," submitted to the Attorney General stated that its investigations were partly based on criminal statutes, but that "subversive activity . . . often does not clearly involve a specific section of a specific statute." Thus, investigations were also based on the 1939 Roosevelt directives which were said to have been "reiterated and broadened by subsequent Directives." (Attachment to Hoover memorandum to Kleindienst, 2/25/72.) (Emphasis added.)

639 The background for this development may be summarized as follows: In May 1972, FBI intelligence officials prepared a "position paper" for Acting Director L. Patrick Gray. This paper merely recited the various Presidential directives, Executive Orders, delimitation agreements, and general authorizations from the Attorney General, with no attempt at analysis. (FBI Domestic Intelligence Division Position Paper: Investigations of Subversion, 5/19/72.) Assistant Director E. S. Miller, head of the Domestic Intelligence Division, withdrew this paper at a conference with Gray and other top Bureau officials; Miller then initiated work on a more extensive position paper, which was completed in July. It concluded that domestic intelligence investigations could practicably be based on the "concept" that their purpose was "to prevent a violation of a statute." The paper also indicated that the ADEX would be revised so that it could not be "interpreted as a means to circumvent repeal of the Emergency Detention Act." (FBI Domestic Intelligence Division: Position Paper: Scope of FBI Authority, 7/31/72; T. J. Smith to E. S. Miller, 8/1/72.)

640 Gray did order that the Bureau should indicate its "jurisdictional authority" to investigate in every case, "by citing the pertinent provision of the U.S. Code. or other authority," and also that the Bureau should "indicate whether or not an investigation was directed by DJ (Department of Justice), or we opened it without any request from DJ." In the latter case, the Bureau was to "cite our reasons." (FBI routing slip, 8/27/72.)

641 One official observed that there were "some individuals now included in ADEX even though they do not realistically pose a threat to the national security." He added that this would leave the Bureau "in a vulnerable position if our guidelines were to be scrutinized by interested Congressional Committees." (Memorandum from T. J. Smith to E. S. Miller, 8/29/72.)

642 Memorandum from Smith to Miller, 8/29/72. The anticipated reduction was from 15,259 (the current figure) to 4,786 (the top two priority categories). The Justice Department was advised of this change. (Memorandum from Gray to Kleindienst, 9/18/72.)

643 Draft copies were distributed to the field for suggestions. (E. S. Miller to Mr. Felt, 5/22/73.)

644 Memorandum from FBI Headquarters to all SAC's, 6/7/73. The memorandum to the field stated, looking back on past Bureau policy, that since the FBI's authority to investigate "subversive elements" had never been "seriously challenged until recently," Bureau personnel (and "the general public") had accepted "the FBI's right to handle internal security matters and investigate subversive activities without reference to specific statutes." But the "rationale" based on "Presidential Directives" was no longer "adequate."

The field was advised that the "chief statutes" upon which the new criteria were based were those dealing with rebellion or insurrection (18 U.S.C. 2383), seditious conspiracy (18 U.S.C. 2384) and advocating overthrow of the government (18 U.S.C.

2528). The ADEX was to be "strictly an administrative device" and should play no part "in investigative decisions or policies." The revision also eliminated "overemphasis" on the Communist Party.

645 For example, the field offices saw the need to undertake "preliminary inquiries" before it was known "whether a statutory basis for investigation exists." This specifically applied where a person had "contact with known subversive groups or subjects," but the Bureau did not know "the purpose of the contact." These preliminary investigations could go on for at least 90 days, to determine whether "a statutory basis for a full investigation exists." Moreover, at the urging of the field supervisors, the period for a preliminary investigation of an allegedly "Subversive organization" was expanded from 45 to 90 days. (Memorandum from FBI Headquarters to all SAC's, 8/8/73.)

646 This was apparently "in connection with" a request made earlier by Senator Edward M. Kennedy, who had requested to see this section at the time of the confirmation hearings for Attorney General Kleindienst in 1972. (Kleindienst, Senate Judiciary Committee, 2/24/72, p. 64; memorandum from Kelley to Richardson, 8/7/73.)

647 In a memorandum to the Attorney General, Director Kelley cited Senator Sam J. Ervin's view that the FBI should be prohibited by statute "from investigating any person without the individual's consent, unless the Government has reason to believe that the person has committed a crime or is about to commit a crime." Kelley then summarized the position paper prepared by the Domestic Intelligence Division and the Bureau's current policy of attempting to rely on statutory authority. However, he observed that the statutes upon which the FBI was relying were either "designed for the Civil War era, not the Twentieth Century" (the rebellion and insurrection laws) or had been "reduced to a fragile shell by the Supreme Court" (the Smith Act dealing with advocacy of overthrow). Moreover, it was difficult to fit into the statutory framework groups "such as the Ku Klux Klan, which do not seek to overthrow the Government, but nevertheless are totalitarian in nature and seek to deprive constitutionally guaranteed rights."

Kelley stated that, while the FBI had "statutory authority," it still needed "a definite requirement from the President as to the nature and type of intelligence data he requires in the pursuit of his responsibilities based on our statutory authority." (Emphasis added.) While the statutes gave "authority," an Executive Order "would define our national security objectives." The FBI Director added:

"It would appear that the President would rather spell out his own requirements in an Executive Order instead of having Congress tell him what the FBI might do to help him fulfill his obligations and responsibilities as President."

648 Memorandum from Kelley to Richardson, 8/7/73.

649 Even before Kelley's request, Deputy Attorney General-Designate William Ruckelshaus (who had served for two months as Acting FBI Director between Gray and Kelley), sent a list of questions to the Bureau to begin "an in-depth examination of some of the problems facing the Bureau in the future." (Memorandum from Ruckelshaus to Kelley, 7/20/73.) The Ruckelshaus study was interrupted by his departure in the "Saturday Night Massacre" of October 1973.

650 Memorandum from Bork to Kelley, 12/5/73.

651 These techniques were handled within the Bureau "on a strictly need-to-know basis" and Kelley believed that they should not be included in a study "which will be beyond the control of the FBI." (Memorandum from Kelley to Bork, 12/11/73.)

One Bureau memorandum to the Petersen committee even suggested that the Attorney General did not have authority over the FBI's foreign counterintelligence operations, since the Bureau was accountable in this area directly to the United States Intelligence Board and the National Security Council. (Petersen Committee Report, pp. 34-35.) The Petersen Committee sharply rejected this view, especially because the ad hoc equivalent of the U.S. Intelligence Board had approved the discredited "Huston plan" in 1970. The Committee declared: "There can be no doubt that in the area of foreign counterintelligence, as in all its other functions, the FBI is subject to the power and authority of the Attorney General." (Petersen Committee Report, p. 35.)

652 FBI Memorandum, "Overall Recommendations -- Counterintelligence Activity," Appendix to Petersen Committee Report.

653 Henry Petersen Testimony, 12/8/75, Hearings, Vol. 6, pp. 270-71.

655 Attorney General's Guidelines: "Domestic Security Investigations," "Reporting on Civil Disorders and Demonstrations Involving a Federal Interest," and "White House Personnel Security and Background Investigations."

656 Memorandum from A. B. Fulton to Mr. Wannall, 7/10/74. See pp. 42-44 for discussion of the initiation of the program.

657 Memorandum from FBI Headquarters to all SACs, 8/16/74.

658 Executive Order 11785, 6/4/74. The new standard: "Knowing membership with the specific intent of furthering the aims of, or *adherence to* and active participation in, any foreign *or domestic* organization, association, movement, group, or combination of persons (hereinafter referred to as organizations) which unlawfully *advocates* or practices the commission of acts of force or violence to prevent others from exercising their rights under the Constitution or laws of the United States or *of any state*, or which seeks to overthrow the Government of the United States or *any State or subdivisions thereof* by unlawful means." [Emphasis added.]

659 Memorandum from Glen E. Pommerening, Assistant Attorney General for Administration, to Kelley, 11/17/74.

With respect to one organization, the Department advised the Bureau that "despite the abolition" of the Attorney General's list, the group "would still come within the criteria" of the employee security program if it "may have engaged in activities" of the sort proscribed by the revised executive order. (Memorandum from Henry E. Petersen to Clarence Kelley, 11/13/74.)

660 "On the other hand," the instructions stated ambiguously, "the FBI should not report every minor local disturbance where there is no apparent interest to the President, the Attorney General or other Government officials and agencies." (Memorandum from Petersen to Kelley, 10/22/74.)

661 Memorandum from Petersen to Kelley, 10/22/74. The FBI was expected to "be aware of disturbances and patterns of disorder," although it is not to report "each and every relatively insignificant incident of a strictly local nature."

662 Memorandum from Petersen to Kelley, 10/22/74. Frank Nyland testimony, 1/27/76, pp. 46--58.

663 Memorandum from J. G. Deegan to W. R. Wannall, 10/30/74. From a legal viewpoint, the Justice Department's instructors dealing with the collection of intelligence on potential civil disturbances were significant because they relied for authority on: (1) the President's powers under Article IV, section 4 of the Constitution to protect the states, upon application of the legislature or the executive, against "domestic violence;" (2) the statute (10 U.S.C. 331. et seq.) authorizing the use of troops; and (3) the Presidential directive of 1969 designating the Attorney General as chief civilian officer to coordinate the Government's response to civil disturbances. (Memorandum from Petersen to Kelley, 10/22/74; Memorandum from Melvin Laird and John Mitchell to the President, 4/1/69.)

664 omitted in original.

665 18 U.S.C. 2101-2102.

666 Memorandum from Petersen to Kelley, 11/13/74. This-memorandum added: "[W]ithout a broad range of intelligence information, the President and the departments and agencies of the Executive Branch could not properly and adequately protect our nation's security and enforce *the numerous statutes* pertaining thereto . . . [T]he Department, and in particular the Attorney General, must continue to be informed of those organizations that engage in violence which represent *a potential threat to the public safety*." [Emphasis added.]

667 The opinion of the Supreme Court in the United States v. United States District Court, 407 U.S. 297 (1972) -- the domestic security wiretapping case stated, "Implicit in that duty is the power to protect our Government against those who would subvert or overthrow it by unlawful means."

668 A 19th century Supreme Court opinion was cited as having interpreted the word "laws" broadly to encompass not only statutes enacted by Congress, but also "the rights, duties, and obligations growing out of the Constitution itself, our international relations and all the protection implied by the nature of Government under the Constitution." [In Re Neagle, 135 U.S. 1 (1890).]

669 The latter power was said to relate "more particularly to the Executive's power to conduct foreign intelligence activities here and abroad." (Kevin Maroney testimony, "Domestic Intelligence Operations for Internal Security Purposes," Hearings before the House Committee on Internal Security, 93d Cong., 2d Sess. (1974), pp. 3332-3335.) Mr. Maroney added:

"We recognize the complexity and difficulty of adequately spelling out the FBI's authority and responsibility to conduct domestic intelligence-type investigations. The concept national security is admittedly a broad one, while the term subversive activities is even more difficult to define."

Mr. Maroney also cited the following from the Supreme Court's opinion in the domestic security wiretapping case: "The gathering of security intelligence is often long-range and involves the interrelation of various sources and types of information. The exact targets of such surveillance may be more difficult to identify . . . Often, too, the emphasis of domestic intelligence gathering is on the prevention of unlawful activity or the enhancement of the Government's preparedness for some possible future crisis or emergency. Thus, the focus of domestic surveillance may be less precise than that directed against more conventional types of crime." [United States v. United States District Court, 407 U.S. 21.97, 322 (1972).]

670 House Committee on Internal Security Hearings, 1974, pp. 3330-3331.

671 W. Raymond Wannall, Assistant Director for the Intelligence Division, Memorandum on the "Basis for FBI National Security Intelligence Investigations," 2/13/75.

672 After several recent transformations, the policy of the Attorney General was established as authorizing warrantless surveillance "only when it is shown that its subjects are the active, conscious agents of foreign powers;" and this standard "is applied with particular stringency where the subjects are American citizens or permanent resident aliens." (Justice Department memorandum from Ron Carr, Special Assistant to the Attorney General, to Mike Shaheen, Counsel on Professional Responsibility, 2/26/76.)

673 In May 1975, for the first time in American history, the Department of Justice publicly asserted the power of the Executive Branch to conduct warrantless surreptitious entries unconnected with the use of electronic surveillance. This

occurred in a letter to the United States Court of Appeals for the District of Columbia concerning an appeal by John Ehrlichman. Ehrlichman was appealing a conviction arising from the break-in at the office of Daniel Ellsberg's psychiatrist after publication of the "Pentagon Papers" in 1971.

The Justice Department's position was that "warrantless searches involving physical entries into private premises" can be "lawful under the Fourth Amendment" if they are "very carefully controlled:"

"There must be solid reason to believe that foreign espionage or intelligence is involved. In addition, the intrusion into any zone of expected privacy must be kept to the minimum and there must be personal authorization by the President or the Attorney General." (Letter from John C. Kenney, Acting Assistant Attorney General, to Hugh E. Cline, Clerk of the United States Court of Appeals for the District of Columbia, 5/9/75.)

674 Rockefeller Commission Report.

675 Levi, 12/11/75, Hearings, Vol. 6, pp. 316-317.

676 Levi. 11/6/75, Hearings, Vol. 5, p. 90.

677 Executive Order 11509, 2/19/76.

678 Attorney General's Guidelines, "Domestic Security Investigations", "Whitehouse Personnel Security and Background Investigations", and "Reporting on Civil Disorders and Demonstrations Involving a Federal Interest", 3/10/76.

679 S. 3197, introduced 3/23/76.

680 The major questions posed by the President's Executive Order and the Attorney General's guidelines for the FBI are discussed in the recommendation section of this report, as are the problems with the national security electronic surveillance bill.

**COINTELPRO: THE FBI'S COVERT ACTION PROGRAMS AGAINST AMERICAN CITIZENS**

**I. INTRODUCTION AND SUMMARY**

COINTELPRO is the FBI acronym for a series of covert action programs directed against domestic groups. In these programs, the Bureau went beyond the collection of intelligence to secret action defined to "disrupt" and "neutralize" target groups and individuals. The techniques were adopted wholesale from wartime counterintelligence, and ranged from the trivial (mailing reprints of Reader's Digest articles to college administrators) to the degrading (sending anonymous poison-pen letters intended to break up marriages) and the dangerous (encouraging gang warfare and falsely labeling members of a violent group as police informers).

This report is based on a staff study of more than 20,000 pages of Bureau documents, depositions of many of the Bureau agents involved in the programs, and interviews of several COINTELPRO targets. The examples selected for discussion necessarily represent a small percentage of the more than 2,000 approved COINTELPRO actions. Nevertheless, the cases demonstrate the consequences of a Government agency's decision to take the law into its own hands for the "greater good" of the country.

COINTELPRO began in 1956, in part because of frustration with Supreme Court rulings limiting the Government's power to proceed overtly against dissident groups; it ended in 1971 with the threat of public exposure. 1 In the intervening 15 years, the Bureau conducted a sophisticated vigilante operation aimed squarely at preventing the exercise of First Amendment rights of speech and association, on the theory that preventing the growth of dangerous groups and the propagation of dangerous ideas would protect the national security and deter violence. 2

Many of the techniques used would be intolerable in a democratic society even if all of the targets had been involved in violent activity, but COINTELPRO went far beyond that. The unexpressed major premise of the programs was that a law enforcement agency has the duty to do whatever is necessary to combat perceived threats to the existing social and political order.

*A. "Counterintelligence Program": A Misnomer for Domestic Covert Action*

COINTELPRO is an acronym for "counterintelligence program."

Counterintelligence is defined as those actions by an intelligence agency intended to protect its own security and to undermine hostile intelligence operations. Under COINTELPRO certain techniques the Bureau had used against hostile foreign agents

were adopted for use against perceived domestic threats to the established political and social order. The formal programs which incorporated these techniques were, therefore, also called "counterintelligence." 2a

"Covert action" is, however, a more accurate term for the Bureau's programs directed against American citizens. "Covert action" is the label applied to clandestine activities intended to influence political choices and social values. 3

#### *B. Who Were the Targets?*

##### *1. The Five Targeted Groups*

The Bureau's covert action programs were aimed at five perceived threats to domestic tranquility: the "Communist Party, USA" program (1956-71) ; the "Socialist Workers Party" program (1961-69) ; the "White Hate Group" program (1964-71) ; the "Black Nationalist-Hate Group" program (1967-71) ; and the "New Left" program (1968-71).

##### *2. Labels Without Meaning*

The Bureau's titles for its programs should not be accepted uncritically. They imply a precision of definition and of targeting which did not exist.

Even the names of the later programs had no clear definition. The Black Nationalist program, according to its supervisor, included "a great number of organizations that you might not today characterize as black nationalist but which were in fact primarily black." 3a Indeed, the nonviolent Southern Christian Leadership Conference was labeled as a Black Nationalist "Hate Group." 4 Nor could anyone at the Bureau even define "New Left," except as "more or less an attitude." 5

Furthermore, the actual targets were chosen from a far broader group than the names of the programs would imply. The CPUSA program targeted not only Party members but also sponsors of the National Committee to Abolish the House Un-American Activities Committee 6 and civil rights leaders allegedly under Communist influence or simply not "anti-Communist." 7 The Socialist Workers Party program included non-SWP sponsors of antiwar demonstrations which were cosponsored by the SWP or the Young Socialist Alliance, its youth group. 8 The Black Nationalist program targeted a range of organizations from the Panthers to SNCC to the peaceful Southern Christian Leadership Conference, 9 and included most black student groups. 10 New Left targets ranged from the SDS 11 to the Interuniversity Committee for Debate on Foreign Policy, 12 from all of Antioch College ("vanguard of the New Left") 13 to the New Mexico Free University 14 and other "alternate" schools, 15 and from underground newspapers 16 to students protesting university censorship of a student publication by carrying signs with four-letter words on them. 17

#### *C. What Were the Purposes of COINTELPRO?*

The breadth of targeting and lack of substantive content in the descriptive titles of the programs reflect the range of motivations for COINTELPRO activity: protecting national security, preventing violence, and maintaining the existing social and political order by "disrupting" and "neutralizing" groups and individuals perceived as threats.

##### *1. Protecting National Security*

The first COINTELPRO, against the CPUSA, was instituted to counter what the Bureau believed to be a threat to the national security. As the chief of the COINTELPRO unit explained it:

We were trying first to develop intelligence so we would know what they were doing [and] second, to contain the threat.... To stop the spread of communism, to stop the effectiveness of the Communist Party as a vehicle of Soviet intelligence, propaganda and agitation. 17a

Had the Bureau stopped there, perhaps the term "counterintelligence" would have been an accurate label for the program. The expansion of the CPUSA program to non-Communists, however, and the addition of subsequent programs, make it clear that other purposes were also at work.

##### *2. Preventing Violence*

One of these purposes was the prevention of violence. Every Bureau witness deposed stated that the purpose of the particular program or programs with which he was associated was to deter violent acts by the target groups, although the witnesses differed in their assessment of how successful the programs were in achieving that goal. The preventive function was not, however, intended to be a product of specific proposals directed at specific criminal acts. Rather, the programs were aimed at groups which the Bureau believed to be violent or to have the potential for violence.

The programs were to prevent violence by deterring membership in the target groups, even if neither the particular member nor the group was violent at the time. As the supervisor of the Black Nationalist COINTELPRO put it, "Obviously you are going to prevent violence or a greater amount of violence if you have smaller groups." (Black Nationalist supervisor deposition, 10/17/75, p. 24.) The COINTELPRO unit chief agreed: "We also made an effort to deter or counteract the propaganda ... and to deter recruitment where we could. This was done with the view that if we could curb the organization, we could curb the action or the violence within the organization." 17b In short, the programs were to prevent violence indirectly, rather than directly, by preventing possibly violent citizens from joining or continuing to associate with possibly violent groups. 18

The prevention of violence, is clearly not, in itself, an improper purpose; preventing violence is the ultimate goal of most law enforcement. Prosecution and sentencing are intended to deter future criminal behavior, not only of the subject but also of others who might break the law. In that sense, law enforcement legitimately attempts the indirect prevention of possible violence and, if the methods used are proper, raises no constitutional issues. When the government goes beyond traditional law enforcement methods, however, and attacks group membership and advocacy, it treads on ground forbidden to it by the Constitution. In *Brandenburg v. Ohio*, 395 U.S. 444 (1969), the Supreme Court held that the government is not permitted to "forbid or proscribe advocacy of the use of force or law violation except where such advocacy is directed toward inciting or producing imminent lawless action and is likely to incite or produce such action." In the absence of such clear and present danger, the government cannot act against speech nor, presumably, against association.

### *3. Maintaining the Existing Social and Political Order*

Protecting national security and preventing violence are the purposes advanced by the Bureau for COINTELPRO. There is another purpose for COINTELPRO which is not explicit but which offers the only explanation for those actions which had no conceivable rational relationship to either national security or violent activity. The unexpressed major premise of much of COINTELPRO is that the Bureau has a role in maintaining the existing social order, and that its efforts should be aimed toward combating those who threaten that order. 19

The "New Left" COINTELPRO presents the most striking example of this attitude. As discussed earlier, the Bureau did not define the term "New Left," and the range of targets went far beyond alleged "subversives" or "extremists." Thus, for example, two student participants in a "free speech" demonstration were targeted because they defended the use of the classic four-letter-word. Significantly, they were made COINTELPRO subjects even though the demonstration "does not appear to be inspired by the New Left" because it "shows obvious disregard for decency and established morality." 20 In another case, reprints of a newspaper article entitled "Rabbi in Vietnam Says Withdrawal Not the Answer" were mailed to members of the Vietnam Day Committee "to convince [them] of the correctness of the U.S. foreign policy in Vietnam." 21 Still another document weighs against the "liberal press and the bleeding hearts and the forces on the left" which were "taking advantage of the situation in Chicago surrounding the Democratic National Convention to attack the police and organized law enforcement agencies." 22 Upholding decency and established morality, defending the correctness of U.S. foreign policy, and attacking those who thought the Chicago police used undue force have no apparent connection with the expressed goals of protecting national security and preventing violence. These documents, among others examined, compel the conclusion that Federal law enforcement officers looked upon themselves as guardians of the status quo. The attitude should not be a surprise; the difficulty lies in the choice of weapons.

#### *D. What Techniques Were Used?*

##### *1. The Techniques of Wartime*

Under the COINTELPRO programs, the arsenal of techniques used against foreign espionage agents was transferred to domestic enemies. As William C. Sullivan, former Assistant to the Director, put it,

This is a rough, tough, dirty business, and dangerous. It was dangerous at times. No holds were barred.... We have used [these techniques] against Soviet agents. They have used [them] against us. . . . [The same methods were] brought home against any organization against which we were targeted. We did not differentiate. This is a rough, tough business. 23

Mr. Sullivan's description -- rough, tough, and dirty -- is accurate. In the course of COINTELPRO's fifteen-year history, a number of individual actions may have violated specific criminal statutes; 24 a number of individual actions involved risk of serious bodily injury or death to the targets (at least four assaults were reported as "results" ; 25 and a number of actions, while not illegal or dangerous, can only be described as "abhorrent in a free Society." 26 On the other hand, many of the actions were more silly than repellent.

The Bureau approved 2,370 separate counterintelligence actions. 27 Their techniques ranged from anonymously mailing reprints of newspaper and magazine articles (sometimes Bureau-authored or planted) to group members or supporters to convince them of the error of their ways, 28 to mailing anonymous letters to a member's spouse accusing the target of infidelity ; 29 from using informants to raise controversial issues at meetings in order to cause dissent, 30 to the "snitch jacket" (falsely labeling a group member as an informant) 31 and encouraging street warfare between violent groups ; 32 from contacting members of a "legitimate group to expose the alleged subversive background of a fellow member 33 to contacting an employer to get a target fired; 34 from attempting to arrange for reporters to interview targets with planted questions, 35 to trying to stop targets from speaking at all ; 36 from notifying state and local authorities of a target's criminal law violations, 37 to using the IRS to audit a professor, not just to collect any taxes owing, but to distract him from his political activities. 38

##### *2. Techniques Carrying A Serious Risk of Physical, Emotional, or Economic Damage.*

The Bureau recognized that some techniques were more likely than others to cause serious physical, emotional, or economic damage to the targets. Any proposed use of those techniques was scrutinized carefully by headquarters supervisory personnel, in an attempt to balance the "greater good" to be achieved by the proposal against the known or risked harm to the target. If the "good" was sufficient, the proposal was approved. 39 For instance, in discussing anonymous letters to spouses, the agent who supervised the New Left COINTELPRO stated:

[Before recommending approval] I would want to know what you want to get out of this, who are these people. If it's somebody, and say they did split up, what would accrue from it as far as disrupting the New Left is concerned? Say they broke up, what then....

[The question would be] is it worth it? 39a

Similarly, with regard to the "snitch jacket" technique -- falsely labeling a group member as a police informant -- the chief of the Racial Intelligence Section stated:

You have to be able to make decisions and I am sure that labeling somebody as an informant, that you'd want to make certain that it served a good purpose before you did it and not do it haphazardly. . . . It is a serious thing. . . . As far as I am aware, in the black extremist area, by using that technique, no one was killed. I am sure of that. 40

Moore was asked whether the fact that no one was killed was the result of "luck or planning." He answered:

"Oh, it just happened that way, I am sure." 41

It is thus clear that, as Sullivan said, "No holds were barred, 42 although some holds were weighed more carefully than others. When the willingness to use techniques which were concededly dangerous or harmful to the targets is combined with the range of purposes and criteria by which these targets were chosen, the result is neither "within bounds" nor "justified" in a free society. 43

#### *E. Legal Restrictions Were Ignored*

What happened to turn a law enforcement agency into a law violator? Why do those involved still believe their actions were not only defensible, but right? 44

The answers to these questions are found in a combination of factors: the availability of information showing the targets' vulnerability gathered through the unrestrained collection of domestic intelligence; the belief both within and without the Bureau that it could handle any problem; and frustration with the apparent inability of traditional law enforcement methods to solve the problems presented.

There is no doubt that Congress and the public looked to the Bureau for protection against domestic and foreign threats. As the COINTELPRO unit chief stated:

At this time [the mid-1950s] there was a general philosophy too, the general attitude of the public at this time was you did not have to worry about Communism because the FBI would take care of it. Leave it to the FBI.

I hardly know an agent who would ever go to a social affair or something, if he were introduced as FBI, the comment would be, "we feel very good because we know you are handling the threat." We were handling the threat with what directives and statutes were available. There did not seem to be any strong interest of anybody to give us stronger or better defined statutes. 45

Not only was no one interested in giving the Bureau better statutes (nor, for that matter, did the Bureau request them), but the Supreme Court drastically narrowed the scope of the statutes available. The Bureau personnel involved trace the institution of the first formal counterintelligence program to the Supreme Court reversal of the Smith Act convictions. The unit chief testified:

The Supreme Court rulings had rendered the Smith Act technically unenforceable.... It made it ineffective to prosecute Communist Party members, made it impossible to prosecute Communist Party members at the time. 46

This belief in the failure of law enforcement produced the subsequent COINTELPROs as well. The unit chief continued:

The other COINTELPRO programs were opened as the threat arose in areas of extremism and subversion and there were not adequate statutes to proceed against the organization or to prevent their activities. 47

Every Bureau witness deposed agreed that his particular COINTELPRO was the result of tremendous pressure on the Bureau to do something about a perceived threat, coupled with the inability of law enforcement techniques to cope with the situation, either because there were no pertinent federal statutes, 48 or because local law enforcement efforts were stymied by indifference or the refusal of those in charge to call the police.

Outside pressure and law enforcement frustration do not, of course, fully explain COINTELPRO. Perhaps, after all, the best explanation was proffered by George C. Moore, the Racial Intelligence Section chief:

The FBI's counterintelligence program came up because there was a point -- if you have anything in the FBI, you have an action-oriented group of people who see something happening and want to do something to take its place. 49

#### *F. Command and Control*

## *1. 1956-71*

While that "action-oriented group of people" was proceeding with fifteen years of COINTELPRO activities, where were those responsible for the supervision and control of the Bureau? Part of the answer lies in the definition of "covert action"--clandestine activities. No one outside the Bureau was supposed to know that COINTELPRO existed. Even within the Bureau, the programs were handled on a "need-to-know" basis.

Nevertheless, the Bureau has supplied the Committee with documents which support its contention that various Attorneys General, advisors to Presidents, members of the House Appropriations Subcommittee, and, in 1958, the Cabinet were at least put on notice of the existence of the CPUSA and White Hate COINTELPROs. The Bureau cannot support its claim that anyone outside the FBI was informed of the existence of the Socialist Workers Party, Black Nationalist, or New Left COINTELPROs, and even those letters or briefings which referred (usually indirectly) to the CPUSA and White Hate COINTELPROs failed to mention the use of techniques which risked physical, emotional, or economic damage to their targets. In any event, there is no record that any of these officials asked to know more, and none of them appears to have expressed disapproval based on the information they were given.

As the history of the Domestic Intelligence Division shows, the absence of disapproval has been interpreted by the Bureau as sufficient authorization to continue an activity (and occasionally, even express disapproval has not sufficed to stop a practice). Perhaps, however, the crux of the "command and control" problem lies in the testimony by one former Attorney General that he was too busy to know what the Bureau was doing, 50 and by another that, as a matter of political reality, he could not have stopped it anyway. 51

## *2. Post-1971*

Whether the Attorney General can control the Bureau is still an open question. The Peterson Committee, which was formed within the Justice Department to investigate COINTELPRO at Attorney General Saxbe's request, worked only with Bureau-prepared summaries of the COINTELPRO files. 52 Further, the fact that the Department of Justice must work with the Bureau on a day-to-day basis may influence the Department's judgment on Bureau activities. 53

### *G. Termination*

If COINTELPRO had been a short-lived aberration, the thorny problems of motivation, techniques, and control presented might be safely relegated to history. However, COINTELPRO existed for years on an "ad hoc" basis before the formal programs were instituted, and more significantly, COINTELPRO-type activities may continue today under the rubric of "investigation."

## *1. The Grey Area Between Counterintelligence and Investigation*

The word "counterintelligence" had no fixed meaning even before the programs were terminated. The Bureau witnesses agreed that there is a large grey area between "counterintelligence" and "aggressive investigation," and that, headquarters supervisors sometimes had difficulty in deciding which caption should go on certain proposals. 54

Aggressive investigation continues, and may be even more disruptive than covert action. An anonymous letter (COINTELPRO) can be ignored as the work of a crank; an overt approach by the Bureau ("investigation") is not so easily dismissed. 55 The line between information collection and harassment can be extremely thin.

## *2. Is COINTELPRO Continuing?*

COINTELPRO-type activities which are clearly not within the "grey area" between COINTELPRO and investigation have continued on at least three occasions. Although all COINTELPROs were officially terminated "for security reasons" on April 27, 1971, the documents discontinuing the program provided:

In exceptional circumstances where it is considered counterintelligence action is warranted, recommendations should be submitted to the Bureau under the individual case caption to which it pertains. These recommendations will be considered on an individual basis. 56

The Committee requested that the Bureau provide it with a list of any "COINTELPRO-type" actions Since April 28, 1971. The Bureau first advised the Committee that a review failed to develop any information indicating post termination COINTELPRO activity. Subsequently, the Bureau located and furnished to the Committee two instances of COINTELPRO-type operations. 57 The Committee has discovered a third instance; four months after COINTELPRO was terminated, information on an attorney's political background was furnished to friendly newspaper sources under the so-called "Mass Media Program," intended to discredit both the attorney and his client. 58

The Committee has not been able to determine with any greater precision the extent to which COINTELPRO may be continuing. Any proposals to initiate COINTELPRO-type action would be filed under the individual case caption. The Bureau has over 500,000 case files, and each one would have to be searched. In this context, it should be noted that a Bureau search of all field office COINTELPRO files revealed the existence of five operations in addition to those known to the Petersen committee. 59 A search of all investigative files might be similarly productive.

## *3. The Future of COINTELPRO*

Attitudes within and without the Bureau demonstrate a continued belief by some that covert action against American citizens is permissible if the need for it is strong enough. When the Petersen Committee report on COINTELPRO was released, Director Kelley responded, "For the FBI to have done less under the circumstances would have been an abdication of its responsibilities to the American people." He also restated his "feeling that the FBI's counterintelligence programs had an impact on the crises of the time and, therefore, that they helped to bring about a favorable change in this country." 60 In his testimony before the Select Committee, Director Kelley continued to defend COINTELPRO, albeit with some reservations:

What I said then, in 1974, and what I believe today, is that the FBI employees involved in these programs did what they felt was expected of them by the President, the Attorney General, the Congress, and the people of the United States. . . .

Our concern over whatever abuses occurred in the Counterintelligence Programs, and there were some substantial ones, should not obscure the underlying purpose of those programs.

We must recognize that situations have occurred in the past and will arise in the future where the Government may well be expected to depart from its traditional role, in the FBI's case, as an investigative and intelligence-gathering agency, and take affirmative steps which are needed to meet an imminent threat to human life or property. 62

Nor is the Director alone in his belief that faced with sufficient threat, covert disruption is justified. The Department of Justice promulgated tentative guidelines for the Bureau which would have permitted the Attorney General to authorize "preventive action" where there is a substantial possibility that violence will occur and "prosecution is impracticable." Although those guidelines have now been dropped, the principle has not been rejected.

## II. THE FIVE DOMESTIC PROGRAMS

### *A. Origins*

The origins of COINTELPRO are rooted in the Bureau's jurisdiction to investigate hostile foreign intelligence activities on American soil. Counterintelligence, of course, goes beyond investigation; it is affirmative action taken to neutralize hostile agents.

The Bureau believed its wartime counterattacks on foreign agents to be effective -- and what works against one enemy will work against another. In the atmosphere of the Cold War, the American Communist Party was viewed as a deadly threat to national security.

In 1956, the Bureau decided that a formal counterintelligence program, coordinated from headquarters, would be an effective weapon in the fight against Communism. The first COINTELPRO was therefore initiated. 63

The CPUSA COINTELPRO accounted for more than half of all approved proposals. 64 The Bureau personnel involved believed that the success of the program -- one action was described as "the most effective single blow ever dealt the organized communist movement" -- made counterintelligence techniques the weapons of choice whenever the Bureau assessed a new and, in its view, equally serious threat to the country.

As noted earlier, law enforcement frustration also played a part in the origins of each COINTELPRO. In each case, Bureau witnesses testified that the lack of adequate statutes, uncooperative or ineffective local police, or restrictive court rulings had made it impossible to use traditional law enforcement methods against the targeted groups.

Additionally, a certain amount of empire building may have been at work. Under William C. Sullivan, the Domestic Intelligence Division greatly expanded its jurisdiction. Klan matters were transferred in 1964 to the Intelligence Division from the General Investigative Division; black nationalist groups were added in 1967; and, just as the Old Left appeared to be dying out, 66 the New Left was gradually added to the work of the Division's Internal Security Section in the late 1960s.

Finally, it is significant that the five domestic COINTELPROs were started against the five groups which were the subject of intensified investigative programs. Of course, the fact that such intensive investigative programs were started at all reflects the Bureau's process of threat assessment: the greater the threat, the more need to know about it (intelligence) and the more impetus to counter it (covert action). More important, however, the mere existence of the additional information gained through the investigative programs inevitably demonstrated those particular organizational or personal weaknesses which were vulnerable to disruption. COINTELPRO demonstrates the dangers inherent in the overbroad collection of domestic intelligence; when information is available, it can be -- and was -- improperly used.

### *B. The Programs*

Before examining each program in detail, some general observations may be useful. Each of the five domestic COINTELPROs had certain traits in common. As noted above, each program used techniques learned from the Bureau's wartime efforts against hostile foreign agents. Each sprang from frustration with the perceived inability of law enforcement to deal with what the Bureau believed to be a serious threat to the country. Each program depended on an intensive intelligence effort to provide the information used to disrupt the target groups.

The programs also differ to some extent. The White Hate program, for example, was very precisely targeted; each of the other programs spread to a number of groups which do not appear to fall within any clear parameters. 67 In fact, with each subsequent COINTELPRO, the targeting became more diffuse.

The White Hate COINTELPRO also used comparatively few techniques which carried a risk of serious physical, emotional, or economic damage to the targets, while the Black Nationalist COINTELPRO used such techniques extensively. The New Left COINTELPRO, on the other hand, had the highest proportion of proposals aimed at preventing the exercise of free speech. Like the progression in targeting, the use of dangerous, degrading, or blatantly unconstitutional techniques also appears to have become less restrained with each subsequent program.

1. CPUSA. -- The first official COINTELPRO program, against the Communist Party, USA, was started in August 1956 with Director Hoover's approval. Although the formal program was instituted in 1956, COINTELPRO-type activities had gone on for years. The memorandum recommending the program refers to prior actions, constituting "harassment," which were generated by the field during the course of the Bureau's investigation of the Communist Party." These prior actions were instituted on all ad hoc basis as the opportunity arose. As Sullivan testified, "[Before 1956] we were engaged in COINTELPRO tactics, divide, confuse, weaken in diverse ways, all organization. . . . [Before 1956] it, was more sporadic. It depended on a given office. . . ." 69

In 1956, a series of field conferences was held to discuss the development of new security informants. The Smith Act trials and related proceedings had exposed over 100 informants, leaving the Bureau's intelligence apparatus in some disarray. During the field conferences, a formal counterintelligence program was recommended, partly because of the gaps in the informant ranks. 70

Since the Bureau had evidence that until the late 1940s the CPUSA had been "blatantly" involved in Soviet espionage, and believed that the Soviets were continuing to use the Party for "political and intelligence purposes," 71 there was no clear line of demarcation in the Bureau's switch from foreign to domestic counterintelligence. The initial areas of concentration were the use of informants to capitalize on the conflicts within the Party over Nikita Khrushchev's denunciation of Stalin; to prevent the CP's efforts to take over (via a merger) a broad-based socialist group; to encourage the Socialist Workers Party in its attacks on the CP; and to use the IRS to investigate underground CP members who either failed to file, or filed under false names.

As the program proceeded, other targets and techniques were developed, but until 1960 the CPUSA targets were Party members, and the techniques were aimed at the Party organization (factionalism, public exposure, etc.)

2. The 1960 Expansion. -- In March 1960, CPUSA COINTELPRO field offices received a directive to intensify counterintelligence efforts to prevent Communist infiltration ("COMINFIL") of mass organizations, ranging from the NAACP 72 to a local scout troop. 73 The usual technique would be to tell a leader of the organization about the alleged Communist in its midst, the target, of course, being the alleged Communist rather than the organization. In an increasing number of cases, however, both the alleged Communist and the organization were targeted, usually by planting a news article about Communists active in the organization. For example, a newsman was given information about Communist participation in a SANE march, with the express purpose being to discredit SANE as well as the participants, and another newspaper was alerted to plans of Bettina Aptheker to join a United Farm Workers picket line. 74 The 1960 "COMINFIL" memorandum marks the beginning of the slide from targeting CP members to those allegedly under CP "influence" (such civil right's leaders as Martin Luther King, Jr.) to "fellow travelers" (those, taking positions supported by the Communists, such as school integration, increased minority hiring, and opposition to HUAC.) 75

3. Socialist Workers Party. -- The Socialist Workers Party ("SWP") COINTELPRO program was initiated on October 12, 1961, by the headquarters supervisor handling the SWP desk (but with Hoover's concurrence) apparently on a theory of even-handed treatment: if the Bureau has a program against the CP, it was only fair to have one against the Trotskyites. (The COINTELPRO unit chief, in response to a question about why the Bureau targeted the SWP in view of the fact that the SWP's hostility to the Communist Party had been useful in disrupting the CPUSA, answered, "I do not think that the Bureau discriminates against subversive organizations.") 76

The program was not given high priority -- only 45 actions were approved -- and was discontinued in 1969, two years before the other four programs ended. (The SWP program was then subsumed in the New Left COINTELPRO.) Nevertheless, it marks an important departure from the CPUSA COINTELPRO: although the SWP had contacts with foreign Trotskyite groups, there was no evidence that the SWP was involved in espionage. These were, in C. D. Brennans phrase, "home grown tomatoes." 77 The Bureau has conceded that the SWP has never been engaged in organizational violence, nor has it taken any criminal steps toward overthrowing the country. 78

Nor does the Bureau claim the SWP was engaged in revolutionary acts. The Party was targeted for its rhetoric; significantly, the originating letter points to the SWPs "open" espousal of its line, "through running candidates for public office" and its direction and/or support of "such causes as Castro's Cuba and integration problems arising in the South." Further, the American people had to be alerted to the fact that "the SWP is not just another socialist group but follows the revolutionary principles of Marx, Lenin, and Engles as interpreted by Leon Trotsky." 79

Like the CPUSA COINTELPRO, non-Party members were also targeted, particularly when the SWP and the Young Socialist Alliance (the SWP's youth group) started to co-sponsor antiwar marches. 80

4. White Hate. -- The Klan COINTELPRO began on July 30, 1964, with the transfer of the "responsibility for development of informants and gathering of intelligence on the KKK and other hate groups" from the General Investigative Division to the Domestic Intelligence Division. The memorandum recommending the reorganization also suggested that, "counterintelligence and disruption tactics be given further study by DID and appropriate recommendations made." 81

Accordingly, on September 2, 1964, a directive was sent to seventeen field offices instituting a COINTELPRO against Klan-type and hate organizations "to expose, disrupt, and otherwise neutralize the activities of the various Klans and hate organizations, their leadership, and adherents." 82 Seventeen Klan organizations and nine "hate" organizations (e.g., American Nazi Party, National States Rights Party, etc.) were listed as targets. The field offices were also instructed specifically to consider "Action Groups" -- "the relatively few individuals in each organization who use strong arm tactics and violent actions to achieve their ends." 83 However, counterintelligence proposals were not to be limited to these few, but were to include any influential member if the opportunity arose. As the unit chief stated:

The emphasis was on determining the identity and exposing and neutralizing the violence prone activities of "Action Groups," but also it was important to expose the unlawful activities of other Klan organizations. We also made an effort to deter or counteract the propaganda and to deter violence and to deter recruitment where we could. This was done with the view that if we could curb the organization, we could curb the action or the violence within the organization. 84

The White Hate COINTELPRO appears to have been limited, with few exceptions, 85 to the original named targets. No "legitimate" right wing organizations were drawn into the program, in contrast with the earlier spread of the CPUSA and SWP programs to non members. This precision has been attributed by the Bureau to the superior intelligence on "hate" groups received by excellent informant penetration.

Bureau witnesses believe the Klan program to have been highly effective. The unit chief stated:

I think the Bureau got the job done.. I think that one reason we were able to get the job done was that we were able to use counterintelligence techniques. It is possible that we eventually could have done the job without counterintelligence techniques. I am not sure we could have done it as well or as quickly. 86

This view was shared by George C. Moore, Section Chief of the Racial Intelligence Section, which had responsibility for the White Hate and Black Nationalist COINTELPROs:

I think from what I have seen and what I have read, as far as the counterintelligence program on the, Klan is concerned, that it was effective. I think it was one of the most effective programs I have ever seen the Bureau handle as far as any group is concerned. 87

5. Black Nationalist-Hate Groups. 88 -- In marked contrast to prior COINTELPROs, which grew out of years of intensive intelligence investigation, the Black Nationalist COINTELPRO and the racial intelligence investigative section were set up at about the same time in 1967.

Prior to that time, the Division's investigation of "Negro matters" was limited to instances of alleged Communist infiltration of civil rights groups and to monitoring civil rights protest activity. However, the long, hot summer of 1967 led to intense pressure on the Bureau to do something to contain the problem, and once again, the Bureau heeded the call.

The originating letter was sent out to twenty-three field offices on August 25, 1967, describing the program's purpose as

... to expose, disrupt, misdirect, discredit, or otherwise neutralize the activities of black nationalist, hate-type organizations and groupings, their leadership, spokesmen, membership, and supporters, and to counter their propensity for violence and civil disorder. . . . Efforts of the various groups to consolidate their forces or to recruit new or youthful adherents must be frustrated. 89

Initial group targets for "intensified attention" were the Southern Christian Leadership Conference, the Student Nonviolent Coordinating Committee, Revolutionary Action Movement, Deacons for Defense and Justice, Congress of Racial Equality, and the Nation of Islam. Individuals named targets were Stokely Carmichael, H. "Rap" Brown, Elijah Muhammed, and Maxwell Stanford. The targets were chosen by conferring with Headquarters personnel supervising the racial cases; the list was not intended to exclude other groups known to the field.

According to the Black Nationalist supervisor, individuals and organizations were targeted because of their propensity for violence or their "radical or revolutionary rhetoric [and] actions":

Revolutionary would be [defined as] advocacy of the overthrow of the Government.... Radical [is] a loose term that might cover, for example, the separatist view of the Nation of Islam, the influence of a group called U.S. Incorporated.... Generally, they wanted a separate black nation.... They [the NOI] advocated formation of a separate black nation on the territory of five Southern states. 90

The letter went on to direct field offices to exploit conflicts within and between groups; to use news media contacts to disrupt, ridicule, or discredit groups; to preclude "violence-prone" or "rabble rouser" leaders of these groups from spreading their philosophy publicly; and to gather information on the "unsavory backgrounds" -- immorality, subversive activity, and criminal activity-- of group members. 91

According to George C. Moore, the Southern Christian Leadership Conference was included because

... at that time it was still under investigation because of the communist infiltration. As far as I know, there were not any violent propensities, except that I note ... in the cover memo [expanding the program] or somewhere, that they mentioned that

if Martin Luther King decided to go a certain way, he could cause some trouble.... I cannot explain it satisfactorily . . . this is something the section inherited. 92

On March 4, 1968, the program was expanded from twenty-three to forty-one field offices. 93 The letter expanding the program lists five long-range goals for the program:

- (1) to prevent the "coalition of militant black nationalist groups," which might be the first step toward a real "Mau Mau" in America;
- (2) to prevent the rise of a "messiah" who could "unify, and electrify," the movement, naming specifically Martin Luther King, Stokely Carmichael, and Elijah Muhammed;
- (3) to prevent violence on the part of black nationalist groups, by pinpointing "potential troublemakers" and neutralizing them "before they exercise their potential for violence;"
- (4) to prevent groups and leaders from gaining "respectability" by discrediting them to the "responsible" Negro community, to the white community (both the responsible community and the "liberals" -- the distinction is the Bureau's), and to Negro radicals; and
- (5) to prevent the long range growth of these organizations, especially among youth, by developing specific tactics to "prevent these groups from recruiting young people." 94

6. The Panther Directives. -- The Black Panther Party ("BPP") was not included in the first two lists of primary targets (August 1967 and March 1968) because it had not attained national importance. By November 1968, apparently the BPP had become sufficiently active to be considered a primary target. A letter to certain field offices with BPP activity dated November 25, 1968, ordered recipient offices to submit "imaginative and hard-hitting counterintelligence measures aimed at crippling the BPP." Proposals were to be received every two weeks. Particular attention was to be given to capitalizing upon the differences between the BPP and US, Inc. (Ron Karenga's group), which had reached such proportions that "it is taking on the aura of gang warfare with attendant threats of murder and reprisals." 95

On January 30, 1969, this program against the BPP was expanded to additional offices, noting that the BPP was attempting to create a better image. In line with this effort, Bobby Seale was conducting a "purge" 96 of the party, including expelling police informants. Recipient offices were instructed to take advantage of the opportunity to further plant the seeds of suspicion concerning disloyalty among ranking officials. 97

Bureau witnesses are not certain whether the Black Nationalist program was effective. Mr. Moore stated:

I know that the ... overall results of the Klan [COINTELPRO] was much more effective from what I have been told than the Black Extremism [COINTELPRO] because of the number of informants in the Klan who could take action which would be more effective. In the Black Extremism Group . . . we got a late start because we did not have extremist - activity [until] '67 and '68. Then we had to play catch-up.... It is not easy to measure effectiveness.... There were policemen killed in those days. There were bombs thrown. There were establishments burned with molotov cocktails.... We can measure that damage. You cannot measure over on the other side, what lives were saved because somebody did not leave the organization or suspicion was sown on his leadership and this organization gradually declined and [there was] suspicion within it, or this organization did not join with [that] organization as a result of a black power conference which was aimed towards consolidation efforts. All we know, either through their own ineptitude, maybe it emerged through counterintelligence, maybe, I think we like to think that that helped to do it, that there was not this development. . . . What part did counterintelligence [play?] We hope that it did play a part. Maybe we just gave it a nudge." 98

7. New Left. -- The Internal Security Section had undergone a slow transition from concentrating on the "Old Left" -- the CPUSA and SWP -- to focusing primarily on the activities of the "New Left" -- a term which had no precise definition within the Bureau. 99 Some agents defined "New Left" functionally, by connection with protests. Others defined it by philosophy, particularly antiwar philosophy.

On October 28, 1968, the fifth and final COINTELPRO was started against this undefined group. The program was triggered in part by the Columbia campus disturbance. Once again, law enforcement methods had broken down, largely (in the Bureau's opinion) because college administrators refused to call the police on campus to deal with student demonstrations. The atmosphere at the time was described by the Headquarters agent who supervised the New Left COINTELPRO:

During that particular time, there was considerable public, Administration -- I mean governmental Administration [and] news media interest in the protest movement to the extent that some groups, I don't recall any specifics, but some groups were calling for something to be done to blunt or reduce the protest movements that were disrupting campuses. I can't classify it as exactly an hysteria, but there was considerable interest [and concern]. That was the framework that we were working with.... It would be my impression that as a result of this hysteria, some governmental leaders were looking to the Bureau. 100

And, once again, the combination of perceived threat, public outcry, and law enforcement frustration produced a COINTELPRO.

According to the initiating letter, the counterintelligence program's purpose was to "expose, disrupt, and otherwise neutralize," the activities of the various New Left organizations, their leadership, and adherents, with particular attention to Key Activists, "the moving forces behind the New Left." The final paragraph contains an exhortation to a "forward look, enthusiasm, and interest" because of the Bureau's concern that "the anarchist activities of a few can paralyze institutions of learning, induction centers, cripple traffic, and tie the arms of law enforcement officials all to the detriment of our society." The internal memorandum recommending the program further sets forth the Bureau's concerns:

Our Nation is undergoing an era of disruption and violence caused to a large extent by various individuals generally connected with the New Left. Some of these activists urge revolution in America and call for the defeat of the United States in Vietnam. They continually and falsely allege police brutality and do not hesitate to utilize unlawful acts to further their so-called causes.

The document continues:

The New Left has on many occasions viciously and scurrilously attacked the Director and the Bureau in an attempt to hamper our investigation of it and to drive us off the college campuses. 101

Based on those factors, the Bureau decided to institute a new COINTELPRO.

8. New Left Directives. -- The Bureau's concern with "tying the hands of law enforcement officers," and with the perceived weakness of college administrators in refusing to call police onto the campus, led to a May 23, 1968, directive to all participating field offices to gather information on three categories of New Left activities:

(1) false allegations of police brutality, to "counter the wide-spread charges of police brutality that invariably arise following student-police encounters";

(2) immorality, depicting the "scurrilous and depraved nature of many of the characters, activities, habits, and living conditions representative of New Left adherents"; and

(3) action by college administrators, "to show the value of college administrators and school officials taking a firm stand," and pointing out "whether and to what extent faculty members rendered aid and encouragement."

The letter continues, "Every avenue of possible embarrassment must be vigorously and enthusiastically explored. It cannot be expected that information of this type will be easily obtained, and an imaginative approach by your personnel is imperative to its success." 103

The order to furnish information on "immorality" was not carried out with sufficient enthusiasm. On October 9, 1968, headquarters sent another letter to all offices, taking them to task for their failure to "remain alert for and to seek specific data depicting the depraved nature and moral looseness of the New Left" and to "use this material in a vigorous and enthusiastic approach to neutralizing them." 104 Recipient offices were again instructed to be "particularly alert for this type of data" 105 and told:

As the current school year commences, it can be expected that the New Left with its anti-war and anti-draft entourage will make every effort to confront college authorities, stifle military recruiting, and frustrate the Selective Service System. Each office will be expected, therefore, to afford this program continuous effective attention in order that no opportunity will be missed to destroy this insidious movement. 106

As to the police brutality and "college administrator" categories, the Bureau's belief that getting tough with students and demonstrators would solve the problem, and that any injuries which resulted were deserved, is reflected in the Bureau's reaction to allegations of police brutality following the Chicago Democratic Convention.

On August 28, 1968, a letter was sent to the Chicago field office instructing it to "obtain all possible evidence that would disprove these charges" [that the Chicago police used undue force] and to "consider measures by which cooperative news media may be used to counteract these allegations." The administrative "note" (for the file) states :

Once again, the liberal press and the bleeding hearts and the forces on the left are taking advantage of the situation in Chicago surrounding the Democratic National Convention to attack the police and organized law enforcement agencies... We should be mindful of this situation and develop all possible evidence to expose this activity and to refute these false allegations. 107

In the same vein, on September 9, 1968, an instruction was sent to all offices which had sent informants to the Chicago convention demonstrations, ordering them to debrief the informants for information "indicating incidents were staged to show police reacted with undue force and any information that authorities were baited by militants into using force." 108 The offices were also to obtain evidence of possible violations of anti-riot laws. 109

The originating New Left letter had asked all recipient offices to respond with suggestions for counterintelligence action. Those responses were analyzed and a letter sent to all offices on July 6, 1968, setting forth twelve suggestions for counterintelligence action which could be utilized by all offices. Briefly the techniques are:

(1) preparing leaflets designed to discredit student demonstrators, using photographs of New Left leadership at the respective universities. "Naturally, the most obnoxious pictures should be used";

(2) instigating "personal conflicts or animosities" between New Left leaders;

(3) creating the impression that leaders are "informants for the Bureau or other law enforcement agencies";

(4) sending articles from student newspapers or the "underground press" which show the depravity of the New Left to university officials, donors, legislators, and parents. "Articles showing advocacy of the use of narcotics and free sex are ideal";

(5) having members arrested on marijuana charges;

(6) sending anonymous letters about a student's activities to parents, neighbors, and the parents' employers. "This could have the effect of forcing the parents to take action";

(7) sending anonymous letters or leaflets describing the "activities and associations" of New Left faculty members and graduate assistants to university officials, legislators, Boards of Regents, and the press. "These letters should be signed 'A Concerned Alumni,' or 'A Concerned Taxpayer'";

(8) using cooperative press contacts" to emphasize that the "disruptive elements" constitute a "minority" of the students. "The press should demand an immediate referendum on the issue in question";

(9) exploiting the "hostility" among the SDS and other New Left groups toward the SWP, YSA, and Progressive Labor Party;

(10) using "friendly news media" and law enforcement officials to disrupt New Left coffeehouses near military bases which are attempting to "influence members of the Armed Forces";

(11) using cartoons, photographs, and anonymous letters to "ridicule" the New Left, and

(12) using "misinformation" to "confuse and disrupt" New Left activities, such as by notifying members that events have been cancelled. 110

As noted earlier, the lack of any Bureau definition of "New Left" resulted in targeting almost every anti-war group, 111 and spread to students demonstrating against anything. One notable example is a proposal targeting a student who carried an "obscene" sign in a demonstration protesting administration censorship of the school newspaper, and another student who sent a letter to that paper defending the demonstration. 112 In another article regarding "free love" on a university campus was anonymously mailed to college administrators and state officials since free love allows "an atmosphere to build up on campus that will be a fertile field for the New Left." 113

None of the Bureau witnesses deposed believes the New Left COINTELPRO was generally effective, in part because of the imprecise targeting.

### **III. THE GOALS OF COINTELPRO: PREVENTING OR DISRUPTING THE EXERCISE OF FIRST AMENDMENT RIGHTS**

The origins of COINTELPRO demonstrate that the Bureau adopted extralegal methods to counter perceived threats to national security and public order because the ordinary legal processes were believed to be insufficient to do the job. In essence, the Bureau took the law into its own hands, conducting a sophisticated vigilante operation against domestic enemies.

The risks inherent in setting aside the laws, even though the purpose seems compelling at the time, were described by Tom Charles Huston in his testimony before the Committee: 114

The risk was that you would get people who would be susceptible to political considerations as opposed to national security considerations, or would construe political considerations to be national security considerations, to move from the kid with a bomb to the kid with a picket sign, and from the kid with the picket sign to the kid with the bumper sticker of the opposing candidate. And you just keep going down the line. 115

The description is apt. Certainly, COINTELPRO took in a staggering range of targets. As noted earlier, the choice of individuals and organizations to be neutralized and disrupted ranged from the violent elements of the Black Panther Party to Martin Luther King, Jr., who the Bureau concedes was an advocate of nonviolence; from the Communist Party to the Ku Klux Klan; and from the advocates of violent revolution such as the Weathermen, to the supporters of peaceful social change, including the Southern Christian Leadership Conference and the Inter-University Committee for Debate on Foreign Policy.

The breadth of targeting springs partly from a lack of definition for the categories involved, and partly from the Bureau's belief that dissident speech and association should be prevented because they were incipient steps toward the possible ultimate commission of an act which might be criminal. Thus, the Bureau's self-imposed role as protector of the existing political and social order blurred the line between targeting criminal activity and constitutionally protected acts and advocacy.

The clearest example of actions directly aimed at the exercise of constitutional rights are those targeting speakers, teachers, writers or publications, and meetings or peaceful demonstrations. 116 Approximately 18 percent of all approved COINTELPRO proposals fell into these categories. 117

The cases include attempts (sometimes successful) to get university and high school teachers fired; to prevent targets from speaking on campus; to stop chapters of target groups from being formed; to prevent the distribution of books, newspapers, or periodicals; to disrupt news conferences; to disrupt peaceful demonstrations, including the SCLC's Washington Spring Project and Poor People's Campaign, and most of the large antiwar marches; and to deny facilities for meetings or conferences.

#### *A. Efforts to Prevent Speaking*

An illustrative example of attacks on speaking concerns the plans of a dissident stockholders' group to protest a large corporation's war production at the annual stockholders meeting. 118 The field office was authorized to furnish information about the group's plans (obtained from paid informants in the group) to a confidential source in the company's management. The Bureau's purpose was not only to "circumvent efforts to disrupt the corporate meeting," but also to prevent any attempt to "obtain publicity or embarrass" corporate officials. 119

In another case, 120 anonymous telephone calls were made to the editorial desks of three newspapers in a Midwestern city, advising them that a lecture to be given on a university campus was actually being sponsored by a Communist-front organization. The university had recently lifted its ban on Communist speakers on campus and was experiencing some political difficulty over this decision. The express purpose of the phone calls was to prevent a Communist-sponsored speaker from appearing on campus and, for a time, it appeared to have worked. One of the newspapers contacted the director of the university's conference center. He in turn discussed the meeting with the president of the university who decided to cancel the meeting. 121 The sponsoring organization, supported by the ACLU, took the case to court, and won a ruling that the university could not bar the speaker. (Bureau headquarters then ordered the field office to furnish information on the judge.) Although the lecture went ahead as scheduled, headquarters commended the field office for the affirmative results of its suggestion: the sponsoring organization had been forced to incur additional expense and attorneys' fees, and had received newspaper exposure of its "true communist character."

#### *B. Efforts to Prevent Teaching*

Teachers were targeted because the Bureau believed that they were in a unique position to "plant the seeds of communism [or whatever ideology was under attack] in the minds of unsuspecting youth." Further, as noted earlier, it was believed that a teacher's position gave respectability to whatever cause he supported. In one case, a high school teacher was targeted for inviting two poets to attend a class at his school. The poets were noted for their efforts in the draft resistance movement. This invitation led to an investigation by the local police, which in turn provoked sharp criticism from the ACLU. The field office was authorized to send anonymous letters to two local newspapers, to the city Board of Education, and to the high school administration, suggesting that the ACLU should not criticize the police for probing into high school activities, "but should rather have focused attention on [the teacher] who has been a convicted draft dodger." The letter continued, "[the teacher] is the assault on academic freedom and not the local police." The purpose of the letter, according to Bureau documents, was "to highlight [the teacher's] antidraft activities at the local high school" and to "discourage any efforts" he may make there. The letter was also intended to "show support for the local police against obvious attempts by the New Left to agitate in the high schools." 122 No results were reported.

In another case, 123 a university professor who was "an active participant in New Left demonstrations" had publicly surrendered his draft card and had been arrested twice, (but not convicted) in antiwar demonstrations. The Bureau decided that the professor should be "removed from his position" at the university. The field office was authorized to contact a "confidential source" at a foundation which contributed substantial funds to the university, and "discreetly suggest that the [foundation] may desire to call to the attention of the University administration questions concerning the advisability of [the professor's] continuing his position there." The foundation official was told by the university that the professor's contract would not be renewed, but in fact the professor did continue to teach. The following academic year, therefore, the field office was authorized to furnish additional information to the foundation official on the professor's arrest and conviction (with a, suspended sentence) in another demonstration. No results were reported.

In a third instance, the Bureau attempted to "discredit and neutralize" a university professor and the Inter-University Committee for Debate on Foreign Policy, in which he was active. The field office was authorized to send a fictitious name letter to influential state political figures, the mass media, university administrators, and the Board of Regents, accusing the professor and "his protesting cohorts" of "giving aid and comfort to the enemy," and wondering "if the strategy is to bleed the United States white by prolonging the war in Vietnam and pave the way for a takeover by Russia." No results were reported. 124

#### *C. Efforts to Prevent Writing and Publishing*

The Bureau's purpose in targeting attempts to speak was explicitly to prevent the "propagation" of a target's philosophy and to deter "recruitment" of new members. Publications and writers appear to have been targeted for the same reasons. In one example, 125 two university instructors were targeted solely because they were influential in the publication of and contributed financial support to a student "underground" newspaper whose editorial policy was described as "left-of-center, anti-establishment, and opposed [to] the University administration." The Bureau believed that if the two instructors were forced to withdraw their support of the newspaper, it would "fold and cease publication. . . . This would eliminate what voice the New Left has in the area." Accordingly, the field office was authorized to send an anonymous letter to a university official furnishing information concerning the instructors' association with the newspaper, with a warning that if the university did not persuade the instructors to cease their support, the letter's author would be forced to expose their activities publicly. The field office reported that as a result of this technique, both teachers were placed on probation by the university president, which would prevent them from getting any raises.

Newspapers were a common target. The Black Panther Party paper was the subject of a number of actions, both because of its contents and because it was a source of income for the Party. 126 Other examples include contacting the landlord of premises rented by two "New Left" newspapers in an attempt to get them evicted; 121 an anonymous letter to a state legislator protesting the distribution on campus of an underground newspaper "representative of the type of mentality that is following the New Left theory of immorality on certain college campuses"; 128 a letter signed "Disgusted Taxpayer and Patron" to advertisers in a student newspaper intended to "increase pressure on the student newspaper to discontinue the type of journalism that had been employed" (an article had quoted a demonstrator's "vulgar language"); 129 and proposals (which, according to the Bureau's response to a staff inquiry, were never carried out) to physically disrupt printing plants. 130

#### *D. Efforts to Prevent Meeting*

The Bureau also attempted to prevent target groups from meeting. Frequently used techniques include contacting the owner of meeting facilities in order to have him refuse to rent to the group; 131 trying to have a group's charter revoked; 132 using the press to disrupt a "closed" meeting by arriving unannounced; 133 and attempting to persuade sponsors to withdraw funds. 134 The most striking examples of attacks meeting, however, involve the use of "disinformation." 135

In one "disinformation" case, the Chicago Field Office duplicated blank forms prepared by the National Mobilization Committee to End the War in Vietnam ("NMC") soliciting housing for demonstrators coming to Chicago for the Democratic National Convention. Chicago filled out 217 of these forms with fictitious names and addresses and sent them to the NMC, which provided them to demonstrators who made "long and useless journeys to locate these addresses." The NMC then decided to discard all replies received on the housing forms rather than have out-of-town demonstrators try to locate nonexistent addresses. 136 (The same program was carried out when the Washington Mobilization Committee distributed housing forms for demonstrators coming to Washington for the 1969 Presidential inaugural ceremonies.) 137

In another case, during the demonstrations accompanying inauguration ceremonies, the Washington Field Office discovered that NMC marshals were using walkie-talkies to coordinate their movements and activities. WFO used the same citizen band to supply the marshals with misinformation and, pretending to be an NMC unit, countermanded NMC orders. 138

In a third case 139 a midwest field office disrupted arrangements for state university students to attend the 1969 inaugural demonstrations by making a series of anonymous telephone calls to the transportation company. The calls were designed to confuse both the transportation company and the SDS leaders as to the cost of transportation and the time and place for leaving and returning. This office also placed confusing leaflets around the campus to show different times and places for demonstration-planning meetings, as well as conflicting times and dates for traveling to Washington.

In a fourth instance, the "East Village Other" planned to bomb the Pentagon with flowers during the 1967 NMC rally in Washington. The New York office answered the ad for a pilot, and kept up the pretense right to the point at which the publisher showed up at the airport with 200 pounds of flowers, with no one to fly the plane. Thus, the Bureau was able to prevent this "agitational-propaganda activity as relates to dropping flowers over Washington." 140

The cases discussed above are just a few examples of the Bureau's direct attack on speaking, teaching, writing and meeting. Other instances include targeting the New Mexico Free University for teaching, among other things, "confrontation politics" and "draft counseling training." 141 In another case, an editorial cartoonist for a northeast newspaper was asked to prepare a cartoon which would "ridicule and discredit" a group of antiwar activists who traveled to North Vietnam to inspect conditions there; the cartoon was intended to "depict [the individuals] as traitors to their country for traveling to North Vietnam and making utterances against the foreign policy of the United States." 142 A professor was targeted for being the faculty advisor to a college group which circulated "The Student As Nigger" on campus." A professor conducting a study on the effect and social costs of McCarthyism was targeted because he sought information and help from the American Institute of Marxist Studies. 144 Contacts were made with three separate law schools in an attempt to keep a teaching candidate from being hired, or once hired, from getting his contract renewed. 145

The attacks on speaking, teaching, writing, and meeting have been examined in some detail because they present, in their purist form, the consequences of acting outside the legal process. Perhaps the Bureau was correct in its assumption that words lead to deeds, and that larger group membership produces a greater risk of violence. Nevertheless, the law draws the line between criminal acts and constitutionally protected activity, and that line must be kept. 146 As Justice Brandeis declared in a different context fifty years ago:

Our government is the potent, the omnipresent teacher. For good or for ill, it teaches the whole people, by its example. Crime is contagious. If the Government becomes a lawbreaker, it breeds contempt for law: it invites every man to become a law unto himself. To declare that in the administration of the criminal law the end justifies the means -- to declare that the Government may commit crimes in order to secure the conviction of the private criminal -- would bring terrible retribution. Against the pernicious doctrine this Court should resolutely set its face. *Olmstead v. U.S.*, 277 U.S. 439,485 (1927)

#### **IV. COINTELPRO TECHNIQUES**

The techniques used in COINTELPRO were -- and are -- used against hostile foreign intelligence agents. Sullivan's testimony that the "rough, tough, dirty business" 147 of foreign counterintelligence was brought home against domestic enemies was corroborated by George Moore, whose Racial Intelligence Section supervised the White Hate and Black Nationalist COINTELPROs:

You can trace [the origins] up and back to foreign intelligence, particularly penetration of the group by the individual informant. Before you can engage in counterintelligence you must have intelligence .... If you have good intelligence and know what it's going to do, you can seed distrust, sow misinformation. The same technique is used in the foreign field. The same technique is used, misinformation, disruption, is used in the domestic groups, although in the domestic groups you are dealing in '67 and '68 with many, many more across the country ... than you had ever dealt with as far as your foreign groups. 148

The arsenal of techniques used in the Bureau's secret war against domestic enemies ranged from the trivial to the life endangering. Slightly more than a quarter of all approved actions were intended to promote factionalization within groups and between groups; a roughly equal number of actions involved the creation and dissemination of propaganda. 149 Other techniques involved the use of federal, state, and local agencies in selective law enforcement, and other use (and abuse) of government processes; disseminating derogatory information to family, friends, and associates; contacting employers; exposing "communist infiltration" or support of target groups; and using organizations which were hostile to target groups to disrupt meetings or otherwise attack the targets.

#### *A. Propaganda*

The Bureau's COINTELPRO propaganda efforts stem from the same basic premise as the attacks on speaking, teaching, writing and meeting: propaganda works. Certain ideas are dangerous, and if their expression cannot be prevented, they should be countered with Bureau-approved views. Three basic techniques were used: (1) mailing reprints of newspaper and magazine articles to group members or potential supporters intended to convince them of the error of their ways; (2) writing articles for or furnishing information to "friendly" media sources to "expose" target groups; 150 and (3) writing, printing, and disseminating pamphlets and fliers without identifying the Bureau as the source.

##### *1. Reprint Mailings*

The documents contain case after case of articles and newspaper clippings being mailed (anonymously, of course) to group members. The Jewish members of the Communist Party appear to have been inundated with clippings dealing with Soviet mistreatment of Jews. Similarly, Jewish supporters of the Black Panther Party received articles from the BPP newspaper containing anti-Semitic statements. College administrators received reprints of a Reader's Digest article 151 and a Barron's article on campus disturbances intended to persuade them to "get tough." 152

Perhaps only one example need be examined in detail, and that only because it clearly sets forth the purpose of propaganda reprint mailings. Fifty copies of an article entitled "Rabbi in Vietnam Says Withdrawal Not the Answer," described as "an excellent article in support of United States foreign policy in Vietnam," were mailed to certain unnamed professors and members of the Vietnam Day Committee "who have no other subversive organizational affiliations." The purpose of the mailing was "to convince [the recipients] of the correctness of the U.S. foreign policy in Vietnam." 153

Reprint mailings would seem to fall under Attorney General Levi's characterization of much of COINTELPRO as "foolishness." 154 They violate no one's civil rights, but should the Bureau be in the anonymous propaganda business?

##### *2. "Friendly" Media*

Much of the Bureau's propaganda efforts involved giving information or articles to "friendly" media sources who could be relied upon not to reveal the Bureau's interests. 155 The Crime Records Division of the Bureau was responsible for public relations, including all headquarters contacts with the media. In the course of its work (most of which had nothing to do with COINTELPRO) the Division assembled a list of "friendly" news media sources -- those who wrote pro-Bureau stories. 156 Field offices also had "confidential sources" (unpaid Bureau informants) in the media, and were able to ensure their cooperation.

The Bureau's use of the news media took two different forms: placing unfavorable articles and documentaries about targeted groups, and leaking derogatory information intended to discredit individuals. 157

A typical example of media propaganda is the headquarters letter authorizing the Boston Field Office to furnish "derogatory information about the Nation of Islam (NOI) to established source [name excised]": 158

Your suggestions concerning material to furnish [name] are good. Emphasize to him that the NOI predilection for violence, preaching of race hatred, and hypocrisy, should be exposed. Material furnished [name] should be either public source or known to enough people as to protect your sources. Insure the Bureau's interest in this matter is completely protected by [name]. 160

In another case, information on the Junta of Militant Organizations ("JOMO", a Black Nationalist target) was furnished to a source at a Tampa television station. 161 Ironically, the station manager, who had no knowledge of the Bureau's involvement, invited the Special Agent in Charge, his assistant, and other agents to a preview of the half-hour film which resulted. The SAC complimented the station manager on his product, and suggested that it be made available to civic groups. 162

A Miami television station made four separate documentaries (on the Klan, Black Nationalist groups, and the New Left) with materials secretly supplied by the Bureau. One of the documentaries, which had played to an estimated audience of 200,000, was the subject of an internal memorandum "to advise of highly successful results of counterintelligence, exposing the black extremist Nation of Islam."

[Excised] was elated at the response. The station received more favorable telephone calls from viewers than the switchboard could handle. Community leaders have commented favorably on the program, three civic organizations have asked to show the film to their members as a public service, and the Broward County Sheriff's Office plans to show the film to its officers and in connection with its community service program.

This expose showed that NOI leaders are of questionable character and live in luxury through a large amount of money taken as contributions from their members. The extreme nature of NOI teachings was underscored. Miami sources advised the expose has caused considerable concern to local NOI leaders who have attempted to rebut the program at each open meeting of the NOI since the program was presented. Local NOI leaders plan a rebuttal in the NOI newspaper. Attendance by visitors at weekly NOI meetings has dropped 50%. This shows the value of carefully planned counterintelligence action. 163

The Bureau also planted derogatory articles about the Poor People's Campaign, the Institute for Policy Studies, the Southern Students Organizing Committee, the National Mobilization Committee, and a host of other organizations it believed needed to be seen in their "true light."

### *3. Bureau-Authored Pamphlets and Fliers.*

The Bureau occasionally drafted, printed, and distributed its own propaganda. These pieces were usually intended to ridicule their targets, rather than offer "straight" propaganda on the issue. Four of these fliers are reproduced in the following pages.

NOTE: Memorandum from New York Field Office to FBI Headquarters, 1/14/70; memorandum from FBI Headquarters to New York Field Office, 1/20/70.

NOTE: Memorandum from New York Field Office to FBI Headquarters, 2/7/69; memorandum from FBI Headquarters to New York Field Office, 2/14/69.

NOTE: Memorandum from New York Field Office to FBI Headquarters, 1/21/69; memorandum from FBI Headquarters to New York Field Office, 1/24/69.

NOTE: Memorandum from New York Field Office to FBI Headquarters, 8/5/69; memorandum from FBI Headquarters to New York Field Office, 8/11/69.

### *B. Effects to Promote Enmity and Factionalism Within Groups or Between Groups*

Approximately 28% of the Bureau's COINTELPRO efforts were designed to weaken groups by setting members against each other, or to separate groups which might otherwise be allies, and convert them into mutual enemies. The techniques used included anonymous mailings (reprints, Bureau-authored articles and letters) to group members criticizing a leader or an allied group; 164 using informants to raise controversial issues; forming a "notional" -- a Bureau run splinter group -- to draw away membership from the target organization; encouraging hostility up to and including gang warfare between rival groups; and the "snitch jacket."

#### *1. Encouraging Violence Between Rival Groups*

The Bureau's attempts to capitalize on active hostility between target groups carried with them the risk of serious physical injury to the targets. As the Black Nationalist supervisor put it:

It is not easy [to judge the risks inherent in this technique]. You make the best judgment you can based on all the circumstances and you always have an element of doubt where you are dealing with individuals that I think most people would characterize as having a degree of instability. 65

The Bureau took that risk. The Panther directive instructing recipient officers to encourage the differences between the Panthers and U.S., Inc. which were "taking on the aura of gang warfare with attendant threats of murder and reprisals," 166 is just one example.

A separate report on disruptive efforts aimed at the Panthers will examine in detail the Bureau's attempts to foment violence. These efforts included anonymously distributing cartoons which pictured the U.S. organization gloating over the corpses of two murdered Panthers, and suggested that other BPP members would be next, 167 and sending a New Jersey Panther leader the following letter which purported to be from an SDS member: 168

"To Former Comrade [name]

"As one of 'those little bourgeois, snooty nose' -- 'little schoolboys' -- 'little sissies' Dave Hilliard spoke of in the 'Guardian' of 8/16/69, I would like to say that you and the rest of you black racists can go to hell. I stood shoulder to shoulder with Carl Nichols last year in Military Park in Newark and got my a--- whipped by a Newark pig all for the cause of the wineheads like you and the rest of the black pussycats that call themselves Panthers. Big deal, you have to have a three hour educational session just to teach those ... (you all know what that means don't you! It's the first word your handkerchief head mamma teaches you) how to spell it.

"Who the hell set you and the Panthers up as the vanguard of the revolutionary and disciplinary group. You can tell all those wineheads you associate with that you'll kick no one's '... a---,' because you'd have to take a three year course in spelling to know what an a--- is and three more years to be taught where it's located.

"Julius Lester called the BPP the vanguard (that's leader) organization so international whore Cleaver calls him racist, now when full allegiance is not given to the Panthers, again racist. What the hell do you want? Are you getting this? Are you lost? If you're not digging then you're really hopeless.

"Oh yes! We are not concerned about Hilliard's threats.

"Brains will win over brawn. The way the Panthers have retaliated against US is another indication. The score: US-6: Panthers-0.

"Why, I read an article in the Panther paper where a California Panther sat in his car and watched his friend get shot by Karenga's group and what did he do? He run back and write a full page story about how tough the Panthers are and what they're going to do. Ha Ha -- B -- S --.

"Goodbye [name] baby-and watch out. Karenga's coming.

"Right On' as they say."

An anonymous letter was also sent to the leader of the Blackstone Rangers, a Chicago gang "to whom violent type activity, shooting, and the like, are second nature," advising him that "the brothers that run the Panthers blame you for blocking their thing and there's supposed to be a hit out for you." The letter was intended to "intensify the degree of animosity between the two groups" and cause "retaliatory action which could disrupt the BPP or lead to reprisals against its leadership." 169

EDITOR:

What's with this bull---- SDS outfit? I'll tell you what they has finally showed there true color White. They are just like the commies and all the other white radical groups that suck up to the blacks and use us. We voted at our meeting in Oakland for community control over the pigs but SDS says no. Well we can do with out them mothers. We can do it by ourselves.

OFF THE PIGS POWER TO THE PEOPLE

Soul Brother Jake

In another case, the Bureau tried to promote violence, not between violent groups, but between a possibly violent person and another target. The field office was given permission to arrange a meeting between an SCLC officer and the leader of a small group described as "anti-Vietnam black nationalist [veterans'] organization." The leader of the veterans' group was known to be upset because he was not receiving funds from the SCLC. He was also known to be on leave from a mental hospital, and the Bureau had been advised that he would be recommitted if he were arrested on any charge. It was believed that "if the confrontation occurs at SCLC headquarters," the veterans' group leader "will lose his temper, start a fight," and the "police will be called in." The purpose was to "neutralize" the leader by causing his commitment to a mental hospital, and to gain "unfavorable publicity for the SCLC." 170

At least four assaults -- two of them on women -- were reported as "results" of Bureau actions. The San Diego field office claimed credit for three of them. In one case, US members "broke into" a BPP meeting and "roughed up" a woman member. 171

In the second instance, a critical newspaper article in the Black Panther paper was sent to the US leader. The field office noted that "the possibility exists that some sort of retaliatory actions will be taken against the BPP." 172 The prediction proved correct; the field office reported that as a result of this mailing, members of US assaulted a Panther newspaper vendor. 173 The third assault occurred after the San Diego Police Department, acting on a tip from the Bureau that "sex orgies" were taking place at Panther headquarters, raided the premises. (The police department conducted a "research project," discovered two outstanding traffic warrants for a BPP member, and used the warrants to gain entry.) The field office reported that as a "direct result" of the raid, the woman who allowed the officers into the BPP headquarters had been "severely beaten up" by other members." 174

In the fourth case, the New Haven field office reported that an informant had joined in a "heated conversation" between several group members and sided with one of the parties "in order to increase the tension." The argument ended with members hitting each other. The informant "departed the premises at this point, since he felt that he had been successful, causing a flammable situation to erupt into a fight." 175

## *2. Anonymous Mailings*

The Bureau's use of anonymous mailings to promote factionalism range from the relatively bland mailing of reprints or fliers criticizing a group's leaders for living ostentatiously or being ineffective speakers, to reporting a chapter's infractions to the group's headquarters intended to cause censure or disciplinary action.

Critical letters were also sent to one group purporting to be from another, or from a member of the group registering a protest over a proposed alliance.

For instance, the Bureau was particularly concerned with the alliance between the SDS and the Black Panther Party. A typical example of anonymous mailing intended to separate these groups is a letter sent to the Black Panther newspaper: 176 [sic - report did not contain text of letter. - PW]

In a similar vein, is a letter mailed to Black Panther and New Left leaders. 177

Dear Brothers and Sisters,

Since when do us Blacks have to swallow the dictates of the honky SDS? Doing this only hinders the Party progress in gaining Black control over Black people. We've been over by the white facists pigs and the Man's control over our destiny. We're sick and tired of being severly brutalized, denied our rights and treated like animals by the white pigs. We say to hell with the SDS and its honky intellectual approaches which only perpetuate control of Black people by the honkies.

The Black Panther Party theory for community control is the only answer to our problems and that is to be followed and enforced by all means necessary to insure control by Blacks over all police departments regardless of whether they are run by honkies or uncle toms.

The damn SDS is a paper organization with a severe case of diarrhea of the mouth which has done nothing but feed us lip service. Those few idiots calling themselves weathermen run around like kids on halloween. A good example is their "militant" activities at the Northland Shopping Center a couple of weeks ago. They call themselves revolutionaries but take a look at who they are. Most of them come from well heeled families even by honky standards. They think they're helping us Blacks but their futile, misguided and above all white efforts only muddy the revolutionary waters.

The time has come for an absolute break with any non-Black group and especially those ----- SDS and a return to our pursuit of a pure black revolution by Blacks for Blacks.

Power !

Off the Pigs!!!!

These examples are not, of course, exclusive, but they do give the flavor of the anonymous mailings effort.

## *3. Interviews*

Interviewing group members or supporters was an overt "investigative" technique sometimes used for the covert purpose of disruption. For example, one field office noted that "other [BPP] weaknesses that have been capitalized on include interviews of members wherein jealousy among the members has been stimulated and at the same time has caused a number of persons to fall under suspicion and be purged from the Party." 178

In another case, fourteen field offices were instructed to conduct simultaneous interviews of individuals known to have been contacted by members of the Revolutionary Union. The purpose of the coordinated interviews was "to make possible affiliates of the RU believe that the organization is infiltrated by informants on a high level. 179

In a third instance, 'a "black nationalist" target attempted to organize a youth group in Mississippi. The field office used informants to determine "the identities of leaders of this group and in interviewing these leaders, expressed to them [the

target's] background and his true intentions regarding organizing Negro youth groups." Agents also interviewed the target's landlords and "advised them of certain aspects of [his] past activities and his reputation in the Jackson vicinity as being a Negro extremist." Three of the landlords asked the target to move. 180 The same field office reported that it had interviewed members of the Tougaloo College Political Action Committee, an "SNCC - affiliated" student group. The members were interviewed while they were home on summer vacation. "Sources report that these interviews had a very upsetting effect on the PAC organization and they felt they have been betrayed by someone at Tougaloo College. Many of the members have limited their participation in PAC affairs since their interview by Agents during the summer of 1968." 181

#### *4. Using Informants To Raise Controversial Issues*

The Bureau's use of informants generally is the subject of a separate report. It is worth noting here, however, that the use of informants to take advantage of ideological splits in an organization dates back to the first COINTELPRO. The originating CUPSA document refers to the use of informants to capitalize on the discussion within the Party following Khrushchev's denunciation of Stalin. 182

Informants were also used to widen rifts in other organizations. For instance, an informant was instructed to imply that the head of one faction of the SDS was using group funds for his drug habit, and that a second leader embezzled funds at another school. The field office reported that "as a result of actions taken by this informant, there have been fist fights and acts of name calling at several of the recent SDS meetings." In addition, members of one faction "have made early morning telephone calls" to other SDS members and "have threatened them and attempted to discourage them from attending SDS meetings." 183

In another case, an informant was used to "raise the question" among his associates that an unmarried, 30-year old group leader "may either be bisexual or a homosexual." The field office believed that the question would "rapidly 'become a rumor' and 'could have serious results concerning the ability and effectiveness of [the target's] leadership.'" 184

#### *5. Fictitious Organizations*

There are basically three kinds of "notional" or fictitious organizations. All three were used in COINTELPRO attempts to factionalize.

The first kind of "notional" was the organization whose members were all Bureau informants. Because of the Committee's agreement with the Bureau not to reveal the identities of informants, the only example which can be discussed publicly is a proposal which, although approved, was never implemented. That proposal involved setting up a chapter of the W.E.B. DuBois Club in a Southern city which would be composed entirely of Bureau informants and fictitious persons. The initial purpose of the chapter was to cause the CPUSA expense by sending organizers into the area, cause the Party to fund Bureau coverage of out-of-town CP meetings by paying the informants' expenses, and receive literature and instructions. Later, the chapter was to begin to engage in deviation from the Party line so that it would be expelled from the main organization "and then they could claim to be the victim of a Stalinist type purge." It was anticipated that the entire operation would take no more than 18 months. 185

The second kind of "notional" was the fictitious organization with some unsuspecting (non-informant) members. For example, Bureau informants set up a Klan organization intended to attract membership away from the United Klans of America. The Bureau paid the informant's personal expenses in setting up the new organization, which had, at its height, 250 members. 186

The third type of "notional" was the wholly fictitious organization, with no actual members, which was used as a pseudonym for mailing letters or pamphlets. For instance, the Bureau sent out newsletters from something called "The Committee for Expansion of Socialist Thought in America," which attacked the CPUSA from the "Marxist right" for at least two years. 187

#### *6. Labeling Targets As Informants*

The "snitch jacket" technique -- neutralizing a target by labeling him a "snitch" or informant, so that he would no longer be trusted -- was used in all COINTELPROs. The methods utilized ranged from having an authentic informant start a rumor about the target member, 188 to anonymous letters or phone calls, 189 to faked informants' reports. 190

When the technique was used against a member of a nonviolent group, the result was often alienation from the group. For example, a San Diego man was targeted because he was active in draft counseling at the city's Message Information Center. He had, coincidentally, been present at the arrest of a Selective Service violator, and had been at a "crash pad" just prior to the arrest of a second violator. The Bureau used a real informant to suggest at a Center meeting that it was "strange" that the two men had been arrested by federal agents shortly after the target became aware of their locations. The field office reported that the target had been "completely ostracized by members of the Message Information Center and all of the other individuals throughout the area . . . associated with this and/or related groups." 191

In another case, a local police officer was used to "jacket" the head of the Student Mobilization Committee at the University of South Carolina. The police officer picked up two members of the Committee on the pretext of interviewing them concerning narcotics. By prearranged signal, he had his radio operator call him with the message, "[name of target] just called. Wants you to contact her. Said you have her number." 192 No results were reported.

The "snitch jacket" is a particularly nasty technique even when used in peaceful groups. It gains an added dimension of danger when it is used -- as, indeed, it was -- in groups known to have murdered informers. 193

For instance, a Black Panther leader was arrested by the local police with four other members of the BPP. The others were released, but the leader remained in custody. Headquarters authorized the field office to circulate the rumor that the leader "is

the last to be released" because "he is cooperating with and has made a deal with the Los Angeles Police Department to furnish them information concerning the BPP."

The target of the first proposal then received an anonymous phone call stating that his own arrest was caused by a rival leader.  
194

In another case, the Bureau learned that the chairman of the New York BPP chapter was under suspicion as an informant because of the arrest of another member for weapons possession. In order to "cast further suspicion on him" the Bureau sent anonymous letters to BPP headquarters in the state, the wife of the arrested member, and a local member of CORE, saying "Danger-Beware-Black Brothers, [name of target] is the fink who told the pigs that [arrested members] were carrying guns." The letter also gave the target's address. 195

In a third instance, the Bureau learned through electronic surveillance of the BPP the whereabouts of a fugitive. After his arrest, the Bureau sent a letter in a "purposely somewhat illiterate type scrawl" to the fugitive's half-brother:

Brother:

Jimmie was sold out by Sister [name -- the BPP leader who made the phone call picked up by the tap] for some pig money to pay her rent. When she don't get it that way she takes Panther money. How come her kid sells the paper in his school and no one bothers him. How come Tyler got busted up by the pigs and her kid didn't. How come the FBI pig fascists knew where to bust Lonnie and Minnie way out where they were.

--- Think baby. 196

In another example, the chairman of the Kansas City BPP chapter went to Washington in an attempt to testify before a Senate subcommittee about information he allegedly possessed about the transfer of firearms from the Kansas City Police Department to a retired Army General. The attempt did not succeed; the committee chairman adjourned the hearing and then asked the BPP member to present his information to an aide. The Bureau then authorized an anonymous phone call to BPP headquarters "to the effect that [the target] was paid by the committee to testify, that he has cooperated fully with this committee, and that he intends to return at a later date to furnish additional testimony which will include complete details of the BPP operation in Kansas City." 197

In the fifth case, the Bureau had so successfully disrupted the San Diego BPP that it no longer existed. One of the former members, however, was "'politicking' for the position of local leader if the group is ever reorganized." Headquarters authorized the San Diego field office to send anonymous notes to "selected individuals within the black community of San Diego" to "initiate the rumor that [the target], who has aspirations of becoming the local Black Panther Party Captain, is a police informant." 198

In a sixth case, a letter alleging that a Washington, D.C., BPP leader was a police informant was sent "as part of our continuing effort to foment internal dissension within ranks of Black Panther Party." 199

Brother: I recently read in the Black Panther newspaper about that low dog Gaines down in Texas who betrayed his people to the pigs and it reminded me of a recent incident that I should tell you about. Around the first part of Feb. I was locked up at the local pigpen when the pigs brought in this dude, who told me he was a Panther. This dude who said his name was [deleted] said he was vamped on by six pigs and was brutalized by them. This dude talked real bad and said he had killed pip and was going to get more when he got out, so I thought he probably was one of you. The morning after [name] was brought in a couple of other dudes in suits came to see him and called him out of the cell and he was gone a couple of hours. Later on these dudes came back again to see him. [Name] told me the dudes were his lawyers but they smelled like pig to me. It seems to me that you might want to look into this because I know you don't want anymore low-life dogs helping the pigs brutalize the people. You don't know me and I'm not a Panther but I want to help with the cause when I can.

A lumpen brother

In a seventh case, the "most influential BPP activist in North Carolina" had been photographed outside a house where, a "shoot out" with local police had taken place. The photograph, which appeared in the local newspaper, showed the target talking to a policeman. The photograph and an accompanying article were sent to BPP headquarters in Oakland, California, with a handwritten note, supposedly from a female BPP member known to be "disenchanted" with the target, saying, "I think this is two pigs oinking." 200

Although Bureau witnesses stated that they did not authorize a "snitch jacket" when they had information that the group was *at that time* actually killing suspected informants, 201 they admitted that the risk was there whenever the technique was used.

It would be fair to say there was an element of risk there which we tried to examine on a case by case basis. 202

Moore added, "I am not aware of any time we ever labeled anybody as an informant, that anything [violent] ever happened as a result, and that is something that could be measured." When asked whether that was luck or lack of planning, he responded, "Oh, it just happened that way, I am sure." 203

### *C. Using Hostile Third Parties Against Target Groups*

The Bureau's factionalism efforts were intended to separate individuals or groups which might otherwise be allies. Another set of actions is a variant of that technique; organizations already opposed to the target groups were used to attack them.

The American Legion and the Veterans of Foreign Wars, for example, printed and distributed under their own names Bureau-authored pamphlets condemning the SDS and the DuBois Clubs.

In another case, a confidential source, who headed an anti-Communist organization in Cleveland, and who published a, "self-described conservative weekly newspaper," the Cleveland Times, was anonymously mailed information on the Unitarian Society of Cleveland's sponsorship of efforts to abolish the House Committee on Un-American Activities. The source had "embarrassed" the Unitarian minister with questions about the alleged Communist connections of other cosponsors "at public meetings." 204

It was anticipated that the source would publish a critical article in her newspaper, which "may very well have the result of alerting the more responsible people in the community" to the nature of the movement and "stifle it before it gets started." 205

The source newspaper did publish an article entitled "Locals to Aid Red Line," which named the Minister, among others, as a local sponsor of what it termed a "Communist dominated plot" to abolish the House Committee. 206

One group, described as a "militant anticommunist right wing organization, more of an activist group than is the more well known John Birch Society," was used on at least four separate occasions. The Bureau developed a long-range program to use the organization in "counterintelligence activity" by establishing a fictitious person named "Lester Johnson" who sent letters, made phone calls, offered financial support, and suggested action:

*In view of the activist nature of this organization, and their lack of experience and knowledge concerning the interior workings of the [local] CP, [the field office proposes] that efforts be made to take over their activities and use them in such a manner as would be best calculated by this office to completely disrupt and neutralize the [local] CP, all without [the organization] becoming aware of the Bureau's interest in its operation. 207*

"Lester Johnson" used the organization to distribute fliers and letters opposing the candidacy of a lawyer running for a judgeship 208 and to disrupt a dinner at which an alleged Communist was to speak. 209 "Johnson" also congratulated the organization on disrupting an antidraft meeting at a Methodist Church, furnishing further information about a speaker at the meeting 210 and suggested that members picket the home of a local "communist functionary." 211

Another case is slightly different from the usual "hostile third party" actions, in that both organizations were Bureau targets. "Operation Hoodwink" was intended to be a long-range program to disrupt both La Cosa Nostra (which was not otherwise a COINTELPRO target) and the Communist Party by "having them expend their energies attacking each other." The initial project was to prepare and send a leaflet, which purported to be from a Communist Party leader to a member of a New York "family" attacking working conditions at a business owned by the family member. 212

### *D. Disseminating Derogatory Information to Family, Friends, and Associates*

Although this technique was used in relatively few cases it accounts for some of the most distressing of all COINTELPRO actions. Personal life information, some of which was gathered expressly to be used in the programs, was then disseminated, either directly to the target's family through an anonymous letter or telephone call, or indirectly, by giving the information to the media.

Several letters were sent to spouses; three examples follow. 213 The names have been deleted for privacy reasons.

The first letter was sent to the wife of a Grand Dragon of the United Klans of America ("Mrs. A"). It was to be "typed on plain paper in an amateurish fashion." 214

"My Dear Mrs. (A),

"I write this letter to you only after a long period of praying to God. I must cleanse my soul of these thoughts. I certainly do not want to create problems inside a faintly but I owe a duty to the klans and its principles as well as to my own menfolk who have cast their divine lot with the klans.

"Your husband came to [deleted] about a year ago and my menfolk blindly followed his leadership, believing him to be the savior of this country. They never believed the "stories that he stole money from the klans in [deleted] or that he is now making over \$25,000 a year. They never believed the stories that your house in [deleted] has a new refrigerator, washer, dryer and yet one year ago, was threadbare. They refuse to believe that your husband now owns three cars and a truck, including the new white car. But I believe all these things and I can forgive them for a man wants to do for his family in the best way he can.

"I don't have any of these things and I don't grudge you any of them neither. But your husband has been committing the greatest of the sins of our Lord for many years. He has taken the flesh of another unto himself.

"Yes, Mrs. A, he has been committing adultery. My menfolk say they don't believe this but I think they do. I feel like crying. I saw her with my own eyes. They call her Ruby. Her last name is something like [deleted] and she lives in the 700 block of [deleted] Street in [deleted.] I know this. I saw her strut around at a rally with her lustfilled eyes and smart aleck figure.

"I cannot stand for this. I will not let my husband and two brothers stand side by side with your husband and this woman in the glorious robes of the klan. I am typing this because I am going to send copy to Mr. Shelton and some of the klans leaders that I have faith in. I will not stop until your husband is driven from [deleted] and back into the flesh-pots from wherein he came.

"I am a loyal klanswoman and a good churchgoer. I feel this problem affects the future of our great country. I hope I do not cause you harm by this and if you believe in the Good Book as I do, you may soon receive your husband back into the fold. I pray for you and your beautiful little children and only wish I could tell you who I am. I will soon, but I am afraid my own men would be harmed if I do."

"A God-fearing klanswoman"

The second letter was sent to the husband ("Mr. B") of a woman who had the distinction of being both a New Left and Black Nationalist target; she was a leader in the local branch of the Women's International League for Peace and Freedom, "which group is active in draft resistance, antiwar rallies and New Left activities," and an officer in ACTION, a biracial group which broke off from the local chapter of the Congress of Racial Equality and which "engaged in numerous acts of civil disruption and disobedience." 215

Two informants reported that Mr. B had been making suspicious inquiries about his wife's relationship with the Black males in ACTION. The local field office proposed an anonymous letter to the husband which would confirm his suspicions, although the informants did not know whether the allegations of misconduct were true. It was hoped that the "resulting marital tempest" would "result in ACTION losing their [officer] and the WILPF losing a valuable leader, thus striking a major blow against both organizations." 216

Accordingly, the following letter, 216a written in black ink, was sent to the husband:

A letter from the field office to headquarters four months later reported as a "tangible result" of the letter that the target and her husband had recently separated, following a series of marital arguments:

This matrimonial stress and strain should cause her to function much less effectively in ACTION. While the letter sent by the [field office] was probably not the sole cause of this separation, it certainly contributed very strongly. 217

The third letter was sent to the wife of a leader of the Black Liberators ("Mrs. C"). She was living in their home town with their two daughters while he worked in the city. Bureau documents describe Mrs. C. as a "faithful, loving wife, who is apparently convinced that her husband is performing a vital service to the Black world. . . . She is to all indications an intelligent, respectable young mother, who is active in the AME Methodist Church." 218

The letter was "prepared from a penmanship, spelling style to imitate that of the average Black Liberator member. It contains several accusations which should cause [X's] wife great concern." It was expressly intended to produce "ill feeling and possibly a lasting distrust" between X and his wife; it was hoped that the "concern over what to do about it" would "detract from his time spent in the plots and plans of his organization." 219

The letter was addressed to "Sister C":

The Petersen Committee said that some COINTELPRO actions were "abhorrent in a free society." This technique surely falls within that condemnation. 220

#### *E. Contacts with Employers*

The Bureau often tried to get targets fired, with some success. 221 If the target was a teacher, the intent was usually to deprive him of a forum and to remove what the Bureau believed to be the added prestige given a political cause by educators. In other employer contacts, the purpose was either to eliminate a source of funds for the individual or (if the target was a donor) the group, or to have the employer apply pressure on the target to stop his activities.

For example, an Episcopal minister furnished "financial and other" assistance to the Black Panther Party in his city. The Bureau sent an anonymous letter to his bishop so that the church would exert pressure on the minister to "refrain from assistance to the Black Panther Party." 222 Similarly, a priest who allowed the Black Panther Party to use his church for its breakfast program was targeted; his bishop received both an anonymous letter and three anonymous phone calls. The priest was transferred shortly thereafter. 223

In another case, a black county employee was targeted because he had attended a fund raiser for the Mississippi Summer Project and, on another occasion, a presentation of a Negro History Week program. Both functions had been supported by "clandestine CP members." The employee, according to the documents, had no record of subversive activities; "he and his wife appear to be genuinely interested in the welfare of Negroes and other minority groups and are being taken in by the communists." The Bureau chose a curiously indirect way to inform the target of his friends' Party membership; a local law enforcement official was used to contact the County Administrator in the expectation that the employee would be "called in and questioned about his left-wing associates." 224

The Bureau made several attempts to stop outside sources from funding target operations. 225 For example, the Bureau learned that SNCC was trying to obtain funds from the Episcopal Church for a "liberation school." Two carefully spaced letters were sent to the Church which falsely alleged that SNCC was engaged in a "fraudulent scheme" involving the anticipated funds. The letters purported to be from local businessmen approached by SNCC to place fictitious orders for school supplies and divide the money when the Church paid the bills. 226 Similar letters were sent to the Interreligious Foundation for Community Organizing, from which SNCC had requested a grant for its "Agrarian Reform Plan." This time, the letters alleged kickback approaches in the sale of farm equipment and real estate. 227

Other targets include an employee of the Urban League, who was fired because the Bureau contacted a confidential source in a foundation which funded the League; 228 a lawyer known for his representation of "subversives," whose nonmovement client received an anonymous letter advising it not to employ a "well-known Communist Party apologist"; 229 and a television commentator who was transferred after his station and superiors received an anonymous protest letter. The commentator, who had a weekly religious program, had expressed admiration for a black nationalist leader and criticized the United States' defense policy. 230

#### *F. Use and Abuse of Government Processes*

This category, which comprises 9 percent of all approved proposals includes selective law enforcement (using Federal, state, or local authorities to arrest, audit, raid, inspect, deport, etc.) ; interference with judicial proceedings, including targeting lawyers who represent "subversives"; interference with candidates or political appointees; and using politicians and investigating committees, sometimes without their knowledge, to take action against targets.

##### *1. Selective Law Enforcement*

Bureau documents often state that notifying law enforcement agencies of violations committed by COINTELPRO targets is not counterintelligence, but part of normal Bureau responsibility. Other documents, however, make it clear that "counterintelligence" was precisely the purpose. "Be alert to have them arrested," reads a New Left COINTELPRO directive to all participating field offices. 231 Further, there is clearly a difference between notifying other agencies of information that the Bureau happened across in an investigation -- in plain view, so to speak -- and instructing field offices to find evidence of violations -- any violations -- to "get" a target. As George Moore stated:

Ordinarily, we would not be interested in health violations because it is not my jurisdiction, we would not waste our time. But under this program, we would tell our informants perhaps to be alert to any health violations or other licensing requirements or things of that nature, whether there were violations and we would see that they were reported. 232

State and local agencies were frequently informed of alleged statutory violations which would come within their jurisdiction. 233 As noted above, this was not always normal Bureau procedure.

A typical example of the attempted use, of local authorities to disrupt targeted activities is the Bureau's attempt to have a Democratic Party fund raiser raided by the state Alcoholic Beverage Control Commission. 234 The function was to be held at a private house: the admission charge included "refreshments." It was anticipated that alcoholic beverages would be served. A confidential source in the ABC Commission agreed to send an agent to the fund raiser to determine if liquor was being served and then to conduct a raid. 235 (In fact, the raid was cancelled for reasons beyond the Bureau's control. A prior raid on the local fire department's fund raiser had given rise to considerable criticism and the District Attorney issued an advisory opinion that such affairs did not violate state law. The confidential source advised the field office that the ABC would not, after all, raid the Democrats because of "political ramifications.") 236

In the second case, the target was a "key figure" Communist. He had a history of homosexuality and was known to frequent a local hotel. The Bureau requested that the local police have him arrested for homosexuality; it was then intended to publicize the arrest to "embarrass the Party." Interestingly, the Bureau withdrew its request when the target stopped working actively for the Party because it would no longer cause the intended disruption. 237 This would appear to rebut the Bureau's contention that turning over evidence of violations to local authorities was not really COINTELPRO at all, but just part of its job.

##### *2. Interference With Judicial Process*

The Bureau's attempts to interfere with judicial processes affecting targets are particularly disturbing because they violate a fundamental principle of our system of government. Justice is supposed to be blind. Nevertheless, when a target appeared before a judge, a jury, or a probation board, he sometimes carried an unknown burden; the Bureau had gotten there first.

Three examples should be sufficient. A university student who was a leader of the Afro American Action Committee had been arrested in a demonstration at the university. The Bureau sent an anonymous letter to the county prosecutor intended to discredit her by exposing her "subversive connections"; her adoptive father was described as a Communist Party member. The Bureau believed that the letter might aid the prosecutor in his case against the student. Another anonymous letter containing the same information was mailed to a local radio announcer who had an "open mike" program critical of local "leftist" activity. The letter was intended to further publicize the "connection" between the student and the Communist Party. 239

In the second example, a Klan leader who had been convicted on a weapons charge was out on bail pending appeal. He spoke at a Klan rally, and the Bureau arranged to have newsmen present. The resulting stories and photographs were then delivered to the appellate judges considering his case. 240

The third instance involved a real estate speculator's bequest of over a million dollars to the three representatives of the Communist Party who were expected to turn it over to the Party. The Bureau interviewed the probate judge sitting on the case, who was "very cooperative" and promised to look the case over carefully. The judge asked the Bureau to determine whether the widow would be willing to "take any action designed to keep the Communist Party from getting the money." The Bureau's efforts to gain the widow's help in contesting the will proved unsuccessful. 241

### *3. Candidates and Political Appointees*

The Bureau apparently did not trust the American people, to make the proper choices in the voting booth. Candidates who, in the Bureau's opinion, should not be elected were therefore targeted. The case of the Democratic fundraiser discussed earlier was just one example.

Socialist Workers Party candidates were routinely selected for counterintelligence, although they had never come close to winning an election. In one case, a SWP candidate for state office inadvertently protected herself from action by announcing at a news conference that she had no objections to premarital sex; a field office thereupon withdrew its previously approved proposal to publicize her common law marriage. 241a

Other candidates were also targeted. A Midwest lawyer whose firm represented "subversives" (defendants in the Smith Act trials) ran for City Council. The lawyer had been active in the civil rights movement in the South, and the John Birch Society in his city had recently mailed a book called "It's Very Simple -- The True Story of Civil Rights" to various ministers, priests, and rabbis. The Bureau received a copy of the mailing list from a source in the Birch Society and sent an anonymous follow-up letter to the book's recipients noting the pages on which the candidate had been mentioned and calling their attention to the "Communist background" of this "charlatan." 242 The Bureau also sent a fictitious-name letter to a television station on which the candidate was to appear, enclosing a series of informative questions it believed should be asked. 243 The candidate was defeated. He subsequently ran (successfully, as it happened) for a judgeship.

Political appointees were also targeted. One target was a member of the board of the NAACP and the Democratic State Central Committee. His brother, according to the documents, was a communist, and the target had participated in some Party youth group activities fifteen years earlier. The target's appointment as secretary of a city transportation board elicited an anonymous letter to the Mayor, with carbons to two newspapers, protesting the use of "us taxpayers' money" in the appointment of a "known Communist" to a highly paid job; more anonymous letters to various politicians, the American Legion, and the county prosecutor in the same vein; and a pseudonymous letter to the members of the transportation board, stating that the Mayor had "saddled them with a Commie secretary because he thinks it will get him a few Negro votes. 244

### *4. Investigating Committees*

State and Federal legislative investigating committees were occasionally used to attack a target, since the committees' interests usually marched with the Bureau's.

Perhaps the most elaborate use of an investigating committee was the framing of a complicated "snitch jacket." In October 1959, a legislative committee held hearings in Philadelphia, "ostensibly" to show a resurgence of CP activity in the area. 245 The Bureau's target was subpoenaed to appear before the committee but was not actually called to testify. The field office proposed that local CP leaders be contacted to raise the question of "how it was possible for [the target] to escape testifying" before the committee; this "might place suspicion on him as being cooperative" with the investigators and "raise sufficient doubt in the minds of the leaders regarding [the target] to force him out of the CP or at least to isolate and neutralize him." Strangely enough, the target was not a bona fide CP member; he was an undercover infiltrator for a private anti-Communist group who had been a source of trouble for the FBI because he kept getting in their way.

A more typical example of the use of a legislative committee is a series of anonymous letters sent to the chairman of a state investigating committee that was designated to look into New Left activities on the state's college campuses. The target was an activist professor, and the letters detailed his "subversive background."

### *G. Exposing "Communist Infiltration" of Groups*

This technique was used in approximately 4 percent of all approved proposals. The most common method involved anonymously notifying the group (civil rights organization, PTA, Boy Scouts, etc.) that one or more of its members was a "Communist," 246 so that it could take whatever action it deemed appropriate. Occasionally, however, the group itself was the COINTELPRO target. In those cases, the information went to the media, and the intent was to link the group to the Communist Party.

For example, one target was a Western professor who was the immediate past president of a local peace center, "a coalition of anti-Vietnam and antidraft groups." He had resigned to become chairman of the state's McCarthy campaign organization, but it was anticipated that he would return to the peace center after the election. According to the documents, the professor's wife had been a Communist Party member in the early 1950s. This information was furnished to a newspaper editor who had written an editorial branding the SDS and various black power groups as "professional revolutionists." The information was intended to "expose these people at this time when they are receiving considerable publicity to not only educate the public to their character, but disrupt the members" of the peace organization. 247

In another case, the Bureau learned through electronic surveillance of a civil rights leader's plans to attend a reception at the Soviet Mission to the United Nations. (The reception was to honor a Soviet author.) The civil rights leader was active in a school boycott which had been previously targeted; the Bureau arranged to have news photographers at the scene to photograph him entering the Soviet Mission. 248

Other instances include furnishing information to the media on the participation of the Communist Party Presidential candidate in a United Farm Workers' picket line: 249 "confidentially" telling established sources of three Northern California newspapers that the San Francisco County CP Committee had stated that the Bay area civil rights groups would "begin working" on the area's large newspapers "in an effort to secure greater employment of Negroes;" 250 and furnishing information on Socialist Workers Party participation in the Spring Mobilization Committee to End the War in Vietnam to "discredit" the antiwar group by tying it "into the subversive movement." 251

## **V. COMMAND AND CONTROL: THE PROBLEM OF OVERSIGHT**

### **A. Within the, Bureau**

#### **1. Internal Administration**

The Bureau attempted to exercise stringent internal controls over COINTELPRO. All counterintelligence proposals had to be approved by headquarters. Every originating COINTELPRO document contains a strong warning to the field that "no counterintelligence action may be initiated by the field without specific Bureau authorization." The field would send a proposal under the COINTELPRO caption to the Seat of Government -- the Bureau term for headquarters -- where it would be routed to the Section Chief of the section handling the particular COINTELPRO program. 252

The recommendation would then be attached to the proposal, beginning the process of administrative review. The lowest level on which a proposal could be approved was the Assistant Director, Domestic Intelligence Division, to whom the Section Chief reported via the Branch Chief. More often, the proposal would go through the Assistant to the Director and often to the Director himself.

#### **2. Coordination**

The Counterintelligence programs were coordinated with the rest of the section's work primarily through informal contacts, but also through section meetings and the Section Chief's knowledge of the work of his entire section. Further, although the initial COINTELPRO was an effort to centralize what had been an ad hoc series of field actions, the programs continued to be essentially field-oriented with little target selection by headquarters. However, the Section Chief would attempt to make sure targets were being effectively chosen by occasionally sending out directives to field offices to intensify the investigation of a particular individual or group and to consider the subject for counterintelligence action."

#### **3. Results**

Participating field offices were required to send in status letters (usually every ninety days) reporting any tangible results. They were instructed to resolve any doubts as to whether a counterintelligence action caused the observed result in their favor. Nevertheless, results were reported in only 527 cases, or 22 percent, of the approved actions. When a "good" result was reported, the field office, or agent involved frequently received a letter of commendation or incentive award. 254

#### **4. Blurred Distinction Between Counterintelligence and Investigation**

It is possible that some actions did not receive headquarters scrutiny simply because the field offices were never told precisely what "counterintelligence" was. Although Bureau procedures strictly required COINTELPRO proposals to be approved at headquarters and a control file to be maintained both in the field and at headquarters, the field offices had no way to determine with any certainty just what was counterintelligence and what was investigation. Many of the techniques overlap: contacts with employers, contacts with family members, contacts with local law enforcement, even straight interviewing, are all investigative techniques which were used in COINTELPRO actions. 255 More importantly, actions in the Rev. Martin Luther King case which cannot, by any stretch of the language, be called "investigative" were not called COINTELPRO, but were carried under the investigative caption. 256

The Bureau witnesses agree that COINTELPRO has no fixed definition, and that there is a large grey area between what is counterintelligence and what is aggressive investigation. As the Black Nationalist supervisor put it, "Basically actions taken to neutralize an individual or disrupt an organization would be COINTELPRO; actions which were primarily investigative would have been handled by the investigative desks," even though the investigative action had disruptive effects. 256a Aggressive investigation continues, and in many cases may be as disruptive as COINTELPRO, because in an investigation the Bureau can and does reveal its interest. An anonymous letter (COINTELPRO) can be discarded as the work of a crank; but if the local FBI agent says the subject of an investigation is a subversive an employer or family member pays attention.

## 5. Inspection

The Inspection Division attempted to ensure that standard procedures were being followed. The Inspectors focused on two things: field office participation, and the mechanics of headquarters approval. However, the Inspection Division did not exercise oversight in the sense of looking for wrongdoing. Rather, it was an active participant in COINTELPRO by attempting to make sure that it was being efficiently and enthusiastically conducted. 257

As the Assistant Director then in charge of the Inspection Division testified, the "propriety" of COINTELPRO was not investigated. He agreed that his job was to "determine whether the program was being pursued effectively as opposed to whether it was proper," and added, "There was no instruction to me, nor do I believe there is any instruction in the Inspector's manual that the Inspector should be on the alert to see that constitutional values are being protected." 258

### B. Outside the Bureau: 1956-1971

There is no clear answer to the question whether anyone outside the Bureau knew about COINTELPRO. One of the hallmarks of COINTELPRO was its secrecy. No one outside the Bureau was to know it existed. 259 A characteristic instruction appeared in the Black Nationalist originating letter:

You are also cautioned that the nature of this new endeavor is such that under no circumstances should the existence of the program be made known outside the Bureau and appropriate within-office security should be afforded to sensitive operations and techniques considered under the program. 260

Thus, for example, anonymous letters had to be written on commercially purchased stationery; newsmen had to be so completely trustworthy that they were guaranteed not to reveal the Bureau's interest; and inquiries of law enforcement officials had to be under investigative pretext. In approving or denying any proposal, the primary consideration was preventing "embarrassment to the Bureau." Embarrassment is a term of art. It means both public relations embarrassment -- criticism -- and any revelation of the Bureau's investigative interest to the subject, which may then be expected to take countermeasures. 261

This secrecy has an obvious impact on the oversight process. There is some question whether anyone with oversight responsibility outside the Bureau was informed of COINTELPRO. In response to the Committee's request, the Bureau has assembled all documents available in its files which indicate that members of the executive and legislative branches were so informed. 262

#### 1. Executive Branch

On May 8, 1958, Director Hoover sent two letters, one to the Honorable Robert Cutler, Special Assistant to President Eisenhower, and the other to Attorney General William Rogers, containing the same information. The Attorney General's letter is captioned "COMMUNIST PARTY, USA-INTERNAL SECURITY." The letters are fairly explicit notification of the CPUSA COINTELPRO:

In August of 1956, this Bureau initiated a program designed to promote disruption within the ranks of the Communist Party (CP) USA ... Several techniques have been utilized to accomplish our objectives. 263

The letters go on to detail use of informants to engage in controversial discussions, after which "acrimonious debates ensued, suspicions were aroused, and jealousies fomented"; and anonymous mailings of anti-communist material, both reprinted and Bureau-prepared, to active CP members. 264 (Two examples of the Bureau's product were enclosed.) "Tangible accomplishments" achieved by the program were "disillusionment and defection among Party members and increased factionalism at all levels." 265 However, the only techniques disclosed were use of informants and anonymous propaganda mailings. There is no record of any reply to these letters.

On January 10, 1961, letters from the Director were sent to Dean Rusk, Robert Kennedy, and Byron R. White, who were about to take office as Secretary of State, Attorney General, and Deputy Attorney General, respectively. The letters enclosed a top secret summary memorandum setting forth the overall activities of the Communist Party, USA, and stated, "Our responsibilities in the internal security field and our counterattack against the CPUSA are also set out in this memorandum." 266

The five-page memorandum contains one section entitled "FBI Counterattack." This section details penetration of the Party at all levels with security informants; use of various techniques to keep the Party off-balance and disillusioned; infiltration by informants; intensive investigation of Party members; and prosecution. Only one paragraph of that report appears at all related to the Bureau's claim that the CPUSA COINTELPRO was disclosed:

As an adjunct to our regular investigative operations, we carry on a carefully planned program of counterattack against the CPUSA which keeps it off balance. Our primary purpose in this program is to bring about disillusionment on the part of individual members which is carried on from both inside and outside the Party organization. [Sentence on use of informants to disrupt excised for security reasons.]

In certain instances we have been successful in preventing communists from seizing control of legitimate mass organizations and have discredited others who were secretly operating inside such organizations. For example, during 1959 we were able to prevent the CPUSA from seizing control of

the 20,000-member branch of the National Association for the Advancement of Colored People in Chicago, Illinois. 267

The only techniques disclosed were use of informants and COMINFIL exposure. There is no record of any replies to these letters.

On September 2, 1965, letters were sent to the Honorable Marvin Watson, Special Assistant to President Johnson and Attorney General Katzenbach (whose letter was captioned "PENETRATION AND DISRUPTION OF KLAN ORGANIZATIONS-RACIAL MATTERS"). These two-page letters refer to the Bureau's success in solving a number of cases involving racial violence in the South. They then detail the development of a large number of informants and the value of the information received from them.

One paragraph deals with "disruption":

We also are seizing every opportunity to disrupt the activities of Klan organizations. Typical is the manner in which we exposed and thwarted a "kick back" scheme a Klan group was using in one southern state to help finance its activities. One member of the group was selling insurance to other Klan members and would deposit a generous portion of the premium refunds in the Klan treasury. As a result of action we took, the insurance company learned of the scheme and cancelled all the policies held by Klan members, thereby cutting on a sizable source of revenue which had been used to finance Klan activities. 268

Notifying an insurance company of a kick back scheme involving its premiums is not a "typical" COINTELPRO technique. It falls within that grey area between counterintelligence and ordinary Bureau responsibilities. Nevertheless, the statement that the Bureau is "seizing every opportunity to disrupt the activities of Klan organizations" is considered by the Bureau to be notification of the White Hate COINTELPRO, even though it does not distinguish between the inevitable and sometimes proper disruption of intensive investigation and the intended disruption of covert action.

On September 3, 1965, Mr. Katzenbach replied to the Director's letter with a two-paragraph memorandum captioned "Re: Your memorandum of September 2, regarding penetration and disruption of Klan organizations." The body of the memorandum makes no reference to disruption, but praises the accomplishments of the Bureau in the area of Klan penetration and congratulates Director Hoover on the development of his informant system and the results obtained through it. The letter concludes:

It is unfortunate that the value of these activities would in most cases be lost if too extensive publicity were given to them; however, perhaps at some point it may be possible to place these achievements on the public record, so that the Bureau can receive its due credit. 269

The Bureau interpreted this letter as approval and praise of its White Hate COINTELPRO. Mr. Katzenbach has said that he has no memory of this document, nor of the response. He testified that during his term in the Department he had never heard the terms "COINTEL" or COINTELPRO, and that while he was familiar with the Klan investigation, he was not aware of any improper activities such as letters to Wives. 270 Mr. Katzenbach added:

It never occurred to me that the Bureau would engage in the sort of sustained improper activity which it apparently did. Moreover, given these excesses, I am not surprised that I and others were unaware of them. Would it have made sense for the FBI to seek approval for activities of this nature -- especially from Attorneys General who did not share Mr. Hoover's political views, who would not have been in sympathy with the purpose of these attacks, and who would not have condoned the methods? 271

The files do not reveal any response from Mr. Watson.

On December 19, 1967, Director Hoover sent a letter to Attorney General Ramsey Clark, with a copy to Deputy Attorney General Warren Christopher, captioned "KU KLUX KLAN INVESTIGATIONS -- FBI ACCOMPLISHMENTS" and attaching a ten-page memorandum with the same caption and a list of statements and publications regarding the Ku Klux Klan "and the FBI's role in investigating Klan matters." The memorandum was prepared "pursuant to your conversation with Cartha DeLoach of this Bureau concerning FBI coverage and penetration of the Ku Klux Klan." 272

The memo is divided into eleven sections: Background, Present Status, FBI Responsibility, Major Cases, Informants, Special Projects, Liaison With Local Authorities, Klan Infiltration of Law Enforcement, Acquisition of Weapons and Dynamite of the Ku Klux Klan, Interviews of Klansmen, and Recent Developments.

The first statement in the memorandum which might conceivably relate to the White Hate COINTELPRO appears under the heading "FBI Responsibility":

. . . We conduct intelligence investigations with the view toward infiltrating the Ku Klux Klan with informants, neutralizing it as a terrorist organization, and deterring violence. 273

The Bureau considers the word "neutralize" to be a COINTELPRO key word.

Some specific activities which were carried out within the Bureau under the COINTELPRO caption are then detailed under the heading "Special Projects." The use of Bureau informants to effect the removal of Klan officers is set forth under the

subheadings "Florida," "Mississippi," and "Louisiana." More significantly, the "Florida" paragraph includes the statement that, "We have found that by the removal of top Klan officers and provoking scandal within the state Klan organization through our informants, the Klan in a particular area can be rendered ineffective." 274 This sentence, although somewhat buried should, if focused upon, have alerted the recipients to actions going beyond normal investigative activity. Other references are more vague, referring only to "containing the growth" or "controlling the expansion" of state Klans. 275 There is no record of any reply to this letter, which Clark does not remember receiving:

Did [these phrases in the letter] put me on notice? No. Why? I either did not read them, or if I did read them, didn't read them carefully.... I think I didn't read this. I think perhaps I had asked for it for someone else, and either bucked it on to them or never saw it. 276

He added, "I think that any disruptive activities, such as those you reveal, regarding the COINTEL program and the Ku Klux Klan should be absolutely prohibited and subjected to criminal prosecution." 277

Finally, on September 17, 1969, a letter was sent to Attorney General Mitchell, with copies to the Deputy Attorney General and the Assistant Attorneys General of the Criminal Division, Internal Security Division, and Civil Division, captioned "INVESTIGATION OF KLAN ORGANIZATIONS-RACIAL MATTERS (KLAN)," which informs the recipients of the "significant progress we have recently made in our investigation of the Ku Klux Klan." The one page letter states that, "during the last several months, 278 while various national and state leaders of the United Klan of America remain in prison, we have attempted to negate the activities of the temporary leaders of the Ku Klux Klan." 279

The only example given is the "careful use and instruction of selected racial informants" to "initiate a split within the United Klans of America." This split was evidenced by a Klan rally during which "approximately 150 Klan membership cards were tacked to a cross and burned to signify this breach." 280

The letter concludes, "We will continue to give full attention to our responsibilities in an effort to accomplish the maximum possible neutralization of the Klan." 281 There is no record of any replies to these letters.

While the only documentary evidence that members of the executive branch were informed of the existence of any COINTELPRO has been set forth above, the COINTELPRO unit chief stated that he was certain that Director Hoover orally briefed every Attorney General and President, since he wrote "squibs" for the Director to use in such briefings. He could not, however, remember the dates or subject matter of the briefings, and the Bureau was unable to produce any such "squibs" (which would not, in any case, have been routinely saved). Cartha DeLoach, former Assistant to the Director, testified that he "distinctly" recalled briefing Attorney General Clark, "generally ... concerning COINTELPRO. 282 Clark denied that DeLoach's testimony was either true or accurate, adding "I do not believe that he briefed me on anything even, as he says, generally concerning COINTELPRO, whatever that means." 283 The Bureau has failed to produce any memoranda of such oral briefings, although it was the habit of both Director Hoover and DeLoach to write memoranda for the files in such situations. 284

## *2. The Cabinet*

The Bureau has furnished the Committee a portion of a briefing paper prepared for Director Hoover for his briefing of the Cabinet, presided over by President Eisenhower, dated November 6, 1958. There is no transcript of the actual briefing. The briefing as a whole apparently dealt with, among other things, seven programs which are "part of our overall counterintelligence operations" and which are "specific answers to specific problems which have arisen within our investigative jurisdiction." Six of the programs apparently related to espionage. The seventh deals with the CPUSA:

To counteract a resurgence of Communist Party influence in the United States, we have a seventh program designed to intensify any confusion and dissatisfaction among its members. During the past few years, this program has been most effective. Selective informants were briefed and trained to raise controversial issues within the Party. In the process, many were able to advance themselves to higher positions. The Internal Revenue Service was furnished the names and addresses of Party functionaries who had been active in the underground apparatus. Based on this information, investigations were instituted in 262 possible income tax evasion cases. Anticomunist literature and simulated Party documents were mailed anonymously to carefully chosen members. 285

This statement, although concise, would appear to be a fairly explicit notification of the existence of the CPUSA COINTELPRO. There are no documents reflecting any response.

## *3. Legislative Branch*

The Bureau has furnished excerpts from briefing papers prepared for the Director in his annual appearances before the House Appropriations Subcommittee. During the hearings pertaining to fiscal years 1958, 1959, 1960, 1961, 1963, 1966, and 1967, 286 these briefing papers were given to the Director to be used in top secret, off-the-record testimony relating to the CPUSA and White Hate COINTELPROs. No transcripts are available of the actual briefings, and it is, therefore, not possible to determine whether the briefing papers were used at all, or, conversely, whether the Director went beyond them to give additional information. Additionally, portions of the briefing papers are underlined by hand and portions have been crossed out, also by hand. Some sections are both underlined and crossed out. The Bureau has not been able to explain the meaning of the underlining or cross marks. However, if the briefing papers were used as written, the Subcommittee was informed of the existence of the CPUSA and Klan COINTELPROs.

The FY 1958 briefing paper is in outline form. Under the heading "auxiliary measures directed against Communist Party-USA" is a paragraph entitled "FBI counterintelligence program to exploit Party 'split':"

The Bureau also recently inaugurated a newly devised counterintelligence program which is designed to capitalize upon the "split" presently existing in the leadership of the Communist Party-USA. Among other objectives, efforts are being made by the Bureau, through informants and other techniques, to keep these rifts open, and to otherwise weaken the party where possible to do so in an anonymous manner. The Internal Revenue Service has been given the names of 336 communist underground subjects, so that the agency may be able to entertain prosecutions for filing of false income tax returns or other violations within the jurisdiction of that Service.

The FY 1959 briefing paper on the CPUSA deals primarily with informant penetration, but includes the statement that "to counteract [CPUSA] activities the FBI for years has had a planned intensive program designed to infiltrate, penetrate, disorganize, and disrupt the Communist Party, USA." 287 In covering informant activities, the paper includes the statement "they [informants] have likewise worked to excellent advantage as a disruptive tactic." 288 The one specific example cited has been deleted by the Bureau because it tends to identify an informant.

The FY 1960 briefing paper is even more explicit. The pertinent section is entitled "FBI's Anti-Communist Counterintelligence Program." It details use of informants to engage in controversial discussions "to promote dissension, factionalism and defections" which "have been extremely successful from a disruptive standpoint." 289 One paragraph deals with propaganda mailings "carefully concealing the identity of the FBI as its source"; 290 another paragraph states that "Communist Party leaders are considerably concerned over this anonymous dissemination of literature." 291

The FY 1961 briefing paper, again titled "FBI's Counterintelligence Program", states that the program was devised "to promote dissension, factionalism and defections within the communist cause." 292 The only technique discussed (but at some length) is anonymous propaganda mailings. The effectiveness of the technique, according to the paper, was proven from the mouth of the enemy that the mailings "appear to be the greatest danger to the Communist Party, USA." 293

The FY 1963 briefing paper, captioned "Counterintelligence Program," is extraordinarily explicit. It reveals that:

Since August, 1956, we have augmented our regular investigative operations against the Communist Party-USA with a "counterintelligence program" which involves the application of disruptive techniques and psychological warfare directed at discrediting and disrupting the operations of the Party, and causing disillusionment and defections within the communist ranks. The tangible results we are obtaining through these covert and extremely sensitive operations speak for themselves. 294

The paper goes on to set forth such techniques as disrupting meetings, rallies, and press conferences through causing the last-minute cancellation of the rental of the hall, packing the audience with anticommunists, arranging adverse publicity in the press, and giving friendly reporters "embarrassing questions" for Communists they interviewed. The briefing paper also mentions the use of newsmen to take photographs which show the close relationship between the leaders of the CPUSA and officials of the Soviet Union, using informants to sow discord and factionalism, exposing and discrediting Communists in such "legitimate organizations" as the YMCA and the Boy Scouts, and mailing anonymous propaganda. 295

The briefing paper for FY 1966 again refers to "counterintelligence action:" "We have since 1956 carried on a sensitive program for the purpose of disrupting, exposing, discrediting, and otherwise neutralizing the Communist Party-USA and related organizations." 296 The paper cites two examples. The first is an operation conducted against a Communist Party functionary who arrived in a (deleted) city to conduct a secret two-week Party school for local youth. The Bureau arranged for him to be greeted at the airport by local television newsmen. The functionary lost his temper, pushing the reporter away and swinging his briefcase at the cameraman, who was busily filming the entire incident. The film was later televised nationally. The second technique is described as "the most effective single blow ever dealt the organized communist movement." The description has been deleted "as it tends to reveal a highly sensitive technique." 297 The COINTELPRO unit chief also stated that this one single action succeeded in causing a "radical decrease" in CPUSA membership, but refused to tell the Committee staff what that action was because it involved foreign counterintelligence. 298

The final briefing paper, for FY 1967, refers to the CPUSA program and its expansion in 1964 to include "Klan and hate-type organizations and their memberships." It continues, "counterintelligence action today is a valuable adjunct to investigative responsibilities and the techniques used complement our investigations. All information related to the targeted organizations, their leadership and members, which is developed from a variety of sources, is carefully reviewed for its potential for use under this program." 299

Examples cited are the Bureau's preparation of a leaflet on the W.E.B. DuBois Clubs entitled "Target ... American Youth!" sponsored by the VFW; alerting owners of meeting locations to their use by Communists; alerting the Veterans Administration to a Klan member's full-time employment in order to reduce his pension, and the IRS to the fact that he failed to file tax returns; exposing the insurance kick back scheme also referred to in the 1965 letters to Watson and Katzenbach; and increasing informant coverage by duplicating a Klan business card given to prospective members. 300

#### *C. Outside the Bureau: Post -- 1971.*

In the fall of 1973, the Department of Justice released certain COINTELPRO documents which had been requested by NBC reporter Carl Stern in a Freedom of Information Act request following the Media, Pennsylvania, break-in. In January 1974, Attorney General Saxbe asked Assistant Attorney General Henry Petersen to form an intradepartmental committee to study COINTELPRO and report back to him. 301 The committee was composed of both Department attorneys and Bureau agents. The Department lawyers did not work directly with Bureau documents; instead the Bureau prepared summaries of the documents in the COINTELPRO control file, which did not include the identities or affiliations of the targets, and the Department members were allowed to do a sample comparison to verify the accuracy of the summaries.

A revised and shortened version of the report of the Petersen Committee was made public in November 1974. The public report was prefaced by a statement from Attorney General Saxbe which stated that while "in a small number of instances, some of these programs involved what we consider today to be improper activities," most of the activities "were legitimate." 301a The public version did not examine the purposes or legality of the programs or the techniques, although it did state some COINTELPRO activities involved "isolated instances" of practices that "can only be considered abhorrent in a free society." 302 The confidential report to Attorney General Saxbe examined the legal issues at some length. It emphasized that many COINTELPRO activities "were entirely proper and appropriate law enforcement procedures." 303 These included the following:

notifying other Government authorities of civil and criminal violations of group members; interviewing such group members; disseminating public source material on such individuals and groups to media representatives; encouraging informants to argue against the use of violence by such groups; and issuing general public comment on the activities, policies and objectives of such groups through testimony at legislative hearings and in other formal reports. 304

On the other hand, the report concluded that many other COINTELPRO activities designed to expose, disrupt, and neutralize domestic groups "exceeded the Bureau's investigative authority and may be said to constitute an unwarranted interference with First Amendment rights of free speech and associations of the target individuals and organizations." 305

Department attorneys prepared two legal memoranda, one viewing COINTELPRO as a conspiracy to deprive persons of First Amendment rights under 18 U.S.C. 241, and the other rejecting that view. 306 The committee itself reached the following conclusion:

While as a matter of pure legal theory it is arguable that these programs resulted in Section 241 violations, it is the view of the committee that any decision as to whether prosecution should be undertaken must also take into account several other important factors which bear upon the events in question. These factors are: first, the historical context in which the programs were conceived and executed by the Bureau in response to public and even Congressional demands for action to neutralize the self-proclaimed revolutionary aims and violence prone activities of extremist groups which posed a threat to the peace and tranquility of our cities in the mid and late sixties; second, the fact that each of the COINTELPRO programs was personally approved and supported by the late Director of the FBI; and third, the fact that the interferences with First Amendment rights resulting from individual implemented program actions were insubstantial. Under these circumstances, it is the view of the committee that the opening of a criminal investigation of these matters is not warranted. 307

The report also concluded that there were "substantial questions" as to the liability of various former and present officials to civil suit "under tort theories of defamation of interference with contract rights." 308

The Departmental committee's crucial conclusion was that the interferences with First Amendment rights were "insubstantial." It appears to have reached that conclusion by ignoring the declared goals of the programs: cutting down group membership and preventing the "propagation" of a group's philosophy. Further, the committee brushed over dangerous or degrading techniques by breaking down the categories of actions into very small percentages, and then concluded that, if only 1 percent of the actions involved poison pen letters to spouses, then the activity was "insubstantial" as compared to the entirety of COINTEL proposals, even though, as to the individuals in that category, the invasion might be very substantial indeed.

Another weakness in the Petersen committee report is its characterization as legitimate of such techniques as "leaking" public source material to the media, interviewing group members, and notifying other government authorities of civil and criminal violations. The term "public source material" is misleading, since the FBI's files contain a large amount of so-called public source data (such as arrest records, outdated or inaccurate news stories) which should not be "leaked" outside the Bureau to discredit an individual. 309 Interviews can be conducted in such an intrusive and persistent manner as to constitute harassment. Minor technical law violations can be magnified when uncovered and reported by the FBI to another agency for the purpose of disruption rather than objective law enforcement. 310 Claims that a technique is legitimate per se should not be accepted without examining the actual purpose and effect of the activity.

Although the Petersen committee's report concluded that "the opening of a criminal investigation of these matters is not warranted," 311 the Committee did recommend broad changes in Bureau procedures. First, the report urged that "a sharp distinction . . . be made between FBI activities in the area of foreign counterintelligence and those in the domestic field." 312 The committee proposed that the Attorney General issue a directive to the FBI:

prohibiting it from instituting any counterintelligence program such as COINTELPRO without his prior knowledge and approval. Specifically, this directive should make it unmistakably clear that no disruptive action should be taken by the FBI in connection with its investigative responsibilities involving domestic based organizations, except those which are sanctioned by rule of law, procedure, or judicially recognized and accepted police practices, and which are not in violation of state or federal law. The FBI should also be charged that in any event where a proposed action may be perceived, with reason, to unfairly affect the rights of citizens, it is the responsibility of the FBI as an institution and of FBI agents as individuals to seek legal advice from the Attorney General or his authorized representative. 313

Attorney General Saxbe did not issue such a directive, and the matter is still pending before Attorney General Levi. 314

## VI. EPILOGUE

On April 1, 1976, Attorney General Levi announced the establishment of a special review committee within the Department of Justice to notify COINTELPRO victims that they were the subjects of FBI activities directed against them. Notification will be made "in those instances where the specific COINTELPRO activity was improper, actual harm may have occurred, and the subjects are not already aware that they were the targets of COINTELPRO activities." 315

The review committee has established guidelines for determining which COINTELPRO activities were "improper," but it will be difficult to make that determination without giving an official imprimatur to questionable activities which do not meet the notification criteria. For example, there is little point in notifying all recipients of anonymous reprint mailings that they received their copy of a Reader's Digest article from the FBI, but the Department should not suggest that the activity itself is a proper Bureau function. Other acts which fall within the "grey area" between COINTELPRO and aggressive investigation present similar problems. 316

Nevertheless, a Departmental notification program is an important step toward redressing the wrongs done, and carries with it some additional benefits. For the first time, Departmental attorneys will review the original files, rather than relying on Bureau-prepared summaries. Further, the Department will have acknowledged -- finally -- that COINTELPRO was wrong. Official repudiation of the programs is long overdue.

The American people need to be assured that never again will an agency of the government be permitted to conduct a secret war against those citizens it considers threats to the established order. Only a combination of legislative prohibition and Departmental control can guarantee that COINTELPRO will not happen again. The notification program is an auspicious beginning.

#### Footnotes:

1 On March 8, 1971, the FBI resident agency in Media, Pennsylvania, was broken into. Documents stolen in the break-in were widely circulated and published by the press. Since some documents carried a "COINTELPRO" caption -- a word unknown outside the Bureau -- Carl Stern, a reporter for NBC, commenced a Freedom of information Act lawsuit to compel the Bureau to produce other documents relating to the programs. The Bureau decided because of "security reasons" to terminate them on April 27, 1971. (Memorandum from C. D. Brennan to W. C. Sullivan, 4/27/71; Letter from FBI headquarters to all SAC's, 4/28/71.)

2 The Bureau's direct attacks on speaking, teaching, writing, and meeting are discussed at pp. 28-33, attempts to prevent the growth of groups are set forth at pp. 34-40.

2a For a discussion of U.S. intelligence activities against hostile foreign intelligence operations, see Report on Counterintelligence.

3 See Senate Select Committee Report, "Alleged Assassination Plots Involving Foreign Leaders" and Staff Report: "Covert Action in Chile."

3a Black Nationalist Supervisor deposition, 10/17/75, p. 12.

4 Memorandum from FBI Headquarters to all SAC's, 8/25/67, p. 2.

5 New Left Supervisor's deposition, 10/28/75, p. 8. The closest any Bureau document comes to a definition is found in an investigative directive: "The term 'New Left' does not refer to a definite organization, but to a movement which is providing ideologies or platforms alternate to those of existing communist and other basic revolutionary organizations, the so-called 'Old Left.' The New Left movement is a loosely-bound, free-wheeling, college-oriented movement spearheaded by the Students for a Democratic Society and includes the more extreme and militant anti-Vietnam war and anti-draft protest organizations." (Memorandum from FBI Headquarters to all SAC's, 10/28/68; Hearings, Vol. 6, Exhibit 61. p. 669.) Although this characterization is longer than that of the New Left Supervisor, it does not appear to be substantively different.

6 Memorandum from FBI Headquarters to Cleveland Field Office, 11/6/64.

7 One civil rights leader, the subject of at least three separate counterintelligence actions under the CPUSA caption, was targeted because there was no "direct evidence" that he was a communist, "neither is there any substantial evidence that he is anti-communist." One of the actions utilized information gained from a wiretap; the other two involved dissemination of personal life information. (Memorandum from J.A. Sizoo to W.C. Sullivan, 2/4/64; Memorandum from New York Field Office to FBI Headquarters, 2/12/64; Memoranda from FBI Headquarters to New York Field Office, 3/26/64 and 4/10/64; Memorandum to New York Field Office from FBI Headquarters, 4/21/64; Memorandum from FBI Headquarters to Baltimore Field Office, 10/6/65.)

13 Memorandum from FBI Headquarters to Cincinnati Field Office, 6/18/68.

14 Memorandum from FBI Headquarters to Albuquerque Field Office, 3/14/69.

15 Memorandum from FBI Headquarters to San Antonio Field Office, 7/23/69.

16 Memorandum from FBI Headquarters to Pittsburgh Field Office, 11/14/69.

17 Memorandum from FBI Headquarters to Minneapolis Field Office, 11/4/68.

17a COINTELPRO Unit Chief deposition, 10/16/75, p. 14.

17b Unit Chief deposition, 10/16/75, p.54.

18 "Possibly violent" did not necessarily mean likely to be violent. Concededly non-violent groups were targeted because they might someday change; Martin Luther King, Jr. was targeted because (among other things) he might "abandon his supposed 'obedience' to 'white, liberal doctrines' (non-violence) and embrace black nationalism." (Memorandum from FBI Headquarters to all SAC's, 3/4/68, 1). 3.)

19 This attitude toward change is apparent in many of those Bureau activities investigated by the Committee. It played a large part in the Martin Luther King, Jr. case, which is the subject of a separate report.

20 FBI Headquarters memorandum, 11/4/68.

21 Memorandum from FBI Headquarters to San Francisco Field Office, 11/1/65.

22 Memorandum from Cartha DeLoach to John Mohr, 8/29/64, pp. 1-8.

23 William C. Sullivan testimony, 11/1/75, pp. 97-98.

24 A memorandum prepared for the Justice Department Committee which studied COINTELPRO in 1974 stated that COINTELPRO activities "may" have violated the Civil Rights statute, the mail and wire fraud statutes, and the prohibition against divulging information gained from wiretaps. (Memorandum to H. E. Petersen, 4/25/74.) Internal Bureau documents show that Bureau officials believed sending threats through the mail might violate federal extortion statutes. (See, e.g., Memorandum from FBI Headquarters to Newark Field Office, 2/19/71.) Such threats were mailed or telephoned on several occasions.

25 Memorandum from FBI Headquarters to Chicago Field Office, 1/30/70.

26 Hearing of the Subcommittee on Civil Rights and Constitutional Rights 11/20/74, p. 11. The Petersen Committee, composed of Department of Justice attorneys and Bureau agents, was formed in 1974 at the request of Attorney General Saxbe to investigate COINTELPRO. Its conclusions are discussed on pp. 73-76.

27 3,247 actions were proposed.

28 E.g., Memorandum from FBI Headquarters to San Francisco Field Office, 11/1/65.

29 E.g., Memorandum from FBI Headquarters to San Francisco Field Office, 11/26/68.

30 E.g., Memorandum from Los Angeles Field Office to FBI Headquarters, 12/12/68.

31 E.g., Memorandum from Newark Field Office to FBI Headquarters, 7/3/69. The term "snitch jacket" is not part of Bureau jargon; it was used by those familiar with the Bureau's activities directed against the Black Panther Party in a staff interview.

32 E.g., Memorandum from Columbia Field Office to FBI Headquarters, 11/4/70.

33 E.g., Memorandum from FBI Headquarters to Chicago Field Office, 8/2/68.

34 E.g., Memorandum from FBI Headquarters to Cleveland and Boston Field Offices, 5/5/64.

35 E.g., Memorandum from FBI Headquarters to Minneapolis Field Office, 11/18/69.

36 E.g., Memorandum from FBI Headquarters to San Antonio Field Office, 4/6/70.

37 E.g., Memorandum from FBI Headquarters to Minneapolis Field Office, 11/19/70.

38 E.g., Memorandum from Midwest City Field Office to FBI Headquarters, 8/1/68.

39 Mechanically, the Bureau's programs were administered at headquarters, but individual actions were proposed and usually carried out by the field. A field proposal under the COINTELPRO caption would be routed to a special agent supervising that particular program. During most of COINTELPRO's history that supervisor was a member of the section at the Domestic Intelligence Division with investigative responsibility for the subject of the proposal. The supervisor's recommendation then went up through the Bureau hierarchy. Proposals were rarely approved below the level of Assistant Director in charge of the Division, and often were approved by one of the top three men in the Bureau.

39a New Left supervisor testimony, 10/28/75, pp. 72, 74.

40 George C. Moore testimony, 11/3/75, p. 62.

41 Moore, 11/3/75, p. 64

42 Sullivan, 11/1/75, p. 97.

43 James B. Adams testimony, 11/19/75, Hearings, Vol. 6, pp. 73, 75.

44 The unit chief stated: "The Bureau people did not think that they were doing anything wrong and most of us to this day do not think we were doing anything wrong." (Unit chief, 10/16/75, p. 102.) Moore felt the same way: "I thought I did something very important during those days. I have no apologies to make for anything we did, really." (Moore 11/3/75, p. 25.)

45 Unit chief, 10/16/75, pp. 11, 12, 14.

46 Unit chief, 10/10/75, pp. 12-14, Deputy Associate Director Adams' testimony on COINTELPRO noted that "interpretations as to the constitutionality of [the Smith Act of 1940] leave us with a statute still on the books that proscribes certain actions, but yet the degree of proof necessary to operate under the few remaining areas is such that there was no satisfactory way to proceed." (Adams testimony, 11/19/75, Hearings, Vol. 6, p. 71.) In fact, the Smith Act decisions did not come down until 1957. Perhaps the witnesses were referring to Communist Party v. Subversive Activities Control Board, 351 U.S. 115 (1956), which held that testimony by "tainted" Government witnesses required remanding the case to the Board.

47 Unit chief, 10/16/75, p. 15.

48 One witness also pointed out that while the federal antiriot and antibombing statutes were not passed until 1968, inadequate statutes were not the only problem. Statutes directed at specific criminal acts would only have served to allow prosecution after the crime; they would not have prevented the act in the first place. He also stated that he did not believe it would be possible to pass a statute which would have given the Bureau the tools necessary to prevent violence by disrupting the growth of violence-prone organizations -- "because of something called the United States Constitution." When asked whether that answer implied that preventing the growth of an organization is unconstitutional, he answered, "I think so." (Black Nationalist supervisor, 10/1/75, pp. 25-26.) He was the only Bureau witness who had reservations about COINTELPRO's constitutionality. Another witness gave a more typical response. When asked whether anybody at any time during the course of the programs discussed their constitutionality or legal authority, he replied, "No, we never gave it a thought." (Moore, 11/3/75, p. 83.)

49 Moore, 11/3/75, p. 79.

50 Ramsey Clark testimony, 12/3/75, Hearings, Vol. 6, 1).245).

Nicholas deB. Katzenbach testimony, 12/3/75, Hearings, Vol. 6, p. 217.

52 These summaries were the point of departure for the Select Committee's investigation but were deemed unsatisfactory for a complete inquiry.

53 For instance, the Department is defending litigation commenced against the Bureau by COINTELPRO victims who happen to have received their files through Freedom of Information Act requests. More such litigation may arise as more targets learn of Bureau actions taken against them.

54 The New Left supervisor stated, "[The COINTELPRO caption was] as much as it was anything else, and administrative device to channel the mail to the Bureau . . . we get back to this old argument between the supervisors not argument, but discussion, between the supervisors, it falls on yours, no, it doesn't, it's yours." (New Left Supervisor, 10/28/75, p. 49.)

55 The Bureau can and does reveal its interest in the subjects of investigation to employees, family members, and neighbors. The Black Nationalist supervisor explained, "Generally speaking, we should not be giving out information to somebody we are

trying to get information from. As a practical matter sometimes we have to. The mere fact that you contact somebody about someone gives them the indication that the FBI is interested in that person." (Black Nationalist deposition, 10/17/75, p. 16). See also the statement of the Social Workers Party, 10/2/75, which details more than 200 incidents involving its members since COINTELPRO's termination. The SWP believes these to be as disruptive as the formal SWP COINTELPRO.

56 Memorandum from Charles D. Brennan to William C. Sullivan, 4/27/71, Hearings, Vol. 6, Exhibit 55-3.

57 In one instance, a field office was authorized to contact the editor of a Southern newspaper to suggest that he have reporters interview Klan members and write an article based on those interviews. The editor was also furnished information on Klan use of the polygraph to "weed out FBI informants." According to the Bureau, "subsequent publication of the Klan's activities resulted in a number of Klan officials ceasing their activities." (Letter from FBI to the Senate Select Committee 10/24/75.) The second case involved an anonymous letter and derogatory newspaper clipping which were sent to a Black Panther Party office in the Northeast to discredit a Panther leader's abilities. (Letter from FBI to the Senate Select Committee, 9/24/75.)

58 It should be noted that Charles Colson spent seven months in jail for similar activity involving the client.

59 Letter from Attorney General Edward H. Levi to the Senate Select Committee, 5/23/75. These included: (1) 37 actions authorized between 1960 and 1971 "aimed at militant groups which sought Puerto Rican independence;" (2) "Operation Hoodwink," from October 1966 to July 1968, "aimed at putting organized crime elements in competition with the Communist Party USA;" (3) a 1961 program targeted against "a foreign-dominated group;" (4) two actions taken between January 1969 and March 1971 against "a foreign nationality group in the United States;" and (5) seven actions between 1961 and 1968 against members, leaders, and factions of "a foreign communist party."

The FBI's operations against "a foreign communist party" indicate that the Bureau, as well as the CIA, has engaged in covert action abroad.

60 Clarence M. Kelley testimony, House Civil Rights and Constitutional Rights Subcommittee hearings, 11/20/74, pp. 44-45. This statement appears to be an explicit recognition that one purpose of COINTELPRO was to influence political events.

61 omitted in original.

62 Clarence M. Kelley testimony, 12/10/75, Hearings, Vol. 6, 1). 283, 284. Affirmative legal steps to meet an imminent threat to life or property are, of course, quite proper. The difficulty with the Director's statement, juxtaposed as it was with a discussion of COINTELPRO, is that the threats COINTELPRO purported to meet were not imminent, the techniques used were sometimes illegal, and the purposes went far beyond the prevention of death or destruction.

63 Memorandum from Alan Belmont to L. V. Boardman, 8/28/56, Hearings, vol. 6, exhibit 12.

64 1,388 of a total of 2,370.

65 Excerpt from materials prepared for the FBI Director's briefing of the House Appropriations Subcommittee, FY 1966, p. 2.

66 According to Sullivan, membership in the Communist Party declined steadily through the '60s. When the CPUSA membership dropped below a certain figure, Director Hoover ordered that the membership figures be classified. Sullivan believes that this was done to protect the Bureau's appropriations. (Sullivan, 11/1/75, pp. 33-34.)

67 For instance, the Southern Christian Leadership Conference was targeted as a "Black Nationalist-Hate Group." (memorandum from FBI headquarters to all SAC's, 3/4/68, p. 4.)

68 Memorandum from Alan Belmont to L. V. Boardman, 8/28/56, Hearings, Vol. 6. exhibit 12.

69 Sullivan testimony, 11/1/75, pp. 42-43.

70 As noted earlier, Bureau personnel also trace the decision to adopt counterIntelligence methods to the Supreme Court decisions overturning the Smith Act convictions. As the unit chief put it, "The Supreme Court rulings had rendered the Smith Act technically unenforceable .... it made it ineffective to prosecute Communist Party members, made it impossible to prosecute Communist Party members at the time." (Unit chief, 10/16/75, p. 14).

71 Unit chief, 10/16/75, p. 10.

72 Memorandum from New Haven Field Office to FBI Headquarters, 5/24/60.

78 Robert Shackelford testimony, 2/6/76, pp. 88-89.

79) Memorandum from FBI Headquarters.

80 For example, anonymous letters were sent to the parents of two nonmember students participating in a hunger strike against the war at a midwest college, because the fast was sponsored by the Young Socialist Alliance. The letters warned that the students' participation "could lead to injury to [their] health and damage [their] academic standing," and alerted them to their sons' "involvement in left wing activities." It was hoped that the parents would "protest to the college that the fast is being allowed" and that the Young Socialist Alliance was permitted on campus. (Memorandum from FBI headquarters to Cleveland Field Office, 11/29/68.)

81 Memorandum from J. H. Gale to Charles Tolsen, 7/30/64, p. 5. Opinion within the Division had been sharply divided on the merits of this transfer. Some saw it as an attempt to bring the Intelligence Division's expertise in penetrating secret organizations to bear on a problem -- Klan involvement in the murder of civil rights workers -- creating tremendous pressures on the Bureau to solve. Traditional law enforcement methods were insufficient because of a lack of Federal statutes, and the noncooperation of local law enforcement. Others thought that the Klan's activities were essentially a law enforcement problem, and that the transfer would dilute the Division's major internal security responsibility. Those who opposed the transfer lost, and trace many of the Division's subsequent difficulties to this "substantial enlargement" of the Division's responsibilities. ("Unit chief, 10/16/75, pp. 45-47.)

82 Memorandum from FBI Headquarters to Atlanta Field Office, 9/2/64, p. 1.

83 FBI Headquarters memorandum, 9/2/64, p. 3.

84 Unit Chief, 10/14/75, p. 54.

85 A few actions were approved against the "Minutemen," when it became known that members were stockpiling weapons.

86 Unit Chief, 10/16/75, p. 48.

87 Moore, 11/3/75, p. 31.

88 Note that this characterization had no substantive meaning within the Bureau. See p. 4.

89 Memorandum from FBI Headquarters to all SAC's, 8/25/67.

90 Black Nationalist supervisor, 10/17/75, pp. 66-67. The supervisor stated that individual NOI members were involved with sporadic violence against police, but the organization was not itself involved in violence. (Black National supervisor, 10/17/75, p. 67.) Moore agreed that the NOI was not involved in organizational violence, adding that the Nation of Islam had been unjustly blamed for violence in the ghetto riots of 1967 and 1968: "We had a good informant coverage of the Nation of Islam.... We were able to take a very positive stand and tell the Department of Justice and tell everybody else who accused the Nation of Islam ... [that they] were not involved in any of the riots or disturbances. Elijah Muhammed kept them under control, and he did not have them on the streets at all during any of the riots." (Moore, 11/3/75, p. 36.)

When asked why, therefore, the NOI was included as a target, Mr. Moore answered: "Because of the potential, they did represent a potential ... they were a paramilitary type. They had drills, the Fruit of Islam, they had the capability because they were a force to be reckoned with, with the snap of his finger Elijah Muhammed could bring them into any situation. So that there was a very definite potential, very definite potential." (Moore, 11/3/75, p. 37.)

91 The unit chief, who wrote the letter on instructions from his superiors, concedes that the letter directed field offices to gather personal life information on targets, not for "scandalous reasons," but "to deter violence or neutralize the activities of violence-prone groups." (Unit chief, 10/16/75, p. 66.)

92 Moore, 11/3/75, pp. 37, 39, 40.

93 Primary targets listed in this second letter are the Southern Christian Leadership Conference, the Student Nonviolent Coordinating Committee, Revolutionary Action Movement, Nation of Islam, Stokely Carmichael, H. "Rap" Brown, Martin Luther King, Maxwell Stanford, and Elijah Muhammed. CORE was dropped for reasons no witness was able to reconstruct. The agent who prepared the second letter disagreed with the inclusion of the SCLC, but lost. (Black Nationalist supervisor, 10/17/75, p. 14.)

94 Memorandum from FBI headquarters to all SAC's, 3/4/68, pp. 3-4.

95 Memorandum from FBI Headquarters to Baltimore Field Office, 11/25/68.

96 Memorandum from FBI Headquarters to all SAC's, 1/30/69.

97 This technique, the "snitch jacket," was used in all COINTELPRO programs.

98 Moore, 11/3/75, pp. 34, 50-52.

99 As the New Left supervisor put it, "I cannot recall any document that was written defining New Left as such. It is my impression that the characterization of New Left groups rather than being defined at any specific time by document, it more or less grew...." Agreeing it was a very amorphous term, he added: "It has never been strictly defined, as far as I know.... It is more or less an attitude I would think." (New Left supervisor, 10/28/75, pp. 7-8.)

100 New Left supervisor, 10/28/75, pp. 21-22.

101 Memorandum from Charles D. Brennan to William C. Sullivan, 5/9/68.

102 omitted in original.

103 memorandum from FBI headquarters to all SAC's, 5/23/68. Memorandum from FBI headquarters to all SACs, 10/9/68. This time the field offices got the message. One example of information furnished under the "Immorality" caption comes from the Boston field office;

"[Informant] who has provided reliable information in the past concerning the activities of the New Left in the Metropolitan Boston area has advised that numerous meetings concerning anti-Vietnam and/or draft activity are conducted by members sitting around the table or a living room completely in the nude. These same individuals, both male and female, live and sleep together regularly and it is not unusual to have these people take up residence with a different partner after a six or seven month period.

"According to the informant, the living conditions and habits of some of the New Left adherents are appalling in that certain individuals have been known to wear the same clothes for an estimated period of weeks and in some instances for months. Personal hygiene and eating habits are equally neglected by these people, the informant said.

"The informant has noted that those individuals who most recently joined the movement are in most instances the worst offenders as far as moral and personal habits are concerned. However, if these individuals remain in the movement for any length of time, their appearance and personal habits appear to improve somewhat." (Memorandum from Boston Field Office to FBI Headquarters, 6/13/68.)

106 Memorandum from FBI Headquarters to all SACs, 10/9/68.

107 Memorandum from FBI Headquarters to Chicago Field Office, 8/28/68.

108 Memorandum from FBI Headquarters to all SAC's, 9/9/68.

109 Note that there was no attempt to determine whether the allegations were true. Ramsey Clark, Attorney General at the time, testified that he did not know that either directive had been issued and that "they are highly improper." He also noted that the Bureau's close working relationship with state and local police forces had made it necessary to "preempt the FBI" in cases involving the investigation of police misconduct' "we found it necessary to use the Civil Rights Division, and that is basically what we did." (Clark, 12/3/75, Hearings Vol. 6. pp. 254-255.)

110 Memorandum from FBI Headquarters to all SAC's, 7/6/68.

111 The New Left supervisor confirmed what the documents reveal: "legitimate" (nonviolent) antiwar groups were targeted because they were "lending aid and comfort" to more disruptive groups. According to the New Left supervisor:

"This [nonviolent groups protesting against the war] was the type of thing that the New Left, the violent portion, would seize upon. They could use the legitimacy of an accepted college group or outside group to further their interests." (New Left supervisor, 10/28/75, p. 39)

Nonviolent groups were thus disrupted so there would be less opportunity for a violent group to make use of them and their respectability. Professors active in "New Left matters," whether involved in violence or just in general protest, were targeted for "using [their] good offices to lend aid and comfort to the entire protest movement or to help disrupt the school through [their] programs." (New Left supervisor, 10/28/75, p. 69.)

112 Memorandum from FBI Headquarters, Minneapolis Field Office, 11/4/68.

113 Memorandum from FBI Headquarters to San Antonio Field Office, 8/27/68.

114 Huston was the Presidential assistant who coordinated the 1970 recommendations by an interagency committee for expanded domestic intelligence, including concededly illegal activity. The so-called "Huston Plan" is the subject of a separate report.

115 Tom Charles Huston testimony, 9/23/75, Hearings, Vol. 2, p. 45.

116 The usual constitutional inquiry is whether the government is "chilling" First Amendment rights by indirectly discouraging a protected activity while pursuing an otherwise legitimate purpose. In the case of COINTELPRO, the Bureau was not attempting indirectly to chill free speech or association; it was squarely attacking their exercise.

117 The percentage is derived from a cross-indexed tabulation of the Petersen Committee summaries. Interestingly, these categories account for 39 percent of the approved "New Left" proposals, which reflects both the close connection between antiwar activities and the campuses, and the "aid and comfort" theory of targeting, in which teachers were targeted for advocating an end to the war through nonviolent means.

118 The group was composed largely of university teachers and clergymen who had bought shares in order to attend the meeting. (Memorandum from Minneapolis Field Office to FBI headquarters, 4/1/70.)

119 Memorandum from FBI Headquarters to Minneapolis Field Office, 4/23/70; memorandum from Minneapolis Field Office to FBI Headquarters, 4/1/70.

120 Memorandum from Detroit Field Office to FBI Headquarters, 10/26/60; Memoranda from FBI Headquarters to Detroit Field Office, 10/27/60, 10/28/60, 10/31/60; Memorandum from F. J. Baumgardner to Alan H. Belmont, 10/26/60.

121 It is interesting to note that after the anonymous calls to the newspapers giving information on the "communist nature" of the sponsor, the conference center director called the local FBI office to ask for information on the speaker. He was informed that Bureau records are confidential and that the Bureau could not make any comment.

122 Memorandum from FBI Headquarters to Pittsburgh Field Office, 6/19/69.

123 Memorandum from FBI Headquarters to Pittsburgh Field Office, 5/1/70.

124 Memorandum from Detroit Field Office to FBI Headquarters, 10/11/66; memorandum from FBI Headquarters to Detroit Field Office, 10/26/66.

125 Memorandum from Mobile Field Office to FBI Headquarters, 12/9/70; memorandum from FBI Headquarters to Mobile Field Office, 12/31/70; memorandum from Mobile Field Office to FBI Headquarters, 2/3/71.

126 In one example, a letter signed "A Black Parent" was sent to the mayor, the Superintendent of Schools, the Commander of the American Legion, and two newspapers in a northeastern city protesting a high school's subscription to the BPP newspaper. The letter was also intended to focus attention on the teacher who entered the subscription "so as to deter him from implementing black extremist literature and philosophy into the Black History curriculum" of the school system. (Memorandum from Buffalo Field Office to FBI Headquarters, 2/5/70.)

127 Memorandum from Los Angeles Field Office to FBI Headquarters, 9/9/68; memorandum from FBI Headquarters to SAC, Los Angeles Field Office, 9/23/68.

128 Memorandum from Newark Field Office to FBI Headquarters, 5/23/69; memorandum from FBI Headquarters to Newark Field Office, 6/4/69.

129 Memorandum from Detroit Field Office to FBI Headquarters, 2/28/69; memorandum from FBI Headquarters to Detroit Field Office, 3/27/69.

130 For example, one proposal requested that the FBI Lab prepare a quart of solution "capable of duplicating a scent of the most foul smelling feces available," along with a dispenser capable of squirting a narrow stream for a distance of approximately three feet. The proposed targets were the physical plant of a New Left publisher and BPP publications prior to their distribution. Headquarters instructed the field office to furnish more information about the purpose for the material's use and the manner and security with which it would be used. The idea was then apparently dropped. (Memorandum from Detroit Field Office to FBI Headquarters, 10/13/70; memorandum from FBI Headquarters to Detroit Field Office, 10/23/70.)

131 Memorandum from FBI Headquarters to Los Angeles Field Office, 9/23/68.

132 Memorandum from FBI Headquarters to San Antonio Field Office, 5/13/69.

133 Memorandum from FBI Headquarters to Indianapolis Field Office, 6/17/68.

134 Memorandum from FBI Headquarters to all SAC's, 12/30/68.

135 One of the 12 standard techniques referred to in the New Left memorandum discussed at pp. 25--26, disinformation bridges the line between "counterintelligence" and sabotage.

136 Memorandum from Chicago Field Office to FBI Headquarters, 9/9/68; memorandum from Charles Brennan to William C. Sullivan, 8/15/68.

137 Memorandum from Washington Field Office to FBI Headquarters, 1/21/69.

138 Egil Krogh has stated to the Committee staff that he was in charge of coordinating D.C. law enforcement efforts during demonstrations, and gained the cooperation of NMC marshals to ensure an orderly demonstration. This law enforcement/NMC coordination was effected through the same walkie-talkie system the Bureau was disrupting. (Memorandum from FBI Headquarters to Washington Field Office, 1/10/69; staff summary of Egil Krogh interview, 5/23/75.)

139 Memorandum from Cincinnati Field Office to FBI Headquarters, 12/20/68; memorandum from FBI Headquarters to Cincinnati Field Office, 12/29/68.

140 Memoranda from New York Field Office to FBI Headquarters, 9/15/67, 9/26/67, and 10/17/67; memorandum from FBI Headquarters to New York Field Office, 9/29/67. By letter of January 14, 1976, the Bureau submitted specific instances of "action, other than arrest and prosecution, to prevent any stage of [a] crime or violent acts from being initiated" which had been taken. The examples were intended to aid in developing "preventive action" guidelines.

One of the examples was the prevention of the publisher's plan to drop flowers over the Pentagon: "A plan was thus thwarted which could well have resulted in tragedy had another pilot accepted such a dangerous flying mission and violated Federal or local regulations in flying low over the Pentagon which is also in the heavy traffic pattern of the Washington National Airport." The letter does not explain why it was necessary to act covertly in this case. If flying over the Pentagon violates Federal regulations, the Bureau could have arrested those involved when they arrived at the airport. No informant was involved; the newspaper had advertised openly for a pilot.

141 Memorandum from FBI Headquarters to Albuquerque Field Office, 3/19/69.

142 Memorandum from Boston Field Office to FBI Headquarters, 1/22/66.

143 Memorandum from FBI Headquarters to El Paso Field Office, 12/6/68.

144 Memorandum from FBI Headquarters to New York Field Office, 3/19/65.

145 Memorandum from FBI Headquarters to Cleveland and Boston Field Offices, 5/6/64.

146 Mr. Huston learned that lesson as well:

"We went from this kind of sincere intention, honest intention, to develop a series of justifications and rationalizations based upon this ... distorted view of inherent executive power and from that, whether it was direct ... or was indirect or inevitable, as I tend to think it is, you went down the road to where you ended up, with these people going into the Watergate.

"And so that has convinced me that you have just got to draw the line at the top of the totem pole, and that we would then have to take the risk -- it is not a risk-free choice, but it is one that, I am afraid, in my judgment, that we do not have any alternative but to take." (Huston, 9/23/75, p. 45.)

147 Sullivan, 11/1/75, pp. 97-98.

148 Moore, 11/3/75, pp. 32-33.

149 The percentages used in this section are derived from a staff tabulation of the Petersen Committee summaries. The numbers are approximate because it was occasionally difficult to determine from the summary what the purpose of the technique was.

150 The resulting articles could then be used in the reprint mailing program.

153 Memorandum from FBI Headquarters to San Francisco Field Office, 11/1/65.

154 Levi 12/11/75, Hearings, Vol. 6, p. 318.

155 "Name checks" were apparently run on all reporters proposed for use in the program, to make sure they were reliable. In one case, a check of Bureau files showed that a television reporter proposed as the recipient of information on the SDS had the same name as someone who had served in the Abraham Lincoln Brigade. The field office was asked to determine whether the "individuals" were "identical." The field office obtained the reporter's credit records, voting registration, and local police records, and determined that his credit rating was satisfactory, that he had no arrest record, that he "stated a preference for one of the two major Political Parties" -- and that he was not, in fact, the man who fought in the Spanish Civil war. Accordingly, the information was furnished. (Memorandum from Pittsburgh Field Office to FBI Headquarters, 12/26/68; memorandum from FBI Headquarters to Pittsburgh Field Office, 1/23/69.)

156 The Bureau also noted, for its files, those who criticized its work or its Director, and the Division maintained a "not-to-contact" list which included the names of some reporters and authors. One proposal to leak information to the Boston Globe was turned down because both the newspaper and one of its reporters "have made unfounded criticisms of the FBI in the past." The Boston Field Office was advised to resubmit the suggestion using another newspaper. (Memorandum from FBI Headquarters to Boston Field Office, 2/8/68.)

157 Leaking derogatory information is discussed at p. 50.

158 The Committee's agreement with the Bureau governing document production Provided that the Bureau could excise the names of "confidential sources" when the documents were delivered to the Committee. Although the staff was permitted to see the excised names at Bureau headquarters, it was also agreed that the names not be used.

159 Note that Bureau witnesses testified that the NOI was not, in fact, involved in organization violence. See pp. 20-21.

164 This technique was also used in disseminating propaganda. The distinction lies in the purpose for which the letter, article or flier was mailed.

165 Black Nationalist supervisor, 10/17/75, p. 40.

166 Memorandum from FBI Headquarters to Baltimore Field Office, 11/25/68.

167 Memorandum from San Diego Field Office to FBI Headquarters, 2/20/69; memorandum from San Diego Field Office to FBI Headquarters, 3/27/69; memorandum from FBI Headquarters to San Diego Field Office, 4/4/69.

168 Memorandum from Newark Field Office to FBI Headquarters, 8/15/69. According to the proposal, the letter would not be typed by the field office stenographic pool because of the language. The field office also used asterisks in its communication with headquarters which "refer to that colloquial phrase ... which implies an unnatural physical relationship with a maternal parent." Presumably the phrase was used in the letter when it was sent to the Panthers.

200 Memorandum from Charlotte Field Office to FBI Headquarters 3/23/71; memorandum FBI Headquarters to Charlotte Field Office, 3/31/71.

201 In fact, some proposals were turned down for that reason. See, e.g., letter from FBI Headquarters to Cincinnati Field Office, 2/18/71, in which a proposal that an imprisoned BPP member be labeled a "pig informer" was rejected because it was possible it would result in the target's death. But note that just one month later, two similar proposals were approved. Letter from FBI Headquarters to Washington Field Office, 3/19/71, and letter from FBI Headquarters to Charlotte Field Office, 3/31/71.

202 Black Nationalist supervisor, 10/17/75, p. 39.

203 Moore, 11/3/15, p. 64.

204 The minister has given the Select Committee an affidavit which states that there was an organized attempt by the Bureau's source to disrupt the Church's meetings, including "fist fights." Affidavit of Rev. Dennis G. Kuby, 10/19/75).

205 Memorandum from Cleveland Field Office to FBI Headquarters, 10/28/64; memorandum from FBI Headquarters to Cleveland Field Office, 11/6/64.

206 Memorandum from FBI Headquarters to Cleveland Field Office, 11/6/64.

207 Memorandum from Detroit Field Office to FBI Headquarters, 10/18/66, p. 2.

208 Memorandum from Detroit Field Office to FBI Headquarters, 1/19/67.

The lawyer was targeted, along with his law firm, because the firm "has a long history of providing services for individual communists and communist organizations," and because he belonged to the National Lawyers Guild.

209 Memorandum from FBI Headquarters to Detroit Field Office, 1/16/67.

210 Memorandum from FBI Headquarters to Detroit Field Office, 1/10/67.

211 Memorandum from FBI Headquarters to Detroit Field Office, 11/3/66.

212 Memorandum from F. J. Baumgardner to William C. Sullivan, 10/4/66; memorandum from FBI Headquarters to New York Field Office, 10/5/66.

A similar proposal attempted "to cause dissension between Negro numbers operators and the Italian hoodlum element" in Detroit. The Bureau had information that black "numbers men" were contributing money to the local "black power movement." An anonymous letter containing a black hand and the words "watch out" was sent a minister who was "the best known black militant in Detroit." The letter was intended to achieve two objectives. First, the minister was expected to assume that "the Italian hoodlum element was responsible for this letter, report this to the Negro numbers operators, and thereby cause them to further resent the Italian hoodlum element." Second, it is also possible that [the minister] may become extremely frightened upon receipt of this letter and sever his contact with the Negro numbers men in Detroit and might even restrict his black nationalist activity or leave Detroit. (Memorandum from the Detroit Field Office to FBI Headquarters, 6/14/68; Memorandum from FBI Headquarters to Detroit Field Office, 6/28/68.)

213 Letters were also sent to parents informing them that their children were in communes, or with a roommate of the opposite sex; information on an actress' pregnancy by a Black Panther was sent to a gossip columnist; and information about a partner's affair with another partner's wife was sent to the members of a law firm as well as the injured spouses.

Personal life information was not the only kind of derogatory information disseminated; information on the "subversive background" of a target (or family member) was also used, as were arrest records.

214 Memorandum from Richmond Field Office to FBI Headquarters, 8/26/66.

215 Memorandum from St. Louis Field Office to FBI Headquarters, 1/30/70.

216 Memorandum from St. Louis Field Office to FBI Headquarters, 1/30/70. Note that there is no allegation that ACTION was engaged in violence. When the target was interviewed by the staff, she was asked whether ACTION ever took part in violent activities. She replied that someone once spat in a communion cup during a church sit-in and that members sometimes used four letter words, which was considered violent in her city. The staff member then asked about more conventionally violent acts, such as throwing bricks or burning buildings. Her response was a shocked, "Oh, no! I'm a pacifist -- I wouldn't be involved in an organization like that." (Staff interview of a COINTELPRO target.)

230 Memorandum from FBI Headquarters to Cincinnati Field Office, 3/28/69.

231 Memorandum from FBI Headquarters to all SAC's, 10/9/68.

232 Moore, 11/3/75, p. 47.

233 Federal agencies were also used. For instance, a foreign-born professor active in the New Left was deported by the Immigration and Naturalization Service at the Bureau's instigation. (Memorandum from FBI Headquarters to San Diego Field Office, 9/6/68.) The Bureau's use of the IRS in COINTELPRO is included in a separate report. Among other actions, the Bureau obtained an activist professor's tax returns and then used a source in a regional IRS office to arrange an audit. The audit was intended to be timed to interfere with the professor's meetings to plan protest demonstrations in the 1968 Democratic convention.

234 The fund raiser was targeted because of two of the candidates who would be present. One, a state assemblyman running for reelection, was active in the Vietnam Day Committee; the other, the Democratic candidate for Congress, had been a sponsor of the National Committee to Abolish the House Committee on Un-American Activities and had led demonstrations opposing the manufacture of napalm bombs. (Memorandum from FBI Headquarters to San Francisco Field Office, 10/21/66.)

244 Memorandum from Detroit Field Office to FBI Headquarters, 10/24/66; memorandum from FBI Headquarters to Detroit Field Office, 11/3/66.

245 According to the documents, "operating under the direction of New York headquarters," a document was placed in the record by the Committee which according to the "presiding officer," indicated that the CP planned to hold its national

convention in Philadelphia. The field office added, "This office is not aware of any such plan of the CP." Memorandum from, Philadelphia Field Office to FBI Headquarters, 11/3/59; memorandum from FBI Headquarters to Philadelphia Field Office, 11/12/59.

246 Note that the "Communist" label was loosely applied, and might mean only that an informant reported that a target had attended meetings of a "front" group some years earlier. As noted earlier, none of the "COINTELPRO" labels were precise.

247 Memorandum from FBI Headquarters to Phoenix Field Office, 6/11/68.

248 Memorandum from William C. Sullivan, 2/4/64; memorandum from FBI Headquarters to New York Field Office, 2/12/64.

249 The target was not intended to be the United Farm Workers, but a local college professor expected to participate in the picket line. The Bureau had unsuccessfully directed "considerable efforts to prevent hiring" the professor. Apparently, the Bureau did not consider the impact of this technique on the United Farm Workers' efforts. Memorandum from San Francisco Field Office to FBI Headquarters 9/12/68; Memorandum from FBI Headquarters to San Francisco Field Office, 9/13/68.

250 Memorandum from San Francisco Field Office to FBI Headquarters, 4/16/64.

251 Memorandum from San Francisco Field Office to FBI Headquarters, 3/10/67; memorandum from FBI Headquarters to San Francisco Field Office, 3/14/67.

252 The CPUSA, SWP, and New Left programs were handled in the Internal Security Section; the White Hate program was first handled in a short-lived three-man "COINTELPRO unit" which, during the three years of its existence, supervised the CP and SWP programs as well, and then was transferred to the Extremists Section; the Black Nationalist program was supervised by the Racial Intelligence Section. The Section Chief would then route the proposal to the COINTELPRO supervisor for each program. Occasionally the Section Chief made a recommendation as to the proposal; more often the supervisor made the initial decision to approve or deny.

253 No control file was maintained of these directives. Since these directives were sent out under the investigative caption, the first time the COINTELPRO caption would be used was on the field proposal which responded to the directives.

254 (Unit chief, 10/16/75, p. 167.) There is no central file of such awards, so the number is retrievable only by searching each agent's personnel file.

255 According to Moore, even the "snitch jacket" -- labeling a group member as an informant when he is not -- is not solely a counterintelligence technique, but may be used, in an ordinary investigation, to protect a real informant, "Maybe . . . you had an informant whose life was at stake because somebody suspected him and the degree of response . . . might be the degree that you would have to use in order to sow enough suspicion on other people to take it away from your informant." (Moore, 11/3/75, p. 70)

256 See Dr. Martin Luther King Report.

256a Black Nationalist deposition, 10/17/75, p. 15.

257 As Moore put it, "This was a program, and whenever the Bureau had a program, you had to produce results because it was scrutinized by the inspectors, not only during your own inspection on a yearly basis, but also scrutinized in the field during field inspections." (Moore, 11/3/75, p. 43.) The New Left supervisor, who received copies of the inspection reports, stated that "it would be an innocuous type report in every instance I can recall." (New Left supervisor, 10/28/75, p. 72)

For example, one Domestic Intelligence Division inspection report on the "White Hate" programs noted under "Accomplishments" that the decline in Klan organizations is attributable to "hard-hitting investigations, counterintelligence programs directed at them, and penetration . . . by our racial informants." The report then lists several specific actions, including the defeat of a candidate with Klan affiliations; the removal from office of a high Klan official; and the issuance of a derogatory press release. (Inspection, Domestic Intelligence Division, 1/8-26/71, pp. 15, 17-19.)

258 Mark Felt testimony, 2/3/76, pp. 56,65.

259 For security reasons, no instructions were printed in the Manual. In service training for intelligence agents did contain an hour on COINTELPRO, so it may be assumed that most agents knew something about the programs.

For instances in which Attorneys General, the Cabinet, and the House Subcommittee on Appropriations were allegedly informed of the existence of the CPUSA and Klan COINTELPROs. [sic]

260 Memorandum from FBI Headquarters to all SAC's, 8/25/67.

261 One example of the lengths to which the Bureau went in maintaining secrecy may be instructive. The Bureau sent a letter to Klan members purporting to be from the "National Intelligence Committee" -- a super-secret Klan disciplinary body. The letter fired the North Carolina Grand Dragon and suspended the Imperial Wizard, Robert Shelton. Shelton complained to both

the local postal inspector and the FBI resident agency (which solemnly assured him that his complaint was not within the Bureau's jurisdiction). The Bureau had intended to mail a second "NIC" letter, but the plans were held in abeyance until it could be learned whether the postal inspector intended to act on Shelton's complaint. The Bureau, therefore, contacted the local postal inspector, using their investigation of Shelton's complaint as a pretext, to see what the inspector intended to do. The field office reported that the local inspector had forwarded the complaint to regional headquarters, which in turn referred it to a Chief Postal Inspector in Washington, D.C. The Bureau's liaison agent was then sent to that office to determine what action the postal authorities planned to take. He returned with the information that the Post Office had referred the matter to the Fraud Section of the Department of Justice's Criminal Division, under a cover letter stating that since Shelton's allegations "appear to involve an internal struggle" for Klan control, and "since the evidence of mail fraud was somewhat tenuous in nature," the Post Office did not contemplate any investigation. Neither, apparently, did the Department. The Bureau did not inform either the Postal Inspector or the Criminal Division that it had authored the letter under review. Instead, when it appeared the FBI's role would not be discovered, the Bureau prepared to send out the second letter -- a plan which was discontinued when the Klan "notional" was proposed.

274 Memorandum from Director, FBI to the Attorney General, 12/19/67, p. 8.

275 The paragraph under the subheading "Tennessee" includes the statement that, through a highly placed Bureau informant, "we were able to control the expansion of the Klan." The paragraphs under the subheading "Virginia" states that, after the United Klans of America began an intensive organizational effort in the state, "We immediately began an all-out effort to penetrate the Virginia Klan, contain its growth, and deter violence." The specific examples given, however, are not COINTELPRO actions, but liaison with state and local authorities, prosecution, cooperation with the Governor, and warning a civil rights worker of a plot against his life. The paragraph under the subheading "Illinois" contains nothing relating to COINTELPRO activities, but refers to cooperation with state authorities in the prosecution of a Klan official for a series of bombings. (Memorandum from Director, FBI, to the Attorney General, 12/19/67, pp. 8 10.)

301 Although portions of the Committee's report were made public in April 1974, Petersen has testified that the purpose of the report was simply to inform the Attorney General. The inquiry was not intended to be conclusive and certainly was not an adversary proceeding. "We were doing a survey rather than conducting an investigation." (Henry Petersen testimony, 12/11/75, Hearing, Vol. 6, p. 271.)

308 Petersen Committee Report, p. 22.

309 For instance, the 20-years-past "Communist" activities of a target professor's wife were found in "public source material," as were the arrest records of a prominent civil rights leader. Both were leaked to "friendly" media on condition that the Bureau's interest not be revealed.

310 See, e.g., the attempt to get an agent on the Alcohol Beverage Control Board to raid a Democratic Party fundraiser.

311 The Civil Rights Division refused to endorse this conclusion, although it was under heavy pressure from top Department executives to do so. Assistant Attorney General J. Stanley Pottinger was first informed of the Petersen committee report a week before its public release; and no official of the Civil Rights Division had previously examined any of the COINTELPRO materials or summaries. After the report's release, the Civil Rights Division was permitted a short time to review some of the materials. (Staff summary of interview with Assistant Attorney General Pottinger, 4/21/76.)

Under these restrictions the Civil Rights Division was not able to review "everything in the voluminous files," but rather conducted only a "general survey of the program unrelated to specific allegations of criminal violations." Assistant Attorney General Pottinger advised Attorney General Saxbe, upon the completion of this brief examination of COINTELPRO, that the Division found "no basis for making criminal charges against particular individuals or involving particular incidents." Although some of the acts reviewed appeared "to amount to technical violations," the Division concluded that "without more" information, prosecutive action would not be justified under its "normal criteria." However, Pottinger stressed that a "different prosecution judgment would be indicated if specific acts more fully known and developed, could be evaluated in a complete factual context." (Memorandum from J. Stanley Pottinger, Assistant Attorney General, to Attorney General Saxbe, 12/13/74.)

313 Petersen Committee Report, Subcommittee on Civil and Constitutional Rights hearings, 11/20/74, p. 28.

314 Attorney General Levi has proposed a series of guidelines on domestic intelligence. A set of "preventive action" guidelines was prepared which would have authorized the Bureau to take "nonviolent emergency measures" to "obstruct or prevent" the use of force or violence upon the Attorney Generals' authorization. These guidelines have now been abandoned because the Attorney General determined that it was not possible to frame general language which would permit proper (and indeed ordinary) law enforcement measures such as increased guards around building or traffic control during a demonstration while preventing COINTELPRO type activity.

315 Department of Justice release, 4/1/76.

316 The notification guidelines read as follows:

1. The review of the COINTELPRO files should be conducted by the existing Shaheen committee.
2. An individual should be notified in those instances where an action directed against him was improper and, in addition, there is reason to believe he may have been caused actual harm. In making this determination in doubtful cases, the committee should resolve the question in favor of notification.
3. Excluded from notification should be those individuals who are known to be aware that they were the subjects of COINTELPRO activities.
4. An advisory group will be created to pass upon those instances where the committee is uncertain as to whether notification should be given, and otherwise to advise the committee as requested.
5. The manner of notification should be determined in each case to protect rights to privacy,
6. Notification should be given as the work of the committee proceeds, without waiting for the entire review to be completed.
7. In the event that the committee determines in the process of review that conduct suggests disciplinary action or referral of a matter to the Criminal or civil rights Divisions, the appropriate referral should be made.
8. No departure from these instructions will be made without the express approval of the Attorney General. The committee may request such departure only through and with the recommendation of the advisory group. (Letter from Department (if Justice to the Select Committee, 4/23/76.)

**DR. MARTIN LUTHER KING, JR., CASE STUDY**

**I. INTRODUCTION**

From December 1963 until his death in 1968, Martin Luther King, Jr. was the target of an intensive campaign by the Federal Bureau of Investigation to "neutralize" him as an effective civil rights leader. In the words of the man in charge of the FBI's "war" against Dr. King:

No holds were barred. We have used [similar] techniques against Soviet agents. [The same methods were] brought home against any organization against which we were targeted. We did not differentiate. This is a rough, tough business. 1

The FBI collected information about Dr. King's plans and activities through an extensive surveillance program, employing nearly every intelligence-gathering technique at the Bureau's disposal. Wiretaps, which were initially approved by Attorney General Robert F. Kennedy, were maintained on Dr. King's home telephone from October 1963 until mid-1965; the SCLC headquarter's telephones were covered by wiretaps for an even longer period. Phones in the homes and offices of some of Dr. King's close advisers were also wiretapped. The FBI has acknowledged 16 occasions on which microphones were hidden in Dr. King's hotel and motel rooms in an "attempt" to obtain information about the "private activities of King and his advisers" for use to "completely discredit" them. 2

FBI informants in the civil rights movement and reports from field offices kept the Bureau's headquarters informed of developments in the civil rights field. The FBI's presence was so intrusive that one major figure in the civil rights movement testified that his colleagues referred to themselves as members of "the FBI's golden record club." 3

The FBI's formal program to discredit Dr. King with Government officials began with the distribution of a "monograph" which the FBI realized could "be regarded as a personal attack on Martin Luther King," 4 and which was subsequently described by a Justice Department official as "a personal diatribe ... a personal attack without evidentiary support." 5

Congressional leaders were warned "off the record" about alleged dangers posed by Reverend King. The FBI responded to Dr. King's receipt of the Nobel Peace Prize by attempting to undermine his reception by foreign heads of state and American ambassadors in the countries that he planned to visit. When Dr. King returned to the United States, steps were taken to reduce support for a huge banquet and a special "day" that were being planned in his honor.

The FBI's program to destroy Dr. King as the leader of the civil rights movement entailed attempts to discredit him with churches, universities, and the press. Steps were taken to attempt to convince the National Council of Churches, the Baptist World Alliance, and leading Protestant ministers to halt financial support of the Southern Christian Leadership Conference (SCLC), and to persuade them that "Negro leaders should completely isolate King and remove him from the role he is now occupying in civil rights activities." 6 When the FBI learned that Dr. King intended to visit the Pope, an agent was dispatched to persuade Francis Cardinal Spellman to warn the Pope about "the likely embarrassment that may result to the Pope should he grant King an audience." 7 The FBI sought to influence universities to withhold honorary degrees from Dr. King. Attempts were made to prevent the publication of articles favorable to Dr. King and to find "friendly" news sources that would print unfavorable articles. The FBI offered to play for reporters tape recordings allegedly made from microphone surveillance of Dr. King's hotel rooms.

The FBI mailed Dr. King a tape recording made from its microphone coverage. According to the Chief of the FBI's Domestic Intelligence Division, the tape was intended to precipitate a separation between Dr. King and his wife in the belief that the separation would reduce Dr. King's stature. 7a The tape recording was accompanied by a note which Dr. King and his advisers interpreted as a threat to release the tape recording unless Dr. King committed suicide. The FBI also made preparations to promote someone "to assume the role of leadership of the Negro people when King has been completely discredited." 8

The campaign against Dr. King included attempts to destroy the Southern Christian Leadership Conference by cutting off its sources of funds. The FBI considered, and on some occasions executed, plans to cut off the support of some of the SCLC's major contributors, including religious organizations, a labor union, and donors of grants such as the Ford Foundation. One FBI field office recommended that the FBI send letters to the SCLC's donors over Dr. King's forged signature warning them that the SCLC was under investigation by the Internal Revenue Service. The IRS files on Dr. King and the SCLC were carefully scrutinized for financial irregularities. For over a year, the FBI unsuccessfully attempted to establish that Dr. King had a secret foreign bank account in which he was sequestering funds.

The FBI campaign to discredit and destroy Dr. King was marked by extreme personal vindictiveness. As early as 1962, Director Hoover penned on an FBI memorandum, "King is no good." 9 At the August 1963 March on Washington, Dr. King told the country of his dream that "all of God's children, black men and white men, Jews and Gentiles, Protestants and Catholics, will be able to join hands and sing in the words of the old Negro spiritual, 'Free at last, free at last. Thank God almighty, I'm free at last.'" 10 The FBI's Domestic Intelligence Division described this "demagogic speech" as yet more evidence that Dr. King was "the most dangerous and effective Negro leader in the country." 11 Shortly afterward, Time magazine chose Dr. King as the "Man of the Year," an honor which elicited Director Hoover's comment that "they had to dig deep in the garbage to come up with this one." 12 Hoover wrote "astounding" across the memorandum informing him that Dr. King had been granted an audience with the Pope despite the FBI's efforts to prevent such a meeting. The depth of Director Hoover's bitterness toward Dr. King, a bitterness which he had effectively communicated to his subordinates in the FBI, was apparent from the FBI's attempts to sully Dr. King's reputation long after his death. Plans were made to "brief" congressional leaders in 1969 to prevent the passage of a "Martin Luther King Day." In 1970, Director Hoover told reporters that Dr. King was the "last one in the world who should ever have received" the Nobel Peace Prize. 13

The extent to which Government officials outside of the FBI must bear responsibility for the FBI's campaign to discredit Dr. King is not clear. Government officials outside of the FBI were not aware of most of the specific FBI actions to discredit Dr. King. Officials in the Justice Department and White House were aware, however, that the FBI was conducting an intelligence investigation, not a criminal investigation, of Dr. King; that the FBI had written authorization from the Attorney General to wiretap Dr. King and the SCLC offices in New York and Washington; and that the FBI reports on Dr. King contained considerable information of a political and personal nature which was "irrelevant and spurious" to the stated reasons for the investigation. 14 Those high executive branch officials were also aware that the FBI was disseminating vicious characterizations of Dr. King within the Government; that the FBI had tape recordings embarrassing to Dr. King which it had offered to play to a White House official and to reporters; and that the FBI had offered to "leak" to reporters highly damaging accusations that some of Dr. King's advisers were communists. Although some of those officials did ask top FBI officials about these charges, they did not inquire further after receiving false denials. In light of what those officials did know about the FBI's conduct toward Dr. King, they were remiss in failing to take appropriate steps to curb the Bureau's behavior. To the extent that their neglect permitted the Bureau's activities to go on unchecked, those officials must share responsibility for what occurred. The FBI now agrees that its efforts to discredit Dr. King were unjustified. The present Deputy Associate Director (Investigation) testified:

Mr. Adams. There were approximately twenty-five incidents of actions taken [to discredit Dr. King] ... I see no statutory basis or no basis of justification for the activity.

The CHAIRMAN. Was Dr. King, in his advocacy of equal rights for black citizens, advocating a course of action that in the opinion of the FBI constituted a crime?

Mr. ADAMS. No, sir.

The CHAIRMAN. He was preaching non-violence was he not, as a method of achieving equal rights for black citizens?

Mr. ADAMS. That's right ... Now as far as the activities which you are asking about, the discrediting, I know of no basis for that and I will not attempt to justify it. 15

The FBI conducted its investigation of Dr. King and the SCLC under an FBI manual provision -- called COMINFIL -- permitting the investigation of legitimate noncommunist organizations, suspected by the FBI of having been infiltrated by communists, to determine the extent, if any, of communist influence. The FBI's investigation was based on its concern that Dr. King was being influenced by two persons -- hereinafter referred to as Adviser A and Adviser B -- that the Bureau believed were members of the Communist Party.

Officials in the Justice Department relied on the FBI's representations that both of these advisers were communists, that they were in a position to influence Dr. King, and that Adviser A in fact exercised some influence in preparing Dr. King's speeches and publications. Burke Marshall, Assistant Attorney General for Civil Rights from 1961-1965, testified that he "never had any reason to doubt [the FBI's] allegations concerning [Adviser A]." He recalled that the charges about Adviser A were "grave and serious," and said that he believed Attorney General Kennedy had permitted the investigation to proceed because:

Stopping the investigation in light of those circumstances would have run the risk that there would have been a lot of complaints that the Bureau had been blocked for political reasons from investigating serious charges about communist infiltration in the civil rights movement. 17

Edwin Guthman, Press Secretary for the Justice Department from 1961 through 1964, testified that Attorney General Robert Kennedy "viewed this as a serious matter," that he did not recall "that any of us doubted that the FBI knew what it was talking about," and that although the question of whether Adviser A was influencing Dr. King was never fully answered "we accepted pretty much what the FBI reported as being accurate." 18

We have been unable to reach a conclusion concerning the accuracy of the FBI's charges that the two Advisers were members of the Communist Party, USA or under the control of the Party during the FBI's COMINFIL investigation. However, FBI files do contain information that Adviser A and Adviser B had been members of the Communist Party at some point prior to the opening of the COMINFIL investigation in October 1962. FBI documents provided to the Committee to support the Bureau's claim that both men were members of the Communist Party at the time the COMINFIL investigation was opened are inconclusive. Moreover, the FBI has stated that it cannot provide the Committee with the full factual basis for its charges on the grounds that to do so would compromise informants of continuing use to the Bureau.

Without access to the factual evidence, we are unable to conclude whether either of those two Advisers was connected with the Communist Party when the "case" was opened in 1962, or at any time thereafter. We have seen no evidence establishing that either of those Advisers attempted to exploit the civil rights movement to carry out the plans of the Communist Party.

In any event, the FBI has stated that at no time did it have any evidence that Dr. King himself was a communist or connected with the Communist Party. Dr. King repeatedly criticized Marxist philosophies in his writing and speeches. The present Deputy Associate Director of the FBI's Domestic Intelligence Division, when asked by the Committee if the FBI ever concluded that Dr. King was a communist, testified, "No, sir, we did not." 20

The FBI's COMINFIL investigation appears to have centered almost entirely on discussions among Dr. King and his advisers about proposed civil rights activities rather than on whether those advisers were in fact agents of the Communist Party. Although the FBI conducted disruptive programs -- COINTELPROs -- against alleged communists whom it believed were attempting to influence civil rights organizations, the Bureau did not undertake to discredit the individual whom it considered Dr. King's most "dangerous" adviser until more than four years after opening the COMINFIL investigation. 21 Moreover, when a field office reported to FBI headquarters in 1964 that the Adviser was not then under the influence and control of the Communist Party, the FBI did not curtail either its investigations or discrediting program against Dr. King, and we have no indication that the Bureau informed the Justice Department of this finding. 22 Rather than trying to discredit the alleged communists it believed were attempting to influence Dr. King, the Bureau adopted the curious tactic of trying to discredit the supposed target of Communist Party interest -- Dr. King himself.

Allegations of communist influence on Dr. King's organization must not divert attention from the fact that, as the FBI now states, its activities were unjustified and improper. In light of the Bureau's remarks about Dr. King, its reactions to his criticisms, the viciousness of its campaign to destroy him, and its failure to take comparable measures against the Advisers that it believed were communists, it is highly questionable whether the FBI's stated motivation was valid. It was certainly not justification for continuing the investigation of Dr. King for over six years, or for carrying out the attempts to destroy him.

Our investigation indicates that FBI officials believed that some of Dr. King's personal conduct was improper. Part of the FBI's efforts to undermine Dr. King's reputation involved attempts to persuade Government officials that Dr. King's personal behavior would be an embarrassment to them. The Committee did not investigate Dr. King's personal life, since such a subject has no proper place in our investigation. Moreover, in order to preclude any further dissemination of information obtained during the electronic surveillances of Dr. King, the Committee requested the FBI to excise from all documents submitted to the Committee any information which was so obtained. We raise the issue of Dr. King's private life here only because it may have played a part in forming the attitudes of certain FBI and administration officials toward Dr. King.

Many documents which we examined contained allegations about the political affiliations and morality of numerous individuals. We have attempted to be sensitive to the privacy interests of those individuals, and have taken care not to advance the effort to discredit them. We have excised many of the Bureau's characterizations from the documents quoted in this report. In some cases, however, in order fully to explain the story, it was judged necessary to quote extensively from Bureau reports, even though they contain unsupported allegations. We caution the reader not to accept these allegations on their face, but rather to read them as part of a shameful chapter in the nation's history.

The reader is also reminded that we did not conduct an investigation into the assassination of Dr. King. In the course of investigating the FBI's attempts to discredit Dr. King, we came across no indication that the FBI was in any way involved in the assassination.

## **II. THE COMINFIL INVESTIGATION**

In October 1962 the FBI opened its investigation of the Southern Christian Leadership Conference and of its president, Dr. Martin Luther King, Jr. The investigation was conducted under an FBI manual provision captioned "COMINFIL" -- an acronym for communist infiltration -- which authorized investigations of legitimate noncommunist organizations which the

FBI believed to be influenced by communist party members in order to determine the extent of the alleged communist influence. 23 These wide-ranging investigations were conducted with the knowledge of the Attorney General and were predicated on vague executive directives and broad statutes. 24

The FBI kept close watch on Dr. King and the SCLC long before opening its formal investigation. FBI Director J. Edgar Hoover reacted to the formation of the SCLC in 1957 by reminding agents in the field of the need for vigilance:

In the absence of any indication that the Communist Party has attempted, or is attempting, to infiltrate this organization you should conduct no investigation in this matter. However, in view of the stated purpose of the organization, you should remain alert for public source information concerning it in connection with the racial situation. 25

In May 1962 the FBI had included Dr. King on "Section A of the Reserve Index" as a person to be rounded up and detained in the event of a "national emergency." 26 During this same period the FBI ordered its field offices to review their files for "subversive" information about Dr. King and to submit that information to FBI headquarters in reports "suitable for dissemination." 27

The Bureau had apparently also been engaged in an extensive surveillance, of Dr. King's civil rights activities since the late 1950s under an FBI program called "Racial Matters." This program, which was unrelated to COMINFIL, required the collection of "all pertinent information" about the "proposed or actual activities" of individuals and organizations "in the racial field." 28 Surveillance of Dr. King's civil rights activities continued under the Racial Matters program after the COMINFIL case was opened. Indeed, the October 1962 memorandum which authorized the COMINFIL case specifically provided that "any information developed concerning the integration or racial activities of the SCLC must [also] be reported [under a] Racial Matters caption." 29

The first FBI allegations that the Communist Party was attempting to infiltrate the SCLC appeared in a report from the FBI to Attorney General Robert F. Kennedy, dated January 8, 1962. 30 The report stated that one of Dr. King's advisers -- hereinafter referred to as "Adviser A" -- was a "member of the Communist Party, USA." 31 Within a few months FBI reports were describing another of Dr. King's associates -- hereinafter referred to as "Adviser B" -- as a "member of the National Committee of the Communist Party." 32 The allegations concerning these two individuals formed the basis for opening the COMINFIL investigation in October 1962.

It is unclear why the FBI waited nine months to open the COMINFIL investigation. 33 The Bureau might have been hoping to acquire new information from microphone and wiretap surveillance of Adviser A's office, which was initiated in March 1962. 34 However, it does not appear that these surveillances collected any additional information bearing on the FBI's characterization of Adviser A as a "communist."

Despite the goals and procedures outlined in the COMINFIL section of the FBI Manual, the Bureau's investigation of Dr. King did not focus on whether any of his advisers were acting under Communist Party discipline and control or were working to enable the Communist Party to influence or control the SCLC. The microphone which had been installed in Adviser A's office in March 1962 was discontinued before the COMINFIL investigation began, 36 and, although wiretap coverage of Adviser A continued -- and even intensified 37 -- the information obtained appears to have related solely to his advice to Dr. King concerning the civil rights movement and not at all to the alleged Communist Party origins of that advice. 38 Two FBI reports prepared in succeeding years which summarize the FBI's information about Adviser A do not contain evidence substantiating his purported relationship with the Communist Party. 39

Without full access to the Bureau's files, the Committee cannot determine whether the FBI's decision to initiate a COMINFIL investigation was motivated solely by sincere concerns about alleged communist infiltration, or whether it was in part influenced by Director Hoover's animosity toward Dr. King. The FBI Director's sensitivity to criticism and his attitude toward Dr. King are documented in several events which occurred during the period when the FBI was considering initiating the COMINFIL investigation.

As early as February 1962, Director Hoover wrote on a memorandum that Dr. King was "no good." 40

In January 1962 an organization called the Southern Regional Council issued a report criticizing the Bureau's inaction during civil rights demonstrations in Albany, Georgia.<sup>41</sup> An updated version of that report was released in November 1962. A section entitled "Where was the Federal Government" made the following observations about the FBI:

-- There is a considerable amount of distrust among Albany Negroes for local members of the Federal Bureau of Investigation.

-- With all the clear violations by local police of constitutional rights, with undisputed evidence of beatings by sheriffs and deputy sheriffs, the FBI has not made a single arrest on behalf of Negro citizens.

-- The FBI has [taken] dozens of affidavits from Negro citizens complaining that their constitutional rights had been violated by city and county officials. But eight months later, there was no sign of action on these charges.

-- The FBI is most effective in solving ordinary crimes, and perhaps it should stick to that. 42

Newspaper coverage of the report's allegations were forwarded to Bureau headquarters by the Atlantic office. Although Bureau rules required prompt investigation of allegations such as those in the Southern Regional Council's Report, no investigation was undertaken. 43 Before even receiving the full report, Bureau officials were describing it as "slanted and biased," and were searching their files for information about the report's author. 44

Shortly after the Report was issued, newspapers quoted Dr. King as saying that he agreed with the Report's conclusions that the FBI had not vigorously investigated civil rights violations in Albany. Dr. King reportedly stated:

One of the great problems we face with the FBI in the South is that the agents are white Southerners who have been influenced by the mores of the community. To maintain their status, they have to be friendly with the local police and people who are promoting segregation.

Every time I saw FBI men in Albany, they were with the local police force. 45

FBI headquarters was immediately notified of Dr. King's remarks. 46 After noting that Dr. King's comments "would appear to dovetail with information . . . indicating that King's advisors are Communist Party (CP) members and he is under the domination of the CP," 47 Bureau officials decided to contact Dr. King in an effort to "set him straight." 48

The FBI's effort to contact Dr. King consisted of a telephone call to the SCLC office in Atlanta by Cartha D. DeLoach, head of the FBI's Crime Records Division, and one by the Atlanta Special Agent in Charge. Both calls were answered by secretaries who promised to ask Dr. King to return the calls. When Dr. King did not respond, DeLoach observed:

It would appear obvious that Rev. King does not desire to be told the true facts. He obviously used deceit, lies, and treachery as propaganda to further his own causes . . . I see no further need to contacting Rev. King as he obviously does not desire to be given the truth. The fact that he is a vicious liar is amply demonstrated in the fact he constantly associates with and takes instructions from [a] . . . member of the Communist Party. 49

Two years later—in late 1964 -- the Director was refusing to meet with Dr. King because "I gave him that opportunity once and he ignored it." 50

William Sullivan, who was head of the Domestic Intelligence Division during the investigation of Dr. King, testified:

[Director Hoover] was very upset about the criticism that King made publicly about our failure to protect the Negro in the South against violations of the Negro civil liberties, and King on a number of occasions soundly criticized the Director. . . . Mr. Hoover was very distraught over these criticisms and so that would figure in it. . . . I think behind it all was the racial bias, the dislike of Negroes, the dislike of the civil rights movement. . . . I do not think he could rise above that. 51

The FBI sent frequent reports about Dr. King's plans and activities to officials in both the Justice Department and the White House from the initiation of the COMINFIL investigation until Dr. King's death in 1968. Despite the fact that the investigation of Dr. King failed to produce evidence that Dr. King was a communist, or that he was being influenced to act in a way inimical to American interests, no responsible Government official ever asked the FBI to terminate the investigation. Their inaction appears to have stemmed from a belief that it was safer to permit the FBI to conduct the investigation than to stop the Bureau and run the risk of charges that the FBI was being muzzled for political reasons.

Burke Marshall testified that the "charges" made by the Bureau against Adviser A "were grave and serious." The Kennedy Administration had been outspoken in its support of Dr. King, and ordering the FBI to terminate its investigation would, in Marshall's opinion, "have run the risk" that there would have been a lot of complaints that the Bureau had been blocked for political reasons from investigating serious charges about communist infiltration in the civil rights movement. 52

Edwin O. Guthman, Press Chief for the Justice Department under Attorney General Kennedy, testified that Robert Kennedy viewed the charges about Adviser A:

as a serious matter and not in the interest of the country and not in the interest of the civil rights movement. . . . The question of whether he was influencing King and his contacts with King, that was a matter which was not fully decided, but in those days we accepted pretty much what the FBI reported as being accurate. 53

Guthman testified that he was told by Kennedy in 1968 that Kennedy had approved wiretap coverage of Dr. King's home and of two SCLC offices in October 1963 because "he felt that if he did not do it, Mr. Hoover would move to impede or block the passage of the Civil Rights Bill . . . and that he felt that he might as well settle the matter as to whether [Adviser A] did have the influence on King that the FBI contended. . . ." 54 Attorney General Kennedy's reasons for approving the wiretaps are discussed at length in a subsequent chapter. 55 Of relevance here is the support which Guthman's observations lend to Marshall's recollection that Attorney General Kennedy permitted the COMINFIL investigation to continue from concern about the truth of the FBI's charges and about the political consequences of terminating the investigation.

The Johnson Administration's willingness to permit the FBI to continue its investigation of Dr. King also appears to have involved political considerations. Bill Moyers, President Johnson's assistant, testified that sometime around the spring of 1965 President Johnson "seemed satisfied that these allegations about Martin Luther King were not founded." Yet President Johnson did not order the investigation terminated. When asked the reason, Moyers explained that President Johnson:

was very concerned that his embracing the civil rights movement and Martin Luther King personally would not backfire politically. He didn't want to have a southern racist Senator produce something that would be politically embarrassing to the President and to the civil rights movement. We had lots of conversations about that.... Johnson, as everybody knows, bordered on paranoia about his enemies or about being trapped by other people's activities over which he had no responsibility. 56

Intelligence reports submitted by the Bureau to the White House and the Justice Department contained considerable intelligence of potential political value to the Kennedy and Johnson Administrations. The Attorneys General were informed of meetings between Dr. King and his advisers, including the details of advice that Dr. King received, the strategies of the civil rights movement, and the attitude, of civil rights leaders toward the Administrations and their policies. 57 The implications of this inside knowledge were graphically described by one of Dr. King's legal advisers, Harry Wachtel:

The easiest example I can give is that that if I'm an attorney representing one side, negotiating and trying to achieve something, and if the Attorney on the other side had information about what my client was thinking and what we were talking about, it would become a devastatingly important impediment to our negotiation, our freedom of action. 58

Burke Marshall, however, described the Bureau's reports about Dr. King and the SCLC as "of no use: it was stupid information." He elaborated:

I was in touch with Martin King all the time about all kinds of information that went way beyond what was reported by the Bureau about what he was going to do, where he was going to be, the wisdom of what he was going to do, who he was going to do it with, what the political situation was. The Southern Christian Leadership Conference and Dr. King were in some sense close associates of mine. [Information of the type included in FBI reports] was all information that I would have had any way. 59

### **III. CONCERN INCREASES IN THE FBI AND THE KENNEDY ADMINISTRATION OVER ALLEGATIONS OF COMMUNIST INFLUENCE IN THE CIVIL RIGHTS MOVEMENT, AND THE FBI INTENSIFIES THE INVESTIGATION: JANUARY 1962-OCTOBER 1963**

#### *Introduction and Summary*

This chapter explores developments in the Martin Luther King case from the period preceding the FBI's opening of the COMINFIL investigation in October 1962 through the FBI's decision to intensify its investigation of suspected communist influence in the civil rights movement in October 1963. Particular emphasis is placed on the internal reasons for the FBI's intensification of its investigation of Dr. King and on the interplay between the Justice Department and the FBI during this period.

In summary, the evidence described in this chapter establishes that the FBI barraged the Justice Department with a stream of memoranda concerning the Communist Party's interest in the civil rights movement and Dr. King's association with two individuals, referred to in this report as Advisers A and B, who were alleged to have strong ties to the Party. 60 In response to the Bureau's warnings, the Justice Department endeavored to convince Dr. King to sever his relations with those individuals, but met with only mixed success. Dr. King continued to turn to Adviser A for advice; Adviser B, whose association with Dr. King and allegedly with the Communist Party had been picked up by the press in late 1962, publicly announced his resignation from the SCLC in early July 1963, although he apparently continued to associate with Dr. King on an informal basis.

During hearings over the administration's proposed public accommodations bill in July 1963, critics of the bill charged that the civil rights movement, and Dr. King in particular, were influenced by Communists. Dr. King's plans for a civil rights march on Washington in August were receiving increasing publicity. On July 16, the Attorney General raised with the FBI's Justice Department liaison, Courtney Evans, the possibility of a wiretap on Dr. King and one of his legal advisers.

The following day the FBI sent an analysis of its COMINFIL information to the Justice Department. The administration decided to continue its public support of Dr. King. During the ensuing week, the President informed the press that there was no evidence that civil rights demonstrations were Communist-inspired; the Attorney General announced that the FBI had no evidence that any civil rights leaders were controlled by Communists; and the Attorney General rejected the FBI's request for authority to wiretap Dr. King.

In August 1963, the Justice Department received a report from the FBI which apparently contained allegations extremely unfavorable to Dr. King. The Attorney General told Courtney Evans that he faced impeachment if the report was "leaked," and demanded that it be resubmitted with a cover memorandum detailing the factual basis for the allegation. The memorandum submitted in response to that request contained no information concerning Dr. King that had not already been known to the Attorney General in July, but the Attorney General permitted the investigation to proceed.

In late July 1963, the FBI opened a file entitled "Communist Influence in Racial Matters," and closely monitored preparations for the August 28 Civil Rights March on Washington. The FBI's Domestic Intelligence Division informed Director Hoover shortly before the March that Communist influence in the civil rights movement was negligible. The Director disagreed. The head of the Domestic Intelligence Division, William Sullivan, responded by recommending more intense FBI surveillance of the civil rights movement.

*A. The Justice Department Warns Dr. King About Advisers A and B: January 1962 -- June 1963*

The Kennedy administration's concern over FBI allegations that Communists were influencing the civil rights movement led the Justice Department to make several attempts to persuade Dr. King to sever his relations with Advisers A and B. In January 1962, Hoover first warned Attorney General Kennedy that Adviser A, a member of the Communist Party, U.S.A., "is allegedly a close adviser to the Reverend Martin Luther King." 62 Shortly afterwards, Assistant Attorney General Burke Marshall of the Justice Department's Civil Rights Division told Dr. King that the Bureau claimed Adviser A was a communist and advised that they break off relations. 63 According to an FBI memorandum, Deputy Attorney General Byron R. White also considered speaking with Dr. King about Adviser A, but decided against doing so when told by the FBI that revealing too much of the FBI's information might tip off Dr. King or Adviser A to the identity of certain FBI informants. 64

Dr. King gave no indication of breaking off relations with Adviser A, who was a close friend and trusted advisor. He did, however, apparently consider the adverse effects on the civil rights movement that his association with Adviser B might cause. 65 In June 1962 the FBI intercepted a conversation 66 in which Adviser A recommended that Dr. King informally use Adviser B as his executive assistant, noting that "as long as Adviser B did not have the title of Executive Director, there would not be as much lightning flashing around him." Dr. King was reported to have agreed, remarking that "no matter what a man was, if he could stand up now and say he is not connected, then as far as I am concerned, he is eligible to work for me." 67

On October 8, 1962 the FBI's Domestic Intelligence Division prepared a memorandum summarizing accounts that had previously appeared in newspapers concerning Adviser B's alleged Communist background and his association with Dr. King. The Division forwarded the memorandum to Cartha D. DeLoach, head of the Crime Records Division, the FBI's public relations arm, for "possible use by his contacts in the news media field in such Southern states as Alabama where Dr. King has announced that the next targets for integration of universities are located." DeLoach's signature and the notation, "handled, Augusta (illegible), Atlanta, 1-/19" appear on the recommendation. 68

The article was apparently disseminated, because an October 25, 1962, article in the Augusta Chronicle described Adviser B as a member of the CPUSA's National Committee who was serving as Dr. King's "Acting Executive Director." Dr. King publicly responded, on October 30, that "no person of known Communist affiliation" could serve on the staff of the SCLC and denied any knowledge that Adviser B had Communist affiliations. Dr. King also announced Adviser B's temporary resignation from the SCLC pending an SCLC investigation of the allegations.

A stream of memoranda from the FBI, however, warned the Justice Department that Adviser B continued as an associate of Dr. King despite his apparent resignation from the SCLC. In December, Director Hoover was cautioning the Attorney General that Adviser B continued to "represent himself as being affiliated with the New York Office of the SCLC and, during late November and early December 1962, was actively engaged in the work of this organization." 69 A few days later, the Attorney General was informed that Advisers A and B were planning a "closeted ... critical review" with Dr. King concerning the direction of the civil rights movement. Kennedy penned on the memorandum: "Burke -- this is not getting any better." 70

In early February 1963, Dr. King asked the Justice Department for a briefing on Adviser B's background, apparently in response to newspaper articles about Adviser B resulting from the Bureau's campaign to publicize Adviser B's relationship with Dr. King. Assistant Attorney General Marshall noted in a memorandum that he had "been in touch with the Attorney General on this matter and is anxious to have it handled as soon as possible." 71 Sometime later in February, Marshall spoke with Dr. King about severing his association with Advisers A and B. Memoranda from Director Hoover to the Justice Department during the ensuing months, however, emphasized that Dr. King was maintaining a close relationship with both men. Those memoranda to the Justice Department contained no new information substantiating the charges that either was a member of the Communist Party, or that either was carrying out the Party's policies. 72

The Attorney General's concern over Dr. King's association with the two advisers continued. A memorandum by Hoover states that on June 17, 1963:

The Attorney General called and advised he would like to have Assistant Attorney General Burke Marshall talk to Martin Luther King and tell Dr. King he has to get rid of [Advisers A and B], that he should not have any contact with them directly or indirectly.

I pointed out that if Dr. King continues this association, he is going to hurt his own cause as there are more and more Communists trying to take advantage of [the] movement and bigots down South who are against integration are beginning to charge Dr. King is tied in with Communists. I stated I thought Marshall could very definitely say this association is rather widely known and, with things crystallizing for them now, nothing could be worse than for Dr. King to be associated with it. 73

Marshall subsequently spoke with Dr. King about Advisers A and B. 74 In a follow-up memorandum written several months later Marshall stated:

... I brought the matter to the attention of Dr. King very explicitly in my office on the morning of June 22 prior to a scheduled meeting which Dr. King had with the President. This was done at the direction of the Attorney General, and the President separately [and] strongly urged Dr. King that there should be no further connection between Adviser B and the Southern Christian Leadership Conference. Dr. King stated that the connection would be ended. 75

Dr. King later told one of his associates that the President had told him "there was an attempt (by the FBI) to smear the movement on the basis of Communist influence. The President also said, 'I assume you know you're under very close surveillance.'" 76

Marshall's and the President's warnings did not go unheeded. On July 3, 1963, Dr. King sent the Attorney General a copy of a letter to Adviser B bearing that date. 77 In that letter, Dr. King stated that an investigation by the SCLC had proven the charges concerning Adviser B's association with the Communist Party groundless, but that his permanent resignation was necessary because "the situation in our country is such that ... any allusion to the left brings forth an emotional response which would seem to indicate that SCLC and the Southern Freedom Movement are Communist inspired." 78

*B. Allegations About Dr. King During Hearings on the Public Accommodations Bill and the Administration's Response: July 1963*

Allegations of Communist influence in the civil rights movement were widely publicized in the summer of 1963 by opponents of the administration's proposed public accommodations bill. On July 12, 1963, Governor Ross E. Barnett of Mississippi testified before the Senate Commerce Committee that civil rights legislation was "a part of the world Communist conspiracy to divide and conquer our country from within." 79 Barnett displayed a photograph entitled "Martin Luther King at Communist Training School" taken by an informant for the Georgia Commission of Education, which showed Dr. King at a 1957 Labor Day Weekend seminar at the Highland Folk School in Monteagle, Tennessee with three individuals whom he alleged were communists. When Senator Mike Monroney challenged the accuracy of this characterization, Barnett stated that he had not checked the allegations with the FBI and suggested that the Commerce Committee do so. The FBI subsequently concluded that the charges were false. 80

Later that day, Senator Monroney asked Director Hoover for his views on whether Dr. King and the leaders of other civil rights organizations had Communist affiliations. 81 Senator Warren G. Magnuson also asked Hoover about the authenticity of the photograph, the status of the Georgia Commission on Education, and the nature of the Highlander Folk School. 82 Director Hoover forwarded these requests and similar inquiries from other Senators to the Justice Department 83 with a memorandum summarizing the COMINFIL information about SCL:

In substance, the Communist Party, USA, is not able to assume a role of leadership in the racial unrest at this time. However, the Party is *attempting* to exploit the current racial situation through propaganda and participation in demonstrations and other activities whenever possible. Through these tactics, the Party *hopes* ultimately to progress from its current supporting role to a position of active leadership. [Emphasis added.]

In the same memorandum, Director Hoover brought up the subject of Advisers A and B's alleged Communist affiliations. He claimed that the Communist Party had pinned its hopes on Adviser A, and that although Adviser B had resigned from the SCLC, he continued to associate with Dr. King. 84

On July 15, Governor George C. Wallace of Alabama testified before the Senate Commerce Committee in opposition to the Civil Rights bill, berating officials for "fawning and pawing over such people as Martin Luther King and his pro Communist friends and associates." Wallace referred to the picture displayed by Governor Barnett three days before and added:

Recently Martin Luther King publicly professed to have fired a known Communist, [Adviser B], who had been on his payroll. But as discovered by a member of the US Congress, the public profession was a lie, and Adviser B had remained on King's payroll. 86

On July 17, the President announced at a news conference:

We have no evidence that any of the leaders of the civil rights movement in the United States are Communists. We have no evidence that the demonstrations are Communist-inspired. There may be occasions when a Communist takes part in a demonstration. We can't prevent that. But I think it is a convenient scapegoat to suggest that all of the difficulties are Communist and that if the Communist movement would only disappear that we would end this. 87

On July 23, Robert Kennedy sent to the Commerce Committee the Justice Department's response to the queries of Senators Monroney and Magnuson:

Based on all available evidence from the FBI and other sources, we have no evidence that any of the top leaders of the major civil rights groups are Communists, or Communist controlled. This is true as to Dr. Martin Luther King, Jr., about whom particular accusations were made, as well as other leaders.

It is natural and inevitable that Communists have made efforts to infiltrate the civil rights groups and to exploit the current racial situation. In view of the real injustices that exist and the resentment against them, these efforts have been remarkably unsuccessful. 88

Burke Marshall, who aided in formulating these responses for the Justice Department, told the Committee that rumors of communist infiltration in the civil rights movement had caused the Administration considerable concern.

At that point, in some sense the business was a political problem, not from the point of view of the support that the civil rights movement was giving the administration or anything like that, but how to be honest with the Senators with this problem facing us and at the same time not to give ammunition to people who for substantive reasons were opposed to civil rights legislation.

Generally, for years the civil rights movement in the South and to some extent in some quarters in the North ... were constantly referred to as communist infiltrated, communist inspired, radical movements ... So that the political problem that I would

identify with this whole situation would be that and not a question of whether or not there was support given the Administration by civil rights groups in the South. 89

*C. The Attorney General Considers a Wiretap of Dr. King and Rejects the Idea: July 1963*

On July 16, 1963, the day after Governor Wallace's charges that Dr. King was dominated by Communists and the day before the President's denial of Communist influence in the civil rights movement, the Attorney General raised with Courtney Evans the possibility of wiretap coverage of Dr. King. According to Evans' memorandum about this meeting:

The AG was contacted at his request late this afternoon. He said that ... a New York attorney who has had close association with Martin Luther King, and with [Adviser A] had been to see Burke Marshall about the racial situation. According to the AG, [the attorney] had indicated he had some reservations about talking with [Adviser A] on the phone. Marshall thought he might have been referring to a possible phone tap, and passed it off by telling [the New York attorney] this was something he would have to take up with [Adviser A.]

The purpose of the AG's contact was that this brought to his attention the possibility of effecting technical coverage on both [the New York attorney] and Martin Luther King. I told the AG that I was not at all acquainted with [the New York attorney], but that, in so far as Dr. King was concerned, it was obvious from the reports that he was in a travel status practically all the time, and it was, therefore, doubtful that a technical surveillance on his office or home would be very productive. I also raised the question as to the repercussions if it should ever become known that such a surveillance had been put on Dr. King.

The AG said this did not concern him at all, that in view of the possible Communist influence in the racial situation, he thought it advisable to have as complete coverage as possible. I told him, under the circumstances, that we would check into the matter to see if coverage was feasible, and, if so, would submit an appropriate recommendation to him. 90

Reports from the FBI offices indicated that wiretaps were feasible, 91 and Director Hoover requested the Attorney General to approve wiretaps on phones in Dr. King's home, SCLC offices, 92 and the New York attorney's home and law office. 93

On July 24, the day after his letter to the Commerce Committee exonerating Dr. King, the Attorney General informed Evans that he had decided against technical surveillance of Dr. King but had approved surveillance of the New York Attorney. 94

The Attorney General informed me today that he had been considering the request he made on July 16, 1963, for a technical surveillance on Martin Luther King at his home and office and was now of the opinion that those would be ill-advised.

At the time the Attorney General initially asked for such a surveillance, he was told there was considerable doubt that the productivity of such surveillance would be worth the risk because King travels most of the time and that there might be serious repercussions should it ever become known the Government had instituted this coverage. These were the very thoughts that the Attorney General expressed today in withdrawing his request.

With reference to the other technical surveillance requested at the same time, namely, the one on [the New York attorney], the Attorney General felt this was in a different category and we should go forward with this coverage. It is noted that this was previously approved in writing by the Attorney General.

... We will take no further action to effect technical coverage on Martin Luther King, either at his home or at his office at the Southern Christian Leadership Conference, in the absence of a further request from the Attorney General. 95

In June 1969, Director Hoover told a reporter for the Washington Evening Star that Attorney General Kennedy had "requested that the telephones of Dr. King be covered by electronic devices and was persuaded by our people not to do it in view of the possible repercussions," and because Dr. King's constant traveling made a wiretap impractical. 96 When the Committee asked Courtney Evans whether the idea of installing a wiretap originated with the Attorney General, he testified:

No, this is not clear in my mind at all. The record that has been exhibited to me really doesn't establish this definitely, although that inference can be drawn from some of the memoranda. But it is my recollection, without the benefit of any specifics, that there was much more to it than this. And I have the feeling that there were pressures existing in time to develop more specific information that may have had a bearing here.

Q. Pressures emanating from where and upon whom?

A. I think from both sides, the Bureau wanted to get more specific information, and the Department wanted resolved the rather indefinite information that had been received indicating the possibility of Communist influence on the Dr. King movement. 97

*D. The Attorney General Voices Concern Over Continuing FBI Reports About King: July-August 1963*

Following the appearance of an article on July 25, 1963, in the Atlanta Constitution, titled "One-time Communist Organizer Heads Rev. King's Office in N.Y.," Dr. King announced that an SCLC investigation of Adviser B indicated that he had "no present connection with the CP nor any sympathy with its philosophy." Dr. King explained that Adviser B had been on the SCLC staff on a temporary basis since his resignation in December 1962, but that he had left the SCLC on June 26, 1963, by "mutual agreement" because of concern that his affiliation with the integration movement would be used against it by "segregationists and race baiters."

The Justice Department, however, continued to receive reports from the FBI that Dr. King was continuing his association with Advisers A and B. 99 Shortly after Attorney General Kennedy's July 23 response to the Commerce Committee, Courtney Evans:

Adviser B, [deleted] pointed out to Marshall the undesirability of making the specific comments ... as to giving complete clearance to Martin Luther King as Marshall had had the full details as to King's association with [Adviser A] and [Adviser B.]

Marshall said that he was most appreciative of our warning him about these pitfalls and he would be guided accordingly in any future statements. He added that he would also appreciate our continuing to highlight for him any information concerning communist activity in the Negro movement." 100

On July 29, Director Hoover sent the Justice Department a report from the New York Office entitled "Martin Luther King, Jr.: Affiliation with the Communist Movement." 101 The entry under the caption, "Evidence of Communist Party Sympathies," has been deleted by the FBI from copies of the report given to the Committee on the grounds that it might compromise informants. It was a general characterization and ran for only one and one-half lines. A memorandum from Courtney Evans described Attorney General Kennedy's reaction:

The Attorney General stated that if this report got up to the Hill at this time, he would be impeached. He noted if this report got out, it would be alleged the FBI said King was [excised by the FBI].

The Attorney General went on to say that the report had been reviewed in detail by Assistant Attorney General Burke Marshall who had told him there wasn't anything new here concerning King's alleged communist sympathies but that it was the timing of the report and its possible misuse that concerned him. The Attorney General went on to say that he didn't feel he could fully trust everyone in the Internal Security Division of the Department.

I pointed out to the Attorney General that first of all this report was classified secret and was just a summary report to bring our files and that of the Department's up to date. He said that while this was undoubtedly true, the submission of the report at this time in this form presented definite hazards. He therefore asked that the report be resubmitted to him with a cover memorandum setting forth the exact evidence available to support the statement that King has been described [excised by the FBI]. 102

The reason for Attorney General Kennedy's reaction is unclear. 103 It may be that he feared a "leak" of the FBI's allegations concerning communist influence over Dr. King would be particularly embarrassing in light of the Administration's recent statements in support of Dr. King. The Attorney General's insistence on a supplemental memorandum detailing the underlying evidence, coupled with the tone of the memorandum, also suggests that he was anxious to get to the bottom of the charges.

Hoover resubmitted the report with a cover letter stating in part:

In this connection, your attention is invited to my letter of February 14, 1962, in captioned matter and to my letter of July 17, 1963, captioned "Request from Senator Monroney Concerning Current Racial Agitation," both of which contain information to the effect that Adviser A has characterized King [deleted by FBI]. 104

The relevant portions of the February 14, 1962, memorandum and the July 17, 1963, memorandum have been deleted from copies supplied to the Committee. It is clear, however, that the Attorney General had been aware of whatever information those memoranda contained when he had decided not to approve the King wiretaps the previous month.

Despite the FBI's failure to produce any new evidence to substantiate its apparently unfavorable characterization of Dr. King, the question of whether Advisers A and B continued to influence Dr. King remained a matter of concern to the Justice Department. On August 20, 1963, Evans reported:

Today the Attorney General asked if we would continue to keep him closely informed of information received relative to Advisers B's contact with Martin Luther King. He had specific reference to our letter of August 2, 1963.

It appears that the Attorney General is receiving conflicting advice within the Department proper as to whether there is sufficient evidence of a continuing contact between King and Adviser B to justify some action. The Civil Rights Division has expressed the thought that nothing need be done by the Department. On the other hand, Andrew Oehmann, the Attorney General's Executive Assistant, has counseled him that in his judgment there is ample evidence there is a continuing relationship which Martin Luther King is trying to conceal. 105

*E. The FBI Intensifies Its Investigation of Alleged Communist Influence in the Civil Rights Movement: July-September 1963*

On July 18, 1963, in response to intelligence reports that the Communist Party was encouraging its members to participate actively in the forthcoming March on Washington, the FBI opened a file captioned "Communist Influence in Racial Matters." Field offices were advised:

it is reasonable to assume that the future will witness a strong effort on the part of the CPUSA to inject itself into and to exploit the struggle for equal rights for Negroes. Therefore, during the investigation of the CPUSA, each recipient office should be extremely alert to data indicating interest, plans, or actual involvement of the Party in the current Negro movement. This matter should be given close attention and the Bureau kept currently advised. 106

The results of voluminous reports from field offices around the country concerning the plans of the Communist Party and "other subversive groups" were summarized by the Domestic Intelligence Division in a report dated August 22, 1963. 107 That report concluded that there was no evidence that the March "was actually initiated by or is controlled by the CP," 108 although the Party had publicly endorsed the March and had urged members to "clandestinely participate" in order to "foster the illusion that the CP is a humanitarian group acting in the interest of the Negro." The Party's tactics were summarized:

CP leaders have stressed the fact that the March is not the be all and end all in itself. Events which subsequently flow from the March will be of utmost importance, such as following up in contacts now being made by CP members working in support of the demonstration. Utilizing the March, the Party has three basic general objectives:

- (1) Participation by CP members through legitimate organizations.
- (2) Attempt to get the Party line into the hands of sympathizers and supporters of the March through distribution of "The Worker" and Party pamphlets.
- (3) Utilize the March as a steppingstone for future Party activity through contacts now being made by Party members involved in the March. 109

The next day the Domestic Intelligence Division submitted to the Director a 67-page Brief detailing the CPUSA's efforts to exploit the American Negro, and finding virtually no successes in these efforts. A synopsis observed:

(1) "The 19 million Negroes in the United States today constitute the largest and most important racial target of the Communist Party, USA. Since 1919, communist leaders have devised countless tactics and programs designed to penetrate and control Negro population." The "colossal efforts" focused around "equal opportunity," and efforts were, presently being made with "limited degrees of success" to infiltrate legitimate Negro organizations. "[T]here is no known substantial implementation of Communist Party aims and policies among Negroes in the labor field."

(2) "While not the instigator and presently unable to direct or control the coming Negro August 28 March on Washington, D.C., communist officials are planning to do all possible to advance communist aims in a supporting role."

(3) "Despite tremendous sums of money and time spent by the Communist Party, USA, on the American Negro during the past 44 years, the Party has failed to reach its goal with the Negroes."

(4) "There has been an obvious failure of the Communist Party of the United States to appreciably infiltrate, influence, or control large numbers of American Negroes in this country ... The Communist Party in the next few years may fail dismally with the American Negro as it has in the past. On the other hand, it may make prodigious strides and great success with the American Negroes, to the serious detriment of our national security. Time alone will tell." 110

William Sullivan, who then headed the Domestic Intelligence Division of the FBI, testified that this "Brief" precipitated a dispute between Director Hoover and the Domestic Intelligence Division over the extent of communist influence in the civil rights movement, and that the resulting "intensification" was part of an attempt by the Intelligence Division to regain Hoover's approval. 111 The documentary evidence bearing on the internal FBI dispute is set forth below, with Sullivan's explanation of what occurred. Sullivan's comments, however, should be considered in light of the intense personal feud that subsequently developed between Sullivan and Director Hoover, and which ultimately led to Sullivan's dismissal from the Bureau. While Sullivan testified that the intensified investigation of the SCLC was the product of Director Hoover's prodding the Domestic Intelligence Division to conform its evidence to his preconceptions, the documentary evidence may also be read as indicating that the Domestic Intelligence Division was manipulating the Director in a subtle bureaucratic battle to gain approval for expanded programs.

Sullivan testified that a careful review of the files in preparation for writing the "Brief" revealed no evidence of "marked or substantial" Communist infiltration of the movement, and that he had instructed his assistant to "state the facts just as they are" and "then let the storm break." 112 Sullivan said he had known that Hoover would be displeased with his conclusions because Hoover was convinced the civil rights movement was strongly influenced by communists. Sullivan's prediction was borne out by Hoover's observations, scrawled across the bottom of the memorandum:

This memo reminds me vividly of those I received when Castro took over Cuba. You contended then that Castro and his cohorts were not communists and not influenced by communists. Time alone proved you wrong. I for one can't ignore the memoes . . . re King, Advisers A and B . . . et al. as having only an infinitesimal effect on the efforts to exploit the American Negro by the Communists. 113

Sullivan recalled:

This [memorandum] set me at odds with Hoover . . . A few months went by before he would speak to me. Everything was conducted by exchange of written communications. It was evident that we had to change our ways or we would all be out on the street. 114

The Director penned sarcastic notes on subsequent memoranda from the Domestic Intelligence Division. In the margin of a report that over 100 Communist Party members were planning to participate in the March on Washington, the Director wrote, "just infinitesimal!" 115 A preliminary report on possible communist influence on the March noted that Party functionaries were pleased with the March, believed it would impress Congress, and that a "rally of similar proportions on the subject of automation could advance the cause of socialism in the United States." Director Hoover remarked, "I assume CP functionary claims are all frivolous." 116 Sullivan testified:

the men and I discussed how to get out of trouble. To be in trouble with Mr. Hoover was a serious matter. These men were trying to buy homes, mortgages on homes, children in school. They lived in fear of getting transferred, losing money on their homes, as they usually did. In those days the market was not soaring, and children in school, so they wanted another memorandum written to get us out of this trouble we were in. I said I would write the memorandum this time. The onus always falls on the person who writes a memorandum. 117

On August 30, Sullivan wrote his apologetic reply:

The Director is correct. We were completely wrong about believing the evidence was not sufficient to determine some years ago that Fidel Castro was not a communist or under communist influence. On investigating and writing about communism and the American Negro, we had better remember this and profit by the lesson it should teach us. . . . Personally, I believe in the light of King's powerful demagogic speech yesterday I'll be stands head and shoulders over all other Negro leaders put together when it comes to influencing great masses of Negroes. We must mark him now, if we have not done so before, as the most dangerous Negro of the future in this Nation from the standpoint of communism, the Negro and national security.

[I]t may be unrealistic to limit ourselves as we have been doing to legalistic proofs or definitely conclusive evidence that would stand up in testimony in court or before Congressional Committees that the Communist Party, USA, does wield substantial influence over Negroes which one day could become decisive. . . .

We regret greatly that the memorandum did not measure up to what the Director has a right to expect from our analysis. 119

Sullivan testified concerning this memorandum:

Here again we had to engage in a lot of nonsense which we ourselves really did not believe in. We either had to do that or we would be finished. 120

The memorandum stated that "'The history of the Communist Party, U.S.A., is replete with its attempts to exploit, influence and recruit the Negro.'" After reading this entry, Sullivan testified:

These are words that are very significant to me because I know what they mean. We build this thing . . . and say all this is a clear indication that the Party's favorite target is the Negro today. When you analyze it, what does it mean? How often has it been able to hit the target? . . . We did not discuss that because we would have to say they did not hit the target, hardly at all. 121

In an apparent further effort to please the Director, Sullivan recommended, on September 16, 1963, "increased coverage of communist influence on the Negro." His memorandum noted that "all indications" pointed toward increasing "attempts" by the Party to exploit racial unrest. The field was to "intensify" coverage of communist influence on Negroes by giving "fullest consideration to the use of all possible investigative techniques."

Further, we are stressing the urgent need for imaginative and aggressive tactics to be utilized through our Counterintelligence Program -- these designed to attempt to neutralize or disrupt the Party's activities in the Negro field. 122

Hoover rejected this proposal with the remarks:

No. I can't understand how you can so agilely switch your thinking and evaluation. Just a few weeks ago you contended that the Communist influence in the racial movement was ineffective and

infinitesimal. This -- notwithstanding many memos of specific instances of infiltration. Now you want to load the Field down with more coverage in spite of your recent memo depreciating C.P. influence in racial movement. I don't intend to waste time and money until you can make up your minds what the situation really is. 123

Sullivan testified that he had interpreted Hoover's note to mean that the Director was:

egging US on, to come back and say, "Mr. Hoover, you are right, we are wrong. There is communist infiltration of the American Negro. We think we should go ahead and carry on an intensified program against it." He knew when he wrote this, he knew precisely what kind of reply he was going to get. 124

Sullivan responded in a memorandum to the Deputy Associate Director, Alan Belmont:

On returning from a few days leave I have been advised of the Director's continued dissatisfaction with the manner in which we prepared a Brief on [communist influence in racial matters] and subsequent memoranda on the same subject matter. This situation is very disturbing to those of us in the Domestic Intelligence Division and we certainly want to do everything possible to correct our shortcomings. . . . The Director indicated he would not approve our last SAC letter until there was a clarification and a meeting of minds relative to the question of the extent of communist influence over Negroes and their leaders . . . .

As we know, facts by themselves are not too meaningful, for they are somewhat like stones tossed in a heap as contrasted to the same stones put in the form of a sound edifice. It is obvious that *we did not put the proper interpretation upon the facts which we gave to the Director.* [Emphasis added.]

As previously stated, we are in complete agreement with the Director that communist influence is being exerted on Martin Luther King, Jr., and that King is the strongest of the Negro leaders . . . [w]e regard Martin Luther King to be the most dangerous and effective Negro leader in the country.

May I repeat that our failure to measure up to what the Director expected of us in the area of Communist-Negro relations is a subject of very deep concern to us in the Domestic Intelligence Division. We are disturbed by this and ought to be. I want him to know that we will do everything that is humanly possible to develop all facts nationwide relative to communist penetration and influence over Negro leaders and their organizations. 125

Sullivan resubmitted his proposed intensification instructions to the field. This time the Director agreed.

The intensification was put into effect by an SAC letter dated October 1, 1963, which contained the usual allusion to "efforts" and "attempts" by the Communist Party to influence the civil rights movement, but which said nothing about the absence of results:

The history of the Communist Party, USA (CPUSA), is replete with its *attempts to exploit, influence and recruit* the Negro. The March on Washington, August 28, 1963, was a striking example as Party leaders early put into motion *efforts* to accrue gains for the CPUSA from the March. The presence at the March of around 200 Party members, ranging from several national functionaries headed by CPUSA General Secretary Gus Hall to many rank-and-file members, is clear indication of the Party's favorite target (the Negro) today.

All indications are that the March was not the "end of the line" and that the Party will *step up its efforts* to exploit racial unrest and in every possible way claim credit for itself relating to any "gains" achieved by the Negro. A clear-cut indication of the Party's *designs* is revealed in secret information obtained from a most sensitive source that the Party *plans* to hold a highly secretive leadership meeting in November, 1963, which will deal primarily with the Negro situation. The Party has closely guarded plans for Gus Hall to undertake a "barnstorming" trip through key areas of the country to meet Party people and thus better prepare himself for the November meeting.

In order for the Bureau to cope with the Party's efforts and thus fulfill our responsibilities in the security field, it is necessary that we at once intensify our coverage of communist influence on the Negro. Fullest consideration should be given to the use of all possible investigative techniques in the investigation of the CP-USA, those communist fronts through which the Party channels its influence, and the many individual Party members and dupes. There is also an urgent need for imaginative and aggressive tactics to be utilized through our Counterintelligence Program for the purpose of attempting to neutralize or disrupt the Party's activities in the Negro field. Because of the Bureau's responsibility for timely dissemination of pertinent information to the Department and other interested agencies, it is more than ever necessary that all facets of this matter receive prompt handling. 126

The instruction to use "all possible investigative techniques" appears to have dictated the intensification of the COMINFIL investigation of the SCLC.

This was consistent with Sullivan's assurance to Director Hoover at the end of September that "we will do everything that is humanly possible to develop all facts nationwide relative to the Communist penetration and influence, over Negro leaders and their organizations."

The emphasis on "imaginative and aggressive tactics" to disrupt Communist Party activities in the Negro field appears to have involved an expansion of the COINTELPRO operation already underway against the Communist Party. In 1956, the Bureau had initiated a COINTELPRO operation against the Communist Party, USA, with the goal of "feeding and fostering" internal friction within the Party. The program was soon expanded to include "preventing communists from seizing control of legitimate mass organizations, and ... discrediting others who [are] secretly operating inside such organizations." 127 The October 1, 1963 "intensification" instruction emphasized this latter objective of disruption. 129

The intensification order appears to have been more a product of preconceptions and bureaucratic squabbles within the FBI than a response to genuine concerns based on hard evidence that communists might be influencing the civil rights movement. Because Director Hoover is deceased, the Committee was able to obtain only one side of the story. Sullivan's version depicts the Domestic Intelligence Division executing an about-face after Director Hoover rejected its conclusion that evidence did not indicate significant communist influence, reinterpreting its original data to reach conclusions the Director wanted to hear, and then basing its recommendations for action on the new "analysis." However, the memoranda could also support a contention that the Domestic Intelligence Division misled Director Hoover in order to maneuver him into supporting expanded domestic intelligence programs.

#### **IV. ELECTRONIC SURVEILLANCE OF DR. MARTIN LUTHER KING AND THE SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE**

##### *Introduction and Summary*

In October 1963, Attorney General Robert Kennedy approved an FBI request for permission to install wiretaps on phones in Dr. King's home and in the SCLC's New York and Atlanta offices to determine the extent, if any, of "communist influence in the racial situation." The FBI construed this authorization to extend to Dr. King's hotel rooms and the home of a friend. No further authorization was sought until mid-1965, after Attorney General Katzenbach required the FBI for the first time to seek renewed authorization for all existing wiretaps. The wiretaps on Dr. King's home were apparently terminated at that time by Attorney General Katzenbach; the SCLC wiretaps were terminated by Attorney General Ramsay Clark in June 1966.

In December, 1963 -- three months after Attorney General Kennedy approved the wiretaps -- the FBI, without informing the Attorney General, planned and implemented a secret effort to discredit Dr. King and to "neutralize" him as the leader of the civil rights movement. One of the first steps in this effort involved hiding microphones in Dr. King's hotel rooms. Those microphones were installed without Attorney General Kennedy's prior authorization or subsequent notification, neither of which were required under practices then current. The FBI continued to place microphones in Dr. King's hotel rooms until November 1965. Attorney General Katzenbach was apparently notified immediately after the fact of the placement of three microphones between May and November 1965. It is not clear why the FBI stopped its microphone surveillance of Dr. King, although its decision may have been related to concern about public exposure during the Long Committee's investigation of electronic surveillance.

This chapter examines the legal basis for the wiretaps and microphones, the evidence surrounding the motives for their use, and the degree to which Justice Department and White House officials were aware of the FBI's electronic surveillance of Dr. King.

##### *A. Legal Standards Governing the FBI's Duty to Inform the Justice Department of Wiretaps and Microphones During the Period of the Martin Luther King Investigation*

The FBI's use of wiretaps and microphones to follow Dr. King's activities must be examined in light of the accepted legal standards and practices of the time. Before March 1965, the FBI followed different procedures for the authorization of wiretaps and microphones. Wiretaps required the approval of the Attorney General in advance. However, once the Attorney General had authorized the FBI to initiate wiretap coverage of a subject, the Bureau generally continued the wiretap for as long as it judged necessary. As former Attorney General Katzenbach testified:

The custom was not to put a time limit on a tap, or any wiretap authorization. Indeed, I think the Bureau would have felt free in 1965 to put a tap on a phone authorized by Attorney General Jackson before World War II. 130

In "national security" cases, the FBI was free to carry out microphone surveillances without first seeking the approval of the Attorney General or informing him afterward. The Bureau apparently derived authority for its microphone practice from a 1954 memorandum sent by Attorney General Brownell to Director Hoover, stating:

It is clear that in some instances the use of microphone surveillance is the only possible way to uncovering the activities of espionage agents, possible saboteurs, and subversive persons. In such instances I am of the opinion that the national interest requires that microphone surveillance be utilized by the Federal Bureau of Investigation. This use need not be limited to the development of evidence for prosecution. The FBI has an intelligence function in connection with internal security matters equally as important as the duty of developing evidence for presentation to the courts and the national security requires that the FBI be able to use microphone surveillance for the proper discharge of both such functions. The Department of Justice approves the use of microphone surveillance by the FBI under these circumstances and for these purposes.... I recognize that for the FBI to fulfill its important intelligence function, considerations of internal security and the national safety are paramount and, therefore, may compel the unrestricted use of this technique in the national interest. 131

The Justice Department was on notice that the FBI's practice was to install microphones without first informing the Justice Department. Director Hoover told Deputy Attorney General Bryon White in May 1961:

in the internal security field we are utilizing microphone surveillances on a restricted basis even though trespass is necessary to assist in uncovering the activity of Soviet intelligence agents and Communist Party leaders.... In the interest of national safety, microphone surveillances are also utilized on a restricted basis, even though trespass is necessary, in uncovering major criminal activities. 132

A memorandum by Courtney Evans indicates that he discussed microphones in "organized crime cases" with the Attorney General in July 1961:

It was pointed out to the Attorney General that we had taken action with regard to the use of microphones in [organized crime] cases and . . . we were nevertheless utilizing them in all instances where this was technically feasible and where valuable information might be expected. The strong objections to the utilization of telephone taps as contrasted to microphone surveillances was stressed. The Attorney General stated he recognized the reasons why telephone taps should be restricted to national-defense-type cases and he was pleased we had been using microphone surveillances, where these objections do not apply, wherever possible in organized crime matters. 133

The Justice Department later summarized this practice in a brief to the Supreme Court:

Under Departmental practice in effect for a period of years prior to 1963, and continuing into 1965, the Director of the Federal Bureau of Investigation was given authority to approve the installation of devices such as [microphones] for intelligence (but not evidentiary) purposes when required in the interest of internal security or national safety, including organized crime, kidnappings, or matters wherein human life might be at stake. 134

On March 30, 1965, at the urging of Attorney General Katzenbach, the FBI adopted a uniform procedure for submitting both wiretaps and microphones to the Attorney General for his approval prior to installation. Director Hoover described the new procedures in a memorandum to the Attorney General:

In line with your suggestion this morning, I have already set up the procedure similar to requesting of authority for phone taps to be utilized in requesting authority for the placement of microphones. In other words, I shall forward to you from time to time requests for authority to install microphones where deemed imperative for your consideration and approval or disapproval. Furthermore, I have instructed that, where you have approved either a phone tap or the installation of a microphone, you will be advised when such is discontinued if in less than six months and, if not discontinued in less than six months, that a new request be submitted by me to you for extension of the telephone tap or microphone installation. 135

One week later Katzenbach sent to the White House a proposed Presidential directive to all Federal agencies on electronic surveillance. This directive, formally issued by President Johnson on June 30, 1965, forbade the nonconsensual interception of telephone communications by Federal personnel, "except in connection with investigations related to the national security" and then only after obtaining the written approval of the Attorney General. The directive was less precise concerning microphone surveillance:

Utilization of mechanical or electronic devices to overhear nontelephone conversations is an even more difficult problem, which raises substantial and unresolved questions of constitutional interpretation. I desire that each agency conducting such investigations consult with the Attorney General to ascertain whether the agency's practices are fully in accord with the law and with a decent regard for the rights of others. 136

#### *B. Wiretap Surveillance of Dr. King and the SCLC: October 1963 -- June 1966*

On September 6, 1963, Assistant Director William Sullivan first recommended to Director Hoover that the FBI install wiretaps on Dr. King's home and the offices of the Southern Christian Leadership Conference. 137 Sullivan's recommendation was apparently part of an attempt to improve the Domestic Intelligence Division's standing with the Director by convincing him that Sullivan's Division was concerned about alleged communist influence on the civil rights movement and that the Division intended, as Sullivan subsequently informed the Director, to "do everything that is humanly possible" in conducting its investigation. 138

Sullivan's recommendation was viewed with scepticism by the FBI leadership since Attorney General Kennedy had rejected a similar proposal two months earlier. Associate Director Clyde Tolson noted on the memorandum containing Sullivan's Proposal: "I see no point in making this recommendation to the Attorney General in view of the fact that he turned down a similar recommendation on July 22, 1963." 139 Director Hoover scrawled below Tolson's note: "I will approve though I am dizzy over vacillation as to influence of CPUSA." 140

In late September 1963 the FBI conducted a survey and concluded that wiretap coverage of Dr. King's residence and of the New York SCLC office could be implemented without detection. 141 On October 7, citing "possible communist influence in the racial situation," Hoover requested the Attorney General's permission for a wiretap "on King at his current address or at any future address to which he may move" and "on the SCLC office at the current New York address or to any other address to which it may be moved." 142 Attorney General Kennedy signed the request on October 10 and, on October 21, also approved the FBI request for coverage of the SCLC's Atlanta office. 143

Two memoranda by Courtney Evans indicate that the Attorney General was uncertain about the advisability of the wiretaps. On October 10, the Attorney General summoned Evans to discuss the FBI's request for the wiretaps on Dr. King's home telephone and the New York SCLC telephones. Evans wrote:

The Attorney General said that he recognized the importance of this coverage if substantial information is to be developed concerning the relationship between King and the communist party. He said there was no question in his mind as to the coverage in New York City but that he was worried about the security of an installation covering a residence in Atlanta, Georgia. He noted that the last thing we could afford to have would be a discovery of a wiretap on King's residence.

I pointed out to the Attorney General the fact that a residence was involved did not necessarily mean there was any added risk because of the technical nature of the telephone system.... After this discussion the Attorney General said he felt we should go ahead with the technical coverage on King on a trial basis, and to continue it if productive results were forthcoming. He said he was certain that all Bureau representatives involved would recognize the delicacy of this particular matter and would thus be even more cautious than ever in this assignment .... 144

According to Evans' memorandum, the Attorney General signed the authorization for the wiretap immediately after this conversation.

Another memorandum by Evans describes the Attorney General's reaction on approving the Bureau's request for a wiretap on the Atlanta SCLC office a week later:

The Attorney General is apparently still vacillating in his position as to technical coverage.... I reminded him of our previous conversation wherein he was assured that all possible would be done to insure the security of this operation.

The Attorney General advised that he was approving [the wiretaps] but asked that this coverage and that on King's residence be evaluated at the end of thirty days in light of the results secured so that the continuance of those surveillances could be determined at that time. 145

Wiretaps were installed on the SCLC's New York office on October 24, 1963, and at Dr. King's home and the SCLC's Atlanta office on November 8, 1963. The FBI made an internal evaluation of the wiretaps in December 1963 and decided on its own to extend the wiretaps for three months. Reading the Attorney General's authorization broadly, the FBI construed permission to wiretap Dr. King "at his current address or at any future address" to include hotel room phones and the phone at the home of friends with whom he temporarily stayed. The FBI installed wiretaps, without seeking further authorization, on the following occasions:

| Location                       | Installed     | Discontinued  |
|--------------------------------|---------------|---------------|
| King's Atlanta home            | Nov. 8, 1963  | Apr. 30, 1965 |
| A friend's home                | Aug. 14, 1964 | Sept. 8, 1964 |
| Hyatt House Motel, Los Angeles | Apr. 24, 1964 | Apr. 26, 1964 |
| Hyatt House Motel, Los Angeles | July 7, 1964  | July 9, 1964  |
| Claridge Hotel, Atlantic City  | 22/08/64      | 27/08/64      |
| SCLC Atlanta headquarters      | 08/11/63      | June 21, 1966 |
| SCLC New York headquarters     | Oct. 24, 1963 | 24/01/64      |
|                                | July 13, 1964 | July 31, 1964 |

The Committee was not able to ascertain why Attorney General Kennedy approved the FBI's request for wiretaps in October 1963 after refusing an identical request in July 1963. Burke Marshall, Kennedy's assistant in charge of civil rights affairs, testified that he could not recall ever having discussed the matter with the Attorney General. It was his opinion, however, that the decision had been influenced by events arising out of concern about possible communist influence in the civil rights movement that had been widely publicized during the hearings on the Public Accommodations Act in the summer of 1963. Marshall recalled that Dr. King had made a "commitment" to the Attorney General and to the President to "stop having any communication" with Advisers A and B. Subsequently,

information came in, not as far as Adviser B, but as far as Adviser A was concerned, that that commitment was not lived up to, and I have assumed since, although I do not remember discussing it with Robert Kennedy, that the reason that he authorized the tap ... was that he wanted to find out what was going on.

From his point of view, Martin Luther King had made a commitment on a very important matter ... [and] King had broken that commitment. So therefore the Attorney General wanted to find out whether [Adviser A] did in fact have influence over King, what he was telling King, and so forth. 147

Marshall's answer to a question concerning whether anyone in the Justice Department ever considered asking the FBI to discontinue the investigation of Dr. King also sheds some light on why the Attorney General might have decided to approve the wiretaps:

Not that I know of. [The FBI's allegations concerning Adviser A] were grave and serious, and the inquiries from the Senate and from the public, both to the President and to the Attorney General, as well as the Bureau, had to be answered and they had to be answered fully. Stopping the investigation in light of those circumstances would have run the risk that there would have been a lot of complaints that the Bureau had been blocked for political reasons from investigating serious charges about communist infiltration in the civil rights movement. 148

Edwin O. Guthman, the Justice Department Public Relations Chief during Robert Kennedy's tenure as Attorney General, told the Committee that he had spoken with then Senator Robert Kennedy about the wiretap when it was revealed in a Jack Anderson story in 1968. According to Guthman, Robert Kennedy told him:

he had been importuned or requested by the FBI over a period of time to wiretap the phones of Dr. King, specifically wiretap the phones, as I recollect, at the headquarters of the Southern Christian Leadership Conference and, I think, Martin Luther King's home, but I'm not certain about that....

Robert Kennedy said that he finally agreed in the fall of 1963 to give the FBI permission to wiretap the phones, and my clear recollection on this is that his feeling was that if he did not do it, Mr. Hoover would move to impede or block the passage of the civil rights bill, which had been introduced in the summer of 1963, and that he felt that he might as well settle the matter as to whether (Adviser A) did have the influence on King that the FBI contended.... My recollection is that there had been a number of conversations with King by Burke Marshall and Robert Kennedy, and I think President Kennedy had indicated to King that, he ought not to have anything to do with (Adviser A). My understanding and recollection is that King said he would, and then each time the FBI would come back and say, he's still in contact with (Adviser A) ... Robert Kennedy viewed this as a serious matter and not in the interest of the country and not in the interest of the civil rights movement, if the FBI information was accurate. 149

Guthman testified that he could not recall Kennedy's elaborating on the steps that he had feared Director Hoover would take against the civil rights legislation if he had not agreed to the wiretap, but gave his own opinion that "Hoover's influence on the Hill could be considerable and it could have been a form of public statement or conferring with Senators in that area." 150

It is also not clear why Attorney General Kennedy insisted that the wiretaps be evaluated after 30 days and then failed to complain when the FBI neglected to send him an evaluation. Evans, after reviewing his memorandum stating that the Attorney General required the FBI to evaluate the wiretaps after 30 days, testified that he assumed the Attorney General had "expected the Bureau to ... submit the results of that evaluation to him." When asked if the Attorney General had ever inquired into whether the evaluation had been made, Evans testified:

I am reasonably certain he never asked me. I would point out, however, that the assassination of President Kennedy followed these events reasonably close in point of time, and this disrupted the operation of the Office of the Attorney General. 151

In March 1965 Attorney General Nicholas Katzenbach requested the FBI to submit all of its wiretaps for reauthorization. 152 He testified:

In late April 1965, in accordance with this program, I received a request from the Bureau to continue a tap on Dr. King's personal phone. I ordered it discontinued. It is, however, possible that a request for the continuation of a preexisting tap on the headquarters of the Southern Christian Leadership Conference was made about the same time, and I may have approved that tap. I do not recall the date or the circumstances which would have led me to do so. 153

Documents provided to the Committee by the FBI reflect that in early April 1965 the Atlanta office informed headquarters that it was discontinuing the wiretap on Dr. King's home because he was moving. On April 19 the Director authorized a survey to

determine if a wiretap could be placed on the phone in Dr. King's new residence with "full security." The Director's memorandum also stated that "After receipt of results of survey and Atlanta's recommendations, a memorandum will be prepared along with any necessary correspondence with the Attorney General." 154 A memorandum from the Atlanta office the next month states: "On [May 6, 1965], Mr. Sullivan telephonically advised that the installation of this Tesur [technical surveillance] was not authorized at this time." 155

The Bureau has been unable to find a record of any discussions between FBI officials and Attorney Katzenbach concerning this wiretap, and there are no memoranda in the Bureau files which indicate the reason that the wiretap on Dr. King's new home was not authorized.

The FBI terminated the wiretap on the New York SCLC office in January 1964, only two months after it had been installed, "for lack of productivity." 156 The wiretap was reinstalled in July 1964 and discontinued later that month because "the office moved." 157 No further wiretaps were placed on the New York office.

The wiretap on the Atlanta SCLC office was reviewed by Attorney General Katzenbach on October 27, 1965, and received his approval. A Bureau memorandum recommending continuation of the coverage in April 1966 was returned with a notation by Katzenbach, dated June 20, 1966, stating: "I think this coverage should be discontinued, particularly in light of possible charges of a criminal nature against [certain SCLC employees]." 159 Technical coverage was discontinued the following day. 160

Attorney General Ramsey Clark turned down two requests by the FBI for wiretaps on the phones of the SCLC, once on January 3, 1968, and again on January 17, 1969. 161 Clark wrote the Director concerning the 1968 request:

I am declining authorization of the requested installation of the above telephone surveillance at the present time. There has not been an adequate demonstration of a direct threat to national security. 162

Clark's refusal to authorize an SCLC wiretap in 1969 occurred two days before he left office, at the termination of the Johnson Administration. Less than a month later the Director informed the Atlanta office that an SCLC wiretap "is in line to be presented to the new Attorney General, and a survey, with full security assured ... is desirable." 163 FBI files contain no indication of the disposition of this final request.

#### *C. Microphone Surveillance of Dr. King, January 1964 -- November 1965.*

From January 1964 through November 1965, the FBI installed at least 15 hidden microphones in hotel and motel rooms occupied by Martin Luther King. 164 The FBI has told the Committee about the following microphone surveillances:

- Willard Hotel, Washington, D.C. (Jan. 5, 1964).
- Shroeder Hotel, Milwaukee (Jan. 27, 1964).
- Hilton Hawaiian Village, Honolulu (Feb. 18, 1964).
- Ambassador Hotel, Los Angeles (Feb. 20, 1964).
- Hyatt House Motel, Los Angeles (Feb. 22, 1964).
- Statler Hotel, Detroit (Mar. 19, 1964).
- Senator Motel, Sacramento (Apr. 23, 1964).
- Hyatt House Motel, Los Angeles (July 7, 1964).
- Manger Hotel, Savannah, Ga. (Sept. 28, 1964).
- Park Sheraton Hotel, New York (Jan. 8, 1965).
- Americana Hotel, New York (Jan. 28, 1965).
- Sheraton Atlantic Hotel, New York (May 12, 1965).
- Astor Hotel, New York (Oct. 14, 1965).
- New York Hilton Hotel, New York (Oct. 28, 1965).
- Americana Hotel, New York (Nov. 29, 1965). 165

#### *1. Reasons for the FBI's Microphone Surveillance of Dr. King.*

The wiretaps on Dr. King's home telephone and the phones of the SCLC offices were authorized by the Attorney General for the stated purpose of determining whether suspected communists were influencing the course of the civil rights movement. FBI documents indicate that the microphone coverage, (which was initiated without the knowledge of the Attorney Generals, in conformance with practice then current), was originally designed not only to pick up information bearing on possible Communist influence over Dr. King, but also to obtain information for use in the FBI's secret effort to discredit Dr. King as the leader of the civil rights movement. 166 By 1965, references to discrediting efforts had been dropped, and documents requesting authorization for microphones mentioned only the purpose of obtaining information about possible communist influences. 167 The details of the Bureau's efforts to undermine Dr. King are discussed in the ensuing chapters.

The first microphones were installed about two weeks after a December 23, 1963, FBI conference at which methods of "neutralizing" Dr. King were explored. 168 Microphone surveillance was again discussed at an all-day conference at FBI Headquarters in February 1964, attended by representatives of the FBI laboratory "preparatory to effecting coverage of the activities of Martin Luther King, Jr., and his associates in Honolulu." 169 Justifying the need for microphone coverage, the Chief of the FBI's Internal Security Section wrote that the FBI was "attempting" to obtain information about "the [private] activities of Dr. King and his associates" so that Dr. King could be "completely discredited." 170

The FBI memorandum authorizing the placement of the first microphone on Dr. King -- at the Willard Hotel in early January 1964 -- gave as a basis "the intelligence and counterintelligence possibilities which thorough coverage of Dr. King's activities might develop . . . ." 171 The Willard Hotel "bug" yielded 19 reels of tape. A memorandum summarizing the tapes was sent to

the Director with William Sullivan's recommendation that it be shown to Walter Jenkins, President Johnson's Special Assistant, "inasmuch as Dr. King is seeking an appointment with President Johnson." 172 Cartha D. DeLoach, Assistant to the Director, showed the summary memorandum to Jenkins, and later wrote:

I told Jenkins that the Director indicated I should leave this attachment with him if he desired to let the President personally read it. Jenkins mentioned that he was sufficiently aware of the facts that he could verbally advise the President of the matter. Jenkins was of the opinion that the FBI could perform a good service to the country if this matter could somehow be confidentially given to members of the press. I told him the Director had this in mind, however, he also believed we should obtain additional information prior to discussing it with certain friends. 173

The FBI was apparently encouraged by the intelligence afforded by "bugs" and by the White House's receptiveness to that type of information. A microphone was installed at the Shroeder Hotel in Milwaukee two weeks later, but was declared "unproductive" because "there were no activities of interest developed." 174 Dr. King's visit to Honolulu in mid-February 1964 was covered by a squad of surveillance experts brought in for the occasion from San Francisco. One of these experts was described in a Bureau memorandum as the "most experienced, most ingenious, most unruffled, most competent sound man for this type of operation in the San Francisco Office;" another was chosen because he had "shown unusual ingenuity, persistence, and determination in making microphone installations;" and a third had "been absolutely fearless in these types of operations for over twelve years." 175 More than twenty reels of tape were obtained during Dr. King's stay in Honolulu and his sojourn in Los Angeles immediately afterward. 176 Director Hoover agreed to send a copy of a memorandum describing the contents of the tapes to Jenkins and Attorney General Kennedy in order to:

remove all doubt from the Attorney General's mind as to the type of person King is. It will probably also eliminate King from any participation in [a memorial for President Kennedy which the Attorney General was helping to arrange]. 177

Dr. King's stay in Los Angeles in July 1964 was covered by both wiretaps and microphones in his hotel room. The wiretap was intended to gain intelligence about Dr. King's plans at the Republican National Convention. Microphone surveillance was requested to attempt to obtain information useful in the campaigns to discredit him. 178 Sullivan's memorandum describing the coverage was sent to Hoover with a recommendation against dissemination to the White House or the Attorney General:

as in this instance it is merely repetitious and does not have nearly the impact as prior such memoranda. We are continuing to follow closely King's activities and giving consideration to every possibility for future similar coverage that will add to our record on King so that in the end he might be discredited and thus be removed from his position of great stature in the Negro community. 179

Hoover wrote on the memorandum, "Send to Jenkins." The summary memorandum and a cover letter were sent to Jenkins on July 17. 180

It should also be noted that Dr. King's activities at the Democratic National Convention in Atlantic City, New Jersey in August 1964 were closely monitored by the FBI. Microphones were not installed on that occasion, although wiretaps were placed on Dr. King's hotel room phone. The stated justification for the wiretap was the investigation of possible communist influence and the fact that Dr. King "may indulge in a hunger fast as a means of protest." 181 A great deal of potentially useful political information was obtained from this wiretap and disseminated to the White House. 182

The memorandum authorizing microphone coverage of Dr. King's room in Savannah, Georgia during the annual SCLC conference in September and October 1964 described surveillance as necessary because it was "expected that attempts will again be made to exert influence upon the SCLC and in particular on King by communists." 183

The seven "bugs" in Dr. King's rooms during visits to New York from January to November 1965 were justified in contemporaneous internal FBI memoranda by anticipated meetings of Dr. King with several people whom the FBI claimed had affiliations with the Communist Party. 184 No mention was made of the possibility of obtaining private life material in memoranda concerning these "bugs." 185

## *2. Evidence Bearing on Whether the Attorneys General Authorized or Knew About the Microphone Surveillance of Dr. King*

In summary, it is clear that the FBI never requested permission for installing microphones to cover Dr. King from Attorney General Kennedy, and there is no evidence that it ever directly informed him that it was using microphones. There is some question, however, concerning whether the Attorney General ultimately realized that the FBI was using "bugs" because of the nature of the information that he was being sent.

Evidence concerning Attorney General Katzenbach's knowledge of microphone surveillance of Dr. King is contradictory. In March 1965, Katzenbach required the FBI for the first time to seek the Justice Department's approval for all microphone installations. The FBI has given the Committee documents which indicate that Katzenbach was informed shortly after the fact of three microphone installations on Dr. King, that he did not object to those installations, and that he urged the FBI to use caution in its surveillance activities. Katzenbach does not now recall having been informed about the FBI's microphone surveillance of Dr. King.

(a) Attorney General Robert F. Kennedy. -- The FBI makes no claim that Attorney General Kennedy was expressly informed about the microphones placed in Dr. King's hotel rooms. The only FBI claim that Attorney General Kennedy might have been aware of the microphones is a Domestic Intelligence Division memorandum written in December 1966, which states:

concerning microphone coverage of King, Attorney General Robert F. Kennedy was furnished the pertinent information obtained, perusal of which would indicate that a microphone was the source of this information. 186

Next to this entry, Hoover wrote: "when?" A memorandum from the Domestic Intelligence Division a few days later explained:

Attorney General Robert F. Kennedy was furnished an eight page "Top Secret" memorandum . . . dated March 4, 1964. This memorandum is a summary of microphone coverage . . . in the Willard Hotel, Washington, D.C.; Hilton Hawaiian Village, Honolulu, Hawaii; Ambassador Hotel, Los Angeles, California; and the Hyatt House Hotel, Los Angeles, California. The wording of the memorandum is couched in such a manner that it is obvious that a microphone was the source. 187

The question of whether Attorney General Kennedy suspected that the FBI was using microphones to gather information about Dr. King must also be viewed in light of the Attorney General's express authorization of wiretaps in the King case on national security grounds, and of the FBI's practice -- known to officials in the Justice Department -- of installing microphones in national security cases without notifying the Department. We have examined the Bureau's claim with respect to Attorney General Kennedy's possible knowledge about the microphones and have found the following evidence.

As noted above, on January 13, 1964, William Sullivan recommended to Hoover that President Johnson's assistant, Walter Jenkins, be given a copy of a memorandum detailing information discovered through the Willard Hotel bug. 188 Sullivan expressed doubts, however, about whether the Attorney General should be given the information:

The attached document is classified "Top Secret" to minimize the likelihood that this material will be read by someone who will leak it to King. However, it is possible despite its classification, the Attorney General himself may reprimand King on the basis of this material. If he does, it is not likely we will develop any more such information through the means employed. It is highly important that we do develop further information of this type in order that we may completely discredit King as the leader of the Negro people.

Next to Sullivan's recommendation that Courtney Evans hand-deliver a copy of the memorandum to the Attorney General, Director Hoover wrote: "No. A copy need *not* be given the A.G." 189

Jenkins was subsequently shown a copy of the report, but was not told the source of the information.

Shortly after the Honolulu bug, Sullivan changed his mind and recommended that the Attorney General be informed of information gathered by both the Willard and Honolulu bugs to "remove all doubt from the Attorney General's mind about the type of person King is." 190 Sullivan suggested:

Mr. Evans personally deliver to the Attorney General a copy of the attached "Top Secret" memorandum. It is also believed that Mr. Evans should indicate to the Attorney General that if King was to become aware of our coverage of him it is highly probable that we will no longer be able to develop such information through the means employed to date and that we, of course, are still desirous of continuing to develop such information.

Director Hoover wrote next to this recommendation "O.K." A notation in the margin states: "Done. 3/10/64. E[Evans]." 191 The memorandum sent to the Attorney General did not state the source of the information that it contained.

When shown Sullivan's memorandum by the Committee, Courtney Evans testified that he did not recall delivering the memorandum about Dr. King to the Attorney General, but that "I assume I must have in view of this record." 192 He doubted that he had spoken with the Attorney General about the substance of the memorandum, however, because "if I did have a conversation with him, I believe I would have written a memorandum as to that conversation." 193 When asked if he recalled ever telling the Attorney General that the memorandum contained information obtained through microphone coverage, Evans testified:

No, I do not. And considering the tenor of the times then, I would probably have been very circumspect and told him exactly what I was instructed to tell him and nothing more.... I think it is a matter of record that the relationship between the Attorney General and the Director had deteriorated to the point that they weren't speaking to each other. And consequently I felt that it was essential that I followed these instructions very explicitly. 194

A memorandum from Evans dated September 11, 1964, indicates that the Attorney General had in fact received the summary memorandum, but sheds no light on whether he was told the source of the information:

Before leaving office, Attorney General Kennedy instructed his Executive Assistant, Harold Reis, to return to the Bureau copies of top secret memoranda submitted to him by the FBI . . . on March 4, 1964, and June 1, 1964, as Mr. Kennedy did not feel this material should go to the general Department files. These memoranda deal with activities of Martin Luther King. Reis accordingly handed these memoranda to me. They are attached. 195

It is uncertain whether the Attorney General understood the source of the information after reading the FBI summary memoranda. Evans told the Committee that he never received any indication that the Attorney General suspected the FBI was

following Dr. King's activities with hidden microphones, and surmised that the Attorney General might have assumed the information was the product of live informants, or surveillance by local law enforcement agencies. 196 Walter Jenkins, who also read these memoranda, told the Committee that he had not suspected that the FBI had obtained the information in them by using microphones. 197 Bill Moyers, President Johnson's Assistant, also saw several of the memoranda concerning Dr. King, and testified that he had not realized that the FBI had collected the information through microphones. He told the Committee, however, that "the nature of the general references that were being made, I realized later, could only have come from that kind of knowledge unless there was an informer in Martin Luther King's presence a good bit of the time. 198

(b) Attorney General Nicholas deB. Katzenbach. -- Four FBI documents appear to indicate that Attorney General Katzenbach was informed about the FBI's microphone surveillance of Dr. King. Katzenbach testified that he could not recall having been informed of the surveillance, and stated that it would have been inconsistent with his claimed disapproval of a wiretap on Dr. King's home at the same time. The Bureau's position appears in a Domestic Intelligence memorandum listing the wiretaps and microphones installed in the investigation of Dr. King:

Attorney General Katzenbach was specifically notified of three of these microphone installations. In each of these three, instances the Attorney General was advised that a trespass was involved in the installation. 199

The Bureau maintains that Attorney General Katzenbach was advised of microphone placements in Dr. King's hotel rooms on the following occasions:

On May 13, 1965, the New York field office installed a microphone in Dr. King's suite at the Sheraton Atlantic Hotel in New York, pursuant to authorization from an Inspector in the Domestic Intelligence Division, apparently without Director Hoover's prior knowledge. According to a contemporaneous memorandum, the New York office had only a few hours notice of Dr. King's arrival and needed to install the microphone "immediately." 200 A memorandum dated May 17, addressed to the Attorney General and signed by Director Hoover, stated:

On May 12, 1965, information was obtained indicating a meeting of King and his advisors was to take place in New York on that date. Because of the importance of that meeting and the urgency of the situation, a microphone surveillance was effected on May 13 . . . 201

On October 14, 1965, a microphone was installed in Dr. King's room in the Astor Hotel in New York. This installation was approved by William Sullivan, head of the Domestic Intelligence Division, again without Director Hoover's prior knowledge, "on New York's assurance that full security was available, and since time was of the essence" (Sullivan claimed that the FBI had learned of Dr. King's plan to visit New York only a few hours before.) 202 On his memorandum informing Assistant to the Director Alan Belmont of the microphone placement, Sullivan wrote: "Memo to AG being prepared." A memorandum to the Attorney General, dated October 19 and signed by Director Hoover, stated that the Astor Hotel surveillance had been placed because of the "importance" of Dr. King's meeting with his advisers in New York "and the urgency of the situation." 203

On November 9, 1965, a microphone was installed in Dr. King's room in the Americana Hotel in New York. A Domestic Intelligence Division memorandum of that date states:

On New York's assurance that full security was available and since time was of the essence [as the FBI had learned of Dr. King's planned visit to New York on that day], New York was told to go ahead with the installation.... Inasmuch as the installation will be made today (11/29/65) and deactivated immediately upon King's departure, probably 11/30/65, we will promptly submit a memorandum to the Attorney General advising when the installation was made and when it was taken off. 204

A memorandum to the Attorney General, dated December 1, 1965, and bearing Director Hoover's signature, stated that "a microphone surveillance was effected November 29, 1965 on King ... and was discontinued on November 30, 1965." The reason for the installation was the "importance of the meeting and the urgency of the situation ..." 205

The FBI has given the Committee copies of the three memoranda to Attorney General Katzenbach informing him that microphones had been placed on Dr. King's rooms. Each is initialed "N deB K" in the upper right hand corner. When shown these memoranda, Katzenbach testified: "Each of these bears my initials in what appears to be my handwriting in the place where I customarily initialed Bureau memoranda." 206 He denied, however, any recollection of having received the memoranda. 207

The Bureau also supplied the Committee with a transmittal slip dated December 10, 1965.

Mr. Hoover --

Obviously these are particularly delicate surveillances and we should be very cautious in terms of the non-FBI people who may from time to time necessarily be involved in some aspect of installation.

N deB K 208

Katzenbach identified the handwritten note as his, and testified that although he recalled writing the note, he could not recall why he had written it. When asked if he recalled the "delicate surveillances" mentioned in the note, Katzenbach told the Committee:

I don't recall, and I have nothing in my possession that has served to refresh my recollection, and nothing has been shown to me by the Committee staff that serves to refresh my recollection.

Q. In your opinion, could this note have referred to the three mentioned electronic surveillances against Dr. King?

Mr. KATZENBACH. On its face it says that it did . . . it would seem to me that would be a possibility. I point out that it could refer to almost anything. My opinion is obviously, since I don't recall getting the first three, that this was not associated with it, and I really don't have enough recollection of what was associated with it to say. I did see Mr. Helms on that date. Whether it related to something he asked for, I don't know. 209

Katzenbach added that he was:

puzzled by the fact that the handwritten note, if related to the December 1 memorandum from the Director, is written on a separate piece of paper. It was then, and is now, my consistent practice to write notes of that kind on the incoming piece of paper, provided there is room to do so. 210

The documentary evidence -- the three notices that a microphone had been placed on a room occupied by Dr. King shortly before, and the note in Katzenbach's handwriting referring to "delicate surveillances" which the FBI states was sent to the Bureau with the last of the notices -- indicates that Attorney General Katzenbach knew of the microphone surveillance but did not order it halted. Katzenbach, in denying any knowledge of the microphones, pointed to two factors mitigating against the likelihood of his having permitted the surveillance to continue once learning of it: his rejection of a wiretap on Dr. King's new home in April 1965, the fact that his handwritten note urged caution in future surveillances, and that no microphone surveillances were carried out after the date of the note. 211

Katzenbach's position throughout his testimony before the Committee is best summarized by a portion of a written, sworn statement that he submitted at the time of his public appearance:

These memoranda do not indicate on their face the Bureau sought any prior authorization, or state any reasons why it was not sought. They appear to present me with information after the fact and request no authority to perform similar surveillances in the future. I believe the Bureau knew full well that I would not authorize the surveillances in question, not only because of the circumstances surrounding Dr. King, but particularly because the bugs were to be placed in a hotel room. That is among the worst possible invasions of privacy and would demand the strongest conceivable justification. Indeed, I believe this position had been made clear in written memoranda to the Bureau dating back to the 1950s, and I have a clear recollection of being critical of the Bureau for installing a bug in the bedroom of a leading member of the Mafia. I reaffirmed this position to the Bureau sometime in 1965 or 1966, but that reaffirmation may have postdated these memoranda.

Finally, I cannot recall any memoranda at any time informing me that the Bureau had installed a tap or a bug without my prior authorization. While I authorized Mr. Hoover to do so in emergency circumstances in a memorandum written in the summer of 1965, not only does the May memorandum predate that authorization, but there is nothing in the memoranda which suggests that on any of these occasions was there an "emergency." Further, my calendars, which are in the possession of the Committee, indicate my general availability 212 to the Bureau on two occasions involving these memoranda, and my total availability to the Bureau on the third. Nor do I have any recollection that the "emergency" procedure was ever invoked by the Bureau during my term in office.

Obviously I do not believe that I received these memoranda. Equally obvious is the fact that if I initialed them, I am mistaken in my belief. 213

Although apparently no microphones were placed in Dr. King's hotel rooms after the November 29, 1965 "bug" at the Americana Hotel, the Domestic Intelligence Division did make one further attempt to install a microphone. A memorandum from William Sullivan to Carl DeLoach, then Assistant to the Director, dated January 21, 1966, states that Sullivan had authorized the New York office to "bug" King's room during an anticipated three-day stay. Clyde Tolson wrote across this memorandum, "Remove this surveillance at once. 1/21," and Hoover added his "yes." Tolson added a note on the bottom of the memorandum, complaining, "No one here approved this. I have told Sullivan again not to institute a mike surveillance without the Director's approval." Hoover wrote next to this comment, "Right." 214

## **V. THE FBI'S EFFORT TO DISCREDIT DR. MARTIN LUTHER KING: 1964**

*Introduction and Summary* In December 1963, a meeting was convened at FBI headquarters to discuss various "avenues of approach aimed at neutralizing King as an effective Negro leader." Two weeks later, FBI agents planted the first microphones in Dr. King's hotel rooms in an "attempt" to obtain information about the private "activities of Dr. King and his associates" so that Dr. King could be "completely discredited." That same week, the head of the Domestic Intelligence Division recommended the promotion of a new "national Negro leader" who could "overshadow King and be in the position to assume the role of the leadership of the Negro people when King has been completely discredited."

The FBI's effort to discredit Dr. King and to undermine the SCLC involved plans touching on virtually every aspect of Dr. King's life. The FBI scrutinized Dr. King's tax returns, monitored his financial affairs, and even tried to establish that he had a secret foreign bank account. Religious leaders and institutions were contacted in an effort to undermine their support of him, and unfavorable material was "leaked" to the press. Bureau officials contacted members of Congress, and special "off the

record" testimony was prepared for the Director's use before the House Appropriations Committee. Efforts were made to turn White House and Justice Department Officials against Dr. King by barraging them with unfavorable reports and, according to one witness, even offering to play for a White House official tape recordings that the Bureau considered embarrassing to King.

This chapter examines not only the Bureau's efforts to discredit Dr. King, but the degree to which officials in other branches of the Government were responsible for those actions. A few months before the FBI held its December 1963 conference at which its program against Dr. King was apparently formulated, the Director distributed a "monograph" about Dr. King to the heads of several Governmental agencies. Attorney General Kennedy ordered it immediately withdrawn. During the course of the following year, the FBI sent several intelligence reports bearing on Dr. King's private life to the White House and Justice Department. Although government officials outside the FBI were not aware of the extent of the FBI's efforts to discredit Dr. King, officials of the Justice Department and of the White House did know that the FBI had offered tape recordings and derogatory information about Dr. King to reporters. The Attorney General went no further than complaining to the President and accepting a Bureau official's representation that the allegations were not true. President Johnson not only failed to order the Bureau to stop, but indeed cautioned it against dealing with certain reporters who had complained of its conduct.

#### *A. The FBI Disseminates the First King "Monograph" and Attorney General Kennedy Orders It Recalled: October 1963*

On October 15, 1963, William Sullivan forwarded to Assistant Director Alan Belmont for his approval a monograph entitled "Communism and the Negro Movement -- A Current Analysis." He proposed that it be distributed to the Attorney General, the White House, CIA, State Department, Defense Department, and Defense Department intelligence agencies. 215 Sullivan testified that the purpose of the monograph was to "discredit King." 216

Belmont submitted the monograph to the Director with a note stating:

The attached analysis of Communism and the Negro movement is highly explosive. It can be regarded as a personal attack on Martin Luther King. There is no doubt it will have a heavy impact on the Attorney General and anyone else to whom we disseminate....

The memorandum makes good reading and is based on information from reliable sources. We may well be charged, however, with expressing opinions and conclusions, particularly with reference to some of the statements about King.

This memorandum may startle the Attorney General, particularly in view of his past association with King, and the fact that we are disseminating this outside the Department. He may resent this. Nevertheless, the memorandum is a powerful warning against Communist influence in the Negro movement, and we will be carrying out our responsibility by disseminating it to the people indicated in the attached memorandum. 217

The monograph was distributed on October 18, 1963. One week later, the Attorney General called Courtney Evans and stated that he had just learned that the Army had received a copy of a report about Dr. King's alleged communist activities. Evans reported to Belmont:

He was obviously irritated. He went on to ask if the Army got copies of all reports submitted to him.... The Attorney General asked what responsibilities the Army had in relation to the communist background of Martin Luther King. I told the Attorney General ... that the Army had an interest in communist activities particularly in relation to racial matters because the military had to be called on if civil disturbances arising out of such matters went beyond the ability of civilian authorities. This explanation seemed to serve no purpose. 218

Director Hoover recorded in a memorandum of the same date:

The Attorney General called and advised me there was a lot of talk at the Pentagon regarding the document.... The Attorney General anticipated that this information would leak out as the military didn't like the Negroes.

The Attorney General felt we should get back all copies of the document. I told him ... we would get them from all agencies to which they were disseminated.... I also told him if any newspapers asked about this, no comment would be made and no mention would be made that such a document existed. 219

All copies were recovered by October 28.

Burke Marshall, Assistant Attorney General in charge of the Civil Rights Division under Robert Kennedy, told the Committee that the monograph was:

a personal diatribe . . . a personal attack without evidentiary support on the character, the moral character and person of Dr. Martin Luther King, and it was only peripherally related to anything substantive, like whether or not there was communist infiltration or influence on the civil rights movement.... It was a personal attack on the man and went far afield from the charges [of possible communist influence]. 220

Marshall recalled that he had been very "irritated" about the monograph and that the Attorney General had "thought it was outrageous." He remembered that the Attorney General had ordered the monograph withdrawn, but did not know if the Attorney General had taken any further steps to reprimand the Bureau. 221

*B. The FBI Plans Its Campaign To Discredit Dr. King: December 23, 1963*

On December 23, 1963, a nine-hour conference was held at FBI headquarters to discuss Martin Luther King. In attendance were Assistant Director Sullivan, Internal Security Section Chief Frederick Baumgardner, three other FBI headquarters officials, and two agents from the FBI's Atlanta Field Office.

A prepared list of twenty-one proposals was presented and discussed. The proposals raised the possibility of "using" ministers, "disgruntled" acquaintances, "aggressive" newsmen, "colored" agents, Dr. King's housekeeper, and even suggested using Dr. King's wife or "placing a good looking female plant in King's office." 222 An account of the meeting written by William Sullivan emphasized that the Bureau must take a "discreet approach" in developing information about Dr. King for use "at an opportune time in a counterintelligence move to discredit him." It was generally agreed that the Bureau should make use of "all available investigative techniques coupled with meticulous, planning, boldness, and ingenuity, tempered only with good judgment," [sic] but that "discretion must not reach the point of timidity." 223

Sullivan's memorandum reported that the following decisions were made at the conference:

- (1) We must determine and check out all of the employees of the SCLC.
- (2) We must locate and monitor the funds of the SCLC.
- (3) We must identify and check out the sources who contribute to the SCLC.
- (4) We must continue to keep close watch on King's personal activities.
- (5) We will, at the proper time when it can be done, without embarrassment to the Bureau, expose King as an opportunist who is not a sincere person but is exploiting the racial situation for personal gain.
- (6) We will explore the possibility of utilizing additional specialized investigative techniques at the SCLC office.

Sullivan described the purpose of the meeting as

To explore how best to carry on our investigation to produce the desired results without embarrassment to the Bureau. Included in our discussion was a complete analysis of the avenues of approach aimed at neutralizing King as an effective Negro leader and developing evidence concerning King's continued dependence on communists for guidance and direction. 224

Precisely what prompted the Bureau to decide upon this drastic now approach is still unclear.

William Sullivan was asked by the Committee whether tactics, such as placing female "plants," were common practices of the FBI. Sullivan testified that they were:

common practice among intelligence services all over the world. This is not an isolated phenomenon. . . . This is a common practice, rough, tough, dirty business. Whether we should be in it or not, that is for you folks to decide. We are in it .... No holds were barred. We have used that technique against Soviet agents. They have used it against us.

Question. The same methods were brought home?

Mr. SULLIVAN. Brought home against any organization against which we were targeted. We did not differentiate. This is a rough, tough business.

Senator MONDALE. Would it be safe to say that the techniques we learned in fighting ... true espionage in World War II came to be used against some of our own American citizens?

Mr. SULLIVAN. That would be a correct deduction. 225

Sullivan testified that the plans formulated at the December 24, 1963 meeting were in accord with "Mr. Hoover's policy." 226 After reviewing the memoranda, Sullivan emphasized,

I want to make this clear, this is not an isolated phenomenon, that this was a practice of the Bureau down through the years. I might say it often became a real character assassination. 227

Sullivan was asked by the Committee whether he or any other employees of the Bureau ever objected to using these tactics. Sullivan responded:

Not to my recollection ... I was not ready at that time to collide with him. Everybody in the Division went right along with Hoover's policy. I do not recall anybody ever raising a question.

... never once did I bear anybody, including myself, raise the question, is this course of action which we have agreed upon lawful, is it legal, is it ethical or moral? We never gave any thought to this realm of reasoning, because we were just naturally pragmatists. The one thing we were concerned about will this course of action work, will it get us what we want, will we reach the objective that we desire to reach?

As far as legality is concerned, morals or ethics, was never raised by myself or anybody else.... I think this suggests really in government we are amoral. 228

On December 29, 1963, less than a week after the FBI conference, Time magazine chose Dr. King as the "Man of the Year," describing him as the "unchallenged voice of the Negro people ... [who] has infused the Negroes themselves with the fiber that gives their revolution its true stature." 229 Hoover wrote across the memorandum informing him of this honor: "They had to dig deep in the garbage to come up with this one." 230

*C. William Sullivan proposes a plan to promote a new negro leader: January 1964*

On January 6, 1964 -- about two weeks after the FBI's conference to plan methods of "neutralizing" Dr. King's influence and to gather information about Dr. King's personal life -- the FBI installed the microphone in Dr. King's room at the Willard Hotel. As explained in the preceding chapter, additional microphones soon followed; physical and photographic surveillance was initiated; special Headquarters "briefings" were held; "dry runs" were planned; and the most sophisticated and experienced Bureau personnel were deployed to gather information that might be used in a concerted effort to destroy Dr. King's influence.

Two days after the installation of the Willard Hotel microphones, Assistant Director William Sullivan proposed that the FBI select a new "national Negro leader" as Dr. King's successor. In proposing the plan, Sullivan stated:

It should be clear to all of us that Martin Luther King must, at some propitious point in the future, be revealed to the people of this country and to his Negro followers as being what he actually is -- a fraud, demagogue and scoundrel. When the true facts concerning his activities are presented, such should be enough, if handled properly, to take him off his pedestal and to reduce him completely in influence. When this is done, and it can be and will be done, obviously much confusion will reign, particularly among the Negro people. ... The Negroes will be left without a national leader of sufficiently compelling personality to steer them in the proper direction. This is what could happen, but need not happen if the right kind of a national Negro leader could at this time be gradually developed so as to overshadow Dr. King and be in the position to assume the role of the leadership of the Negro people when King has been completely discredited.

For some months I have been thinking about this matter. One day I had an opportunity to explore this from a philosophical and sociological standpoint with [an acquaintance] whom I have known for some years.... I asked [him] to give the matter some attention and if he knew any Negro of outstanding intelligence and ability to let me know and we would have a discussion. [He] has submitted to me the name of the above-captioned person. Enclosed with this memorandum is an outline of [the person's] biography which is truly remarkable for a man so young. On scanning this biography, it will be seen that [he] does have all the qualifications of the kind of a Negro I have in mind to advance to positions of national leadership....

If this thing can be set up properly without the Bureau in any way becoming directly involved, I think it would be not only a great help to the FBI but would be a fine thing for the country at large. While I am not specifying at this moment, there are various ways in which the FBI could give this entire matter the proper direction and development. There are highly placed contacts of the FBI who might be very helpful to further such a step. These can be discussed in detail later when I have probed more fully into the possibilities 231

When Sullivan was shown this memorandum by the Committee, he testified:

I'm very proud of this memorandum, one of the best memoranda I ever wrote. I think here I was showing some concern for the country. 232

Sullivan sought the Director's approval "to explore this whole matter in greater detail." The Director noted his own "o.k." and added:

I am glad to see that "light" has finally, though dismally delayed, come to the Domestic Int. Div. I struggled for months to get over the fact that the communists were taking over the racial movement but our experts here couldn't or wouldn't see it. 233

It is uncertain whether the FBI took steps to implement Sullivan's plan. The FBI files contain no additional memoranda on the subject. The successor for Dr. King proposed in Sullivan's memorandum has told the Committee that he was never contacted

by the FBI, and that he was not aware of the FBI's plans for him or of any attempts by the FBI to promote him as a civil rights leader. 234

*D. FBI Headquarters Orders the Field Offices To Intensify Efforts to Discredit Dr. King: April-August 1964*

On April 1, 1964, in response to a suggestion from the Atlanta field office for another conference in Washington to plan strategy against Dr. King, FBI Headquarters ordered the Atlanta and New York offices to:

give the matter of instant investigation a thorough analysis with a view toward suggesting new avenues of investigation and intensification in areas already being explored. Bear in mind the main goals of this matter; namely, determining the extent of the communist influence in racial matters and taking such *action as is appropriate to neutralize or completely discredit the effectiveness of Martin Luther King, Jr., as a Negro leader.* . . . 235 [Emphasis added.]

Headquarters listed several arms "having potential for further inquiry":

possibilities of anonymous source contacts, possibilities of utilizing contacts in the news media field, initiating discreet checks relative to developing background information on employees of the Southern Christian Leadership Conference (SCLC) ; remaining alert to the possibility of capitalizing on any disgruntled SCLC employee; the possibility of developing information concerning any financial dealings of King which may be illegal; and the development of subversive information pertaining to SCLC employees. 236

The Atlanta Office responded with several ideas for "how the effectiveness of King can be neutralized or discredited. 237

-- Determining whether a "rift" was developing between Dr. King and Roy Wilkins, head of the NAACP, and if so, using newspapers friendly to the Bureau to "feed pertinent subversive connections and dealings of King to Wilkins."

-- "Furnishing to friendly newspapers on an anonymous basis, certain specific leads where he may develop the necessary data so that he may further write critical news stories."

-- "Discreetly investigate the background of twelve key (SCLC) employees and associates in an effort to obtain some weakness that could be used for counter-intelligence activities."

-- "Injection of false information with certain discontented (SCLC) employees."

-- Sending letters to SCLC's financial donors, written on SCLC stationery fabricated in the FBI laboratory and bearing Dr. King's signature, advising the donors that the IRS was checking SCLC's tax records. "It is believed that such a letter of this type from SCLC may cause considerable concern and eliminate future contributions."

-- Placing a pretext call to an SCLC creditor to impress him with the "financial plight" of the SCLC so that he "may be incited into collection efforts."

-Examining Dr. King's checking accounts and credit card accounts to develop information about his financial affairs.

-- Making a survey to determine whether to install a "trash cover" of the SCLC office in Atlanta. 238

The Atlanta office also assured the Bureau that it would continue to explore the possibility of technical coverage of an Atlanta apartment frequently used by Dr. King, although coverage would involve several security problems. 239

Shortly after these proposals were submitted, the Director expressed "the Bureau's gratitude" to the Atlanta agents for their "aggressive imagination looking toward more and better ways of meeting the problems involved" in the investigation. 240

The New York office submitted only a few new suggestions, asserting that "It is felt that [our] coverage is adequate." 241 To this the Director replied:

The Bureau cannot adjudge as adequate any coverage which does not positively provide to the Bureau 100 percent of the intelligence relating to the communist influence in racial matters. Obviously, we are not securing all the information that is pertinent and needs to be secured. Our coverage, therefore, is not deemed adequate. 242

With respect to the New York office's conclusions about a civil rights leader and associate of Dr. King, who was also under close Bureau scrutiny for alleged "subversive" ties, the Director wrote:

The Bureau does not agree with the expressed belief of the New York office that [ ] is not sympathetic to the Party cause. While there may not be any direct evidence that [ ] is a communist, neither is there any substantial evidence that he is anticommunist. 243

Surprisingly, the Bureau did not even comment on the statement of the New York office that Adviser A was "not now under CP discipline in the civil rights field." 244

In June 1964 a special unit was established in the Bureau's Internal Security Section to handle exclusively "the over-all problem of communist penetration with the racial movement." 245 The memorandum justifying the special unit pointed out that "urgency for the FBI to 'stay ahead' of the situation is tied to pending civil rights legislation and foreseeable ramifications arising out of the complex political situations in an election year where civil rights and social disturbances will play a key role in campaign efforts and possible election results." 246

In August the Bureau issued new instructions directing the field "to broaden its efforts relating to communist influences in the racial field." 247 The term "communist," the field was told, "should be interpreted in its broadest sense as including persons not only adhering to the principles of the CPUSA itself, but also to such splinter and offshoot groups as the Socialist Workers Party, Progressive Labor and the like." 248 The Director pointed out:

The news media of recent months mirror the civil rights issue as probably the number one domestic issue in the political spectrum. There are clear and unmistakable signs that we are in the midst of a social revolution with the racial movement as its core. The Bureau, in meeting its responsibilities in this area, is an integral part of this revolution . . . . 249

The Special Unit that had been established in June was made a permanent unit.

#### *E. Steps Taken by the FBI in 1964 to Discredit Dr. King*

The FBI's program to "neutralize" Martin Luther King as the leader of the civil rights movement went far beyond the planning and collection stage. The Committee has discovered the following attempts by the FBI to discredit Dr. King in 1964.

##### *1. Attempts to Discredit Dr. King with the White House*

As set forth in the preceding chapter, a memorandum summarizing the contents of the Willard Hotel tapes was shown to presidential assistant Walter Jenkins in January 1964 "inasmuch as King is seeking an appointment with President Johnson." 250 The summary of information obtained from surveillance at the Willard, Honolulu, and Los Angeles hotels was sent to the White House and to the Attorney General in March 1964 in order to "remove all doubt from the Attorney General's mind as to the type of person King is." 251 A third memorandum derived from microphone surveillance was sent to the White House in July. 252

##### *2. Attempts to Discredit Dr. King With the Congress*

In January 1964, Director Hoover gave off-the-record testimony before the House Appropriations Committee. His precise comments are not known. The briefing paper prepared for his appearance by the Domestic Intelligence Division, however, indicates that Director Hoover was prepared to represent to the Committee that Dr. King's advisers were communists and that Dr. King engaged in improper behavior. 253

The Director's off-the-record briefing had an immediate impact. The FBI was soon told that the members of the Committee were "very concerned regarding the background" of Dr. King, and that some members of the Committee felt that the President should be requested to instruct the USIA to withdraw a film dealing favorably with the August 1963 March on Washington. They were, reported to be "particularly disturbed and irked at the fact that Martin Luther King appears to predominate the film." 254

In March 1964 Cartha DeLoach, Assistant to the Director, reported that he had been approached by Representative Howard Smith (D-Va.), Chairman of the House Rules Committee. According to DeLoach's memorandum, Representative Smith said that he had heard about the Director's remarks before the Appropriations Committee. Congressman Smith was reported to have asked for information for a speech about Dr. King on the floor of the House. DeLoach declined to furnish the required information, but recommended to the Director that Congressman Smith might be useful in the future because a speech by him about Dr. King would be picked up by "newspapers all over the Nation." 255

In a television interview several years later, Congressman Rooney stated:

Now you talk about the FBI leaking something about Martin Luther King. I happen to know all about Martin Luther King, but I have never told anybody.

INTERVIEWER. How do you know everything about Martin Luther King?

Representative ROONEY. From the Federal Bureau of Investigation.

INTERVIEWER. They've told you -- gave you information based on tapes or other sources about Martin Luther King?

Representative RODNEY. They did.

INTERVIEWER. Is that proper?

Representative ROONEY. Why not? 256

### *3. Attempts to Discredit Dr. King with Universities*

In early March 1964, the Bureau learned that Marquette University in Milwaukee, Wisconsin contemplated awarding Dr. King an honorary degree. A memorandum noted:

It is shocking indeed that the possibility exists that King may receive an Honorary Degree from the same institution which honored the Director with such a degree in 1950. . . . By making pertinent information available to [a University official] at this time, on a strictly confidential basis, we will be giving the University sufficient time to enable it to take positive action in a manner which might avoid embarrassment to the University. 257

The university official was briefed by an FBI agent on Dr. King's background and assured the Bureau that Dr. King would not be considered for an honorary degree. The result of this FBI project is unclear.

In April 1964, the FBI learned that Dr. King had been offered an honorary degree by Springfield College. DeLoach visited Senator Leverett Saltonstall, who was a member of the board of the College, in an effort to convince him to influence the College to withdraw its offer. According to DeLoach, Senator Saltonstall promised to speak with an official of the College. The College official was reported to have subsequently visited DeLoach, 258 but to have said that he would be unable to "uninvite" Dr. King because the information concerning Dr. King had to be held in confidence, and the board of trustees was governed by "liberals." 259

### *4. Attempts to Discredit Dr. King with Churches*

On June 12, 1964, William Sullivan wrote a memorandum stating that he had been contacted by the General Secretary of the National Council of the Churches of Christ. Sullivan reported that, "I took the liberty of advising [him] confidentially of the fact that Dr. Martin Luther King not only left a great deal to be desired from the standpoint of Communism, but also from the standpoint of personal conduct." Sullivan observed:

I think that we have sowed an idea here, which may do some good. I will follow up on the matter very discreetly to see what desirable results may emanate therefrom. 260

Sullivan met again with the General Secretary in mid-December 1964 and reported that the General Secretary had assured him "steps have been taken by the National Council of the Churches of Christ to make certain from this time on that Martin Luther King will never get 'one single dollar' of financial support from the National Council." Sullivan reported that the Secretary stated that he had discussed Dr. King's background with some "key" protestant clergymen who were "horrificed." Sullivan also noted that the Secretary said that he also intended to discuss the matter with Roy Wilkins to persuade Wilkins "that Negro leaders should completely isolate King and remove him from the role he is now occupying in civil rights activities. 261

On December 8, 1964, the Director authorized the disclosure of information about Dr. King's personal life to an influential member of the Baptist World Alliance (BWA), so that he could pass the information along to the General Secretary of BWA, and to BWA Program Committee members, to prevent the Committee from inviting Dr. King to address the BWA's 1965 Congress in Miami Beach. The Director rejected a proposal, however, for "arranging for [certain BWA members] to listen to sources we have concerning this matter." 262

### *5. Attempts to Discredit Dr. King with the Pope*

On August 31, 1964, the FBI learned that Dr. King, who was going to be touring Europe in September, might have plans to visit the Pope. Internal Security Section Chief Baumgardner observed:

It would be shocking indeed for such an unscrupulous character as King to receive an audience with the Pope. It is believed that if a plan to see the Pope is in the making, it ought to be nipped in the bud. We have considered different possibilities for meeting this problem and believe that the best one would be to have Assistant Director Malone of the New York office personally contact Francis Cardinal Spellman and on a highly confidential basis bring to the Cardinal's attention the fact that King is to visit Rome....

Malone should be able to impress upon the Cardinal the likely embarrassment that may result to the Pope should he grant King an audience and King is later discredited. 263

On September 8, Baumgardner reported:

Malone called today and stated that he had discussed the situation with Cardinal Spellman over the weekend and he said that the Cardinal took instant steps to advise the Vatican against granting any audience to King . . . Cardinal Spellman is going to Rome next week . . . and thus will be on the scene personally and further insure that the Pope is not placed in an embarrassing position through any contact with King. 264

The FBI's efforts were to no avail. The Pope met with Dr. King. The Director wrote across the memoranda informing him of that meeting, "astounding," and "I am amazed that the Pope gave an audience to such a [excised by FBI]." 265 The Director then initiated inquiries into the reason for the failure of this project.

#### *6. The Attempt to Discredit Dr. King During His Receipt of the Nobel Peace Prize*

On October 14, 1964, Martin Luther King was named to win the Nobel Peace Prize. He received the prize in Europe on December 10, 1965. The FBI took measures to dampen Dr. King's welcome, both in Europe and on his return home.

On November 22, 1964 -- two weeks before Dr. King's trip to receive the prize -- the Domestic Intelligence Division assembled a thirteen-page updated printed version of the monograph which Attorney General Kennedy had ordered recalled in October 1963. 266 A copy was sent to Bill Moyers, Special Assistant to the President, on December 1, 1964, with a letter requesting his advice concerning whether the monograph should also be distributed to "responsible officials in the Executive Branch." 267 Moyers gave his permission on December 7, 268 and copies were distributed to the heads of several executive agencies. 269

Information about Dr. King's private life was also made available to United Nations representatives Adlai Stevenson and Ralph Bunche, who the Bureau had learned were being considered as possible participants at the December 1964 "welcome home" reception for Dr. King. 270

Three days after Vice President-elect Humphrey participated in one of the "welcome home" receptions for Dr. King in New York, the Bureau sent him a copy of the updated King monograph and a separate memorandum entitled "Martin Luther King, Jr.: His Personal Conduct." 272 On December 8, 1964, the Bureau decided to brief Governor Nelson Rockefeller about Dr. King's private life and alleged Communist associations, apparently to dissuade the Governor from taking part in ceremonies commending Dr. King for having received the Nobel Prize. 273

Upon learning that Dr. King might meet with a certain foreign leader, FBI headquarters instructed the FBI representative in that country to brief the proper authorities about Dr. King. 274 The United States ambassadors in London and Oslo were briefed about Dr. King because "the Ambassadors might consider entertaining King while he is in Europe to receive the Nobel Peace Prize" and it might be possible to "forestall such action by the Ambassadors if they were briefed." The ambassadors in Stockholm and Copenhagen were also briefed because "King is also to visit those cities." 275

On November 10, 1964, the FBI learned that the United States Information Agency was considering requesting Dr. King to engage in a one-week lecture tour in Europe following his receipt of the Noble Prize. Hoover approved the Domestic Intelligence Division's recommendation that USIA be furnished with the latest critical Bureau reports about Dr. King. 276

#### *7. Attempts to Block Dr. King's Publications*

On September 11, 1964, the FBI learned that Dr. King intended to publish an article in a major national publication. The Domestic Intelligence Division noted that it did not know "what line King will take in the article or what its specific stands will be," but nonetheless recommended that "it would be well to prevent any publication of his views." 277

The task of preventing publication was assigned to an agent with contacts at the magazine who had "forestalled" the publication of an article by Dr. King in that magazine earlier in 1964. 278

The agent subsequently reported that he had contacted an official of the magazine in late September. According to the agent, the official had agreed to "endeavor to assist" the FBI, and had been briefed about King, but was unable to block publication because a contractual agreement had already been made. 279 The FBI did apparently have some influence at the magazine, however, because a memorandum reporting the incident concludes:

In connection with this [magazine] article by King, our sources have indicated that since he was awarded the Nobel Peace Prize he has attempted through some of his associates to change the [magazine] article in an effort to soften criticism made by him against other civil rights groups and leaders. King feared that such criticism would cause difficulties in the civil rights movement. The [magazine], however, has resisted King's efforts to make these changes. 280

In February 1964, the Director alerted the field offices that Dr. King was writing a new book, and noted that "it is entirely possible that with the publication of the book the Bureau may desire to take some action, possibly in the counterintelligence area or otherwise, which may be designed to discredit King or otherwise neutralize his effectiveness . . ." 281

The field offices were instructed to maintain information relating to the preparation and publication of the book. The FBI files indicate that this information was collected, but it is not clear whether it was ever used.

#### *8. Attempt to Undermine the National Science Foundation's Cooperation with the SCLC*

The FBI sent the National Science Foundation (NSF) a copy of the second printed monograph on King in order to convince the NSF to remove the SCLC from "the NSF program to obtain qualified Negro students from southern schools." 282

#### *9. Unsuccessful FBI Attempts to Locate Financial Improprieties*

In early January 1964, the Chief of the Internal Security Section of the Domestic Intelligence Division, Frederick J. Baumgardner, recommended that "examination of recent income tax returns of King might well reveal information which could assist the Bureau in its efforts to discredit King or neutralize his effectiveness." 283 The Intelligence Division subsequently acquired from the Internal Revenue Service copies of income tax returns for the prior five years of Dr. King, the SCLC, and the Gandhi Society, 284 an organization which the FBI stated "augmented" the fund-raising activities of the SCLC. 285 The Intelligence Division of the IRS told the Bureau that "IRS had very carefully scrutinized King's returns in the past but had not been able to establish a cause of action against him." 286 However, the IRS assured the FBI that Dr. King's current returns would be scrutinized "very carefully to determine whether any violations appear." 287 None did.

Undeterred, the Director informed the field offices that "the Bureau believes that more than ever it would be most desirable to identify any bank where [King] may have an account ... and consider an audit of such account." 288

One effort to uncover derogatory information about Dr. King was conceived by the Supervisor in charge of the King case during a golf game. 289 A remote acquaintance of the Supervisor mentioned that he had heard from a friend that an acquaintance had said that Dr. King had a numbered account in a foreign bank with a balance of over one million dollars. The Supervisor suggested to Sullivan:

If we can prove that King is hoarding large sums of money, we would have available possibly the best information to date which could be used to discredit him, especially in the eyes of his own people . . . . we may take the action to discredit King ourselves through friendly news sources, or the like, or we might turn the information over to the Internal Revenue Service for possible criminal prosecution. 290

The plan was approved by Director Hoover and an inquiry was initiated. By December 1965, the investigation into a possible foreign bank account was described by the Director as "the most important presently pending" facet of the King investigation. 291 The investigation was dropped shortly afterward, however, when it developed that the initial source of the allegation informed the FBI that "it was merely a wild conclusion that had been previously drawn by someone whose identity he does not now recall." 292

#### *F. The Question of Whether Government Officials Outside of the FBI Were Aware of the FBI's Effort to Discredit Dr. King*

There is no doubt that the responsible officials in the Kennedy and Johnson administrations were aware of the FBI's COMINFIL investigation involving Dr. King and the SCLC and that the wiretaps used by the FBI to collect its information were authorized under procedures existing at the time. While there is some question concerning whether officials outside of the FBI were aware that the FBI was using microphones to cover Dr. King's activities, there is no doubt that the product of the microphone surveillance was widely disseminated within the executive branch. Indeed, dissemination of the printed "monograph" about Dr. King to several executive agencies was expressly approved by Bill Moyers, President Johnson's assistant, in January 1965.

The Committee has been unable to determine the extent to which the FBI's effort to discredit Dr. King and the SCLC by disseminating unfavorable information outside of the Government was suspected or known about by Government officials responsible for supervising the FBI. The Committee requested the FBI to provide any information in its possession reflecting that any Presidents or Attorneys General during the relevant periods were aware of any FBI efforts to "discredit" or "neutralize" Dr. King. The Bureau replied:

A review of the King file in response to other items included in the request and a polling of all Headquarters personnel involved in that and previous reviews did not result in the location or recollection of any information in FBIHQ files to indicate any of the aforementioned individuals were specifically aware of any efforts, steps or plans or proposals to "discredit" or "neutralize" King.

It is, of course, evident that much information developed in the course of the King case involving him in activities of interest to the White House and to representatives of the Department of Justice, including Attorneys General Kennedy and Katzenbach, as well as Assistant Attorney General Marshall, was such that it could conceivably have been the opinion of one or more of the above individuals that such information was being provided to "discredit" or "neutralize" King. 293

Nicholas Katzenbach, Burke Marshall, Walter Jenkins, and Bill Moyers have told the Committee that they did not realize that the FBI was engaged in a concerted effort to discredit Dr. King, and that to the best of their knowledge, Presidents John Kennedy and Lyndon Johnson, as well as Attorney General Robert Kennedy, were not aware of that effort. There was no evidence that the FBI's program to discredit Dr. King was authorized outside of the FBI. There is evidence, however, that officials responsible for supervising the FBI received indications that such an effort to discredit Dr. King might be taking place, and failed to take adequate steps to prevent it. President Johnson and his Attorneys General were aware at least of Bureau attempts to disseminate unfavorable reports about Dr. King to the press. Top Executive Branch officials have told the Committee that they had believed that the FBI had tape recordings embarrassing to Dr. King, and that the FBI had offered to play those tapes both to a government official and to reporters. The evidence reveals a disturbing attitude of unconcern by responsible officials and a failure on their part to make appropriate corrective measures. As Nicholas Katzenbach explained to the Committee:

Nobody in the Department of Justice connected with Civil Rights could possibly have been unaware of Mr. Hoover's feelings (against Dr. King). Nobody could have been unaware of the potential for disaster which those feelings embodied. But, given the realities of the situation, I do not believe one could have anticipated the extremes to which it was apparently carried. 294a

The following incidents have played a part in our determination that high officials of the Executive Branch must share responsibility for the FBI's effort against Dr. King.

(1) As described in the previous chapter, a summary memorandum containing information gathered from the FBI microphone placed in Dr. King's room in the Willard hotel was shown to Presidential Assistant Walter Jenkins by Cartha DeLoach on January 14, 1964. According to DeLoach's contemporaneous account of that meeting:

Jenkins was of the opinion that the FBI could perform a service to the country if this matter could somehow be confidentially given to members of the press. I told him the Director had this in mind, however, also believed we should obtain additional information prior to discussing it with certain friends. 295

DeLoach testified that he could not recall the meeting with Jenkins, but that the memorandum should accurately reflect his conversation. 296

Jenkins told the Committee staff in an unsworn interview that he did not recall the meeting described in DeLoach's memorandum, but that he had no reason to doubt that he had read the summary memorandum which DeLoach claims Jenkins saw. Jenkins expressly denied, however, that he had suggested that the information in the summary memorandum should be "leaked" to the press, or that either he or President Johnson had ever suggested that information about Dr. King should be "leaked" to anyone. He added, however, that he might have used words to the effect that "this is something people should know about" -- referring to people in the Government -- which could have been misinterpreted by DeLoach. He did not recall DeLoach telling him that the Director ultimately planned to leak this information to "certain friends." 297

(2) A February 5, 1964 FBI memorandum reports a conversation between Edwin Guthman, the Justice Department's press secretary, and John Mohr of the Domestic Intelligence Division. According to Mohr's memorandum, Guthman told Mohr that he had heard that a reporter was preparing an article about Dr. King's alleged Communist affiliations.

Guthman stated he was quite concerned inasmuch as it appeared there had been a leak from the FBI in connection with this matter. He told me the Attorney General had been most hopeful that there would be no "leaks" concerning King.

From the tone of Guthman's entire remarks, it would appear he had two thoughts in mind without actually stating such thoughts. These, thoughts were (1) that the Attorney General is most anxious that information concerning King not be released; and (2) that the Attorney General's connections with King, and his defensive statements concerning King to Congress in Civil Rights hearings, would certainly injure the Attorney General's political chances for the future.

(H)e told me once again the Attorney General was not worried about what an exposure of King could do to him. He stated he and the Attorney General are only trying to protect FBI sources of information. 298

The memorandum states that Guthman was told "there had been no leaks from the FBI concerning Dr. Martin Luther King," and that Guthman had responded that "he had no proof whatsoever that the FBI had furnished information to the newspapers concerning King."

Guthman testified that he recalled the Justice Department had "suspected that the information had been leaked by the FBI." When asked the basis for that suspicion, he said that "we felt that the question of King and the association with [Advisers A] was a matter which was rather tightly held since it was not something of general knowledge." 299 Guthman said that he could "not specifically" recall a reaction by Attorney General Kennedy to this "leak":

except to be somewhat displeased over it, But that was in a sense all in a day's work and I don't recall anything specific. 300

Guthman testified that he did not recall any further efforts to determine whether the FBI had in fact leaked the story. 301

Guthman testified that DeLoach's memorandum "distorted" his remarks. Guthman said that his visit had been motivated, not by concerns about Kennedy's political future, but rather by a concern to protect FBI sources. 301a A memorandum dated February 5, 1964, by Guthman, does not mention a meeting with Mohr, but does contain an account of a meeting between Guthman and Cartha DeLoach on the previous day.

We both agreed that it was inevitable that King's connections with (Adviser A) would ultimately become public. I told DeLoach that our concern was over the FBI's source and that we had no other concern as to what the Attorney General had said or what our actions had been in connection with Martin Luther King.

DeLoach said he thought we should be concerned in view of what the Attorney General had said on the subject. I pointed out that anything the Attorney General had said had been cleared with the FBI. I told Deke that our record in this matter could stand any scrutiny and that, both Senator Russell and Senator Monroney had been fully apprised of the facts last summer or last fall. 302

A memorandum by Courtney Evans later that day reports that Evans discussed this matter with Assistant Attorney General Burke Marshall, who said that he did not intend to tell the reporter anything about Dr. King, but that "if he developed anything at all with regard to [the reporter's] source of information, he would pass this along to us . . ." Evans' memorandum also notes, "According to information developed by our Atlanta office on February 4, 1964, [the reporter] had in his possession what appeared to be a blind memorandum containing information as to [Adviser A's alleged connections with the Communist Party]." 303

A memorandum from Cartha DeLoach to Director Hoover dated February 18, 1964, apparently alludes to this incident and provides some insight into the political implications of the FBI's investigation of Dr. King. According to DeLoach's memorandum, Walter Jenkins and Bill Moyers of the White House told him that Burke Marshall had called and "indicated that the Attorney General had thought it highly advisable for the President to see the Department of Justice file on Martin Luther King . . . to make certain that the President knew all about King." 304

The memorandum states that Marshall then:

told Moyers that he wanted to give the White House a little warning. He stated that he personally knew that the FBI had leaked information concerning Martin Luther King to a newspaper reporter. Marshall told Moyers that he thought the White House should know this inasmuch as information concerning King would undoubtedly be coming out before the public in the near future.

Director Hoover wrote next to this entry. "Marshall is a liar." 305

The memorandum reports that Jenkins told DeLoach that he thought the Attorney General was concerned with "being on record with the President with the fact that although he has, for political purposes, defended King, he wants the President to realize that he, the Attorney General, is well aware of King's Communistic background." 306

The Director's handwritten note states: "Katzenbach did his dirt against us before Warren Commission and now Marshall is trying to poison the W (hite) H (ouse) about FBI." 307

Neither Burke Marshall nor Bill Moyers recalled the events described in DeLoach's memorandum. Marshall testified, however, about an incident involving the FBI's leaking information to a reporter that may well have been the same incident. Marshall recalled that sometime in 1964, a reporter told him that the Atlanta office of the FBI had given him information unfavorable to Dr. King. Marshall said that he phoned the Bureau official with whom he normally conducted business and said, "I'm informed by a reporter that your people in Atlanta have given this information about Martin Luther King, and that I think it is outrageous." The official at first said, "I don't believe it," but promised to inquire further. He later called and said, "The Director wants you to know that you're a ... damned liar." Marshall told the Committee, "It was very difficult with the Bureau because if you said that they were leaking derogatory information, they would say, 'no, we're not.'" 308

(3) Bill Moyers, President Johnson's assistant, testified that sometime during the "hurley-burley disorganized period" shortly after President Kennedy's assassination and prior to President Johnson's state of the Union address, he heard laughter inside Walter Jenkins' office. Moyers inquired and was told by a secretary that an FBI agent had come to the office and offered to play for Jenkins a tape recording which would have been personally embarrassing to Dr. King. Jenkins refused to listen to the tape. A week later, the same FBI agent again came to the White House and offered to play the tape for Jenkins, and again Jenkins refused to listen to it. 309

Jenkins told the Committee that he did not recall ever having been offered tapes by the FBI, and did not know of anyone on the White House staff who had been. 310

In addition to this incident, Moyers testified that he had been generally aware that the FBI reports about Dr. King included information of a personal nature, unrelated to the purpose of the FBI's investigation. When asked if he had ever asked the FBI why it was disseminating this type of material to the White House, Moyers responded:

I don't remember. I just assumed it was related to a fallout of the investigations concerning the communist allegations, which is what the President was concerned about.

Question. Did you ever question the propriety of the FBI's disseminating that type of information?

Answer. I never questioned it, no. I thought it was spurious and irrelevant ... If they were looking for other alleged communist efforts to embarrass King and the President, which is what the President thought, Kennedy or Johnson, it would just seem natural that other irrelevant and spurious information would come along with that investigation.

Question. And you found nothing improper about the FBI's sending that information along also?

Answer. Unnecessary? Improper at that time, no.

Question. Do you recall anyone in the White House ever questioning the propriety of the FBI's disseminating this type of material?

Answer. I think there were comments that tended to ridicule the FBI's doing this, but no. 311

Moyers testified that he had not suspected that the FBI was covering Dr. King's activities with microphones, although he conceded, "I subsequently realized I should have assumed that. . . . The nature of the general references that were being made I realized later could only have come from that kind of knowledge unless there was an informer in Martin Luther King's presence a good bit of the time." 312

(4) According to Nicholas Katzenbach, on November 25, 1964, the Washington Bureau Chief of a national news publication told him that one of his reporters had been approached by the FBI and given an opportunity to listen to some "interesting" tapes involving Dr. King. 313 Katzenbach told the Committee:

I was shocked by this revelation, and felt that the President should be advised immediately. On November 28, I flew, with Mr. Burke Marshall, the retiring head of the Civil Rights Division, to the LBJ Ranch.

On that occasion he and I informed the President of our conversation with the news editor and expressed in very strong terms our view that this was shocking conduct and politically extremely dangerous to the Presidency. I told the President my view that it should be stopped immediately and that he should personally contact Mr. Hoover. I received the impression that President Johnson took the matter very seriously and that he would do as I recommended.

On the following Monday, I was informed by at least one other reporter, and perhaps two, of similar offers made to them the prior week. I spoke to the Bureau official who had been identified as having made the offer and asked him about it. He flatly denied that any such offer had been made or that the FBI would engage in any such activity. Thereupon I asked at least one of the reporters -- perhaps all of them -- whether they would join me in confronting the Bureau on this issue. They declined to do so.

I do not know whether President Johnson discussed this matter with Mr. Hoover, or what, if anything, was said. However, I was quite confident that that particular activity ceased at that time, and I attributed it to Mr. Johnson's intervention. From that time until I left the Justice Department I never heard from any person of subsequent similar activity by the Bureau, and I assumed it had ceased. I should add only this: I believed that the tapes in question were not tapes resulting from Bureau surveillance but tapes acquired from State law enforcement authorities, and that such a representation was made to the reporter at the time. 314

Katzenbach testified that Cartha DeLoach was the Bureau official whom the reporters had identified as having offered the tapes. Katzenbach said that he had contacted DeLoach on his own volition, and that he did not tell DeLoach that he had discussed the matter with the President. He said that when he asked DeLoach if the Bureau had been offering to play tape recordings concerning Dr. King to reporters, DeLoach "told me rather angrily they were not." 315

Burke Marshall, when questioned by the Committee about these events, testified that the same two reporters had also informed him that Director Hoover was offering to play tape recordings of Dr. King. He testified that he had assumed the reporters "were telling the truth, that these tape recordings existed, and that they were being leaked by the FBI." 316 He testified that he had not suspected that the FBI had produced the tapes itself from microphone coverage, but that he had assumed the FBI had acquired the tape recordings from Southern law enforcement agencies.

It did not occur to me that the FBI would go around placing microphones in Dr. King's hotel . . . . The notion that they would plant the microphone, that they had a whole system of surveillance of that sort, involving illegal entry and trespass and things like that, did not occur to me. I would not have put it past the local police, but I considered at the time -- except for Mr. Hoover himself -- that the Bureau was a tightly controlled, well-run, efficient, law abiding law enforcement agency, that it didn't do things like that, and therefore, it didn't occur to me that they had done it. 317

Marshall recalled that he and Katzenbach had flown to President Johnson's ranch in Texas and had told the President that the FBI was offering the tape recordings to reporters. Marshall said that the President, was "shocked," and that the "conversation was in the context of it being very important and a very nasty piece of business that had to be stopped." Marshall did not know, however, what action the President subsequently took, if any, and could not remember whether the President had voiced an intention to take any specific action. 318

DeLoach, when asked if he had ever discussed the contents of tape recordings or surveillances of Dr. King with members of the press, testified: "I don't recall any such conversations." 319 DeLoach did state, however, that he had known about the tape recordings of Dr. King. He testified that one such tape recording had been in his office on one occasion, and that "it was so garbled and so terrible, I mean from the standpoint of fidelity, that I told them to knock it off and take it back." 320

The only record of this episode in the FBI files is a memorandum by DeLoach dated December 1, 1964, stating in part:

Bill Moyers, while I was at the White House, today, advised that word had gotten to the President this afternoon that [the newsman] was telling all over town . . . . that the FBI had told him that Martin Luther King was [excised]. [The newsman] according to Moyers, had stated to several people that, "If the FBI will do this to Martin Luther King, they will undoubtedly do it to anyone for personal reasons."

Moyers stated the President wanted to get this word to us so we would know not to trust [the newsman]. Moyers also stated that the President felt that [the newsman] lacked integrity and was

certainly no lover of the Johnson administration or the FBI. I told Moyers this was certainly obvious.  
321

DeLoach testified that he could not recall the events surrounding this memorandum. Bill Moyers, after reviewing DeLoach's memorandum, testified that he recalled nothing about the incident involving the newsman or about Katzenbach's and Marshall's discussion with the President. He did not recall ever having heard that the Bureau had offered to play tape recordings of Dr. King to reporters, or ever having discussed the matter with DeLoach. He testified, however, that DeLoach's memorandum:

sounds very plausible. I'm sure the President called me or he told me to tell him whatever [DeLoach's document reflects].

Question. Did the President tell you that he understood that [the newsman] was saying all over town that the Bureau had been offering tapes?

Answer. I can't remember the details of that. You know, I can't tell you the number of times the President was sounding off at [the newsman]. 322

When asked if it would be fair to conclude that the President had complained to Moyers about the newsman's revealing that the Bureau had offered to play tapes rather than about the fact that the Bureau had such tapes and had offered to play them, Moyers replied, "It would be fair to conclude that. I don't recall if that was exactly the way the President said it." 323

## **VI. THE HOOVER-KING CONTROVERSY BECOMES PUBLIC AND A TRUCE IS CALLED: APRIL-DECEMBER 1964**

### *Summary*

Director Hoover's dislike for Dr. King, which had been known within the Bureau since early 1962, 324 became a matter of public record in November 1964 when Director Hoover described Dr. King at a meeting with women reporters as the "most notorious liar" in the country. Dr. King responded that the Director was obviously "faltering" under the responsibilities of his office. The FBI immediately intensified its secret campaign against Dr. King, offering to play the tapes from microphone surveillance of Dr. King to reporters and to leak stories concerning him to the press. The FBI also sent a tape recording made from the microphone surveillance to Dr. King, with a warning which Dr. King and his close associates interpreted as an invitation to suicide.

The public aspects of the dispute peaked in December 1964, shortly before Dr. King went to Europe, to receive the Nobel Peace Prize. Dr. King publicly announced that it was time for the controversy to end, and arranged a meeting with Director Hoover to seal a truce. The FBI's public criticism stopped, but the Bureau's secret campaign to discredit Dr. King continued. Believing that Dr. King's downfall would severely harm the entire movement for racial equality, several prominent civil rights figures met with FBI officials to voice their concern and seek assurances from the FBI that the attacks on Dr. King would stop.

### *A. First Steps in the Public Controversy April-November 1964*

Although the FBI had been covertly engaged in a massive campaign to discredit Dr. King for several months, the fact that the FBI was the source of allegations about communist influence in the civil rights movement did not become public until the release of Director Hoover's off-the-record testimony before the House Appropriations Committee in April 1964. The Director was quoted in the press as having testified that "'Communist influence does exist in the Negro movement' and can influence 'large masses' of people.'" 325 Dr. King immediately issued a forceful reply:

It is very unfortunate that Mr. J. Edgar Hoover, in his claims of alleged communist infiltration in the civil rights movement, has allowed himself to aid and abet the salacious claims of southern racists and the extreme right-wing elements.

We challenge all who raise the "red" issue, whether they be newspaper columnists or the head of the FBI himself -- to come forward and provide real evidence which contradicts this stand of the SCLC. We are confident that this cannot be done.

We affirm that SCLC is unalterably opposed to the misguided philosophy of communism.

It is difficult to accept the word of the FBI on communist infiltration in the civil rights movement, when they have been so completely ineffectual in resolving the continued mayhem and brutality inflicted upon the Negro in the deep south. It would be encouraging to us if Mr. Hoover and the FBI would be as diligent in apprehending those responsible for bombing churches and killing little children as they are in seeking out alleged communist infiltration in the civil rights movement. 326

In early May 1964, Director Hoover made the following response to a question from United Press International concerning whether any communists were in positions of leadership in the civil rights movement:

Let me first emphasize that I realize the vast majority of Negroes have rejected and recognize communism for what it is ....

The existence and importance of the communist influence in the Negro movement should not be ignored or minimized, nor should it be exaggerated. The Communist Party will use its forces either in the open forum of public opinion or through its sympathizers who do not wear the badge of communism but who spout some of the same ideas carried in the Communist Party line. This is the influence which is capable of moving large masses of loyal and dedicated citizens toward communist objectives while being lured away from the true issues involved. It is up to the civil rights organizations themselves to recognize this and face up to it. 327

On May 11, Dr. King appeared on the news program, "Face the Nation." He denied communists had infiltrated decision-making positions in the civil rights movement or the SCLC and remarked that it was "unfortunate" that "such a great man" as Director Hoover had made allegations to that effect. Dr. King added that the Director should more appropriately have remarked on how surprising it was that so few Negroes had turned to communism in light of the treatment they had received. Dr. King said that the Justice Department had warned him of only one suspected communist in the SCLC, and that he had fired that individual. 328

The feud between Director Hoover and Dr. King heightened on November 18, 1964, with the Director's public allegation that Dr. King was the "most notorious liar" in the country. Director Hoover made that comment during a meeting with women reporters in the context of explaining how FBI agents were assigned in civil rights cases. According to a memorandum of the meeting written by DeLoach:

[The Director] stated it was a common belief in some circles that Special Agents in the South were all, without exception, southern born agents. As a matter of fact, 70% of the agents currently assigned to the South were born in the North. He stated that the "notorious" Martin Luther King had attempted to capitalize on this matter by claiming that all agents assigned to the Albany, Georgia, Resident Agency were southern born agents. As a matter of fact, 4 out of 5 of the agents assigned to the Albany, Georgia, Resident Agency were northern born. The Director stated he had instructed me to get in touch with Reverend King and line up an appointment so that King could be given the true facts. He stated that King had refused to give me an appointment and, therefore, he considered King to be the most "notorious liar" in the country. 329

When the reporters asked Director Hoover for more details about Dr. King,

he stated, off the record, "He is one of the lowest characters in the country." There was an immediate inquiry as to whether he could be quoted on the original statement that Martin Luther King was a liar and he stated, "Yes -- that is public record." 330

Nicholas Katzenbach, who was then Acting Attorney General, testified that he talked with Director Hoover about that press conference and

[Hoover] told me that it was not his practice to have press conferences, had not done so in the past, and would not do so again in the future. Perhaps the depth of his feeling with respect to Dr. King was revealed to me by his statement that he did not understand all the publicity which the remark had attracted because he had been asked a simple question and given a simple truthful answer. 331

Some of Dr. King's advisers drafted a strong response, one of which would have "blown Hoover out of the water, calling him every name in the book." 332 Before they had an opportunity to release the statement, Dr. King, who was then in Bimini, issued the following public reply:

I cannot conceive of Mr. Hoover making a statement like this without being under extreme pressure. He has apparently faltered under the awesome burden, complexities and responsibilities of his office. 333

Dr. King also sent a telegram to Director Hoover, which was made public, stating:

I was appalled and surprised at your reported statement maligning my integrity. What motivated such an irresponsible accusation is a mystery to me.

I have sincerely questioned the effectiveness of the F.B.I. in racial incidents, particularly where bombings and brutalities against Negroes are at issue . . .

I will be happy to discuss this question with you at length in the near future. Although your statement said you have attempted to meet with me, I have sought in vain for any record of such a request. 334

Dr. King also criticized Director Hoover in a press interview on the same day for "following the path of appeasement of political powers in the South." 335

The Domestic Intelligence Division prepared an analysis of the allegations in Dr. King's telegram, emphasizing the events two years earlier which the FBI had interpreted as a refusal by Dr. King to be interviewed. 336 Sullivan recommended against replying to Dr. King's charges or meeting with Dr. King. The Director penned his agreement on Sullivan's memorandum:

O.K. But I can't understand why we are unable to get the true facts before the public. We can't even get our accomplishments published. We are never taking the aggressive, but above lies remain unanswered. 337

The following day, the FBI mailed a tape recording from the Willard Hotel microphone surveillance to Dr. King accompanied by a letter which Dr. King and his associates interpreted as an invitation to suicide.

*B. Tapes Are Mailed to King: November 21, 1964*

Sometime in mid-November 1964 a decision was made at FBI Headquarters to mail a tape recording made during microphone surveillance of Dr. King to the SCLC office in Atlanta. William Sullivan, who was responsible for the project, testified that he first learned of the plan when Alan Belmont, Assistant to the Director, told him that Director Hoover wanted one of the King tapes mailed to Coretta King to precipitate their separation, thereby diminishing Dr. King's stature. Belmont told Sullivan that the FBI laboratory would "sterilize the tape to prevent its being traced to the Bureau." Sullivan was to have the tape mailed from a southern state. 338

Sullivan told the Committee that he had opposed the plan because it would warn Dr. King that his activities were being covered by microphones. According to Sullivan, Belmont agreed that the plan was unwise, but said that he had no power to stop it because the orders had come from Hoover and Tolson. 339

The FBI technician who prepared the tape told the Committee that he had been ordered to produce a "composite" tape from coverage of hotel rooms in Washington, D.C., San Francisco, and Los Angeles. After the tape was completed, a copy was left with Sullivan. 340

Sullivan testified that he ordered a "tight-lipped . . . reliable" agent to fly to Tampa, Florida to mail a package to Coretta King. He did not tell the agent that the package contained the King tape. 341 The agent testified that he flew to Miami and then called Sullivan, who instructed him to address the package to Martin Luther King, Jr. The agent said that he mailed the package from a post office near the Miami airport. 342 A travel voucher provided to the Committee by the FBI indicates that the agent flew to Miami on November 21, 1964.

Congressman Andrew Young, who was then Dr. King's assistant, recalled that the tape arrived at the SCLC Headquarters in Atlanta sometime before December 1964. Congressman Young said that the office personnel assumed the tape contained another of Dr. King's speeches; it was stored for a while, and later sent to Dr. King's home along with several other tapes. 343 Dr. King, Congressman Young, and some others listened to the tape sometime after Dr. King had returned from receiving the Nobel Peace Prize, probably in January 1965. Congressman Young testified that he probably destroyed the tape several years later.

Congressman Young recalled that the tape was of "very poor quality, very garbled," but that at least part of it appeared to have been made during a conversation between Dr. King and other civil rights leaders at the Willard Hotel. He testified that none of the comments on the tape related to the commission of a crime or to "affection" for communism. "It was personal conversation among friends." 344

According to Congressman Young a letter had accompanied the tape, stating that the tape would be released in 34 days and threatening "there is only one thing you can do to prevent this from happening." Congressman Young said that when he and Dr. King read the letter, "we assumed that the letter and the tape had been mailed 34 days before the receipt of the Nobel Prize, and that this was a threat to expose Martin just before he received the Nobel Prize." Congressman Young testified:

I think that the disturbing thing to Martin was that he felt somebody was trying to get him to commit suicide, and because it was a tape of a meeting in Washington and the postmark was from Florida, we assumed nobody had the capacity to do that other than the Federal Bureau of Investigation. 345

Both Young and Ralph Abernathy, who also heard the tape and read the letter, interpreted it as inviting Dr. King to take his own life. 346

William Sullivan testified that he could not recall such a letter. 347 The FBI provided the Committee with a copy of a letter which was found in Sullivan's office files following his discharge in 1971. 348 The letter stated in part:

King, look into your heart. You know you are a complete fraud and a greater liability to all of us Negroes. White people in this country have enough frauds of their own but I am sure they don't have one at this time that is any where near your equal. You are no clergyman and you know it. I repeat that you are a colossal fraud and an evil, vicious one at that....

King, like all frauds your end is approaching. You could have been our greatest leader. . . . But you are done. Your "honorary" degrees, your Nobel Prize (what a grim farce) and other awards will not save you. King, I repeat you are done....

The American public, the church organizations that have been helping -- Protestants, Catholics and Jews will know you for what you are -- an evil beast. So will others who have backed you. You are done.

King, there, is only one thing left for you to do. You know what it is. You have just 34 days in which to do (this exact number has been selected for a specific reason, it has definite practical significance). You are done. There is but one way out for you. You better take it before your filthy fraudulent self is bared to the nation.

Andrew Young stated that the last paragraph of this letter was identical with the letter that had been sent to the SCLC headquarters, but that the other portions of the letter appeared to be an earlier draft of the letter that he had seen. 349 Sullivan testified that he did not recall ever having seen the document, although it was "possible" that he had something to do with it and simply cannot remember. 350 Sullivan also testified that he could not recall any conversations at the FBI concerning the possibility of Dr. King's committing suicide. After reading the last paragraph of the letter, he conceded that it could be interpreted as an invitation to suicide, although so far as Sullivan knew, the FBI's goal was simply to convince Dr. King to resign from the SCLC, not to kill himself. 351

When asked by the Committee what had ultimately happened to the letter received by Reverend King, Andrew Young testified:

I'm not really sure about this now, but I think we discussed something about a letter with DeLoach -- I'm not certain whether it was DeLoach or the local FBI agents -- and they said they would be glad to look into it. They said, whenever we got any of these kind of threatening letters, to send them to them, and they would be glad to investigate. That letter may have been sent back to DeLoach. 352

*C. Attempts by the FBI to "Leak" to Reporters Tape Recordings Embarrassing to Dr. King*

After Director Hoover denounced Dr. King as a "notorious liar" in mid-November, the FBI apparently made several attempts to "leak" tape recordings concerning Dr. King to newsmen. One offer involving the Bureau Chief of a national news publication has been discussed at length in the preceding chapter. 353 David Kraslow, another reporter, has told a Committee staff member, that one of his "better sources at the Bureau" offered him a transcript of a tape recording about Dr. King. Kraslow said that his source read him a portion of the transcript on the phone, and claimed that it came from a "bug" operated by a Southern police agency. Kraslow said that he declined the offer. 354

It is not known how many other reporters were approached by the FBI during that period; Nicholas Katzenbach testified that at least one other reporter had informed him of a similar Bureau offer, 355 and other witnesses, such as James Farmer, have mentioned additional "leaks" from the Bureau. 356

*D. Roy Wilkins of NAACP meets with DeLoach to discuss allegations about Dr. King: November 27, 1964*

On November 24, 1964, Director Hoover gave a speech at Loyola University in Chicago in which he referred to moral laxness in civil rights groups. On November 27, Roy Wilkins, Executive Secretary of NAACP, phoned DeLoach and requested a meeting. Wilkins told the Committee that he had been disturbed by Hoover's Loyola University speech a few days before, and that he had realized Hoover had been referring to Dr. King because of rumors then circulating that the FBI had developed "derogatory" material about Dr. King. Wilkins was spurred into meeting with DeLoach by pointed inquiries from several reporters about whether Director Hoover's remarks had been directed toward Dr. King. Wilkins described his motivation in requesting the meeting as "protecting the civil rights movement." He said that Dr. King did not learn of his meeting with DeLoach until over a week after it had occurred. 357

DeLoach and Wilkins have given the Committee differing accounts of what was said at their meeting. DeLoach's version is summarized in a letter that he sent to President Johnson on November 30, 1964:

Wilkins said that ... the ruination of King would spell the downfall of the entire civil rights movement ... Wilkins indicated that [if allegations concerning King's personal conduct and supposed connections with communists were publicized], many of his Negro associates would rise to his defense. He felt, however, that many white people who believe in the civil rights movement and who yearly contribute from \$500 to \$50,000 to this movement would immediately cease their financial support. This loss, coupled with the loss of faith in King by millions of Americans, would halt any further progress of the civil rights movement. 358

A memorandum by DeLoach written shortly after the meeting states:

I told him ... that if King wanted war we certainly would give it to him. Wilkins shook his head and stated there was no doubt in his mind as to which side would lose if the FBI really came out with all its ammunition against King. I told him the ammunition was plentiful and that while we were not responsible for the many rumors being initiated against King, we had heard of these rumors and were certainly in a position to substantiate them. 359

DeLoach's memorandum stated that the meeting had concluded with Wilkins' promise to "tell King that he can't win in a battle with tile FBI and that the best thing for him to do is to retire from public life."

Wilkins told the Committee that DeLoach's description of the meeting was "self serving and filled with inaccuracies" and denied DeLoach's description of his remarks as "pure invention." 360 Wilkins stated that he had expressed his concern that accusations about Dr. King would cripple the civil rights movement, noting that if charges were publicly levied against Dr. King, the black community would side with Dr. King and the white community with Director Hoover. Wilkins said that he advised DeLoach that the FBI should not overreact to Dr. King's criticisms and that he considered Dr. King's criticism of the FBI's failure to vigorously enforce the civil rights laws to be totally justified. Wilkins told the Committee that although he had considered the meeting a "success" at the time, after reading DeLoach's memorandum he realized that he had failed to convey the impression that he had intended, since DeLoach had clearly misinterpreted his remarks. 361

When DeLoach was asked by the Committee if the "ammunition" he had threatened to use against Dr. King was the tape recordings, DeLoach replied, "I don't know what I had in mind, frankly, it's been so long ago, I can't recall." 362 Wilkins did not remember DeLoach's use of the term "ammunition," but did recall that DeLoach frequently alluded to "derogatory information," although Wilkins was unclear whether DeLoach was referring to allegations about Dr. King's personal conduct or about Communist infiltration of the SCLC. 363

The following day, an official of the Domestic Intelligence Division proposed to William Sullivan, head of the Division, that several leading members of the Black community should be briefed about Dr. King by the FBI "on a highly confidential basis." It was proposed that "the use of a tape, such as contemplated in your memorandum, together with a transcript for convenience in following the tape," should be used.

"The inclusion of U.S. Government officials, such as Carl Rowan or Ralph Bunch, is not suggested as they might feel a duty to advise the White House of such contemplated meeting. . . . This group should include such leadership as would be capable of removing King from the scene if they, of their own volition, decided this was the thing to do after such a briefing." 363a

*E. Dr. King and Director Hoover Meet: December 1, 1964*

According to one of Dr. King's legal counsels, Harry Wachtel, several prominent civil rights leaders told Dr. King of their concern that public controversy with Director Hoover would hurt the civil rights movement, but promised to support Dr. King should such a confrontation occur. Wachtel recalled that Dr. King and his staff pondered "how to defuse this and prevent it from becoming the principal focus of the struggle, Hoover versus King," which "could only have lead to a division and thus a dilution of the growing strength of the civil rights movement." Wachtel testified:

Everything pointed toward the problem of how Hoover would respond if Dr. King said in effect, "you're a liar; prove your case. If you call me a liar, prove it." Every lawyer worth his salt knows this is the beginning of the Alger Hiss type of dilemma. Libel and slander litigation or public debate of famous personalities can easily lead to destruction of an ongoing movement. You end up spending your time fighting over "truth as a defense." 364

Dr. King and his advisers settled on an approach to the problem, and on the evening of November 30, 1964, at a public meeting in honor of his receiving the Nobel Peace Prize, Dr. King announced his intention to meet, with Director Hoover to iron out their differences.

I do not plan to engage in public debate with Mr. Hoover and I think the time has come for all this controversy to end, and for all of us to get on with the larger job of civil rights and law enforcement. 365

According to Andrew Young, who was then Dr. King's Executive Assistant, the meeting was arranged by Dr. Archibald Carey, a close friend of both DeLoach and Dr. King, at King's request. 366

Young recalled that Dr. King had been surprised by Director Hoover's "most notorious liar" allegation and wanted to find out what was at the heart of the problem. 367 Walter Fauntroy, who said that his recollection of events surrounding the meeting was "fuzzy," added that Dr. King had also been motivated by a desire to bring to the Director's attention complaints of Southern SCLC workers concerning the lack of FBI protection during civil rights demonstrations. 368

The meeting between Dr. King and Director Hoover took place at 3:30 p.m. on the afternoon of December 1, 1964. Dr. King was accompanied by Ralph Abernathy, Secretary of the SCLC; Andrew Young, Dr. King's Executive Assistant, and Walter Fauntroy, the SCLC representative in Washington. Director Hoover was accompanied by Cartha DeLoach.

DeLoach detailed the meeting in a twelve-page memorandum which Young and Abernathy described as "substantially" accurate, finding fault chiefly with the praise of Director Hoover and of the FBI which DeLoach attributed to Dr. King. According to the, DeLoach account, Dr. King said:

(he) wanted to clear up any misunderstanding which might have occurred. He stated that some Negroes had told him that the FBI had been ineffective, however, he was inclined to discount such criticism. Reverend King asked that the Director please understand that any criticism of the Director and the FBI which had been attributed to King was either a misquote or an outright misrepresentation. He stated this particularly concerned Albany, Georgia. ...

Reverend King stated he personally appreciated the great work of the FBI which had been done in so many instances ... Reverend King stated he has never made any personal attack upon Mr. Hoover ...

Reverend King said that the Director's report to the President this summer on rioting was a very excellent analysis.

Reverend King stated he has been, and still is very concerned regarding the matter of communism in the civil rights movement. Reverend King stated that from a strong philosophical point of view he could never become a communist ... He claimed that when he learns of the identity of a communist in his midst he immediately deals with the problem by removing this man. He stated there have been one or two communists who were engaged in fund raising for the SCLC. Reverend King then corrected himself to say that these one or two men were former communists and not Party members at the present time ... He stated that he had insisted that [Adviser B] leave his staff because the success of his organization ... was far more important than friendship with [Adviser B.] 369

According to Young, the meeting opened with a simple exchange of greetings -- not with the excessive praise of the Director reflected in DeLoach's memorandum -- and then Director Hoover proceeded to give a monologue that lasted for some fifty-five minutes. DeLoach's summary memorandum bears out Young's characterization of the meeting as essentially a briefing by Director Hoover on FBI operations relating to civil rights. 370

Congressman Young testified that neither the Director's pointed criticism of Dr. King nor the possibility that the FBI was spreading rumors about Dr. King was raised at the meeting. 371 Neither Young nor Abernathy recalled any hint of blackmail, but Abernathy did remember quite clearly that at one point Hoover "gave King a lecture reminding him that he was a man of the cloth" and a national leader, and that he should "behave himself." Abernathy did not discern any hint that Dr. King had not lived up to the expected standards. He said that Dr. King remained "very calm," thanked Director Hoover for the reminder, and agreed that it was important for a national leader to set a moral example. Abernathy said that the Director then told Dr. King, "If you haven't done anything wrong, you don't have anything to worry about." 372

Although DeLoach's memorandum of the meeting states that Director Hoover and Dr. King discussed possible Communist influence in the SCLC, Andrew Young testified:

He never brought up the subject of Communism at all . . . (Adviser A's) name never came up, and there was never any discussion in our meeting about Communism or Communist advisers. 373

DeLoach described the meeting to the Committee as follows:

I fully expected it to be a confrontation. However, to the contrary, it was more or less of a love feast with Mr. Hoover telling Dr. King that Dr. King is a symbol of leadership for 12 million Negroes and should be careful about his associations and about his personal conduct, and Dr. King telling Mr. Hoover that he had not wished to cast any reflection upon the FBI and had no intention of doing so in the future. In other words, it was a very peaceful meeting. (DeLoach, p. 170)

Andrew Young agreed that there had been

not even an attitude of hostility. In fact, Hoover was very disarming in that he congratulated Dr. King for having won the Nobel Prize, and as far as we are concerned, this was not the same man that called Martin a notorious liar. We attributed it to the fact of his age and the kinds of possible fluctuations that are possible with people under pressure in advanced years. 375

Young also told the Committee that within a few weeks of the meeting, the FBI announced that it had arrested suspects in the summer murder of three civil rights workers in the South. "So in a sense we were reassured that the FBI was doing its law enforcement job, and we hoped the personal tensions, as far as Dr. King was concerned, were over and done." 376

Harry Wachtel said that Dr. King and his advisors had viewed the meeting as a success because it had "defused" the FBI's attacks in time to permit Dr. King to travel to Europe and receive the Nobel Prize. Wachtel believed that Dr. King's response to Hoover's challenge prevented the FBI from succeeding in what Wachtel viewed as an attempt to promote disputes and factionalism among the civil rights leaders:

The factionalism that the FBI sought to create was widespread. It came out in the Committee's record that they were even seeking a new leader. In CIA terms, you find yourself a new president of a country who is in your control ... They were applying to domestic affairs the type of factionalism that they had worked on so successfully.... And you had to be around to know that it didn't take much to disrupt this delicate marriage of the leadership of the civil rights movement. 377

A memorandum written by DeLoach on December 12, 1964, indicates that the FBI also viewed the feud with Dr. King as having quieted. In response to an inquiry from William Sullivan concerning whether the remainder of the tape recordings about Dr. King should be transcribed, DeLoach responded:

I fully agree that the work should eventually be done, particularly if an additional controversy arises with King. I see no necessity, however, in this work being done at the present time inasmuch as the controversy has quieted down considerably and we are not in need of transcripts right now ... I would recommend that we hold off doing this tremendous amount of work until there is an actual need. 378

*1. Farmer-DeLoach Meeting: December 1, 1964*

On December 1, 1964 -- apparently immediately following Hoover's meeting with Dr. King 379 -- James Farmer, National Director of the Congress of Racial Equality, met with DeLoach to convince him not to launch a smear campaign against Dr. King. Farmer explained the circumstances leading up to the meeting to the Committee as follows.

During the last week in November 1964, Farmer met with the editor of a New York newspaper who said that he had been with an FBI agent when Director Hoover's accusation of Dr. King as a "notorious liar," was reported. The editor told Farmer that the Agent had remarked, "the Chief has finally gotten it off his chest." The Agent then went into a "tirade" against Dr. King. A few days later, Farmer was told by a reporter from the New York Post that stories about Dr. King were being repeated in journalistic circles. Shortly afterwards, Farmer was informed that a conservative columnist was preparing a derogatory story about Dr. King, and that the FBI was prepared to back up his allegations.

Farmer told the Committee that a CORE staff member had verified this rumor with an FBI contact who reportedly said "the chief wants Farmer to know" that he had no interest in "getting Farmer, Whitney Young, or Roy Wilkins -- only King." 380

Farmer then called DeLoach, whom he considered to be a "man of his word," and asked for a private conference. Before the meeting, Farmer met with Dr. King and told him about the allegations. Dr. King approved Farmer's meeting with DeLoach, but did not tell Farmer that he was intending to meet with Director Hoover.

On December 1, Farmer conferred with DeLoach in the back seat of a limousine while driving around Washington, D.C. Farmer told the Committee that DeLoach began the conversation by remarking, "I know why you wanted to come down here." He recalled that DeLoach said that the FBI did have evidence which supported the rumors about Dr. King, but that the Bureau was not "peddling" the information. 381

DeLoach's memorandum of that meeting states:

Farmer told me that he had heard from a number of newsmen that the FBI planned to expose Reverend King by tomorrow, Wednesday, December 2, 1964. He stated that he and King had had a lengthy conference last night in New York City and that it had been agreed that Farmer should come down to see me and prevent this action being taken if at all possible. He stated he knew that King had made a sudden decision to come down also and that he hoped that King's meeting with the Director had been an amiable one. I told him that it had been.

I told Farmer that we, of course, had no plan whatsoever to expose Reverend King. I told him that our files were sacred to us and that it would be unheard of for the FBI to leak such information to newsmen. I told him I was completely appalled at the very thought of the FBI engaging in such endeavors....

I again repeated that we had never entertained the idea to expose Reverend King; however, I wanted Farmer to definitely know that the campaign of slander and vilification against the Director and the FBI should stop without any delay. I told him that if this war continued that we, out of necessity, must defend ourselves. I mentioned that I hoped it would not be necessary for the FBI to adopt defensive tactics. Farmer got the point without any difficulty whatsoever. He immediately assured me that there would be no further criticism from him. He stated he felt certain there would be no further criticism from King.

Farmer was shown DeLoach's memorandum by the Committee. He denied that he had assured DeLoach that his or Dr. King's criticism of the FBI would cease, that there had been any discussion of "warfare," and he stated that he did not know what the reference to his "getting the point" meant. 383

*2. Young-Abernathy-DeLoach Meeting: January 8, 1965*

On January 8, 1965 -- shortly after the tape and letter were brought to the attention of the leaders of the SCLC -- Andrew Young and Ralph Abernathy, at Dr. King's urgings, requested a meeting with Director Hoover.

Both Young and Abernathy told the Committee that the purpose of the meeting was to determine why the FBI was antagonistic toward Dr. King and to stem continuing attacks against Dr. King's character. Young said that the meeting was prompted by the receipt of the tape and letter. 384 Abernathy confirmed this account, and added that although they had not assumed that the FBI had sent the tape itself, they did believe that the FBI had at least known about the tape and could help in terminating the campaign of personal abuse directed against Dr. King. 385

DeLoach, rather than Director Hoover, met with Young and Abernathy. Abernathy told the Committee that he had made it unmistakably clear to DeLoach they were concerned about charges bearing on Dr. King's personal conduct. 386 DeLoach's memorandum of the meeting states:

Reverend Abernathy spoke very generally, pointing out that people were always "making charges" and "innuendoes" against Mr. King.... Reverend Young said it looked like there were some attempts to smear and ruin the civil rights movement; that just lately there has been some new evidence in this regard and that very obviously the activities of Mr. King and the SCLC are under close surveillance....

[Young] said he did feel though there must be some sort of concerted organized campaign that was being directed against King and the SCLC....

Reverend Abernathy stated that there were three points they had wanted to discuss; communist infiltration, allegations that King was getting rich on the civil rights movement and the third point had to do with allegations about the personal life and moral character of King.... Abernathy said that he was not going to make allegations against the FBI but that some things were going on they just could not understand.

Reverend Young said that King had been receiving letters charging him with immorality, that these letters attacked his personal life.

Reverend Young said that he was deeply concerned about irresponsible usage of personal information on the part of scandalmongers and wondered if there could be any "leaks" from the Government. He was assured that there were no leaks from the FBI, that the Director ran a tight organization and that any irresponsibility on the part of any agent would not be tolerated. 387

Andrew Young testified that he "thought" that he had mentioned the letter and tape recording that had been received by Dr. King. He recalled that DeLoach

denied everything. He denied that an FBI agent would ever talk to the press about anything.

Question. Did you bring up the issue of whether the FBI was tapping Dr. King's phone, SCLC's phone, or bugging Dr. King?

YOUNG. Yes, we did. He assured us that was not true. 388

### *3. Carey-DeLoach Meeting. -- May 19, 1965*

On May 19, 1965, Dr. Archibald J. Carey, Jr., then a Chicago attorney who was well acquainted with Dr. King, DeLoach, and Director Hoover, met with DeLoach to "mediate" in what he regarded as an unfortunate dispute among his friends. Dr. Carey told the Committee staff that Dr. King had first brought to his attention rumors about Dr. King's "communist sympathies" and personal conduct during a weekend visit to Chicago some time in May 1965. On that occasion, Dr. King told Dr. Carey that the FBI was trying to discredit him and might release stories to the press regarding his personal life in the near future. Dr. Carey told the Committee that Dr. King did not ask him to talk with the FBI about their attempt to discredit him, but rather that he had volunteered to "see what he could do." Dr. King gave his assent. 389

DeLoach, in a memorandum of the meeting, wrote that "Carey told me that he wanted to enlist the sympathies of the FBI in not letting any effort to discredit King occur." DeLoach said that he had told Dr. Carey that "the FBI had plenty to do without being responsible for a discrediting campaign against Reverend King." DeLoach ended the memorandum with the comment:

Dr. Carey is the third individual that King has had come to see us relative to requesting that we not expose him. Roy Wilkins, Jim Farmer, and Reverend Abernathy have all been here for the same purpose. It is obvious that King is becoming very disturbed and worried about his background, else he would not go to such great efforts to have people approach the FBI. I did not commit the FBI in any manner insofar as exposing King is concerned. To the contrary, I let Carey flatly know of King's derelictions insofar as false allegations against us are concerned and of the fact that King and other civil rights workers owed the FBI a debt of gratitude they would never be able to repay. 390

Director Hoover wrote on the memorandum, "Well handled."

Dr. Carey told the Committee staff that he contacted Dr. King after the meeting and suggested that criticizing the FBI was not the best strategy for the civil rights movement. Dr. Carey said that he had asked both Dr. King and Director Hoover not to alienate each other. He also said that he had been concerned less with the truth or falsity of any of the allegations that were made than with ending the dispute. 390a

## **VII. THE FBI PROGRAM AGAINST DR. KING: 1965-1968**

The public dispute between Dr. King and Director Hoover ended with their December 1, 1964, meeting. The Bureau's covert attempts to discredit Dr. King and undermine his influence in the civil rights movement did not cease, however, but continued unabated until Dr. King's death. 391 Although the intensity of the FBI's campaign against Dr. King appears to have been reduced somewhat in 1966 and 1967, Dr. King's public stand against the war in Vietnam in mid-1967 revived the FBI's attempt to link Dr. King and the SCLC with communism.

### *A. Major Efforts to Discredit Dr. King: 1965-1968*

#### *1. Attempts to Discredit Dr. King With Churches*

On February 1, 1965, The Domestic Intelligence Division learned that Dr. King was scheduled to speak at the Davenport, Iowa, Catholic Interracial Council's banquet and receive a "Pacem in Terris" award in memory of Pope John. Internal Security

Section chief Frederick Baumgardner observed, "it is shocking indeed that King continues to be honored by religious groups." 392 Baumgardner recommended that Assistant Director Malone contact Francis Cardinal Spellman and suggest that "in the end it might well be embarrassing to the Catholic Church for having given honors to King." The Director noted on the memorandum, "I see no need to further approach Spellman"; he was apparently alluding to the unsuccessful attempt to sabotage Dr. King's audience with the Pope through Spellman's intervention. There is no record of any further action.

In February 1966 Dr. King held a press conference following a meeting with the Reverend John P. Cody, Archbishop of the Chicago Diocese of the Roman Catholic Church, and announced that he and Cody were in agreement on general civil rights goals and that he hoped priests and nuns in Chicago would participate in SCLC programs. The Domestic Intelligence Division subsequently recommended that a special agent acquainted with the Archbishop brief him about Dr. King to aid "the Archbishop in determining the degree of cooperation his archdiocese will extend to King's program in Chicago and [to] result in a lessening of King's influence in Chicago." 393

The Archbishop was briefed on February 24, 1966, "along the lines discussed with Assistant Director Sullivan." 394 The agent who conducted the briefing wrote that he felt "certain that [Cody] will do everything possible to neutralize King's effect in this area." 395

In April 1966 the FBI Legal Attache in Paris requested permission to inform the pastor of the American Church in Paris of Dr. King's background "in an effort to convince him that his continued support of Martin Luther King may result in embarrassment for him and the American Church in Paris." 396 The pastor was briefed on May 9, 1966. According to the agent who conducted the briefing, the pastor was skeptical about the FBI allegations, but promised to keep the information in mind for future dealings with Dr. King. 397

## *2. Attempts to Discredit Dr. King With Heads of Government Agencies*

In March 1965 the FBI contacted former Florida Governor LeRoy Collins. Collins was then Director of the Community Relations Service, Department of Commerce, a position the Bureau viewed as "something of a 'mediator' in problems relating to the racial field." 398 The FBI told Collins that Coretta King had criticized his participation in developments in Selma, Alabama and had said that Collins was "blinded by prejudice." A copy of the December 1964 monograph about Dr. King was also sent to Collins, "in view of [his] important position relative to the racial movement." 399

Also in March 1965 the FBI learned that the Internal Revenue Service intended to invite Dr. King as one of 19 guest lecturers at a series of seminars on Equal Employment Opportunities. When the IRS requested routine name checks on the 19 individuals, Director Hoover approved a Domestic Intelligence Division request to send the IRS a copy of the December 1964 monograph; normal procedures were followed in checking the other 18 people. 400

In December 1966 Domestic Intelligence Director William Sullivan reported that he had met with Ambassador U. Alexis Johnson during a tour of the FBI's Legal Attache Office in Japan and was surprised to learn that Johnson was unaware of allegations that communists were influencing Dr. King. Sullivan recommended that Johnson be sent a copy of the monograph about Dr. King "because of his position." 401 Director Hoover approved the plan, and a copy of the monograph was sent to the FBI Legal Attache in Tokyo for hand-delivery to the Ambassador. 402

Dr. King publicly announced his opposition to American involvement in the war in Vietnam in a speech at New York's Riverside Church on April 4, 1967. Six days later, Charles Brennan of the Domestic Intelligence Division recommended the circulation of an updated draft of the King monograph to the White House. Brennan's memorandum states that the revised monograph contained allegations about communist influence over Dr. King as well as personally derogatory allegations. 403

Director Hoover approved and copies of the revised monograph were sent to the White House, the Secretary of State, the Secretary of Defense, the Director of the Secret Service, and the Attorney General. 404 A copy was subsequently sent to the Commandant of the Marine Corps, who had been interested in "King's activities in the civil rights movement but recently had become quite concerned as to whether there are any subversive influences which have caused King to link the civil rights movement with the anti-Vietnam War movement." The Domestic Intelligence Division recommended that a copy be given to the Marine Commandant because "it is felt would definitely be to the benefit of [the Commandant] and to the Bureau...." 405

In February 1968, FBI Headquarters learned that Dr. King planned a "Washington Spring Project" for April 1968. According to a Domestic Intelligence Division memorandum, the Director suggested that the King monograph be again revised. That memorandum noted:

Bringing this monograph up-to-date and disseminating it at high level prior to King's "Washington Spring Project" should serve again to remind top-level officials in Government of the wholly disreputable character of King....

Because of the importance of doing a thorough job on this, we will conduct an exhaustive field review to bring together the most complete and up-to-date information and to present it in a hard-hitting manner. 406

The revised monograph, dated March 12, 1968, was disseminated to the White House, the Attorney General, and the heads of various government intelligence agencies. 407

## *3. Attempts to Discredit Dr. King By Using the Press*

Despite Cartha DeLoach's assurances to Andrew Young and Ralph Abernathy that the FBI would never disseminate information to the press, the Bureau continued its efforts to cultivate "friendly" news sources that would be willing to release information unfavorable to Dr. King. Ralph McGill, the pro-civil rights editor of the Atlanta Constitution, was a major focus of the Bureau's attentions. The Bureau apparently first furnished McGill with derogatory information about Dr. King as part of an attempt to dissuade community leaders in Atlanta from participating in a banquet planned to honor Dr. King upon his return from the Nobel Prize ceremonies. After a meeting with McGill, William Sullivan reported that McGill said that he had stopped speaking favorably of Dr. King, that he had refused to take an active part in preparing for the banquet, and that he had even taken steps to undermine the banquet. McGill's version of what transpired will never be known, since McGill is deceased. According to Sullivan's memorandum, however:

Mr. McGill told me that following my first discussion with him a few weeks ago he contacted a banker friend in Atlanta who was helping to finance the banquet to be given King next Wednesday night. The banker was disturbed and said he would contact some other bankers also involved and see if support could be quietly withdrawn. McGill's friend and some of the bankers did take steps to withdraw but this was very quickly relayed to bankers in Haiti who were on the threshold of an important financial deal with the Atlanta, Georgia, bankers. They took the position that if the Atlanta bankers did not support the Martin Luther King party, their financial deal with these Georgia bankers was off. . . . As a result they got cold feet and decided to go ahead with financing King's party.

McGill told me that .... a Catholic leader in Georgia, an Episcopal clergyman and a Jewish rabbi are also quite active in support of this party for King ... I told him that ... he might want to explore very confidentially and discreetly the subject matter with these three men. . . .

McGill told me that he thinks it is too late now, especially in view of the financial interest of the Georgia bankers in the Haiti deal, to prevent the banquet from taking place. However, McGill said he would do what he could to encourage key people to limit their praise and support of King as much as possible.

McGill also told me that he is taking steps through [a Negro leader] to get key Negro leaders to unite in opposition to King and to gradually force him out of the civil rights movement if at all possible. 409

The FBI subsequently told the White House that McGill:

believes that the very best thing that could happen would be to have King step completely out of the civil rights movement and public life for he feels that if this is not done, sooner or later King will be publicly exposed. Mr. McGill believes that an exposure of King will do irreparable harm to the civil rights movement in which he, Mr. McGill, and others are so interested and have worked so hard for; and likewise it will do injury to different citizens of the country who have been supporting King . . . . 410

In late May 1965, a reporter from United Press International requested the Bureau for information about Dr. King for use in a series of articles about the civil rights leader. The Special Agent in Charge in Atlanta recommended that the Bureau give the reporter both public source and confidential information about Dr. King because the reporter "is the UPI's authority in the South on the Negro movement and his articles carry a great deal of influence and [the SAC did not believe] that he would prepare anything flattering or favorable to King." The Director approved a recommendation that the reporter be supplied with a public source document and with a "short summation" of allegations concerning communist influence over Dr. King to be used "merely for orientation purposes." 411

In October 1966, the Domestic Intelligence Division recommended that an article "indicting King for his failure to take a stand on the [black power] issue and at the same time exposing the degree of communist influence on him" be given to a newspaper contact "friendly" to the Bureau, "such as ... [the] Editor of U.S. News and World Report."

It is felt that the public should again be reminded of this communist influence on King, and the current controversy among civil rights leaders makes this timely to do so. 412

Attached to the memorandum was a proposed article which noted that the efforts of several civil rights leaders to denounce "Black Power" had been "undermined by one man in the civil rights movement who holds in his hands the power to silence the rabble rousers and to give the movement renewed momentum." The article attributed Dr. King's equivocation to his advisers, who were alleged to have had affiliations with the Communist Party or organizations associated with the Party. Dr. King's decision to oppose the Vietnamese war was also attributed to these advisers. 413

One project involving the mass media which the FBI felt had been particularly successful was its attempt to prevent Dr. King from obtaining contributions from James Hoffa of the Teamsters Union. In October 1966, the FBI discovered that Dr. King planned to meet with Hoffa, but that Dr. King had wanted to avoid publicity because, in the words of the Bureau:

Disclosure of King's transparent attempt to blackmail Hoffa with the large Negro membership of Hoffa's union, to solve the Southern Christian Leadership Conference's financial problems, would cause an uproar among leaders of organizations having large Negro memberships; pointing out their own vulnerability to such a squeeze by any unscrupulous civil rights leader. This potential collusion between large labor unions and the civil rights movement could also react to the detriment of the Negro in that through large financial donations, an unscrupulous labor leader could subvert the legitimate aims and objectives of the civil rights movement to his own purposes. 414

The Crime Records Division prepared an article for public release raising the question of "who really gets squeezed when these two pythons get together." 416 The Domestic Intelligence Division also recommended:

a Bureau official be designated now to alert friendly news media of the meeting once the meeting date is learned so that arrangements can be made for appropriate press coverage of the planned meeting to expose and disrupt it. 417

Director Hoover's "O.K." appears below that recommendation.

On discovering that the meeting was about to occur, the Crime Records Division notified a reporter for the New York Daily News and a national columnist. "News photographers and wire services are also being alerted to give coverage. . . ." 418

A Crime Records Division memorandum on the following day reported that "in view of publicity in the New York Daily News regarding this proposed meeting, King and his aides had decided that it would be unwise to meet with Hoffa." The Bureau then notified reporters that Dr. King was coming to Washington, D.C. The reporters "cornered" Dr. King as he came off the plane and quizzed him about the proposed meeting. The Crime Records Division reported these events to the Director with the assessment that "our counterintelligence aim to thwart King from receiving money from the Teamsters has been quite successful to date." Director Hoover initialed the memorandum reporting this news, "Excellent." 419

In March 1967 Director Hoover approved a recommendation by the Domestic Intelligence Division to furnish "friendly" reporters questions to ask Dr. King. The Intelligence Division believed that Dr. King would be particularly "vulnerable" to questions concerning his opposition to the war in Vietnam, and recommended that a reporter be selected to interview Dr. King "ostensibly to question King about his new book," but with the objective of bringing out the foreign policy aspects of Dr. King's philosophy.

This could then be linked to show that King's current policies remarkably parallel communist efforts. This would cause extreme embarrassment to King. 420

In October 1967 the Domestic Intelligence Division recommended that an editorial in a Negro magazine, which criticized Dr. King for his stance on the Vietnam war, be given to "friendly news sources." The purpose of the dissemination was to "publicize King as a traitor to his country and his race" and to "reduce his income" from a series of shows given by Harry Belafonte to earn funds for the SCLC. The recommendation was approved by the Director and is marked "Handled 10/28/67." 421

#### *4. Attempts to Discredit Dr. King With Major Political and Financial Leaders*

In March 1965 the FBI learned that a "Martin Luther King Day" was being planned in a major city. The Domestic Intelligence Division recommended that the Special Agent in Charge "personally meet with the Governor and brief him concerning King" in order to "induce him to minimize the affair and especially the award for King."

The Domestic Intelligence Division memorandum was initialed by the Director and bears the handwritten notation, "handled 3-5-65, WCS[ullivan]." 422

In October 1966 the FBI learned that Dr. King had met with McGeorge Bundy, then Director of the Ford Foundation, and received a tentative offer of a grant for the SCLC. The Domestic Intelligence Division decided that officials of the Foundation might not be aware of the "subversive backgrounds of King's principal advisers," but that if they were briefed, "this might preclude any assistance being granted." Director Hoover approved a plan to have a former FBI agent, who was then a vice-president of the Ford Motor Company, approach Bundy. 423 The ex-agent was contacted, briefed on Dr. King, and according to DeLoach, "stated he would personally contact Bundy in an effort to put a stop to King receiving any funds from the Ford Foundation." 424

In a memorandum dated October 26, 1966, DeLoach reported that the ex-agent had contacted Bundy, but that Bundy had refused to talk with him about Dr. King, saying that he would only talk with a person having first-hand knowledge about Dr. King, and would not listen to rumors. DeLoach recommended that the FBI not directly approach Bundy, since "it is doubtful that contact with him by the FBI will convince him one way or another." Director Hoover wrote on DeLoach's memorandum, "Yes. We would get no where with Bundy." 425

#### *5. Attempts to Discredit Dr. King With Congressional Leaders*

According to a memorandum by Assistant to the Director DeLoach, Speaker of the House John McCormack requested a briefing about Dr. King's background and activities in August 1965. DeLoach reported that he briefed McCormack for 45 minutes about Dr. King's private life and about possible communist influence over Dr. King. According to DeLoach, McCormack stated that "he now recognized the gravity of the situation and that something obviously must be done about it." 426 McCormack was not interviewed by the committee staff.

Not all Congressional inquiries about Dr. King, however, were answered by the Bureau. For example, in January 1968, DeLoach reported that he had met with Senator Robert C. Byrd at the Senator's request. DeLoach's memorandum of the meeting states that the Senator expressed concern over Dr. King's plan for demonstrations in Washington, D.C. during the summer and said that it was time Dr. King "met his Waterloo." DeLoach's memorandum states that Senator Byrd asked if the FBI would prepare a speech about Dr. King which he could deliver on the floor of the Senate. DeLoach declined to provide any information that was not on the public record, although he did promise to keep the Senator informed of new public source items. 427 The Committee staff did not interview Senator Byrd.

### *B. COINTELPRO Operations Against Dr. King and His Associates*

The FBI elevated its activities against Dr. King and his associates to the status of formal counterintelligence programs (COINTELPRO) during this period. 428 In July 1966, the Director instructed the New York field office that "immediate steps should be taken to discredit, expose, or otherwise neutralize Adviser A's role as a clandestine communist." 429 An agent was assigned full-time to "carefully review the [Adviser A] case file seeking possible counterintelligence approaches." He reported that there was no derogatory information on Adviser A's personal life, 430 and that the only "effective way to neutralize [him] is by public exposure" of his alleged Communist Party associations. 431 None of the FBI's efforts against Adviser A appear to have met success.

The FBI considered initiating a formal COINTELPRO to discredit Dr. King and Dr. Benjamin Spock in May 1967 when rumors developed concerning the possibility that King and Spock might run as "peace" candidates in the 1968 presidential election. The New York field office recommended postponing the effort to expose "communist connections" of persons associated with King and Spock until they had formally announced their candidacy. 432 The Chicago field office proposed waiting until the summer of 1968, reasoning that by then the Administration would have either resolved the Vietnam conflict or, if not, the Communist Party would be emphasizing the peace theme, and exposure of Communist Party links with the King-Spock campaign "would doubtlessly be appreciated by the Administration." 433 While the Chicago field office felt that the Bureau should not "rule out" the use of "flyers, leaflets, cards and bumper stickers" to discredit the King-Spock ticket, it recommended "the use of a political columnist or reporter for this purpose." 434 Apparently no steps were taken to implement the plan.

In August 1967 the Bureau initiated a COINTELPRO captioned "Black Nationalist-Hate Groups." This program is extensively described in the Staff Report on COINTELPRO. The document initiating the program states:

The purpose of this new counterintelligence endeavor is to expose, disrupt, misdirect, discredit, or otherwise neutralize the activities of black-nationalist, hate-type organizations and groupings, their leadership, spokesmen, membership and supporters, and to counter their propensity for violence and civil disorder.

Intensified attention under this program should be afforded to the activities of such groups as the Student Nonviolent Coordinating Committee, *Southern Christian Leadership Conference*, Revolutionary Action Movement, the Deacons for Defense and Justice, Congress of Racial Equality, and the Nation of Islam. [Emphasis added.] 435

The Domestic Intelligence Division expanded the Black Nationalist-Hate Groups COINTELPRO in February 1968. The instructions to the field offices listed as a "goal":

Prevent the rise of a "messiah" who could unify and electrify the militant black nationalist movement. Malcolm X might have been such a "messiah;" he is the martyr of the movement today. Martin Luther King, Stokely Carmichael, and Elijah Muhammed all aspire to this position. Elijah Muhammed is less of a threat because of his age. King could be a real contender for this position should he abandon his supposed "obedience" to "white, liberal doctrines" (nonviolence) and embrace black nationalism .... 436

The SCLC was retained as a "primary target" of the COINTELPRO, and Martin Luther King's name was added to the list of persons who were targets.

The supervisor of the Black Nationalist COINTELPRO told the Committee that he could recall no counterintelligence activities directed against the SCLC, but that several were taken against Dr. King. 437

### *C. The FBI's Efforts to Discredit Dr. King During His Last Months*

Between 1965 and early 1967, the files indicate that Bureau concern about Dr. King had decreased. This concern was revived by Dr. King's April 4, 1967, speech at New York's Riverside Church, in which he opposed the Administration's position in Vietnam. The FBI interpreted this position as proof he "has been influenced by communist advisers," and noted that King's remarks were "a direct parallel of the communist position on Vietnam." 438 A week after the speech the FBI sent the White House and the Justice Department a revised edition of the printed King monograph.

In early December 1967 Dr. King announced plans to hold demonstrations in major American cities, including Washington, D.C., to spur Congress into enacting civil rights legislation. The FBI followed closely developments in Dr. King's "Washington Spring Project" forwarding to the White House information concerning Adviser A's fund-raising activities and Dr. King's plans to tape a lecture series for a foreign television system, allegedly to raise funds for the project. 440

In February 1968 the FBI again revised the King monograph and distributed it to certain officials in the Executive Branch. The Domestic Intelligence Division memorandum recommending the new monograph stated that its dissemination "prior to King's 'Washington Spring Project' should serve again to remind top-level officials in Government of the wholly disreputable character of King." 441

In early March, the Bureau broadened its Black Nationalist-Hate Groups COINTELPRO explicitly to include Dr. King. 442 Toward the end of the month, the FBI began to disseminate information to the press "designed to curtail success of Martin Luther King's fund raising campaign for the Washington Spring Project." The first of many plans included circulating a story

that King does not need contributions from the 70,000 people he solicited. Since the churches have offered support, no more money is needed and any contributed would only be used by King for other purposes. This item would need nation-wide circulation in order to reach all the potential contributors and curtail their donations. 443

On March 25, the Bureau approved a plan to mail an anonymous letter to a civil rights leader in Selma, Alabama, who was "miffed" with Dr. King, and a copy of that letter to a Selma newspaper, hoping that the newspaper might interview the leader about its contents. The Bureau described the purpose of the letter as calling

to the attention of [the civil rights leader] that King is merely using the Negroes of the Selma area for his own personal aggrandizement; that he is not genuinely interested in their welfare, but only in their donations; that in all probability the individuals going to Washington for the Spring Project will be left stranded without suitable housing or food. The letter should also play up the possibility of violence. 444

There is no indication in FBI files that the letter was mailed.

During the latter part of March, Dr. King went to Memphis, Tennessee, where a strike by Sanitation Workers had erupted into violent riots.

A March 28, 1968, Domestic Intelligence Division memorandum stated:

A sanitation strike has been going on in Memphis for some time. Martin Luther King, Jr., today led a march composed of 5,000 to 6,000 people through the streets of Memphis. King was in an automobile preceding the marchers. As the march developed, acts of violence and vandalism broke out including the breaking of windows in stores and some looting.

This clearly demonstrates that acts of so-called nonviolence advocated by King cannot be controlled. The same thing could happen in his planned massive civil disobedience for Washington in April.

#### ACTION

Attached is a blind memorandum pointing out the above, which if you approve, should be made available by Crime Records Division to cooperative news media sources.

The memorandum carried Director Hoover's "O.K." and the notation, "handled on 3/28/68." 445

On March 29, 1968, the Domestic Intelligence Division recommended that the following article be furnished to a cooperative news source:

Martin Luther King, during the sanitation workers' strike in Memphis, Tennessee, has urged Negroes to boycott downtown white merchants to achieve Negro demands. On 3/29/68 King led a march for the sanitation workers. Like Judas leading lambs to slaughter King led the marchers to violence, and when the violence broke out, King disappeared.

The fine Hotel Lorraine in Memphis is owned and patronized exclusively by Negroes but King didn't go there for his hasty exit. Instead King decided the plush Holiday Inn Motel, white owned, operated and almost exclusively patronized, was the place to "cool it." There will be no boycott of white merchants for King, only for his followers. 446

On April 4, Dr. King returned to Memphis. This time he registered at the Lorraine Hotel. We have discovered no evidence that the FBI was responsible for Dr. King's move to the Lorraine Hotel. 447

#### *D. Attempts to Discredit Dr. King's Reputation After His Death*

The FBI's attempts to discredit Dr. King did not end with his death. In March 1969 the Bureau was informed that Congress was considering declaring Dr. King's birthday a national holiday, and that members of the House Committee on Internal Security might be contacting the Bureau for a briefing about Dr. King. The Crime Records Division recommended briefing the Congressmen because they were "in a position to keep the bill from being reported out of Committee" if "they realize King was a scoundrel." DeLoach noted: "This is a delicate matter -- but can be handled very cautiously." Director Hoover wrote, "I agree. It must be handled *very cautiously*." 447a

In April 1969 FBI Headquarters received a recommendation for a counterintelligence program from the Atlanta Field Office. The nature of the proposed program has not been revealed to the Committee. A memorandum concerning the plan which the Bureau has given to the Committee, however, notes that the plan might be used "in the event the Bureau is inclined to entertain counterintelligence action against Coretta Scott King and/or the continuous projection of the public image of Martin Luther King ...." 447b The Director informed the Atlanta office that "the Bureau does not desire counterintelligence action against Coretta King of the nature you suggest at this time. 448

#### CONCLUSION

Although it is impossible to gauge the full extent to which the FBI's discrediting programs affected the civil rights movement, the fact that there was impact is unquestionable.

Rumors circulated by the FBI had a profound impact on the SCLC's ability to raise funds. According to Congressman Andrew Young, a personal friend and associate of Dr. King, the FBI's effort against Dr. King and the SCLC "chilled contributions. There were direct attempts at some of our larger contributors who told us that they had been told by agents that Martin had a Swiss bank account, or that Martin had confiscated some of the monies from the March on Washington for his personal use. None of that was true." 449 Harry Wachtel, one of Dr. King's legal counsels who handled many of the financial and fund raising activities of the SCLC, emphasized that the SCLC was always in need of funds. "Getting a grant or getting a contribution is a very fragile thing. A grant delayed has a very serious impact on an organization, whose financial condition was pretty rough." 450 Wachtel testified that the SCLC continually had to overcome rumors of poor financial management and communist connections.

The material ... stayed in the political bloodstream all the way through to the time of Dr. King's death, and even after. In our efforts to build a King Center, it was around. It was like a contamination. 451

The SCLC leadership assumed that anything said in meetings or over the telephone would be intercepted by wiretaps, bugs, or informants. Ironically, the FBI memorandum reporting that a wiretap of the SCLC's Atlanta office was feasible stated:

In the past when interviews have been conducted in the office of Southern Christian Leadership Conference certain employees when asked a question, in a half joking manner and a half serious manner replied, "You should know that already, don't you have our wires tapped?" It is noted in the past, State of Georgia has conducted investigations regarding subject and Southern Christian Leadership Conference. 452

Harry Wachtel commented on the impact constant surveillance on members of the SCLC:

When you live in a fishbowl, you act like you're in a fishbowl, whether you do it consciously or unconsciously.... I can't put specifics before you, except to say that it beggars the imagination not to believe that the SCLC, Dr. King, and all its leaders were not chilled or inhibited from all kinds of activities, political and even social. 453

Wachtel also pointed out the ramifications stemming from the Government's advance knowledge of what civil rights leaders were thinking:

It is like political intelligence. It did not chill us from saying it, but it affected the strategies and tactics because the people you were having strategies and tactics about were privy to what you were about. They knew your doubts. . . . Take events like strategies in Atlantic City.... Decision-making concerning which way to go, joining one challenge or not, supporting a particular situation, or not, had to be limited very strongly by the fact that information which was expressed by telephone, or which could even possibly be picked up by bugging, would be in the hands of the President. 454

Perhaps most difficult to gauge is the personal impact of the Bureau's programs. Congressman Young told the Committee that while Dr. King was not deterred by the attacks which are now known to have been instigated in part by the FBI, there is "no question" but that he was personally affected:

It was a great burden to be attacked by people he respected, particularly when the attacks engendered by the FBI came from people like Ralph McGill. He sat down and cried at the New York Times editorial about his statement on Vietnam, but this just made him more determined. It was a great personal suffering, but since we don't really know all that they did, we have no way of knowing the ways that they affected us. 455

23 FBI Manual Section 87e. The Section in effect at the time the FBI initiated its investigation of Dr. King and the SCLC was captioned, "Legitimate Noncommunist Organizations that are Communist Infiltrated," and provided in part:

"(1) No investigation should be conducted without prior Bureau approval.

"(2) Investigations should be handled most discreetly by experienced agents.

"Advise Bureau promptly under caption 'COMINFIL (name of organization)' when one of the following exists and include your recommendation for instituting an investigation.

"(a) The Communist Party has specifically instructed its members to infiltrate the organization.

"(b) Communist Party members have infiltrated the organization in sufficient strength to influence or control the organization.

(7) Data concerning following topics should be fully developed and reported on:

"(a) Basis for investigation and fact that our investigation is directed solely toward establishing extent of Communist Party infiltration, or that organization is specific target for infiltration, and that Bureau is not investigating legitimate activities of organization.

"(b) Address of organization.

"(c) Brief characterization of organization, including total membership.

"(d) Principal officers of organization.

"(e) Communist Party program to infiltrate this organization and influence its policy.

"(f) Results of this program, including Communist Party affiliations of officers and members."

Clarence Kelley, the present Director of the FBI, was asked by the Committee :

"Taking the current manual and trying to understand its applicability laid against the facts in the Martin Luther King case, under section 87 permission is granted to open investigations of the influence of non-subversive groups, and the first sentence reads: 'When information is received indicating that a subversive group is seeking to systematically infiltrate and control a nonsubversive group or organization, an investigation can be opened.'"

"Now, I take it that is the same standard that was used in opening the investigation of the Southern Christian Leadership Conference in the 1960's, so that investigation could still be opened today under the current FBI manual?"

Mr. KELLEY: "I think so." (Clarence Kelley testimony, 12/10/75, Hearings, Vol. 6, p. 308.)

24 See Report, on the Development of FBI Domestic Investigations, p. 479.

25 Memorandum from Director, FBI to Special Agent in Charge, Atlanta, 9/20/57. The "stated purpose" of the SCLC was to organize a register-and-vote campaign among Negroes in the South. (Trezza Anderson, Pittsburgh Courier, 8/17/57.) Considerable "public source" information was recorded in FBI files both before and after this date.

26 The action memorandum stated that Dr. King's name "should be placed in Section A of the Reserve Index and tabbed communist." (Memorandum from Director, FBI, to SAC, Atlanta, 5/11/62.) Persons to be listed in Section A of the Reserve Index were described by the FBI as people "who in time of national emergency, are in a position to influence others against the national interest or are likely to furnish material financial aid to subversive elements due to their subversive associations and ideology." The types of persons to be listed in Section A included:

"(a) Professors, teachers or leaders;

"(b) Labor union organizers or leaders;

"(c) Writers, lecturers, newsmen, entertainers, and others in the mass media field;

"(d) Lawyers, doctors, and scientists;

"(e) Other potentially influential persons on a local or national level;

"(f) Individuals who could potentially furnish material financial aid." See Committee staff report on Development of FBI Domestic Intelligence Investigations.

Dr. King was placed on the Reserve Index despite the fact that as late as November 1961 the Atlanta Field Office had advised FBI Headquarters that there was "no information on which to base a security matter inquiry." (Airtel from SAC, Atlanta, to Director, FBI, 11/21/61.)

27 Memorandum from Director, FBI to SAC, Atlanta, 2/27/62. The instructions did not define what was meant by "subversive." Reports from field offices during the ensuing months considered as "subversive" such information as the fact that Dr. King had been one of 350 signers of a petition to abolish the House Committee on Un-American Activities. (FBI Report, New York, 4/13/62.) These instructions to the field were issued on the first day of Dr. King's trial in which he and seven hundred other civil rights demonstrators were charged in Albany, Georgia, with parading without a permit. (Atlanta Constitution, 2/28/62, p. 1.)

28 FBI Manual Section 122, p. 5. This policy was later interpreted as requiring "coverage" of demonstrations, meetings, "or any other pertinent information concerning racial activity." (Memorandum from Director, FBI to SAC, Atlanta, 6/27/63.)

29 Memorandum from Director, FBI, to SAC, Atlanta, 10/23/62, p. 2.

30 On the same day the Southern Regional Counsel -- a respected civil rights study group -- issued a report criticizing the Bureau's inaction during civil rights demonstration that were then occurring in Albany, Georgia. This report is discussed at pp. 89-90.

31 Memorandum from Director, FBI, to Attorney General, 1/5/62.

32 Memorandum from Frederick Baumgardner to William Sullivan, 10/22/62.

33 FBI headquarters first requested the field offices for recommendations concerning whether a COMINFIL investigation should be opened on July 20, 1962. This was the same day on which officials in Albany, Georgia, sought a judicial ban against demonstrations led by Dr. King, alleging that Negroes had been endangering the lives of police officers "and agents of the Federal Bureau of Investigation." (New York Times, 7/22/62).

34 A microphone was installed in Adviser A's office on March 16, 1962 (Airtel from SAC, New York to Director, FBI, 3/16/62 and a wiretap was installed on his office telephone on, 3/20/62 (Airtel from SAO, New York to Director, FBI,

3/20/62). The wiretap was authorized by the Attorney General (Memorandum from Director, FBI to Attorney General, 3/6/62). The microphone was approved only at the FBI division level (Memorandum from James Bland to William Sullivan, 3/2/62).

35 FBI Manual Section 87, pp. 12-13, 83-85. Former Assistant Director Sullivan testified: "if a man is not under the discipline and control of the Communist Party, *ipso facto* he is not really a member of the Communist Party. The Party demands the man's complete discipline, the right of complete discipline over a Party member. That is why they have the graduations, you see, the fellow traveler, not a Party member, because he would not accept the entire discipline of the Party. The sympathizer, another graduation of it, what we call the dupe, the victim of Communist fronts and so forth. The key -- I am glad you raised this question -- the key to membership is does this man accept completely the Party discipline. If he does not, he is not regarded as a genuine member." (Sullivan, 11/1/75, p. 18.)

36 It was discontinued on August 16, 1962. See Airtels from SAC, New York to Director, FBI, 8/16/62 and 11/15/62, and Memorandum from Director, FBI to SAC, New York, 11/23/62.

37 The Attorney General authorized a wiretap on Adviser A's home telephone in November 1962 (memorandum from Director, FBI to Attorney General, 11/20/62).

38 E.g., Memorandum from Director, FBI, to Attorney General Kennedy.

39 Indeed, in April 1964 a field office reported that Adviser A was not under the influence of the Communist Party. Memorandum from SAC New York to Director, FBI, 4/14/64.

40 Memorandum from James Bland to William Sullivan, 2/3/62.

41 Special Report, Southern Regional Council, 1/8/62.

42 "Albany, A Study of Racial Responsibility," Southern Regional Council, 11/14/62.

43 Item #17, FBI Response to Senate Select Committee, 10/15/75. FBI rules provided that allegations about Bureau misconduct had to be investigated and that "every logical lead which will establish the true facts should be completely run out unless such action would embarrass the Bureau. . . ."

44 Memorandum from Alex Rosen to Alan Belmont, 11/15/62. The updated report was received at headquarters on December 5, 1962. (Memorandum from SAC, Atlanta to Director, FBI, 12/4/62.)

45 Atlanta Constitution, 11/19/62, p. 18. In 1961 a report issued by the U.S. Commission on Civil Rights, entitled "Justice," had addressed the problem of FBI agents investigating local law enforcement officials and reached a similar conclusion, including mistrust of the FBI by southern Blacks.

46 Memorandum from SAC, Atlanta, to Director, FBI, 11/19/62.

47 Memorandum from Alex Rosen to Alan Belmont, 11/20/62.

48 Memorandum from Alan Belmont to Clyde Tolson, 11/26/62. A decision was made that Dr. King should be contacted by both Assistant Director DeLoach and Assistant Director William Sullivan "in order that there will be a witness and there can be no charge of provincialism inasmuch as Cartha D. DeLoach comes from the South and Mr. Sullivan comes from the North." (Ibid.)

49 Memorandum from Cartha DeLoach to John Mohr, 1/15/63. FBI officials also "interviewed" or otherwise contacted various newspaper publishers to set [them] straight" about Dr. King's remarks. (Memorandum from Alex Rosen to Alan Belmont, 1/17/63.) One of the publishers contacted was described as "impressed with the Director" and as being on the "Special Correspondents List." (Letter from Cartha DeLoach to one of the publishers, 11/29/62, p. 3.) The FBI also took steps to "point out" the "evasive conduct of King" to the Attorney General and Civil Rights Commission. (Letter, FBI Director to Attorney General, 1/18/63; Letter, FBI to Staff Director, Commission on Civil Rights, 1/18/63.)

50 Note on memorandum from Frederick Baumgardner to William Sullivan, 11/20/64.

51 William Sullivan testimony, 11/1/75, p. 62. Sullivan's assessment must be viewed in light of the feud that subsequently developed between Sullivan and Hoover and which ultimately led to Sullivan's dismissal from the FBI. That feud is discussed in the committee's final report.

52 Marshall, 3/3/76, p. 55.

53 Edwin Guthman testimony, 3/16/76, p. 16.

54 Guthman, 3/16/76, p. 5.

55 See pp. 115-116.

56 Bill Moyers testimony, 3/2/76, p. 22.

57 The FBI files are replete with examples of politically valuable intelligence about Dr. King that was sent to the Justice Department and the White House. For instance, in May 1963, at a critical point in the Congressional debate over the public accommodations bill, Hoover informed the Attorney General of a discussion between Dr. King and an adviser "concerning a conference which Reverend King reportedly has requested with you and the President." The discussion was reported to have centered on the Administration's sensitivity over its inability to control the racial situation and on the need to maintain the pace of civil rights activities "so that the President will have to look for an alternative." Dr. King was said to believe that the President would then be receptive to ideas from Dr. King which would provide a solution to "his problem, (his) fear of violence . . . ." Dr. King was said to have stated that if a conference with the President could not be worked out, then the movement would have to be "enlarged," and that "he would like to put so much pressure on the President that he would have to sign an Executive Order making segregation unconstitutional." (Memorandum from Director, FBI to Attorney General, 5/31/63.)

58 Harry Wachtel testimony, 2/27/76, p. 12.

59 Burke Marshall, 3/3/76, p. 54; 56-57.

60 The memoranda also contained information about the civil rights movement of considerable political value to the administration.

61 omitted in original.

62 Memorandum from Director, FBI to Attorney General 1/8/62.

63 Burke Marshall testimony, 3/31/76, p. 10.

64 Memorandum from Courtney Evans to Alan Belmont, 2/6/62.

65 Allegations concerning Adviser B's membership in the Communist Party had received wide publicity in the newspapers. There were no such press allegations about Adviser A.

66 Adviser A's phones were covered by FBI wiretaps. See p. 88.

67 Memorandum from New York Field Office to FBI Headquarters, 8/21/62, p. 6.

68 Memorandum from F. J. Baumgardner to William Sullivan, 10/8/62, p. 2. The memorandum bears the caption "Communist Party, USA, COINTELPRO." This is the first indication of a counterintelligence program directed against Adviser B. Adviser A became the subject of such a program in 1966. For a discussion of the FBI's COINTELPRO effort, see staff report on COINTELPRO.

69 Memorandum from Director, FBI to Attorney General, 1/23/63, p. 1.

70 Memorandum from Director, FBI to Attorney General, 1/10/63. The Attorney General was subsequently told that Adviser B, Dr. King, and Adviser A conferred with other members of the SCLC on January 10 and 11. (Memorandum from Director, FBI to Burke Marshall, 1/31/63.)

71 Memorandum from Alex Rosen to Alan Belmont, 2/4/63.

72 On March 10 the Attorney General was informed that Adviser A and Dr. King had engaged in a lengthy conversation concerning an article that Dr. King was preparing for The Nation. (Memorandum from Director, FBI to Attorney General, 3/12/63.) On June 3, the Director sent the Attorney General a nine-page "concise summary" of information about Adviser A, emphasizing his role as Dr. King's adviser. (Memorandum from Director, FBI to Attorney General, 6/3/63.) An FBI memorandum in early June reported a discussion between Adviser A and Dr. King concerning whether Dr. King would appear on a television program in connection with a projected article in the Saturday Evening Post. Dr. King accepted Adviser A's recommendation that he read the article before committing himself because the reporter "raised a lot of questions about [Adviser B] and that kind of thing." (Memorandum from Director, FBI to Attorney General, 6/7/63.)

73 Memorandum from J. Edgar Hoover to Clyde Tolson, Alan Belmont, Cartha DeLoach, Alex Rosen, William Sullivan, 6/17/63. During this period the Attorney General requested a report from the Internal Security Division concerning Dr. King. The reply, dated June 28, cited Advisers A and B as the chief sources of alleged Communist influence on Dr. King. (Memorandum from J. Walter Yeagley to the Attorney General, 6/28/63.)

74 Andrew Young, who was present at the meeting with Burke Marshall, testified that Marshall had said that the Bureau had informed the Justice Department that there was in fact Communist influence in the civil rights movement, and had explicitly mentioned Adviser A. When Young asked Marshall for proof, he said that he had none, and that he "couldn't get anything out of the Bureau." Young recalled that Marshall had said, "We ask (the Bureau) for things and we get these big memos, but they don't ever really say anything." Young testified that Marshall "was asking us to disassociate ourselves from [Adviser A] altogether." (Andrew Young testimony, 2/19/76, pp. 40-44)

75 Memorandum from Burke Marshall to J. Edgar Hoover, 9/12/63.

76 Young, 2/19/76, p. 40.

77 Letter from Martin Luther King, Jr. to Adviser B, 7/3/63.

78 King letter, 7/3/63, which concluded: "We certainly appreciate the years of unselfish service which you have put into our New York Office and regret the necessity of your departure. Certainly yours is a significant sacrifice commensurate with the sufferings in jail and through loss of jobs under racist intimidation. We all pray for the day when our nation may be truly the land of the free. May God bless you and continue to inspire you in the service of your fellowman."

79 Ross Barnett testimony, Senate Commerce Committee, 7/12/63, p. 1.

The FBI informed the Justice Department that none of those individuals were Communist Party members, and that there was no evidence supporting the charge that the school was a communist training center. (Memorandum from Milton Jones to Cartha DeLoach, 7/16/63, p. 2).

Congressman Andrew Young, then an adviser to Dr. King, testified that the Highlander Folk School photograph had been frequently used to smear Dr. King in the South. Congressman Young's testimony that the School was not a Communist institution was consistent with the FBI's conclusion (Andrew Young testimony, 2/18/76, p. 53).

81 Letter from Senator Mike Monroney to J. Edgar Hoover, 7/12/63.

82 Letter from Senator Warren G. Magnuson to J. Edgar Hoover, 7/16/63.

83 Tolson urged Hoover to let the Attorney General respond to these reports; otherwise, Hoover might be called before the Committee to testify concerning "current racial agitation." The Director noted on the bottom of the memorandum, "I share Tolson's views." Memorandum from Clyde Tolson to the Director, 7/16/63.

84 Memorandum from Director, FBI to Attorney General, 7/17/63.

85 omitted in original.

86 Wallace introduced into the record a copy of an article from the Birmingham News, "King's SCLC Pays [Adviser B.] Despite Denial," June 30, 1963. The article stated that Dr. King had told reporters that Adviser B had not been associated with the SCLC since December 1962. but that a "highly authorized source" revealed that Dr. King was continuing to accept Adviser B's services and to pay his expenses. The article also reported allegations about Adviser B's association with the Communist Party.

87 Public Papers of the Presidents, John F. Kennedy, p. 574.

88 Senator Richard Russell of Georgia, who had also inquired of the FBI about Dr. King, was orally briefed by Nicholas Katzenbach and Courtney Evans on November 1, 1963. According to a memorandum by Evans, the Attorney General had made several attempts to draft a reply to Senator Russell's inquiries, and had finally settled on an "innocuous" written reply and an oral briefing. (DeLoach to Mohr, 2/5/76).

89 Burke Marshall testimony, 3/3/76, p. 13.

90 Memorandum from Courtney Evans to Alan Belmont, 7/16/63. The New York attorney was described by the FBI as a counsel to Dr. King, and an activist in civil rights matters. (Memorandum from J. Edgar Hoover to the Attorney General, 7/22/63.)

91 Airtel, from SAC Atlantic to Director FBI, 7/24/63: "Technical surveillance feasible with full security."

92 Memorandum from J. Edgar Hoover to Attorney General, 7/23/63.

93 Memorandum, J. Edgar Hoover to Attorney General, 7/22/63.

94 The only evidence of communist ties of the New York attorney that the FBI appears to have given the Attorney General was an informant's allegation that in 1953 and 1954 he had been an active member of the Labor Youth League, an organization which had been cited as "subversive" under Executive Order 104,50 (Memorandum from J. Edgar Hoover to the Attorney General).

95 Memorandum from Courtney Evans to Alan Belmont, 7/25/63.

96 Jeremiah O'Leary, The Evening Star, 6/19/69; Hoover memorandum for record, 6/19/69.

97 Courtney Evans testimony, 12/1/75, pp. 7-8.

98 omitted in original.

99 On July 17, in the midst of publicity concerning Dr. King's association with Adviser B, Director Hoover informed the Attorney General that although Adviser B had formally resigned from the SCLC, he was continuing his association with Dr. King. (Memorandum from Director, FBI, to Attorney General, 7/17/63.)

100 Memorandum from Courtney Evans to Alan Belmont, 7/29/63.

101 Report of Special Agent: Martin Luther King, Jr.: Affiliation with the Communist Movement, 7/22/63.

102 Memorandum from Courtney Evans to Alan Belmont, 8/1/63.

103 Burke Marshall testified that he could not recall this incident. Burke Marshall testimony, 3/3/76, p. 25.

104 Memorandum from Director, FBI to Attorney General, 8/2/63.

105 Memorandum from Courtney Evans to Alan Belmont, 8/20/63.

106 Memorandum from Director, FBI to Special Agents in Charge, 7/18/63, p. 2.

107 Memorandum from Frederick Baumgardner to William Sullivan, 8/22/63, p. 1.

108 Baumgardner memorandum, 8/22/63, p. 1. The report noted that Adviser A was critical of the Party's role in the civil rights movement and that he had said he did not consider himself under the control of the Party in his dealings with Dr. King.

109 Baumgardner memorandum, 8/22/63, p. 2.

110 Memorandum from Frederick Baumgardner to William Sullivan, 8/23/63, P. 1 [Emphasis added].

111 William Sullivan testimony, 11/1/75, p. 12.

112 Sullivan, 11/1/75, p. 13.

113 Baumgardner memorandum, 8/23/63, p. 3.

114 Sullivan, 11/1/75, p. 20.

Memorandum from Frederick Baumgardner to William Sullivan, 8/26/63, P. 1.

116 Memorandum from Frederick Baumgardner to William Sullivan, 8/29/63, p. 3.

117 Sullivan, 11/1/75, p. 22.

118 The "demagogic speech" was Dr. King's "I have a dream" speech. When shown this entry by the Committee, Sullivan testified:

"I do not apologize for this tactic. You either had to use this tactic or you did not exist. I put in this memorandum what Hoover wanted to hear. He was so damn mad at us." (Sullivan, 11/1/75, p. 29)

119 Memorandum from William Sullivan to Alan Belmont. 8/30/63, p. 1. 120

120 Sullivan, 11/1/75, p. 30.

121 Sullivan testimony, 11/1/75, p. 41.

122 Memorandum from Frederick Baumgardner to William Sullivan, 9/16/63.

123 Director Hoover's note on Baumgardner memorandum. 9/16/63, p. 2. Hoover commented on the transmittal slip:

"I have certainly been misled by previous memos which clearly showed communist penetration of the racial movement. The attached is contradictory of all that. We are wasting manpower and money investigating CP effort in racial matter if the attached is correct. (memorandum from Clyde Tolson to the Director, 9/18/63.)

124 Sullivan, 11/1/75, p. 46.

125 Memorandum from William Sullivan to Alan Belmont, 9/25/63, p. 1. Sullivan named the "changing situation in the Communist Party-Negro relations area" as the reason for a more intense investigation of communist influence in racial matters:

"During the past two weeks in particular there have been sharp stepped-up activities on the part of communist officials to infiltrate and to dominate Negro developments in this country. Further, they are meeting with successes."

A review of the Bureau files for the month prior to Sullivan's memorandum reveals no increase in CPUSA activity or any success on its part. The only relevant entries indicate:

(1) At a meeting on August 30, leading Party functionaries termed the March on Washington a 'success,' and discussed what action to take to advance civil rights legislation. Demonstrations were discussed, but none were planned. (Memorandum from Director, FBI, to Attorney General, 9/5/63).

(2) On August 30, Adviser B was observed spending an hour in the building housing the New York SCLC offices. (Memorandum from Director, FBI to Attorney General, 9/5/63).

126 Director, FBI to SAC, 10/1/63. [Emphasis added.]

127 The history of COINTELPRO -- FBI's counterintelligence operations to disrupt various domestic dissident groups -- is discussed in a separate staff report. Adviser B had been the target of one such COINTELPRO operation in 1962, when the Bureau attempted to generate a series of newspaper articles designed to expose his alleged Party background. See pp. 95--96.

128 omitted in original.

129 The use of COINTELPRO techniques to discredit Dr. King is discussed in the ensuing chapters.

130 Nicholas Katzenbach testimony, 11/12/75, p. 87.

131 Memorandum from the Attorney General to the Director, FBI, "Microphone Surveillance," 5/20/54. Attorney General Brownell's memorandum authorizing "unrestricted use" of microphone surveillance in national security cases was prompted by the Supreme Court's decision in *Irvine v. California*, 347 U.S. 128 (1961), in which the Court denounced as "obnoxious" the installation of a microphone in a criminal suspect's bedroom.

132 Memorandum from Director, FBI, to Deputy Attorney General Byron White, 5/4/61.

133 Memorandum from Courtney Evans to Alan Belmont, July 7, 1961. A Bureau memorandum by Director Hoover several years later states that Evans subsequently gave then Senator Robert Kennedy a letter, dated February 17, 1966, stating that Evans had never discussed the use of microphones with Kennedy and that Evans "did not know of any written material that was sent to you (Kennedy)" concerning microphone surveillances. The letter from Evans to Kennedy was released to the press. Director Hoover concluded in his memorandum reporting this incident that in view of Evans "disregard for the truth and duplicity toward the FBI, he should not be contacted without prior Bureau approval." (Memorandum, J. Edgar Hoover, Re: Courtney A. Evans, Person Not To Be Contacted, December 15, 1966.)

134 *Black V. United States* 385 U.S. 26 (1966).

155 Memorandum from SAC, Atlanta to Director, FBI, 5/19/65.

156 Memorandum from SAC, New York to Director, FBI, 1/27/64.

157 Memorandum from Director, FBI, to SAC, New York, 8/7/64.

158 omitted in original.

159 Memorandum from Director, FBI to Attorney General, 6/22/66. The charges had nothing to do with Dr. King.

160 Memorandum from Joseph Sizoo to Files. 6/23/66.

161 Memorandum from Ramsey Clark to J. Edgar Hoover, 1/3/68; memorandum from Ramsey Clark to J. Edgar Hoover, 1/17/69.

162 Clark memorandum, 1/3/68.

163 Memorandum from Director, FBI to SAC, Atlanta, 2/14/69.

164 Witnesses have indicated that other microphones might have been used to cover the activities of Dr. King and his associates, although those microphones might have been placed by local law enforcement officers. Bureau documents indicate that the New York and Miami police did in fact place microphones in Dr. King's hotel rooms, (memorandum from Director, FBI to Special Agent in Charge, New York, 5/7/65; Memorandum from Frederick Baumgardner to William Sullivan, 5/27/66). Congressman Andrew Young, who was one of Dr. King's chief aides, testified: "we found a bug in the pulpit in a church in Selma, Alabama, in 1965, and we didn't even move it or destroy it. We took it out from under the pulpit, taped it on top of the pulpit, and Reverend Abernathy called it, 'this little do hickey' and he said, 'I want you to tell Mr. Hoover, I don't want it under here where there is a whole lot of static, I want him to get it straight,' and he preached to the little bug." (Andrew Young testimony, 2/19/76, p. 55.)

165 Letter from FBI to Senate Select Committee, 7/24/75, pp. 4-5. (The Bureau also authorized the installation of a microphone at the Park Sheraton Hotel in New York on March 29, 1965, but Dr. King did not stay at the hotel and the coverage was terminated.)

166 See, for example, Memorandum from William Sullivan to Alan Belmont, 1/6/64; memorandum from Frederick Baumgardner to William Sullivan, 1/28/64. Some Bureau witnesses have suggested that the microphones were installed only to intercept conversations between Dr. King and other individuals, such as Adviser A, to determine the extent of communist influence over King. The Bureau, however, was unable to produce any evidence that it had anticipated meetings between Dr. King and Adviser A or between Dr. King and any other of his advisers whom the Bureau alleged had communist connections on the initial occasions when microphones were used.

167 Memorandum from Frederick Baumgardner to William Sullivan, 10/29/65; memorandum from Frederick Baumgardner to William Sullivan, 11/29/65.

168 Memorandum from William Sullivan to Alan Belmont, 1/13/64. This conference and the FBI's attempts to discredit King are discussed infra, pp. 133 et seq.

169 Memorandum from Frederick Baumgardner to William Sullivan, 2/4/64.

170 Baumgardner memorandum, 1/28/64.

171 Memorandum from William Sullivan to Alan Belmont, 1/6/64.

172 Memorandum from William Sullivan to Alan Belmont, 1/13/64. The memorandum did not indicate how the information had been obtained.

173 Memorandum from Cartha D. DeLoach to J. Edgar Hoover, 1/14/64. Jenkins told members of Committee staff in an informal interview that he had never suggested disseminating derogatory material about Dr. King to the press. (staff summary of interview with Walter Jenkins, 12/1/75, p. 2.) The Committee did not take Jenkins testimony because Jenkins informed the Committee that he was ill.

174 Memorandum from William Sullivan to Alan Belmont, 1/28/64.

175 Airtel, Special Agent in Charge, San Francisco, to FBI Director, 2/25/64.

176 The FBI also covered Dr. King's activities with photographic surveillance.

177 Memorandum from Frederick Baumgardner to William Sullivan, 3/4/64. The memorandum did not show how the information had been obtained.

178 Memorandum from Frederick Baumgardner to William Sullivan, 7/2/64.

179 Memorandum from Frederick Baumgardner to William Sullivan, 7/15/64.

180 Letter from J. Edgar Hoover to Walter Jenkins, 7/17/64.

181 Memorandum from William Sullivan to Alan Belmont, 8/21/64.

182 The FBI's surveillance of Dr. King and other civil rights leaders at the Atlantic City Democratic National Convention is discussed at length in a separate staff report dealing with electronic surveillance.

183 Memorandum from Frederick Baumgardner to William Sullivan, 9/28/64.

184 Memoranda from Joseph Sizoo to William Sullivan, 1/8/65, 1/29/65, and 5/13/65; memorandum from William Sullivan to Alan Belmont, 10/14/65; memoranda from Frederick Baumgardner to William Sullivan, 10/29/65 and 11/29/65.

185 Possible reasons that the mention of the collection of private life material was dropped from FBI memoranda during this period include (1) the "truce" between Dr. King and the FBI after December 1964 (see, pp. 163 et seq.) and (2) the fact that after May 1965 the FBI was required to inform the Attorney General of microphone surveillance and did not want to leave a "paper record" referring to the FBI's program to discredit Dr. King.

186 Memorandum from Charles Brennan to William Sullivan, 12/15/66, p. 2.

187 Memorandum from Charles Brennan to William Sullivan, 12/19/66.

188 Memorandum from William Sullivan to Alan Belmont, 1/13/64. This incident is discussed, at p. 121.

189 Sullivan memorandum, 1/13/64. Sullivan's remarks in this passage underscore the tension generated by the mutually inconsistent policies of the FBI and the Justice Department toward Dr. King. Sullivan viewed the FBI's task as gathering information with which to discredit Dr. King. He perceived the Attorney General's goal was to prevent Dr. King from being discredited. Sullivan feared that if the Attorney General were told of the derogatory information about Dr. King, the Attorney General might reprimand Dr. King. Thus, the FBI would be thwarted in its goals if it gave the Attorney General information which he needed to ensure that Dr. King not be discredited.

190 Baumgardner memorandum, 3/4/64. See p. 122. The memorandum also stated: "We avoided mentioning specific dates as to when it took place or mention of when the information was received -- thus to avoid, if possible, a question being raised by the Attorney General as to why he was not told earlier of the Willard incident."

191 Baumgardner memorandum, 3/4/64. p. 2.

192 Courtney Evans testimony, 12/1/75, p. 20.

193 Evans, 12/1/75, p. 20. The FBI has told the Committee that no such memorandum exists in its files.

194 Evans, 1/21/75, pp. 21-22.

195 Memorandum from Courtney Evans to Alan Belmont, 9/11/64.

196 Evans 12/1/75, pp. 21

197 Staff summary of Walter Jenkins interview, 1975, p. 3. 198

198 Bill Moyers testimony, 3/2/76, p. 89.

199 Memorandum from Charles Brennan to William Sullivan, 12/15/75, p. 2.

200 Memorandum from Joseph Sizoo to, William Sullivan, 5/13/65.

201 Memorandum from Director, FBI to Attorney General, 5/17/65.

202 Memorandum from William Sullivan to Alan Belmont, 10/14/65.

203 Memorandum from Director, FBI to Attorney General, 10/19/65.

204 Memorandum from Frederick Baumgardner to William Sullivan, 11/29/65.

205 memorandum from Director, FBI to Attorney General, 12/1/65.

206 Nicholas Katzenbach testimony, 12/3/75, Hearings, Vol. 6, p. 211.

207 When asked if he thought his initials in the corner of the three documents were forgeries, Katzenbach testified: "Let me be just as clear about that as I can. I have no recollection of receiving these documents, and I seriously believe that I would have recollected them had I received them. If they are my initials and if I put them on, then I am clearly mistaken in that recollection." (Katzenbach. 12/3/75. Hearings, p. 227.)

208 Memorandum from Nicholas Katzenbach to J. Edgar Hoover, 12/10/65. The Bureau asserts that the transmittal slip, which bears an FBI secretary's notation "Martin Luther King," was located in the FBI's Martin Luther King file. The serial number for filing on the transmittal slip is immediately subsequent to the serial number of the December 1 notification. The Bureau has informed the committee, however, that there is no evidence that the two memoranda were ever attached to one another, or that anything was attached to the transmittal slip when it came to the Bureau.

209 Katzenbach, 12/3/75, Hearings, p. 229. Katzenbach also told the Committee: "My calendar does show that on that date I had a meeting alone with the Deputy Director of the CIA, Mr. Helms, which he had requested the previous afternoon. The meeting was a brief one and would be consistent with a request by the CIA for domestic surveillances by the FBI. I rarely saw Mr. Helms alone, and he did on one or two occasions make such a request. But I have no recollection of the subject matter of that particular meeting and cannot, therefore say that this handwritten note is related to it." (Katzenbach, 12/3/75, Hearings, p. 211.)

210 Katzenbach, 12/3/75, Hearings, p. 211.

211 Katzenbach, 11/12/75, pp. 75-76.

212 Katzenbach wrote in a footnote, asterisked after this reference to his "general availability" : "For communications purposes, it was my consistent practice to be met by Bureau agents whenever I traveled. In addition, I kept the White House operator informed of how to reach me at all times. In the first occasion, I left my office for a flight to Chicago at 2:30 p.m. and was, as a practical matter, unavailable to the Bureau only during the two-hour flight. On the second occasion, I left my office at 12:35 p.m. for a one-hour flight to New York, and was similarly unavailable only during the flight. On the third occasion, I was in Washington office all day, and thus always available to the Bureau."

213 Katzenbach, 12/3/75, Hearings, pp. 211-212.

214 Memorandum from William Sullivan to Cartha DeLoach, 1/21/66. The significance of this memorandum is unclear. Hoover's and Tolson's strong reactions to Sullivan's approval of a microphone on King's room -- an action which Sullivan had taken several times before -- may have been in response to the "delicate surveillances" warning of the Attorney General, or an

added caution in light the Long Committee investigation into electronic surveillance. (The Long Committee investigation is discussed in the Committee Staff Report about electronic surveillance.) It is perhaps significant that on the same day that Tolson ordered Sullivan to remove the "bug" from Dr. King's hotel room, C. D. DeLoach met with Senator Long and, according to a memorandum by DeLoach, secured Senator Long's promise not to call any FBI witnesses to testify before his Subcommittee. DeLoach's account of that meeting states:

"While we have neutralized the threat of being embarrassed by the Long Subcommittee, we have not yet eliminated certain dangers which might be created as a result of newspaper pressure on Long. We therefore must keep on top this situation at all times." (Memorandum from C. D. DeLoach to C. Tolson, 1/21/66. Ordering Sullivan to remove the microphone in Dr. King's hotel room which would have proven extremely embarrassing if it had been discovered, might have been one of Tolson's responses to DeLoach's warning.)

215 Memorandum from William Sullivan to Alan Belmont, 10/15/63.

216 William Sullivan testimony, 11/1/75, p. 49.

217 Memorandum from Alan Belmont to Clyde Tolson, 10/17/63. Hoover wrote in the margin "We must do our duty" and "I am glad you recognize at last that there exists such influence." Copies were sent to the Attorney General, the White House, the Secretary of State, the Director of Central Intelligence, the Secretary of Defense, the Director of Naval Intelligence, the Army Assistant Chief of Staff for Intelligence, and the Department of Special Investigations of the Air Force.

218 Memorandum from Courtney Evans to Alan Belmont, 10/25/63.

219 Memorandum from J. Edgar Hoover to Clyde Tolson, Alan Belmont, John Mohr, Cartha DeLoach, Alex Rosen, and William Sullivan, 10/25/63.

220 Burke Marshall testimony, 3/3/76, p. 32. Carl T. Rowan, then Director of USIA, was sent a copy of the monograph. In a newspaper article in 1969, Rowan wrote, "(p)erhaps this is the time for me to reveal that I have read the FBI reports based on electronic surveillance of the late Nobel Prize-winner. I know how much dirt the FBI has dug up, and 90 percent of it is barnyard gossip that has nothing to do with 'internal security' or 'Marxist influences.'" (Carl T. Rowan, "FBI Won't Talk About Additional Wiretappings," The Washington D.C. Evening Star, 6/20/69, p. A-13)

221 Marshall testimony, 3/3/76, p. 34.

222 FBI work paper, "Questions To Be Explored at Conference 12/23/63 re: Communist influence in Racial Matters."

The Bureau subsequently considered the possibility of getting Detroit policemen to raid Dr. King's hotel room in March 1964 and kept abreast of the Miami police force's plans to raid Dr. King's hotel room in 1966 (Unsigned Bureau memorandum, "For Telephonic Briefing of Detroit Office;" Airtel, Miami Office to Director, FBI, 5/23/66).

223 Memorandum from William Sullivan to Alan Belmont, 12/24/63. Six months later, in April 1964, FBI headquarters was still instructing agents in the field to "continue to gather information concerning King's personal activities ... in order that we may consider using this information at an opportune time in a counterintelligence move to discredit him" and to consider the possibility of "utilizing contracts in the news media field." (Memorandum from FBI Director to Atlanta Office, April 1, 1964)

224 Sullivan memorandum, 12/24/63.

225 Sullivan, 11/1/75, p. 97.

226 Sullivan, 11/1/75, p. 85.

227 Sullivan, 11/1/75, p. 87.

228 Sullivan, 11/1/75, pp. 92-93.

229 United Press International release, 12/29/63, regarding 1/3/64 Time cover story.

230 UPI release, 12/29/63.

231 Memorandum from William Sullivan to Alan Belmont, 1/8/64.

232 Sullivan, 11/1/75, p. 149.

233 Sullivan memorandum, 1/8/64.

234 Staff interview, 11/17/75. This note by Director Hoover should be read in light of his "feud" with the Domestic Intelligence Division described pp. 104 et seq.

235 Memorandum from Director, FBI to SAC Atlanta, 4/1/64.

236 Director, FBI memorandum, 4/1/64.

237 Memorandum from SAC, Atlanta to Headquarters, 4/14/64, p. 11.

238 SAC, Atlanta memorandum, 4/14/64.

239 The FBI overcame similar security problems in another city where hotel room coverage of Dr. King was desired by supplying "lead" information to newsmen "in order that they might determine if they could develop sufficient facts to cause an expose of King."

240 Memorandum from Director, FBI to SAC, Atlanta, 4/24/64. The Domestic Intelligence Division ultimately approved taking preliminary steps for possible anonymous mailings to the newsmen and to install coverage on any new apartments that King might lease. The other suggestions were rejected because they did "not appear desirable and/or feasible for direct action by the Bureau at this time." (Memorandum from Frederick Baumgardner to William Sullivan, 5/6/64.)

241 Memorandum from SAC, New York to Director, FBI, 4/14/64, p. 2. Those suggestions essentially included increasing coverage of the New York SCLC office and sending an anonymous letter to a disaffected SCLC employee "to cause disruption in the New York office." The anonymous letter was ultimately mailed. (Memorandum from Director, FBI, to SAC, New York, 4/20/64.)

242 Memorandum from Director, FBI, to SAC, New York, 4/24/64.

243 Director, FBI memorandum, 4/24/64, p. 2.

244 SAC, New York memorandum, 4/14/64. A detailed, comprehensive, 163-page internal Headquarters working paper, entitled "Communist Party, USA, Negro Question, Communist Influence in Racial Matters," dated April 27, 1964, includes 14 pages dealing solely with Adviser A, but does not include the information received from New York just two weeks earlier that Adviser A "is not now under CP discipline in the civil rights field."

245 Unsigned FBI Memorandum, Addendum by Inspection Division, 6/4/64.

246 Memorandum from Frederick Baumgardner to William Sullivan, 5/20/64, addendum by Inspection Division, p. 1.

247 Memorandum from Frederick Baumgardner to William Sullivan, 8/25/64.

248 Memorandum from Director, FBI, to SAC, Atlanta, 8/28/64, p. 6.

249 Director, FBI memorandum, 8/28/64, pp. 1-2.

250 Sullivan memorandum, 1/13/64, p. 2.

251 Baumgardner memorandum, 3/4/64.

252 See Chapter IV.

253 Memorandum from Frederick Baumgardner to William Sullivan, 1/22/64.

254 Memorandum from N. P. Callahan to John Mohr, 1/31/64.

Carl Rowan told a Committee staff member that shortly before his appointment as Director of USIA was announced, he had been invited to the White House for a Sunday evening dinner with the President and Mrs. Johnson to view the film about the March. Rowan said that when the President asked him if he was going to distribute the film, Rowan replied that if he could not, "you have to find yourself a new Director." Rowan recalled that the President replied, "That's good enough for me." Rowan recalled that after the film had been distributed, he had been called aside by Congressman Rooney, who repeated stories about Dr. King that had been given to him by the Bureau. Rowan stated that Rooney had specifically mentioned the bugging of Dr. King's suite at the Willard Hotel. (Staff Interview of Carl T. Rowan, 8/29/75)

255 Memorandum from Cartha DeLoach to John Mohr, 3/16/64, p. 2. Hoover wrote on DeLoach's memorandum: "Someone on Senator [sic] Rooney's committee certainly betrayed the secrecy of the 'off-the-record' testimony I gave re: King. I do not want anything on King given to Smith nor anyone else at this time."

256 Interview with Congressman Rooney, NBC News' First Tuesday," 6/1/71.

257 Memorandum from Frederick Baumgardner to William Sullivan, 3/4/64. The officer who handled this assignment was given a letter of commendation by the Director and a monetary award.

258 DeLoach had originally intended not to contact the College official because of his "close association with (Sargent) Shriver." Senator Saltonstall, however, requested the College official to confer with DeLoach.

259 Memorandum from Cartha DeLoach to John Mohr, 4/8/64. DeLoach stated that he would "deny any such information had been furnished" if the official told anyone that the FBI had briefed him.

260 Memorandum from William Sullivan to Alan Belmont, 12/16/64.

261 Memorandum from William Sullivan to Alan Belmont, 12/16/64.

262 Memorandum from Milton Jones to Cartha DeLoach, 12/8/64.

263 Memorandum from Frederick Baumgardner to William Sullivan, 8/31/64, p. 1.

The Chief of the Security Section recommended:

"If approved, Assistant Director Malone should personally orally brief Francis Cardinal Spellman in accordance with the attached Top Secret summary [containing information about Dr. King's private life] ... This is the same summary we previously used in preventing King's receiving an honorary degree from Marquette University." (Baumgardner to Sullivan, 8/31/64.)

264 Memorandum from Frederick Baumgardner to William Sullivan, 9/8/64.

265 Director's notes on UPI release, 9/8/64, and New York Herald Tribune, 9/19/64.

266 Memorandum from William Sullivan to Alan Belmont, 11/22/64. See pp. 131, et seq.

267 Letter from J. Edgar Hoover to Bill Moyers, 12/1/64.

268 Memorandum from Cartha DeLoach to John Mohr, 12/7/64.

269 Copies were distributed to Acting Attorney General Nicholas Katzenbach, the Secretaries of State and Defense, the Director of the CIA, and the heads of the Military Intelligence agencies, as well as to USIA.

270 Untitled memorandum, 11/12/64.

271 omitted in original.

272 Letter from J. Edgar Hoover to Hubert Humphrey, 12/21/64.

273 Memorandum from Frederick Baumgardner to William Sullivan, 12/8/64.

274 Cable from Director, FBI to Legat, 11/10/64.

275 Memorandum from Frederick Baumgardner to William Sullivan, 11/30/64.

276 Memorandum from Frederick Baumgardner to William Sullivan, 11/12/64.

277 Memorandum from Frederick Baumgardner to William Sullivan, 9/11/64.

313 The two newsmen turned down the Bureau's offer.

314 Nicholas Katzenbach testimony, 12/3/75, Hearings, Vol. 6, p. 210.

315 Nicholas Katzenbach testimony, 11/12/75, pp. 97-98.

316 Marshall testimony, 3/3/76, p. 39.

317 Marshall testimony, 3/3/76, p. 43.

318 Marshall testimony, 3/3/76, p. 43.

319 DeLoach testimony, 11/25/75, p. 156.

320 DeLoach testimony, 11/25/76, p. 188.

321 Memorandum from Cartha DeLoach to John Mohr, 12/1/64.

322 Bill Moyers testimony, 3/2/76, p. 8.

323 Moyers testimony, 3/2/76, p. 9.

324 As early as February 1962, the Director had informed the Domestic Intelligence Division: "King is no good anyway."

325 New York Times, 4/22/64, p. 30.

326 FBI transcription of Dr. King's statement to press, Memorandum from William Sullivan to Alan Belmont, 4/23/64. Another FBI memorandum which dealt with Dr. King's statement indicated the Bureau's opinion that someone "high in the Administration not known to us ... apparently agreed with Dr. King's press release." Sullivan's report about Dr. King's statement pointed out that "King quoted the AG against the Director, to the effect that it is to be expected that communist will try to infiltrate civil rights movements, but they had not succeeded in making the expected impact." (Memorandum from William Sullivan to Alan Belmont, 4/23/64.)

327 Memorandum from Cartha DeLoach to Edwin Guthman, 5/14/64, p. 4. Director Hoover's answer was initially submitted to Guthman, the Attorney General's Special Assistant for Public information. Guthman strongly objected to the answer because it "put communist influence in the civil rights movement out of perspective." He then had a lengthy conference with DeLoach, and the answer, quoted above, was agreed upon. (memorandum from Edwin Guthman to Cartha DeLoach, 5/12/64; DeLoach memorandum, 5/14/64.)

328 Memorandum from Frederick Baumgardner to William Sullivan, 5/11/64. The Headquarters agent who reported on the television program added the comment: "King's obvious reference was to the 'removal' of (Adviser B) from the SCLC. As expected, King lied about being warned of anyone else because he had been warned about (Adviser A) and has nevertheless maintained a close association with (Adviser A)." (Baumgardner memorandum, 5/11/64.)

329 Memorandum from Cartha DeLoach to John Mohr, 11/18/64, p. 6.

330 DeLoach memorandum, 11/18/64, p. 10. DeLoach told the Committee about the incident: "I passed Mr. Hoover a note and told him that if he really felt that way, he should keep it off the record. He paid no attention to that note. I passed him a second note and made the same statement and he paid no attention to that, and on the third occasion that I passed him a note, he said out loud to the women that 'DeLoach tells me I should keep these statements concerning King off the record, but that's none of his business. I made it for the record and you can use it for the record.'" (Cartha DeLoach testimony, 11/25/75, p. 169. See also DeLoach testimony, 12/3/75, Hearings, Vol. 6, p. 173.)

331 Katzenbach testimony, 12/3/75, Hearings, Vol. 6, p. 210.

332 Harry Wachtel testimony, 2/27/76, p. 42.

333 New York Times, 11/20/64, p. 18.

334 New York Times, 11/20/64, p. 19.

335 New York Times, 11/20/64, p. 18.

336 That incident is described at pp. 89--91.

337 Memorandum from Alex Rosen to Alan Belmont, 11/20/64. p. 4. Director Hoover remarked on another memorandum, "I have no intention of seeing King. I gave him that opportunity once and he ignored it."

338 William Sullivan testimony, 11/1/75, pp. 104-105. The Willard Hotel tape was called in from the Washington field office on November 19, 1964. The decision at Headquarters would have been made sometime earlier, probably as a result of the "notorious liar" controversy.

339 Sullivan, 11/1/75, p. 105.

340 Staff summary of [FBI Technician] interview, 7/25/75, p. 5. The tape which was ultimately sent to Dr. King, however, may have consisted of the Willard coverage.

341 Sullivan, 11/1/75, p. 106.

342 Staff summary of [FBI Agent] interview, 4/23/75. The agent recalled that the package, which was marked "fragile," did not have a return address. Sullivan remembered that the agent had commented that he had had trouble mailing the package because it had no return address, but that he had "talked his way around it." (Sullivan, 11/1/75, p. 109.)

343 Andrew Young testimony, 2/19/76, pp. 6-9. Young recalled that the package containing the tape had a Florida postmark.

344 Young, 2/19/76, p. 7.

345 Young, 2/19/76, p. 8.

346 Young, 2/19/76, p. 8; staff summary of Ralph Abernathy interview, 11/19/75), p. 3.

347 Sullivan, 11/1/75, p. 112.

348 The Bureau said it could not find a copy in any of its other files.

349 The letter given to the Committee by the FBI was single spaced; Andrew Young testified that Dr. King had received "a double spaced letter and it was about a page and a half. It was typed in a very old typewriter, very bad typing." He was certain, however that the last paragraph of the two letters were nearly identical. The one sent to Dr. King "was simplified and has shorter, simpler sentences, but essentially said the same thing, especially the part about 'there's only one thing left for you to do. . . .' I remember that vividly." (Young, 2/19/76, p.36)

350 Sullivan, 11/1/75, p. 112. Sullivan suggested that the letter might have been "planted" in his files.

351 One FBI witness testified that he interpreted the "34 days" to refer to Christmas, and that the FBI had apparently hoped Dr. King would resign for Christmas. (James Adams testimony, 11/19/75, Hearings. Vol. 6, pp. 66-68.) When asked about this interpretation, Andrew Young testified:

"We didn't think of that. We thought that he was talking about committing suicide, and we tied the date to the Noble Prize.... That is the way we discussed it; to commit suicide, or that he was going to be publicly humiliated just at the moment of his receipt of the Noble Prize." (Andrew Young, 2/19/76, p. 37)

Carl Rowan stated during a staff interview that he had been informed by a reliable source, whom he declined to identify, that the decision to mail the tape recording and letter had been made during a meeting at which Director Hoover was present. Rowan's source said that the Director was "livid" over Dr. King's receipt of the Nobel Peace Prize, and that methods of preventing Dr. King from receiving the Prize were discussed at the meeting. According to the source, there was a discussion at the meeting concerning allegations that Dr. King had tried to commit suicide when he was young (such allegations had appeared in the news media e.g. Time 1/3/64, p. 14), and that he still had suicidal tendencies. The source told Rowan that the participants in the meeting had concluded that if the tape were mailed, Dr. King might be so distressed that he would commit suicide. (Staff summary of Carl Rowan interview, 8/29/75. p. 2.)

"The Director reiterated that ...

"The Director interrupted King and briefly detailed five cases ...

371 Young, 2/19/73, p. 14.

372 Staff summary of Ralph Abernathy interview, 11/14/75, p. 2. Upon reflection, Abernathy stated that he was uncertain whether this latter exchange had occurred at the December 1 meeting or at some other meeting. However, he could not recall any other meeting between Director Hoover and Dr. King at which he was present. DeLoach's memorandum account of the meeting does not mention this exchange, and Andrew Young could not recall it.

In 1970, when the Bureau received a series of inquiries following a series of stories in the press suggesting that Director Hoover had "blackmailed" Dr. King at the December 1964 meeting by threatening to "expose" his alleged "extramarital activities," the FBI prepared a form letter stating:

"I received your letter of ---- and would like to assure that the FBI does not engage in blackmail activities. Also, there is not one shred of truth in the allegation that this Bureau blackmailed Martin Luther King."

373 Young, 2/19/76, p. 19.

374 DeLoach, 11/25/75, p. 170.

Time magazine subsequently carried two accounts of the Hoover-King meeting. According to the December 14, 1970 issue of Time, Director Hoover described the meeting as follows:

"I got a wire from the Reverend King in New York. He was getting ready to get the Nobel Prize. He was the last one in the world who should ever have received it. He wired asking to see me. I held him in complete contempt because of the things he said and because of his conduct. First I felt I shouldn't see him, but then I thought he might become a martyr if I didn't. King was very suave and smooth. He sat right there where you're sitting and said he never criticized the FBI. I said, Mr. King -- I never called him reverend -- stop right there, you're lying. He then pulled out a press release that he said he intended to give to the press. I said, don't show it to me or read it to me. I couldn't understand how he could have prepared a press release even

before we met. Then he asked if I would go out and have a photograph taken with him, and I said I certainly would mind. And I said, if you ever say anything that is a lie again, I will brand you a liar again. Strange to say, he never attacked the Bureau again for as long as he lived."

The exchange which Director Hoover reported to Time magazine does not appear in DeLoach's detailed memorandum of the meeting. Young also denied the Director's account, and noted that "there was a public Hoover that made remarks about Dr. King that were more on that tone, but in the meeting, none of that kind of attitude or none of those statements were made." (Young, 2/19/75, p. 17.)

The August 17, 1970 issue of Time magazine states:

"Hoover, Time learned, explained to King just what damaging private detail he had on the tapes, and lectured him that his morals should be those befitting a Nobel Prize winner. He also suggested that King should tone down his criticism of the FBI."

Young testified, "there was nothing like that at the meeting." (Young, 2/19/76, p. 17) and DeLoach's memorandum of the meeting does not report such a conversation.

375 Young, 2/19/76, p. 15.

376 Young, 2/19/75, p. 14.

377 Wachtel, 2/27/76, p. 48.

378 DeLoach memorandum, 12/10/64, addendum. Director Hoover wrote on the memorandum, "I think it should be done now while it is fresh in the minds of the specially trained agents." A notation states: "Done. We have prepared 321 pp. of transcripts, 3/26/65."

379 DeLoach's memorandum of the meeting sets it at 5 p.m., after the King-Hoover meeting. Farmer, however, said that DeLoach left the King-Hoover meeting to confer with him. (Staff summary of James Farmer interview, 11/13/75, p. 5.)

380 Farmer (staff summary), 11/13/75, pp. 1-2.

381 Farmer (staff summary), 11/13/75, pp. 2-4.

382 omitted in original.

383 Farmer (staff summary), 11/13/76, p. 4.

384 Young, 2/19/76, p. 20. Young testified that:

"We asked for the meeting because even though we thought that Hoover wasn't as bad as he seemed publicly, and we thought this was just a sort of lapse in his behavior, we still kept getting reports from the press about stories that were still being told, and we received the tape."

385 Abernathy (staff summary), 11/14/75, pp. 2-3.

386 Abernathy (staff summary), 11/14/75, p. 2.

387 Memorandum from Cartha DeLoach to John Mohr, 1/11/65, pp. 1-3.

388 Young, 2/19/76, p. 38.

389 Staff summary of Archibald Carey interview 12/21/75, pp. 1-2. DeLoach in a memorandum concerning his meeting with Dr. Carey, wrote that Dr. Carey had said:

"He had come to see us on behalf of Martin Luther King. He added that King was in Chicago last weekend and stayed in Carey's home, and at that time indicated every evidence of great disturbance. King told Carey he had been reliably informed there was a massive effort to discredit him by the Federal Bureau of Investigation. This effort is to begin this week." (Memorandum from Cartha DeLoach to John Mohr, 5/19/65, p. 1)

Dr. Carey told the Committee that DeLoach had exaggerated Dr. King's concern over these rumours in his memorandum.

390 DeLoach memorandum, 5/19/65, p. 2.

391 Carey (staff summary), 11/21/75, p. 3.

391 Even after Dr. King's death, the FBI tried to tarnish his public image. See pp. 183.

419 Memorandum from Robert Wick to Cartha DeLoach, 11/9/66.

420 Memorandum from Charles Brennan to William Sullivan, 3/8/67. The proposal was given Director Hoover's "O.K." and a handwritten note in the margin initialed by the Chief of the Crime Records Division states, "handled."

421 Memorandum from George Moore to William Sullivan 16/18/67.

422 Memorandum from Frederick Baumgardner to William Sullivan, 3/2/65.

423 Memorandum from Frederick Baumgardner to William Sullivan, 10/24/66.

424 Memorandum from Cartha DeLoach to Clyde Tolson, 10/26/66.

425 Memorandum from Cartha DeLoach to Clyde Tolson, 10/26/66. DeLoach's memorandum noted: "I personally feel that Bundy is of the pseudo-intellectual, Ivy League group that has little respect for the FBI." Bundy confirmed that he had been approached concerning Dr. King and that he had refused to talk about Dr. King.

426 Memorandum from Cartha DeLoach to John Mohr, 8/14/65.

427 Memorandum from Cartha DeLoach to Clyde Tolson, 1/19/68.

428 COINTELPRO is discussed at length in the Staff Report on COINTELPRO.

429 Memorandum from Director, FBI to SAC, New York, 7/18/66. Allegations concerning Adviser A's suspected Communist Party affiliations are discussed at pp. 149-150.

430 The complete absence of any derogatory information on Adviser A's personal life did not prevent the Bureau from attempting to develop such information. In October 1967 the New York office informed Washington it would "continue its efforts to place [Adviser A] in a compromising position" with a woman acquaintance. (Memorandum from SAC New York to Director, FBI, 10/7/66.)

431 Memorandum from SAC, New York to Director, FBI, 8/15/66.

432 Memorandum from SAC, New York to Director, FBI, 2/25/67.

433 Memorandum from SAC. The field office noted: "Effectively tabbing as communists or as communist-backed the more hysterical opponents of the President on the Vietnam question in the midst of the Presidential campaign would be a real boon to Mr. Johnson."

434 Memorandum from SAC, Chicago to Director, FBI, 6/1/67. The Chicago office observed: "It is emphasized that this person should be respected for his balance and fair-mindedness. An article or series by an established conservative would not adequately serve our purposes."

435 Memorandum from Director, FBI to Special Agents in Charge, 8/25/67.

436 Memorandum from Director, FBI to Special Agents in Charge, 3/4/68.

437 Testimony, 10/17/75, p. 14.

438 Memorandum from Charles Brennan to William Sullivan, 4/10/67,

439 omitted in original.

440 Memorandum from George Moore to William Sullivan, 12/18/67; memorandum from Director, FBI to LEGAT, 12/21/67.

441 Memorandum from George Moore to William Sullivan, 2/29/68.

442 See discussion, supra, p. 180.

443 Memorandum from George Moore to William Sullivan, 3/26/68.

444 Memorandum from SAC, Mobile to Director, FBI, 3/25/68; memorandum from Director, FBI to SAC, Mobile, 4/2/68.

445 Memorandum from George Moore to William Sullivan, 3/28/68. An article about violence in the sanitation strike, published in the Memphis Commercial Clarion on March 29, 1968, echoed the wording of the FBI memorandum, although there is no proof that the FBI was responsible for the article. The article stated:

"Yesterday's march, ostensibly a protest on behalf of the city's striking sanitation workers, was generally considered to be a 'dress rehearsal' by Dr. King for his planned march on Washington April 22." (Memphis commercial clarion, 3/29/68.)

446 Memorandum from George Moore to William Sullivan, 3/29/68.

447 Dr. King's associates and the FBI both deny that this last effort to discredit Dr. King influenced his decision to move to the Lorraine Hotel. Dr. Ralph Abernathy, who was with Dr. King during his last days, told the Committee that he had not been aware of any newspaper articles criticizing Dr. King for staying at the Holiday Inn during his visit the previous week. He was certain that the Lorraine had not been chosen because of any articles that might have appeared and said that Dr. King always stayed at the Lorraine when he visited Memphis, with the exception of the prior visit. In that instance, Dr. King had been brought to the Holiday Inn by police following a riot during the sanitation strike. (Staff summary of Ralph Abernathy interview, 11/19/75, p. 2.)

A handwritten note on the FBI memorandum criticizing Dr. King for staying at the Holiday Inn states: "handled, 4-3-68." The FBI questioned the agent who wrote "handled" on the memorandum and informed the Committee that he did not recall the memorandum, and did not know whether "handled" indicated that he had disseminated the article or simply cleared the memorandum through the Crime Records Division of the FBI.

According to the FBI, Dr. King checked into the Lorraine Hotel at 10:30 a.m. on April 3. The FBI has concluded that "the notation indicating that the proposed furnishing of information to news media was 'handled' on April 3, 1968, would, of course, preclude any such information from appearing in the press prior to King's checking into the Hotel Lorraine. . . ."

**SUPPLEMENTARY DETAILED STAFF REPORTS  
ON INTELLIGENCE ACTIVITIES AND THE  
RIGHTS OF AMERICANS**

---

**BOOK III**

---

**FINAL REPORT  
OF THE  
SELECT COMMITTEE  
TO STUDY GOVERNMENTAL OPERATIONS  
WITH RESPECT TO  
INTELLIGENCE ACTIVITIES  
UNITED STATES SENATE**

APRIL 23 (under authority of the order of April 14), 1976

**THE FBI'S COVERT ACTION PROGRAM TO DESTROY THE BLACK PANTHER PARTY**

**INTRODUCTION**

In August 1967, the FBI initiated a covert action program -- COINTELPRO -- to disrupt and "neutralize" organizations which the Bureau characterized as "Black Nationalist Hate Groups." 1 The FBI memorandum expanding the program described its goals as:

1. Prevent a coalition of militant black nationalist groups....
2. Prevent the rise of a messiah who could unify and electrify the militant nationalist movement ... Martin Luther King, Stokely Carmichael and Elijah Muhammad all aspire to this position....
3. Prevent violence on the part of black nationalist groups....
4. Prevent militant black nationalist groups and leaders from gaining respectability by discrediting them....
5. . . . prevent the long-range growth of militant black nationalist organizations, especially among youth. 2

The targets of this nationwide program to disrupt "militant black nationalist organizations" included groups such as the Southern Christian Leadership Conference (SCLC), the Student Nonviolent Coordinating Committee (SNCC), the Revolutionary Action Movement (RAM), and the Nation of Islam (NOI). It was expressly directed against such leaders as Martin Luther King, Jr., Stokely Carmichael, H. Rap Brown, Maxwell Stanford, and Elijah Muhammad.

The Black Panther Party (BPP) was not among the original "Black Nationalist" targets. In September 1968, however, FBI Director J. Edgar Hoover described the Panthers as:

"the greatest threat to the internal security of the country.

"Schooled in the Marxist-Leninist ideology and the teaching of Chinese Communist leader Mao Tse-tung, its members have perpetrated numerous assaults on police officers and have engaged in violent confrontations with police throughout the country. Leaders and representatives of the Black Panther Party travel extensively all over the, United States preaching their gospel of hate and violence not only to ghetto residents, but to students in colleges, universities and high schools is well." 3

By July 1969, the Black Panthers had become the primary focus of the program, and was ultimately the target of 233 of the total authorized "Black Nationalist" COINTELPRO actions. 4

Although the claimed purpose of the Bureau's COINTELPRO tactics was to prevent violence, some of the FBI's tactics against the BPP were clearly intended to foster violence, and many others could reasonably have been expected to cause violence. For example, the FBI's efforts to "intensify the degree of animosity" between the BPP and the Blackstone Rangers, a Chicago street gang, included sending an anonymous letter to the gang's leader falsely informing him that the Chicago Panthers had "a hit out" on him. 5 The stated intent of the letter was to induce the Ranger leader to "take reprisals against" the Panther leadership. 6

Similarly, in Southern California, the FBI launched a covert effort to "create further dissension in the ranks of the BPP." 7 This effort included mailing anonymous letters and caricatures to BPP members ridiculing the local and national BPP leadership for the express purpose of exacerbating an existing "gang war" between the BPP and an organization called the United Slaves (US). This "gang war" resulted in the killing of four BPP members by members of US and in numerous beatings and shootings. Although individual incidents in this dispute cannot be directly traced to efforts by the FBI, FBI officials were clearly aware of the violent nature of the dispute, engaged in actions which they hoped would prolong and intensify the dispute, and proudly claimed credit for violent clashes between the rival factions which, in the words of one FBI official, resulted in "shootings, beatings, and a high degree of unrest in the area of southeast San Diego." 8

James Adams, Deputy Associate Director of the FBI's Intelligence Division, told the Committee:

None of our programs have contemplated violence, and the instructions prohibit it, and the record of turndowns of recommended actions in some instances specifically say that we do not approve this action because if we take it it could result in harm to the individual. 9

But the Committee's record suggests otherwise. For example, in May 1970, after US organization members had already killed four BPP members, the Special Agent in Charge of the Los Angeles FBI office wrote to FBI headquarters:

Information received from local sources indicate that, in general, the membership of the Los Angeles BPP is physically afraid of US members and take premeditated precautions to avoid confrontations.

In view of their anxieties, it is not presently felt that the Los Angeles BPP can be prompted into what could result in an internecine struggle between the two organizations. . . .

The Los Angeles Division is aware of the mutually hostile feelings harbored between the organizations and the first opportunity to capitalize on the situation will be maximized. It is intended that US Inc. will be appropriately and discreetly advised of the time and location of BPP activities *in order that the two organizations might be brought together and thus grant nature the opportunity to take her due course.* [Emphasis added.] 10

This report focuses solely on the FBI's counterintelligence program to disrupt and "neutralize" the Black Panther Party. It does not examine the reasonableness of the basis for the FBI's investigation of the BPP or seek to justify either the politics, the rhetoric, or the actions of the BPP. This report does demonstrate, however, that the chief investigative branch of the Federal Government, which was charged by law with investigating crimes and preventing criminal conduct, itself engaged in lawless tactics and responded to deep-seated social problems by fomenting violence and unrest.

#### *A. The Effort to Promote Violence Between the Black Panther Party and Other Well-Armed, Potentially Violent Organizations*

The Select Committee's staff investigation has disclosed a number of instances in which the FBI sought to turn violence-prone organizations against the Panthers in an effort to aggravate "gang warfare." Because of the milieu of violence in which members of the Panthers often moved we have been unable to establish a direct link between any of the FBI's specific efforts to promote violence, and particular acts of violence that occurred. We have been able to establish beyond doubt, however, that high officials of the FBI desired to promote violent confrontations between BPP members and members of other groups, and that those officials condoned tactics calculated to achieve that end. It is deplorable that officials of the United States Government, should engage in the activities described below, however dangerous a threat they might have considered the Panthers; equally disturbing is the pride which those officials took in claiming credit for the bloodshed that occurred.

##### *1. The Effort to Promote Violence Between the Black Panther Party and the United Slaves (US), Inc.*

FBI memoranda indicate that the FBI leadership was aware of a violent power struggle between the Black Panther Party and the United Slaves (US) in late 1968. A memorandum to the head of the FBI's Domestic Intelligence Division, for example, stated:

On 11/2/68, BPP received information indicating US members intended to assassinate Leroy Eldridge Cleaver ... at a rally scheduled at Los Angeles on 11/3/68. A Los Angeles racial informant advised on

11/8/68 that [a BPP member] had been identified as a US infiltrator and that BPP headquarters had instructed that [name deleted] should be killed.

During BPP rally, US members including one [name deleted], were ordered to leave the rally site by LASS members (Los Angeles BPP Security Squad) and did so. US capitulation on this occasion prompted BPP members to decide to kill [name deleted] and then take over US organization. Members of LASS . . . were given orders to eliminate [name deleted] and [name deleted]. 11

This memorandum also suggested that the two US members should be told of the BPP's plans to "eliminate" them in order to convince them to become Bureau informants. 12

In November 1968, the FBI took initial steps in its program to disrupt the Black Panther Party in San Diego, California by aggravating the existing hostility between the Panthers and US. A memorandum from FBI Director Hoover to 14 field offices noted a state of "gang warfare" existed, with "attendant threats of murder and reprisals." between the BPP and US in southern California and added:

In order to fully capitalize upon BPP and US differences as well as to exploit all avenues of creating further dissention in the ranks of the BPP, recipient offices are instructed to submit imaginative and hard-hitting counterintelligence measures aimed at crippling the BPP. 13

As the tempo of violence quickened, the FBI's field office in San Diego developed tactics calculated to heighten tension between the hostile factions. On January 17, 1969, two members of the Black Panther Party -- Apprentice "Bunchey" Carter and John Huggins -- were killed by US members on the UCLA campus following a meeting involving the two organizations and university students. 14 One month later, the San Diego field office requested permission from headquarters to mail derogatory cartoons to local BPP offices and to the homes of prominent BPP leaders around the country. 15 The purpose was plainly stated:

The purpose of the caricatures is to indicate to the BPP that the US organization feels that they are ineffectual, inadequate, and riddled with graft and corruption. 16

In the first week of March, the first cartoon was mailed to five BPP members and two underground papers, all in the San Diego area. 17 According to an FBI memorandum, the consensus of opinion within the BPP was that US was responsible and that the mailing constituted an attack on the BPP by US. 18

In mid-March 1969, the FBI learned that a BPP member had been critically wounded by US members at a rally in Los Angeles. The field office concluded that shots subsequently fired into the, home of a US member were the results of a retaliatory raid by the BPP. 19 Tensions between the BPP and US in San Diego, however, appeared to lessen, and the FBI concluded that those chapters were trying "to talk out their differences." The San Diego field office reported:

On 3/27/69 there was a meeting between the BPP and US organization. . . . Wallace [BPP leader in San Diego] . . . concluded by stating that the BPP in San Diego would not hold a grudge against the US members for the killing of the Panthers in Los Angeles (Huggins and Carter). He stated that lie would leave any retaliation for this activity to the black community. . . .

On 4/2/69, there was a friendly confrontation between US and the BPP with no weapons being exhibited by either side. US members met with BPP members and tried to talk out their differences. 20

On March 27, 1969 -- the day that the San Diego field office learned that the local BPP leader had promised that his followers "would not hold a grudge" against local US members for the killings in Los Angeles -- the San Diego office requested headquarters' approval for three more cartoons ridiculing the BPP and falsely attributed to US. One week later, shortly after the San Diego office learned that US and BPP members were again meeting and discussing their differences, the San Diego field office mailed the cartoons with headquarters' approval. 21

On April 4, 1969 there was a confrontation between US and BPP members in Southcrest Park in San Diego at which, according to an FBI memorandum, the BPP members "ran the US members off." 22 On the same date, US members broke into a BPP political education meeting and roughed up a female BPP member. 21 The FBI's Special Agent in Charge in San Diego boasted that the cartoons had caused these incidents:

The BPP members ... strongly objected being made fun of by cartoons being distributed by the US organization (FBI cartoons in actuality) ... [Informant] has advised on several occasions that the cartoons are "really shaking up the BPP." They have made the BPP feel that US is getting ready to move and this was the cause of the confrontation at Southcrest Park on 4/4/69. 24

The fragile truce had ended. On May 23, 1969, John Savage, a member of the BPP in Southern California, was shot and killed by US member Jerry Home, aka Tambuzi. The killing was reported in an FBI memorandum which stated that confrontations between the groups were now "ranging from mere harrassment up to and including beating of various individuals." 25 In mid-June, the San Diego FBI office informed Washington headquarters that members of the US organization were holding firearms practice and purchasing large quantities of ammunition:

Reliable information has been received ... that members of the US organization have purchased ammunition at one of the local gun shops. On 6/5/69, an individual identified as [name deleted] purchased 150 rounds of 9 MM ammunition, 100 rounds of .32 automatic ammunition, and 100 rounds

of .38 special ammunition at a local gun shop. [Name deleted] was tentatively identified as the individual who was responsible for the shooting of BPP member [name deleted] in Los Angeles on or about 3/14/69. 26

Despite this atmosphere of violence, FBI headquarters authorized the San Diego field office to compose an inflammatory letter over the forged signature of a San Diego BPP member and to send it to BPP headquarters in Oakland, California. 27 The letter complained of the killing of Panthers in San Diego by US members, and the fact that a local BPP leader had a white girlfriend. 28

According to a BPP bulletin, two Panthers were wounded by US gunman on August 14, 1969, and the next day another BPP member, Sylvester Bell, was killed in San Diego by US members. 29 On August 36, 1969, the San Diego office, of US was bombed. The FBI believed the BPP was responsible for the bombing. 30

The San Diego office of the FBI viewed this carnage as a positive development and informed headquarters: "Efforts are being made to determine how this situation can be capitalized upon for the benefit of the Counterintelligence Program ...." 31 The field office further noted:

In view of the recent killing of BPP member Sylvester Bell, a new cartoon is being considered in the hopes that it will assist in the continuance of the rift between BPP and US. 32

The San Diego FBI office pointed with pride to the continued violence between black groups:

Shootings, beatings, and a, high degree of unrest continues to prevail in the ghetto area of southeast San Diego. Although no specific counterintelligence action can be credited with contributing to this overall situation, *it is felt that a substantial amount of the unrest is directly attributable to this program.* [Emphasis added.] 33

In early September 1969, the San Diego field office informed headquarters that Karenga, the Los Angeles US leader, feared assassination by the BPP. 34 It received permission from headquarters to exploit this situation by sending Karenga a letter, purporting to be from a US member in San Diego, alluding to an article in the BPP newspaper criticizing Karenga and suggesting that he order reprisals against the Panthers. The Bureau memorandum which originally proposed the letter explained:

The article, which is an attack on Ron Karenga of the US organization, is self-explanatory. It is felt that if the following letter be sent to Karenga, pointing out that the contents of the article are objectionable to members of the US organization in San Diego, the possibility exists that some sort of retaliatory action will be taken against the BPP . . . . 35

FBI files do not indicate whether the letter, which was sent to Karenga by the San Diego office, was responsible for any violence.

In January 1970, the San Diego office prepared a new series of counterintelligence cartoons attacking the BPP and forwarded them to FBI headquarters for approval. 36 The cartoons were composed to look like a product of the US organization.

The purpose of the caricatures is to indicate to the BPP that the US Organization considers them to be ineffectual, inadequate, and [considers itself] vitally superior to the BPP. 37

One of the caricatures was "designed to attack" the Los Angeles Panther leader as a bully toward women and children in the black community. Another accused the BPP of "actually instigating" a recent Los Angeles Police Department raid on US headquarters. A third cartoon depicted Karenga as an overpowering individual "who has the BPP completely at his mercy . . . ." 38

On January 29, 1970, FBI headquarters approved distribution of these caricatures by FBI field offices in San Diego, Los Angeles, and San Francisco. The authorizing memorandum from headquarters stated:

US Incorporated and the Black Panther Party are opposing black extremist organizations. Feuding between representatives of the two groups in the past had a tendency to limit the effectiveness of both. The leaders and incidents depicted in the caricatures are known to the general public, particularly among the Negroes living in the metropolitan areas of Los Angeles, San Diego and San Francisco.

The leaders and members of both groups are distrusted by a large number of the citizen within the Negro communities. Distribution of caricatures is expected to strengthen this distrust. 39

Bureau documents provided to the Select Committee do not indicate whether violence between BPP and US members followed the mailing of this third series of cartoons.

In early May 1970, FBI Headquarters became aware of an article entitled "Karenga King of the Bloodsuckers" in the May 2, 1970, edition of the BPP newspaper which "vilifies and debases Karenga and the US organization." 40 Two field offices received the following request from headquarters:

[s]ubmit recommendation to Bureau . . . for exploitation of same under captioned program. Consider from two aspects, one against US and Karenga from obvious subject matter; the second against BPP because, inherent in article is admission by BPP that it has done nothing to retaliate against US for killing of Panther members attributed to US and Karenga, an admission that the BPP has been beaten at its own game of violence. 41

In response to this request, the Special Agent in Charge in Los Angeles reported that the BPP newspaper article had already resulted in violence, but that it was difficult to induce BPP members to attack US members in Southern California because they feared US members. 42 The Los Angeles field office hoped, however, that "internecine struggle" might be triggered through a skillful use of informants within both groups:

The Los Angeles Division is aware of the mutually hostile feelings harbored between the organizations and the first opportunity to capitalize on the situation will be maximized. It is intended that US Inc. will be appropriately and discretely advised of the time and location of BPP activities *in order that the two organizations might be brought together and thus grant nature the opportunity to take her due course.* [Emphasis added.] 43

The release of Huey P. Newton, BPP Minister of Defense, from prison in August 1970 inspired yet another counterintelligence plan. An FBI agent learned from a prison official that Newton had told an inmate that a rival group had let a \$3,000 contract on his life. The Los Angeles office presumed the group was US, and proposed that an anonymous letter be sent to David Hilliard, BPP Chief of Staff in Oakland, purporting to be from the person holding the contract on Newton's life. The proposed letter warned Hilliard not to be around when the "unscheduled appointment" to kill Newton was kept, and cautioned Hilliard not to "got in my way." 44

FBI headquarters, however, denied authority to send the letter to Hilliard. Its concern was not that the letter might cause violence or that it was improper action by a law enforcement agency, but that the letter might violate a Federal statute:

While Bureau appreciates obvious effort and interest exhibited concerning anonymous letter ... studied analysis of same indicates implied threat therein may constitute extortion violation within investigative jurisdiction of Bureau or postal authorities and may subsequently be embarrassing to Bureau. 45

The Bureau's stated concern with legality was ironic in light of the activities described above.

## *2. The Effort To Promote Violence Between the Blackstone Rangers and the Black Panther Party*

In late 1968 and early 1969, the FBI endeavored to pit the Blackstone Rangers, a heavily armed, violence-prone, organization, against the Black Panthers. 46 In December 1968, the FBI learned that the recognized leader of the Blackstone Rangers, Jeff Fort, was resisting Black Panther overtures to enlist "the support of the Blackstone Rangers." 47 In order to increase the friction between these groups, the Bureau's Chicago office proposed sending an anonymous letter to Fort, informing him that two prominent leaders of the Chicago BPP had been making disparaging remarks about his "lack of commitment to black people generally." The field office observed:

Fort is reportedly aware that such remarks have been circulated, but is not aware of the identities of the individual responsible. He has stated that he would "take care of" individuals responsible for the verbal attacks directed against him.

Chicago, consequently, recommends that Fort be made aware that [name deleted] and [name deleted] together with other BPP members locally, are responsible for the circulation of these remarks concerning him. It is felt that if Fort were to be aware that the BPP was responsible, it would lend impetus to his refusal to accept any BPP overtures to the Rangers and *additionally might result in Fort having active steps taken to exact some form of retribution toward the leadership of the BPP.* [Emphasis added.] 48

On about December 18, 1968, Jeff Fort and other Blackstone Rangers were involved in a serious confrontation with members of the Black Panther Party.

During that day twelve members of the BPP and five known members of the Blackstone Rangers were arrested on Chicago's South Side. 49 A report indicates that the Panthers and Rangers were arrested following the shooting of one of the Panthers by a Ranger. 49a

That evening, according to an FBI informant, around 10:30 p.m., approximately thirty Panthers went to the Blackstone Rangers' headquarters at 6400 South Kimbark in Chicago. Upon their arrival Jeff Fort invited Fred Hampton, Bobby Rush and the other BPP members to come upstairs and meet with him and the Ranger leadership. 49b The Bureau goes on to describe what transpired at this meeting:

. . . everyone went upstairs into a room which appeared to be a gymnasium, where Fort told Hampton and Rush that he had heard about the Panthers being in Ranger territory during the day, attempting to show their "power" and he wanted the Panthers to recognize the Rangers "power." Source stated that Fort then gave orders, via walkie-talkie, whereupon two men marched through the door carrying pump shotguns. Another order and two men appeared carrying sawed off carbines then eight more, each carrying a .45 caliber machine gun, clip type, operated from the shoulder or hip, then others came with over and under type weapons. Source stated that after this procession Fort had all Rangers present,

approximately 100, display their side arms and about one half had .45 caliber revolvers. Source advised that all the above weapons appeared to be new.

Source advised they left the gym, went downstairs to another room where Rush and Hampton of the Panthers and Fort and two members of the Main 21 sat by a table and discussed the possibility of joining the two groups. Source related that Fort took off his jacket and was wearing a .45 caliber revolver shoulder holster with gun and had a small caliber weapon in his belt.

Source advised that nothing was decided at the meeting about the two groups actually joining forces, however, a decision was made to meet again on Christmas Day. Source stated Fort did relate that the Rangers were behind the Panthers but were not to be considered members. Fort wanted the Panthers to join the Rangers and Hampton wanted the opposite, stating that if the Rangers joined the Panthers, then together they would be able to absorb all the other Chicago gangs. Source advised Hampton did state that they couldn't let the man keep the two groups apart. Source advised that Fort also gave Hampton and Rush one of the above .45 caliber machine guns to "try out."

Source advised that based upon conversations during this meeting, Fort did not appear over anxious to join forces with the Panthers, however, neither did it appear that he wanted to terminate meeting for this purpose. 49c

On December 26, 1968 Fort and Hampton met again to discuss the possibility of the Panthers and Rangers working together. This meeting was at a South Side Chicago bar and broke up after several Panthers and Rangers got into an argument. 49d On December 27, Hampton received a phone call at BPP Headquarters from Fort telling him that the BPP had until December 28, 1968 to join the Blackstone Rangers. Hampton told Fort he had until the same time for the Rangers to join the BPP and they hung up. 49e

In the wake of this incident, the Chicago office renewed its proposal to send a letter to Fort, informing FBI headquarters:

As events have subsequently developed . . . the Rangers and the BPP have not only not been able to form any alliance, but enmity and distrust have arisen, to the point where each has been ordered to stay out of the other territory. The BPP has since decided to conduct no activity or attempt to do recruiting in Ranger territory. 50

The proposed letter read:

Brother Jeff:

I've spent some time with some Panther friends on the west side lately and I know what's been going on. The brothers that run the Panthers blame you for blocking their thing and *there's supposed to be a hit out for you*. I'm not a Panther, or a Ranger, just black. From what I see these Panthers are out for themselves not black people. I think you ought to know what they're up to, I know what I'd do if I was you. You might hear from me again.

(sgd.) A black brother you don't know. [Emphasis added.] 51

The FBI's Chicago office explained the purpose of the letter as follows:

It is believed the above may intensify the degree of animosity between the two groups and occasion Fort to take retaliatory action which could disrupt the BPP or lead to reprisals against its leadership.

Consideration has been given to a similar letter to the BPP alleging a Ranger plot against the BPP leadership; however, it is not felt this would be productive principally because the BPP at present is not believed as violence prone as the Rangers to whom violent type activity -- shooting and the like -- is second nature. 52

On the evening of January 13, 1969, Fred Hampton and Bobby Rush appeared on a Chicago radio talk show called "Hot Line." During the course of the program Hampton stated that the BPP was in the "process of educating the Blackstone Rangers." 52a Shortly after that statement Jeff Fort was on the phone to the radio program and stated that Hampton had his facts confused and that the Rangers were educating the BPP. 52b

Oil January 16, Hampton, in a public meeting, stated that Jeff Fort had threatened to blow his head off if he came within Ranger territory. 52c

On January 30, 1969, Director Hoover authorized sending the anonymous letter. 53 While the Committee staff could find no evidence linking this letter to subsequent clashes between the Panthers and the Rangers, the Bureau's intent was clear. 54

#### *B. The Effort To Disrupt the Black Panther Party by Promoting Internal Dissension*

##### *1. General Efforts to Disrupt the Black Panther Party Membership*

In addition to setting rival groups against the Panthers, the FBI employed the full range of COINTELPRO techniques to create rifts and factions within the Party itself which it was believed would "neutralize" the Party's effectiveness."

Anonymous letters were commonly used to sow mistrust. For example, in March 1969 the Chicago FBI Field Office learned that a local BPP member feared that a faction of the Party, allegedly led by Fred Hampton and Bobby Rush, was "out to get" him. 56 Headquarters approved sending an anonymous letter to Hampton which was drafted to exploit dissension within the BPP as well as to play on mistrust between the Blackstone Rangers and the Chicago BPP leadership:

Brother Hampton:

Just a word of warning. A Stone friend tells me [name deleted] wants the Panthers and is looking for somebody to get you out of the way. Brother Jeff is supposed to be interested. I'm just a black man looking for blacks working together, not more of this gang banging. 57

Bureau documents indicate that during this time an informant within the BPP was also involved in maintaining the division between the Panthers and the Blackstone Rangers. 57a

In December 1968, the Chicago FBI Field Office learned that a leader of a Chicago youth gang, the Mau Mau's, planned to complain to the national BPP headquarters about the local BPP leadership and questioned its loyalty. 58 FBI headquarters approved an anonymous letter to the Mail Mau leader, stating:

Brother [deleted] :

I'm from the south side and have some Panther friends that know you and tell me what's been going. I know those two [name deleted] and [name deleted] that run the Panthers for a long time and those mothers been with every black outfit going where it looked like they was something in it for them. The only black people they care about is themselves. *I heard too they're sweethearts* and that [name deleted] has worked for the man that's why he's not in Viet Nam. Maybe that's why they're just playing like real Panthers. I hear a lot of the brothers are with you and want those mothers out but don't know how. The Panthers need real black men for leaders not freaks. Don't give up 'brothers. [Emphasis added.] 59

A black friend.

The FBI also resorted to anonymous phone calls. The San Diego Field Office placed anonymous calls to local BPP leaders naming other BPP members as "police agents." According to a report from the field office, these calls, reinforced by rumors spread by FBI informants within the BPP, induced a group of Panthers to accuse three Party members of working for the police. The field office boasted that one of the accused members fled San Diego in fear for his life. 60

The FBI conducted harassing interviews of Black Panther members to intimidate them and drive them from the Party. The Los Angeles Field Office conducted a stringent interview program

in the hope that a state of distrust [sic] might remain among the members and add to the turmoil presently going on within the BPP. 61

The Los Angeles office claimed that similar tactics had cut the membership of the United States (US) by 50 percent. 62

FBI agents attempted to convince landlords to force Black Panther members and offices from their buildings. The Indianapolis Field Office reported that a local landlord had yielded to its urgings and promised to tell his Black Panther tenants to relocate their offices. 63 The San Francisco office sent in article from the Black Panther newspaper to the landlord of a BPP member who had rented an apartment under an assumed name. The article, which had been written by that member and contained her picture and true name, was accompanied by an anonymous note stating, "(false name) is your tenant (true name)" 64 The San Francisco office secured the eviction of one Black Panther who lived in a public housing project by informing the Housing Authority officials that she was using his apartment for the BPP Free Breakfast Program. 65 When it was learned that the BPP was conducting a Free Breakfast Program "In the notorious Haight-Ashbury District of San Francisco," the Bureau mailed a letter to the owners of the building:

Dear Mr. (excised):

I would call and talk to you about this matter, but I am not sure how you feel, and I do not wish to become personally embroiled with neighbors. It seems that the property owners on (excised) Street have had enough trouble in the past without bringing in Black Panthers.

Maybe you are not aware, but the Black Panthers have taken over (address deleted). Perhaps if you drive up the street, you can see what they are going to do to the property values. They have already plastered a nearby garage with big Black Panther posters.

-- A concerned property owner. 66

The Bureau also attempted to undermine the morale of Panther members by attempting to break up their marriages. In one case, an anonymous letter was sent to the wife of a prominent Panther leader stating that her husband had been having affairs with several teenage girls and had taken some of those girls with him on trips. 67 Another Panther leader told a Committee staff member that an FBI agent had attempted to destroy his marriage by visiting his wife and showing photographs purporting to depict him with other women. 68

## *2. FBI Role in the Newton-Cleaver Rift*

In March 1970, the FBI initiated a concerted program to drive a permanent wedge between the followers of Eldridge Cleaver, who was then out of the country and the supporters of Huey P. Newton, who was then serving a prison sentence in California. 69 An anonymous letter was sent to Cleaver in Algeria stating that BPP leaders in California were seeking to undercut his influence. The Bureau subsequently learned that Cleaver had assumed the letter was from the then Panther representative in Scandinavia, Connie Matthews, and that the letter had led Cleaver to expel three BPP international representatives from the Party. 70

Encouraged by the apparent success of this letter, FBI headquarters instructed its Paris Legal Attache to mail a follow-up letter, again written to appear as if Matthews was the author, to the Black Panther Chief-of-Staff, David Hilliard, in Oakland, California. The letter alleged that Cleaver "has tripped out. Perhaps he has been working too hard," and suggested that Hilliard "take some immediate action before this becomes more serious." The Paris Legal Attache was instructed to mail the letter:

At a time when Matthews is in or has just passed through Paris immediately following one of her trips to Algiers. The enclosed letter should be held by you until such an occasion arises at which time you are authorized to immediately mail it in Paris in such a manner that it cannot be traced to the Bureau. 71

In early May, Eldridge Cleaver called BPP national headquarters from Algeria and talked with Connie Matthews, Elbert Howard, and Roosevelt Hilliard. A Bureau report stated:

Various items were discussed by these individuals with Hilliard. Connie Matthews discussed with Hilliard "those letters" appearing to relate to the counterintelligence letters, which have been submitted to Cleaver and Hilliard purportedly by Matthews ....

It appears ... that [Elbert Howard] had brought copies of the second counterintelligence letter to David Hilliard with him to Algiers which were then compared with the ... letter previously sent to Cleaver in Algiers and that ... discussed this situation .... 72

The San Francisco Field Office reported that some BPP leaders suspected that the CIA or FBI had sent the letters, while Others suspected the Black Panther members in Paris. A subsequent FBI memorandum indicated that suspicion had focused on the Panthers in Europe. 73

On August 13 1970 -- the day that Huey Newton was released from prison -- the Philadelphia Field Office had an informant distribute a fictitious BPP directive to Philadelphia Panthers, questioning Newton's leadership ability. 74 The Philadelphia office informed FBI Headquarters that the directive:

stresses the leadership and strength of David Hilliard and Eldridge Cleaver while intimating Huey Newton is useful only as a drawing card.

It is recommended this directive ... be mailed personally to Huey Newton with a short anonymous note. The note would indicate the writer, a Community Worker in Philadelphia for the BPP, was incensed over the suggestion Huey was only being used by the Party after founding it, and wanted no part of this Chapter if it was slandering its leaders in private. 75

Headquarters approved this plan on August 19, 1970. 76

FBI officials seized on several incidents during the following months as opportunities to advance their program. In an August 1970 edition of the BPP newspaper, Huey Newton appealed to "oppressed groups," including homosexuals, to "unite with the BPP in revolutionary fashion." 77 FBI headquarters approved a plan to mail forged letters from BPP sympathizers and supporters in ghetto areas to David Hilliard, protesting Newton's statements about joining with homosexuals, hoping this would discredit Newton with other BPP leaders. 78

In July and August 1970, Eldridge Cleaver led a United States delegation to North Korea and North Vietnam. Ramparts editor Robert Scheer, who had been a member of the delegation, held a press conference in New York and, according to the Bureau, glossed over the Panther's role in sponsoring the tour. 79 The New York office was authorized to send an anonymous letter to Newton complaining about Scheer's oversight to strain relations between the BPP and the "New Left." 80 On November 13, 1970, the Los Angeles field office was asked to prepare an anonymous letter to Cleaver criticizing Newton for not aggressively obtaining BPP press coverage of the BPP's sponsorship of the trip. 81

In October 1970, the FBI learned that Timothy Leary, who had escaped from a California prison where he was serving a sentence for possessing marijuana, was seeking asylum with Eldridge Cleaver in Algiers. The San Francisco field office, noting that the Panthers were officially opposed to drugs, sent Newton an anonymous letter calling his attention to Cleaver "playing footsie" with Leary. 82 In January when Cleaver publicly condemned Leary, FBI headquarters approved sending

Newton a bogus letter from a Berkeley, California commune condemning Cleaver for "divorcing the BPP from white revolutionaries." 83

In December 1970, the BPP attempted to hold a Revolutionary Peoples' Constitutional Convention (RPCC) in Washington, D.C. The Bureau considered the convention a failure and received reports that most delegates had left it dissatisfied. 84 The Los Angeles FBI field office suggested a letter to Cleaver designed to

provoke Cleaver to openly question Newton's leadership ... It is felt that distance and lack of personal contact between Newton and Cleaver do offer a counterintelligence opportunity that should be probed.

In view of the BPP's unsuccessful attempt to convene a Revolutionary People's Constitutional Convention (RPCC), it is suggested that each division which had individuals attend the RPCC write numerous letters to Cleaver criticizing Newton for his lack of leadership. It is felt that, if Cleaver received a sufficient number of complaints regarding Newton it might ... create dissension that later could be more fully exploited. 85

FBI headquarters approved the Los Angeles letter to Cleaver and asked the Washington field office to supply a list of all organizations attending the RPCC. 86 A barrage of anonymous letters to Newton and Cleaver followed:

Two weeks later, the San Francisco office mailed Newton an anonymous letter, supposedly from a "white revolutionary," complaining about the incompetence of the Panthers who had planned the conference. 86a The New York office mailed a complaint to the BPP national headquarters, purportedly from a black student at Columbia University who attended the RPCC as a member of the University's student Afro-American Society. 86b The San Francisco office sent a letter containing an article from the Berkeley Barb to Cleaver, attacking Newton's leadership at the RPCC. Mailed with the article was a copy of a letter to Newton criticizing the RPCC and bearing the notation:

Mr. Cleaver,

Here is a letter I sent to Huey Newton. I'm sincere and hope you can do something to set him right and get him off his duff. 86c

In January 1971, the Boston office sent a letter, purportedly from a "white revolutionary," to Cleaver, stating in part:

Dear Revolutionary Comrade:

The people's revolution in America was greatly impeded and the stature of the Black Panther Party, both nationally and internationally, received a major setback as an outcome of the recent Revolutionary People's Constitutional Convention. . . .

The Revolutionary People's Constitutional Convention did little, if anything, to organize our forces to move against the evils of capitalism, imperialism and racism. Any unity or solidarity which existed between the Black Panther Party and the white revolutionary movement before the Convention has now gone down the tube. . . .

The responsibility of any undertaking as meaningful and important to the revolution . . . should not have been delegated to the haphazard ways of [name deleted] whose title of Convention Coordinator . . . places him in the . . . position of receiving the Party's wrath . . . Huey Newton himself (should) have assumed command . . . .

The Black Panther Party has failed miserably. No longer can the Party be looked upon as the "Vanguard of the Revolution."

Yours in Revolution,

Lawrence Thomas,  
Students for a Democratic Society.

Memorandum from Boston Field Office to FBI Headquarters, 1/8/71. This letter was sent to Cleaver through Oakland BPP headquarters to determine whether the BPP in California would forward the letter to him. (Ibid.)

One letter to Cleaver, written to appear as if it had come from Connie Matthews, Newton's personal secretary read in part:

Things around headquarters are dreadfully disorganized with the comrade commander not making proper decisions. The newspaper is in a shambles. No one knows who is in charge. The foreign department gets no support . . . I fear there is rebellion working just beneath the surface . . . .

We must either get rid of the Supreme Commander [Newton] or get rid of the disloyal members. 87

In a January 28, 1971, evaluation, FBI headquarters noted that Huey Newton had recently disciplined high BPP officials and that he prepared "to respond violently to any question of his actions or policies." The Bureau believed that Newton's reaction was in part a "result of our counterintelligence projects now in operation."

The present chaotic situation within the BPP must be exploited and recipients must maintain the present high level of counterintelligence activity. You should each give this matter priority attention and immediately furnish Bureau recommendations . . . designed to further aggravate the dissention within BPP leadership and to fan the apparent distrust by Newton of anyone who questions his wishes. 88

The campaign was intensified. On February 2, 1971, FBI headquarters directed each of 29 field offices to submit within eight days a proposal to disrupt local BPP chapters and a proposal to cause dissention between local BPP chapters and BPP national headquarters. The directive noted that Huey Newton had recently expelled or disciplined several "dedicated Panthers" and

This dissention coupled with financial difficulties offers an exceptional opportunity to further disrupt, aggravate and possibly neutralize this organization through counterintelligence. In light of above developments this program has been intensified ... and selected offices should ... increase measurably the pressure on the BPP and its leaders. 89

A barrage of anonymous letters flowed from FBI field offices in response to the urgings from FBI headquarters. A fictitious letter to Cleaver, signed by the "New York 21," criticized Newton's leadership and his expulsion of them from the BPP. 90 An imaginary New York City member of the Youth Against War and Facism added his voice to the Bureau's fictitious chorus of critics of Newton and the RPCC. 91 An anonymous letter was sent to Huey Newton's brother, Melvin Newton, warning that followers of Eldridge Cleaver and the New York BPP chapter were planning to have him killed. 92 The FBI learned that Melvin Newton told his brother he thought the letter had been written by someone "on the inside" of the BPP organization because of its specificity. 93 Huey Newton reportedly remarked that he was "definitely of the opinion there is an informer in the party right in the ministry." 93a

On February 19, 1971, a false letter, allegedly from a BPP official in Oakland, was mailed to Don Cox, a BPP official close to Cleaver in Algeria. The letter intimated that the recent death of a BPP member in California was the result of BPP factionalism (which the Bureau knew was not the case.) The letter also warned Cleaver not to allow his wife, Kathleen, to travel to the United States because of the possibility of violence. 94

A letter over the forged signature of "Big Man" Howard, editor of the BPP newspaper, told Cleaver:

Eldridge:

[Name deleted] told me Huey talked with you Friday and what he had to say. I'm disgusted with things here and the fact that you are being ignored.... It makes me mad to learn that Huey now has to lie to you. I'm referring to his fancy apartment which he refers to as the throne. . . .

I can't risk a call as it would mean certain expulsion. You should think a great deal before sending Kathleen. If I could talk to you I could tell you why I don't think you should. 95

The San Francisco office reported to headquarters that because of the various covert actions instituted against Cleaver and Newton since November 11, 1970:

fortunes of the BPP are at a low ebb.... Newton is positive there is an informant in Headquarters. Cleaver feels isolated in Algeria and out of contact, with Newton and the Supreme Commander's [Newton's] secretary (Connie Matthews) has disappeared and been denounced. 96

On April 8, 1976 in Executive Testimony Kathleen Cleaver testified that many letters, written to appear as if they had come from BPP members living in California caused disruption and confusion in the relationship between the Algerian Section and the BPP leadership in Oakland. She stated:

We did not know who to believe about what, so the general effect, not only of the letters but the whole situation in which the letters were part was creating uncertainty. It was a very bizarre feeling. 96a

On February 26, 1971, Eldridge Cleaver, in a television interview, criticized the expulsion of BPP members and suggested that Panther Chief of Staff David Hilliard be removed from his post. As a result of Cleaver's statements, Newton expelled him and the "Intercommunal Section of the Party" in Algiers, Algeria. 97

On March 25, 1971, the Bureau's San Francisco office sent to various BPP "Solidarity Committees\*" throughout Europe bogus letters on "facsimiles of BPP letterhead," stating:

To Black Panther Embassies,

You have received copies of February 13, 1971 issue of The Black Panther declaring [three BPP members] as enemies of the People.

The Supreme Servant of the People, Huey P. Newton, with concurrence of the Central Committee of the Black Panther Party, has ordered the expulsion of the entire Intercommunal Section of the Party at Algiers. You are advised that Eldridge Leroy Cleaver is a murderer and a punk without genitals. D.C. Cox is no better.

Leroy's running dogs in New York have been righteously dealt with. Anyone giving any aid or comfort to Cleaver and his jackanapes will be similarly dealt with no matter where they may be located.

[Three BPP international representatives, names deleted] were never members of the Black Panther Party and will never become such.

Immediately report to the Supreme Commander any attempts of these elements to contact you and be guided by the above instructions.

Power to the People

David Hilliard, Chief of Staff  
For Huey P. Newton  
Supreme Commander. 98

On the same day, FBI headquarters formally declared its counterintelligence program aimed at "aggravating dissension" between Newton and Cleaver a success. A letter to the Chicago and San Francisco Field Offices stated:

Since the differences between Newton and Cleaver now appear to be irreconcilable, no further counterintelligence activity in this regard will be undertaken at this time and now new targets must be established.

David Hilliard and Elbert "Big Man" Howard of National Headquarters and Bob Rush of Chicago BPP Chapter are likely future targets....

Hilliard's key position at National Headquarters makes him an outstanding target.

Howard and Rush are also key Panther functionaries; and since it was necessary for them to affirm their loyalty to Newton in "The Black Panther" newspaper of 3/20/71, they must be under a certain amount of suspicion already, making them prime targets.

San Francisco and Chicago furnish the Bureau their comments and recommendations concerning counterintelligence activity designed to cause Newton to expel Hilliard, Howard and Rush. 99

### *C. Covert Efforts To Undermine Support of the Black Panther Party and to Destroy the Party's Public Image*

#### *1. Efforts To Discourage and To Discredit Supporters of the Black Panthers*

The Federal Bureau of Investigation's program to "neutralize" the Black Panther Party included attempts to deter individuals and groups from supporting the Panthers and, when that could not be accomplished, often extended to covert action targeted against those supporters.

The Bureau made a series of progressively more severe efforts to destroy the confidence between the Panthers and one of their major California supporters, Donald Freed, a writer who headed an organization of white BPP sympathizers called "Friends of the Panthers." In July 1969, the Los Angeles Field Office sent the local BPP office a memorandum bearing Freed's name and address to "Friends of the Panthers." Written in a condescending tone and including a list of six precautions whites should keep in mind when dealing with Panthers, the memorandum was calculated to cause a "rift between the Black Panther Party and their assisting organizations." 100 A few days later, the Bureau had leaflets placed in a park near a BPP-sponsored national conference in Oakland, California, alleging that Freed was a police informant. 101

The FBI viewed with favor an intensive local investigation of Freed for "harboring" and "possession of illegal firearms."

It is felt that any prosecution or exposure of either Freed or [name deleted] will severely hurt the BPP. Any exposure will not only deny the Panthers money, but additionally, would cause other white supporters of the BPP to withdraw their support. It is felt that the Los Angeles chapter of the BPP could not operate without the financial support of white sympathizers. 102

The Bureau's Los Angeles Division also arranged for minutes of a BPP support group to be provided to the BPP when it was learned that statements of members of the support group were critical of Panther leaders. 103

The FBI attempted to disaffect another BPP supporter, Ed Pearl of the Peace and Freedom Party, by sending him a cautionary letter bearing a fictitious signature. A Bureau memorandum describing the letter says:

The writer states that although he is not a member of the BPP, he is a Mexican who is trusted by BPP members. The writer advises that he has learned from BPP members that certain whites in the PFP who get in the way of the Panthers will be dealt with in a violent manner. The object sought in this letter is to cause a breach between the PFP and the BPP. The former organization had been furnishing money and support to the latter. 104

Famous entertainment personalities who spoke in favor of Panther goals or associated with BPP members became the targets of FBI programs. When the FBI learned that one well-known Hollywood actress had become pregnant during in affair with a BPP member, it reported this information to a famous Hollywood gossip columnist in the form of an anonymous letter. The story was used by the Hollywood columnist. 105 In June 1970, FBI headquarters approved an anonymous letter informing Hollywood gossip columnist, Army Archerd that actress Jane Fonda had appeared at a BPP fund-raising function, noting that "It can be expected that Fonda's involvement with the BPP cause could detract from her status with the general public if reported in a Hollywood 'gossip column.'" 106 The wife of a famous Hollywood actor was targeted by the FBI when it discovered that she was a financial contributor and supporter of the BPP in Los Angeles. 107 A caricature attacking her was prepared by the San Diego FBI office. 108

A famous entertainer was also targeted after the Bureau concluded that he supported the Panthers. Two COINTELPRO actions against this individual were approved because FBI headquarters "believed" they:

would be an effective means of combating BPP fund-raising activities among liberal and naive individuals. 109

The Bureau also contacted the employers of BPP contributors. It sent a letter to the President and a Vice-President of Union Carbide in January 1970 after learning that a production manager in its San Diego division contributed to the BPP. The letter, which centered around a threat not to purchase Union Carbide stock, stated in part:

Dear Mr. [name deleted]:

I am writing to you in regards to an employee in your San Diego operation, [name deleted]. . . .

I am not generally considered a flag-waving exhibitionist, but I do regard myself as being a loyal American citizen. I, therefore, consider it absolutely ludicrous to invest in any corporation whose ranking employees support, assist, and encourage any organization which openly advocates the violent overthrow of our free enterprise system.

It is because of my firm belief in this self-same free enterprise, capitalistic system that I feel morally obligated to bring this situation to your attention.

Sincerely yours,

T. F. Ellis  
Post Office Box ---  
San Diego, California 110

The response of Union Carbide's Vice President was reported in a San Diego Field Office memorandum:

On 3/21/70, a letter was received from Mr. [name deleted], Vice President of the Union Carbide Corporation, concerning a previously Bureau-approved letter sent to the Union Carbide Corporation objecting to the financial and other support to the BPP of one of their employees, [name deleted]. The letter indicated that Union Carbide has always made it a policy not to become involved in personal matters of their employees unless such activity had an adverse affect upon that particular employee's performance. 111

One of the Bureau's prime targets was the BPP's free "Breakfast for Children" program, which FBI headquarters feared might be a potentially successful effort by the BPP to teach children to hate police and to spread "anti-white propaganda." 112 In an admitted attempt "to impede their contributions to the BPP Breakfast Program," the FBI sent anonymous letters and copies of an inflammatory Black Panther Coloring Book for children to contributors, including Safeway Stores, Inc., Mayfair Markets, and the Jack-In-The-Box Corporation. 113

On April 8, 1976 in Executive Testimony a former member of the BPP Central Steering Committee stated that when the coloring book came to the attention of the Panther's national leadership, Bobby Seale ordered it destroyed because the book "did not correctly reflect the ideology of the Black Panther Party . . ." 114

Churches that permitted the Panthers to use their facilities in the free breakfast program were also targeted. When the FBI's San Diego office discovered that a Catholic Priest, Father Frank Curran, was permitting his church in San Diego to be used as a serving place for the BPP Breakfast Program, it sent an anonymous letter to the Bishop of the San Diego Diocese informing him of the priest's activities. 115 In August 1969, the San Diego Field Office requested permission from headquarters to place three telephone calls protesting Father Curran's support of the BPP program to the Auxiliary Bishop of the San Diego Diocese:

All of the above calls will be made from "parishioners" objecting to the use of their church to assist a black militant cause. Two of the callers will urge that Father Curran be removed as Pastor of the

church, and one will threaten suspension of financial support of the church if the activities of the Pastor are allowed to continue..

Fictitious names will be utilized in the event a name is requested by the Bishop. It is felt that complaints, if they do not effect the, removal of Father Curran . . . will at least result in Father Curran becoming aware that his Bishop is cognizant of his activities and will thus result in a curtailment of these activities. 116

After receiving permission and placing the calls, the San Diego office reported: "the Bishop appeared to be . . . quite concerned over the fact that one of his Priests was deeply involved in utilization of church facilities for this purpose. 117

A month later, the San Diego office reported that Father Curran had been transferred from the San Diego Diocese to "somewhere in the State of New Mexico for permanent assignment."

In view of the above, it would appear that Father Curran has now been completely neutralized.

The BPP Breakfast Program, without the prompting of Father Curran, has not been renewed in the San Diego area. It is not anticipated at this time that any efforts to re-establish the program will be made in the foreseeable future. 118

In another case, the FBI sent a letter to the superior of a clergyman in Hartford, Connecticut who had expressed support for the Nlack Panthers, which stated in part:

Dear BISHOP:

It pains me to have to write this letter to call to your attention a matter which, if brought to public light, may cause the church a great deal of embarrassment. I wish to remain anonymous with regard to the information because in divulging it I may have violated a trust. I feel, however, that what I am writing is important enough that my conscience is clear.

Specifically, I'm referring to the fact that Reverend and Mrs. [name deleted] are associating with leaders of the Black Panther Party. I recently heard through a close friend of Reverend [name deleted] that he is a revolutionist who advocates overthrowing the Government of the United States and that he has turned over a sizable sum of money to the Panthers. I can present no evidence of fact but is it possible Reverend [name deleted] is being influenced by Communists? Some statements he has made both in church and out have led me to believe he is either a Communist himself, or so left-wing that the only thing he lacks is a card.

I beseech you to counsel with Reverend [name deleted] and relay our concern over his political philosophies which among other things involves association with a known revolutionist, [name deleted], head of the Black Panther Party in New Haven. I truly believe Reverend [name deleted] to be a good man, but his fellow men have caused him to go overboard and he now needs a guiding light which only you can provide.

Sincerely,

A Concerned Christian. 119

Anonymous FBI mailings were also sent to public officials and persons whose help might sway public opinion against the BPP. In December 1969, the FBI mailed Bureau-reproduced copies of BPP "Seasons Greetings" cards to ten FBI field offices 120 with the following instructions:

Enclosed for each office are 20 copies of reproductions of three types of Black Panther Party (BPP) "seasons greetings cards" which depict the violent propensities of this organization. You should anonymously mail these cards to those newspaper editors, public officials, responsible businessmen, and clergy in your territory who should be made aware of the vicious nature of the BPP. 121

The San Francisco office mailed its cards to several prominent local persons and organizations. 122

The Bureau also targeted attorneys representing Black Panther members. In July 1969, the Los Angeles Field Office suggested that a break between the BPP membership and Charles Garry, an attorney who frequently represented BPP members, might be accomplished by planting a rumor that Garry, Bobby Seale, and David Hilliard were conspiring to keep BPP leader Huey Newton in jail. 123 This proposal was rejected by FBI headquarters out of concern that the Bureau might be recognized as the source of the rumor. 124 Headquarters did suggest, however:

Los Angeles should review the ideas set forth ... especially as they pertain to Charles Garry, Bobby Seale, and David Hilliard, and prepare a specific counterintelligence proposal designed to create a breach between the BPP and Garry. Consider such things as anonymous communications and anonymous telephone calls as well as cartoons and other logical methods of transporting your idea. 125

When the San Francisco Division learned that Garry intended to represent Bobby Seale at the Chicago 7 trial, it sent the Chicago office transcripts of hearings before the House Committee on Un-American Activities and the California State Senate's Report on Un-American Activities, which allegedly showed that Garry was connected with the Communist Party. It was intended to distribute this material "to cooperative news media in that City." 126

Similarly, when two local BPP leaders filed suit against the San Diego Police Department charging harassment, illegal arrest, and illegal searches, the San Diego Field Office reviewed its files

to determine if any public source information is available which describes [the attorney's] activities in behalf of CP (Communist Party) activities. If so, an appropriate request will be forwarded to the Bureau concerning a possible letter to the editor and/or an editorial. 127

The FBI also sought to destroy community support for individual BPP members by spreading rumors that they were immoral. This idea was originally advanced in an August 1967 memorandum from FBI headquarters to all major field offices:

Many individuals currently active in black nationalist organizations have backgrounds in immorality, subversive activity, and criminal records. Through your investigation of key agitators, you should endeavor to establish their unsavory backgrounds. Be alert to determine evidence of misappropriation of funds or other types of personal misconduct on the part of militant nationalist leaders so any practical or warranted counterintelligence may be instituted. 128

An example of "successful" implementation of this program was a 1970 report from the San Diego Field Office that it had anonymously informed the parents of a teenage girl that she was pregnant by a local Panther leader:

The parents showed extreme concern over a previously unknown situation and [name deleted] was forced to resign from the BPP and return home to live. It also became general knowledge throughout the Negro community that a BPP leader was responsible for the difficulty being experienced by [name deleted]. 129

The field office also considered the operation successful because the mother of another girl questioned the activities of her own daughter after talking with the parent the agents had anonymously contacted. She learned that her daughter, a BPP member, was also pregnant, and had her committed to a reformatory as a wayward juvenile. 130

*Efforts To Promote Criticism of the Black Panthers in the Mass Media and To Prevent the Black Panther Party and Its Sympathizers from Expressing Their Views*

The FBI's program to destroy the Black Panther Party included a concerted effort to muzzle Black Panther publications to prevent Panther members and persons sympathetic to their aims from expressing their views, and to encourage the mass media to report stories unfavorable to the Panthers.

In May 1970, FBI headquarters ordered the Chicago, Los Angeles, Miami, Newark, New Haven, New York, San Diego, and San Francisco field offices to advance proposals for crippling the BPP newspaper, The Black Panther. Immediate action was deemed necessary because:

The Black Panther Party newspaper is one of the most effective propaganda operations of the BPP.

Distribution of this newspaper is increasing at a regular rate thereby influencing a greater number of individuals in the United States along the black extremist lines.

Each recipient submit by 6/5/70 proposed counterintelligence measures which will hinder the vicious propaganda being spread by the BPP.

The BPP newspaper has a circulation in excess of 100,000 and has reached the height of 139,000. It is the voice of the BPP and if it could be effectively hindered it would result in helping to cripple the BPP. Deadline being set in view of the need to receive recommendations for the purpose of taking appropriate action expeditiously. 131

The San Francisco Field Office submitted an analysis of the local Black Panther printing schedules and circulation. It discouraged disruption of nationwide distribution because the airline company which had contracted with the Panthers might lose business or face a law suit and recommended instead:

a vigorous inquiry by the Internal Revenue Service to have "The Black Panther" report their income from the sale of over 100,000 papers each week. Perhaps the Bureau through liaison at SOG [seat of government] could suggest such a course of action. It is noted that Internal Revenue Service at San Francisco is receiving copies of Black Panther Party funds and letterhead memoranda.

It is requested that the Bureau give consideration to discussion with Internal Revenue Service requesting financial records and income tax return for "The Black Panther." 132

The San Diego Field Office, while noting that the BPP newspaper had the same legal immunity from tax laws and other state legislation as other newspapers, suggested three California statutes which might be used against The Black Panther. One was a State tax on printing equipment; the second a "rarely used transportation tax law"; and the third a law prohibiting business in a residential area. 133

The San Diego Field Office had a more imaginative suggestion however; spray the newspaper printing room with a foul smelling chemical:

The Bureau may also wish to consider the utilization of "Skatol", which is a chemical agent in powdered form and when applied to a particular surface emits an extremely noxious odor rendering the premises surrounding the point of application uninhabitable. Utilization of such a chemical of course, would be dependent upon whether an entry could be achieved into the area which is utilized for the production of "The Black Panther." 134

The San Diego Division also thought that threats from another radical organization against the newspaper might convince the BPP to cease publication:

Another possibility which the Bureau may wish to consider would be the composition and mailing of numerous letters to BPP Headquarters from various points throughout the country on stationary [sic] containing the national emblem of the Minutemen organization. These letters, in several different forms, would all have the common theme of warning the Black Panthers to cease publication or drastic measures would be taken by the Minutemen organization....

Utilization of the Minutemen organization through direction of informants within that group would also be a very effective measure for the disruption of the publication of this newspaper. 135

On another occasion, however, FBI agents contacted United Airlines officials and inquired about the rates being charged for transporting the Black Panther magazine. A Bureau memorandum states that the BPP was being charged "the General Rate" for printed material, but that in the future it would be forced to pay the "full legal rate allowable for newspaper shipment." The memorandum continued:

Officials advise this increase . . . means approximately a forty percent increase. Officials agree to determine consignor in San Francisco and from this determine consignees throughout the United States so that it can impose full legal tariff. They believe the airlines are due the differences in freight tariffs as noted above for past six to eight months, and are considering discussions with their legal staff concerning suit for recovery of deficit. . . . (T)hey estimate that in New York alone will exceed ten thousand dollars. 136

In August 1970, the New York Field Office reported that it was considering plans:

directed against (1) the production of the BPP newspaper; (2) the distribution of that newspaper and (3) the use of information contained in particular issues for topical counterintelligence proposals.

The NYO [New York Office] realizes the financial benefits coming to the BPP through the sale of their newspaper. Continued efforts will be made to derive logical and practical plans to thwart this crucial BPP operation. 137

A few months later, FBI headquarters directed 39 field offices to distribute copies of a column written by Victor Riesel, a labor columnist, calling for a nationwide union boycott against handling the BPP newspaper.

Enclosed for each office are 50 reproductions of a column written by Victor Riesel regarding the Black Panther Party (BPP).

Portions of the column deals with proposal that union members refuse to handle shipments of BPP newspapers. Obviously if such a boycott gains national support it will result in effectively cutting off BPP propaganda and finances, therefore, it is most desirable this proposal be brought to attention of members and officials of unions such as Teamsters and others involved in handling of shipments of BPP newspapers. These shipments are generally by air freight. The column also deals with repeated calls for murder of police that appear in BPP paper; therefore, it would also be desirable to bring boycott proposal to attention of members and officials of police associations who might be in a position to encourage boycott.

Each office anonymously mail copies of enclosed to officials of appropriate unions, police organizations or other individuals within its territory who could encourage such a boycott....

Handle promptly and advise Bureau of any positive results noted. Any publicity observed concerning proposed boycott should be brought to attention of Bureau.

Be alert for any other opportunities to further exploit this proposal. 138

Bureau documents submitted to the Select Committee staff do not indicate the outcome of this plan.

On one occasion the FBI's Racial Intelligence Section concocted a scheme to create friction between the Black Panthers and the Nation of Islam by reducing sales of the NOI paper, Muhammed Speaks:

While both papers advocate white hate, a noticeable loss of revenue to NOI due to decreased sales of their paper caused by the BPP might well be the spark to ignite the fuel of conflict between the two organizations. Both are extremely money conscious.

We feel that our network of racial informants, many of whom are directly involved in the sale of the NOI and BPP newspapers, are in a position to cause a material reduction in NOI newspaper sales. Our sources can bring the fact of revenue loss directly to NOI leader, Elijah Muhammad, who might well be influenced to take positive steps to counteract the sale of BPP papers in the Negro community. We feel that with careful planning and close supervision an open dispute can be developed between the two organizations. 139

FBI headquarters promptly forwarded this suggestion to the field offices in Chicago, New York, and San Francisco with the express hope that Elijah Muhammed might be influenced "to take positive steps to counteract the sale of BPP newspapers in the Negro community." 140 The following month, the Chicago Field Office advised against using informants for this project because animosity was already developing between the BPP and NOI, and any revelation of a Bureau attempt to encourage conflict might serve to bring the BPP and NOI closer together. 141

Numerous attempts were made to prevent Black Panthers from airing their views in public. For example, in February 1969, the FBI joined with the Chicago police force to prevent the local BPP leader, Fred Hampton, from appearing on a television talk show. The FBI memorandum explaining this incident states:

the [informant] also enabled Chicago to further harass the local BPP when he provided information the afternoon of 1/24/69 reflecting that Fred Hampton was to appear that evening at local TV studio for video tape interview. . . . The tape was to be aired the following day.

Chicago was aware a warrant for mob action was outstanding for Hampton in his home town and the above information . . . was provided the Maywood Police Department with a suggestion that they request the Chicago Police Department to serve this arrest warrant. This was subsequently done with Hampton arrested at television studio in presence of 25 BPP members and studio personnel. This caused considerable embarrassment to the local BPP and disrupted the plans for Hampton's television appearance. 142

Headquarters congratulated the Chicago Field Office on the timing of the arrest "under circumstances which proved highly embarrassing to the BPP." 143

The Bureau's San Francisco office took credit for preventing Bobby Seale from keeping a number of speaking engagements in Oregon and Washington. In May 1969, while Seale was traveling from a speaking engagement at Yale University to begin his West Coast tour, a bombing took place in Eugene, Oregon which the FBI suspected involved the Black Panthers. The San Francisco Field Office subsequently reported:

As this was on the eve of Seale's speech, this seemed to be very poor advance publicity for Seale. . . . It was . . . determined to telephone Mrs. Seale [Bobby Seale's mother] claiming to be a friend from Oregon, bearing the warning that it might be dangerous for Seale to come up. This was done.

Shortly thereafter, Mrs. Seale reported this to BPP headquarters, claiming an unknown brother had sent a warning to Bobby from Oregon. Headquarters took this very seriously and when Bobby arrived shortly thereafter, he decided not to go north with "all the action going on up there." He subsequently cancelled a trip to Seattle. It is believed that the above mentioned telephone call was a pivotal point in persuading Seale to stay home. 144

The San Francisco office reported that not only had Seale been prevented from making his appearances, but that he had lost over \$1,700 in "badly needed" fees and that relations between Seale and "New Left" leaders who had been scheduled to appear with him had become strained.

In December 1969, FBI headquarters stressed to the San Francisco Field Office the need to prevent Black Panther speaking engagements:

Several recent communications received at the Bureau indicate the BPP is encouraging their branches to set up speaking engagements at schools and colleges and the showing of films in order to raise money . . . San Francisco should instruct [local FBI] office covering to immediately submit to the Bureau for approval a counterintelligence proposal aimed at preventing the activities scheduled. . . .

The BPP in an effort to bolster its weak financial position is now soliciting speaking engagements and information has been developed indicating they are reducing their monetary requirements for such speeches. We have been successful in the past through contacts with established sources in preventing such speeches in colleges or other institutions. 145

In March 1970, a representative of a Jewish organization contacted the San Francisco FBI Field Office when it learned that one of its local lodges had invited David Hilliard, BPP Chief-of-Staff, and Attorney Charles Garry to speak. San Francisco subsequently reported to headquarters:

Public source information relating to David Hilliard, Garry, and the BPP, including "The Black Panther" newspaper itself, was brought to [source's] attention. He subsequently notified the [FBI] office that the [name deleted] had altered their arrangements for this speech and that the invitation to Hilliard was withdrawn but that Charles Garry was permitted to speak but his speech was confined solely to the recent case of the Chicago 7. 146

The FBI exhibited comparable fervor in disseminating information unfavorable to the Black Panthers to the press and television stations. A directive from FBI headquarters to nine field offices in January 1970 explained the program:

To counteract any favorable support in publicity to the Black Panther Party (BPP) recipient offices are requested to submit their observations and recommendations regarding contacts with established and reliable sources in the television and/or radio field who might be interested in drawing up a program for local consumption depicting the true facts regarding the BPP.

The suggested program would deal mainly with local BPP activities and data furnished would be of a public source nature. This data could be implemented by information on tile BPP nationally if needed. . . .

All offices should give this matter their prompt consideration and submit replies by letter. 147

Soon afterward, the Los Angeles office identified two local news reporters whom it believed might be willing to help in the effort to discredit the BPP and received permission to

discreetly contact [name deleted] for the purpose of ascertaining his amenability to the preparation of a program which would present the true facts about the Black Panther Party as part of a counterintelligence effort. 148

Headquarters also suggested information and materials to give to a local newsman who expressed an interest in airing a series of programs against the Panthers. 149

In July 1970, the FBI furnished information to a Los Angeles TV news commentator who agreed to air a series of shows against the BPP, "especially in the area of white liberals contributing to the BPP." 150 In October, the Los Angeles Division sent headquarters a copy of an FBI-assisted television editorial and reported that another newsman was preparing yet another editorial attack on the Panthers. 151

In November 1970, the San Francisco Field Office notified the Director that Huey Newton had "recently rented a luxurious lakeshore apartment in Oakland, California." The San Francisco office saw "potential counterintelligence value" in this information since this apartment was far more elegant than "the ghetto-like BPP 'pads' and community centers utilized by the Party." It was decided not to "presently" leak "this information to cooperative news sources," because of a "pending special investigative technique." 152 The information was given to the San Francisco Examiner, however, in February 1971, and an article was published stating that Huey P. Newton, BPP Supreme Commander, had moved into a \$650-a-month apartment overlooking Lake Merritt in Oakland, California, under the assumed name of Don Penn. 153 Headquarters approved anonymously mailing copies of the article to BPP branches and ordered copies of the, article for "divisions with BPP activity for mailing to newspaper editors." 154

The San Francisco office informed FBI headquarters later in February that

BPP Headquarters was besieged with inquiries after the printing of the San Francisco Examiner article and the people at headquarters refuse to answer the news media or other callers on this question. This source has further reported that a representative of the Richmond, Virginia, BPP contacted headquarters on 2/18/71, stating they had received a xeroxed copy of . . . the article and believed it had been forwarded by the pigs but still wanted to know if it was true. 155

#### *D. Cooperation Between the Federal Bureau of Investigation and Local Police Departments in Disrupting the Black Panther Party*

The FBI enlisted the cooperation of local police departments in several of its covert action programs to disrupt and "neutralize" the Black Panther Party. The FBI frequently worked with the San Diego Police Department, supplying it with informant reports to encourage raids on the homes of BPP members, often with little or no apparent evidence of violations of State or Federal law. 156

Examples are numerous. In February 1969, the San Diego Field Office learned that members of the local BPP chapter were following each other to determine if police informants had infiltrated their organization. The field office passed this information to the San Diego police with the suggestion that BPP members engaged in these surveillances might be followed and arrested for violations of "local Motor Vehicle Code laws." 157 When the San Diego Field Office received reports that five BPP members were living in the local BPP headquarters and "having sex orgies on almost a nightly basis," it informed the local police with the hope that a legal basis for a raid could be found. 158 Two days later, the San Diego office reported to headquarters:

As a result of the Bureau-approved information furnished to the San Diego Police Department regarding the "sex orgies" being held at BPP Headquarters in San Diego, which had not previously been known to the Police Department, a raid was conducted at BPP Headquarters on 11/20/69. [Name deleted], San Diego Police Department, Intelligence Unit, advised that, due to this information, he assigned two officers to a research project to determine if any solid basis could be found to conduct a raid. His officers discovered two outstanding traffic warrants for [name deleted], a member of the BPP, and his officers used these warrants to obtain entry into BPP Headquarters.

As a result of this raid [6 persons] were all arrested. Seized at the time of the arrests were three shotguns, one of which was stolen, one rifle, four gas masks and one tear gas canister.

Also as a result of this raid, the six remaining members of the BPP in San Diego were summoned to Los Angeles on 11/28/69.... Upon their arrival, they were informed that due to numerous problems with the BPP in San Diego, including the recent raid on BPP Headquarters, the BPP Branch in San Diego was being dissolved.

Also, as a direct result of the above raid [informants] have reported that [name deleted] has been severely beaten up by other members of the BPP due to the fact that she allowed the officers to enter BPP Headquarters the night of the raid. 159

A later memorandum states that confidential files belonging to the San Diego Panthers were also "obtained" during this raid. 160

In March 1969, the San Diego Field Office informed Bureau headquarters:

information was made available to the San Diego Police Department who have been arranging periodic raids in the hope of establishing a possession of marijuana and dangerous drug charge [against two BPP members]. . . .

The BPP finally managed to rent the Rhodesian Club at 2907 Imperial Avenue, San Diego, which will be utilized for a meeting hall. A request will be forthcoming to have the San Diego Police Department and local health inspectors examine the club for health and safety defects which are undoubtedly by [sic] present. 161

The San Diego office also conducted "racial briefing sessions" for the San Diego police. Headquarters was informed:

It is also felt that the racial briefing sessions being given by the San Diego Division are affording tangible results for the Counterintelligence Program. Through these briefings, the command levels of virtually all of the police departments in the San Diego Division are being apprised of the identities of the leaders of the various militant groups. It is felt that, although specific instances cannot be attributed directly to the racial briefing program, police officers are much more alert for these black militant individuals and as such are contributing to the over-all Counterintelligence Program, directed against these groups. 162

The Committee staff has seen documents indicating extensive cooperation between local police and the FBI in several other cities. For example, the FBI in Oakland prevented a reconciliation meeting between Huey Newton's brother and former Panthers by having the Oakland police inform one of the former Panthers that the meeting was a "set up." The San Francisco office concluded:

It is believed that such quick dissemination of this type of information may have been instrumental in preventing the various dissidents from rejoining forces with the BPP. 163

Another Bureau memorandum reflected similar cooperation in Los Angeles:

The Los Angeles office is furnishing on a daily basis information to the Los Angeles County Sheriff's Office Intelligence Division and the Los Angeles Police Department Intelligence and Criminal Conspiracy Divisions concerning the activities of the black nationalist groups in the anticipation that such information might lead to the arrest of these militants. 164

Information from Bureau files in Chicago on the Panthers was given to Chicago police upon request, and Chicago Police Department files were open to the Bureau. 165 A Special Agent who handled liaison between the FBI's Racial Matters Squad (responsible for monitoring BPP activity in Chicago) and the Panther Squad of the Gang Intelligence Unit (GIU) of the Chicago Police Department from 1967 through July 1969, testified that he visited GIU between three and five times a week to exchange information. 166 The Bureau and Chicago Police both maintained paid informants in the BPP, shared informant information, and the FBI provided information which was used by Chicago police in planning raids against the Chicago BPP. 167

According to an FBI memorandum, this sharing of informant information was crucial to police during their raid on the apartment occupied by several Black Panther members which resulted in the death of the local Chairman, Fred Hampton, and another Panther:

[Prior to the raid], a detailed inventory of the weapons and also a detailed floor plan of the apartment were furnished to local authorities. In addition, the identities of BPP members utilizing the apartment at the above address were furnished. This information was not available from any other source and subsequently proved to be of tremendous value in that it subsequently saved injury and possible death to police officers participating in a raid ... on the morning of 12/4/69. The raid was based on the information furnished by the informant . . . " 168 [Emphasis added.]

45 Memorandum from FBI Headquarters to Los Angeles Field Office, 9/30/70.

46 There is no question that the Blackstone Rangers were well-armed and violent. The Chicago police had linked the Rangers and rival gangs in Chicago to approximately 290 killings from 1965-69. Report of Captain Edward Buckney, Chicago Police Dept., Gang Intelligence Unit, 2/23/70, p. 2. One Chicago police officer, familiar with the Rangers, told a Committee staff member that their governing body, the Main 21, was responsible for several ritualistic murders of black youths in areas the gang controlled. (Staff summary of interview with Renault Robinson, 9/25/75.)

47 Memorandum from Chicago Field Office to FBI Headquarters, 12/16/68. Forte also had a well-earned reputation for violence. Between September 1964 and January 1971, he was charged with more than 14 felonies, including murder (twice), aggravated battery (seven times), robbery (twice), and contempt of Congress. (Select Committee staff interview of FBI criminal records.) A December 1968 FBI memorandum noted that a search of Forte's apartment had turned up a .22 caliber, four-shot derringer pistol. (Memorandum from Chicago Field Office to FBI Headquarters, 12/12/68, p. 2.)

48 Memorandum from Chicago Field Office to FBI Headquarters, 12/16/68, p. 2.

53 Memorandum from FBI Headquarters to Chicago Field Office, 1/30/69.

54 There are indications that a shooting incident between the Rangers and the Panthers on April 2, 1969, in a Chicago suburb may have been triggered by the FBI. According to Bobby Rush, coordinator of the Chicago BPP at the time, a group of armed BPP members had confronted the Rangers because Panther William O'Neal -- who has since surfaced as an FBI informant -- had told them that a Panther had been shot by Blackstone Rangers and had insisted that they retaliate. This account, however, has not been confirmed. (Staff summary of interview with Bobby Rush, 11/26/75.)

55 The various COINTELPRO techniques are described in detail in the Staff Report on COINTELPRO.

56 Memorandum from Chicago Field Office to FBI Headquarters, 3/24/69.

57 Memorandum from FBI Headquarters to Chicago Field Office, 4/8/69.

59 Memorandum from FBI Headquarters to Chicago Field Office, 1/30/69.

60 Memorandum from San Diego Field Office to FBI Headquarters, 3/12/69.

The FBI had success with this technique in other cases. For example, the FBI placed another anonymous call to Stokely Carmichael's residence in New York City. Carmichael's mother was informed falsely that several BPP members were out to kill her son, and that he should "hide out." The FBI memorandum reporting this incident said that Mrs. Carmichael sounded "shocked" on hearing the news and stated that she would tell Stokely when he came home. The memorandum observed that on the next day, Stokely Carmichael left New York for Africa. (Memorandum from New York Field Office to FBI Headquarters, 9/9/68, p. 2.)

84 Memorandum from FBI Headquarters to Los Angeles, San Francisco, and Washington Field Offices, 12/15/70.

85 Memorandum from Los Angeles Field Office to FBI Headquarters, 12/3/70, p. 2.

86 Memorandum from FBI Headquarters to Los Angeles, San Francisco, and Washington Field Offices, 12/15/70. A list of 10 organizations whose members attended the RPCC was forwarded to the FBI offices in Atlanta, Boston, Chicago, Detroit, New York, and San Francisco. (Memorandum from FBI Headquarters to Atlanta (and 5 other Field Offices), 12/31/70.) There is no indication concerning how the Bureau obtained this list.

86a Memorandum from FBI Headquarters to San Francisco Field Office, 12/16/70.

86b Memorandum from New York Field Office to FBI Headquarters, 12/14/70.

86c Memorandum from FBI Headquarters to San Francisco Field Office, 1/6/71.

87 Memorandum from San Francisco Field Office to FBI Headquarters, 1/18/70. FBI headquarters authorized this letter on January 21, 1971 stating that the Bureau must now seize the time and "immediately" send the letter, (Memorandum from FBI Headquarters to San Francisco Field Office, 1/21/71, p. 2.) Shortly afterward, a letter was sent to Cleaver from alleged Puerto Rican political allies of the BPP in Chicago, The Young Lords.

What do we get. A disorganized Convention, apologetic speakers and flunkys who push us around, no leadership, no ideas, no nothing.... [Y]our talk is nice, but your ideas and action is nothing.... You are gone, those you left behind have big titles but cannot lead, cannot organize, are afraid to even come out among the people. The oppressed of Amerikka cannot wait. We must move without YOU.... (Memorandum from Chicago Field Office to FBI Headquarters, 1/19/71; memorandum from FBI Headquarters to Chicago and San Francisco Field Offices, 1/27/71.)

88 Memorandum from FBI Headquarters to Boston, Los Angeles, New York, and San Francisco Field Offices, 1/28/71.

137 Memorandum from New York Field Office to FBI Headquarters, 8/19/70.

138 Memorandum from FBI Headquarters to SAC's in 39 cities, 11/10/70.

139 Memorandum from G. C. Moore to W. C. Sullivan, 6/26/70.

140 Memorandum from FBI Headquarters to Chicago, New York, and San Francisco Field Offices, 6/26/70.

141 Memorandum from Chicago Field Office to FBI Headquarters, 7/15/70.

142 Memorandum from Chicago Field Office to FBI Headquarters, 2/10/69.

143 Memorandum from FBI Headquarters to Chicago Field Office, 2/20/69.

144 Memorandum from San Francisco Field Office to FBI Headquarters, 5/26/69.

145 Memorandum from FBI Headquarters to San Francisco Field Office, 12/4/69.

146 Memorandum from San Francisco Field Office to FBI Headquarters, 3/18/70.

147 Memorandum from FBI Headquarters to San Francisco Field Office (and 8 other offices), 1/23/70. The San Diego office had already made efforts along the lines proposed in this memorandum. In November 1969 it requested permission from headquarters to inform two newscasters "for use in editorials" that the sister and brother-in-law of a Communist Party member were believed to be members of the local Black Panthers. The office also proposed preparing "all editorial for publication in the Copley press." (Airtel from SAC, San Diego to Director, FBI, 11/12/69.) The San Francisco office had also leaked information to a San Francisco Examiner reporter, who wrote a front-page story complete with photographs concerning "the conversion by the BPP of an apartment into a fortress." (Memorandum from San Francisco Field Office to FBI Headquarters, 1/21/70.)

148 Memorandum from Los Angeles Field Office to FBI Headquarters, 2/6/70; memorandum from FBI Headquarters to Los Angeles Field Office 3/5/70 (this memorandum bears Director Hoover's initials).

149 Memorandum from FBI Headquarters to Los Angeles and San Francisco Field Offices, 5/27/70.

150 Memorandum from Los Angeles Field Office to FBI Headquarters, 9/10/70, p. 2.

151 Memorandum from Los Angeles Field Office to FBI Headquarters, 10/23/70.

152 Memorandum from San Francisco Field Office to FBI Headquarters, 11/24/70.

153 Memorandum from San Francisco Field Office to FBI Headquarters, 2/12/71.

154 Memorandum from FBI Headquarters to San Francisco Field Office, 2/8/71.

155 Memorandum from San Francisco Field Office to FBI Headquarters, 2/18/71. In a February 1971 report on recent COINTELPRO activity, the San Francisco Division described the San Francisco Examiner article as one of its "counterintelligence activities." This report said that because of the article, Newton had given an interview to another San Francisco daily to try to explain his seemingly expensive lifestyle. The report also states that copies of the article were sent to "all BPP and NCCF [National Committee to Combat Fascism] offices in the United States and to three BPP contacts in Europe." (Memorandum from San Francisco Field Office to FBI Headquarters, 2/25/71.)

156 The suggestion of encouraging local police to raid and arrest members of so-called "Black Nationalist Hate Groups" was first put forward in a February 29, 1968 memorandum to field offices. This memorandum cited as an example of successful use of this technique: "The Revolutionary Action Movement (RAM), a pro-Chinese Communist group, was active in Philadelphia, Pa., in the summer of 1967. The Philadelphia office alerted local police who then put RAM leaders under close scrutiny. They were arrested on every possible charge until they could no longer make bail. As a result, RAM leaders spent most of the summer in jail and no violence traceable to RAM took place." (Memorandum from G. C. Moore to W. C. Sullivan, 2/29/68, p. 3.)

157 The San Diego office reported to headquarters: "As of one week ago, the BPP in San Diego was so completely disrupted and so much suspicion, fear, and distrust has been interjected into the party that the members have taken to running surveillances on one another in an attempt to determine who the 'Police agents' are. On 2/19/69, this information was furnished to the San Diego Police Department with the suggestion that possibly local Motor Vehicle Code laws were being violated during the course of these surveillances." (Memorandum from San Diego Field Office to FBI Headquarters 2/27/69.)

158 Memorandum from San Diego Field Office to FBI Headquarters, 11/10/69. Headquarters told the San Diego office that if there was no legal basis for a raid, it should "give this matter further thought and submit other proposals to capitalize on this information in the counterintelligence field." (Memorandum from FBI Headquarters to San Diego Field Office, 11/18/69, p. 1.)

159 Memorandum from San Diego Field Office to FBI Headquarters, 12/3/69, pp. 2-3.

160 Memorandum from San Diego Field Office to FBI Headquarters, 2/17/70.

161 Memorandum from San Diego Field Office to FBI Headquarters, 3/26/69.

162 Memorandum from San Diego Field Office to FBI Headquarters, 12/15/69.

163 Memorandum from San Francisco Field Office to FBI Headquarters, 4/21/69.

INTELLIGENCE ACTIVITIES  
UNITED STATES SENATE**

APRIL 23 (under authority of the order of April 14), 1976

**THE USE OF INFORMANTS IN FBI DOMESTIC INTELLIGENCE INVESTIGATIONS**

**I. INTRODUCTION AND SUMMARY**

The dangers to a free society that are implicit in the use of secret intelligence informers have long been recognized. In his Constitutional History of England, written in the mid-19th century, Sir Thomas May observed:

Men may be without restraints upon their liberty; they may pass to and fro at pleasure: but if their steps are tracked by spies and informers, their words noted down for crimination, their associates watched as conspirators -- who shall say that they are free? 1

May pointed to the use of informers by "continental despotisms," noting that "the freedom of a country may be measured by its immunity from this baleful agency." 2

On the other hand, law enforcement officials see informants 3 as a highly effective technique -- one justified by the public's interest in the detection of crime and the prosecution of criminals. FBI officials testified to the Committee that informants "provide one of the best and most complete forms of coverage" in their investigations. 4 Former Attorney General Katzenbach testified that the use of intelligence informants in the mid-1960s to infiltrate the Ku Klux Klan -- a technique urged upon the FBI by President Johnson, Attorney General Robert Kennedy, and Mr. Katzenbach -- was a principal factor in stopping repeated acts of criminal violence.

This Appendix, pursuant to the Committee's mandate under Senate Resolution 21, focuses on the use of informants in FBI intelligence investigations who are recruited, paid and directed by Bureau Special Agents. The Committee did not examine the use of informants in FBI criminal investigations nor did the Committee examine instances of the "walk-in" who volunteers information to the FBI on a one-time basis. As discussed in more detail below, paid and directed intelligence informants are extensively used in FBI domestic intelligence investigations of groups and individuals. These intelligence informants are, the subject of this Appendix.

The use of informants to collect intelligence on Americans is not confined to the FBI. The Committee also examined the use of intelligence informants by other agencies. In the late 1960s, informants and undercover agents were used by the CIA and Army Intelligence to secretly penetrate domestic groups. In 1968, about 1500 Army intelligence agents were engaged in monitoring and penetrating civilian activity in the United States; although a 1971 Defense Department directive now generally limits the military's collection of information about private groups and individuals, the directive permits the military to secretly penetrate civilian groups where approved by the Defense Department. See the Appendices on Improper Surveillance of Private Citizens

by the Military and CIA Intelligence Activities Regarding Americans. In addition, the Internal Revenue Service uses informants for intelligence purposes. See the IRS Report: p. 863, "Selective Enforcement for Non-Tax Purposes."

#### *A. Summary of Facts*

##### *1. The Extensive Use of Intelligence Informants*

The paid and directed informant is the most extensively used technique in FBI domestic intelligence investigations. Informants were used in 85 percent of the domestic intelligence investigations analyzed in a recent study by the General Accounting Office.<sup>5</sup> By comparison, electronic surveillance was used in only 5 percent of the cases studied. The FBI places strong emphasis on informant coverage, in intelligence investigations, instructing agents to "develop reliable informants at all levels and in all segments" of groups under investigation.<sup>6</sup>

The Committee's investigation revealed that the FBI was using more than 1,500 domestic intelligence informants as of June 30, 1975.<sup>7</sup>

The FBI budget for Fiscal Year 1976 programmed a total of \$7,401,000 for the intelligence informant program, more than twice the amount allocated for the organized crime informant program.<sup>8</sup>

The number of intelligence informants has been substantially larger in previous years because of the "Ghetto Informant Program," which at its height comprised over 7,000 informants. The FBI began the Ghetto Informant Program in 1967 in the context of the urban riots and violence of the mid-1960's, and in response to instructions from the White House and the Attorney General. Although "ghetto" informants were initially used as "listening posts" to provide information on the planning or organizing of riots and civil disturbances, many were eventually given specific assignments to attend public meetings of "extremists" and to identify bookstores and others distributing "extremist literature". The FBI terminated the program in 1973 after sharp debate within the Bureau over the program's effectiveness and the propriety of the listening post concept.

Generally, there are two types of intelligence informants: those the FBI first recruits and then inserts into investigated groups under investigation, and those who are already members of such a group and are "turned" or recruited as FBI informants.

In addition to paid and directed informants, the FBI uses "confidential sources," defined in the FBI Manual of Instructions as persons who furnish the FBI information available to them through their position, such as "bankers, telephone company employees, and landlords."<sup>9</sup> Confidential sources were used in 50 Percent of the cases analyzed by the GAO, ranking behind informants and local law enforcement officials as the third most used techniques in intelligence cases. As of June 1975, there were 1,254 confidential sources approved by FBI headquarters for domestic intelligence purposes.<sup>9a</sup>

##### *2. The Unpublished Standards for the Use of Intelligence Informants.*

The standards for the use of intelligence informants are contained in internal FBI directives that are not available to the public.

The FBI Manual of Instructions sets few limits on the scope of intelligence informant reporting. The Manual proscribes only the reporting of communications between an attorney and client, legal "defense plans or strategy," "employer-employee relationships" (where an informant is connected with a labor union), and "legitimate institution or campus activities" in schools.<sup>10</sup> The Manual contains no standard limiting an informant's reporting to information relating to the commission of criminal offenses or even to violent or potentially violent activity. In fact, intelligence informants report on virtually every aspect of a group's activity serving, in the words of both FBI officials and an informant, as a "vacuum cleaner" of information.<sup>11</sup>

FBI officials recognized this broad scope of informant reporting as a problem area, pointing out that it produces "too much information" in FBI files.<sup>11a</sup> They expressed their belief that an informant should report to some degree the lawful aspects of a group's activity in order to permit an accurate picture to be drawn. But they did recognize the need "to narrow down" informant reporting from its present broad scope.<sup>12</sup>

The Manual does not set independent standards which must be supported by facts before an organization can be the subject of informant coverage. Once the criteria for opening a regular intelligence investigation are met, and the case is opened, informants can be used without any restrictions.<sup>12a</sup> There is no specific determination made as to whether the substantial intrusion represented by informant coverage is justified by the government's interest in obtaining information. There is nothing that requires that a determination be made of whether less intrusive means will adequately serve the government's interest. There is also no requirement that the decisions of FBI officials to use informants be reviewed by anyone outside the Bureau. In short, intelligence informant coverage has not been subject to the standards which govern the use of other intrusive techniques such as wiretapping or other forms of electronic surveillance. (Compare the requirements for use of electronic surveillance and wiretaps discussed in "Intelligence Activities and the Rights of Americans"; Part IV.)

#### *B. Policy and Constitutional Issues Raised by the Use of Intelligence Informants*

The use of informants and confidential sources in intelligence investigations of domestic groups and citizens can raise important policy and Constitutional issues. Unlike investigations of specific criminal activity, intelligence investigations frequently have involved continuous surveillance across a broad spectrum of activity. Where "intelligence" rather than evidence of particular criminal activity is collected, informants and confidential sources give the FBI a large amount of information dealing with the lawful political and personal activity of citizens. Former FBI informants infiltrated into organizations testified that they reported "any and everything" they saw or heard pertaining to the group's members,<sup>13</sup> and that they took membership lists, financial data, and other records and gave them to the FBI. This testimony was confirmed by

the FBI agents to whom they reported. As one agent testified, his informant "told me everything she knew" about the political organization she infiltrated. 14

Under the Bill of Rights, particularly the First and Fourth Amendments, our Constitution protects freedom of speech and political association and the right to be secure against unreasonable searches and seizures.

In the light of the protections guaranteed by our Constitution, the use of informants for intelligence purposes raises three principal issues:

(1) The first issue concerns whether informants should be used at all in intelligence investigations, 15 and, if so, under what circumstances. The use of informants in the investigation of groups and individuals involved in political activity may chill the exercise of First Amendment rights. For example, citizens interested in attending a meeting of a political group either to join or to express support for a lawful interest they share with the group, may be deterred by the fear that their attendance would mark them as a member in an informant's eyes. They may fear an informant's report will prevent their gaining a job requiring a security clearance, even though in fact they supported no unlawful activity. Although citizens may not know that a secret informant is reporting on a particular group, the mere existence of the FBI intelligence informant system can be sufficient to cause them to curtail their exercise of First Amendment rights for fear they will be reported to the FBI.

(2) The second issue concerns the scope of an informant's reporting. Should an informant report only indications of criminal or violent activity, or should he report all aspects of a group's activity and the personal lives of individuals in the interest of intelligence? In this connection, there is the further question of whether an informant should be permitted to take the confidential records and documents of a group or individual (such as membership lists or financial data) and give them to the FBI, when the Government cannot properly obtain them through statutory disclosure requirement, subpoena, or search warrant.

(3) Finally, there is the issue of an informant's conduct and behavior. The Committee heard testimony on the difficulties inherent in an informant reporting on violent and criminal activity. To be in a position to report, the informant may have to participate in the unlawful activity to some degree. As one FBI handling agent testified of an informant in a violence-prone element of the Ku Klux Klan, "he couldn't be an angel and be a good informant." 16 Where such an informant is paid and directed by the FBI, the Government may be placed in the at least unseemly posture of involvement through its agents in the activity it is seeking to prevent. At the extreme, the Government's informant may be held to have acted as an agent provocateur, that is, an agent of the Government who has provoked illegal or violent activity.

#### *C. The Lack of Judicial Treatment of Intelligence Informant Issues*

These issues have rarely been before the courts. This is in part due to the nature of secret intelligence informant activity. Members of a group will seldom learn that an FBI intelligence informant has been in their midst or has copied their records for the FBI because intelligence investigations almost invariably do not result in prosecutions. 17 Without knowledge of an informant's activity and in the absence of a prosecution, a group or its members will not come before a court to raise Constitutional objections. Consequently, there are few court decisions and those that do exist usually concern criminal, rather than intelligence informants. In *Hoffa v. United States*, 18 a criminal case involving charges of bribing a jury, the Supreme Court held that an informant's testimony concerning a defendant's conversations could not be considered the product of a search where the defendant had consented to the presence of the individual who served as an informant. The facts did not, however, present the issue of whether an informant's surreptitious taking of documents for the Government constituted an unlawful search.

The Select Committee's investigation has revealed for the first time the extremely broad scope of FBI intelligence informant surveillance and reporting. The Supreme Court has yet to be presented with the types of factual situations -- such as intensive informant coverage of lawful political activity and personal matters -- which may produce the chilling of rights guaranteed by the First Amendment. Moreover, apart from particular cases which may come before a court, the overall effect on the exercise of First Amendment rights in the society at large may be very great where it is known that a large-scale intelligence informant system is operating. No court has seen the overall pattern of FBI intelligence informant coverage of citizens and groups. Consequently, courts have been unable to assess the full impact of the informant system on the exercise of constitutionally protected rights.

A U.S. Army surveillance system was challenged on First Amendment grounds in *Laird v. Tatum*, but the Court described the information gathered in that case as "nothing more than a good newspaper reporter would be able to gather by attendance at public meetings and the clipping of articles from publications available on any newsstand." 19 In a more recent case, the California Supreme Court held that secret surveillance of classes and group meetings at a university through the use of undercover agents was "likely to pose a substantial restraint upon the exercise of First Amendment rights." 20 Citing a number of U.S. Supreme Court opinions, the California Supreme Court stated in its unanimous decision:

In view of this significant potential chilling effect, the challenged surveillance activities can only be sustained if [the Government] can demonstrate a "compelling" state interest which justifies the resultant deterrence of First Amendment rights and which cannot be served by alternative means less intrusive on fundamental rights. 21

#### *D. The Scope of the Committee's Investigation*

Before turning to the discussion below, two points as to the Committee's investigation must be noted.

First, in recognition of the sensitive nature of the informant technique, including the risk of exposure, or physical harm to present and former informants, the Committee worked out procedures with the cooperation of the Attorney General and the

FBI to protect the integrity of the FBI's operations while assuring the Committee's ability to conduct a thorough investigation. For example, while materials on full FBI intelligence investigations were examined, including informant reports on target groups and particular incidents, the names and identities of informants were not revealed unless they had previously been made public through court proceedings or the informant's own choice.

Second, as noted above, the Committee's investigation focused on the use of FBI-paid and directed intelligence informants and FBI-approved confidential sources, not criminal informants, one-time "walk-ins" or citizens who provide information to FBI Special Agents on their own initiative. In short, the Committee's investigation dealt not with the citizen's right to communicate with a law enforcement agency, but with a specific and substantial government intelligence program employing individuals who are paid and directed by the FBI Intelligence Division. It is in this sense that the discussion that follows uses the term "intelligence informant."

The discussion below is in two parts. To illustrate the nature of the intelligence informant technique, Part One examines the case histories of two former FBI intelligence informants. Part One also sets out eleven additional examples of informant coverage in domestic intelligence investigations and describes the "Ghetto Informant Program," conducted from 1967 to 1973, as well as other past FBI informant programs directed towards specific concerns.

Part Two discusses the size and scope of the FBI intelligence informant program and the standards that exist for the use of intelligence informants.

## II. THE NATURE OF THE INTELLIGENCE INFORMANT TECHNIQUE

### *A. Case Histories of Particular Informants*

To provide an understanding of the intelligence informant technique, two case studies are presented. The first case study involves a former FBI "subversive" informant in the Vietnam Veterans Against the War, Mary Jo Cook. The second case study involves a former FBI "extremist" informant in the Ku Klux Klan, Gary Rowe. Before turning to those cases, the FBI's definitions of subversive and extremist informants are set forth below.

**Subversive Informants.** -- The FBI classifies its paid and directed intelligence informants into two categories, "subversive" and "extremist," corresponding to the two types of domestic intelligence investigations. "Subversive" 22 informants are those used in the investigation of "subversive activities," defined in Section 87 of the FBI Manual as "activities aimed at overthrowing, destroying, or undermining the Government of the United States or any of its political subdivisions" by illegal means. 23 Section 87 has been applied to the activities of the Communist Party and a wide variety of other organizations which the FBI believes have revolutionary characteristics. During the Vietnam War, investigations of individuals labeled "Key Activists" were conducted under Section 87, in which informant coverage was stressed. For example, in January 1968, instructions went out to ten major field offices to designate certain persons as "Key Activists." They were defined as "individuals in the Students for a Democratic Society and the anti-Vietnam war groups [who] are extremely active and most vocal in their statements denouncing the United States and calling for civil disobedience and other forms of unlawful and disruptive acts." 24 There was to be "an intensive investigation" of each "key activist":

Because of their leadership and prominence in the "new left" movement, as well as the growing militancy of this movement, each office must maintain high-level informant coverage on these individuals so that the Bureau is kept abreast of their day-to-day activities as well as the organizations they are affiliated with, to develop information regarding their sources of funds, foreign contacts, and future plans. 25

**Extremist Informants.** -- "Extremist" informants 25a are those used in the investigation of "extremist" activities, defined in Section 122 of the FBI Manual in the same way as subversive activities but also including "denying the rights of individuals under the Constitution." 26 In practice, "extremist" investigations have concerned violence-prone groups composed of members of one or another race. Section 122 is intended to cover what the Bureau calls "White Hate" groups, such as the Ku Klux Klan, and "Black Nationalist Hate" groups, such as the Black Panther Party and the Nation of Islam. It also applies to some American Indian groups such as the American Indian Movement, as well as a variety of terrorist organizations engaged in "urban guerrilla warfare." 27

In the case of organizations of blacks, informant coverage in Section 122 investigations extended beyond the Black Panthers. In the fall of 1970, the FBI decided to include "every Black Student Union and similar group regardless of their past or present involvement in disorders." 28 The initial proposal for informant coverage called for "preliminary inquiry through established sources and informants to determine background, aims and purposes, leaders and Key Activists." 29 It was estimated this would cause FBI field offices to open 4,000 cases on both groups and individuals. The subsequent instructions to the field offices stressed the need to investigate Black Student Unions and similar groups and to "target informants and sources to develop information regarding these groups on a continuing basis ... and to develop such coverage where none exists." 30

The case histories illustrating the activity of FBI's subversive and extremist intelligence informants are presented below.

#### *1. Mary Jo Cook -- FBI Informant in the Vietnam Veterans Against the War*

In June 1973, Mary Jo Cook was recruited by the FBI field office in Buffalo, New York to serve as a paid and directed informant in the Buffalo chapter of the Vietnam Veterans Against the War (VVAW). 31

a. Background. -- The FBI made limited investigations in 1967 and 1968 to determine if the Communist Party or other "subversive" elements were directing or controlling the VVAW but concluded that there was no such outside influence. 32

In August 1971, a full investigation of the VVAW was opened on the basis of reports that Communist youth groups were infiltrating the VVAW and the alleged involvement of some VVAW members in illegal demonstrations; militant antiwar activity by the VVAW, including reported links with foreign elements, was also a basis for the full investigation. 33 FBI concern centered on the national office of the VVAW, which the FBI saw as adopting Marxist-Leninist doctrine and anti-imperialist positions.

The FBI's investigation of local VVAW chapters was, in part, designed to determine the extent to which they were following the position of the VVAW national office or were being infiltrated by Communist elements. 34

b. Cooks Instructions. -- From her initial meeting with the FBI agent who recruited her, Cook understood that she was to serve as both a reporter of information and a moderating force in the VVAW. Cook testified that she understood she was to act as "a voice of reason . . . a guiding force in the organization and keep things calm, cool and collected." 35 Cook testified:

The major understanding that I got from the meeting was that VVAW-WSO was an organization primarily of veterans who were possible victims of manipulation. They had been through the Vietnam War. They had legitimate readjustment needs, and the Bureau was afraid that they could become violent or could become manipulated in a cause or social concern, and they wanted me to go in there and participate in the organization and make sure that the veterans didn't get "ripped off". 36

Cook's handling agent similarly testified that one of the main purposes of placing Cook in the VVAW chapter was to neutralize any violence or illegal activities, as well as to report them. 37

c. The Scope of Cook's Reporting. -- As to her reporting function, Cook testified that she was to report virtually everything about the VVAW and its members. She stated that:

I was to go to meetings, write up reports ... on what happened, who was there ... to try to totally identify the background of every person there, what their relationships were, who they were living with, who they were sleeping with, to try to get some sense of the local structure and the local relationships among the people in the organization. 38

The FBI Special Agent to whom Cook reported similarly testified as to the broad scope of Cook's reporting: "She told me everything she knew about the Buffalo chapter of the VVAW." 39

To obtain the type of information desired by the FBI, Cook testified that she took a leadership role in the VVAW. The FBI asked her to go to as many regional and national meetings of the VVAW as possible to "get a good sense of how the local chapter fit in [the] national organization". 40 Cook stated "it was a very democratic process [in the VVAW] so that there was no way that I could ... fulfill the request of the FBI ... without actually becoming elected leadership in the chapter". 41

The scope of Cook's intelligence reporting, including identities of individuals, personal matters, and lawful political activity, is illustrated by the following FBI summaries 42 of two reports given the FBI by Cook:

Report No. 1

Report concerns a meeting of the VVAW/WSO Women's Group held November 5, 1973, in Buffalo, New York. Nine women attended, all named in the report. One woman had been the girlfriend of an individual named in the report who was associated with the Martin Sostre Defense Committee and lived with him for a while. Report concluded with plans for a men's group meeting to be held later.

Report No. 2

Report concerns a meeting of the VVAW/WSO Steering Committee held 11/10/73. Five identified individuals were present. There was a discussion of finances and some displeasure at the financial record system. Plans for a benefit at a bar were discussed. Information was presented concerning a newsletter to be mailed out which will discuss the VVAW/WSO's position on amnesty, the upgrading of discharges, information about a strike at a Buffalo firm.

Some objections were raised concerning the wording of some VVAW/WSO objectives.

Plans for a future coalition meeting organized by two individuals were discussed, the same coalition that worked on the Impeach Nixon rally.

Matters concerning possible new members and/or attendees at future meetings were discussed. Plans for a VVAW/WSO team on a television sports quiz show were discussed.

One member raised four criticisms of the VVAW/WSO, all listed. One member wrote a regional newsletter.

d. Cook's Taking of VVAW Documents. -- Besides reporting in detail on VVAW members and meetings, Cook also took VVAW documents and gave them to the FBI. 43 For example, Cook testified that she gave the FBI VVAW mailing lists, thus providing the FBI with the names of many individuals outside of the smaller number of people who attended VVAW meetings. 44

In addition to the mailing lists which Cook gave to the FBI, she also took a number of other VVAW documents, including papers relating to legal defense matters. As Cook's FBI handling agent testified:

She brought back several things ... various position papers taken by various legal defense groups, general statements of ... the VVAW, legal thoughts on various trials, the Gainesville (Florida) 8 ... the Camden (New Jersey) 9 ... various documents from all of these groups. 44a

Cook also gave the FBI a confidential legal manual prepared by VVAW attorneys as a guide for legal defense strategy and methods should VVAW members be arrested in demonstrations or other political activity. 45 As discussed in more detail below, the FBI Manual provides that legal defense matters are not to be reported by informants. However, the FBI interprets this provision as prohibiting only the reporting of privileged attorney-client communications or legal defense matters in connection with a specific trial. Since the VVAW legal manual was intended for general use, rather than in connection with a particular case, the FBI considered that the VVAW manual did not fall within the prohibition.

e. Reporting on Non-VVAW Groups and Individuals. -- In addition to reporting on the VVAW itself, Cook also reported on those individuals and groups who worked on political issues in conjunction with the VVAW:

Senator HART: ... did you report also on groups and individuals outside the [VVAW], such as other peace groups or individuals who were opposed to the war whom you came in contact with because they were cooperating with the [VVAW] in connection with protest demonstrations and petitions?

Ms. COOK: ... I ended up reporting on groups like the United Church of Christ, American Civil Liberties Union, the National Lawyers Guild, liberal church organizations [which] quite often went into coalition with the [VVAW]. 45a

As a result of this broad reporting scope, Cook estimated that she identified as many as 1,000 people to the FBI in the 18 months she worked as an informant. 46 Cook estimated that sixty to seventy percent of these 1,000 people were nonveterans who had participated with the VVAW in various political efforts. 47

In November 1974, Cook quit her work as an informant because of her belief that the VVAW was engaged in lawful political activity and her conclusion that she could not in conscience inform on its members and others working with them. 48 Cook concluded that the Buffalo VVAW Chapter was working towards ending the involvement of U.S. in Vietnam, amnesty for draft resisters, upgrading military discharges, and better health and drug treatment for Vietnam veterans. 49

Cook testified:

I started talking with the FBI about all of the contradictions that I was starting to see. I didn't understand what my involvement was anymore . . . I didn't see the reason for my continuance . . . [I said to the FBI] these people don't need me functioning in their midst, and if you can't give me assurances that the information that I am giving you, which you seem to strip the context away from isn't going to be used against these people, then I cannot continue . . . and they could not give me any assurance that this information would not be used against people . . . . 50

## *2. Gary Rowe -- FBI Informant in the Ku Klux Klan*

Gary Rowe worked as an FBI informant in the Birmingham, Alabama chapter of the Ku Klux Klan from 1959 until March 1965, when he surfaced to testify as an eyewitness to the killing of a civil rights worker, Mrs. Viola Liuzzo, by Klan members. 51

Rowe's activity as an FBI informant illustrates the distinction between an informant's reporting of information relating to violence or criminal activity and the reporting of general intelligence. On the one hand, Rowe provided the FBI with a great deal of information on Klan violence and criminal activity. At the same time, however, Rowe reported virtually every aspect of Klan activity, regardless of its relation to actual or potential violence or criminal offenses. In addition, on a number of occasions Rowe participated in Klan violence in order to be in a position to report its occurrence to the FBI. Consequently, even though Rowe was able to report significant violence and criminal activity, his case highlights two principal issues: 1) the question of overbreadth in intelligence informant reporting, and 2) the government's participation or unseemly involvement through its paid and directed informants in the violent or criminal activity it is investigating.

a. The Use of Intelligence Informants to Report Klan Violence and Criminal Activity. -- In testimony before the Committee, former Attorney General Nicholas Katzenbach emphasized the violent acts committed by some Ku Klux Klan members in the South during the years Rowe was an FBI informant:

The central point of . . . my testimony is that some Klan members in those states, using the Klan as a vehicle, were engaged in repeated acts of criminal violence. It had nothing to do with preaching a social point of view: it had to do with proven acts of violence. 52

Katzenbach stated that to deal with the problem of Klan violence, Attorney General Robert Kennedy had suggested to President Johnson an intensified use of FBI informants in the Klan, along the lines employed by the FBI against Communist groups. Katzenbach quoted from a letter Robert Kennedy had sent to the President in mid-1964 just prior to the murders of three civil rights workers in Mississippi:

The unique difficulty as it seems to me to be presented by the situation in Mississippi (which is duplicated in parts of Alabama and Louisiana at least) is in gathering information on fundamentally lawless activities which have the sanction of local law enforcement agencies, political officials and a substantial segment of the white population. The techniques followed in the use of specially trained, special assignment agents in the infiltration of Communist groups should be of value. If you approve, it might be desirable to take up with the Bureau the possibility of developing a similar effort to meet this new problem. 53

And Katzenbach pointed out that informants were critical to the solution of the murders of the three civil rights workers: "That case could not have been solved without acquiring informants who were highly placed members of the Klan." 54

Katzenbach emphasized his view that the use of FBI informants in the Klan should be viewed as a criminal investigation technique, pointing out that, in the case of the Klan, "these techniques were designed to deter violence to prevent murder, bombings, and beatings. In my judgment, they were successful." 55 At the same time, he indicated the disruptive results that "an effective informant program" 56 may produce. He stated:

It is true that the FBI program with respect to the Klan made extensive use of informers. That is true of virtually every criminal investigation with which I am familiar. In an effort to detect, prevent, and prosecute acts of violence, President Johnson, Attorney General Kennedy, Mr. Allen Dulles, myself and others urged the Bureau to develop an effective informant program, similar to that which they had developed with respect to the Communist Party. It is true that these techniques did in fact disrupt Klan activities, sowed deep mistrust among the Klan members, and made Klan members aware of the extensive informant system of the FBI and the fact that they were under constant observation. 57

Rowe played a critical role in the solution of the murder of Mrs. Viola Liuzzo. Owing to his close relationship to Klan leaders, Rowe was asked to accompany several Klansmen in an unspecified mission against those participating in a civil rights march in Alabama in March, 1965. Rowe reported this invitation to his FBI handling agent, who told him to go and report what occurred. 57a As a result, Rowe was an eyewitness to the murder of Mrs. Liuzzo, and reported the crime to the FBI within hours of its occurrence. Subsequently, Rowe's testimony was a critical element in the ultimate conviction of the Klansmen responsible for the killing. 58

b. The Scope of Rowe's Reporting. -- Rowe's assignment, according to the FBI Special Agent who recruited him 59 and served as his first handling agent, was

to gather information as to members, leaders, because I did not know who they were, if he could get the number of Klaverns ... in the Birmingham area, and just keep in touch with me as to the activities that occurred. That was his initial instruction.

I wanted information that would be of assistance to make a determination as to the violent nature of the organization. This would be, violations of civil rights, things of this nature ... you certainly can't get it on the outside. 60

In practice, Rowe testified that he reported to the FBI "any and everything that I observed or heard pertaining to any Klansmen." 61 This broad scope of Rowe's reporting was confirmed by the FBI agents to whom he reported. As one agent testified:

... he furnished us information on the meetings and the thoughts and feelings, intentions and ambitions, as best he knew them, of other members of the Klan, both the rank and file and the leadership. 62 Special Agent No. 3, 11/21/75, p. 7.

According to another of Rowe's FBI handling agents, Rowe's mission was "total reporting," including membership lists, financial matters, and political positions, as well as Klan violence. 63 Rowe also testified that, in line with his "total reporting" instructions he reported intimate details of the personal lives of Klan members. 64

Rowe was able to give the FBI extensive information about Klan membership as a result of his position in the "Klan Bureau of Investigation," the Klan's security and investigative arm. 65 Rowe did most of the investigation of prospective members in the Birmingham area, and would regularly make their applications available to his FBI handling agent, who would copy the applications before returning them to Rowe. 66

In addition, Rowe took Klan membership lists and gave them to the FBI. Rowe's handling agent testified as to the way such lists were taken:

I remember one evening during the course of a meeting that was going on ... he called my home and said I will meet you in a half an hour ... I have a complete list of everybody that I have just taken out of the files, but I have to have it back within such a length of time.

Well, naturally I left home and met him and had the list duplicated forthwith, and back in his possession and back in the files with nobody suspecting. 67

Rowe also reported on political matters relating to the Klan .68 During a campaign for mayor in Birmingham, Rowe was instructed to attend public political meetings to assess the candidates' position on integration, and to identify Klan members present and the extent to which they were actively engaged in the campaign. 69 Rowe also reported on "National Conventions" of the Klan, closed meetings at which officers were elected and Klan positions determined. 70

In addition to Klan activities, Rowe reported on the activities of other organizations to the FBI. As a member of the "Klan Bureau of Investigation," Rowe was instructed by the Klan to attend and report on meetings of civil rights groups. Rowe gave the information he developed on these civil rights organizations to the FBI as well, even though this fell outside the area of reporting on Klan activities. 71

c. The Issue of Participation in Criminal or Violent Activity. -- In addition to general intelligence, Rowe was particularly instructed to report any instances of planned or actual violence by the Klan. 72 Merely attending Klan meetings as an ordinary member did not put Rowe in a position to observe the planning for, or occasion of violence, by the Klan .73 As Rowe's FBI handling agent testified, "to gather information [on violence] you have to be there." 74

Consequently, the FBI instructed Rowe to join a smaller group of Klan members, a so-called "Action Group", which conducted violent acts against blacks and civil rights workers. 75

At the outset, Rowe's handling agent had instructed him that "under no conditions should I participate in any violence whatsoever." 76 Although these instructions continued to be formally reiterated to Rowe, Rowe and his FBI handling agents understood that for Rowe to be able to report Klan violence, he would have to be present for -- and at times might be involved in -- that violence.

Rowe testified as to a number of instances where he and other Klansmen had "beaten people severely, had boarded buses and kicked people off; had went in restaurants and beaten them with blackjacks, chains, pistols." 77

For example, on one occasion, Rowe gave the FBI advance warning that Klan members were planning to assault and beat blacks attending a country fair. His FBI handling agent instructed him "to go and see what happened." 78 To accomplish this, Rowe accompanied the Klansmen to the fair, where, to preserve his cover, he participated in the resulting violence. 79 On another occasion, Rowe's throat was cut while he was participating with other Klansmen in large-scale violence against Freedom Riders at the Birmingham bus depot in May, 1961. 80

Rowe described how he and other Klansmen used "baseball bats, clubs, chains, and pistols" in attacking the Freedom Riders (Rowe, 12/2/75, p. 1867). Rowe recalled that, when he asked why there was no apparent action on his reports of the impending violence, his FBI handling agent told him "who the hell are we going to report it to? . . . the [Birmingham] police department helped set [the violence] up.

We are an investigating agency not in enforcement agency. All we do is gather information." 81

The resulting dilemma was described by one of Rowe's FBI handling Agents:

. . . it is kind of difficult to tell him that we would like you to be there on deck, observing, be able to give us information and still keep yourself detached and uninvolved and clean, and that was the problem that we constantly had.

. . . I'm sure he was present many, many times, when he participated in things, and I'm sure he reported them at that time, but we certainly cautioned him against that. 82

Although Rowe's participation in Klan violence was practically an inherent feature of his informant's role, the FBI took particular care in at least one instance that Rowe did not suggest or lead violent activity. In April 1964, several years after Rowe joined the Klan "Action Group," the Birmingham Field Office reported that Rowe had become an Action Group squad leader. Bureau Headquarters ordered that Rowe resign this leadership position or be discontinued as an informant. 83 The Bureau further advised the Field Office:

in those cases where you have an informant who is a member of a violent squad ... you should insure that the informant understands he is not to direct, lead, or instigate any acts of violence. 84

Nevertheless, even these instructions did not extend to ruling out Rowe's participation in violence, but rather only leading or directing violent acts. The essential characteristic of Rowe's status was expressed by the following testimony of his FBI handling agent:

If he happened to be with some Klansman and they decided to do something, he couldn't be an angel and be a good informant. 85

#### *B. Examples of Intelligence Informant Coverage of Groups Subject to Intelligence Investigations*

In addition to the case histories of the informants described above, the nature of the intelligence informant technique can also be illustrated by other examples of informant coverage in domestic intelligence investigations. The cases of informant coverage set out below indicate the types of information intelligence informants produce for FBI files.

In summary, these cases further demonstrate the extremely broad scope of informant reporting, including both lawful political activity and details of the personal lives of citizens. For example, informants in the Women's Liberation Movement (Case No. 9, below) reported the identities of women who belonged to Women's Liberation groups at several Midwest universities, and statements made by women concerning the personal reasons that motivated them to participate in the Women's Movement. Informant coverage of lawful political activity is also shown in Case No. 1 which involved a public meeting held by a citizens group to debate the merits of developing a certain U.S. missile. Several cases presented below involve instances where informants in violence-prone groups provided information that led to arrests and prosecutions or the prevention of violence. (See Case Nos. 3, 6, and 8 below.) The Socialist Workers Party (Case No. 10, below) is an example of informant coverage and intelligence surveillance that continued uninterrupted for many years, despite the fact that for more than three decades, the group has committed no criminal acts. 86

*Case No. 1 -- Citizens Panel on the Merits of an Anti-Ballistic Missile System (1969)*

An FBI informant and two FBI confidential sources reported on a meeting of a Washington, D.C., group that expressed concern about the development of the Anti-Ballistic Missile System (ABM) in the late 1960s. 87 The meeting was targeted for informant coverage because the Daily World, a communist newspaper, had commented on the formation of the group. 88 The informant reported on plans for the meeting which was to be held in a high school auditorium where the merits of development of the ABM would be debated, and on publicity materials distributed at churches and schools. The informant also reported that the speakers for the debate would include, on the "pro side," a Defense Department official and a Defense Department consultant and on the "con side," a political science professor and a well-known scientist. 89 A confidential FBI source reported on the past and present residence of the person who had applied to rent the auditorium and on his current position in the military. Another confidential source informed the FBI of the anti-Vietnam war and anti-ABM articles being distributed at the meeting. 90 The informant and source reports on plans for the meeting and on the meeting itself were disseminated by teletype to the White House, the Vice President, the Attorney General, the Secret Service, the State Department, the CIA, and various military intelligence agencies. 91 A subsequent report described plans for a similar meeting in the District of Columbia and included the names of prominent D.C. politicians who planned to attend. 92

*Case No. 2 -- Dr. Carl McIntyre's American Christian Action Council (1971)*

An FBI confidential source and an informant reported information about the formation of this group by Dr. McIntyre. The group was established to act as a counter to various liberal groups and to the "Clergy and Laymen Concerned about Vietnam". The initial report from a confidential source mentioned plans to picket NBC-TV studios in Philadelphia, Baltimore and Washington, D.C., and named all the members of the Board of Directors. 93 Subsequent reports from an informant described the group's plans to oppose the President's trip to China and to support prayer in the public schools. 93a The informant also reported on the group's convention held jointly with Dr. McIntyre's missionary group and on plans for the group's future organization and activities. 94

*Case No. 3 -- Detroit Black Panther Party 1970*

An FBI extremist informant involved in an intelligence investigation of the Detroit Black Panther Party (BPP) furnished advance information regarding a planned ambush of Detroit police officers which enabled the Detroit Police Department to take action to prevent injury or death to the officers. The information led to the arrest of eight persons and the seizure of a cache of weapons. The informant also furnished information resulting in the location and confiscation by Bureau agents of approximately fifty sticks of dynamite available to BPP, which likely resulted in saving of lives and preventing property damage. 95

On June 20, 1970, the informant furnished the names of three BPP members who were supposed to carry out the ambush on June 27, 1970 and reported that others whose identity he did not know would also be involved. This information was furnished to the Detroit Police Department who in turn monitored the ambush site. On June 27, 1970, the informant advised that the planned ambush of police officers would definitely take place that night, shortly after midnight. On June 28, 1970, two Detroit police officers, while patrolling on the east side of Detroit a few minutes after midnight, were fired upon by snipers.

Immediately after the shooting, Detroit police officers arrested the three individuals identified by the informant and charged them with assault with intent to commit murder. In addition, three other individuals were arrested in connection with this shooting. A cache of weapons and ammunition was recovered from the residence of one of those arrested. 96

On July 25, 1970, the informant advised that a member of the Detroit National Committee to Combat Fascism, and another individual, whom he believed to be a member of the White Panther Party, stole some dynamite on or about July 11, 1970. The informant was directed to ascertain the location of this dynamite. He later determined that it had been stored at the farm of the second individual's mother. The informant further advised that the mother did not share her son's radical views and had no knowledge that the dynamite was on her farm. On September 16, 1970, the mother gave Bureau agents permission to search her property. Approximately fifty sticks of dynamite were discovered. 97

*Case No. 4 -- National Conference on Amnesty (1974)*

Several FBI informants provided information on a national conference held to support amnesty for veterans of the Vietnam war. The FBI targeted the conference for informant coverage because of other informant reports that the Vietnam Veterans Against the War were instrumental in organizing the conference and might attempt to take it over. 98 The informant's reports identified the various church and civil liberties groups who sponsored and organized the conference, as well as the participation of a draft evader and several "subversives." 99 The reports described the topics for workshops at the conference, and the organization of a steering committee which would include delegates from families of men killed in Vietnam and Congressional staff aides. 100

*Case No. 5 -- Public Meeting Opposing U.S. Involvement in Vietnam War (1966)*

Informants were used extensively in FBI investigations of possible Communist links to the antiwar movement. An example is the FBI's coverage of various antiwar teach-ins and conferences sponsored by the Universities Committee on Problems of War and Peace. A forty-one page report from the Philadelphia office -- based on coverage by thirteen informants and confidential sources -- described in detail a "public hearing on Vietnam." 101 A Communist Party official had "urged all CP members" in the area to attend, and one of the organizers was alleged to have been a Communist in the early 1950's. Upon receipt from an informant of a list of the speakers, the FBI culled its files for data on their backgrounds. One was described by a source as a Young Socialist Alliance "sympathizer." Another was a conscientious objector to military service. A third had contributed \$5,000 to the National Committee to Abolish the House Committee on Un-American Activities. A speaker representing the W.E.B. DuBois Club was identified as a Communist. 102 The FBI covered the meeting with an informant who reported practically verbatim the remarks of all the speakers, including the following:

- the Chairman of the Philadelphia Ethical Society
- a representative of the American Civil Liberties Union
- a representative of the United Electrical Workers
- a spokesman for the Young Americans for Freedom
- a member of the staff of the "Catholic Worker"
- a minister of the African Methodist Episcopal Church
- a minister of the Episcopal Church
- a representative of the Philadelphia Area Committee to End the War in Vietnam
- a Professor of Industrial Economics at Columbia University
- a representative of the Inter-University Committee for Debate on Foreign Policy
- a member of Women's Strike for Peace who had traveled to North Vietnam
- a member of Women's International League for Peace and Freedom who had visited South Vietnam
- a chaplain from Rutgers University
- a professor of political science from Villanova University
- another member of Young Americans for Freedom the former Charge d'Affaires in the South Vietnamese Embassy 103

This informant's report was so extensive as to be the equivalent of a tape recording, although the FBI report does not indicate that the informant was "wired." Another informant reported the remarks of the following additional participants:

- an official of the Committee for a Sane Nuclear Policy
- a minister of the Church of the Brethren
- a Unitarian minister
- a representative of United World Federalists
- a member of Students for a Democratic Society
- a member of the Socialist Workers Party
- a spokesman for the W. E. B. DuBois Clubs 104

The report was prepared as a Letterhead Memorandum with fourteen copies for possible dissemination by the FBI to other Executive Branch agencies. Copies were disseminated to military intelligence agencies, the State Department, and the Internal Security and Civil Rights Divisions of the Justice Department. 105

*Case No. 6 -- Black Nationalist Group (1968)*

On July 22, 1968, in connection with an intelligence investigation of a Cleveland black nationalist group called "New Libya," an extremist informant reported that a cache of rifles and automatic weapons was in the hands of group members. The informant was later able to determine where these weapons were located and that the group was formulating plans for disturbances in Cleveland and other cities. On July 23, 1968, a racial disturbance broke out in Cleveland triggered by the Black Libya group. The riot lasted three days and resulted in a number of police and civilian deaths. The informant's information was relayed to appropriate agencies prior to the outburst of violence.

The informant's advance reports were instrumental in successful prosecutions on first degree murder charges against "New Libya" members. 106

*Case No. 7 -- Investigation of "Free Universities" (1966)*

The FBI used informants in investigations of "Free Universities" in proximity to college campuses to determine whether they were connected with "subversive" groups. For example, when an article appeared in a Detroit newspaper stating that a "Free University" was being formed in Ann Arbor, Michigan, and that it was "anti-institutional," FBI Headquarters instructed the Detroit field office to "ascertain through established sources [i.e., informants already in place] the origin of this group and the identity of the individuals who are responsible for the formation of the group and whether any of these individuals have subversive backgrounds." 107 A note on the instruction pointed out that even if there was no specific prior indication of Communist involvement, established informants were to be used in investigations of such "free universities":

Several "Free Universities" have been formed in large cities recently by the Communist Party and other subversive groups. We are therefore conducting discreet investigations through established sources regarding all such "Free Universities" that come to the Bureau's attention to determine whether they are in any way connected with subversive groups. 108

Based on the reports of five informants and confidential sources, the field office prepared a ten-page letterhead memorandum describing in detail the formation, curriculum content, and associates of the group -- including several members of Students for a Democratic Society and the Socialist Workers Party. 109 Although no further investigation was recommended, the report was disseminated to local military intelligence and Secret Service offices, military intelligence and Secret Service headquarters in Washington, the State Department, and Internal Security Division of the Justice Department. 110

*Case No. 8 -- Washington, D.C. Black Panther Party (1970-1971)*

An informant of the Richmond FBI Field Office reported a conspiracy by leaders of the Washington, D.C., Chapter of the Black Panther Party (BPP) and leaders of the Richmond Information Center (RIC), an affiliate of the BPP, to steal and transport, weapons from Richmond, Virginia, to Washington, D.C. Five persons were ultimately indicted by a federal grand jury. A subsequent trial resulted in the conviction of four of the individuals.

On May 14, 1970, the informant reported that in Richmond, Virginia, a leader of the Black Panther Party asked a leader of the Richmond Information Center if he was in a position to obtain guns for the Washington BPP chapter. 111 FBI investigation failed to develop any further information regarding guns. However, on January 8, 1971, a recently developed informant advised that around April 1970 four individuals from the Richmond area had burglarized a private residence. Seven weapons were stolen during the burglary. The informant advised that on November 3, 1970, the guns were then transported from the Richmond area to Washington, D.C., by rented automobile. 112

*Case No. 9 -- Women's Liberation Movement (1969)*

Informants were a principal source of information in the FBI's investigation of the Women's Liberation Movement. For example, in the spring of 1969, the New York field office drew largely on informant reporting to describe the Movement's basic philosophy and to report particular meetings in the New York area. In describing one such meeting, the report stated:

On [ ] 69, informant, who has furnished reliable information in the past, advised that a WLM meeting was held on [ ] 69, at [ ] New York City. Each woman at this meeting stated why she had come to the meeting and how she felt oppressed, sexually or otherwise.

According to this informant, these women are mostly concerned with liberating women from this "oppressive society." They are mostly against marriage, children, and other states of oppression caused by men. Few of them, according to the informant, have had political backgrounds. The informant stated that a mailing list was passed around at this meeting for WLM and the "Red Stockings," another women's group. 113

Similarly, the Kansas City Field Office used informant reports to describe the extent of Women's Liberation Movement activity and to identify individual members at three universities in the Field Office territory: the University of Missouri at Kansas City, the University of Missouri at Columbia, and the University of Kansas at Lawrence. The level of detail as to personal identities of persons participating in the Women's Movement at University of Missouri, Kansas City, is illustrated by the following passage from the Field Office Report:

[informant] indicates members of Women's Liberation Movement campus group who are now enrolled as students at University of Missouri, Kansas City, are [five names deleted]. Of these five, [informant] said [names deleted] are indicated to be at least potential "New Left Radicals." [Informant] noted that

[names deleted], not currently students on the UMKC campus, are reportedly roommates at . . . Kansas City. 114

*Case No. 10 -- Socialist Workers Party (1940 to date)*

FBI informants are operating within the Socialist Workers Party (SWP) as part of the FBI's long-term intelligence investigation of the SWP. 115 Informants report the political positions taken by the SWP with respect to such issues as the "Vietnam War," "racial matters," "U.S. involvement in Angola," "food prices," and any SWP efforts to support a non-SWP candidate for political office. 116 To enable the FBI to develop background information on SWP leaders, informants report certain personal aspects of their lives, such as marital status. 117 The informants also report on SWP cooperation with other groups who are not the subject of separate intelligence investigations. 118

The intelligence investigation of the SWP began in 1940 as a result of the SWP's description of itself as a Marxist-Leninist "combat" organization which foresaw the inevitability or desirability of violence should revolutionary conditions arise in the United States. 119 The FBI conceded, however, that since shortly after its formation the SWP has not committed any violent acts, nor have its expressions "constituted an indictable incitement to violence." 120 Nevertheless, the FBI's intelligence investigation of the SWP -- and the use of informants against the party and its members -- has continued from 1940 to the present day.

*Case No. 11 -- Ku Klux Klan*

As part of its COINTEL Program of using covert action against domestic groups, 121 the FBI assisted an informant in the Ku Klux Klan in his efforts to set-up a new state-wide Klan organization independent of the regular Klan. The FBI saw the formation of a rival group as an opportunity to promote dissension in the regular Klan both at the state and national levels. In approving the operation, FBI headquarters stated its belief that "if a death-dealing blow can be dealt to the [state Klan], the entire Klan organization in the United States will collapse." 122 The FBI indicated that if the new Klan organization was "successful in obtaining a sizable following," it would be "controlled" by the FBI "through our informant." 123

Two years after the formation of the new Klan group, a status report by the FBI Field Office described the operation as "successful" in capitalizing on the opportunity to "further disrupt [the regular Klan] and to entice members of the regular Klan into the new Klan organization. At that time, the new Klan group had issued several dozen charters (although in many instances no chapter was in fact organized) and included nearly 200 members. The report stated further that the new Klan organization would be phased out when it had "done its ultimate damage to the regular Klan." 124

The Committee's investigation revealed that this tactic risked increasing violence and racial tension. The Director of the State Bureau of Investigation testified that there were dangerous confrontations between the two Klan groups. He testified as to one such occasion "in which the two groups met in force, and both elements had ... guns, including shotguns ... they were physically armed and facing each other." 124a The FBI informant in the rival Klan group also called for violence against blacks. The State Bureau of Investigation Director further testified that he witnessed the FBI informant address a Klan rally attended by several thousand persons and heard the informant state: "We are going to have peace and order in America if we have to kill every Negro." 124b

*C. Special FBI Informant Programs*

In addition to the use of informants in particular domestic intelligence investigations of groups or individuals, the FBI has conducted special programs to develop informants for general reporting purposes. These were (1) the Ghetto Informant Program (1967-1973); (2) the development of informants in defense industrial facilities under the Plant Informant Program (1940-1969) and (3) the American Legion Contact Program (1940-1954). These programs are outlined below.

*1. The Ghetto Informant Program*

This program was begun in 1967 to develop informants who would provide general intelligence on the potential for violence and civil unrest in black urban areas. 125 In July 1973, after considerable debate within the FBI over the program's propriety, value, and cost, the program was terminated by Director Kelley, with instructions to field offices that ghetto informants were to be either included in the regular FBI informant categories (subversive, extremist or criminal) or discontinued. 126

As of September 1972, there were 7,402 ghetto informants. Figures for previous years were: 1971-6,301; 1970-5,178; 1969 -- 4,067. 127

FBI officials saw the Ghetto Informant Program as their response to the possibility that the urban riots and violence that occurred in the summer of 1967 might be repeated and the express desire of White House and Justice Department officials for advance warnings. 128 In September 1967 Attorney General Ramsey Clark wrote to FBI Director Hoover:

There persists ... a widespread belief that there is more organized activity in the riots than we presently know about. We must recognize, I believe, that this is a relatively new area of investigation and intelligence, reporting for the FBI and the Department of Justice. We have not heretofore had to deal with the possibility of an organized pattern of violence, constituting a violation of federal law, by a group of persons who make the urban ghetto their base of operation and whose activities may not have been regularly monitored by existing intelligence sources.

In these circumstances, we must make certain that every attempt is being made to get all information bearing upon these problems; to take every step possible to determine whether the rioting is pre-

planned or organized; and, *if so, to determine the identity of the people and interests involved*; and to deter this activity by prompt and vigorous legal action.

*As a part of the broad investigation which must necessarily be conducted ... sources or informants in black nationalist organizations, SNCC and other less publicized groups should be developed and expanded to determine the size and purpose of these groups and their relationship to other groups, and also to determine the whereabouts of persons who might be involved in instigating riot activity in violation of federal law.* 129 [Emphasis added.]

In announcing the program to FBI Field Offices, Director Hoover stated that "it is imperative and essential that the Bureau learn of any indications of advance planning or organized conspiracy on the part of individuals or organizations in connection with riots and civil disturbances." 130

As originally conceived, a "ghetto informant" was to act as a "listening post" rather than an informant who actively sought information or who infiltrated particular groups. 131 The FBI defined a ghetto informant as "an individual who lives or works in a ghetto area and has access to information regarding the racial situation and racial activities in his area which he furnishes to the Bureau on a confidential basis." 132 A 1972 Inspection Division memorandum noted that the concept of a ghetto informant "includes the proprietor of a candy store or barbershop" in an urban ghetto area. 133

At the outset of the program, ghetto informants, in contrast to regular subversive or extremist informants, were not given specific assignments or directed to infiltrate groups. As the program developed, however, this changed. A Bureau document described this change:

The "listening post" concept was expanded and ghetto informants are now utilized to attend public meetings held by extremists, to identify extremists passing through or locating in the ghetto area, to identify purveyors of extremist literature as well as given specific assignments where appropriate. 134

In addition to specific assignments to report indications of potential violence, ghetto informants were focused on "Afro-American type bookstores." A Philadelphia Field Office directive to Special Agents listed the following such assignment as suitable for ghetto informants: "Visit Afro-America-type bookstores for the purpose of determining if militant extremist literature is available therein and, if so to identify the owners, operators, and clientele of such stores." 135

The "listening post" concept of the Ghetto Informant Program became the subject of sharp debate within the FBI in 1972. The FBI Inspection Division criticized the program for counting a ghetto informant's report that there was no indication of civil unrest in his area as "positive" information. The Inspection Division observed that "negative information is not counted as positive information in any other informant program." 136 The Inspection Division further stated:

Some Ghetto Informants have in the past furnished information in extremist or criminal matters. This has been recognized as a by-product of the Ghetto Informant Program. A more meaningful approach to this whole problem might be to concentrate more heavily in ghetto areas to develop proven Security, Extremist, Revolutionary Activities, and Criminal Informants upon whom we can then rely to keep us advised of civil disturbance plans as a steady by product to the information they are regularly furnishing on domestic intelligence or criminal matters. 137

The Inspection Division further noted that there might be "justifiable apprehension" outside the FBI regarding the "listening post" concept.

... we have some concern of justifiable apprehension that might be expressed by the Congress or the public if this program were to be described in terms out of context with our real intentions. We could fully defend informants providing us regularly with information directly related to our jurisdictional responsibilities and using them for "by product" information on civil unrest. It would be much more difficult to defend establishment of ghetto or urban listening posts all over the country with a possible by-product of information directly within our jurisdiction. 137a

The Inspection Division concluded that ghetto informants who had proven to be productive informants "should be converted to the appropriate substantive informant program to which their services relate." 138

On July 31, 1973, Director Kelley terminated the Ghetto Informant Program, eliminating the category of "ghetto informant" and instructing that "no individual will be operated as an [extremist informant] solely because he is in a 'listening post' position." 139 Under the revised extremist informant program, extremist activity and potential violence were to be monitored through regular extremist informants.

## *2. The Plant Informant Program (1940--1969)*

This program developed out of discussions in October, 1938 among the Army, Navy, and FBI as to which entity would have responsibility for the security of defense industries against espionage and sabotage. 140 As a result of these discussions, it was decided that the FBI would assume the responsibility.

The program was begun in September 1940, when FBI Field Offices were instructed to develop confidential sources in defense plants identified to the FBI on lists submitted by the Army and Navy. 141 By September, 1942, there were 23,746 such confidential sources in 3,879 defense plants. 142

The program was cut back sharply after World War II, but continued in existence until its termination in March, 1969. 143 Generally, the confidential sources in the program were used as a point of contact and potential source of information in investigations of suspected espionage matters. 144

### *3. The American Legion Contact Program (1940-1954)*

This program arose out of a proposal submitted by the American Legion to the Attorney General in 1939. When World War II broke out in Europe, the American Legion submitted to the Attorney General a proposal to use its local posts to investigate and report indications of subversive or espionage activity. 145 The Attorney General turned down the proposal but referred it to the FBI for comment. The FBI came forward with an alternative plan, which in essence called for the use of local American Legion post members as potential "confidential sources" in their communities. 146 After background checks, such sources were to be used to provide information without payment on domestic security matters. 147 The FBI proposal was approved by the Attorney General and the American Legion in November 1940. 148 The program was terminated on August 17, 1954. FBI Field Offices however were instructed to maintain contact with American Legion officials in their areas. 149

### *D. The Use of Informants at Colleges and Universities*

#### *1. Present FBI Policy*

In the course of its domestic intelligence investigations, the FBI regularly uses students, teachers and school officials at colleges and universities as informants and confidential sources.

Under present FBI policy, there are two measures that apply solely to the use of campus informants. Students under 18 years of age may not be used as informants in other than "highly unusual circumstances" and justification for their use must be submitted to Bureau Headquarters. 150 Second, student informants and confidential sources are requested to sign a statement that they are "voluntarily" submitting information because of their "concern over individuals and groups that may be inimical to interests of U.S. Government". 151 The statement also provides that the student informant or source "understands [the] FBI has no interest in legitimate institution or campus activities." 151a However, the Manual does not further explain or specify the distinction between relevant matters in intelligence investigations and such "legitimate activity."

The FBI Manual emphasizes that, despite these two measures requiring "care" in the use of campus informants, FBI Field Offices must have "well-planned [informant] coverage" at colleges and universities. The Manual provides:

Each office must have continuous and well-planned program to obtain necessary coverage at institutions of learning so that Bureau can fulfill its obligations. Care with which this must be done in no way lessens responsibility of each field office to have proper coverage. 152

#### *2. The Background to Present Policy*

FBI policy on the use of informants and sources at colleges and universities underwent a number of changes between 1965 and 1970, the period of campus unrest. In 1967 as a result of the Katzenbach Report on CIA involvement with student groups, FBI Director Hoover cut back sharply on the use of campus informants, imposing a number of restrictions on their use. Later, despite strong pressure from the Justice Department for more intelligence on campus groups, Hoover initially refused to relax these restrictions. Gradually, however, the restrictions were lifted and indeed in September 1970 the age limit for campus informant-- (and all informants) was lowered from 21 to 18.

The development of FBI policy on campus informants in the critical period 1965-1970 is reviewed below.

a. Initial Guidelines for Use of Campus informants. -- FBI field offices had been instructed as early as 1965 to intensify their investigation of "subversive activity" among student groups. 153 In 1967, however, the FBI became concerned that its intelligence activity on college campuses might be exposed by the controversy over CIA links with the National Student Association. 154 Therefore, field offices were advised to conduct campus investigations in a "most discreet and circumspect" manner:

You should ... bear in mind that in our continuing investigations to keep abreast of subversive influence on campus groups, in discharging our responsibilities in the internal security field, such investigations should be conducted in a most discreet and circumspect manner. Good judgment and common sense must prevail so that the Bureau is not compromised or placed in an embarrassing position. 155

Field offices were reminded that existing FBI policy required approval from headquarters before investigating individuals or groups "connected with an institution of learning," before interviewing students or faculty members, and before developing a student or faculty member "as an informant source." These interviews or contacts were also to "be made away from the campus." 156

b. The 1967 Restriction. -- When the Katzenbach Committee issued its report on CIA involvement with student groups, FBI Director Hoover canceled all outstanding authorizations "to contact students, graduate students, and professors of educational institutions in security matters . . . [including] established sources, informants, and other sources." Field Offices were instructed to request new authority from FBI headquarters "where contacts with such individuals are particularly important and necessary." 157

Shortly after the 1967 cutback in campus coverage, however, the FBI formally characterized the Students for a Democratic Society for the first time, stressing its "subversive" connections. As intelligence investigations of SDS chapters expanded, FBI officials realized that the restrictions on campus contacts "impose problems for the field." 158

Field Offices were advised to stress "the development of noncampus informants and sources" to maintain intelligence coverage of "subversive" activity at educational institutions. 159 Shortly thereafter, the restriction was lifted for contacts on campuses with "established sources functioning in an administrative capacity such as a Registrar, Director of Admissions, Dean of Men, Dean of Women and Security Officer, and their subordinates." Headquarters approval, however, was still required to contact students or professors. 160

C. Hoover's Resistance to New Pressure for Relaxed Restrictions on Campus Informants. -- The urban riots of the summer of 1967 greatly intensified FBI domestic intelligence operations. Equally important, the Detroit and Newark riots brought other agencies of the Federal Government into the picture. A Presidential Commission was established to study civil disorders and the Attorney General reexamined statutes on sedition, conspiracy and insurrection. Consequently, the Internal Security Division asked the FBI:

to furnish us with the names of any individuals who appear at more than one campus either before, during, or after any active disorder or riot and the identities of those persons from outside the campus who might be instigators of these incidents. 161

The FBI was asked to use not only its "existing sources," but also "any other source you may be able to develop . . ." 162

Despite the pressure for greater intelligence about campus groups, Director Hoover decided "that additional student informants cannot be developed." 163 Nevertheless, the FBI field offices were instructed to intensify their efforts: "It is ... recognized that with the graduation of senior classes, you will lose a certain percentage of your existing student informant coverage. This decreasing percent of coverage will not be accepted as an excuse for not developing the necessary information." 164

One way to achieve this result without the FBI itself recruiting additional student informants was to have local police do so. Thus, when field officers were reminded of the need for gathering intelligence so that the Justice Department could be provided "data regarding developing situations having a potential for violence," FBI Headquarters stressed the need for "in-depth liaison with local law enforcement agencies." 165

In September 1969, the restriction on recruitment of new campus informants was finally relaxed, although field officers were still forbidden to develop informants under the age of 21. Procedures were instituted, however, "for tight controls and great selectivity in this most sensitive area". Field offices were given the following instruction:

Upon initial contact with a potential student informant or source, informant or source should be requested to execute brief signed written statement for the field file to the effect that such individual has voluntarily furnished information to the FBI because of his concern of [sic] individuals and groups acting against the interests of his government and that he understands that the FBI is not interested in the legitimate activities of educational institutions.

Field offices were also to submit quarterly reports assessing the productivity of each student informant so as "to justify the continued utilization of the source." 166

d. The Huston Plan's Recommendation for Expanded Campus Informant Coverage. -- FBI Intelligence Division officials were greatly dissatisfied with these restrictions, particularly the age restriction on student informants. 167 This dissatisfaction surfaced in June 1970 as the Intelligence Community developed recommendations (the "Huston Plan") for President Nixon for the relaxing of restrictions on domestic intelligence operations. 168 Among other items, the Huston Plan recommended to the President:

Present restrictions should be relaxed to permit expanded coverage of violence-prone campus and student-related groups. 169

Over Hoover's specific objection, this recommendation had also been contained as an option in the earlier Special Report of the intelligence agencies which led to the Huston Plan. In the Special Report, Hoover noted his objection in the following words:

The FBI is opposed to removing any present controls and restrictions relating to the development of campus sources. To do so would severely jeopardize its investigations and could result in charges that investigative agencies are interfering with academic freedom. 170

e. The Removal of the Age Restriction. -- Despite Hoover's recorded opposition in June 1970 to expanded campus informer coverage and President Nixon's ultimate decision not to implement the Huston Plan, in September 1970 the FBI lifted the principal restriction on campus informant use. On September 15, 1970, the FBI authorized its field offices "to develop student security and racial informants who are 18 years of age or older." 171 FBI Headquarters pointed out to the field that the removal of the age restriction presented the field "with a tremendous opportunity to expand your coverage." 172

The expanded campus coverage called for by FBI Headquarters was quickly implemented at the Field Office level as part of the FBI's effort to have New Left campus groups think "there is an FBI agent behind every mailbox." 173 On September 16, 1970 -- the day following the Headquarters letter lifting the age restriction -- the Philadelphia Field Office for example, advised its agents:

The Director has okayed PSI's [potential security informants] and SI's [security informants] age 18 to 21. We have been blocked off from the critical age group in the past. Let us take advantage of this opportunity. 174

### III. THE INTELLIGENCE INFORMANT PROGRAM -- SIZE, SCOPE AND STANDARDS

#### *A. The Number of Intelligence Informants*

As of June 30, 1975, the FBI was using over 1,500 domestic intelligence informants. 175 There were 1,040 FBI regular informants approved by Bureau Headquarters (another 554 were in probationary status pending establishment of their reliability). 176 The FBI programmed a total of \$7,461,000 for its intelligence informants program in Fiscal Year 1976. This amount is more than double the amount the FBI programmed for its organized crime informant program in 1976. 177

In addition to paid and directed informants, the FBI uses confidential and panel sources in its intelligence investigations. Confidential sources are defined by the FBI as individuals who furnish the FBI information available to them through their employment or position in the community. 178 The FBI Manual cites as examples of confidential sources "bankers, telephone company employees, and landlords." 179

In practice, FBI Field Offices designate individuals as confidential sources who are logical and convenient points of contact and information. The source then becomes a matter of administrative record and is available to all agents in the Field Office, minimizing the need for an agent to start from scratch in selecting persons to interview when the need arises. 180 Confidential sources are not usually informed that they have been so designated, nor are they usually paid for any information they provide. 181 As of June 1975, there were 605 confidential extremist sources, and 649 confidential subversive sources. (By comparison, in 1973 there were 837 confidential sources and, in 1972, 684 confidential subversive sources.) 181a

Panel sources are defined as individuals who are not involved in an investigated group but who "will attend its public gatherings on behalf of FBI for intelligence purposes or as potential witnesses." 181b Panel sources were first developed to meet the need for witnesses in the course of Smith Act trials of Communist Party members in the 1950s. In those trials, it was necessary to prove, for example, simple facts as to the existence of the Communist Party, the dates and places of public meetings held by the Party, and similar matters. To avoid surfacing regular informants within the Party to establish such facts, panel sources were developed. Panel sources are used for similar purposes today. 182 As of 1975, there were approximately 200 panel sources. 183

As discussed in more detail above, there were 7,482 informants in the Ghetto Informant Program in 1972, the year before its termination.

#### *B. The FBI Administrative System for Intelligence Informants*

The FBI administers its intelligence informants through a centralized system from Bureau Headquarters. FBI Special Agents may not operate or pay informants and sources without approval of FBI Headquarters or the Special Agent in Charge of a Field Office. FBI Headquarters approval is required to designate an individual as a potential subversive informant. 184

All potential informants are subjected to a background check. Military records, police files, and employment and credit history are typical items reviewed. 185 The results of this background investigation are submitted to Bureau Headquarters. Potential extremist informants may be operated on the personal authority of the Special Agent in Charge at the Field Office level, unless the individual is in a sensitive position where his disclosure as an informant "could cause inordinate concern to the Bureau," is a member of or may soon join an extremist organization, or has a criminal or other unsavory background. 186 In such instances, FBI Headquarters' authority must be obtained, along with a statement outlining the intended use of the informant. 187

Although titled "potential" informants, such individuals nevertheless provide the FBI with intelligence information during this initial stage and are paid for what they supply. 188

Special Agents in Charge may pay an informant up to \$400 on their own authority; 189 after that amount has been expended Bureau Headquarters authorization is required for any additional payments. 190 Although there is no formal ceiling on payments for services (i.e., information provided) FBI informants average approximately \$100 a month, with the most valuable and productive informants, such as Rowe and Cook, earning in the range of \$300-400 monthly. 191

FBI Headquarters approval is required to raise both potential subversive and extremist informants to regular informant status. The request must be initialed by the Field Office SAC or his Deputy. 192

In addition, every six months FBI Headquarters reviews a completed form on each informant submitted by the Field Office. The form summarizes the informant's activities, his pay, the type of information supplied (including the percentage verified from other sources) and an assessment of his value. On the basis of this report, and a comparison of the informant's information with that of others in similar circumstances, a monthly payment limit is established for the next six-month period. 193

There are periodic reviews of informant activities in addition to those described above. The FBI Manual provides that every sixty days the SAC or his deputy are to review each informant's file. 194 In addition, the Inspection Division reviews informant files during its annual inspections of each Field Office. 195

To operate confidential and panel sources, FBI Headquarters approval is also required. Background investigations are also performed on these sources and the results submitted to Bureau Headquarters. 196

Each informant is assigned a "handling agent," an FBI Special Agent who is in contact with the informant on a regular basis, receives the informant's information, and pays him, usually on a monthly basis. The Manual provides that the handling agent "should not only collect information, but direct the informant, be aware of his activities, and maintain such a close relationship that he knows informant's attitude towards the Bureau." 197

The FBI Manual contains detailed provisions for the correction of false information. 197a If it is learned an informant has given false information, "all communications which have been disseminated to (FBI HQs), other Bureau offices and to outside agencies must be corrected." 198 In addition, corrective letters are to be written to amend any reports which contain the incorrect information. Moreover, a control file is to be established and a letter to FBI HQs must be sent which is to be used "to check all pertinent Bureau files to see that necessary corrective action has been taken." 199

The Manual also provides that informants must submit written reports or sign transcriptions of their oral reports. 199a A limited exception to this rule exists for extremist informants who may submit oral reports in cases of imminent violence. 199b

### *C. Standards for the Use of Intelligence Informants*

There are three types of standards for intelligence informants. These are (a) the criteria that govern the decision to use informants against groups and individuals; (b) the limits that are set on the type of information an informant may report to the FBI; and (c) the limits that are placed on an informant's conduct.

At present, the standards for intelligence informants are contained in internal FBI directives. There are no statutes or published government regulations to govern the use of intelligence informants. Unlike wiretap and electronic surveillance, which are subject to an elaborate system of review and approval by the Department of Justice and the courts, there is no review outside the FBI of decisions on intelligence informants. Thus, decisions as to intelligence informant coverage -- e.g., the number of informants to be used in an investigation, the scope and duration of their reporting -- are made exclusively by FBI officials. In addition, since the standards for informant use are in internal FBI directives, it is also within the discretion of FBI officials to change these standards.

#### *1. Criteria for the Decision to Use Informants*

Under the FBI Manual, once a full intelligence investigation of a group or individual is opened, informants can be used without limitation. In a preliminary investigation, established informants may supply information, but new informants may not be recruited. 200

Since September 1973, the FBI has distinguished between full intelligence, investigations and preliminary ones, and has imposed differing limitations on the length, scope, and sources of information for preliminary investigations. A preliminary investigation may be undertaken when the subject's involvement in subversive or extremist activities is questionable or unclear to further define his involvement and to determine whether a statutory basis exists for a full investigation. A preliminary investigation is supposed to be confined to a review of public source documents, record checks, and established sources and informants. The General Accounting Office Study on FBI domestic intelligence operations found, however, that in practice, FBI Field Offices have not adequately distinguished between the two types of investigations. 201 In particular, the GAO found that the limits on the use of informants in preliminary investigations was subject to varying interpretations and loose observance. The GAO Study stated:

Although the Manual of Instructions confines the scope of preliminaries to the use of established sources, our review of the cases showed that the 10 field offices generally used the same sources in the preliminary cases as full-scale, cases.

Most of the field offices interpreted "established sources" broadly and did not believe the type of investigation placed restrictions on who was contacted. An "established source" was generally described by the field offices as being any source previously used by the Bureau. In addition, some field offices indicated that information could come from whatever source -- established or otherwise -- which is necessary to establish a subject's identity and subversive or extremist affiliation. 202

Under current standards, full domestic intelligence investigations may be opened on groups and individuals -- and thus informants may be recruited and targeted against them -- if (1) they have, or allegedly have, violated certain statutes; 203 (2) they are "engaged in activities which *may* result in" a violation of these statutes, (3) they *advocate* activities which *may* result in a violation of these statutes. 204

Informants may also infiltrate groups who are not the subject of intelligence investigations under certain circumstances. The FBI Manual provides that if a group which is the subject of a subversive investigation is seeking "to systematically infiltrate and control" another group, an intelligence investigation of the infiltration (as opposed to the second group itself) may be opened. 205 Informants may join or participate in the activities of the second group if requested by the first group.

In addition, subversive investigations under Section 87 of the FBI Manual examine any significant connections or cooperation between a group under investigation and any other groups. 206

Thus, under this standard, informants in the group under investigation may report on those who happen to work with the group or its members under investigation, even if the cooperation involves lawful activity.

In summary, the scope of informant coverage may extend to (1) groups that are the subject of intelligence investigations; (2) groups which an investigated group is attempting to infiltrate or control; and (3) groups having "significant connections," or which cooperate with investigated groups.

## *2. Limits on the Information an Informant May Report*

There are few limits on the information an informant may report to the FBI. The FBI Manual does not limit an intelligence informant's reporting to information relating to the planning or commission of criminal offenses or violence. As indicated by the case histories examined earlier, informants are expected to report virtually everything they observe regarding a group or individual's activity to fulfill their intelligence purpose.

One rationale for this unlimited reporting was expressed by FBI officials in their testimony to the Committee. In response to a question as to the desirability of limiting an informant's reporting to information pertaining to violence or criminal activity, Deputy Associate Director Adams stated:

Here is the problem that you have with that. When you're looking at an organization, do you report only the violent statements made by the group or do you also show that you may have one or two violent individuals, but you have some of these church groups that were mentioned, and others, that the whole intent of the group is not in violation of the statutes. You have to report the good, the favorable along with the unfavorable, and this is a problem. We wind up with information in our files. We are accused of being vacuum cleaners, and [we] are a vacuum cleaner. If you want to know the real purpose of an organization, do you only report the violent statements made and the fact that it is by a small minority, or do you also show the broad base of the organization and what it really is? 207

However, FBI officials indicated that new limits on the scope of an informant's reporting were needed. As Adams stated "... we have to have guidelines ... we have to narrow down [informant reporting] because we recognize we do wind up with too much information in our files. 207a

The FBI Manual does proscribe the reporting of certain types of information. First, informants are not to report certain legal defense information. The Manual states intelligence informants should decline to assist in legal defense matters or to "handle an assignment where such information is readily available." 208 If an informant cannot avoid involvement, his handling agent is to instruct the informant "not to report any information pertaining to defense plans or strategy." 209 The Manual's limitations on legal-related information are as follows:

If an informant is present in conversation between an attorney and individual under criminal indictment, he should immediately leave. If he is unable to do so and inadvertently learns of defense plans or strategy, he is not to report the substance of any conversation to the FBI. Additionally, the informant is not to engage in or report the substance of a conversation with a criminal defendant dealing with the offense for which the defendant is under indictment. 210

The FBI interprets these provisions as prohibiting only the reporting of privileged attorney-client communications or legal defense matters in connection with a specific proceeding. So-called "standard" legal defense information, such as manuals for general use in legal matters, can be taken by an informant and given to the FBI. The meaning of legal "defense plans or strategy" is not defined in the FBI Manual and can lead to varying interpretations of what can be reported. Thus, as indicated above, Cook's FBI handling agent testified he took from Cook papers discussing legal matters involving the VVAW.

She brought back several things ... various position papers taken by various legal defense groups, general statements of ... the VVAW, legal thoughts on various trials, the Gainesville (Florida) 8 ... the Camden (New Jersey) 9. Various documents from all of these groups. 211

Cook also testified that she gave the FBI a confidential legal manual prepared by VVAW attorneys as a guide for legal defense of VVAW members in the event of prosecution for dissident activity. 212 Since this manual did not derive from an attorney-client communication in connection with a specific court proceeding, the FBI considered the VVAW legal defense manual could be taken.

Besides the above limit on legal information, the only other limitations in the FBI Manual on reporting concern informants in labor unions and at colleges and universities. The Manual states that if an informant "is connected in any manner with labor union, inform him that Bureau is not interested in employer-employee relationships as such and is only concerned with obtaining information on infiltration of unions by subversive elements." 213 Similarly, student informants or sources at colleges and universities are to be told that the FBI "has no interest in legitimate institution or campus activities." 214

## *3. Limits on an Informant's Conduct and Behavior*

The FBI Manual contains provisions dealing with the "direction and control of informants." The Manual states:

Contacting Agent should not only collect information but direct informant, be aware of his activities....

Close control must be exercised over activities of informants to obtain maximum results and prevent any possible embarrassment to Bureau. 215

The Manual speaks of exercising control in order to obtain "maximum results" and prevent "embarrassment" to the Bureau; it does not, however, contain any guidelines as to the limits on informant conduct with respect to violence or illegal conduct.

The FBI points to the limits on FBI Special Agents as the means by which guidelines for intelligence informants are applied. The FBI memorandum to the Committee states: "Specifically, informant development and handling are extensively discussed in the FBI's training programs and there is no question as to Special Agents being aware that informants cannot be directed to perform a function that the Special Agent may not legally perform." 216 The FBI memorandum also points to the FBI Rules and Regulations which state that FBI employees "must not engage in any investigative activity which could abridge in any way" constitutional rights of citizens. 217

These limits apply to FBI Agents and employees in their handling of informants. However, the FBI does not consider informants as FBI employees or "undercover agents," and informants are so advised. 218 Thus, these limits are not directly applicable to informants.

On December 23, 1974, FBI Headquarters reiterated the rules for FBI employee conduct by the Director to all FBI Field Offices and further stated: "You are reminded that these instructions relate to informants in the internal security [domestic, intelligence] field and no informant should be operated in a manner which would be in contradiction of such instructions." 219 This instruction appears to be the only written provision applying FBI employee conduct standards to informants. 220 Prior to the issuance of this instruction in 1974, there were no formal or specific provisions relating to informant conduct in FBI directives. The resulting effect on FBI agent direction of informants can be illustrated by two additional cases. The first case involved an FBI informant in a group of anti-war protestors. In August 1970, this group broke into the Camden, New Jersey, Draft Board, after several months of planning and preparation. The informant, Robert Hardy, testified that he provided essential direction and materials to the group, making the break-in possible. Hardy testified:

Everything they learned about breaking into a building or climbing a wall or cutting glass or destroying lockers, I taught them. I got sample equipment, the type of windows that we would go through, I picked up off the job and taught them how to cut the glass, how to drill holes in the glass so you cannot hear it and stuff like that, and the FBI supplied me with the equipment needed. The stuff I did not have, the [FBI] got off their own agents. 221

Second, in late 1966 or early 1967 the FBI Field Office in San Diego, California was approached by one Howard Berry Godfrey. Godfrey testified that he was "approached" by a member of a right-wing paramilitary group to join. The Committee received varying information concerning why Godfrey contacted the FBI and at whose initiative the informant relationship arose. 222 In any event, Godfrey and the FBI entered into a relationship in 1967 by which Godfrey would provide the Bureau information. This relationship was formalized in August of 1967 when Godfrey was officially "approved" by the FBI's Washington Headquarters as an informant.

Godfrey's relationship with the FBI lasted over five years, terminating in November of 1972. Godfrey was paid varying amounts from 1967 through 1970 when he began to receive \$250 per month plus up to \$100 per month in expenses. 224 He continued at that level until his termination. 225

Godfrey's case study, albeit dealt with here briefly, illustrated a number of the issues which wove their way through the Committee's inquiry into the FBI's use of informants. The first issue is control over the informant by the Bureau. In accord with FBI procedure, Godfrey always was assigned to a principal case agent. The Committee's investigation determined, however, that the actions of Godfrey and his cohorts in the San Diego area were rife with destruction and violence. There is little evidence, other than Godfrey's less than convincing claims, that he actually prevented any violence or destruction from occurring. As a member of the District Attorney's office told the Committee:

They [the FBI] couldn't control him [Godfrey]. Godfrey's actions went well beyond those which we would allow any informant operating under this office to become involved in. 226

For a large part of his time as an FBI informant, the responsibility for monitoring Godfrey was in the hands of a single FBI agent. Moreover, under Bureau procedure, the reports of the informant are only sent to Washington every six months. And, the reports in the case of Godfrey were largely "form" type responses, providing an inadequate basis for any reviewing authority in Washington to determine Godfrey's usefulness.

The second overriding issue present in the Godfrey case study was how the Bureau could prevent the informant from actually inciting, encouraging or participating in violence and/or destruction without losing his utility as an informant. Godfrey admits to participating in some violence and destruction and the record suggests that he may have participated in even more than he now admits to. 227

Examples of the types of actions Godfrey and/or the Secret Army were involved in include firebombing, smashing windows, placing stickers bearing SAO or Minutemen symbols on cars and buildings, propelling lug nuts through windows with sling shots, and breaking and entering. 228

Upon questioning by the Committee, all FBI agents who dealt with Godfrey testified that while Godfrey was specifically instructed never to engage in illegal acts such as firebombings, etc., they recognized that this was often difficult if not impossible to accomplish. One FBI agent put it this way:

Well, I remember almost on a daily basis, this matter would come up. What can I do such and such. And I've said, well obviously you can't do that. Stay with them as long as you can and then find some logical excuse to bow out at the last minute. But he was never asked by me to participate in anything that I would consider illegal or that I think that he would consider illegal and to the best of my recollection, during our association. I can't recall anything specific . . . Now there were occasions when I know that he didn't get out of it. He might have been in one, he had to go and be involved or he would have been out of the group. I really don't remember anything right definite at this time but there were several of those cases, no question about it. 229

And, Godfrey himself described his instructions as:

Q. Was there ever a conversation in which [you and the FBI agent] decided [that] while you would attempt to stay out of [a violent or destructive activity] if it came down to either getting involved in it, or having to just leave the scene [with] a number of questions [being] asked later, under those circumstances that you would go ahead and do the particular activity?

A. Yes. 230

The SAO's actions escalated to a level of violence and destruction where Godfrey's name had to be revealed as an FBI informant. Two events precipitated this. The first was the shooting of Paula Tharp, who was in the residence of the San Diego State University professor Peter Bohmer. Briefly, while Godfrey and an SAO associate were "on a surveillance" of Bohmer's residence (instituted by Godfrey), the associate, according to Godfrey, picked up a gun Godfrey had under the seat of his car and fired shots into the Bohmer house, one of which struck Ms. Tharp. 231 Previously the SAO and Godfrey had singled out Professor Bohmer in their literature for special attention:

For any of our readers who may care to look up Red Scum, and say hello, here is some information that may help. His address is 5155 Muir, Ocean Beach, telephone number is 222-7243, he drives a dark blue 1968 VW Sedan, California licence DKY 147. Just to make sure you talk to the right guy here is his description: he has dark brown shoulder length hair, green eyes, weight is about 160 lbs. and he is 5'10" tall. Now in case any of you don't believe in hitting people who wear glasses, to be fair I guess we will have to tell you he wears contact lenses. [sic]

The significant factor for the Committee's analysis of FBI informants is that even this shooting incident did not immediately terminate Godfrey as an informant. Rather the FBI records show that Godfrey remained on the Bureau payroll until November, 1972. And, it was not until the second major act of destruction that Godfrey was "surfaced" as an informant. 232

The second major act of destruction which occurred was the bombing of the Guild theatre in San Diego. According to Godfrey, the bombing was perpetrated by his subordinate in the SAO, one William Yakopec. 233 Godfrey participated in the SAO sale of some explosives to Yakopec. Yet, he promptly notified the FBI of Yakopec's alleged involvement in the Guild Theatre bombing. Yakopec, who maintains his innocence, was subsequently indicted and convicted of the bombing offenses in the local courts of San Diego.

Godfrey testified publicly at both the Yakopec and Hoover trials and was thereafter re-located to another part of California and ceased to serve as an FBI informant. Godfrey's use as a Government informant is now in litigation.

---

The intelligence informant technique is not a precise instrument. By its very nature, it risks governmental monitoring of Constitutionally-protected activity and the private lives of Americans. Unlike electronic surveillance and wiretaps, there are few standards and no outside review system for the use of intelligence informants. Consequently, the risk of chilling the exercise of First Amendment rights and infringing citizen privacy is increased. In addition, existing guidelines for informant conduct, particularly with respect to their role in violent organizations and FBI use of intelligence informants to obtain the private documents of groups and individuals, need to be clarified and strengthened.

15 This Report focuses solely on the informant technique as used in intelligence investigations. It does not address the question of whether intelligence investigations are themselves consistent with Constitutional guarantees and sound law enforcement policy or can be made so by appropriate standards and controls. See the Committee's Report on Domestic Intelligence and the Findings, Conclusions and Recommendations in that Report.

16 Special Agent, 11/21/75, p. 12.

17 Only 16 of the domestic intelligence cases reviewed by the General Accounting Office -- or less than 3 percent -- were referred to a U.S. attorney or to local authorities for possible prosecution. Of the 16 referrals for criminal violations, only 7 were prosecuted. (GAO Study, p. 33)

Even where there are grounds for prosecution in a domestic intelligence case, such as acts of violence, the decision may be made to forego prosecution rather than surface an informant. The informant's continued reporting from within an organization may be deemed more valuable than a particular prosecution. This in turn may lead to the use of illegitimate action to prevent violence, such as that employed in the FBI's "COINTELPRO" operation. (See COINTELPRO Report.)

18 385 U.S. 293 (1966). The Hoffa court stated: "The risk of ... being betrayed by an informer or deceived as to the identity of one with whom one deals is probably inherent in the conditions of human society. It is the kind of risk we necessary assume whenever we speak." In another criminal case, *Lewis v. United States*, 385 U.S. 206 (1966), the Court, in declining to rule that the use of undercover agents is unconstitutional per se, stated: "In the detection of many types of crime, the Government is entitled to use decoys and to conceal the identity of its agents."

19 In a 5-4 decision, the Court held only that a complaint that First Amendment rights were chilled by "the mere existence, without more" of an Army intelligence activity alleged to be broader than necessary did not present a justiciable controversy in Federal court. Because the complaint failed to allege more specific harm than mere subjection to governmental scrutiny, it failed to state a claim. 408 U.S. 1, 9 (1972)

However, Justice Marshall, sitting as a Circuit Justice, held that a Federal claim under the First Amendment was stated in *Socialist Workers Party v. Attorney General*, 419 U.S. 1315 (1974). There, Justice Marshall found that allegations of a "chilling effect" on First Amendment rights were sufficiently specific to satisfy jurisdictional requirements where it was complained that FBI informants were to monitor a public meeting of the Socialist Workers Party. The complaint stated that FBI informant coverage would have the concrete effect of dissuading delegates from participating in the convention and lead

to possible loss of employment for those identified by the informants as attending. Although Justice Marshall refused to grant an injunction against the use of informants at the convention, he did prohibit the Government from transmitting any information obtained at the convention to nongovernmental entities and left to a trial on the merits the question of whether the claimed "chill" was substantial enough to justify permanent injunctive and monetary relief.

21 533 Pac Rep. 2d, at 232.

22 A subversive informant (sometimes referred to as an "internal security" informant), is defined in the FBI Manual as:

"Individual actively engaged in obtaining furnishing current information on security or intelligence matters exclusively for Bureau whose identity must be protected. Such person should be member or attend meetings of subversive organization, or be in such position relative to subversive organization that he is able to provide current information of value. (FBI, MOI, Sec. 107, 1, A (1).)"

23 FBI, MOI, Sec. 87.A (4).

24 Memorandum from FBI Headquarters to all SAC's, 1/30/68.

25 Ibid.

25a An extremist informant is defined in the FBI Manual as:

"An individual whose identity must be protected and who is actively engaged in obtaining and furnishing current information on extremist matters exclusively to the Bureau. Extremist informants include any individual:

"a. Who is a member of or attends meetings of an extremist group (white, black, or Indian) which has a propensity for violence or which strives to deny individuals certain constitutional rights through the use of force, violence, or intimidation;

"b. Who is in a position to obtain and provide current information of value concerning such organizations;

"c. Or who furnishes information on extremists who may or may not be members of extremist groups but are engaged in planning or carrying out any type of guerrilla warfare against established institutions, which may be in violation of local, state, or Federal laws." (FBI, MOI, Sec. 130, A (1).)

32 FBI Memorandum to Senate Select Committee, 12/2/75; Hearings, Vol. 6, Exhibit 72.

33 In a Memorandum to the Committee, the FBI described the basis for the opening of the full investigation as follows:

"[In August 1971] information from a variety of sources dictated the need to determine the extent of control over VVAW by subversive groups and/or violence-prone elements in the antiwar movement. Sources had provided information that VVAW was stockpiling weapons, VVAW had been in contact with North Vietnam officials in Paris, France, VVAW was receiving funds from former CPUSA members and VVAW was aiding and financing U.S. military deserters. Additionally, information had been received that some individual chapters throughout the country had been infiltrated by the youth groups of the CPUSA and the SWP. A trend of increased militancy developed within the VVAW and the possibilities of violence escalated within the organization. During December 1971, VVAW members forcibly and illegally occupied or surrounded public buildings and national monuments in New, York City, Philadelphia, Austin, Texas, and Washington, D.C." FBI Memorandum to Senate Select Committee, 12/2/75, pp. 2-3; Hearings, Vol. 6, Exhibit 72.

34 Adams, 12/2/75, Hearings, p. 135. Cook had expressed an interest in being an FBI informant to a close friend who was an informant with the VVAW for the FBI. Cook's friend put her in touch with an FBI agent. (Cook, 12/2/75, Hearings, p. 110.)

57 Ibid.

57a Rowe deposition, 10/17/75, pp. 32-33.

58 The murder of Mrs. Liuzzo took place in 1965; from the outset of his informant activity in 1961, Rowe provided the FBI with a great deal of information on planned and actual violence by the Klan throughout his years as an informant. (Rowe,

12/2/75, Vol. 6, pp. 117-118; Adams, 12/2/75, Vol. 6, 142-143). Only rarely, however, did Rowe's information lead to the prevention of violence or arrests of Klan members.

There were several reasons for this, including the difficulty of relying on local police to enforce the law against the Klan in the early 1960's, the failure of the Federal Government to initially mobilize its own resources, and the role of the FBI as an investigative rather than police organization.

Former Attorney General Katzenbach pointed out that, at the outset of the 1960s, when Rowe began his work as an informant, "neither the [Justice] Department nor the Bureau fully appreciated the significance or indeed the genesis of the repeated acts of violence and bloodshed" committed by the Klan and that Federal efforts against Klan violence "did not crystallize" until the murder in June 1964 of three civil rights workers in Mississippi. (Katzenbach, 12/3/75, Hearings, Vol. 6, pp. 213-214) and FBI Deputy Director Adams testified:

"We do not have police powers like the United States Marshalls do ... We are the investigative agency of the Department of Justice and during these times the Department of Justice had us maintain the role of an investigative agency. We were to furnish the information, to the local police, who had an obligation to act. We furnished it to the Department of Justice." (Adams, 12/2/75, Vol. 6, pp. 142-143.)

Katzenbach and Adams pointed out that in the early 1960s, local police in parts of the South refused to act on information the FBI provided about Klan violence. Katzenbach testified:

". . . because local law enforcement organizations -- the traditional first line of defense against (and the Bureau's primary source of information about) such violence were infiltrated by the very persons who were responsible for much of the violence, the net effect was that there was in many sections of the South a total absence of any law enforcement whatsoever." (Katzenbach, 12/3/75, Hearings, Vol. 6, pp. 213-214.)

59 Rowe was not a member of the Klan or sympathetic with Klan objectives when he was recruited to serve as an informant. In his initial interviews with the FBI Special Agent who recruited him, Rowe indicated "he was not in favor of the things the Klan did". (Special Agent No. 1, 11/19/75, p. 7.) Rowe had previously served in the United States Marine Corps, enlisting at the age of 14. (Rowe, 12/2/75, Hearings, Vol. 6, p. 115.) During his initial talks with the FBI, Rowe stated he wanted to work in law enforcement and to serve his country; the FBI told Rowe that to serve as an FBI informant in the Klan would enable him to do both of these things. (Special Agent No. 1, 11/19/75, p. 6.)

60 Special Agent No. 1, 11/19/75, p. 8.

61 Rowe, 12/2/75, Vol 6, p. 116.

62 Special Agent No. 3, 11/21/75, p. 7.

63 Special Agent No. 2, 11/21/75, p. 4. Rowe also carried out certain activities designed to disrupt the Klan. In early 1964, Rowe testified, his FBI handling agent told him of the "COINTEL" or counterintelligence program of the FBI against the Klan. (See COINTELPRO Report). In connection with the COINTEL program. Rowe sought to disrupt the campaign of a Klansman who was a candidate for city police commissioner by spreading innuendo that the Klansman was a homosexual. (Rowe Deposition, 10/17/75, pp. 14-15.) Rowe also testified that he was instructed to plant stories calculated to cause divorces and marital problems among Klansmen. (Ibid., p. 17)

64 Rowe, 12/2/75, Hearings, Vol. 6, 1) 116.

65 Rowe, 12/2/75, Vol. 6, p. 116.

66 Rowe Deposition, 10/17/75, p. 21.

175 Memorandum from the FBI to the Senate Select Committee, 11/28/75

176 By comparison, in 1971 the FBI had 1,731 regular informants, nearly 766 more than in 1975, and, as of 1972, 7,482 informants in the Ghetto Informant Program. The decline since 1971 in the number of regular informants is largely attributable to the decline in dissident political activity with the end of the Vietnam War and the institution of somewhat stricter standards for the opening or continuation of domestic intelligence investigations. As discussed above, the Ghetto Informant Program was discontinued in 1973.

177 FBI, Overall intelligence Program, FY 1977 Budget Compared to FY 1976. The cost of the intelligence informant program comprises payments to informants and FBI personnel, and overhead costs.

**WARRANTLESS FBI ELECTRONIC SURVEILLANCE**

**I. INTRODUCTION**

Technological developments in this century have rendered the most private conversations of American citizens vulnerable to interception and monitoring by government agents. The electronic means by which the Government can extend its "antennae" are varied: microphones may be secretly planted in private locations or on mobile informants; so-called "spike mikes" may be inserted into the wall of an adjoining room; and parabolic microphones may be directed at speakers far away to register the sound waves they emit. Telephone conversations may be overheard without the necessity of attaching electronic devices to the telephone itself or to the lines connecting the telephone with the telephone company. An ordinary telephone may also be turned into an open microphone -- a "miketel" capable of intercepting all conversations within hearing range even when the telephone is not in use.

Even more sophisticated technology permits the Government to intercept any telephone, telegram, or telex communication which is transmitted at least partially through the air, as most such communications now are. This type of interception is virtually undetectable and does not require the cooperation of private communications companies.

Techniques such as these have been used, and continue to be used, by intelligence agencies in their intelligence operations. Since the early part of this century the FBI has utilized wiretapping and "bugging" techniques in both criminal and intelligence investigations. In a single year alone (1945), the Bureau conducted 519 wiretaps and 186 microphone surveillances (excluding those conducted by means of microphones planted on informants). 1 Until 1972, the Bureau used wiretaps and bugs against both American citizens and foreigners within the United States -- without judicial warrant -- to collect foreign intelligence, intelligence and counterintelligence information, to monitor "subversive" and violent activity, and to determine the sources of leaks of classified information. The FBI still uses these techniques without a warrant in foreign intelligence and counterintelligence investigations.

The CIA and NSA have similarly used electronic surveillance techniques for intelligence purposes. The CIA's Office of Security, for example, records a total of fifty-seven individuals who were targeted by telephone wiretaps or microphones within the United States between the years 1947 and 1968. 2 Of these, thirty were employees or former employees of the CIA or of another federal agency who were presumably targeted for security reasons; four were United States citizens unconnected with the CIA or any federal agency. 3 One of the primary responsibilities of the National Security Agency (NSA) is to collect foreign "communications intelligence." To fulfill this responsibility, it has electronically intercepted an enormous number of international telephone, telegram, and telex communications since its inception in the early 1950's. 4

Electronic surveillance techniques have understandably enabled these agencies to obtain valuable information relevant to their legitimate intelligence missions. Use of these techniques has provided the Government with vital intelligence, which would be difficult to acquire through other means, about the activities and intentions of foreign powers, and has provided important leads in counterespionage cases.

By their very nature, however, electronic surveillance techniques also provide the means by which the Government can collect vast amounts of information, unrelated to any legitimate governmental interest, about large numbers of American citizens. Because electronic monitoring is surreptitious, it allows Government agents to eavesdrop on the conversations of individuals in unguarded moments, when they believe they are speaking in confidence. Once in operation, electronic surveillance techniques record not merely conversations about criminal, treasonable, or espionage-related activities, but all conversations about the full range of human events. Neither the most mundane nor the most personal nor the most political expressions of the speakers are immune from interception. Nor are these techniques sufficiently precise to limit the conversations overheard to those of the intended subject of the surveillance: anyone who speaks in a bugged room and anyone who talks over a tapped telephone is also overheard and recorded.

The very intrusiveness of these techniques implies the need for strict controls on their use, and the Fourth Amendment protection against unreasonable searches and seizures demands no less. Without such controls, they may be directed against entirely innocent American citizens, and the Government may use the vast range of information exposed by electronic means for partisan political and other improper purposes. Yet in the past the controls on these techniques have not been effective; improper targets have been selected and politically useful information obtained through electronic surveillance has been provided to senior administration officials.

Until recent years, Congress and the Supreme Court set few limits on the use of electronic surveillance. When the Supreme Court first considered the legal issues raised by wiretapping, it held that the warrantless use of this technique was not unconstitutional because the Fourth Amendment's warrant requirement did not extend to the seizure of conversations. This decision, the 1928 case of *Olmstead v. United States*, 217 U.S. 438, arose in the context of a criminal prosecution, and it left agencies such as the Bureau of Prohibition and the Bureau of Investigation (the former name of the FBI) free to engage in the unrestricted use of wiretapping in both criminal and intelligence investigations.

Six years later, Congress imposed the first restrictions on wiretapping in the Federal Communications Act of 1934<sup>5</sup> which made it a crime for "any person" to intercept and divulge or publish the contents of wire and radio communications. The Supreme Court subsequently construed this section to apply to federal agents as well as ordinary citizens, and held that evidence obtained directly or indirectly from the interception of wire and radio communications was inadmissible in court.<sup>6</sup> But Congress acquiesced in the Justice Department's interpretation that these cases did not prohibit wiretapping *per se*, only the divulgence of the contents of wire communications outside the federal establishment,<sup>7</sup> and government wiretapping for purposes other than prosecution continued.

The Supreme Court reversed its holding in the *Olmstead* case, in 1967, holding in *Katz v. United States*, 389 U.S. 347 (1967), that the Fourth Amendment's warrant requirement did apply to electronic surveillances. But it expressly declined to extend this holding to cases "involving the national security."<sup>8</sup> Congress followed suit the next year in the Omnibus Crime Control Act of 1968,<sup>9</sup> which established a warrant procedure for electronic surveillance in criminal cases but included a provision that neither it nor the Federal Communications Act of 1934 "shall limit the constitutional power of the President"<sup>10</sup> -- a provision which has been relied upon by the Executive Branch as permitting "national security" electronic surveillances.

In 1972, the Supreme Court again addressed the issue of warrantless electronic surveillance. It held in *United States v. United States District Court*, 407 U.S. 297 (1972), that the constitutional power of the President did not extend to authorizing warrantless electronic surveillance in cases involving threats to the "domestic security." The Court distinguished -- but remained silent on -- the question of warrantless electronic surveillance where there was a "significant connection with a foreign power, its agents or agencies."<sup>11</sup>

Without effective guidance by the Supreme Court or Congress, executive branch officials developed broad and ill-defined standards for the use of warrantless electronic surveillance. Vague terms such as "subversive activities," "national interest," "domestic security," and "national security" were relied upon to electronically monitor many individuals who engaged in no criminal activity and who, by any objective standard, represented no genuine threat to the security of the United States.

The secrecy which has enshrouded the warrantless use of this technique moreover, facilitated the occasional violation of the generally meager procedural requirements for warrantless electronic surveillance. Since the early 1940's, for example, Justice Department policy has required the approval of the Attorney General prior to the institution of wiretaps;<sup>12</sup> such approval has been required prior to the institution of microphone surveillances since 1965.<sup>13</sup> This requirement has often been ignored for wiretaps and bugs,<sup>14</sup> and it was not even applied to NSA's electronic monitoring system and its program for "Watch Listing" American citizens. From the early 1960's until 1973, NSA compiled a list of individuals and organizations, including more than one thousand American citizens and domestic groups, whose communications were segregated from the mass of communications intercepted by the Agency, transcribed, and frequently disseminated to other agencies for intelligence purposes. The Americans on the list, many of whom were active in the anti-war and civil rights movements, were placed there by the FBI, CIA, Secret Service, Defense Department, and the Bureau of Narcotics and Dangerous Drugs without judicial warrant, without prior approval by the Attorney General, and without a determination that they satisfied the executive branch standards for warrantless electronic surveillance.<sup>15</sup> For many years in fact, no Attorney General even knew of this project's existence.<sup>16</sup>

Electronic monitoring by the National Security Agency and the CIA, however, is outside the scope of this Report. This Report focuses exclusively on the FBI's use of electronic surveillance; NSA's monitoring system is described at length in the Committee's Report on NSA. Because the legal issues and the FBI's policy and practice regarding consensual monitoring devices such as "body recorders" are distinct from those of nonconsensual wiretaps and microphone installations,<sup>17</sup> the Report is also confined to the latter forms of electronic surveillance.

## II. PRESIDENTIAL AND ATTORNEY GENERAL AUTHORIZATION FOR WARRANTLESS WIRETAPPING

FBI use of warrantless wiretapping for limited purposes has received the approval of Presidents and Attorneys General consistently -- with only one three month exception in 1940 -- from 1931 to the present day. The legal theories advanced to justify the use of this technique, however, have been developed almost entirely by the executive branch itself, and have been "legitimized" largely by the reluctance of Congress and the Supreme Court to confront directly the arguments presented by executive officers.

The evolution of executive branch wiretapping policies from 1924 to 1975, and of the legislative and judicial reaction to these policies, is summarized below.

### *A. Pre-1940*

Justice Department records indicate that the first time an Attorney General formally considered the propriety of warrantless wiretapping for either law enforcement or intelligence purposes, he found it to be "unethical:" in 1924, Attorney General Harlan Fiske Stone ordered a prohibition on the use of this technique by Justice Department personnel, including those of the Bureau of Investigation (the original name of the Federal Bureau of Investigation).<sup>18</sup> To implement this policy, the Director of the Bureau of Investigation, with the approval of Stone's successor, Attorney General John G. Sargent, included the following section in the Bureau's Manual of Rules and Regulations:

Unethical tactics: Wiretapping, entrapment, or the use of any other improper, illegal, or unethical tactics in procuring information in connection with investigative activity will not be tolerated by the Bureau. <sup>19</sup>

This prohibition only applied to the Justice Department. During the 1920's, wiretapping was extensively used by the Bureau of Prohibition, then a part of the Department of the Treasury, in its investigations of violations of the National Prohibition Act. In *Olmstead v. United States*, 277 U.S. 438 (1928), criminal defendants charged with violating this Act challenged the Bureau of Prohibition's use of this technique, but the challenge was unsuccessful. In that case, the Court held that evidence obtained from wiretapping which did not involve a physical intrusion or trespass was admissible and that wiretapping was not unconstitutional because the Fourth Amendment's protections did not apply to the seizure of conversations. The Bureau of Prohibition continued thereafter to employ this technique in its investigations, but the restrictive policy of the Justice Department remained unchanged for the next three years.

In 1930, the Bureau of Prohibition was transferred from the Treasury Department to the Justice Department, and the differing policies regarding wiretapping posed a problem for Attorney General William B. Mitchell. "[T]he present condition in the Department cannot continue," he wrote. "We cannot have one Bureau in which wiretapping is allowed and another in which it is prohibited." <sup>20</sup> He ultimately resolved his dilemma by permitting both the Bureau of Investigation and the Bureau of Prohibition to engage in wiretapping with senior level approval for limited purposes.

On February 19, 1931, instructions were issued at the direction of Attorney General Mitchell stating that no wiretap should be instituted without the written approval of the Assistant Attorney General in charge of the particular case, and that such approval would only be given in cases "involving the safety of victims of kidnappings, the location and apprehension of desperate criminals, and in espionage and sabotage and other cases considered to be of major law enforcement importance." <sup>21</sup> The Manual provision relating to wiretapping was consequently altered to read as follows:

Wiretapping: Telephone or telegraph wires shall not be tapped unless prior authorization of the Director of the Bureau has been secured. <sup>22</sup>

Three years later, Congress' first pronouncement on wiretapping threatened to invalidate the policy enunciated by Mitchell: in June 1934, Congress enacted Section 605 of the Federal Communications Act, 47 U.S.C. 605, which made it a crime for "any person" to intercept and divulge or publish the contents of wire and radio communications. The Supreme Court construed this section in 1937 to apply to Federal agents and held that evidence obtained from the interception of wire and radio communications was inadmissible in court. <sup>23</sup> The Court elaborated on this decision two years later, holding that not only was evidence obtained from such interceptions inadmissible, but that evidence indirectly derived from such interceptions was equally inadmissible. <sup>24</sup>

The Justice Department did not interpret these decisions as prohibiting the interception of wire communications per se, however; only the interception and divulgence of their contents outside the federal establishment was considered by the Department to be unlawful. <sup>25</sup> Even after the *Nardone* decisions, the Department continued to authorize warrantless wiretapping, albeit with the recognition that evidence obtained through the use of this technique would be inadmissible in court.

### *B. 1940 to 1968*

#### *1. The Roosevelt Administration*

Shortly after taking office in 1940, Attorney General Robert H. Jackson reversed the existing Justice Department policy concerning wiretapping. By Order No. 3343, issued March 15, 1940, he prohibited all wiretapping by the Federal Bureau of Investigation, and the previously operative Manual section, which described wiretapping as an unethical practice, was reinstated at his direction.

Jackson's prohibition proved to be short-lived, however, for less than three months later President Franklin D. Roosevelt informed the Attorney General that he did not believe the Supreme Court intended the 1939 Nardone decision to prohibit wiretapping in "matters involving the defense of the nation." The President sent the following memorandum to Attorney General Jackson, granting him authority to approve wiretaps on "persons suspected of subversive activities against the Government of the United States:"

I have agreed with the broad purpose of the Supreme Court decision relating to wiretapping in investigations. The Court is undoubtedly sound both in regard to the use of evidence secured over tapped wires in the prosecution of citizens in criminal cases; and it is also right in its opinion that under ordinary and normal circumstances wiretapping by Government agents should not be carried on for the excellent reason that it is almost bound to lead to abuse of civil rights.

*However, I am convinced that the Supreme Court never intended any dictum in the particular case which it decided to apply to grave matters involving the defense of the nation.*

It is, of course, well known that certain other nations have been engaged in the organization of propaganda of so called "fifth column" in other countries and in preparation for sabotage, as well as in actual sabotage.

It is too late to do anything about it after sabotage, assassinations and "fifth column" activities are completed.

You are, therefore, authorized and directed in such cases as you may approve, after investigation of the need in each case, to authorize the necessary investigating agents that they are at liberty to secure information by listening devices directed to the conversation or other communications of persons suspected of subversive activities against the Government of the United States, including suspected spies. You are requested furthermore to limit these investigations so conducted to a minimum and to limit them insofar as possible to aliens. 26

In 1940 and 1941, several bills were introduced in Congress to authorize electronic surveillance for the purpose Roosevelt articulated in his letter to Jackson and for other purposes as well. One of these was a joint resolution introduced by Representative Emmanuel Celler authorizing the FBI "to conduct investigations, subject to the direction of the Attorney General, to ascertain, prevent, and frustrate any interference with the national defense by sabotage, treason, seditious conspiracy, espionage, violations of neutrality laws, or in any other manner." 27 This resolution would have lifted Section 605's ban on wiretapping for such investigations.

Both President Roosevelt and Attorney General Jackson endorsed such legislation. Roosevelt wrote to Representative Thomas Eliot on February 21, 1941, "I have no compunction in saying that wire tapping should be used against those persons, not citizens of the United States, and those few citizens who are traitors to their country, who today are engaged in espionage or sabotage against the United States . . ." 28

The Justice Department also informed Congress about the theory that had been developed to rationalize ongoing electronic surveillance under Section 605. Attorney General Robert Jackson advised Representative Hatton Summers on March 19, 1941, "The only offense under the present law is to intercept any communication and divulge or publish the same . . . Any person, with no risk of penalty, may tap telephone wires . . . and act upon what he hears or make any use of it that does not involve divulging or publication." 29

The import of these two statements was undoubtedly clear to the members of the House Judiciary Committee to whom they were addressed. The FBI would use wiretaps in the investigation of espionage and sabotage, despite the Federal Communications Act, since the results of the wiretaps would not be "divulged" outside the government. Legislation was needed only in order to use wiretap-obtained evidence or the fruits thereof in criminal prosecutions; a new statute was not necessary if the purpose of wiretapping was to gather intelligence that would not be used in court."

This policy was explicitly acknowledged several months later. After an incident where labor leader Harry Bridges discovered he was under surveillance, Attorney General Francis Biddle announced that FBI agents were, in fact, authorized to tap wires in cases involving espionage, sabotage, and serious crimes such as kidnapping after first securing the permission of the FBI Director and the Attorney General. 31 At the same time Attorney General Biddle advised FBI Director Hoover:

A good deal of my press conference yesterday was consumed in questions about wiretapping. I refused to comment on the Bridges incident, on the ground that it would be improper for me to comment on a case now pending before me.

I indicated that the stand of the Department would be, as indeed it had been for some time, *to authorize wiretapping in espionage, sabotage, and kidnaping cases, where the circumstances warranted*. I described Section 605 of the Communications Act, pointing out that under the Statute interception alone was not illegal; that there must be both interception and divulgence or publication; that the Courts had held only that evidence could not be used which resulted from wiretapping; that the Courts had never defined what divulgence and publication was; that I would continue to construe the Act, until the Courts decided otherwise, not to prohibit interception of communications by an agent, and his reporting the result to his superior officer, as infraction of the law; that although this could be said of all crimes, as a matter of policy wiretapping would be used sparingly, and under express authorization of the Attorney General. 32

## 2. The Truman Administration

The permissible scope of wiretapping was expanded after World War II by President Truman to include "cases vitally affecting the domestic security, or where human life is in jeopardy." The documentary evidence suggests, however, that this expansion was inadvertent on Truman's part and that he actually intended simply to continue in force the policies articulated by President Roosevelt in 1940.

By memorandum of July 17, 1946, Attorney General Tom Clark asked President Truman to renew Roosevelt's authorization for warrantless wiretapping issued six years earlier. Attorney General Clark quoted from that authorization but omitted the portion of Roosevelt's letter which read: "You are requested furthermore to limit these investigations so conducted to a minimum and to limit them insofar as possible to aliens." He then stated to President Truman:

It seems to me that in the present troubled period in international affairs, accompanied as it is by an increase in subversive activity here at home, it is as necessary as it was in 1940 to take the investigative measures referred to in President Roosevelt's memorandum. At the same time, the country is threatened by a very substantial increase in crime. While I am reluctant to suggest any use whatever of these special investigative measures in domestic cases, it seems to me imperative to use them in cases vitally affecting the domestic security, or where human life is in jeopardy.

*As so modified*, I believe the outstanding directive should be continued in force ... In my opinion the measures proposed are within the authority of law, and I have in the files of the Department materials indicating to me that my two most recent predecessors as Attorney General would concur in this view.  
33

Truman approved the Attorney General's 1946 memorandum, but four years later aides to President Truman discovered Clark's incomplete quotation and the President considered returning to the terms of the original 1940 authorization. A February 2, 1950, memorandum located in the Truman Presidential Library reflects that discovery: George M. Eley, the Assistant Counsel to the President, wrote Truman that

Not only did Clark fail to inform the President that Mr. Roosevelt had directed the F.B.I. to hold its wiretapping to a minimum, and to limit it insofar as possible to aliens, he requested the President to approve very broad language which would permit wiretapping in any case 'vitally affecting the domestic security, or where human life is in jeopardy.' This language is obviously a very far cry from the 1940 directive. 34

Eley recommended in this memorandum that "the President consider rescinding his 1046 directive." An order was drafted which closely paralleled Roosevelt's 1940 directive, but for reasons that are unclear it was never issued. 35

The wiretapping standards that were expressed in Clark's 1946 memorandum and approved by President Truman were continued under Attorney General J. Howard McGrath. In a 1952 memorandum to J. Edgar Hoover, McGrath also made explicit the requirement of prior approval by the Attorney General, which had been informally instituted by Attorney General Biddle in 1941:

There is pending, as you know, before the Congress legislation that I have recommended which would permit wiretapping under appropriate safeguards and make evidence thus obtained admissible. As you state, the use of wiretapping is indispensable in intelligence coverage of matters relating to espionage, sabotage, and related security fields. Consequently, I do not intend to alter the existing policy that wiretapping surveillance should be used under the present high restrictive basis and when specifically authorized by me. 36

## 3. The Eisenhower Administration

The Government's perceived inability to prosecute in espionage and sabotage cases where electronic surveillance had been used, which stemmed from the Nardone decisions in the late 1930's, led Attorney General Herbert Brownell to press strongly in 1954 for legislation to authorize "national security" wiretapping without judicial warrant. Rejecting arguments for a warrant requirement, Brownell contended that responsibility should be centralized in the hands of the Attorney General. 37 He also saw a "strong danger of leaks if application is made to a court, because in addition to the judge, you have the clerk, the stenographer and some other officer like a law assistant or bailiff who may be apprised of the nature of the application." 38 Discussing the objectives of "national security" wiretapping, Brownell observed:

We might just as well face up to the fact that the communists are subversives and conspirators working fanatically in the interests of a hostile foreign power ...

It is almost impossible to "spot" them since they no longer use membership cards or other written documents which will identify them for what they are. As a matter of necessity, they turn to the telephone to carry on their intrigue. The success of their plans frequently rests upon piecing together shreds of information received from many sources and many nests. The participants in the conspiracy are often dispersed and stationed in various strategic positions in government and industry throughout the country. Their operations are not only internal. They are also of an international and intercontinental character ...

It is therefore neither reasonable, nor realistic that Communists should be allowed to have the free use of every modern communication device to carry out their unlawful conspiracies, but that law enforcement agencies should be barred from confronting these persons with what they have said over them. 39

The House Judiciary Committee accepted Brownell's reasoning and reported out warrantless wiretapping legislation in 1954. 40 The full House, however, rejected the arguments in support of warrantless wiretapping and amended the bill on the floor to require a prior judicial warrant. 41 Without the support of the Justice Department, the House bill received no formal consideration in the Senate and no serious attempt was again made to enact electronic surveillance legislation until the 1960s.

Because of Congressional deliberations regarding wiretapping, J. Edgar Hoover wrote a memorandum to Attorney General Brownell on March 8, 1955, in which he outlined the current FBI policy in that area and stated that this policy was based on the May 21, 1940, letter from President Roosevelt and the July 17, 1946, memorandum from Attorney General Clark, which was signed by President Truman. 42 Specifically, he noted that the current policy permitted wiretapping, with the prior written approval of the Attorney General, in "cases vitally affecting the domestic security or where human life is in jeopardy."

Hoover also asked Brownell if he believed the Roosevelt and Truman statements constituted sufficient legal authority for wiretapping at the present time, and suggested that if Brownell did not believe they did, he "may want to present this matter to President Eisenhower to determine whether he holds the same view with respect to the policies of the Department of Justice with respect to wiretapping." 43 Brownell responded that he did not believe it necessary to obtain further approval of the existing practice from President Eisenhower as he was of the opinion that President Roosevelt's approval was sufficient. The Attorney General wrote, in part:

In view of the fact that I personally explained to the President, the Cabinet, the National Security Council and the Senate and House Judiciary Committees during 1954 the present policy and procedure on wiretaps, at which time I referred specifically to the authorization letter to the Attorney General from President F. D. Roosevelt, I do not think it necessary to reopen the matter at this time. . . . You will also remember that I made several public speeches during 1954 on the legal basis for the Department of Justice policy and procedure on wiretaps. 44

#### 4. The Kennedy Administration

The existing policy and procedures for wiretapping continued in force through the Kennedy administration. On March 13, 1962, Attorney General Robert F. Kennedy issued Order No. 263-62, which finally rescinded Attorney General Jackson's March 15, 1940, order prohibiting wiretapping, and noted that this rescission was necessary "in order to reflect the practice which has been in effect since May 21, 1940." 45 This order also changed the Manual provisions relating to wiretapping to formally permit use of this technique and reaffirmed the vitality of "[e]xisting instructions to the Federal Bureau of Investigation with respect to obtaining the approval of the Attorney General for wiretapping ...." 46

#### 5. The Johnson Administration

During the Johnson administration, the procedures for conducting wiretaps were tightened and the criteria for use of this technique were altered. Until March 1965, no requirement had existed for the periodic re-authorization of wiretaps by the Attorney General: some surveillances consequently remained in operation for years without review. 47 On March 30, 1965, Attorney General Katzenbach therefore suggested to J. Edgar Hoover that authorizations for individual telephone taps should be limited to six months, after which time a new request should be submitted for the Attorney General's reauthorization. 48 This suggestion was immediately implemented by the FBI.

One week later, on April 8, 1965, Katzenbach sent to the White House a proposed Presidential directive to all federal agencies on wiretapping. 49 This directive, formally issued by President Lyndon Johnson in slightly modified form on June 30, 1965, 50 revoked Attorney General Tom Clark's wiretapping standard of "cases vitally affecting the domestic security or where human life is in jeopardy." The new directive forbade the nonconsensual interception of telephone communications by federal personnel within the United States "except in connection with investigations related to the national security," and then only after first obtaining the written approval of the Attorney General. The President stated, in part:

I am strongly opposed to the interception of telephone conversations as a general investigative technique. I recognize that mechanical and electronic devices may sometimes be essential in protecting our national security. Nevertheless, it is clear that indiscriminate use of these investigative devices to overhear telephone conversations, without the knowledge, or consent of any of the persons involved, could result in serious abuses and invasions of privacy. *In my view, the invasion of privacy of communications is a highly offensive practice which should be engaged in only where the national security is at stake.* To avoid any misunderstanding on this subject in the Federal Government, I am establishing the following basic guidelines to be followed by all government agencies:

(1) No federal personnel is to intercept telephone conversations within the United States by any mechanical or electronic device, without the consent of one of the parties involved (except in connection with investigations related to the national security.)

(2) No interception shall be undertaken or continued without first obtaining the approval of the Attorney General.

(3) All federal agencies shall immediately conform their practices and procedures to the provisions of this order. 51

Despite this Presidential approval of "national security" wiretapping, Director Hoover informed Katzenbach on September 14, 1965, that he was restricting or eliminating the use of a number of investigative techniques by the Bureau

in view of the present atmosphere, brought about by the unrestrained and injudicious use of special investigative techniques by other agencies and departments, resulting in congressional and public alarm and opposition to any activities which could in any way be termed an invasion of privacy.

With regard to wiretapping, Hoover wrote that

[w]hile we have traditionally restricted wiretaps to internal security cases and an occasional investigation involving possible loss of life, such as kidnapping, I have further cut down on wiretaps and I am not requesting authority for any additional wiretaps.. 52

Katzenbach responded on September 27, with a memorandum setting forth what he believed to be appropriate guidelines for the use of the techniques Hoover had restricted or eliminated. He noted that "[t]he use of wiretaps and microphones involving trespass present more difficult problems because of the inadmissibility of any evidence obtained in court cases and because of current judicial and public attitudes regarding their use." 53 He continued:

It is my understanding that such devices will not be used without my authorization, although in emergency circumstances they may be used subject to my later ratification. At this time I believe it is desirable that all such techniques be confined to the gathering of intelligence in national security matters, and I will continue to approve all such requests in the future as I have in the past. I see no need to curtail any such activities in the national security field.

It is also my belief that there are occasions outside of the strict definition of national security (for example, organized crime) when it would be appropriate to use such techniques for intelligence purposes. However, in light of the present atmosphere, I believe that efforts in the immediate future should be confined to national security. I realize that this restriction will hamper our efforts against organized crime and will require a redoubled effort on the part of the Bureau to develop intelligence through other means. 54

While suggesting the possibility that warrantless wiretapping might appropriately be used at some future time in cases involving organized crime, in short, Katzenbach endorsed its use only in "the national security field."

On November 3, 1966, Attorney General Ramsey Clark circulated a memorandum to all United States Attorneys in which he reiterated the "national security" limitation on wiretapping contained in President Johnson's June 30, 1965, directive and in Katzenbach's September 27, 1965, letter to Hoover. He quoted as follows from the 1966 Supplemental Memorandum to the Supreme Court that had been filed in *Black v. United States*, 55 a criminal case which involved a microphone installation:

Present practice, adopted in July 1965 in conformity with the policies declared by President Johnson on June 30, 1965, for the entire Federal establishment, prohibits the installation of listening devices in private areas (as well as the interception of telephone and other wire communications) in all instances other than those involving the collection of intelligence affecting the national security. The specific authorization of the Attorney General must be obtained in each instance when this exception is invoked. Intelligence data so collected will not be available for investigative or litigative purposes. 56

Clark's subsequent guidelines for the use of wiretapping and electronic eavesdropping, issued in June 1967 to the heads of executive agencies and departments, reaffirmed the prohibition of wiretapping in all but "national security" cases. 57

### *C. The Omnibus Crime Control Act of 1968*

Although Justice Department policy regarding wiretapping remained essentially constant from 1965 to 1968, two Supreme Court decisions during this period significantly altered the constitutional framework for electronic surveillance generally. In *Berger v. New York*, 388 U.S. 41 (1967), and *Katz v. United States*, 389 U.S. 347 (1967), the Supreme Court overruled *Olmstead* and held that the Fourth Amendment did apply to searches and seizures of conversations and protected all conversations of an individual as to which he had a reasonable expectation of privacy. Katz explicitly left open the question, however, whether or not a judicial warrant was required in cases "involving the national security." 58

In part as a response to the *Berger* and *Katz* decisions, Congress enacted Title III of the Omnibus Crime Control and Safe Streets Act of 1968, 18 U.S.C. 2510-20. This Act established procedures for obtaining judicial warrants permitting wiretapping by government officials, 59 but the issue of "national security" wiretaps, which was left open in *Katz*, was similarly avoided. Section 2511 (3) of the Act stated that nothing in the Omnibus Crime Control Act or the Federal Communications Act of 1934 shall limit the constitutional power of the President in certain vaguely defined areas. The text of this subsection reads as follows:

(3) Nothing contained in this chapter or in section 605 of the Communications Act of 1934 (48 Stat. 1143, 47 U.S.C. 605) shall limit the constitutional powers of the President to take such measures as he deems necessary to protect the Nation against actual or potential attack or other hostile acts of a foreign power, to obtain foreign intelligence information deemed essential to the security of the United States, or to protect national security information against foreign intelligence activities. Nor shall anything contained in this chapter be deemed to limit the constitutional power of the President to take such measures as he deems necessary to protect the United States against the overthrow of the

Government by force or other unlawful means, or against any other clear and present danger to the structure or existence of the Government. The contents of any wire or oral communication intercepted by authority of the President in the exercise of the foregoing powers may be received in evidence in any trial hearing or other proceeding only where such interception was reasonable, and shall not be otherwise used or disclosed except as is necessary to implement that power. 60

Significantly, this subsection does not define the scope of the President's constitutional power in the national security area. As the Supreme Court noted in the Keith case, it is merely a statement that to the extent such powers exist, if they exist at all they override the procedural requirements for electronic surveillance that are outlined in this statute and in the 1934 Act. 61

#### *D. Justice Department Criteria for Warrantless Wiretaps: 1968-1975*

##### *1. 1968-1972*

In fields other than national security, the Justice Department was obligated to conform with the warrant procedures of the 1968 statute. But in national security cases, Justice Department policy permitted -- and the Act did not forbid -- warrantless wiretapping if the proposed surveillance satisfied one or more of the following criteria (which paralleled the standards enunciated in Section 2511 (3)) :

- (1) That it is necessary to protect the nation against actual or potential attack or any other hostile action of a foreign power;
- (2) That it is necessary to obtain foreign intelligence information deemed essential to the security of the United States;
- (3) That it is necessary to protect national security information against foreign intelligence activities;
- (4) That it is necessary to protect the United States against the overthrow of the Government by force or other unlawful means; or
- (5) That it is necessary to protect the United States against a clear or present danger to the structure or the existence of its Government. 62

Existing procedures for warrantless wiretaps requiring the prior written authorization of the Attorney General and subsequent reauthorization after 90 days remained in effect after the passage of the 1968 Act.

##### *2. The Keith Case: 1972*

On June 19, 1972, the Supreme Court decided the so-called Keith case, *United States v. United States District Court*, 407 U.S. 297 (1972), which held that the Fourth Amendment required prior judicial approval for "domestic security" electronic surveillance. The Court acknowledged the constitutional power of the President to "protect our Government against those who would subvert or overthrow it by unlawful means," 63 but it held that this power did not extend to the authorization of warrantless electronic surveillance directed at a domestic organization which was neither directly nor indirectly connected with a foreign power. 64

To conform with the Keith decision, the Justice Department thereafter limited warrantless wiretapping to cases involving a "significant connection with a foreign power, its agents or agencies." 65 A spokesman for the Department stated that such a connection might be shown by "the presence of such factors as substantial financing, control by or active collaboration with a foreign government and agencies thereof in unlawful activities directed against the Government of the United States." 65a

##### *3. 1972-1975*

The Justice Department's criteria for warrantless electronic surveillance were next modified in 1975. On June 24, 1975, Attorney General Edward H. Levi wrote Senators Frank Church and Edward Kennedy a letter in which he set forth his standards for warrantless wiretaps. He wrote, in part:

Under the standards and procedures established by the President, the personal approval of the Attorney General is required before any non-consensual electronic surveillance may be instituted within the United States without a judicial warrant. All requests for surveillance must be made in writing by the Director of the Federal Bureau of Investigation and must set forth the relevant factual circumstances that justify the proposed surveillance. Both the agency and the Presidential appointee initiating the request must be identified. Requests from the Director are examined by a special review group which I have established within the Office of the Attorney General. Authorization will not be granted unless the Attorney General has satisfied himself that the requested electronic surveillance is necessary for national security or foreign intelligence purposes important to national security.

In addition, the Attorney General must be satisfied that the subject of the surveillance is *either assisting a foreign power or foreign-based political group, or plans unlawful activity directed against a foreign power or foreign-based political group*. Finally, he must be satisfied that the minimum physical intrusion necessary to obtain the information will be used.

All authorizations are for a period of ninety days or less, and the specific approval of the Attorney General is again required for continuation of the surveillance beyond that period. The Attorney General has also been directed to review all electronic surveillance on a regular basis to ensure that the aforementioned criteria are satisfied. Pursuant to the mandate of United States v. United States District Court, electronic surveillance without a judicial warrant is not conducted where there is no foreign involvement. 66

In his public testimony before the Senate Select Committee on Intelligence Activities on November 6, 1975, Attorney General Levi again articulated current Department of Justice criteria for the approval of warrantless electronic surveillance. His formulation on that date returned to the three foreign-related categories which were based on Section 2511(3) of the 1968 Act, between 1972 and 1975, and a fourth category was also added. He stated:

Requests are only authorized when the requested electronic surveillance is necessary to protect the nation against actual or potential attack or other hostile acts of a foreign power; to obtain foreign intelligence deemed essential to the security of the nation; to protect national security information against foreign intelligence activities; or to obtain information certified as necessary for the conduct of foreign affairs matters important to the national security of the United States. 67

In his November 1975 testimony, the Attorney General also omitted the phrase in his June 24 letter which would have permitted warrantless electronic surveillance to be directed against American citizens or domestic groups which "plan[ed] unlawful activity directed against a foreign power or a foreign-based political group." Warrantless electronic surveillance, he said, would only be authorized when the subject of the proposed surveillance is "consciously assisting a foreign power or a foreign-based political group." The elimination of this category was apparently due to the decision of the Court of Appeals for the District of Columbia in *Zweibon v. Mitchell*, 516 F.2d 594 (D.C. Cir., 1975) (en banc), which held unconstitutional warrantless electronic surveillance of a domestic organization that was neither the agent of nor collaborator with a foreign power. 69

To date, neither Congress nor the Supreme Court has ever squarely faced the issue of whether the President may legitimately authorize warrantless electronic surveillance in "national security" cases involving the activities of foreign powers or their agents. As noted above, Section 2511(3) of the 1968 Omnibus Crime Control Act does not represent an affirmative grant of power to the President; it is simply an acknowledgement that Congress does not intend to limit or restrict whatever constitutional power the President may have in connection with "national security" cases. And the Supreme Court in *Keith* explicitly wrote that it only reached the question of the constitutionality of "national security" electronic surveillance in cases that involved "domestic security." While two federal circuit courts have determined that the President may constitutionally authorize warrantless electronic surveillance directed against foreign agents or collaborators, 70 the Supreme Court denied certiorari in both cases and has yet to decide the issue. In the absence of a mandate from Congress or the Supreme Court, the Justice Department has relied on these circuit court cases to support its current standards for warrantless electronic surveillance. 71

Legislation has recently been introduced, with the support of Attorney General Levi, to require a prior judicial warrant for electronic surveillance of an "agent of a foreign power." One of seven specially designated federal judges would be authorized to issue a warrant upon a finding that there is "probable cause to believe that the target of the electronic surveillance is a foreign power or an agent of a foreign power." The term "agent of a foreign power" is defined as

- (i) a person who is not a permanent resident alien or citizen of the United States and who is an officer or employee of a foreign power; or
- (ii) a person who, pursuant to the direction of a foreign power, is engaged in clandestine intelligence activities, sabotage, or terrorist activities, or who conspires with, assists or aids and abets such a person in engaging in such activities. 72

Thus, the legislation would not define the activities which could subject an American to electronic surveillance in terms of the federal criminal laws.

The new legislation also would not reach electronic surveillance of Americans abroad or other "facts and circumstances ... beyond the scope" of its provisions. Authority for such surveillance would continue to be based on whatever may be "the constitutional power of the President." In other respects, however, the proposed statute is a significant step towards effective regulation of FBI electronic surveillance.

### **III. PRESIDENTIAL AND ATTORNEY GENERAL AUTHORIZATION FOR WARRANTLESS MICROPHONE SURVEILLANCE**

Warrantless microphone surveillance, while perhaps the most intrusive type of electronic surveillance, has received significantly less attention from Presidents and Attorneys General than has warrantless wiretapping. The first documentary indication that microphone surveillance was separately considered by any Attorney General is not found until 1952, when Attorney General McGrath prohibited its use in cases involving trespass. Two years later, Attorney General Brownell issued a sweeping authorization for microphone surveillance, even when it involved physical trespass, in cases where the Bureau determined such surveillance was in the national interest; no prior approval by the Attorney General was required. This policy continued until 1965, when microphone surveillance was placed on an equal footing with telephone surveillance, and since that time the policies for both these forms of electronic surveillance have remained identical.

## A. Pre-1952

### 1. 1931 to 1942

The legal status of microphone, as opposed to telephone, surveillance was not addressed by the Supreme Court until 1942, and it was not addressed by Congress until 1968. It is perhaps for this reason that the Justice Department developed no distinct policy on microphone surveillance during the first half of the century.

The Olmstead case in 1928 involved a wiretap rather than a microphone surveillance. Similarly, the Federal Communications Act of 1934 was addressed only to the interception of wire and radio communications; microphone surveillance was not within its ambit. Neither Attorney General Mitchell's nor Attorney General Jackson's instructions on wiretapping in 1931 and 1940, respectively, encompassed microphone surveillance, and President Roosevelt's 1940 authorization and President Truman's 1946 authorization were also limited to wiretapping.

An internal Justice Department memorandum from William Olson, former Assistant Attorney General for Internal Security, to Attorney General Elliot Richardson notes that "[d]uring the period 1931-1940, it appears safe to assume that microphone surveillances were utilized under the same standards as telephone surveillances -- 'in those cases involving the safety of the victims of kidnapping, the location and apprehension of desperate criminals, and in espionage, sabotage, and other cases considered to be of major law enforcement importance.'" 73

### 2. 1942-1952

In 1942, the Supreme Court decided *Goldman v. United States*, 316 U.S. 129, which held in the context of a criminal case that a microphone surveillance was constitutional when it did not involve physical trespass. Thereafter, the test for the validity of a microphone surveillance appeared to be whether or not it involved a trespass. 74 There is no evidence, however, that an Attorney General gave any firm guidance to the FBI in this area until 1952. Although there did not appear to be any distinct articulated Justice Department policy on microphone surveillance for a decade after *Goldman*, J. Edgar Hoover summarized FBI practice since *Goldman* in a 1951 memorandum to Attorney General McGrath:

*As you are aware, this Bureau has also employed the use of microphone installations on a highly restrictive basis, chiefly to obtain intelligence information. The information obtained from microphones, as in the case of wiretaps, is not admissible in evidence. In certain instances, it has been possible to install microphones without trespass, as reflected by opinions rendered in the past by the Department on this subject matter. In these instances, the information obtained, of course, is treated as evidence and therefore is not regarded as purely intelligence information.*

*As you know, in a number of instances it has not been possible to install microphones without trespass. In such instances the information received therefrom is of an intelligence nature only. Here again, as in the use of wiretaps, experience has shown us that intelligence information highly pertinent to the defense and welfare of this nation is derived through the use of microphones.* 76

## B. 1952 to 1965

The first clear instruction to the FBI from an Attorney General regarding microphone surveillance was issued in 1952. On February 26, 1952, Attorney General McGrath wrote to Mr. Hoover as follows:

*The use of microphone surveillance which does not involve a trespass would seem to be permissible under the present state of the law, United States v. Goldman, 316 U.S. 129. Such surveillances as involve trespass are in the area of the Fourth Amendment, and evidence so obtained and from leads so obtained is inadmissible.*

*The records do not indicate that this question dealing with microphones has ever been presented before; therefore, please be advised that I cannot authorize the installation of a microphone involving a trespass under existing law.* 77

As a result of this instruction, Hoover declared in a March 4, 1952, internal FBI memorandum that he would similarly not approve any request for a microphone surveillance in a case involving trespass. 78

The FBI evidently considered this policy on microphone surveillance to be too restrictive, however, especially in the area of internal security. 79 Under pressure from the FBI -- and despite the 1954 Supreme Court decision in *Irvine v. California* 80 -- Attorney General Brownell reversed his predecessor's position. On May 22, 1954, he wrote Director Hoover:

*The recent decision of the Supreme Court entitled Irvine v. California, 347 U.S. 128, denouncing the use of microphone surveillances by city police in a gambling case, makes appropriate a reappraisal of the use which may be made in the future by the Federal Bureau of Investigation of microphone surveillance in connection with matters relating to the internal security of the country.*

*It is clear that in some instances the use of microphone surveillance is the only possible way of uncovering the activities of espionage agents, possible saboteurs, and subversive persons. In such instances I am of the opinion that the national interest requires that microphone surveillance be utilized by the Federal Bureau of Investigation. This use need not be limited to the development of evidence*

for prosecution. The FBI has an intelligence function in connection with internal security matters equally as important as the duty of developing evidence for presentation to the courts and the national security requires that the FBI be able to use microphone surveillance for the proper discharge of both such functions. The Department of Justice approves the use of microphone surveillance by the FBI under these circumstances and for these purposes.

I do not consider that the decision of the Supreme Court in *Irvine v. California*, supra, requires a different course. That case is readily distinguishable on its facts. The language of the Court, however, indicates certain uses of microphones which it would be well to avoid, if possible, even in internal security investigations. *It is quite clear that in the Irvine case the Justices of the Supreme Court were outraged by what they regarded as the indecency of installing a microphone in a bedroom.* They denounced the utilization of such methods of investigation in a gambling case as shocking. The Court's action is a clear indication of the need for discretion and intelligent restraint in the use of microphones by the FBI in all cases, including internal security matters. Obviously, the installation of a microphone in a bedroom or in some comparably intimate location should be avoided wherever possible. It may appear, however, that important intelligence or evidence relating to matters connected with the national security can only be obtained by the installation of a microphone in such a location. It is my opinion that under such circumstances the installation is proper and not prohibited by the Supreme Court's decision in the *Irvine* case.

... It is realized that not infrequently the question of trespass arises in connection with the installation of a microphone.

The question of whether a trespass is actually involved and the second question of the effect of such a trespass upon the admissibility in court of the evidence thus obtained, must necessarily be resolved according to the circumstances of each case. The Department in resolving the problems which may arise in connection with the use of microphone surveillance will review the circumstances in each case in light of the practical necessities of investigation and of the national interest which must be protected. It is my opinion that the Department should adopt that interpretation which will permit microphone coverage by the FBI in a manner most conducive to our national interest. I recognize that for the FBI to fulfill its important intelligence function, *consideration of internal security and the national safety are paramount and, therefore, may compel the unrestricted use of this technique in the national interest.* 81

Brownell cited no legal support for this sweeping authorization. By not requiring prior approval by the Attorney General for specific microphone installations, moreover, he largely undercut the policy which had developed for wiretapping. The FBI in many cases could obtain equivalent coverage by utilizing bugs rather than taps and would not be burdened with the necessity of a formal request to the Attorney General.

On May 4, 1961, Director Hoover wrote a memorandum to Deputy Attorney General Byron R. White, in which he informed the Department that the FBI's policy with regard to microphone surveillance was based on the 1954 Brownell memorandum quoted above. Hoover stated that Brownell had "approved the use of microphone surveillances with or without trespass," and noted that "in the internal security field we are utilizing microphone surveillances on a restricted basis even though trespass is necessary to assist in uncovering the activities of [foreign] intelligence agents and Communist Party leaders." He continued: "In the interests of national safety, microphone surveillances are also utilized on a restricted basis, even though trespass is necessary, in uncovering major criminal activities. We are using such coverage in connection with our investigations of clandestine activities of top hoodlums and organized crime." 82 This memorandum apparently did not lead to further reconsideration of microphone surveillance policy by Justice Department officials, and the practice articulated by Hoover continued without change until 1965. 82a

The Department later summarized the policy during these years in the Supplemental Memorandum to the Supreme Court in the case of *Black v. United States*, 83 referred to above.

The memorandum read, in part: "Under Department practice in effect for a period of years prior to 1963, and continuing until 1965, the Director of the Federal Bureau of Investigation was given authority to approve the installation of devices such as that in question [a microphone] for intelligence (and not evidentiary) purposes when required in the interest of internal security or national safety, including organized crime, kidnappings, and matters wherein human life may be at stake. Acting on the basis of the aforementioned Departmental authorization, the Director approved installation of the device involved in the instant case." 84

#### *C. 1965 to the Present*

On March 30, 1965, when Attorney General Katzenbach instituted the six month limitation on telephone taps, he also expressed the view that proposals for microphone surveillances should be submitted for the Attorney General's prior approval and that this type of surveillance should also be limited to six month periods. 85 While Attorneys General since the 1950s had sporadically given their prior approval to microphone surveillances, the requirement of such approval had never been a consistent policy of the Justice Department, as it had been with respect to wiretapping for more than two decades. 85a With the immediate implementation of Katzenbach's suggestions, therefore, the Justice Department procedures with regard to both wiretapping and microphone surveillance became identical.

President Johnson's June 30, 1965, directive to all federal agencies, which formally prohibited all wiretapping except in connection with "national security" investigations and then only with the prior approval of the Attorney General, referred to the issue of microphone surveillances only tangentially. It read:

Utilization of mechanical or electronic devices to overhear nontelephone conversations is an even more difficult problem, which raises substantial and unresolved questions of constitutional interpretation. I desire that each agency conducting such investigations consult with the Attorney General to ascertain whether the agency's practices are fully in accord with the law and with a decent regard for the rights of others. 86

Apparently, J. Edgar Hoover did not find his "consultations" with the Attorney General to be encouraging. It is noted above that on September 14, 1965, the Director informed Katzenbach that, "[i]n accordance with the wishes you have expressed during various recent conversations with me" and because of public alarm at alleged invasions of privacy by Federal agencies, he was severely restricting or eliminating the use of a number of investigative techniques. Specifically with regard to microphone surveillance, he wrote that "we have discontinued completely the use of" this technique -- despite Katzenbach's approval of the limited use of microphone surveillance in March of that year and despite the absence of a prohibition on the use of the technique in the President's June directive.

It is also noted above in Section II that Katzenbach responded about two weeks later with a memorandum setting forth what he believed to be appropriate guidelines for the use of the techniques Hoover had restricted or eliminated. He gave virtually unrestricted authorization to the FBI to conduct microphone surveillances not involving trespass, writing, "[w]here such questions [i.e., of trespass] are not raised, I believe the Bureau should continue to use these techniques in cases where you believe it appropriate without further authorization from me." 88 With regard to microphone surveillances that did involve trespass, he again treated the use of this technique in a fashion identical to warrantless wiretapping: for both he required his prior approval (except in "emergency circumstances") and for both the legitimate purposes were limited to the gathering of intelligence in "national security matters." While he expressed the belief that both wiretaps and microphone surveillances involving trespass might at some future time be appropriate to use in the area of organized crime, he gave no authority for such use at that time.

The policy set out in Katzenbach's September 27 letter to Hoover was reaffirmed by the Justice Department at least three times prior to the 1967 Katz decision and the passage of the Omnibus Crime Control Act of 1968.

In the July 1966 Supplemental Memorandum filed in the Black case, the Justice Department stated that "[p]resent Departmental practice, adopted in July 1965, prohibits the use of such listening devices in all instances other than those involving the collection of intelligence affecting the national security. The specific authorization of the Attorney General must be obtained in each instance when this exception is involved." This language was quoted by Attorney General Ramsey Clark in his November 3, 1966 memorandum to all United States Attorneys 81 and reaffirmed in Clark's 1967 memorandum to heads of executive departments. 90

The Katz decision, in December 1967, held that a warrantless microphone installation on the side of a public telephone booth was unconstitutional in the context of a criminal case. Thus, Justice Department policy prohibiting microphone surveillances in non-"national security" cases became a constitutional requirement as well -- regardless of whether or not the installation involved trespass. 90a As noted above, however, the issue of electronic surveillance in "national security" cases was not addressed by the Supreme Court in Katz.

The 1968 Omnibus Crime Control Act, unlike the Federal Communications Act of 1934, applies to both telephone wiretaps and microphone surveillances. Because of this, and because the Justice Department policy regarding both techniques became virtually identical in 1965, the description of the evolution of wiretapping policy over the past decade applies equally to the technique of microphone surveillance. In recent years, for all practical purposes, there has been but a single policy for both forms of electronic surveillance.

#### IV. AN OVERVIEW OF FBI ELECTRONIC SURVEILLANCE PRACTICES

The preceding two sections have dealt with the legal framework and Justice Department policy regarding warrantless wiretapping and bugging. This section attempts to provide an overview of FBI electronic surveillance practices. Without purporting to explore the full range of FBI electronic surveillance practices, a limited number of key areas are highlighted in order to suggest the manner in which electronic surveillances are conducted. More specifically, this section discusses the frequency of FBI use of this technique since 1940; internal FBI restrictions on the maximum number of simultaneous electronic surveillances; the method by which requests have been initiated and approved; the manner in which wiretaps and bugs have been installed; the means by which the FBI has responded to the legal obligation to produce electronic surveillance records in criminal trials; and the traditional reluctance of the FBI to permit outside scrutiny of its electronic surveillance practices. A discussion of the application of the Justice Department's standards for wiretapping and bugging to particular cases is reserved for Section VII below.

##### *A. Extent of FBI Electronic Surveillance: 1940-1975*

While FBI use of warrantless electronic surveillance has not been as pervasive as many other investigative techniques such as informants, both wiretaps and bugs have been strategically utilized in a large number of intelligence investigations. The Bureau's reliance on these techniques was greatest during World War II and the immediate postwar period. During the 1960s and early 1970s, internal FBI policy placed a ceiling on the number of simultaneous electronic surveillances conducted by the Bureau. This self-restriction did not act to curtail all use of this technique, but it apparently frustrated intelligence officials in the FBI and other agencies who sought -- unsuccessfully -- a change in this policy through the Huston Plan in 1970. In recent years, Judicial decisions have severely restricted the use of warrantless electronic surveillance against domestic targets, although wiretaps and bugs still continue to be commonly used in the area of foreign intelligence and counterintelligence.

*1. Annual Totals for Wiretaps and Microphone Installations*

According to Justice Department records, the annual totals of warrantless FBI wiretaps and microphones in operation between 1940 and 1974 were as follows:

| Year | Telephone wiretaps | Microphones |
|------|--------------------|-------------|
| 1940 | 6                  | 6           |
| 1941 | 67                 | 25          |
| 1942 | 304                | 88          |
| 1943 | 475                | 193         |
| 1944 | 517                | 198         |
| 1945 | 519                | 186         |
| 1946 | 364                | 85          |
| 1947 | 374                | 81          |
| 1948 | 416                | 67          |
| 1949 | 471                | 75          |
| 1950 | 270                | 61          |
| 1951 | 285                | 75          |
| 1952 | 285                | 63          |
| 1953 | 300                | 52          |
| 1954 | 322                | 99          |
| 1955 | 214                | 102         |
| 1956 | 164                | 71          |
| 1957 | 173                | 73          |
| 1958 | 166                | 70          |
| 1959 | 120                | 75          |
| 1960 | 115                | 74          |
| 1961 | 140                | 85          |
| 1962 | 198                | 100         |
| 1963 | 244                | 83          |
| 1964 | 260                | 106         |
| 1965 | 233                | 67          |
| 1966 | 174                | 10          |
| 1967 | 113                | 0           |
| 1968 | 82                 | 9           |
| 1969 | 123                | 14          |
| 1970 | 102                | 19          |

|      |     |    |
|------|-----|----|
| 1971 | 101 | 16 |
| 1972 | 108 | 32 |
| 1973 | 123 | 40 |
| 1974 | 190 | 42 |

Attorney General Edward H. Levi testimony, Nov. 6, 1975, hearings, vol. 5, pp. 68-70. The statistics before 1968 encompass electronic surveillances for both intelligence and law enforcement purposes. Those after 1968, when the Omnibus Crime Control Act was enacted, include surveillances for intelligence purposes only; electronic surveillances for law enforcement purposes were thereafter subject to the warrant procedures required by the Act.

Comparable figures for the year 1975, through October 29, are: 121 telephone wiretaps and 24 microphone installations. 91

It should be noted that these figures are cumulative for each year; that is, a wiretap on an individual in one year which continued into a second year is recorded in both years. The figures are also duplicative to some extent, since a telephone wiretap or microphone which was installed, then discontinued, and later reinstated is counted as a new surveillance upon reinstatement.

## *2. FBI Policy on the Maximum Number of Simultaneous Electronic Surveillances*

From at least the early 1960s, J. Edgar Hoover placed a ceiling on the number of warrantless electronic surveillances that could be in operation at any one time. As expressed by Charles D. Brennan, who became Assistant Director in charge of the FBI's Domestic Intelligence Division in 1970, ". . . there was always a maximum figure which you were not allowed to exceed, and if you recommended an additional wiretap, it had to be done with the recognition that in another area you would take one off." 92

Until the mid-1960s, the maximum figure was approximately eighty. 93 In response to the 1965 and 1966 investigation by the Senate Subcommittee on Administrative Practice, and Procedure into the use of electronic surveillance and other techniques by federal agencies, however, Hoover instructed Bureau officials to reduce by one half the number of warrantless electronic surveillances then in effect. According to Brennan, the ceiling was lowered out of a concern that this subcommittee's "inquiry might get into the use of that technique by the FBI . . ." 94 The number of warrantless wiretaps in the "security field" was subsequently reduced from 76 to 38, and remained close to the latter figure for several years thereafter. 95

Intelligence officials both within the FBI itself and in other intelligence agencies clearly felt constrained by Hoover's policy, and through the Huston Plan in 1970 they attempted to raise or eliminate the internal limitations on the number of simultaneous electronic surveillances. The Report that was presented to President Nixon in June of 1970 noted: "The limited number of electronic surveillances and penetrations substantially restricts the collection of valuable intelligence information of material important to the entire intelligence community," 96 and it presented the President with the option of modifying "present procedures" to "permit intensification of coverage of individuals and groups in the United States who pose a major threat to the internal security." 97 This option was specifically recommended to the President by Tom Charles Huston. 98

Director Hoover nonetheless remained strongly opposed to lifting restraints on the FBI's use of warrantless electronic surveillance. He added a footnote to the electronic surveillance section of the Huston Report which read:

The FBI does not wish to change its present procedure of selective coverage of major internal security threats as it believes this coverage is adequate at this time. The FBI would not oppose other agencies seeking authority of the Attorney General for coverage required by them and thereafter instituting such coverage themselves. 99

In part because of Hoover's opposition to the Huston Plan, President Nixon, who had originally endorsed the recommendations, withdrew his approval 100 and the maximum number of electronic surveillance stayed essentially constant until 1972.

The policy of placing an arbitrary ceiling on simultaneous warrantless electronic surveillances was apparently terminated after J. Edgar Hoover's death in 1972. With the apparent lifting of this self-restriction, the number of foreign related surveillances increased 101 -- a fact which is reflected in the annual totals listed above.

## *B. Requests, Approvals, and Implementation*

## *1. The Request and Approval Process*

Recommendations for the use of electronic surveillance in particular cases are typically initiated at the field level of the Bureau, although at times they have originated with the Attorney General, the White House, and the head of another agency. 102 If Headquarters approves a field request, the appropriate field office then conducts a feasibility study to determine whether or not the surveillance can be conducted with complete security. Upon a favorable security finding, the Director personally sends the Attorney General a formal request for coverage, setting forth the name and address of the person or persons to be monitored as well as pertinent facts about the case. 103

According to former Attorney General William Saxbe, the "request must contain very detailed information." 104 In numerous cases in the past, however, the information supplied in the request has been minimal at best. For example, several of the so-called "17 wiretaps" during the Nixon administration were approved by Attorney General John Mitchell despite the lack of any data in the formal requests to support the need for the technique's use. 105 It is possible that these and similarly defective requests submitted to other Attorneys General were supplemented by information imparted orally, but, as the District of Columbia Court of Appeals stated in *Zweibon v. Mitchell*:

... we nevertheless note the possibility of abuse when there are no written records of the justifications for instituting a surveillance. Such lack of records allows a search to be justified on information subsequently obtained from the surveillance and permits the assertion that more information was relied on than was in fact the case. Prior judicial approval for wiretapping, among other benefits, of course freezes the record as to the data upon which the surveillance was based. 106

## *2. Implementation of Wiretaps and Bugs*

If the Director receives the written approval of the Attorney General for a particular surveillance, the field office is instructed to implement it. In the case of wiretapping, an agent from the field office generally contacts a representative of the local telephone company who acts as Government liaison. One such telephone company representative in Washington, D.C., testified that he was simply orally advised by an agent of the FBI's Washington Field Office that authority had been granted to tap a particular telephone number. 107

According to the Washington Field Office supervisor in charge of the employees who implemented and monitored "national security" wiretaps, the telephone company representative would then assign "pair numbers" in the cable connecting the FBI's Washington, D.C. Field Office with the company's central office in the city, and the recording and monitoring devices would be attached to the assigned cable pair at the field office, where the Bureau monitoring agents were located. After the supervisor verified the wiretap by determining that the intercepted line was the correct one, he would give the tap a symbol number to be used in lieu of the words "telephone surveillance" in any later communication. 108

Generally, two agents would conduct the monitoring operation in eight-hour shifts. These monitors typically tape recorded all calls on the line and added supplementary notes concerning such items as the identity of the caller and the subject of the conversation if unclear from the tape. 109 Each day, they typed up log summaries, which included anything they believed was consequential. Because the monitors were not told specifically what to look for, however, the summaries tended to be over-inclusive rather than under-inclusive: the supervising agent noted, for instance, that any information obtained about the subject's sex life or drug use would usually be included in the log summaries. 110 He also stated that he disliked having empty summaries for any day, and so issued a general instruction to his monitors that an attempt should be made to include at least one item in the log each day. 111 Even if there was no activity, a monitor would still have to file a log summary stating "no activity" or "no pertinent activity." 112

A special squad within the Washington Field Office was responsible for implementing microphone installations. According to one Bureau agent who served on this squad for a number of years, the authorizing document (which, he said, invariably bore J. Edgar Hoover's initials) would be transmitted to the field office and shown to him and the other members of the squad prior to the installation. This agent stated that in the majority of cases he was able to obtain a key to the target's premises, either from a landlord, hotel manager, or neighbor. In other cases, he simply entered through unlocked doors. He stated that only in a small proportion of the cases to which he was assigned was it necessary to pick a lock. 113 Once the bug was planted, it was generally necessary for Bureau agents to monitor the conversations from a location close to the targeted premises.

## *C. The ELSUR Index*

In the mid-1960s, the Justice Department established a policy of filing disclosures in the courts in cases where criminal defendants had been monitored by electronic surveillance. 114 As a result, it became necessary to establish a general index of the names of all persons overheard on such surveillances. In September 1966, the Assistant Attorney General of the Criminal Division informed Director Hoover that:

In recent months the Department has been confronted with serious problems concerning the prospective or continued prosecution of individuals who have been the subject of prior electronic surveillance. These problems have sometimes arisen comparatively late in the investigative or prosecutive process. For example, we recently were forced to close an important investigation involving major gambling figures in Miami because we were advised that the evidence necessary to obtain a conviction was tainted....

In view of these experiences, it appears necessary and desirable that the Department have full knowledge of the extent of any device problem at as early a stage of preparation for prosecution as possible in order to determine whether a particular case may or may not be tainted or what responses will be necessary with respect to a motion under Rule 16 to produce statements.

Accordingly, I feel it is imperative for us to establish between the Bureau and the Department . . . some sort of "early warning" system. *This may require the Bureau to set up and maintain appropriate indices with respect to electronic surveillance and the materials derived therefrom.*

I have discussed this suggestion with the Attorney General and the Deputy Attorney General. Both feel that the establishment of such indices is necessary. . . 115

In fact, for a number of years prior to this suggestion the Bureau had maintained rudimentary indices within each field office, although there was no central index and those which existed on the field level were believed to be inadequate by Justice Department officials. Because Hoover believed the existing system was adequate, he reacted defensively when Assistant Attorney General Fred Vinson requested a conference between the Department and the Bureau to discuss the details of the Justice Department's proposal. The Director penned the following notation on the Vinson memorandum: "Since [an indexing system] is already operating, I see no need for such a conference.... Tell him it is already done and see that it is meticulously operated." 116

About one week later, however, Hoover directed officials at Headquarters to send a teletype to all field offices which had conducted electronic surveillances since January 1960. 117 These offices were instructed to transmit to Headquarters the names of all individuals whose voices were monitored through electronic surveillance any time within the previous six years, as well as the initial date of the monitoring and the identity of the subject against whom the installation was directed. Each office was also informed that it had a continuing obligation to submit to Headquarters on a weekly basis the names of any additional individuals monitored in the future. 118

The Bureau has since maintained a central index at Headquarters, referred to as the ELSUR Index, which contains the names of all individuals overheard, even incidentally, on both court-ordered and warrantless electronic surveillances. Additional information such as the initial date of the monitoring and the identity of the target of the surveillance is also included in the index. The method by which this index has been compiled, however, raises some questions as to its accuracy and completeness.

Although the ELSUR Index covers the period January 1, 1960, to the present, for example, the FBI's response to a request by the Senate Select Committee for the date and location of all electronic overhears of Martin Luther King, Jr., conceded that retrieval of some of the overhears of King may be impossible. Three factors contributing to this difficulty were set forth by the Bureau:

1. Prior to issuing instructions to field offices in October, 1966, directing them to submit the names of all individuals whose voices have been monitored through a microphone installed or a telephone surveillance operated by the offices anytime since 1/1/60, additional surveillances on which King was monitored are unaccountable for as these surveillance logs may have been destroyed.
2. Prior to the instructions, personnel handling logs may have felt that overhears were of no substance or significance and consequently were not recorded.
3. The setting up of the ELSUR indices was a fieldwide project of large proportions and the instructions going to the field 10/5/66, were subject to broad interpretation, thus leading to possible misinterpretation of these instructions. Also, the factor of human error might be involved, thereby causing incomplete indices until the mechanics of the procedure were ironed out. 119

In fact, several surveillances of King himself which were known to personnel at FBI headquarters were apparently not reflected in the ELSUR Index.

One Special Agent's description of the preparation of ELSUR Index cards by FBI monitors suggests that the Index may be incomplete even for the post-1966 period. According to this agent, the FBI monitors are under instructions to prepare ELSUR Index cards for each identifiable person who speaks over the intercepted line. 120 Since the cards must contain the proper names of these individuals rather than phonetic spellings, and since this information is often difficult to obtain from an overhear alone, the monitors maintain a separate index of phonetic spellings prior to their determination of the proper spelling and its entry into the ELSUR Index. 121 The monitors then attempt to confirm the identity of the persons overheard from various research aids kept at their disposal, such as telephone books and Congressional and federal agency directories, and from discussions with the Bureau agents assigned to the substantive cases. In most cases, it is possible to make an accurate identification, but when this proves to be impossible, the names of unidentified individuals never get entered into the ELSUR Index. 122 Sometimes no entry has been made in the ELSUR Index even though positive identification was subsequently obtained. 122a Thus, a person could be overheard and this fact would not be revealed by a check of the ELSUR Index. 123

#### *D. Congressional Investigation of FBI Electronic Surveillance Practices: The Long Subcommittee*

The Bureau has traditionally been reluctant to permit Congressional investigation into its electronic surveillance practices. During the 1965 and 1966 inquiry by the Senate Subcommittee on Administrative Practice and Procedure into the use of electronic surveillance and other techniques by federal agencies, the FBI took affirmative steps to avoid substantial exposure of such practices to the subcommittee. The Bureau's attempt to thwart this subcommittee's investigation into the use of mail covers in February and March of 1965 is described in the Senate Select Committee's Report on CIA and FBI Mail Opening; 124 a similar attempt, apparently acquiesced in by the Subcommittee, was made in the area of electronic surveillance.

The Bureau's wary attitude toward this investigation is reflected in an internal memorandum dated August 2, 1965:

Senator [Edward V.] Long [of Missouri] is Chairman of the Senate Subcommittee on Administrative, Practice and Procedure. He has been taking testimony in connection with mail covers, wiretapping, and various snooping devices on the part of Federal agencies. He cannot be trusted and although the FBI has not become involved in these hearings, our name has been mentioned quite prominently on several occasions . . . 125

When the Subcommittee's investigation began to touch on the Bureau's electronic surveillance practices in connection with organized crime several months later, Assistant Director Cartha DeLoach and another ranking Bureau official personally visited the Subcommittee's chairman, Senator Edward Long of Missouri, to explain to him the FBI's practices in the area of electronic surveillance. 126 This meeting lasted approximately one and one-half hours, 127 and there is no indication in the documentary record that any other briefing occurred prior to this visit. Nonetheless, an FBI memorandum notes that after the Senator "stated that unfortunately a number of people were bringing pressure on him to look into the FBI's activities in connection with usage of electronic devices," 128 DeLoach suggested to him:

that perhaps he might desire to issue a statement reflecting that he had held lengthy conferences with top FBI officials and was now completely satisfied, after looking into FBI operations, that the FBI had never participated in uncontrolled usage of wiretaps or microphones and that FBI usage of such devices had been completely justified in all instances. 129

According to this memorandum, Senator Long agreed, and when he "stated that he frankly did not know how to word such a release," 130 DeLoach "told him that we would be glad to prepare the release for him on a strictly confidential basis." 131

The next day, Bureau agents prepared such a statement for Senator Long, noting that "it is written from the viewpoint of the Senator and his Committee in that it indicates they have taken a long, hard look at the FBI and have found nothing out of order -- but that they will continue looking over our procedures and techniques from time to time in the future. Such an approach," it was stated, "is felt to be essential if the statement is to have the desired effect. A statement reflecting a stronger pro-FBI position might not only prove ineffective in thwarting those persons who are exerting pressure on the Subcommittee for a probe of our operations, but it could also bring criticism and additional pressure on Senator Long." 132 The statement written by the Bureau for Senator Long reads in full:

As Chairman of the Subcommittee on Administrative Practice and Procedure of the Senate Judiciary Committee, I instructed my staff at the outset of our activities to include the FBI, together with all other Federal agencies, among the organizations to be dealt with to ascertain if there had been invasion of privacy or other improper tactics in their operations. Toward this end, my staff and I have not only conferred at length with top officials of the FBI, but we have conducted exhaustive research into the activities, procedures, and techniques of this agency.

While my Staff and I fully intend to carefully review FBI operations from time to time in the future, I am at the present time prepared to state, based upon careful study, that we are fully satisfied that the FBI has not participated in highhanded or uncontrolled usage of wiretaps, microphones, or other electronic equipment.

The FBI's operations have been under strict Justice Department control at all times. In keeping with a rigid system of checks and balances, FBI installation of wiretaps and microphones has been strictly limited, and such electronic devices have been used only in the most important and serious of crimes either affecting the internal security of our Nation or involving heinous threats to human life. Included among these are major cases of murder, kidnapping, and sadism perpetrated at the specific instruction of leaders of La Cosa Nostra or other top echelons of the extralegal empire of organized crime.

Investigation made by my staff has reflected no independent or unauthorized installation of electronic devices by individual FBI Agents or FBI offices in the field. We have carefully examined Mr. J. Edgar Hoover's rules in this regard and have found no instances of violation. 133

As noted above, there is no indication in the record that any briefing about electronic surveillance by the FBI occurred prior to the preparation of this statement by Bureau agents other than the ninety-minute briefing given by DeLoach. No Bureau agents had been called to testify before the Subcommittee. It does not appear that any Senator or staff members reviewed FBI files on electronic surveillances. Nor is there any indication in the record that the Subcommittee ever learned of the bugging of a Congressman's hotel room, the bugging and wiretapping of Martin Luther King, Jr., or the wiretapping of a Congressional staff member, two newsmen, an editor of a political newsletter, and a former Bureau agent -- all of which had occurred within the previous five years. 134

Ten days after the statement was prepared for Senator Long, DeLoach again visited him and "asked him point blank whether or not he intended to hold hearings concerning the FBI at any time in the future." According to DeLoach's memorandum:

He stated he did not. I asked him if he would be willing to give us a commitment that he would in no way embarrass the FBI. He said he would agree to do this. 135

When the Subcommittee's Chief Counsel asked DeLoach at this meeting "if it would be possible for [DeLoach] or Mr. Gale [another FBI Assistant Director] to appear before the Long Subcommittee ... and make a simple statement to the effect that the FBI used wiretaps only in cases involving national security and kidnapping and extortion, where human life is involved, and used microphones only in those cases involving heinous crimes and Cosa Nostra matters," DeLoach refused. He wrote that he informed the Chief Counsel:

that to put an FBI witness on the stand would be an attempt to open a Pandora's box, in so far as our enemies in the press were concerned [and] that such an appearance as only a token witness would cause more criticism than the release of the statement in question would ever cause. 136

DeLoach noted that Senator Long then stated "he had no plans whatsoever for calling FBI witnesses," but that the Chief Counsel indicated that he would like to call one former FBI agent who was known to DeLoach. According to DeLoach's memorandum regarding this meeting, he told the Chief Counsel that this agent "was a first class s.o.b., a liar, and a man who had volunteered as a witness only to get a public forum," and that the Chief Counsel then reconsidered. The memorandum concludes with the observation:

While we have neutralized the threat of being embarrassed by the Long Subcommittee, we have not yet eliminated certain dangers which might be created as a result of newspaper pressure on Long. We therefore must keep on top of this situation at all times. 137

Partly as a result of the Subcommittee's apparently willing "neutralization" by the Bureau, the FBI's electronic surveillance practices were protected from intensive Congressional and public scrutiny until the 1970s.

## **V. WARRANTLESS FBI ELECTRONIC SURVEILLANCE OF FOREIGN INTELLIGENCE AND COUNTERINTELLIGENCE TARGETS WITHIN THE UNITED STATES**

Foreign agents and foreign establishments within the United States have often been, and continue to be, the targets of warrantless FBI electronic surveillance. In general, the Fourth Amendment questions raised by electronic surveillance of foreigners are not as serious as those raised by the targeting of American citizens; and surveillance of foreign targets may be less susceptible to the types of abuses that have often been associated with wiretapping and bugging of American citizens. Because Americans are often overheard on "foreign" taps and bugs, however, and because American citizens may also be the indirect targets of "foreign" surveillances, the rights of Americans may nonetheless be affected even by surveillance of foreign targets.

Apparently, most warrantless electronic surveillances conducted by the FBI in the past fifteen years have fallen into this broad category. Foreign establishments and foreigners living within the United States have been the subject of wiretaps and bugs far more frequently than have American citizens connected with domestic organizations, for purposes ranging from the collection of foreign intelligence and counterintelligence information to the detection of terrorist activity. 138 Since the 1972 Keith decision, which invalidated "domestic security" warrantless electronic surveillances, the proportion of foreign targets has been even greater. As of November 1975, for example, all existing warrantless electronic surveillances were directed against foreigners. 139

The purpose and value of electronic surveillance against foreign targets, as well as "domestic" abuse questions which have arisen in this context, are discussed below.

### *A. Purpose and Value as an Investigative Technique*

Electronic surveillance of foreign targets has been used extensively by the FBI for the purpose of collecting foreign counterintelligence information. Within the past fifteen years, both wiretaps and bugs designed to collect such information have been directed against targets in the following categories: "Foreign Establishments," "Foreign Commercial Establishments," "Foreign Officials," "Foreign Intelligence Agents," "Foreign Intelligence Contacts," "Foreign Intelligence Agents Suspect," "Foreign Officials' Contact," and "Foreign Intelligence Agents Business Office." Wiretaps alone have been used against "Foreign Intelligence Contact Suspect" and "a [foreign] Exile Group;" bugs alone have been used against the "wife of a foreign intelligence contact," a "relative of a foreign intelligence agent suspect," a "foreign intelligence agent contact," another "[foreign] exile group," and for "coverage of foreign officials." 140

Electronic surveillance of targets such as these is clearly considered by FBI officials to be one of the most valuable techniques for the collection of counterintelligence information. According to W. Raymond Wannall, the former Assistant Director in charge of the Bureau's Domestic Intelligence Division, wiretaps and bugs directed against foreign targets:

give us a base line from which to operate.... Having the benefit of electronic surveillance, we are in a position to make evaluations, to make assessments, to make decisions as to [the conduct of counterintelligence operations].... It gives us leads as to persons . . . hostile intelligence services are trying to subvert or utilize in the United States, so certainly it is a valuable technique. 141

Some of the surveillances in the categories listed above have also been conducted for the primary purpose of collecting "positive" foreign intelligence (which may include economic intelligence) rather than counterintelligence information. 141a While the collection of "Positive" foreign intelligence is outside the FBI's intelligence mandate, such surveillances have been responsive to specific requests of the Attorney General by the State Department and the CIA, both of which have a responsibility for "positive" intelligence. 142

In addition, the Bureau has electronically monitored foreign targets for the purpose of detecting and preventing violent and terrorist activities by foreigners within the United States. Wiretaps have been used for such purposes against a "Foreign Militant Group," a "Foreign Revolutionary Group," a "Foreign Militant Group Official," and a "Propaganda Outlet of the League of Arab States." Microphone surveillances in the last two of these categories and of an "Arab Terrorist Activist," and an "Arab Terrorist Activist Meeting" have been used for similar purposes. 143

## *B. Foreign Surveillance Abuse Questions*

Even properly authorized electronic surveillances directed against foreign targets for the purposes noted above may result in possible abuses involving American citizens. Because wiretaps and bugs are capable of intercepting all conversations on a particular telephone or in a particular area, American citizens with whom the foreign targets communicate are also overheard, and information irrelevant to the purpose of the surveillance may be collected and disseminated to senior administration officials.

It is also possible to institute electronic surveillance of a foreigner for the primary purpose of intercepting the communications of a particular American citizen with that target; since the "foreign" surveillance in this situation can accomplish indirectly what a surveillance of the American could accomplish directly, the former may be used to circumvent the generally more stringent requirements for surveillances of Americans.

Both of these practices, which clearly affect the rights of the Americans involved, have occurred in the past and are discussed below.

### *1. Dissemination of Domestic Intelligence from Incidental Overhears*

Essentially political information -- unrelated to the authorized purpose of the surveillance -- has occasionally been obtained as a by-product of electronic surveillance of foreign targets and disseminated to the highest levels of government. In the early 1960s, for example, Attorney General Robert Kennedy authorized the FBI to institute electronic surveillances of certain foreign targets in Washington, D.C., in connection with the possibly unlawful attempts of a foreign government to influence Congressional deliberations over sugar quota legislation. 144 From these surveillances, the Attorney General was provided with significant information not merely about possible foreign influence but about the reaction of key members of the House Agriculture Committee to the administration's sugar quota proposal as well. 145

Through the Bureau's coverage of certain foreign establishments in Washington, it was also able to supply two President's with reports of the contacts between members of Congress and foreign officials. According to a 1975 FBI memorandum:

On March 14, 1966, then President Lyndon B. Johnson informed Mr. DeLoach [Cartha DeLoach, former Assistant Director of the FBI] ... that the FBI should constantly keep abreast of the actions of representatives of these [foreign countries] in making contacts with Senators and Congressmen and any citizens of a prominent nature. The President stated he strongly felt that much of the protest concerning his Vietnam policy, particularly the hearings in the Senate, had been generated by [certain foreign officials]. 146

As a result of the President's request, the FBI prepared a chronological summary -- based in part on existing electronic surveillances -- of the contacts of each Senator, Representative, or staff member who communicated with selected foreign establishments during the period July 1, 1964, to March 17, 1966. This summary -- which comprised 67 pages -- was transmitted to the White House on March 21, 1966. The cover letter noted that: "based upon our coverage, it appears that" certain foreign officials "are making more contacts with" four named United States Senators "than with other United States legislators." 147

A second summary was prepared on further contacts between Congressmen and foreign officials and was transmitted to the White House on May 13, 1966. From that date until January 1969, when the Johnson administration left office biweekly additions to the second summary were regularly prepared and disseminated to the White House. 148

This practice was reinstituted during the Nixon administration. On July 27, 1970, Larry Higby, Assistant to H. R. Haldeman, informed the Bureau that Mr. Haldeman "wanted any information possessed by the FBI relating to contacts between [certain foreign officials] and Members of Congress and its staff." 149 Two days later, the Bureau provided the White House with a statistical compilation of such contacts from January 1, 1967 to July 29, 1970. 149a As in the case of the information provided to the Johnson White House, no members of Congress were targeted directly but many had been overheard on existing electronic surveillances of foreign officials in Washington, D.C.

### *2. Indirect Targeting of American Citizens Through Electronic Surveillance of Foreign Targets*

There is also evidence that in at least one instance the FBI, at the request of the President, instituted an electronic surveillance of a foreign target for the purpose of intercepting telephone conversations of a particular American citizen. An FBI memorandum states that about one week before the 1968 Presidential election, President Johnson became suspicious that South Vietnamese Government might sabotage his peace negotiations in the hope that Presidential candidate Richard Nixon would win the election and take a "harder line" towards North Vietnam. 150 More specifically, the President believed that Mrs. Anna Chennault, widow of General Clair Chennault and a prominent Republican leader, was attempting to [dis]suade South Vietnamese officials "from attending the Paris peace negotiations until after the election since it would devolve to the credit of the Republican Party." 151

In order to determine the validity of this suspicion, the White House instructed the FBI to institute a physical coverage of Mrs. Chennault, as well as physical and electronic surveillance of the South Vietnamese Embassy. 151a The electronic surveillance of the Embassy was authorized by Attorney General Ramsey Clark on October 29, 1968, installed the same day, and continued until January 6, 1969. 152

Significantly, a Bureau memorandum indicates that FBI officials were ill-disposed toward direct surveillance of Anna Chennault because "it was widely known that she was involved in Republican political circles and, if it became known that the

FBI was surveilling her this would put us in a most untenable and embarrassing position." 153 Thus, a "foreign" electronic surveillance was instituted to indirectly target an American citizen, who, it was apparently believed, should not be surveilled directly.

## VI. WARRANTLESS FBI ELECTRONIC SURVEILLANCE OF AMERICAN CITIZENS

American citizens and domestic organizations have also been the direct targets of FBI wiretaps and bugs for intelligence purposes. Indeed, the use of these techniques against Americans for such purposes has a long history. In 1941, for example, Attorney General Francis Biddle approved a wiretap on the Los Angeles Chamber of Commerce under the standard of "persons suspected of subversive activities." 154 Four years later, a high official in the Truman administration 155 and a former aide to President Roosevelt 156 were both the subject of warrantless electronic surveillance.

Between 1960 and 1972 numerous American citizens and domestic organizations were targeted for electronic surveillance. Most of these warrantless wiretaps and bugs were predicated on the need to protect the country against "subversive" and/or violent activities; many were based on the perceived need to discover the source of leaks of classified information; and an undetermined number 157 of American citizens were wiretapped for other reasons such as the desire to obtain foreign intelligence or counterintelligence information. 158

The Keith decision in 1972 sharply restricted the grounds for wiretapping and bugging which had been asserted previously, although it did not prohibit warrantless electronic surveillance of American citizens for foreign intelligence or counterintelligence purposes when a substantial connection is shown to exist between the American individual or group and a foreign power. 159 No Americans were the subjects of this technique as of November 1975, 160 but a small number of Americans have been electronically monitored since the Keith case on the basis of such a foreign connection. 161

This section focuses on warrantless electronic surveillance of American citizens during the 1960 to 1972 period. It contains a general description of surveillances which were instituted because of the perceived "subversive" or violent nature of the targets, because of leaks of classified information, and on various other grounds. In Section VII, this Report elaborates on three types of abuse questions which have arisen in connection with warrantless electronic surveillance of American citizens.

### *A. Electronic Surveillance Predicated on Subversive Activity*

Numerous American citizens and domestic organizations have been wiretapped and bugged because their activities, while not necessarily violent, were regarded as sufficiently "subversive" to constitute a threat to the security of the United States. In many of these cases, it was believed that the individuals or groups were controlled or financed by, or otherwise connected with, a hostile foreign power. In other cases, the surveillances were based only on the possibility that the targets, whether consciously or not, were being influenced by persons believed to be acting under the direction of a foreign power; such surveillance typically occurred in the context of COMINFIL (Communist infiltration) investigations. 162

The Communist Party, USA, provides the clearest example of a group that was selected for electronic surveillance on the ground of foreign-connected "subversive" activities. In addition to a wiretap on the Headquarters of the Communist Party, the FBI conducted wiretaps in the following target categories:

- Communist Party Functionaries
- Communist Party Propaganda Outlet
- Communist Party Front Group
- Communist Party Member
- Communist Party Affiliate
- Communist Party Publication

Microphone surveillances are recorded in these categories:

- Communist Party Functionaries
- Communist Party Front Groups
- Communist Party Propaganda Outlets
- Communist Party Front Groups Organizer
- Communist Party Function
- Communist Party Members
- Communist Party Publications
- Coverage of Communist Party Meeting
- Communist Party Youth Activist
- Communist Party Labor Group
- Communist Party Youth Group
- Communist Party Affiliate
- Coverage of Communist Party Conference
- Communist Party Apologist 163

Other groups adhering to a communist ideology have also been electronically monitored for similar reasons. According to FBI records, wiretaps were used in cases involving a "Marxist-Leninist Group Affiliate," a "Marxist Leninist Group Leader," and a "Marxist-Leninist Group Functionary." Microphone surveillances were also conducted against a "Basic Revolutionary Group Founder," a "Marxist-Oriented Youth Group," a "Trotskyite Organization," a "Basic Revolutionary Group," an "Organizer of a Basic Revolutionary Group," "Marxist-Leninist Groups," a "Basic Revolutionary Front Group," a "Basic Revolutionary Front

Functionary," a "Marxist-Leninist Front Group," and a "Marxist-Oriented Racial Organization." One "Trotskyite Organization Meeting" was also bugged. 164

Several groups which were believed to have a connection with the Communist Party in Cuba and China have been targeted as well. Into this category fell wiretaps which were directed against a "Pro-Castro Organization," a "Pro Castro Movement Leader," a "Pro-Castro Group Functionary," and a "Pro-Chicom [Chinese Communist] Propaganda Outlet;" and microphones directed against "Pro-Castro Organizations," a "Pro-Chicom Group," and a "Pro Cuban American Group which travelled to Cuba." 165

The "subversive activities" predicate was stretched furthest when used to support electronic surveillance of American citizens and domestic organizations not primarily because their own activities were considered to be subversive but because they were believed to be adversely influenced, whether consciously or not, by persons acting under the direction of a foreign power. One example of reliance on such a rationale is seen in the wiretapping and bug of Dr. Martin Luther King, Jr., and several of his associates. In October 1963, Attorney General Robert Kennedy authorized wiretaps on the residence and two office telephones of Dr. King on the ground of possible Communist infiltration into the Southern Christian Leadership Conference, of which Dr. King was President. 166 The possibility that two of Dr. King's advisors may have been associated with the Communist Party, USA, led to four additional wiretaps on King and a total of fifteen microphone installations in his hotel rooms during 1964 and 1965. 167 Apparently as part of this COMINFIL (Communist infiltration) investigation, several of King's associates were also wiretapped and bugged. 168

At least three other organizations have been targeted for electronic surveillance primarily on the ground of possible Communist infiltration. One such organization, believed to have been influenced by the Communist Party, USA, was wiretapped in 1962. 169 In 1965, Attorney General Nicholas Katzenbach approved wiretaps on both the Student Non-Violent Coordinating Committee (SNCC) 171 and the Students for a Democratic Society (SDS) for similar reasons; 171 the former group had also been the subject of a microphone surveillance in 1964. 172

#### *B. Electronic Surveillance Predicated on Violent Activity*

Allegations of violent activity, or the threat of violent activity, have also served as the predicate for numerous warrantless electronic surveillance of Americans.

Most of the wiretaps and bugs which were instituted for this reason have been directed against "black extremists" and "black extremist organizations." In 1957, for example, Attorney General Herbert Brownell authorized a wiretap on Elijah Muhammad, a leader of the Nation of Islam, because of the organization's alleged "violent nature." 173 This tap, which was never re-authorized until 1964, was finally terminated in 1966. A wiretap was also placed on Malcolm X, another Nation of Islam leader, in 1964 for essentially the same reason. 174 Similarly, Attorney General Katzenbach approved a wiretap on a "black extremist leader" of the Revolutionary Action Movement in 1965. 175 During the first half of the 1960's, microphone surveillances were also directed against a "black separatist group" (one surveillance in 1960 and 1961; two separate surveillances each year from 1962 until 1965) and a "black separatist group functionary" (from 1961 until 1965). 176

The possibility of violent activity also led to wiretaps on the Black Panther Party and one of its leaders in 1969. 177 Both of these taps continued into 1970, when wiretaps on a "black extremist group affiliate" and two (non-white) "racial extremist groups" were added to the list. 178 1971 apparently represented the high point of wiretapping "black extremists:" in that year, there were wiretaps on the Black Panther Party (six separate taps as of March 29, 1971), 179 two (nonwhite) "racial extremist groups," two individuals described as "militant black extremist group members" (one of whom was a member of SNCC), two individuals described as "militant black extremist group functionaries," and a "racial group member." A wiretap was also authorized to cover a "meeting of a militant [black] group." 180 In 1972, wiretaps continued to be used against the Black Panther Party and one of its leaders, a (non-white) "racial extremist group," a "militant black extremist group member," and a "militant black extremist group functionary." 181 Microphone surveillances during the Nixon Administration years were directed against the Black Panther Party in 1970 and a "Black Extremist Group Functionary" (Huey Newton, a leader of the Black Panther Party) from 1970 to 1972. 182

Electronic surveillance based on a "violent activity" predicate was certainly not confined to "black extremists," however. In the early and mid-1960's, wiretaps were placed on Ku Klux Klan members for similar reasons. Two "leaders of a racist organization," one of whom was a Klan member suspected of involvement in the bombing of a black church in Birmingham, Alabama, were wiretapped in 1963 and 1964. 183 Another Ku Klux Klan member was wiretapped in 1964 and 1965. 184 FBI records also disclose the bugging of The National States Rights Party in 1962. 185

White radical organizations were also the subjects of electronic surveillance in the late 1960's and early 1970's on the grounds of violent or potentially violent activity. A "New Left Campus Group" was both wiretapped and bugged in 1969, and the wiretap continued into 1970. 186 Three anti-war organizations which were involved in planning the November 1969 "March on Washington" were also wiretapped in 1969. 187 In 1970, the Headquarters of the Worker Student Alliance (an affiliate of SDS) 188 and an individual who was a contact for the Weatherman organization were wiretapped. 189 The tap on the Worker Student Alliance continued into 1971 and was supplemented in that year by wiretaps on a "New Left Activist", a "domestic protest group," and a "violence prone faction of a domestic protest group" (two separate wiretaps). 190 Additional wiretaps and microphone surveillances during the years 1969 to 1972 fall into the categories: "Investigation of Clandestine Underground Group Dedicated to Strategic Sabotage;" "Weatherman Organization Publication;" "Publication of Clandestine Underground Group Dedicated to Strategic Sabotage;" "Leader of Revolutionary Group;" and "Weather Underground Support Apparatus." 191

For several years during the 1960's, Puerto Rican nationalist groups and their members were also electronically monitored because of their alleged proclivity towards violence. FBI records reveal wiretaps on a "Puerto Rican Independence Group" in 1960 and 1962; and on a "Puerto Rican Independence Group Member" in 1965. Microphone surveillances were placed on a "Contact of Puerto Rican Nationalist Party" in 1960; a "Puerto Rican Independence Group Office" in 1963, 1964, and 1965; a "Puerto Rican Revolutionary" in 1968; and "Pro-Puerto Rican Independence Group Activists" in 1964 and 1965. 192

Other organizations were the subject of electronic surveillance because they were seen as violent advocates of the interests of a foreign power or group. (To the extent an actual connection with a hostile foreign power was perceived, they would also be considered "subversive.") These organizations, which were, or may have been, composed at least in part of American citizens, are described by the following categories: "Pro-Arab Group," "Arab Terrorist Affiliate," "Pro-Palestine Group," "Militant Pro-Chicom [Chinese Communist] Group," "West Coast Fundraising Front for Arab Terrorist Groups," "Arab Terrorist Activist Affiliates," and "Co-Conspirators in Plot to Kidnap a Prominent Anti-Castro Cuban Exile." 193

### *C. Electronic Surveillance Predicated on Leaks of Classified Information*

Another purpose of warrantless electronic surveillance of American citizens during the period 1960 to 1972 was to determine the source of perceived leaks of classified information. At least eight separate investigations into perceived leaks resulted in the wiretapping or bugging of nearly thirty American citizens, yet Bureau memoranda reveal no case in which the source of any leak was discovered by means of electronic surveillance. These investigations are described below.

*Lloyd Norman: 1961.* 194 -- On June 27, 1961, Attorney General Robert Kennedy informed FBI Director Hoover that the most recent issue of Newsweek magazine contained an article about American military plans in Germany, which, the administration believed, was based on classified information. According to an FBI memorandum, Kennedy stated that the President had called him to see if it would be possible to determine who was responsible for the apparent leak. 195 On the same day, and without specific authorization from the Attorney General, the FBI placed a wiretap on the residence of Lloyd Norman, the Newsweek reporter who wrote the article. 196 Kennedy was informed about the tap on June 28, and formally approved it on June 30. It was discontinued on July 3, 1961, when "Norman left Washington, D.C., for the west coast on a month's vacation [and] the only person left at Norman's residence [was] his son." 197

*Hanson Baldwin: 1962.* -- A July 1962 New York Times article about Soviet missile systems by Hanson Baldwin, which the administration also believed was based on classified information, led to the installation of wiretaps on the residences of both Baldwin and a New York Times secretary. According to contemporaneous Bureau memoranda, these wiretaps were instituted without the prior written approval of the Attorney General, and one of them -- the tap on the secretary -- was instituted without the Attorney General's prior knowledge. 198 Formal written approval for these wiretaps was obtained on July 31, 1962, however, three days after the tap on Baldwin was installed and four days after the tap on his secretary was installed. 199 The wiretap on the secretary continued until August 15, 1962; that on Baldwin until August 29, 1962. 200

*Former FBI Special Agent: 1962.* -- Warrantless electronic surveillance predicated on classified information leaks continued with the wiretapping of a former Bureau agent who "disclosed information of a confidential nature concerning investigations conducted by [the] Bureau" in a public forum on October 18, 1962. 201 According to an internal memorandum, the coverage lasted from October 18, 1962, until October 26, 1962, and was repeated in January 1963. 202 On October 19, 1962, Attorney General Kennedy was advised that the Bureau desired to place coverage on this agent; he was apparently not informed that coverage had already been effected the day before. 203 Kennedy's written approval was granted on October 26, the day the surveillance was terminated. 204 The surveillance was reinstituted in January: a Bureau memorandum dated January 9, 1963, simply states:

Mr. Belmont called to say [FBI Assistant Director Courtney] Evans spoke to the Attorney General re placing the tech on [ ] again, and the Attorney General said by all means do this. Mr. Belmont has instructed New York to do so. 205

The authorization for the second surveillance therefore appears to have been oral. Coverage of this agent was permanently suspended on September 9, 1963. 205a

*High Executive Official: 1963.* -- Because of the possibility that a high-ranking executive official may have provided classified information not to the press but to a foreign intelligence officer, the FBI requested the Attorney General in February 1963 to authorize a wiretap on the residence telephone of this official. 205b According to the request which was sent to Attorney General Kennedy, "The President expressed personal interest in receiving information concerning the current relationship between [the official] and representatives of [a foreign country]." 205c

The Attorney General approved the request, and it was instituted three days later. 205d It was discontinued on June 14, 1963, when the target travelled abroad, 205e reinstituted on July 14, 1963; and permanently discontinued on November 6, 1963, "because of lack of productivity." 205f

*Editor of an Anti-Communist Newsletter. 1965.* -- The publication in an anti-Communist newsletter of information believed to be classified led to the wiretapping of both the editor of the newsletter and an attorney in the Washington, D.C. area with whom the editor was in frequent contact. These surveillances were approved in writing by Attorney General Nicholas Katzenbach in April and June of 1965, respectively, and each began about three weeks after approval. 206

In November 1965, the FBI recommended discontinuance of the taps because "[w]e have not developed any data since outset of investigation which would show that [the targets] are currently receiving information from individuals in the Executive Branch of the Government. In fact, we now believe that it is highly unlikely that our technical coverage will develop such information in the future." 206a

According to a memorandum sent to the Attorney General, the tap on the lawyer was discontinued on November 2, 1965, and that on the editor on November 10, 1965. 206b

*Joseph Kraft: 1969.* 207 -- The basic facts surrounding the wiretapping and microphone surveillance of columnist Joseph Kraft are a matter of public record. In June 1969, possibly in response to a leak from the National Security Council, John Ehrlichman instructed John Caulfield and John Ragan, two individuals associated with the White House "Plumbers" and

unconnected with the FBI, to place a wiretap on the Washington, D.C. residence of Mr. Kraft. This tap was removed one week later, when the columnist left Washington on an extended trip to Europe. W. C. Sullivan, then Assistant Director of the FBI, subsequently followed Mr. Kraft abroad, apparently on instructions from Mr. Hoover and Mr. Ehrlichman. Overseas, Sullivan arranged with a foreign security agency to conduct electronic surveillance of Kraft in his hotel room: when the installation of a telephone tap proved to be impossible because of the "elaborate switchboard" of the hotel, a microphone was placed in his room instead. 209 The results of this coverage, which lasted from July 3 to July 7, 1969, were transmitted back to Mr. Hoover personally through the FBI's Legal Attache at the American Embassy. 210

In November and December of that year, Mr. Kraft was again the target of FBI surveillance: the Washington Field Office conducted physical surveillance of the columnist from November 5 until December 12. 211 In addition, Director Hoover requested approval from Attorney General Mitchell for a wiretap on Mr. Kraft on November 5, 212 but approval was never granted and the wiretap never installed. 213

*The "Seventeen Wiretaps:" 1969-1971.* 214 -- The wiretaps which were directed against seventeen government employees and newsmen between May 1969 and February 1971 have been the subject of civil litigation and extensive Congressional inquiries. In view of the pending civil litigation, the Committee has not attempted to duplicate the depositions which bear on the authorization of these wiretaps. The basic facts as recorded in FBI documents and public record testimony, however, may be summarized as follows:

On May 9, 1969, a story by William Beecher concerning American bombing raids in Cambodia appeared in the New York Times. According to a contemporaneous internal memorandum from J. Edgar Hoover to senior FBI officials, Henry Kissinger telephoned him that morning requesting the Bureau to "make a major effort to find out where [the story] came from." 215 Kissinger called Mr. Hoover twice more that day, once to request that additional articles by Beecher be included in the inquiry and once to request that the investigation be handled discreetly "so no stories will get out." 216 Before 5:00 p.m. on May 9, Hoover telephoned Kissinger to inform him that initial FBI inquiries suggested that Morton Halperin, a staff member of the National Security Council, could have been in a position to leak the information upon which Beecher was believed to have based his article: Hoover noted that Halperin "knew Beecher and that he [Hoover] considered [Halperin] a part of the Harvard clique, and, of course, of the Kennedy era." 217

According to Hoover, "Dr. Kissinger said he appreciated this very much and he hoped I would follow it up as far as we can take it and they will destroy whoever did this if we can find him, no matter where he is. 218

Dr. Kissinger has testified that he had been asked at a White House meeting, which, he believed, may have occurred in late April 1969 and which was attended by the President, the Attorney General, and J. Edgar Hoover, "to supply the names of key individuals having access to sensitive information which had leaked [even before the Cambodia story]." 218a He noted that at this meeting "Director Hoover identified four persons as security risks and suggested that these four be put under surveillance initially." 218b Among the persons so identified was Morton Halperin. Kissinger said that when the Cambodia story was published on May 9, "I called Mr. Hoover at President Nixon's request to express the President's and my concern about the seriousness of the leak appearing that date and to request an immediate investigation. He also stated that in these telephone conversations, 'I do not recall any discussion of wiretapping. At that time, my understanding was that the wiretapping program had been authorized and that, therefore, Mr. Hoover or his staff had the right to use wiretapping in their investigations. I do not recall any discussions as to when the program would actually be put into effect.'" 218d He further testified that "[i]n view of the President's authorization, Mr. Hoover evidently chose to institute the wiretaps after my calls to him on May 9, regarding the national security significance of the Beecher story in the New York Times of the same date." 218e

The wiretap on Halperin was installed without the written approval of the Attorney General, in late afternoon on May 9, 1969. 219 The next morning, Alexander Haig personally visited William Sullivan at FBI Headquarters. According to a memorandum from Sullivan to Cartha DeLoach, Haig requested that wiretaps be placed on four individuals, including Halperin, who were members of the National Security Council staff and Defense Department employees. 220 Haig stated that this request "was being made on the highest authority" and "stressed that it is so sensitive it demands handling on a need-to-know basis, with no record maintained." 221 According to Sullivan, Haig said that "if possible, it would be even more desirable to have the matter handled without going to the [Justice] Department." 222

Alexander Haig testified that Dr. Kissinger had instructed him to see Mr. Sullivan and to act as the "so-called liaison as this program was instituted, I believe, authorized by the President, the Director, and the Attorney General." 222a He further stated that Dr. Kissinger provided him with the names to take to Sullivan 222b and that he had the "impression" that the names were "cleared and concurred in by" the President or his representative, the Director, and the Attorney General. 222c Haig denied that he requested the Bureau not to maintain a record of the surveillances, noting that "the point I would recall making very clearly was the extreme sensitivity of this thing, and the avoidance of unnecessary paperwork, which would make this program subject to compromise." 222d He also testified that he does not recall urging Sullivan to avoid going to the Justice Department. 222e

On May 12, a formal request was sent by the Director to Attorney General Mitchell for wiretaps on all four individuals (one of which had been in operation for three days); Mitchell approved; and the additional taps were subsequently instituted. 223

Over the course of the next one and one-half years, thirteen more individuals became the subjects of wiretaps in this same program. Bureau documents reflects the following authorizations from Attorney General Mitchell:

- May 20, 1969: Two members of the staff of the National Security Council
- May 29, 1969: A reporter for the London Sunday Times
- June 4, 1969: A reporter for the New York Times
- July 23, 1969: A White House domestic affairs adviser
- August 4, 1969: A White House speech writer
- September 10, 1969: A correspondent for CBS News
- May 4, 1970: A Deputy Assistant Secretary of State; a State Department official of "Ambassador"

rank; and a Brigadier General with the Defense Department  
-- May 13 1970: Two additional staff members of the National Security Council  
-- December 14, 1970: A second White House domestic affairs adviser. 224

The longest of these wiretaps was the one on Halperin: it continued for twenty-one months, until February 10, 1971, and was apparently terminated at the insistence of Director Hoover, who was about to testify before the House Appropriations Committee. 225 Other wiretaps lasted for periods of time varying from six weeks to twenty months.

*Charles Radford: 1971-1979.* -- The December 1971 publication of an article by Jack Anderson which described private conversations between President Nixon and Henry Kissinger led to a total of four wiretaps on American citizens to determine the source of this apparent leak. According to an internal Bureau memorandum, Attorney General Mitchell personally contacted Deputy Associate FBI Director W. Mark Felt on December 22, 1971, and orally instructed him to institute a wiretap on Charles E. Radford II. 226 Radford, a Navy Yeoman who was assigned to the Joint Chiefs of Staff, was apparently a primary suspect because he had frequent contact with the White House and the National Security Council and belonged to the same church as Jack Anderson. 227 Mitchell informed Felt that this request originated with the President and noted that no prosecution was contemplated. 228 The FBI was not requested to conduct a full investigation of the leak, only to wiretap Radford. 229 After obtaining approval from J. Edgar Hoover, Felt secured the institution of the wiretap on Radford's residence on December 23.

On the basis of certain telephone contacts Radford subsequently made, additional wiretaps were placed on the residences of two of Radford's friends, one a former Defense Attache, the other a State Department employee. These wiretaps were instituted on January 5 and January 14, respectively, and both continued until February 17. 230 When Radford was transferred to the Naval Reserve Training Center near Portland, Oregon, the Attorney General requested a wiretap on the home of Radford's step-father, 230a with whom he was to stay until he could locate a home of his own. This coverage was instituted immediately, 231 and although Radford moved into his own residence by February 15, when another wiretap was installed on his new home, 232 the tap on his step-father was not terminated until April 11, 1972. 233 Coverage was also instituted on the training center where Radford worked on February 7, 1972, and like the tap on his step-father it continued until April 11. 234

The tap on Radford's Oregon residence was not terminated until June 20, 1972 -- one day after the Supreme Court's decision in the Keith case. One Bureau official wrote that "it was not discontinued on 6/19/72, as others falling under the Keith rule had been, since we were awaiting a decision from the White House." 235

In violation of Justice Department procedures, none of these Radford wiretaps was ever authorized by the Attorney General in writing. 236 Two of the wiretaps apparently did not even receive the explicit oral approval of the Attorney General. An internal Bureau memorandum states that the surveillance of the State Department employee and the wiretap on the Naval Reserve Training Center were both requested by David Young, an assistant to John Ehrlichman, who merely informed the Bureau that the requests originated with Ehrlichman and had the Attorney General's concurrence. 237

Thus, between 1960 and 1972, nearly thirty American citizens ostensibly suspected of leaking classified information were wiretapped by the FBI without a warrant in the United States; another was the subject of an FBI microphone surveillance abroad. No fewer than seven of these targets were journalists or newsmen. At least ten of the wiretaps were instituted without the prior written approval of the Attorney General, which was required in every case. Although the taps generated a significant amount of both personal and political information -- much of which was disseminated to the highest levels in the White House -- Bureau memoranda do not reveal that the wiretaps succeeded in identifying a single person who had leaked national security information.

#### *D. Electronic Surveillance Predicated on Other Grounds*

In the course of at least three separate investigations between 1960 and 1972, Americans were the targets of FBI electronic surveillance for purposes which cannot easily be categorized as collecting information about subversive or violent activities or about leaks of classified material. Two of these cases -- the "Sugar Lobby" and the Jewish Defense League surveillances, described below -- related to foreign concerns. The Sugar Lobby investigation was apparently instituted to gather foreign intelligence information seen as necessary for the conduct of foreign affairs and to detect alleged attempts of foreign representatives to influence American officials. A wiretap on the Jewish Defense League (JDL) and one of its members, while requested primarily on the ground of "violent activities," was defended in a subsequent civil action as similarly necessary to gather information important to United States foreign relations.

The third case occurred in connection with the Warren Commission's review of events surrounding President John F. Kennedy's assassination. In 1964, the FBI installed one wiretap (with the approval of the Attorney General) and two microphone surveillances at the specific request of this Commission in order to obtain information about the assassination. 238

*The "Sugar Lobby" Wiretaps: 1961-1962.* 239 -- On February 9, 1961, Attorney General Robert Kennedy requested the FBI to initiate an investigation for the purpose of:

develop[ing] intelligence data which would provide President Kennedy a picture of what was behind pressures exerted on behalf of [a foreign country] regarding sugar quota deliberations in Congress ... in connection with pending sugar legislation. 240

This investigation lasted for approximately nine weeks, and was reinstituted for a three-month period in mid-1962. At its height, the investigation involved a total of twelve telephone wiretaps, three microphone surveillances, and physical surveillances of eleven separate individuals. 241 Six of the wiretaps were directed against American citizens, who included three executive branch employees, a Congressional staff member, and two registered lobbying agents for foreign interests, one

of whom was an attorney whose office telephone was wiretapped. One of the microphone surveillances was directed at a United States Congressman.

The expiration of existing import quotas for sugar in 1961 provided the backdrop against which these events were set. In early 1961, the intelligence community had learned that officials of a foreign government "intensely desired passage of a sugar bill by the U.S. Congress which would contain quotas favorable to [that government]." 242 This fact had significant ramifications on American foreign policy. According to a CIA memorandum addressed to the President's national security advisor:

It is thought by some informed observers that the outcome of the sugar legislation which comes up for renewal in the U.S. Congress in March 1961 will be all-important to the future of U.S. -- [foreign country] relations. 243

There was also a possibility that unlawful influence was involved. In early February, the FBI discovered that representatives of the foreign government might have made monetary payments or given gifts to influence certain Congressmen, Senators, and executive branch officials. 244

Because of the foreign intelligence interest involved, and on the ground that "the administration has to act if money or gifts are being passed by the [foreign representatives]," 245 Robert Kennedy authorized a number of wiretaps on foreign targets and domestic citizens who were believed to be involved in the situation. Specifically, he approved wiretaps on the following American citizens: three officials of the Agriculture Department (residence telephones only) ; 246 the clerk of the House Agriculture Committee (residence telephone only) ; 241 and a registered agent of the foreign country (both residence and business telephones). 248

In the course of this investigation, the Bureau determined that Congressman Harold D. Cooley, the Chairman of the House Agriculture Committee, planned to meet with representatives of the foreign country in a hotel room in New York City, in mid-February 1961. 249 At the instruction of Director Hoover, the New York Field Office installed a microphone in Cooley's hotel room to record this meeting, 250 and the results were disseminated to the Attorney General. 251

Under the Justice Department policy that was in effect at this time, the Bureau was not required to obtain the prior written approval of the Attorney General for microphone surveillance, and none was obtained in this case. It is not certain, moreover, that Attorney General Kennedy was ever specifically informed that Congressman Cooley was the target of a microphone surveillance: a review of this case by Bureau agents in 1966 concluded that "our files contain no clear indication that the Attorney General was specifically advised that a microphone surveillance was being utilized . . . ." 11 252 It was noted, however, that on the morning of February 17, 1961 -- after the microphone was in place but an hour or two before the meeting actually occurred--the Director spoke with the Attorney General and, according to Hoover's contemporaneous memorandum, advised him that the Cooley meeting was to take place that day and that "we are trying to cover it." 253 Hoover also wrote that he "stated [to the Attorney General] this New York situation is interesting and if we can get it covered we will have a full record of it," and that "the Attorney General asked that he be kept advised . . . ." 254 As noted above, Kennedy did receive a summary of the results of the meeting, although no specific reference was made to the technique employed. 255

The 1961 "Sugar Lobby" investigation did discover that possibly unlawful influence was being exerted by representatives of the foreign country involved, but it did not reveal that money was actually being passed to any executive or legislative branch official. All of the electronic surveillances but two (both of which were on foreign targets) were discontinued in April 1961, about two weeks after the administration's own sugar bill passed the Senate.

The investigation was reinstituted in June 1962, however, when the Bureau learned that representatives of the same foreign country might be influencing Congressional deliberations concerning an amendment to the sugar quota legislation. 256 On June 26, 1962, the Bureau requested authority for wiretaps on five foreign establishments plus the office telephones of an attorney who was believed to be an agent for the foreign country and, again, the residence telephone of the Clerk of the House Agriculture Committee. Robert Kennedy approved all of these taps on July 9, 257 and they were instituted about one week later. 258

After one month of operation, the wiretaps on one foreign establishment and the Clerk of the House Agriculture Committee had "produced no information of value" and were consequently discontinued. 259 While there is no indication that the other wiretaps produced evidence of actual payoffs, they did reveal that possibly unlawful influence was again being exerted by the foreign government and internal Bureau permission was obtained to continue them for another sixty days, 260 after which time they were presumably terminated. 261

*Jewish Defense League: 1970 and 1971.* -- On September 14, 1970, the FBI requested a wiretap on six telephone lines of the New York Headquarters of the Jewish Defense League, an organization composed of American citizens who opposed, through both peaceful and violent means, the Soviet Union's treatment of Jewish citizens. 262 Attorney General John Mitchell approved the wiretap on September 15; 262a it was instituted on October 1 and continued for one month. 262b It was re-authorized for two three-month periods on January 4, 1971, and March 31, 1971. 263 Coverage was terminated July 3, 1971. 263a

According to Attorney General Mitchell, the JDL wiretap was "deemed essential to protect this nation and its citizens against hostile acts of a foreign power and to obtain foreign intelligence information deemed essential to the security of the United States." 264 More specifically, he contended that the activities of the Jewish Defense League toward official representatives of the Soviet Union, which had allegedly included acts of violence such as bombing the offices of a Soviet trade organization and the Soviet airlines, risked "the possibility of international embarrassment or Soviet retaliation against American citizens in Moscow," especially in light of vigorous protests by the Soviet Union. 265 The wiretap was approved in order to obtain "advance knowledge of any activities of the JDL" which might have such repercussions; 265a its re-authorization was sought and obtained on the ground that it had "furnished otherwise unobtainable information, well in advance of public statements by the JDL, thereby allowing for adequate countermeasures to be taken by appropriate police and security forces." 266

Criminal indictments were returned against several JDL members in May 1971, and shortly thereafter the prosecution revealed the existence of the wiretap to the defendants. In the context of the criminal case, the Government characterized the JDL wiretap as a "domestic security wiretap" and conceded that it was unlawful. 267 The "foreign intelligence" predicate, however, was raised by Attorney General Mitchell and other civil defendants in the civil action -- *Zweiban v. Mitchell* -- subsequently filed by sixteen members of JDL who were overheard on the wiretap.

The District Court in the *Zweiban* case agreed with Attorney General Mitchell that the JDL wiretap was in fact related to United States foreign affairs and held that its authorization by the Attorney General was a proper exercise of the constitutional power of the President and his designees. On appeal, the Court of Appeals did not reexamine the District Court's finding that the wiretap was originally predicated on foreign affairs needs 268 because it held that even if one accepts the foreign relationship predicate, the wiretapping of American citizens who are neither the agents of nor collaborators with a foreign power is unconstitutional under the Fourth Amendment. 269

## VII. DOMESTIC SURVEILLANCE ABUSE QUESTIONS

The possibilities for abuse of warrantless electronic surveillance have clearly been greatest when this technique is directed against American citizens and domestic organizations. The application of vague and elastic standards for wiretapping and bugging has resulted in electronic surveillances which, by any objective measure, were improper and seriously infringed the Fourth Amendment rights of both the targets and those with whom the targets communicated. Americans who violated no criminal law and represented no genuine threat to the "national security" have been targeted, regardless of the stated predicate. In many cases, the implementation of wiretaps and bugs has also been fraught with procedural violations, even when the required procedures were meager, thus compounding the abuse. The inherently intrusive nature of electronic surveillance, moreover, has enabled the Government to generate vast amounts of information -- unrelated to any legitimate governmental interest -- about the personal and political lives of American citizens. The collection of this type of information has, in turn, raised the danger of its use for partisan political and other improper ends by senior administration officials.

### A. Questionable and Improper Selection of Targets

Judged against the principles established in the 1972 *Keith* case, nearly all of the Americans, unconnected with a foreign power, who were targets of warrantless electronic surveillance were improperly selected. Even without retrospective Fourth Amendment analysis of pre-*Keith* electronic surveillances, however, a close review of some of the particular cases 269a outlined above suggests that (regardless of whether the ostensible predicate was violence, "subversion," or any other basis) the standards for approval of electronic surveillances were far too broad to restrict the use of this technique to cases which involved a substantial threat to the nation. Moreover, the use of warrantless electronic surveillance against certain categories of individuals, such as attorneys, Congressmen and Congressional staff members, and journalists, has revealed an insensitivity to the values inherent in the Sixth Amendment and in the doctrines of "separation of powers" and "freedom of the press."

#### 1. Wiretaps Under the "Domestic Security" Standard

In 1940, President Roosevelt approved the use of wiretapping against "persons suspected of subversive activities against the Government of the United States." 270 As discussed in Section II, this formulation was supplemented by President Truman in 1946 to include "cases vitally affecting the domestic security, or where human life is in jeopardy." 271 Several cases from the period 1960 to 1965 (when the "domestic security" standard was replaced by President Johnson's "national security" standard) suggest the ease with which the term "domestic security" was stretched to cover the targeting of Americans who posed no substantial threat to the internal security of the country.

Prior to the institution of the 1961 and 1962 "Sugar Lobby" wiretaps, 272 for example, the Government did possess some evidence of possibly unlawful influence by foreign officials and some evidence of the importance of the sugar quota legislation to the foreign nation involved. But there was clearly no evidence that "human life" was in jeopardy, and neither the possibility of unlawful influence nor the desire to gain information relevant to our relations with the foreign country had a significant impact on the domestic security. The documentary record of the investigation, moreover, contains no suggestion that the three Agriculture Department employees, one Congressional staff aide, and two lobbyists who were tapped represented any internal security threat.

In the case of the 1961 wiretap on Lloyd Norman, 273 the FBI apparently had no information beyond the fact of his authorship of the "suspect" article that Norman had obtained any classified material or that a leak had actually occurred. Norman himself told Bureau agents when interviewed that "he based his article on speculation and conjecture . . ." 274 and a Pentagon source indicated that he "had no factual information as to who leaked the information or that Norman was actually the person who obtained the information." 275 The wiretap subsequently produced no information which suggested that Norman had received any classified information. 276 According to an internal summary of the final FBI report on the "leak": "The majority of those interviewed thought a competent, well informed reporter could have written the article without having reviewed or received classified data." 277 This wiretap, in short, was approved by Robert Kennedy without any apparent evidence that the target had actually obtained classified information: the wiretap results, Norman's personal interview with the FBI, and the entire investigation all suggested, in fact, that he had not.

In April 1964, Kennedy approved "technical coverage" (electronic surveillance) on Malcolm X after the FBI advised him that the Nation of Islam leader was "forming a new group" which would be "more aggressive" and would "participate in racial demonstrations and civil rights activities." 278 The only indication of possible danger reflected in the wiretap request, however, was that Malcolm X had "recommended the possession of firearms by members for their self-protection." 279

The wiretaps, discussed above, which were placed between 1962 and 1965 as part of COMINFIL investigations, also show the lengths to which the "domestic security" standard could be stretched. Most of these wiretaps were based not on specific actions of the targets that threatened the domestic security but on the possibility that the targets, consciously or even unwittingly encouraged by communists, would engage in such activities in the future. While the Attorney General and the FBI may properly have been concerned about certain advisors to Dr. Martin Luther King, Jr., for example, no serious argument can be made that Dr. King himself jeopardized the nation's security. Yet King was the target of no fewer than five wiretaps between 1963 and 1965, and an associate of his (who was not one of his suspected advisors) was also wiretapped in 1964.

In the case of the Student Non-Violent Coordinating Committee, even *potential* communist infiltration was apparently seen as sufficient to justify a wiretap under the "domestic security" standard. The request for a wiretap on SNCC which was sent to Attorney General Katzenbach in 1965 noted that "confidential informants" described SNCC as "the principal target for Communist Party infiltration among the various civil rights organizations" and stated that some of its leaders had "made public appearances with leaders of Communist-front organizations" and had "subversive backgrounds." 280 The FBI presented no substantial evidence, however, that SNCC was in fact infiltrated by Communists -- only that the organization was allegedly a target for such infiltration in the future.

## *2. Microphone Surveillances Under the "National Interest" Standard*

Between 1954 and 1965, the prevailing standard for the approval of microphone surveillances was that established by Attorney General Brownell in 1954. "Considerations of internal security and the national safety are paramount," he then wrote, "and, therefore, may compel the unrestricted use of this technique in the national interest." 281

Under this standard, J. Edgar Hoover approved the bugging of Congressman Cooley's hotel room in February 1961, in connection with the "Sugar Lobby" investigation. Law enforcement purposes or the need to gather foreign intelligence information may arguably have supported this surveillance, 281a but the documentary record of the Sugar Lobby investigation reveals no genuine "internal security" or "national safety" justification for the Cooley bug. 282

This standard was also used to justify the fifteen microphone surveillances of Dr. Martin Luther King, Jr., between January 1964 and October 1965. Significantly, FBI internal memoranda with respect to some of these installations, make clear that they were planted in Dr. King's hotel rooms for the express purpose of obtaining personal information about him rather than for internal security purposes. 283 The validity of the "national interest" rationale for the other bugs -- and for the microphone surveillances of certain associates of Dr. King -- is also open to serious question. 284

At the 1964 Democratic National Convention in Atlantic City, New Jersey, the FBI also planted a microphone in the joint headquarters of the Student Non-Violent Coordinating Committee and the Congress on Racial Equality. 285 The only reason for the SNCC bug expressed in contemporaneous FBI documents was the following:

Sixty members of the SNCC from Jackson, Mississippi, plan to attend the Convention to assist in seating the Mississippi Freedom Democratic Party delegation. This group also reportedly will utilize walkie-talkies in connection with their planned demonstrations. 286

A 1975 Inspection Report on the FBI's activities at the 1964 Convention speculated that the bug may have been installed because the Bureau had information at that time that "an apparent member of the Communist Party, USA, was engaging in considerable activity, much in a leadership capacity in the Student Non-Violent Coordinating Committee." 287 CORE appears to have been an incidental target of the SNCC bug, since the two groups shared offices in Atlantic City.

## *3. Wiretaps and Microphone Surveillances Under the Five Criteria Based on Section 2511 (3)*

Improper and questionable selection of targets continued after the Justice Department altered the criteria under which wiretaps and bugs could be authorized to conform with the five categories set forth by Congress in Section 2511(3) of the 1968 Omnibus Crime Control Act. (These categories are discussed at p. 288-290.)

There does not appear to have been any genuine national security justification, for example, supporting the "Plumbers" wiretap on Joseph Kraft's Washington residence or the FBI's bug in his hotel room abroad. John Ehrlichman testified before the Senate Watergate Committee that the "national security" was involved, but did not elaborate further. 288 According to the transcript of the White House tapes, President Nixon stated to John Dean, on April 16, 1973 that

... What I mean is I think in the case of the Kraft's stuff what the FBI did, they were both fine. I have checked the facts. There were some done through private sources. Most of it was done through the Bureau after we got -- Hoover didn't want to do Kraft. What it involved apparently, John, was this: the leaks from the NSC [National Security Council]. They were in Kraft and others' columns and we were trying to plug the leaks and we had to get it done and finally we turned it over to Hoover. And then when the hullabaloo developed we just knocked it off altogether . . . 289

Beyond these claims, there is little evidence that any national security issue was involved in the case. Former Deputy Attorney General and Acting FBI Director William Ruckelshaus testified: "I did review the information on which the effort was made from one of the operations out of the White House to put a tap on Mr. Kraft and, frankly, I could never see any national security justification for doing so." 290 Of the hotel room bug, Mr. Ruckelshaus stated: "The justification would have been that he was discussing with some -- asking questions of some members of the North Vietnamese Government, representatives of that government. My own feeling is that this just is not an adequate national security justification for placing any kind of surveillance on an American citizen or newsman. It just is not an adequate justification . . ." 291 Mr. Kraft stated in a 1974 Congressional hearing that he was in contact with North Vietnamese officials while he was overseas in 1969, but he noted that this was a common practice among journalists and that he never knowingly published any classified information on the basis

of these or any other contacts he made there. 292 He further stated that Henry Kissinger, then the President's Special Adviser for National Security, informed him that he had no contemporaneous knowledge of either the wiretap or the hotel room bug, and that former Attorney General Elliot Richardson indicated to him that "there was no justification for these activities." 293 Attorney General Edward Levi recently wrote Mr. Kraft that the FBI's 115-document file on the columnist "did not indicate that Mr. Kraft's activities posed any risk to the national interest." 294

There is also no evidence of a "national security" justification for the physical surveillance or the proposed electronic surveillance of Kraft in the fall of 1969. A Bureau memorandum suggests that the Attorney General did desire some type of coverage of Kraft, 295 but the record reveals no purpose for this coverage.

Perhaps significantly, the physical surveillance was discontinued after five weeks because it had "not been productive." 296 Apparently, the Attorney General himself was unconvinced that a genuine "national security" justification supported the Kraft surveillance: he refused to authorize the requested wiretap and it was consequently never implemented.

The "Seventeen Wiretaps" in 1969, 1970, and 1971 clearly reveal the relative ease with which improper targets can be selected for wiretapping. Shortly after these wiretaps were revealed publicly, President Nixon stated that they had been justified by the need to prevent leaks of classified information harmful to the "national security." 297 In the cases of several of these taps, however, no "national security" claim was advanced in the supporting documents that went to the Attorney General requesting authorization. Two of the targets were domestic affairs advisers at the White House, who had no foreign affairs responsibilities and apparently had no access to classified foreign policy materials. According to Bureau memoranda, their coverage was not requested through the President's National Security Advisor or his assistant, as Bureau memoranda indicate others in this series were, 298 but by the White House directly: John Mitchell approved the first of these two taps at the request of "higher authority;" 299 the second of these two was requested by H. R. Haldeman. 300

A third target was a White House speech writer who had been overheard on an existing tap agreeing to provide a reporter with background information on a Presidential speech concerning not foreign policy but revenue sharing and welfare reform. 301 This tap was also requested by the White House directly. The reinstatement of the tap on one National Security Council staff member was apparently requested by H. R. Haldeman simply because "they have some concern [about him]; they may have a bad apple and have to get him out of the basket." 302 The last four requests which were sent to the Attorney General, including that for reinstatement of the tap on the NSC staff member, do not mention any national security justification to support the requests. 303 While national security issues were at least arguably involved in some of the taps, in short, additional targets were selected with no national security basis at all. As William Ruckelshaus has testified:

I think some of the individuals who were tapped, at least to the extent I have reviewed the record, had very little, if any, relationship to any claim of a national security tie ... I think that as the program proceeded and it became clear to those who could sign off on taps how easy it was to institute a wiretap under the present procedure that those kinds of considerations [i.e., genuine national security justifications] were considerably relaxed as the program went on. 304

As noted in Section VI above, wiretaps were -also placed on three antiwar organizations which were involved in planning the "March on Washington" in November 1969. The first of these three wiretaps, approved by Attorney General Mitchell on November 6, was directed against the New Mobilization Committee to End the War in Vietnam (NMC). 305 The FBI's request for coverage of this group noted that the anticipated size of the demonstration was cause for "concern" should violence break out, but it made no claim that NMC members in particular engaged in or were likely to engage in violent activity. The entire "justification" portion of the memorandum sent to John Mitchell reads as follows:

The New Mobilization Committee to End the War in Vietnam (NMC) is coordinating efforts for a massive antiwar manifestation to take place in Washington, D.C., November 12-16, 1969. This group maintains a Washington, D.C., office at 1029 Vermont Avenue, Northwest, where the planning takes place.

This demonstration could possibly attract the largest number of demonstrators ever to assemble in Washington, D.C. The large number is cause for major concern should violence of any type break out. It is necessary for this Bureau to keep abreast of events as they occur, and we feel that in this instance advance knowledge of plans and possible areas of confrontation would be most advantageous to our coverage and to the safety of individuals and property. Accordingly, we are requesting authorization to install a telephone surveillance on the Washington office of the NMC. 306

Five days after he approved the first tap, the Attorney General authorized wiretaps on the Vietnam Moratorium Committee and a third antiwar organization, both of which were "closely coordinating their efforts with NMC in organizing the demonstration." 307 The only additional justification given for the wiretap on the Vietnam Moratorium Committee was that the group "has recently endorsed fully the activities of the NMC concerning the upcoming antiwar demonstrations." 308

In 1970, approval for a wiretap on a "New Left-oriented campus group" was granted by Attorney General Mitchell on the basis of an FBI request which included, among other factors deemed relevant to the necessity for the wiretap, evidence that the group was attempting "to develop strong ties with the cafeteria, maintenance and other workers on campus" and wanted to "go into industry and factories and ... take the radical politics they learned on the campus and spread them among factory workers." 309

This approval was renewed three months later despite the fact that the request for renewal made no mention of violent or illegal activity by the group. The value of the wiretap was shown, according to the FBI, by such results as obtaining "the identities of over 600 persons either in touch with the national headquarters or associated with" it during the prior three months. 310 Six months after the original authorization the number of persons so identified had increased to 1,428; and approval was granted for a third three-month period. 311

#### *4. Electronic Surveillance of Journalists, Attorneys and Persons Involved in the Domestic Political Process*

As the preceding three subsections indicate, the elasticity of the standards for instituting electronic surveillance has permitted this technique to be directed against American citizens with little or no adequate justification in the particular case. In addition, the targeting of individuals in certain categories, such as journalists, attorneys, and persons involved in the domestic political process, is an inherently questionable practice because of the special concerns which affect these groups.

Between 1961 and 1972, at least six American journalists and newsmen were electronically surveilled by the FBI: Lloyd Norman in 1961; 312 Hanson Baldwin in 1962; 313 the editor of an anti-Communist newsletter in 1965; 314 Joseph Kraft in 1969; 115 and two American newsmen in connection with the "Seventeen Wiretaps" during the period 1969 to 1971. 316 All of these surveillances were ostensibly conducted to determine the source of leaks of classified information.

The wiretapping of journalists in the investigation of "leaks," however has proven to be a fruitless enterprise. As former Secretary of State Dean Rusk stated:

Tapping newsmen will not stop leaks and for the most part is not even going to uncover leaks. There are so many different ways in which leaks can be made and from so many different quarters that there is no way to get at the business of leaks and on sheer practical grounds this is rather foolish policy to pursue. 317

Aside from matters of practicality, the Constitution gives special protection to "freedom of the press." The precedent set by wiretapping newsmen inevitably tends to undermine the Constitutional guarantee of a free and independent press.

During the 1960s there were also numerous wiretaps on the office telephones of attorneys. In the course of the Sugar Lobby investigation in 1962, ten telephone lines of a Washington, D.C., law firm were wiretapped in order to intercept the conversations of a single lawyer who was believed to be acting as a lobbyist for foreign interests. 318 In that same year, the office telephone of an advisor to Dr. Martin Luther King, Jr. -- also a lawyer -- was wiretapped and his office was bugged; 319 his telephone was wiretapped again in 1965. 320 A second attorney who advised Dr. King was wiretapped in 1963; 321 and the office telephone of an attorney who was in frequent contact with the editor of an anti-Communist newsletter was wiretapped in 1965. 322 Attorneys have also been frequently overheard on wiretaps not specifically directed at them. The wiretap on the headquarters of the Jewish Defense League in 1970 and 1971, for instance, intercepted the conversations between Bertram Zweibon, an attorney for several JDL members, and his clients. 323

Both direct and indirect electronic surveillances of attorneys, such as those listed above, inevitably jeopardize the Sixth Amendment-based attorney-client privilege, because this technique, by its intrusive nature, is capable of providing the means by which the FBI and the Justice Department can learn the legal strategy to be used by actual and potential defendants as well as other information given in confidence by clients to their attorneys. In order to minimize the possibility of violating the attorney-client privilege, FBI monitoring agents in court-ordered electronic surveillance cases are currently under instructions to shut off interception equipment upon the commencement of conversations between a client and his attorney concerning a "pending criminal case." 324 This policy is also applied to warrantless electronic surveillances. 325 As a practical matter, however, it is difficult, if not impossible, to comply fully with this requirement since the monitoring agent must listen to the beginning of such a conversation even to recognize it.

In the Jewish Defense League case, the wiretap continued for more than a month after federal criminal indictments were returned against several JDL members. In violation of a specific instruction from the Attorney General to suspend the overhearing and recording of conversations between "individuals who are or may be defendants or attorneys in pending Federal cases," 326 Bureau agents overheard and recorded conversations between some of the indicted JDL members and their attorney, Mr. Zweibon. The District of Columbia Court of Appeals wrote in regard to this matter:

When criminal indictments have already been returned against some subjects of a surveillance, as was true in this case.... surreptitious surveillance may ... deny those subjects effective assistance of counsel in derogation of their Sixth Amendment rights ... We do not mean to suggest that appellees [Attorney General Mitchell and other government officials] were even partially motivated by a desire to overhear privileged attorney-client communications concerning pending criminal trials ... However, we note that such motivations may prompt surveillance in other situations and thus constitute another abuse which prior judicial authorization may help to curb. 327

Electronic surveillance of persons involved in the domestic political process, such as Congressmen, lobbyists, and Congressional aides, also raises special problems. Information is often the key to power; and the ability of high executive officials to use electronic surveillance to obtain information about their political opponents can give the President and his aides enormous influence. Apart from violating the rights of the surveillance targets, wiretapping and bugging on behalf of the President's political interests destroys the Constitutional system of checks and balances designed to limit the exercise of arbitrary power.

Electronic surveillance has been used to serve the interests of Presidents in almost every political arena; it has been a resource for executive power that has tempted administrations of both political parties. Officials succumbed to the temptation with a consistency which demonstrates the immense danger of vesting authority over the use of such techniques solely within the Executive Branch.

#### *B. Procedural Violations*

Frequent violations of the internal procedural requirements for warrantless electronic surveillance have compounded the abuses to which this technique is prone. Wiretaps and bugs have often been installed without the prior authorization of the

Attorney General and at times without prior authority from Bureau Headquarters, thus defeating one of the few checks on the unrestricted use of electronic surveillance. Certain very sensitive surveillances have also been intentionally excluded from the ELSUR Index, rendering impossible the retrieval of overhears and other information about the surveillances through a regular file search. In two cases, surveillance records were physically removed from FBI Headquarters and stored at the White House. The occurrence of procedural violations such as these have doubtlessly facilitated the improper use of electronic surveillance of American citizens.

The failure of the FBI to secure the necessary prior approval of the Attorney General in a number of wiretapping cases has been described above. Wiretaps directed against Lloyd Norman, Hanson Baldwin's secretary, a former FBI agent, and Morton Halperin were all instituted and continued for a period of days without any approval or in some cases, apparently even knowledge, on the part of Attorneys General. 329 No explicit approval was ever secured from the Attorney General for two of the four wiretaps in the Charles Radford series and, also in violation of existing regulations, no written approval was granted for the other two. After the requirement of prior Attorney General approval for microphone surveillance was imposed in 1965, the FBI installed at least three bugs in hotel rooms occupied by Dr. Martin Luther King, Jr., without advising the Attorney General before the fact. 330 Nor was the Attorney General's approval ever sought for the FBI's bugging of columnist Joseph Kraft in 1969. Both the SNCC bug in 1964 and an attempted microphone surveillance of Dr. King in 1966, moreover, occurred without even the approval of FBI Director Hoover: a 1975 Inspection Report on the Bureau's activities at the 1964 Democratic National Convention states that "a thorough review of Bureau records fails to locate any memorandum containing authorization for [the bug planted at SNCC headquarters] ;" 331 and on a January 1966 memorandum reflecting the New York Office installation of a microphone in Dr. King's room, Associate Director Clyde Tolson wrote, "No one here approved this. I have told [FBI Assistant Director William C.] Sullivan [who had authorized the New York office to install the bug] again not to institute mike surveillance without the Director's approval." 332

Violations of the requirement of periodic re-authorization of electronic surveillances, imposed in 1965, have also magnified this technique's abuses in the domestic area. Despite the lack of any evidence of a "national security" leak obtained from any of the "Seventeen Wiretaps," for example, -- the President himself privately admitted that the taps were unproductive and useless in determining the source of leaks 333 -- ten of them remained in operation for periods longer than ninety days and none was ever re-authorized. After the tap on Halperin had been in place for two months, William C. Sullivan wrote the Director that "Nothing has come to light [on this tap] that is of significance from the standpoint of the leak in question ;" 334 yet that tap continued for another nineteen months without re-authorization. The Halperin tap, and that on another National Security Council staff member, moreover, remained in operation long after both of these targets left the employ of the National Security Council and became advisors to Senator Edmund Muskie, then the leading Democratic prospect for the Presidency. These targets no longer had access to classified information but they were clearly in a position to provide political intelligence to the White House unwittingly. 335 The wiretap on Charles Radford was similarly never re-authorized, although it continued for nearly six months after it was instituted in December 1971.

Because of their perceived sensitivity, the records of some wiretaps and bugs were purposefully not contemporaneously integrated into the regular FBI files for warrantless electronic surveillance. When the Bureau was first advised of the "Seventeen Wiretaps," for example, it was told that their sensitivity precluded the maintenance of multiple records; 336 consequently, only one copy of the records was retained and no entries were made in the ELSUR Index. According to a 1973 FBI memorandum regarding the Radford wiretaps, "Our records have been kept completely isolated from other FBI records, and there are no indices whatsoever relating to this project." 337 And in the case of Joseph Kraft, most of the summaries which W. C. Sullivan sent to J. Edgar Hoover from abroad were marked "DO NOT FILE" to make their retrieval through a normal file search impossible. 338 In both the "Seventeen Wiretaps" case and the Kraft case, moreover, the limited surveillance records that were maintained were physically removed from the FBI headquarters and taken by Assistant Attorney General Robert Mardian to John Ehrlichman at the White House, apparently at the instruction of President Nixon. 331 On May 12, 1973, these files were discovered by Acting FBI Director William Ruckelshaus in a safe in Ehrlichman's outer office and returned to Bureau Headquarters. 340

The circumvention of normal approval and filing requirements, in short, accompanied and facilitated the improper wiretapping and bugging of American citizens. The knowledge that these requirements could, in secrecy, be ignored inevitably increased the likelihood that wiretaps and bugs would be employed without substantial justification.

### *C. Collection and Dissemination of Information Irrelevant to Legitimate Governmental Objectives*

Wiretaps and microphones, by their nature, inevitably intercept conversations which are totally unrelated to the authorized purpose of the surveillance. Virtually all conversations are overheard, no matter how trivial, personal, or political they might be. In addition, the techniques are incapable of a surgical precision which would permit the FBI to overhear only the target's conversations. Anyone using a tapped telephone or conversing in a bugged room can be overheard. These characteristics of electronic surveillance have directly resulted in another type of abuse: the collection of information, including purely personal and political information, for dissemination to the highest levels in the Government.

#### *1. Personal Information*

One extreme example of the collection and dissemination of personal information is found in the surveillance of an American citizen at the direct request of the White House. 341 Among the items of interest that the FBI obtained from a wiretap on this individual -- and delivered in utmost secrecy to a Presidential aide -- were the following: that "meat was ordered [by the target's family] from a grocer"; that the target's daughter had a toothache; that the target needed grass clippings for a compost heap he was building; and that during a telephone conversation between the target's wife and a friend the "matters discussed were milk bills, hair, soap operas, and church." 342 Even the FBI evidently realized that this type of information was unrelated to national security: for the last four months of the surveillance, most of the summaries that were disseminated to the White House began, "The following is a summary of non-pertinent information concerning captioned individual as of . . ."

From the bug planted in Joseph Kraft's hotel room, John Ehrlichman learned about this columnist's social contacts there and his views about the activities of an American politician. 343

The "Seventeen Wiretaps" supplied the White House with a wealth of information about the personal lives of the targets and the people with whom they communicated. In the private words of President Nixon, these wiretaps produced "just gobs and gobs of material: gossip and bull." 344 The White House did not learn that any of them were responsible for any national security leaks, but it did learn about their social contacts, their vacation plans, their employment satisfactions and dissatisfactions, their marital problems, their drinking habits, and even their sex lives. 345 The fact that an Associate Justice of the United States Supreme Court was overheard on one of these wiretaps and intended to review a manuscript written by one of the subjects was also disseminated to the White House. 346

The most blatant example of the collection of entirely personal information and its dissemination to high-ranking government officials occurred in connection with the FBI's investigation of Dr. Martin Luther King Jr. As noted above, the Bureau installed at least fifteen bugs in hotel rooms occupied by Dr. King, some of which were installed for the express purpose of collecting personal information. In December 1964, the FBI, with the approval of the White House, disseminated a monograph on alleged communist influence in the civil rights movement to the heads of intelligence agencies as well as the State Department, the Defense Department, and USIA. 347 This monograph contained a section on the personal life of Dr. King that was apparently based in part on the information obtained from these bugs. 348 Between 1965 and 1968, at least two updated versions of the monograph, including the section on King's personal life, were similarly distributed. 349 Other FBI summaries about Dr. King which were based in part on microphone surveillance were also disseminated to executive branch officials outside the FBI. 349a

## *2. Political Information*

Political information useful to the administration in power has also been obtained from electronic surveillance of American citizens and disseminated to Attorneys General and Presidents. While the generation of this type of information was incidental, in most cases, to the purpose of the wiretap, its dissemination has armed key officials with knowledge of the strategies of their political opponents.

*The "Sugar Lobby" Investigation.* -- The "Sugar Lobby" wiretaps and microphone bugging during the Kennedy administration serve as one example of the collection and dissemination of essentially political information. Beyond the Attorney General's concern about American foreign policy and the possibility of bribery, it is clear that at the time the initial wiretaps were placed, the Kennedy administration opposed any sugar bill that provided for the favorable quotas sought by the foreign government in question. The administration wanted a bill that would give the "Executive Branch necessary flexibility in establishing country quotas, ostensibly for the purpose of denying quotas to countries (such as [this particular foreign country]) whose foreign policy was at odds with ours. 350 Even if the 1961 and the 1962 series of wiretaps were arguably legitimate under electronic surveillance law of the early 1960s, they generated some information that was potentially useful to the Kennedy administration in terms of this legislative objective. Given the nature of the techniques used and the targets they were directed against, the collection of such information is not surprising.

One summary of an overhear that was disseminated to the Attorney General noted that a particular lobbyist "mentioned he is working on the Senate and has the Republicans all lined up ..." 351 This same lobbyist was also reported to have said that "he had seen two additional representatives on the House Agriculture Committee, one of whom was 'dead set against us' and who may reconsider, and the other was neutral and 'may vote for us.'" 352 Robert Kennedy further learned that the "friend" of one of the foreign officials "was under strong pressure from the present administration, and since the 'friend' is a Democrat, it would be very difficult for him to present a strong front to a Democratic administration." 353 From the bug in Congressman Cooley's hotel room, the Attorney General was informed that among other matters Mr. Cooley believed he "had not accomplished anything" and that "he had been fighting over the Rules Committee and this had interfered with his attempt to organize." 354

In general, coverage of the entire situation was "intensified during the time preceding the passage of the sugar quota law," 355 and was apparently terminated in 1961 when the bill desired by the administration passed the Senate. According to a memorandum of a meeting between Attorney General Kennedy and Courtney Evans, an Assistant Director of the FBI, Kennedy stated that "now [that] the law has passed he did not feel there was justification for continuing this extensive investigation." 356 The Bureau's own evaluation of these wiretaps in 1966 reads in part: "Undoubtedly, data from our coverage contributed heavily to the administration's success in [passage of the bill it desired]." 357

*The 1964 Democratic National Convention.* -- The dissemination of political information from electronic surveillance was repeated during the Johnson administration. At the request of the White House, the FBI sent a special squad to the Democratic National Convention site, in Atlantic City, New Jersey, on August 22, 1964, ostensibly to assist the Secret Set-vice in protecting President Lyndon Johnson and to ensure that the convention itself would not be marred by civil disruption. Approximately thirty Special Agents, headed by Assistant Director Cartha DeLoach, "were able to keep the White House fully apprised of all major developments during the Convention's course" by means of "Informant coverage, by use of various confidential techniques, by infiltration of key groups through use of undercover agents, and through utilization of agents using appropriate cover as reporters ..." 358 Among the "confidential techniques" were two electronic surveillances: a wiretap on the hotel room occupied by Martin Luther King, Jr., and a microphone surveillance of SNCC and CORE. 359

The White House apparently did not know of the existence of either of these electronic surveillances. Walter Jenkins, an Administrative Assistant to President Johnson who was present at the Convention and the recipient of information developed by the Bureau, stated that he was unaware that any of the intelligence was obtained by wiretapping or bugging. 360 DeLoach has testified that he is uncertain whether he ever informed Jenkins of these sources. 361 It is clear, however, that Jenkins, and presumably President Johnson, nonetheless, received a significant volume of information from the King tap and the SNCC bug -- much of it purely political and only tangentially related to possible civil unrest.

One of the most important issues that might have disturbed President Johnson at the Atlantic City Convention was the seating challenge of the regular, all-white Mississippi delegation by the predominantly black Mississippi Freedom Democratic Party (MFDP). From the electronic surveillances of King and SNCC, the White House was able to obtain the most sensitive details

of the plans and tactics of individuals supporting the MFDP's challenge. On August 24, 1964, for example, Cartha DeLoach, the FBI official who was in charge of the Bureau's special squad in Atlantic City, reported to Jenkins that:

King and [an associate] were drafting a telegram to President Johnson . . . to register a mild protest. According to King, the President pledged complete neutrality regarding the selecting of the proper Mississippi delegation to be seated at the convention. King feels that the Credentials Committee will turn down the Mississippi Freedom Party and that they are doing this because the President exerted pressure on the committee along this line. The MFDP wanted to get the issue before the full convention but because of the President's actions, this will be impossible. 362

The next day another associate of King's contacted (on the telephone in King's room) a member of the MFDP who:

said she thought King should see Governor Endicott Peabody of Massachusetts, Mayor Robert Wagner of New York City, Governor Edmund G. (Pat) Brown of California, Mayor Richard Daley of Chicago, and Governor John W. King of New Hampshire. 363

DeLoach noted that "the purpose of King's seeing these individuals is to urge them to call the White House directly and put pressure on the White House in behalf of the MFDP." 364 Jenkins was also informed that:

MFDP leaders have asked Reverend King to call Governor Egan of Alaska and Governor Burns of Hawaii in an attempt to enlist their support. According to the MFDP spokesman, the Negro Mississippi Party needs these two states plus California and New York for the roll call tonight. 365

Significantly, a 1975 FBI Inspection Report stated that "several Congressmen, Senators, and Governors of states ..." were overheard on this King tap. 366

DeLoach reported, too, that an SCLC staff member told a representative of the MFDP: "Off the record, of course, you know we will accept the Green compromise proposed;" and for Jenkins' benefit, added that "[t]his refers to the proposal of Congresswoman Edith Green of Oregon." 367

On August 26, 1964, King was overheard conferring with another civil rights leader on a number of matters relating to the convention. The report that was sent to Jenkins on this conversation included the following paragraph:

Discussion of a Vice-Presidential nominee came up and King asked what [the other leader] thought of Hugh [sic] Humphrey, and [the other individual] said Hugh Humphrey is not going to get it, that Johnson needs a Catholic ... to go into the ghettos [sic] where Johnson will not journey and, therefore, the Vice-President will be Muskie of Maine ... 368

According to both Cartha DeLoach and Walter Jenkins, the Bureau's coverage in Atlantic City did not serve political ends. 369 From the examples cited above, however, it is clear that the FBI's electronic surveillance did generate a great deal of potentially useful political intelligence, as well as political commentary that was totally unrelated to the possibility of civil unrest. A document located at the Lyndon B. Johnson Presidential Library, moreover, suggests that at least one actual political use was made of the FBI reports. This unsigned memorandum, which Walter Jenkins said was clearly intended for the President (although he disclaimed authorship), 370 disclosed Martin Luther King's strategy in connection with a meeting to be attended by President Johnson. Among other items, this memorandum reports that:

Deac DeLoach called me this morning to say that his information was that King had been advised by Joe Rauh [an attorney for the MFDP] that in this morning's meeting you were not going to let the group discuss seating of the "freedom party" delegation, but would take the initiative. King was, last night, pondering on whether to refuse to come to the meeting on the grounds of short notice ...

Deac's information was that if King did show ... he was instructed to "speak up to the President." 371

Although FBI and White House officials claimed it was implemented to prevent violence at the Convention site, in short, the Bureau's coverage in Atlantic City -- including two electronic surveillances -- undeniably provided useful political intelligence to the President as well. 372

*The "Seventeen Wiretaps."* -- In more recent years, FBI wiretaps have supplied political information to the Nixon administration as well. Since many of the "Seventeen Wiretaps" targets were personally involved in the domestic political process -- as White House aides, reporters, and Congressional consultants -- this program inevitably collected large amounts of essentially political information, much of which was disseminated to the White House. Among the examples of such items are the following:

-- That one of the targets told a friend it "is clear the administration will win on the ABM by a two-vote margin." Two Senators who apparently supported the administration's position were named. 371

-- That one of the targets "recently stated that he was to spend an hour with [one Senator's] Vietnam man, as [that Senator] is giving a speech on the 15th." 374

-- That one of the targets said Congressional hearings on Vietnam were being postponed because a key Senator did not believe they would be popular at that time. 375

-- That a well-known television news correspondent "was very depressed over having been 'singled out' by the Vice President."

-- That a friend of one of the targets wanted to see if a particular Senator would "buy a new [antiwar] amendment" and stated that "They are going to meet with [another influential Senator]." 377

-- That a friend of one of the targets said the Washington Star planned to publish an article critical of Henry Kissinger. 378

-- That a friend of one of the targets described one Senator as marginal" on the Church-Cooper Amendment but noted that another Senator might be persuaded to support it. 379

-- That one of the targets helped a former Ambassador write a press release criticizing a recent speech by President Nixon in which the President "attacked" certain Congressmen. 380

-- That one of the targets said Senator Mondale was in a "dilemma" over the "trade bill." 381

-- That the friend of one of the targets said he had spoken to former President Johnson and "Johnson would not back Senator Muskie for the Presidency as he intended to stay out of politics." 382

At least one example of a political use which was made of information such as this has also been documented. After J. Edgar Hoover informed the President that former Secretary of Defense Clark Clifford planned to write a magazine article criticizing President Nixon's Vietnam policy, 383 Jeb Stuart Magruder wrote John Ehrlichman and H. R. Haldeman that "We are in a position to counteract this article in any number of ways. . ." 384 Ehrlichman then noted to Haldeman that "This is the kind of early warning we need more of -- your game planners are now in an excellent position to map anticipatory action--" 385 and Haldeman responded, "I agree with John's point. Let's get going." 386

Perhaps significantly, after May 1970, copies of the letters summarizing the results of these wiretaps were no longer sent to Henry Kissinger, the President's national security advisor, but to H.R. Haldeman, the President's political advisor.

In summary electronic surveillance has proven to be a valuable technique for the collection of foreign intelligence and counterintelligence information within the legitimate mandate of the FBI. But the history of the use of this technique by the Bureau also proves that its dangers are equally great: without precise standards and effective checks to restrain its use, innocent American citizens may be its victims; without rigid means of restricting the dissemination of information generated through electronic surveillance, Government officials may learn the most personal -- and the most political -- expressions and beliefs of its targets.

10 18 U.S.C. 2511 (3).

11 407 U.S. at 309 n. 8. *United States v. United States District Court* remains the only Supreme Court case dealing with the issue of warrantless electronic surveillance for intelligence purposes. Three federal Courts of Appeal have considered this issue since 1972, however. The Third Circuit and the Fifth Circuit both held that the President may constitutionally authorize warrantless electronic surveillance for foreign counterespionage and foreign intelligence purposes. (*United States v. Butenko*, 494 F.2d 593 (3d Cir. 1974), cert. denied sub nom. *Ivanov v. United States*, 419 U.S. 881 (1974) ; and *United States v. Brown*,

484 F.2d 418 (5th Cir., 1973), cert. denied 415 U.S. 960 (1974).) The Court of Appeals for the District of Columbia held unconstitutional the warrantless electronic surveillance of the Jewish Defense League, a domestic organization whose activities allegedly affected U.S. - Soviet relations but which was neither the agent of nor in collaboration with a foreign power. (Zweibon v. Mitchell, 516 F.2d 594 (D.C. Cir. 1975) (en banc).) See p. 292.

12 See p. 283.

13 See p. 298.

14 See pp. 342-343.

15 See generally, NSA Report: Sec. II.

16 NSA Report: Sec. II.

17 Consensual electronic surveillance, where one party to the conversation consents to the monitoring, has been held by the Supreme Court not to be covered by the Fourth Amendment. (United States v. White, 401 U.S. 745 (1971).) However, the Committee has discovered that the FBI used such techniques in unjustified circumstances and with inadequate controls.

In 1970, all FBI field offices were instructed that "Special Agents in Charge (SACs) may, on their own initiative, authorize the use of concealed recording devices by a Special Agent or proven source in covering public appearances by black and New Left extremists except when such appearances are at educational institutions." (Memorandum from FBI Headquarters to all field offices, 11/5/70.)

In view of the broad meaning given the term "black and New Left extremists" by the Bureau at that time, this policy vested wide discretion in the field to use consensual electronic surveillance to record lawful political expression. Bureau Informants could be "wired" to record everything they heard at a public meeting, and there was no requirement that the technique be limited to the investigation of possible crime.

In 1972, however, Attorney General Richard Kleindienst issued a directive to all federal agencies, including the FBI, stating:

"All federal departments and agencies shall, except in exigent circumstances .... obtain the advance authorization of the Attorney General or any designated Assistant Attorney General before using any mechanical or electronic device to overhear, transmit, or record private conversations other than telephone conversations without the consent of all the participants. Such authorization is required before employing any such device, whether it is carried by the cooperating participant or whether it is installed on premises under the control of the participant." (Memorandum from Attorney General Kleindienst to the Heads of Executive Departments and Agencies, 10/16/72.)

24 Nardone v. United States, 308 U.S. 338 (1939).

25 For example, letter from Attorney General Robert Jackson to Rep. Hatton Summers, 3/19/41. This interpretation was undercut by the Third Circuit in 1974. United States v. Butenko, 494 F.2d 593 (3d Cir., 1974), cert. denied sub nom Ivanov v. United States, 419 U.S. 881 (1974).

26 Franklin D. Roosevelt, Confidential Memorandum for the Attorney General, 5/21/40. (Emphasis added.) Francis Biddle, who became Attorney General in 1941, stated later:

"The memorandum was evidently prepared in a hurry by the President personally, without consultation, probably after he had talked to Bob [Attorney General Jackson]. It opened the door pretty wide to wiretapping of anyone suspected of subversive activities. Bob didn't like it, and, not liking it, turned it over to Edgar Hoover without himself passing on each case. When it came to my turn I studied the applications carefully, sometimes requesting more information, occasionally turning them down when I thought they were not warranted." (Francis Biddle, In Brief Authority, Doubleday & Company, Inc., Garden City, N.Y. 1967, p. 167.)

27 House Joint Resolution 553, 5/27/40.

28 Letter from President Roosevelt to Rep. Thomas Eliot, 2/21/41.

29 Letter from Attorney General Jackson to Rep. Hatton Summers, 3/19/41. [Emphasis added.]

30 FBI Director Hoover strongly opposed any legislation requiring a judicial warrant for wiretapping. He told Attorney General Jackson in 1941:

"Wire-tapping, in my estimation, should only be used in cases of kidnapping, extortion, espionage and sabotage. It is, therefore, imperative that the use of it not be known outside of a very limited circle if the best results are to be obtained. We are dealing with realities in this matter, and we must recognize that many times United States Attorneys' offices are not as close-mouthed as they should be and that matters handled therein do become known to certain favored representatives of the press, with the result that items appear in columns that are many times alarmingly correct. Likewise, we know that there are certain Federal Judges who are not as close-mouthed as they should be about matters brought before them and certainly, in those cases in which wiretapping would be used, if limited to the few violations that I have referred to, they are so interesting and so mysterious that I fear it would encourage the Sherlock Holmes complex that many persons have, to whisper about what is being done, and then the value of the wiretapping would be completely lost. That is why I feel that the Attorney General of the United States should be the Executive Official designated to authorize the use of this procedure in certain specific types of investigations, and that these types of investigations should be very definitely limited and restricted." Memorandum from Director Hoover to the Attorney General, 1/27/41.

31 New York Times, 10/9/41. Former Attorney General Francis Biddle recalled a meeting with President Roosevelt regarding the FBI wiretap on Harry Bridges:

"When all this came out in the newspapers I could not resist suggesting to Hoover that he tell the story of the unfortunate tap directly to the President. We went over to the White House together. F.D.R. was delighted; and, with one of his great grins, intent on every word, slapped Hoover on the back when he had finished, 'By . . . , Edgar, that's the first time you've been caught with your pants down!' The two men liked and understood each other," (Biddle, In Brief Authority, p. 166.)

32 Francis Biddle, Attorney General, Confidential Memorandum for Mr. Hoover, 10/9/41. [Emphasis added.]

In a memorandum to Attorney General Biddle shortly before this press conference, Director Hoover stated, "It was my understanding in our conversation with the President that the matter of establishing technical surveillance was to be continued . . ." (Memorandum from Hoover to Biddle, 10/2/41.)

Assistant Solicitor General Charles Fahy also wrote a memorandum to Attorney General Biddle prior to the press conference which attempted to justify warrantless wiretaps not only on the interpretation of the 1934 Act, but also on the President's power as Commander in Chief. Fahy stated:

"What has been said ... seems to me also to leave open the question whether the general purpose and content of this statute, notwithstanding the rigidity with which the Court has thus far construed its prohibitions, is intended by Congress to apply to the President as Commander in Chief of the Army and Navy. It is my opinion that the Commander in Chief as such may lawfully have divulged to him or to someone on his behalf intercepted information relative to the security of the nation. If our armies were in the field within the United States, it seems to me very clear that the statute would not be construed to prohibit such divulgence. The fact is our Navy is in a sense in the field now, engaged in perilous duty. Our general policy against interception and divulgence, the nature of the wiretapping, and the abuse to which its use lends itself, unite to require that the use to which I think it may be legally put, be most carefully circumscribed. But I conclude that divulgence to or on behalf of the Commander in Chief with respect to matters relating to the military security of the nation is not illegal." (Memorandum from Charles Fahy, Assistant Solicitor General, to the Attorney General, 10/16/41.)

33 Letter from Tom C. Clark, Attorney General, to the President, 7/17/46. [Emphasis added.]

34 Memorandum from George M. Elsey to the President, 2/2/50. Harry S. Truman Library.

35 Memorandum from "H. S. T." to the Attorney General, draft dated 2/7/50. Harry S. Truman Library.

36 Memorandum from J. Howard McGrath to Mr. Hoover, 2/26/52.

McGrath added: "It is requested when any case is referred to the Department in which telephone, microphone or other technical surveillances have been employed by the Bureau or other Federal Agencies (when known) that the Department be advised of the facts at the time the matter is first submitted."

This passage may have referred to the problems that had arisen between the FBI and the Justice Department in the prosecution of Judith Coplon for attempting to deliver government documents to a Soviet agent. The FBI apparently failed to inform Federal prosecutors of electronic surveillance of Miss Coplon and the Soviet agent, and subsequent disclosure of the surveillance led to reversal of her conviction on the grounds that the trial judge improperly withheld the surveillance records from scrutiny by defense counsel. *United States v. Coplon*, 185 F.2d 629 (2d Cir. 1950) On a second appeal her conviction was reversed because telephone conversations between the defendant and her attorney were intercepted during the trial. *Coplon v. United States*, 191 F.2d 749 (D.C. Cir. 1951).

45 Memorandum from William Olson to Elliot Richardson, undated.

46 Attorney General Order No. 263-62, 3/13/62

47 A wiretap on Elijah Muhammed leader of the Nation of Islam, which was originally approved by Attorney General Brownell in 1957, for example, continued until 1964 without subsequent re-authorization. (Memorandum from J. Edgar Hoover to the Attorney General, 12/31/56, initialed "Approved: HB 1/2/57.")

As former Attorney General Katzenbach recently testified: "The custom was not to put a time limit on a tap, or any wiretap authorization. Indeed, I think the Bureau would have felt free in 1965 to put a tap on a phone authorized by Attorney General Jackson before World War II." Nicholas Katzenbach testimony, 11/12/75, p. 87.

48 Memorandum from J. Edgar Hoover to the Attorney General, 3/30/65.

49 Memorandum from Nicholas Katzenbach to the President, 4/8/65.

50 Directive from President Lyndon Johnson to Heads of Agencies, 6/30/65. The restriction on wiretapping in Katzenbach's draft order applied to "all federal agenc[ies]." In the final version, issued by President Johnson, the restriction applied to "federal personnel."

51 Directive from President Johnson to Heads of Agencies, 6/30/65. [Emphasis added.] Mr. Katzenbach testified that this order "required the specific approval of the Attorney General and referred to all agencies in the Government, and it was drafted [as] explicitly . . . as one could draft it, although it has proven rather difficult because of terms like national security to know precisely what you are dealing with." (Nicholas Katzenbach testimony, 5/7/75, p. 15.)

52 Memorandum from J. Edgar Hoover to the Attorney General, 9/14/65.

53 Memorandum from Nicholas Katzenbach to J. Edgar Hoover, 9/27/65.

55 385 U.S. 26 (1966).

56 Memorandum from the Attorney General to all United States Attorneys, 11/3/66, quoting the Supplemental Memorandum to the Supreme Court in *Black v. United States*, filed 7/13/66.

57 memorandum from the Attorney General to the Heads of Executive Departments and Agencies, 6/16/67.

As a matter of practice, Attorney General Clark was more restrictive in approving wiretaps than the stated policy suggested was necessary. He stated that his practice was "to confine the area of approval to international activities directly related to the military security of the United States." (Testimony of Ramsey Clark, Hearings before the Subcommittee on Administrative Practice and Procedure, Committee on the Judiciary, United States Senate (1974).) See p. 349 for an example of a request involving purely domestic "national security" considerations which was turned down by Mr. Clark.

58 389 U.S., at 358 n. 23.

59 Wiretapping by private citizens and unauthorized wiretapping by government employees was also made a criminal offense.

60 A bill drafted by the Justice Department in 1967 would have specifically authorized the President to use warrantless electronic surveillance, but it was limited to the three foreign-related purposes and would have barred the use of information obtained thereby in judicial or other administrative proceedings. (Hearings on H.R. 5386 before Subcommittee No. 5 of the House Judiciary Committee, 90th Cong., 1st Sess. 292 (1967).)

During the Senate debate on the 1968 Act, an amendment was proposed to eliminate the references to the domestic security purposes for warrantless electronic surveillance. Attorney General Ramsey Clark endorsed the amendment; and the Justice Department stated, "The concept of a domestic threat to the national security is vague and undefined. Use of electronic surveillance in such cases may be easily abused." (114 Cong. Rec. 14717, 90th Cong., 2d Sess. (1968).) The amendment was defeated.

61 *United States v. United States District Court*, 407 U.S. 297, 303--04 (1972). In so interpreting Section 2511(3), the Court relied in part on its legislative history, which made it clear that the section was not intended to confer any power upon the President. The Court quoted the remarks of Senator Philip Hart that "... [N]othing in Section 2511(3) even attempts to define the limits of the President's national security power under present law, which I have always found extremely vague. . . . Section 2511(3) merely says that if the President has such a power, then its exercise is in no way affected by Title III." (407 U.S. at 307.)

62 Letter from William Olson to Attorney General Elliot Richardson, undated.

63 407 U.S. at 310.

64 At the same time the Court recognized that "domestic security surveillance may involve different policy and practical considerations apart from the surveillance of 'ordinary crime,'" (407 U.S. at 322), and thus did not hold that "the same type of standards and procedures prescribed by Title III [of the 1968 Act] are necessarily applicable to this case." (407 U.S. at 322). The court noted:

"Given [the] potential distinctions between Title III criminal surveillances and those involving domestic security, Congress may wish to consider protective standards for the latter which differ from those already prescribed for specified crimes in Title III. Different standards may be complete with the Fourth Amendment if they are reasonable both in relation to the legitimate need of Government for intelligence information and the protected rights of our citizens." (407 U.S. at 322-23). 407 U.S. at 309, 321.

65 Testimony of Deputy Assistant Attorney General Kevin Maroney, Hearings Before the Senate Subcommittee on Administrative Practice and Procedure 6/29/72, p. 10. This language paralleled that of the Supreme Court in *Keith*, 407 U.S. at 309, n. 8.

65a Maroney Testimony, Hearings before the Senate Subcommittee on Administration Practice and Procedure, 6/29/72, p. 10.

66 Letter from Attorney General Edward Levi to Senators Frank Church and Edward Kennedy, 6/24/75. [Emphasis added.]

67 Edward H. Levi testimony, 11/6/75, Hearings, Vol. 5, pp. 70, 71.

Unlike the first three phrases, the last criterion -- "to obtain information certified as necessary for the conduct of foreign affairs matters important to the national security of the United States" -- does not parallel the language of Section 2511(3).

68 *Ibid*.

69 In *Zweibon*, the Court of Appeals rejected the defendant former Attorney General's theory that a wiretap on a domestic organization was justified as a proper exercise of the President's foreign affairs powers when the activities of that group adversely affected this country's relations with a foreign power.

70 *United States v. Butenko*, 494 F.2d 593 (3d Cir., 1974), cert. denied sub nom. *Ivanov v. United States*, 419 U.S. 881 (1974); and *United States v. Brown*, 484 F.2d 418 (5th Cir., 1973), cert. denied 415 U.S. 960 (1974).

"A Justice Department memorandum states that the current policy of the Attorney General is to authorize warrantless electronic surveillance "only when it is shown that its subjects are the active, conscious agents of foreign powers." This standard "is applied with particular stringency where the subjects are American citizens or permanent resident aliens."

In one instance during 1975, it was decided that there was not sufficient information to "meet these strict standards;" and the Department went to a court for "orders approving, for periods of twelve days each, wiretaps of the telephone of two individuals." The court issued the orders, according to this Justice Department memorandum, even though "there was not probable cause to believe that any of the particular offenses listed in" the provisions of the 1968 Act for court-ordered electronic surveillance "was being or was about to be committed." The facts supporting the application showed, according to the Department, "an urgent need to obtain information about possible terrorist activities"; that the information was "essential to the security of the United States;" that the information was likely to be obtained by means of the surveillance; and that it "could not practicably be obtained by any other means." The Department has described this "ad hoc adjustment" of the 1968 statute as "extremely difficult and less than satisfactory." (Justice Department memorandum from Ron Carr, Special Assistant to the Attorney General, to Mike Shaheen, Counsel on Professional Responsibility, 2/26/76.)

72 S. 3197, introduced 3/23/76.

73 Memorandum from William Olson to Elliot Richardson, undated.

74 In 1944, Alexander Holtzoff, a Special Assistant to the Attorney General, prepared a memorandum on "admissibility of evidence obtained by trash covers or microphone surveillance" in response to a series of hypothetical questions submitted by the FBI. Holtzoff stated that "evidence obtained by an unlawful search and seizure in violation of the Fourth Amendment is not admissible as against . . . the person in control of the premises that have been illegally searched." He added that "the secret taking or abstraction of papers or other property from the premises without force is equivalent to an illegal search and seizure." However, Holtzoff expressed the view "that microphone surveillance is not equivalent to illegal search and seizure" and "that evidence so obtained should be admissible" even where "an actual trespass is committed." (Memorandum from Holtzoff to J. Edgar Hoover 7/4/44.)

Holtzoff disregarded the implication of *Goldman v. United States*, 316 U.S. 129 (1942), that microphone surveillance involving trespass would violate the Fourth Amendment. Nevertheless, the *Goldman* case did not deal directly with this issue, since it upheld the constitutionality of a microphone surveillance not installed by trespass.

75 Omitted in original.

76 Memorandum from Director FBI to the Attorney General, Subject: "Technical Coverage," 10/6/51. [Emphasis added.]

77 Memorandum from the Attorney General to J. Edgar Hoover, 2/26/52. [Emphasis added.]

78 Memorandum from William Olson to Elliott Richardson, undated.

"A Justice Department memorandum from Thomas K. Hall, Smith Act Unit to William E. Foley, Chief, Internal Security Section, Subject: "Microphone Surveillances," 12/22/53, reflects a meeting between Justice Department officials and Alan Belmont and Carl Hennrich of the Bureau to determine how the use of this technique could be broadened.

80 347 U.S. 128 (1954). In *Irvine*, the Supreme Court held that evidence obtained in a criminal case from a warrantless microphone installation involving trespass was inadmissible in court. The fact that the microphone had been planted in a bedroom particularly offended the court

81 Memorandum from the Attorney General to the Director, FBI, 5/20/54. [Emphasis added.]

82 Memorandum from the Director, FBI to Mr. Byron R. White, Deputy Attorney General, 5/4/61. Less than three months earlier, however, the FBI had planted a bug in a hotel room occupied by a United States Congressman in connection with an investigation that was unrelated to either Communist activities or organized crime. See pages 329-330.

82a For an account of a subsequent meeting between Attorney General Kennedy and the FBI's liaison to the Attorney General regarding certain FBI microphone surveillance practices in 1961, see the Committee's Report on Warrantless Surreptitious Entries, Sec. II.

83 385 U.S. 26 (1966).

84 Supplemental Memorandum for the United States, *Black v. United States*, 385 U.S. 26 (1966), submitted by Solicitor General Thurgood Marshall, 7/13/66.

85 Memorandum from J. Edgar Hoover to the Attorney General, 3/30/65.

85a Mr. Katzenbach testified as follows concerning the requirement he imposed on microphone surveillance:

"Curiously, 'bugs,' which in my judgment are far more serious invasions of privacy than are taps, were not subject to the same authorization procedure in the Department of Justice until I so directed on March 30, 1965. Theretofore, the Bureau had claimed an authority to install bugs at its sole discretion under a memorandum from then Attorney General Brownell dated May 20, 1954. I thought the claim that Attorney General Brownell's memorandum authorized the widespread use of bugs was extremely tenuous." (Katzenbach testimony, Hearings, Vol. 6, p. 200.)

86 Directive from President Johnson to Heads of Agencies, 6/30/65.

87 Memorandum from the Director, FBI to the Attorney General, 9/14/65.

88 Memorandum from Nicholas deB. Katzenbach to J. Edgar Hoover, 9/27/65.

89 Memorandum from the Attorney General to all United States Attorneys, 11/3/66.

90 Memorandum from the Attorney General to Heads of Executive Departments and Agencies, 6/16/67.

90a The Court in *Katz* rejected the distinction made in *Goldman*, between trespassory and nontrespassory microphone surveillances, and the resulting doctrine of "constitutionally protected areas." ". . . [T]he Fourth Amendment," the Court wrote in *Katz*, "protects people, not places." 389 U.S. 347, 351 (1967).

91 Levi, 11/6/76, Hearings, Vol. 5, p. 70.

92 Charles Brennan deposition, 9/23/75, p. 44. An example of this relatively frequent occurrence is reflected in an FBI memorandum dated June 25, 1962, which recommended that seven wiretaps should be instituted in connection with the Bureau's "Sugar Lobby" investigation (see pp. 328-330.)

"As mentioned in memorandum of 6/21/62, for each technical surveillance installed in instant matter, we will temporarily suspend coverage which we have for intelligence purposes on some other establishments so as not to increase total number of technical installations in operation." (Memorandum from W. R. Wannall to W. C. Sullivan, 6/25/62.)

93 Because this restriction applied only to simultaneous electronic surveillances, the ceiling figures are invariably lower than the annual statistics reflected in the chart on p. 301. The annual statistics include all electronic surveillances conducted for any length of time, however brief, during the year indicated.

94 Brennan deposition, 9/23/75, p. 43.

95 Brennan deposition, 9/23/75, p. 42. It has been alleged that the number of wiretaps was temporarily reduced for a brief period each year during J. Edgar Hoover's annual appearances before the House Appropriations Committee so that he could report, if asked, a relatively small number of wiretaps in operation. (See, e.g., Report of the Committee on the Judiciary, House of Representatives, 8/20/74, p. 149.) In one instance involving the so-called "17 wiretaps" in February 1971, Hoover did insist that ongoing surveillances should be discontinued prior to such an appearance. (Memorandum from W. S. Sullivan to Mr. Tolson, 2/10/71.)

But no general pattern of temporary suspensions or terminations during the Director's appearances before the House Appropriations Committee is revealed by Bureau records. The following figures represent the number of warrantless electronic surveillances in operation approximately thirty days prior to, during, and approximately thirty days after Hoover's testimony before that committee from 1967 to 1972:

| Before                      | Date of Director's Testimony | After               |
|-----------------------------|------------------------------|---------------------|
| "Retrieval not practicable" | Feb. 16, 1967 (38)           | Mar. 13, 1967 (42). |
| Jan. 15, 1968 (33)          | Feb. 23, 1968 (33)           | Mar. 22, 1968 (33). |
| Mar. 14, 1969 (46)          | Apr. 17, 1969 (49)           | May 15, 1969 (50).  |
| Feb. 5, 1970 (38)           | Mar. 5, 1970 (36)            | Apr. 6, 1970 (37).  |
| Feb. 16, 1971 (33)          | Mar. 17, 1971 (33)           | Apr. 17, 1971 (40). |
| Jan. 31, 1972 (32)          | Mar. 2, 1972 (34)            | Mar. 31, 1972 (35). |

122a FBI Special Agent deposition, *Halperin v. Kissinger*, 4/7/75, pp. 53, 54.

123 In at least two cases, certain very sensitive surveillances were consciously excluded from the ELSUR Index system. See p. 343. While such exclusion has been rare, the fact that it occurred twice shows that it is possible to circumvent the entire ELSUR Index system.

124 CIA and FBI Mail Opening Report: See, IV, FBI Mail Opening.

125 Memorandum from M. A. Jones to Mr. DeLoach, 8/2/65.

126 Memorandum from C. D. DeLoach to Mr. Tolson, 1/10/66.

127 *Ibid.*

128 *Ibid.*

129 *Ibid.*

130 *Ibid.*

131 *Ibid.*

132 Memorandum from M. A. Jones to Mr. Wick, 1/11/66.

133 Memorandum from M. A. Jones to Mr. Wick (attachment), 1/11/66.

134 The details of these cases are discussed in Section VI below.

135 Memorandum from O. D. DeLoach to Mr. Tolson, 1/21/66.

136 Ibid.

137 Ibid.

138 Letter from FBI to Senate Select committee (attachment), 10/23/75. Some of the surveillances for these purposes targeted Americans, but the FBI has not until recently identified surveillance targets according to their citizenship or resident alien status.

139 Attorney General Edward H. Levi testimony, 11/6/75, Hearings, Vol. 5, p. 71.

140 Letter from FBI to Senate Select Committee (attachment), 10/23/75. These category descriptions are the FBI's, and some may include Americans.

141 W. Raymond Wannall testimony, 10/21/75, pp. 20,21. The legitimate counterintelligence benefit that accrues to the Bureau through the use of this technique would not be reduced if a form of judicial warrant were required prior to the implementation of electronic surveillances directed against foreign agents or collaborators. See Senate Select Committee Final Report, Book II, Recommendations 51 and 52.

141a President Ford's Executive Order on foreign intelligence specifically authorizes FBI electronic surveillance for this purpose. (Executive Order 11509, 2/18/76.)

142 See, e.g., Memorandum from R. D. Cotter to W. C. Sullivan, 3/11/68; Draft, of National Security Council Intelligence Directive No. 9, 5/5/75 version. In the early 1970's, for example, the FBI conducted surveillance of a foreign establishment within the United States at the specific request of the CIA and with clearance from the State Department. This installation received the prior approval of the Attorney General. (Staff summary of FBI memoranda.)

As noted above, Ramsey Clark testified that while he was Attorney General, his practice was "to confine the area of approval to international activities directly related to the military security of the United States." (Ramsey Clark testimony, Hearings before the Senate Subcommittee on Administrative Practice and Procedure (1974).) He stated that he denied requests "to tap Abba Eban when he was on a visit to this country, an employee of the United Nations Secretariat, the Organization of Arab Students in the U.S., the Tanzanian Mission to the U.N., the office of the Agricultural Counselor at the Soviet Embassy and a correspondent of TASS." (Ibid.).

143 Letter from FBI to the Senate Select Committee (attachment), 10/23/75.

144 Memorandum from the Director, FBI for the Attorney General, 2/14/61. Six American citizens were also wiretapped in the course of this investigation. These surveillances are discussed at pp. 328-330.

145 FBI summary memoranda, 2/16/61, 6/15/62.

146 FBI summary memorandum, 2/3/75.

147 FBI summary memorandum, 2/3/75.

148 FBI summary memorandum, 2/3/75.

149 FBI summary memorandum, 2/3/75.

149a No individual Senators, Congressmen, or staff members were named in the statistical summary, however. Nor is there any indication that President Nixon or his aides were specifically concerned about the President's critics. Rather, the request grew out of concern about "an increase in [foreign] interest on Capitol Hill" which was expressed to President Nixon by at least one Senator. (FBI summary memorandum, 2/3/75.)

150 FBI Summary memorandum, 2/1/75.

151 FBI summary memorandum, 2/1/75.

151a Summaries of the information obtained from the physical surveillance of Mrs. Chennault were subsequently disseminated to the White House "in strictest confidence." (Memorandum from C. D. DeLoach to Mr. Tolson 11/4/68; Teletypes from Director, FBI to the White House situation room, 10/30/68, 10/31/68, 11/1/68, 11/2/68, 11/3/68, 11/4/68.)

According to an FBI memorandum, a White House official told Assistant Director Cartha DeLoach that "this situation may very well 'blow the roof off the the political race yet.'" (Memorandum from C. D. DeLoach to Mr. Tolson, 11/4/68.)

In addition, the White House requested the FBI to obtain, and the Bureau did subsequently obtain, the outgoing telephone toll records of Vice Presidential candidate Spiro Agnew while he was campaigning in New Mexico. (Memorandum from C. D. DeLoach to Mr. Tolson, The apparent purpose of this request was to determine whether or not Agnew had communicated with Mrs. Chennault or the South Vietnamese Embassy. (FBI summary memorandum, 2/1/75.)

152 Memorandum from Director, FBI to the Attorney General, 10/29/68; Memorandum from Director, FBI to the Attorney General, 10/30/68; Memorandum from Director, FBI to the Attorney General, 3/27/69. Ramsey Clark testified that he was unaware of the physical coverage of Mrs. Chennault and did not receive reports on her activities. (Ramsey Clark testimony, 12/3/75, Hearings, Vol. 6, p. 252.) There is no indication in the request for this wiretap, which was sent to Attorney General Clark, that the White House or the FBI was specifically interested in intercepting telephone conversations between Mrs. Chennault and South Vietnamese officials. Mrs. Chennault's name does not appear on this request. (Memorandum from Director FBI to the Attorney General, 10/29/68).

153 Memorandum from C. D. DeLoach to Mr. Tolson, 10/30/68. In the context of the memorandum, this quotation may relate more directly to close physical surveillance of Mrs. Chennault. Direct electronic surveillance of Mrs. Chennault was also considered (ibid.), however, and the reason stated in the quotation presumably applied to the rejection of the use of that technique against her.

154 Memorandum from Francis Biddle to Mr. Hoover, 11/19/41. This was approved in spite of his comment to J. Edgar Hoover that the target organization has "no record of espionage at this time." Memorandum from Biddle to Hoover, 11/19/41.)

In 1941, J. Edgar Hoover also requested wiretaps on two Americans who were members of the Communist Party and on a bookstore which was "engaged in the sale of Communist literature and [was] opened by persons connected with the Communist Party." (Memorandum from J. Edgar Hoover to the Attorney General, 10/2/41). It appears that these requests were not approved by Attorney General Biddle. (Biddle to Hoover, 11/19/41).

155 Memorandum from D. M. Ladd to J. Edgar Hoover, 5/23/45. Reports summarizing information from this wiretap were delivered to two of President Truman's White House aides. One of the reports included "transcripts of telephone conversations between [the official] and Justice Frankfurter, and between [the official] and Drew Pearson." Memorandum from Ladd to Hoover, 5/23/45. (There is apparently no record as to who authorized this wiretap.)

156 A memorandum by J. Edgar Hoover indicates that Attorney General Tom Clark "authorized the placing of a technical surveillance" on this individual and that, according to Clark, President Truman "was particularly concerned" about the activities of this individual "and his associates" and wanted "a very thorough investigation" so that "steps might be taken, if possible, to see that such activities did not interfere with the proper administration of government." (Hoover memorandum, 11/15/45.) More than 175 reports summarizing information overheard on this wiretap, which continued until 1948, were delivered to the Truman White House. (Memorandum from FBI to Senate Select Committee (attachment), 3/26/76.)

157 Because the FBI has not always determined the citizenship of electronic surveillance targets, it is possible that American citizens are included among the "foreign" categories listed in Section V.

158 These categories are meant to be descriptive only; they do not constitute the Justice Department standards for warrantless electronic surveillance during this period. As noted in Section II, the standard for wiretapping until 1965 was the "domestic security" standard first articulated by Attorney General Tom Clark in 1946; the microphone surveillance standard until 1965 was that established by Attorney General Herbert Brownell: the "national interest." From 1965 until 1968, both wiretapping and microphone surveillances were governed by the "national security" standard established by President Johnson and Attorney General Nicholas Katzenbach. From 1968 until 1972, the Justice Department relied on criteria based on the five categories set forth in Section 2511 (3) of the Omnibus Crime Control Act. These criteria applied to both wiretaps and bugs. The application of these standards to particular cases is discussed in Section VII.

159 See the discussion of the Keith case, *United States v. United States District Court*, 407 U.S. 297 (1972) p. 290.

160 Attorney General Edward H. Levi testimony, 11/6/75, Hearings, Vol. 5, p. 71.

161 For example, memorandum from Acting FBI Director L. Patrick Gray to the Attorney General, 10/19/72.

162 See Report on the Development of FBI Domestic Intelligence Investigations for an analysis of COMINFIL Investigations.

163 Letter from FBI to Senate select Committee (attachment). 10/23/75. The target category descriptions are the FBI's.

164 Ibid.

165 Letter from FBI to Senate Select Committee (attachment), 10/23/75.

166 Memoranda from J. Edgar Hoover to the Attorney General, 10/7/63 and 10/18/63. See King Report: Sec. IV, Electronic Surveillance of Dr. Martin Luther King, Jr.

167 See King Report: Sec. IV, Electronic Surveillance of Dr. Martin Luther King, Jr. FBI memoranda make clear, however, that at least some of the microphones were planted in Dr. King's hotel rooms for the express purpose of obtaining personal information about him. (For example, memorandum from Frederick Baumgardner to W. C. Sullivan, 2/4/64.) On the question

of authorization for these wiretaps and bugs, see the King Report: Sec. IV, Electronic Surveillance of Dr. Martin Luther King, Jr.

168 Letter from FBI to Senate Select Committee (attachment), 10/23/75. A 1964 wiretap and at least one of the 1965 bugs were on individuals other than the advisors to Dr. King who were believed to have been associated with the Communist Party, USA. Wiretaps on three advisors who had alleged Communist links were instituted in 1962 and 1963.

169 Letter from FBI to Senate Select Committee (attachment), 10/23/75.

170 Memorandum from J. Edgar Hoover to the Attorney General, 6/15/65.

171 Memorandum from J. Edgar Hoover to the Attorney General, 5/25/65.

172 See P. 335.

173 Memorandum from J. Edgar Hoover to the Attorney General, 12/31/56, initialled "Approved: HB, 1/2/57." In retrospect, however, one FBI supervisor noted that while the Nation of Islam had a "potential" for violence, it was not itself involved in violence. He stated that "Elijah Muhammad kept them under control, and he did not have them on the streets at all during any of the riots [in the 1960's]." George C. Moore deposition 11/3/75, pp. 36,39.

174 Memorandum from J. Edgar Hoover to the Attorney General, 4/1/64.

175 Memorandum from J. Edgar Hoover to the Attorney General, 3/3/65.

176 Letter from FBI to Senate Select Committee, 10/22/75.

177 For example, Memorandum from J. Edgar Hoover to the Attorney General, 3/20/69; Memorandum from J. Edgar Hoover to the Attorney General, 10/7/69.

178 Letter from FBI to Senate Committee (attachment), 10/23/75.

194 This case is also discussed at p. 333.

195 Memorandum from R. D. Cotter to Mr. W. C. Sullivan, 12/15/66.

196 Memorandum from J. Edgar Hoover to the Attorney General, 6/29/61. Since the early 1940's, the approval of the Attorney General had been required prior to the implementation of wiretaps. See p. 283. In a 1965 memorandum from Attorney General Katzenbach to J. Edgar Hoover, Mr. Katzenbach noted that: "It is my understanding that such devices [both wiretaps and bugs] will not be used without my authorization, although in emergency circumstances they may be used subject to my later ratification." (Memorandum from Nicholas Katzenbach to J. Edgar Hoover, 9/27/65).

197 Memorandum from Mr. S. B. Donahoe to Mr. W. C. Sullivan, 7/3/61.

198 A July 27, 1962, memorandum from the "Director, FBI" to the Attorney General reads in part:

"In accordance with our discussion today, technical coverage will be effective on Baldwin on the morning of July 28, 1962, at his residence in New York. In addition, we have learned that Baldwin normally utilized [ ] of the 'New York Times' Washington office as his secretary to arrange appointments when he comes to Washington. Consequently, we have placed technical coverage on her residence..." (Memorandum from Director, FBI to the Attorney General, 7/27/62.)

274 Memorandum from R. D. Cotter to W. C. Sullivan, 12/15/66.

275 Memorandum from D. E. Moore to W. C. Sullivan, 6/28/61.

276 An internal FBI memorandum states: "We did not obtain information from this wiretap which assisted us in determining the identity of the person responsible for leaking classified information." (Memorandum from R. D. Cotter to W. C. Sullivan, 12/15/66).

277 Memorandum from R. D. Cotter to W. C. Sullivan, 12/15/66.

278 Memorandum from J. Edgar Hoover to the Attorney General, 4/1/64.

279 Ibid.

280 Memorandum from J. Edgar Hoover to the Attorney General, 6/15/65.

281 Memorandum from the Attorney General to the Director, FBI, 5/20/54.

281a As noted above, however, the Sugar Lobby investigation did not show that any money was passed between foreign representatives and American executive or legislative branch officials.

282 Less than three months after the bug was installed in Congressman Cooley's hotel room, J. Edgar Hoover wrote Deputy Attorney General Byron White that the FBI was "utilizing microphone surveillances on a restricted basis even though trespass is necessary to assist in uncovering the activities of [foreign] intelligence agents and Communist Party leaders. In the interests of national safety, microphone surveillances are also utilized on a restricted basis, even though trespass is necessary, in uncovering major criminal activities. We are using such coverage in connection with our investigations of clandestine activities of top hoodlums and organized crime." (Memorandum from J. Edgar Hoover to Byron R. White, 5/4/61.) No mention was made of the microphone surveillance of the United States Congressman.

283 For example, memorandum from Frederick Baumgardner to W. C. Sullivan, 2/4/64 ; King Report, Sec. IV, Electronic Surveillance on Dr. Martin Luther King, Jr.

284 King Report: Sec. IV, Electronic Surveillance on Dr. Martin Luther King, Jr.

285 One of the wiretaps on Dr. King also occurred while he was attending this convention. Beyond the fact of the ongoing investigation of Dr. King, the only recorded reason for instituting this particular tap in Atlantic City was set forth in an internal memorandum prepared shortly before the Convention:

"Martin Luther King, Jr., head of the Southern Christian Leadership Conference (SCLC), an organization set up to promote integration which we are investigating to determine the extent of Communist Party (CP) influence on King and the SCLC, plans to attend and possibly may indulge in a hunger fast as a means of protest." (Memorandum from Mr. W. C. Sullivan to Mr. A. H. Belmont, 8/21/64.)

296 Memorandum from Mr. Sullivan to Mr. DeLoach, 12/11/69.

297 Public statement of President Nixon, 5/22/73.

298 Memoranda from J. Edgar Hoover to the Attorney General, 5/12/69, 5/20/60, 5/29/69, 6/4/69, 8/4/69, 5/4/70, and 5/13/70.

299 Memorandum from J. Edgar Hoover to the Attorney General, 7/23/69.

300 Memorandum from J. Edgar Hoover to the Attorney General, 12/14/70.

301 Memorandum from W. C. Sullivan to C. D. DeLoach, 8/1/69.

302 Memorandum from J. Edgar Hoover to Messrs. Tolson, Sullivan, and C. D. Brennan, 10/15/70.

303 Memoranda from J. Edgar Hoover to the Attorney General, 5/13/70 (two separate memoranda), 10/16/70, and 12/14/70.

304 Ruckelshaus testimony. Hearings before the Subcommittee on Administrative Practice and Procedure, 5/9/74, pp. 311-312.

305 Memorandum from J. Edgar Hoover to the Attorney General, 11/5/69.

306 Ibid.

307 Memorandum from J. Edgar Hoover to the Attorney General, 11/7/69.

308 Ibid.

309 Memorandum from J. Edgar Hoover to the Attorney General, 3/16/70. The strongest evidence that this group's conduct was inimical to the national security was reported as follows:

"The [group] is dominated and controlled by the pro-Chinese Marxist Leninist [excised] ...

"In carrying out the Marxist-Leninist ideology of the [excised] members have repeatedly sought to become involved in labor disputes on the side of labor, join picket lines and engage in disruptive and sometimes violent tactics against industry recruiters on college campuses...

"This faction is currently very active in many of the major demonstrations and student violence on college campuses ..."  
(Memorandum from J. Edgar Hoover to the Attorney General, 3/16/70. The excised words have been deleted by the FBI.)

310 Memorandum from J. Edgar Hoover to the Attorney General, 6/16/70. The only other results noted by Hoover related to the fact that the wiretap had "obtained information concerning the activities of the national headquarters of [the group and] plans for [the group's] support and participation in demonstrations supporting antiwar groups and the [excised]." It was also noted that the wiretap "revealed ... contacts with Canadian student elements." (The excised words have been deleted by the FBI.)

311 Memorandum from J. Edgar Hoover to the Attorney General, 9/16/70. The only other results noted by Hoover again related to obtaining information about the "plans and activities" of the group. Specifically mentioned were the "plans for the National Interim Committee (ruling body of [excised]) meeting which took place in New York and Chicago," and the plans "for demonstrations at San Francisco, Detroit, Salt Lake City, Minneapolis and Chicago." There was no indication that these demonstrations were expected to be violent. (The excised words have been deleted by the FBI.)

323 *Zweibon v. Mitchell*, 516 F.2d 594, 611 (D.D.C. 1975).

324 Agent's Manual for Conduct of Electronic Surveillance Under Title III of Public Law 90-351, Section VII. If the attorney-client conversation concerns a matter other than a pending criminal case, it is the responsibility of the supervising attorney to determine whether or not the conversation is privileged. If he determines it is not, the interception is treated no differently from any other overheard conversation. If evidence of crimes other than those specified in the court's order is obtained, the FBI may disseminate this information both within the Bureau and to other Federal or state agencies to the same extent that it could disclose the contents of conversations relating to the crime specified in the order authorizing interception.

325 For example, SAC Letter, 8/13/69.

The "pending criminal case" requirement has been interpreted less strictly with respect to some warrantless electronic surveillances, however. On the May 25, 1965, order authorizing a wiretap on an attorney who was an advisor to Dr. King, for

example, Attorney General Katzenbach wrote: "You should discontinue if at any time he is acting as attorney for clients litigating with the U.S." (Memorandum from J. Edgar Hoover to the Attorney General, 5/25/65). Katzenbach therefore left open the possibility that information obtained from conversations which related to a state rather than a federal case could be overheard, recorded, and presumably disseminated to a state prosecutor. See also the similar instruction in the Jewish Defense League case, quoted in the text.

326 Memoranda from J. Edgar Hoover to the Attorney General, 9/14/70, 1/4/71; *Zweibon v. Mitchell*, 516 F.2d 594 610-11 (D.C. Cir. 1975).

327 *Zweibon v. Mitchell*, 516 F.2d 59-4, 634 n. 100 (D.C. Cir. 1975).

328 Omitted in original.

329 The "Plumbers" wiretap against Joseph Kraft was similarly installed without the prior -- or subsequent -- approval of the Attorney General.

330 Attorney General Katzenbach was apparently given after the fact notification, however. See King Report: Sec. IV, Electronic Surveillance of Dr. Martin Luther King, Jr.

365 Ibid.

366 Memorandum from H. N. Bassett to Mr. Callahan, 1/29/75.

367 Memorandum from DeLoach to Jenkins, 8/25/64.

368 Memorandum from C. D. DeLoach to Mr. Walter Jenkins, 8/26/64.

369 DeLoach testified that:

"I was sent there to provide information . . . which would reflect on the orderly progress of the convention and the danger to distinguished individuals, and particularly the danger to the President of the United States, as exemplified by the many, many references [to possible civil disturbances] in the memoranda furnished Mr. Jenkins . . ." (DeLoach testimony, 11/26/75, p. 199.)

Jenkins agreed that the mandate of the FBI's special unit did not encompass the gathering of political intelligence and stated that if any such intelligence was disseminated it was probably due to the inability of Bureau agents to distinguish between dissident activities which might or might not result in violence. (Staff summary of Jenkins interview, 12/1/75.) He added that he did not believe the White House ever made any use of the incidental political intelligence that might have been received.

370 Staff summary of Walter Jenkins interview, 12/1/75.

371 Blind memorandum bearing the handwritten date 8/26/69 and the typewritten date 8/19/64.

372 In contrast to the use of electronic surveillance at the 1964 Democratic Convention, Attorney General Ramsey Clark refused to permit any use of this technique during the Democratic National Convention in Chicago in 1968. A request for a wiretap on the "National Mobilization Office for Demonstrations" was sent to Attorney General Clark as early as March 1968 on the grounds that:

"A telephone surveillance on this office would provide extremely valuable information regarding the plans of [numerous] groups to disrupt the National Democratic Convention. It would also furnish advance notice of any possible activity by these groups which would endanger the safety of the President or other Government officials while in Chicago." (Memorandum from J. Edgar Hoover to the Attorney General, 3/11/68.)

Clark refused to approve the tap. He informed Director Hoover the day after the request was made that:

". . . There has not been an adequate demonstration of a direct threat to the national security. Should further evidence be secured of such a threat, or reevaluation desired, please resubmit.

"Other investigative activities should be undertaken to provide intelligence necessary to the protection of the national interest."  
(Memorandum from Ramsey Clark to J. Edgar Hoover, Director, 3/12/68.)

A total of three more requests for a wiretap on the same proposed target were submitted during the next three months: on March 22 (Memorandum from J. Edgar Hoover to the Attorney General, 3/22/68) ; on April 24 (Memorandum from J. Edgar Hoover to the Attorney General, 4/24/68) ; and for a final time on June 7 (Memorandum from J. Edgar Hoover to the Attorney General, 6/7/68). None of them were signed by the Attorney General and Bureau records indicate that no electronic surveillance was conducted in connection with the 1968 Convention.

**WARRANTLESS SURREPTITIOUS ENTRIES: FBI "BLACK BAG" BREAK-INS AND MICROPHONE  
INSTALLATIONS**

**I. INTRODUCTION**

Since 1948 the FBI has conducted hundreds of warrantless surreptitious entries to gather domestic and foreign intelligence, despite the questionable legality of the technique and its deep intrusion into the privacy of targeted individuals. Before 1966, the FBI conducted over two hundred "black bag jobs." <sup>1</sup> These warrantless surreptitious entries were carried out for intelligence purposes *other than* microphone installation, such as physical search and photographing or seizing documents. Since 1960, more than five hundred warrantless surreptitious *microphone installations* against intelligence and internal security targets have been conducted by the FBI, a technique which the Justice Department still permits. Almost as many surreptitious entries were conducted in the same period against targets of criminal investigations. <sup>1a</sup>

Although several Attorneys General were aware of the FBI practice of break-ins to install electronic listening devices, there is no indication that the FBI informed any Attorney General about its use of "black bag jobs."

Surreptitious entries were performed by teams of FBI agents with special training in subjects such as "lock studies." Their missions were authorized in writing by FBI Director Hoover or his deputy, Clyde Tolson. A "Do Not File" procedure was utilized, under which most records of surreptitious entries were destroyed soon after an entry was accomplished.

The use of surreptitious entries against domestic targets dropped drastically after J. Edgar Hoover banned "black bag jobs" in 1966. In 1970, the relaxation of restraints on domestic intelligence techniques such as surreptitious entries was proposed in the Huston Plan. Hoover opposed this proposal, although he expressed a willingness to follow the Huston Plan, if directed to do so by the Attorney General. <sup>2</sup>

*B. The Legal Context: United States v. Ehrlichman*

The legality of warrantless surreptitious entries for intelligence purposes is highly questionable. An FBI official who administered "black bag" operations in the 1960s expressed the opinion that they were "clearly illegal," <sup>3</sup> even though a 1954 memorandum from Attorney General Herbert Brownell to J. Edgar Hoover had provided the color of legal authority for surreptitious entries to install microphones. <sup>4</sup>

U.S. v. Ehrlichman is the only judicial decision on the legality of a warrantless surreptitious entry and physical search where the action was justified by the claim that it was "in the national interest." 5 In that case -- which did not involve intelligence agencies -- President Nixon's assistants, John Ehrlichman and Charles Colson, were among five defendants accused of conspiring to deprive a Los Angeles psychiatrist of his Fourth Amendment rights "by entering his offices without a warrant for the purpose of obtaining the doctor's medical records relating to one of his patients, Daniel Ellsberg, then under Federal indictment for revealing top secret documents." 6

Ruling on the defendant's discovery motions, Federal District Judge Gerhard Gesell found the break-in and search of the psychiatrist's office "clearly illegal under the unambiguous mandate of the Fourth Amendment" because no search warrant was obtained:

[T]he Government must comply with the strict constitutional and statutory limitations on trespassory searches and arrests even when known foreign agents are involved. . . . To hold otherwise, except under the most exigent circumstances, would be to abandon the Fourth Amendment to the whim of the Executive in total disregard of the Amendment's history and purpose. 7

Gesell also pointed to a passage in the landmark "Keith" case to emphasize that surreptitious entries should be viewed by the courts as more intrusive than other forms of search such as wiretapping:

physical entry of the home is the chief evil against which the wording of the Fourth Amendment is directed. 8

Despite the national security defense raised by the defendants, Judge Gesell concluded that "as a matter of law . . . the President . . . lacked the authority to authorize the Fielding break-in." Gesell commented that break-ins in the interest of "national security" cannot be excepted from the requirement of a judicial warrant; the Fourth Amendment cannot be obviated, he wrote,

. . . whenever the President determines that an American citizen, personally innocent of wrongdoing, has in his possession information that may touch upon foreign policy concerns. Such a doctrine, even in the context of purely information-gathering searches, would give the Executive a blank check to disregard the very heart and core of the Fourth Amendment and the vital privacy interests that it protects. Warrantless criminal investigatory searches -- which this break-in may also have been -- would, in addition, undermine vital Fifth and Sixth Amendment rights." 10

Judicial decisions on electronic surveillance have encompassed surreptitious entries for the purpose of installing electronic listening devices. The leading case, *Katz v. United States*,<sup>11</sup> abandoned previous judicial decisions in which the legality of microphone surveillance depended upon whether or not a "constitutionally protected area," such as a home or office, had been physically invaded. 12 Instead, the Court declared that "the Fourth Amendment protects people, not places," wherever they have a "reasonable expectation of privacy." 13 In *Katz* the Court recognized a possible exception to the warrant requirement for "a situation involving the national security" -- an exception which might apply to all forms of electronic surveillance, including surveillance accomplished by trespass to install a microphone 14

The possible exception to the warrant requirement, articulated by the Supreme Court and sustained by some lower courts in electronic surveillance cases, 15 probably would not apply to surreptitious entries conducted for the purpose of physical search. As Attorney General Edward H. Levi testified:

The nature of the search and seizure can be very important. An entry into a house to search its interior may be viewed as more serious than the overhearing of a certain type of conversation. The risk of abuse may loom larger in one case than the other. 16

## II. OPERATIONAL PROCEDURE, AUTHORIZATION, AND TARGETING

### *A. Internal Procedure and Authorization*

The only internal FBI memorandum located by the Select Committee which discussed the policy for surreptitious entries stated:

We do not obtain authorization for "black bag" jobs from outside the Bureau. Such a technique involves trespassing and is clearly illegal; therefore, it would be impossible to obtain any legal sanction for it. Despite this, "black bag" jobs have been used because they represent an invaluable technique in combating subversive activities of a clandestine nature aimed directly at undermining and destroying our nation. 17

The FBI described the procedure for authorization of surreptitious entries as follows:

When a Special Agent in Charge (SAC) of a field office considered surreptitious entry necessary to the conduct of an investigation, he would make his request to the appropriate Assistant Director at FBIHQ, justifying the need for an entry, and assuring it could be accomplished safely with full security. In accordance with instructions of Director J. Edgar Hoover, a memorandum outlining the facts of the request was prepared for approval of Mr. Hoover, or Mr. Tolson, the Associate Director. Subsequently, the memorandum was filed in the Assistant Director's office under a "Do Not File" procedure, and thereafter destroyed. In the field office, the SAC maintained a record of approval as a control device in his office safe. At the next yearly field office inspection, a review of these records would be made by the Inspector to insure that the SAC was not acting without prior FBIHQ approval in conducting surreptitious entries. Upon completion of this review, these records were destroyed. 18

One FBI agent who performed numerous "black bag jobs" stated that he obtained approval from some officer at FBI headquarters, although not always the Director, before performing a study of the feasibility of an entry. 19 He said that a feasibility study was intended to determine: whether the entry could be accomplished in a secure manner, who owned the building and whether a key could be obtained. Floor plans of the building were often procured. If a building owner appeared to be a "patriotic citizen," FBI agents would approach him for assistance in entering a unit of his building - - ---- "show our credentials and wave the flag." 20 If the FBI agents decided that they would be unable to obtain the building owner's consent to enter the target's premises, the agents would examine the building and the area to determine the feasibility of a break-in. 21

The FBI agent stated that if an entry was considered feasible he would write a memorandum to "Director, FBI" and, in response, would invariably receive an authorizing memorandum from headquarters initialled "JEH" [J. Edgar Hoover]. 22 Another FBI agent who frequently participated in break-ins, stated that the directives for such operations were sometimes initialled by Hoover and usually initialled by the Assistant Director in charge of the Domestic Intelligence Division. 23

One agent, who served on a special squad responsible for installing electronic surveillance devices, stated that in the majority of cases he was able to obtain a key to the target's premises, either from a landlord, hotel manager, or neighbor. In other cases, he simply entered through unlocked doors. He stated that only in a small proportion of the cases to which he was assigned was it necessary to pick a lock. 23a Once a bug was planted, it was generally necessary for Bureau agents to monitor the conversations from a location close to the targeted premises.

Selected FBI agents received training courses in the skills necessary to perform surreptitious entries. An FBI technician provided formal instruction in "lock studies" as in-service training for experienced agents; "specialized lock training" was also provided to each agent who received training in electronic surveillance at "sound school." 24 These courses were conducted at the direction of the Assistant Director in charge of the Bureau Laboratory. The Unit Chief who taught the courses stated that he had participated in numerous "black bag jobs" in which his only role was to open locks and safes; all other activities were performed by other agents accompanying him. He said that he would ordinarily receive an incentive award for a successful entry. 25

One agent involved in surreptitious entries stated that he never knowingly conducted an entry for, or with the assistance of, a local police force; nor was he aware of any information being provided by the FBI to local police about an entry. 26

The agent said that he performed two microphone installations against CIA employees at the request of the CIA. He also stated that he was never accompanied on an entry operation by a CIA officer. 27

#### *B. Targets: Counterintelligence and Domestic Subversives*

The FBI has identified two broad categories of targets for surreptitious entries from 1942 to April 1968: (1) groups and individuals connected with foreign intelligence and espionage operations; and (2) "domestic subversive and white hate groups." 28

A Domestic Intelligence Division memorandum summarized the fruits obtained from surreptitious entries against domestic groups:

We have on numerous occasions been able to obtain material held highly secret and closely guarded by subversive groups and organizations which consisted of membership lists and mailing lists of these organizations. 29

The memorandum also cited a warrantless surreptitious entry against the Ku Klux Klan as an example of the utility of the technique:

Through a "black bag" job, we obtained the records in the possession of three high-ranking officials of a Klan organization.... These records gave us the complete membership and financial information concerning the Klan's operation which we have been using most effectively to disrupt the organization and, in fact, to bring about its near disintegration. 30

A former FBI agent has stated that the locations of break-in operations included the residences of targets of investigation as well as organizational headquarters. 31

The FBI was "unable to retrieve an accurate accounting" of the number of warrantless surreptitious entries from their files: "there is no central index, file, or document ... no precise record of entries" due to the "Do Not File procedure." 32 Relying upon a general review of files and upon the recollections of FBI agents at headquarters, the Bureau estimated that, in the "black bag job" category (warrantless surreptitious entries for purposes other than microphone installation):

There were at least 239 surreptitious entries conducted against at least fifteen domestic subversive targets from 1942 to April 1968.... In addition, at least three domestic subversive targets were the subject of numerous entries from October 1952 to June 1966. 33

"An entry against one white hate group" was also reported .34 One example of a "domestic subversive target" against whom numerous entries were conducted is the Socialist Workers Party, which may have been targeted for as many as ninety-two break-ins during the period from 1960 to 1966. 35

To have a more complete picture of the extent of "black bag" operations, two other FBI estimates, also based on incomplete records, must be considered along with this partial accounting of the number of "black bag job" entries against domestic subversive groups. First, the Bureau estimated that between 1960 and 1975, 509 surreptitious microphone installations took place against 420 separate "targets of counterintelligence, internal security, and intelligence collection investigations." 36 It is impossible to determine from the FBI estimates exactly how many of these installations involved a surreptitious entry because other techniques were also utilized, such as installing a microphone prior to the occupancy of the target or encapsulating it in an article which was sent into the premises. It is also impossible to determine the number of these targets who were American citizens.

Second, the FBI estimated that between 1960 and 1975, there were 491 surreptitious entries to install electronic surveillance devices against 396 targets of criminal investigations. 37

#### *C. Operations Directed Against the Socialist Workers Party*

Recently disclosed FBI memoranda pertaining to surreptitious entries directed at the Socialist Workers Party (SWP) in 1960-1966 provide additional details on FBI procedures. 38 Most of the documents were to be filed in the "Personal Folder" of the Special Agent in Charge of the New York field office. 39

The "purpose of assignment" for surreptitious entries against an SWP affiliate, the Young Socialist Alliance (YSA), was described as follows:

To locate records and information relating to the national organization of the YSA, [and] the identity of national members located throughout the country. Also it is anticipated that records of the local organization will be made available. 40

To carry out this assignment, the FBI prepared memoranda which contained detailed plans for post-midnight burglarizing of YSA headquarters. The FBI's entry plans included descriptions of "security aspects" such as building floor plans, locks, lighting, surrounding streets, entrances, and the occupants' living habits. 41

The FBI's Los Angeles field office obtained "photographs of material maintained in the office of James P. Cannon, National Chairman of the SWP," including letters to and from Cannon. 42 The field office reports about this material carried the warning:

EXTREME CAUTION SHOULD BE EXERCISED IN UTILIZING INFORMATION FURNISHED BY [DELETED] IN ORDER THAT THE IDENTITY OF THIS HIGHLY CONFIDENTIAL SOURCE IS NOT COMPROMISED. 43

Several of the reports were "classified" because disclosure could "compromise effectiveness of the source." 44 Moreover, upon receipt of this information, FBI headquarters advised the Los Angeles field office:

Due to the sensitive nature of [deleted], which may become a further source of valuable information concerning the Socialist Worker's Party, any data obtained from that source should be paraphrased when submitted to the Bureau or other offices in memorandum form suitable for dissemination. 45

The Bureau apparently required such paraphrasing because it contemplated the dissemination outside the FBI of data obtained from surreptitious entries.

The material photographed by the FBI included membership lists, photographs of members, contribution lists, and correspondence concerning members' public participation in United States presidential campaigns, academic debates, and civil rights and antiwar organizing. For example, the following items were among those photographed by Bureau agents at the national offices of the Socialist Worker's Party:

-- "Items of correspondence between SWP National Headquarters and various branches detailing plans to obtain petition signatures to get on the ballot in 1960 elections."

-- "Letter sent by [SWP leader] to President Eisenhower (1/21/60) against loyalty program." 46

-- "SWP members active in trade unions -- identity of union and members disclosed." 47

-- "Letter dated 6/1/60 setting forth the topic of speech to be given by . . . SWP Vice-Presidential candidate at opening of tour at Detroit, and listing complete schedule of cities to be visited thereafter in nationwide tour." 48

- "Correspondence identifying contributors to SWP election campaign fund."
- "Letter proposing picket activity at Democratic Convention." 49
- "List naming all students at each session of Trotsky School from beginning in 1947 to the present." 50
- "Letter setting forth that [deleted] was cancelling balance of her national tour because her husband . . . had suffered a stroke." 51
- "Correspondence re arrangements for [deleted] to debate at Yale University."
- "Letter announcing death of [deleted] . . . and plans for NY memorial meeting . . . ." 52
- "Letter of Young Socialist Alliance (YSA) of 5/23/61 organizing Northern support for Southern students in integration struggle." 53
- "Note from SWP member . . . requesting new key to headquarters so he could continue delivering newspapers there when he finished work at night." 54
- "Letter ... detailing health status of Nat'l Chairman." 55
- "Several current items of correspondence to and from SWP members active in integration activities in Georgia." 56
- "Letters from National office to all branches re March on Washington." 57
- "Voluminous correspondence from many areas re SWP getting on the ballot in 1964 Presidential elections." 58
- "Complete tour schedule for SWP Presidential candidates Sept.-Oct. 1964." 59
- "Plans of [deleted] to write a book." 60
- "Reports on SWP participation in March on Washington (against the Vietnam War)." 61
- "Correspondence re new veterans anti-war organization."
- "Current photographs of SWP members."
- "Correspondence re new anti-war front in Cleveland." 62
- "Confidential address book of National-international Trotskyites." 63

In addition to these items, the FBI obtained information about other activities of SWP members, leaders and affiliates, including publishing plans, financial status, international travels and contacts, legal defense strategy, 64 and the political conflicts within the party. For example, information about "proposed legal maneuvers" by a committee to aid indicted Young Socialist Alliance members in Bloomington, Indiana, was obtained by the FBI.

The number of documents photographed during a single operation reached as high as 220 65 and regularly was above 100.

### **III. FBI POLICY AND THE QUESTION OF AUTHORIZATION OUTSIDE THE BUREAU**

#### *A. FBI Policy: The Hoover Termination of "Black Bag Jobs"*

After apparently approving hundreds of warrantless surreptitious entries, J. Edgar Hoover changed the FBI policy in 1966. In response to a Domestic Intelligence Division memorandum of July 19, 1966, outlining the procedures used for approval and reporting on "black bag jobs," Hoover appended the following handwritten note: "No more such techniques must be used." 67 Six months later, Hoover formalized this directive in a memorandum:

I note that requests are still being made by Bureau officials for the use of "black bag" techniques. I have previously indicated that I do not intend to approve any such requests in the future, and, consequently, no such recommendations should be submitted for approval of such matters. This

practice, which includes also surreptitious entrances upon premises of any kind, will not meet with my approval in the future. 68

The FBI's accounting of surreptitious entries indicated that Hoover's prohibition applied only to "black bag jobs." Break ins to install microphones were not banned. 69 Moreover, Hoover's order did not finally terminate "black bag jobs" against foreign targets. 70 Despite Hoover's directive, there is evidence that at least one "black bag job" directed against a "domestic subversive target" took place between 1966 and 1968. 71

## *B. Presidential and Attorney General Authorization*

### *1. The Huston Plan: Proposal to Lift the Ban*

In 1970, a plan for the inter-agency coordination of domestic intelligence activity was presented to President Nixon. The "Huston Plan" proposed, among other things, that restrictions against "black bag" entries "should be modified to permit selective use of this technique against foreign intelligence targets and other urgent and high priority internal security targets." 72 Presidential assistant Tom Charles Huston, the proponent of this plan, which received the support of many high officials in the intelligence community, was of the opinion that "black bag jobs" were illegal but should be utilized nonetheless:

Use of this technique is clearly illegal: it amounts to burglary. It is also highly risky and could result in great embarrassment if exposed. However, it is also the most fruitful tool and can produce the type of intelligence which cannot be obtained in any other fashion.

The FBI, in Mr. Hoover's younger days, used to conduct such operations with great success and with no exposure. The information secured was invaluable. ...

Surreptitious entry of facilities occupied by subversive elements can turn up information about identities, methods of operation, and other invaluable investigative information which is not otherwise obtainable. This technique would be particularly helpful if used against the Weathermen and Black Panthers. 73

In a memorandum to Attorney General John Mitchell, J. Edgar Hoover expressed his "clear-cut opposition to the lifting of the various restraints" proposed in the Huston Plan, but he also indicated a willingness to participate in the plan if it were adopted:

[T]he FBI is prepared to implement the instructions of the White House at your direction. Of course, we would continue to seek your specific authorization, where appropriate, to utilize the various sensitive investigative techniques involved in individual cases. 74

Although President Nixon granted approval for the Huston Plan, he revoked this approval within five days, in part because of Hoover's opposition. 75

### *2. Justice Department Policy*

(a) Historical Development. -- There is no indication that any Attorney General was informed of FBI surreptitious entries for domestic intelligence purposes other than microphone installation. 71

During World War II Alexander Holtzoff, a Special Assistant to the Attorney General, submitted a memorandum to Director Hoover on the "admissibility of evidence obtained by trash covers or microphone surveillance," in response to a series of hypothetical questions posed by an FBI official. Holtzoff declared flatly:

The secret taking or abstraction of papers or other property from the premises without force is equivalent to an illegal search and seizure, if the taking or abstraction is effected by a representative of the United States. Consequently, such papers or other articles are inadmissible as against a person whose rights have been violated, i.e., the person in control of the premises from which the papers or other property has been taken, *Gouled v. United States*, 255 U.S. 298.

However, Holtzoff interpreted prevailing court decisions as permitting a "microphone installation ... where an actual trespass is committed." He stated that:

evidence so obtained should be admissible, although no precise case decided by the courts involving such a situation has been found. The basic principle governing the situation is ... that microphone surveillance is not equivalent to an illegal search and seizure, *Goldman v. United States*, 316 U.S. 129.

77

In fact, the *Goldman* decision did not support Holtzoff's conclusion, since the microphone surveillance in the case did not involve trespass; and the Court did not address the question of microphone surveillance accomplished by surreptitious entry.

In 1952, Attorney General J. Howard McGrath advised Director Hoover that he could not "authorize the installation of a microphone involving a trespass under existing law." McGrath added, "Such surveillances as involve trespass are in the area of the Fourth Amendment, and evidence so obtained and from leads so obtained, is inadmissible." 78

A 1954 directive from Attorney General Brownell provided at least the color of legal authority for microphone surveillance involving trespass, but did not deal with surreptitious entries for other purposes. 79

The Justice Department policy toward warrantless surreptitious entry for the purpose of microphone installation apparently remained unchanged until 1965, when Attorney General Katzenbach required the FBI to seek his prior approval for microphone surveillances involving trespass, and he restricted the purpose, of such operations to the collection of intelligence affecting the national security. 80

(b) FBI Briefings of Attorney General Robert Kennedy. -- In 1961, the FBI reiterated to the Justice Department that the Bureau's practice was to install microphones, sometimes by trespass, without informing the Justice Department. In May 1961, Byron White, Deputy Attorney General under Robert Kennedy, was told by Director Hoover that:

in the internal security field we are utilizing microphone surveillances on a restricted basis even though trespass is necessary to assist in uncovering the activity of [foreign] intelligence agents and Communist Party leaders. . . . In the interest of national safety, microphone surveillances are also utilized on a restricted basis, even though trespass is necessary, in uncovering major criminal activities. 81

A memorandum by Courtney Evans, Assistant Director of the FBI for the Special Investigative Division, indicates that he discussed microphones in "organized crime cases" with Attorney General Kennedy in July 1961:

It was pointed out to the Attorney General that we had taken action with regard to the use of microphones in (organized crime) cases and . . . we were nevertheless utilizing them in all instances where this was technically feasible and where valuable information might be expected. The strong objections to the utilization of telephone taps as contrasted to microphone surveillances was stressed. The Attorney General stated he recognized the reasons why telephone taps should be restricted to national-defense-type cases and he was pleased we had been using microphone surveillances, where these objections do not apply, wherever possible in organized crime matters. 82

Evans testified that the purpose of this meeting was to secure the Attorney General's approval for the leasing of a telephone line from a private company for a wiretap operation. 83

Evans stated that he was "purposely vague" in this conversation and did not describe to the Attorney General the kinds of technical surveillance the Bureau was using or their methods for installing surveillance devices. 84 He explained that his "purposely vague" briefing was consistent with Director Hoover's policy.

Mr. EVANS. Mainly because of a feeling the Director had expressed, that one shouldn't discuss confidential techniques used by the Bureau any more than was absolutely necessary.

Question. It was your understanding that the admonition applied to the Attorney General as well as all other persons outside the Bureau?

Mr. EVANS. It was my understanding that if exceptions were to be made, the Director was going to make them himself. 85

Evans, who was responsible for the FBI's liaison with Attorney General Kennedy, testified that it was "entirely possible" that the Attorney General did not understand that surreptitious entries might be used in connection with the "microphone surveillance" and leased telephone line taps which he subsequently authorized. Evans himself understood that the operation for which the Attorney General's signature was obtained "could have in some instances" included microphone installation by means of surreptitious entry, although Evans indicated that there were several methods by which the Bureau could make a "legal entry to a location and effect a microphone installation. 86

(c) Present Policy. -- The Justice Department under Attorney General Edward H. Levi has addressed, for the first time, the legal issues arising from "black bag jobs." This occurred in a statement submitted by Acting Assistant Attorney General John C. Keeney in the appeal of the conviction of John Ehrlichman for the break-in by the White House "plumbers" at the office of Daniel Ellsberg's psychiatrist. Assessing the "plumbers" break-in, the Justice Department declared:

The physical entry here was plainly unlawful . . . because the search was not controlled as we have suggested it must be, there was no proper authorization, there was no delegation to a proper officer, and there was no sufficient predicate for the choice of the particular premises invaded. 87

At the same time, however, the Justice Department defended the President's constitutional authority to conduct warrantless surreptitious entries in limited circumstances and with proper executive authorization:

It is the position of the Department that such activities must be very carefully controlled. There must be solid reason to believe that foreign espionage or intelligence is involved. In addition, the intrusion into any zone of expected privacy must be kept to the minimum and there must be personal authorization by the President or the Attorney General. The Department believes that activities so controlled are lawful under the Fourth Amendment.

In regard to warrantless searches related to foreign espionage or intelligence, the Department does not believe there is a constitutional difference between searches conducted by wiretapping and those involving physical entries into private premises. One form of search is no less serious than another. It is and has long been the Department's view that warrantless searches involving physical entries into private premises are justified. 88

The Justice Department and the FBI have not terminated the use of warrantless surreptitious entry for electronic surveillance purposes in cases of "foreign espionage or intelligence". Warrantless surreptitious entry for other forms of search is not presently being conducted but, as indicated in the Justice Department statement, has not been ruled out as a matter of policy in foreign intelligence cases.

The FBI has stated that "microphone surveillances have been continued and in some instances physical entry of the premises has been necessary" against foreign counterintelligence targets. In addition, "a small number" of surreptitious entries which apparently did not involve microphone installation "were conducted in connection with foreign counterintelligence investigations having grave impact on the security of the nation." Entries for the purpose of installing electronic surveillance devices have also provided an opportunity to conduct other forms of search. The Bureau has stated:

Based on available records and discussions with FBI personnel, it has been determined that in connection with microphone surveillances in the United States, there have been occasions when observations and recordings were made of pertinent information contained within the premises. 89

According to the FBI, this "opportunity" has been "exploited" exclusively against foreign agents. 90

Warrantless surreptitious entries against American citizens who have "no significant connection with a foreign power, its agents or agencies" are undoubtedly unconstitutional. 92 The constitutional issues arising from warrantless surreptitious entries against foreign agents within the United States have not been definitely resolved by the courts. The Committee recommends, as a matter of policy that all governmental search and seizure "should be conducted only upon authority of a judicial warrant" issued in narrowly defined circumstances and with procedural safeguards "to minimize the acquisition and retention of non-foreign intelligence information about Americans." 93

#### APPENDIX <sup>1</sup>

#### SURREPTITIOUS ENTRIES FOR THE INSTALLATION OF MICROPHONES IN CRIMINAL INVESTIGATIONS

|          | 1. Entries since 1960 | 2. Separate targets each year since 1960 |
|----------|-----------------------|------------------------------------------|
| 1960     | 11                    | 11                                       |
| 1961     | 69                    | 49                                       |
| 1962     | 106                   | 84                                       |
| 1963     | 84                    | 66                                       |
| 1964     | 83                    | 67                                       |
| 1965     | 41                    | 35                                       |
| 1966     | 0                     | 0                                        |
| 1967     | 0                     | 0                                        |
| 1968     | 0                     | 0                                        |
| Subtotal | 394                   | 312                                      |

According to the FBI, the following entries were conducted pursuant to judicial warrants issued under title III of the Omnibus Crime Control and Safe Streets Act of 1968:

|       | 1. Entries | 2. Separate targets each year |
|-------|------------|-------------------------------|
| 1969  | 3          | 3                             |
| 1970  | 8          | 8                             |
| 1971  | 7          | 6                             |
| 1972  | 19         | 18                            |
| 1973  | 27         | 20                            |
| 1974  | 22         | 21                            |
| 1975  | 11         | 8                             |
| Total | 491        | 396                           |

FBI memorandum from the FBI to Senate Select Committee, Oct. 17, 1975, re request pertaining to surreptitious entries for installation of electronic surveillance.

#### Footnotes:

1 Memorandum from FBI to Senate select Committee, 1/13/76.

Throughout this report, the FBI's term "black bag job" will be used, as in FBI memoranda, to refer to warrantless surreptitious entries for purposes other than microphone installation, e.g., physical search and photographing or seizing documents. The term "surreptitious entries" will be used to refer to all warrantless entries by the FBI, including both "black bag jobs" and entries for the purpose of microphone installation. Surreptitious entries of either type often involved breaking and entering the targeted premises. See the Committee's report on FBI Electronic Surveillance for a general treatment of microphone installations.

1a Memorandum from FBI to Senate Select Committee, 10/17/75, p. 3.

2 Memorandum from J. Edgar Hoover to Attorney General Mitchell, 7/27/70.

3 Memorandum from William C. Sullivan to C. D. DeLoach, 7/19/66. This memorandum was written by Section Chief F. J. Baumgardner and approved on Sullivan's behalf by his principal deputy, J. A. Sizoo.

4 Memorandum from Brownell to Hoover, 5/20/54.

5 U.S. v. Ehrlichman, 376 F. Supp. 29, 31 (1974).

6 U.S. v. Ehrlichman, 376 F. Supp. 29,31 (1974).

7 Ibid, p. 33, Gesell wrote: "Defendants contend that, over the last few years, the courts have begun to carve out an exception to this traditional rule for purely intelligence-gathering searches deemed necessary for the conduct of foreign affairs. However, the cases cited are carefully limited to the issue of wiretapping, a relatively nonintrusive search, United States v. Butenko, 494 F.2d 593 (3rd Cir. 1974) ; United States v. Brown, 484 F.2d 418 (5th Cir. 1973) ; Zweibon v. Mitchell, 363 F. Supp. 936 (D.D.C. 1973), and the Supreme Court has reserved judgment in this unsettled area. United States v. United States District Court, 407 U.S. 297, 322 n. 20, 92 S. Ct. 2125, 32 L. Ed. 2d 752 (1972)." Ibid, p. 33.

8 U.S. v. Ehrlichman, supra at 33, n. 3 citing U.S. v. U.S. District Court, supra at 313. This decision, known as the Keith case, after its author, Judge Damon Keith, is discussed in detail in the report on FBI Electronic Surveillance.

9 U.S. v. Ehrlichman, supra, at 34.

10 Ibid, pp. 33-34. The Ehrlichman decision has been appealed and the Justice Department has filed a memorandum in the Court of Appeals contesting Judge Gesell's ruling on the President's power. The Justice Department's position is set forth later in this report at pp. 369-370.

11 Katz v. United States, 389 U.S. 347 (1967).

12 For example, Goldman v. United States, 316 U.S. 129 (1942).

13 Katz v. United States, 389 U.S. at 351, 360.

14 389 U.S., at 358 n. 23.

15 Although the Supreme Court has never held that there is such an exception, at least two lower courts have so held in the foreign intelligence and counterintelligence field. United States v. Butenko, 494 F.2d 593 (3rd Cir. 1974), United States v. Brown, 484 F.2d 418 (5th Cir. 1973) ; but cf., Zweibon v. Mitchell, 516 F.2d 594 (D.C. Cir. 1975, en banc).

16 Levi testimony, 11/6/75, Hearings, Vol. 5, p. 97.

17 Memorandum. from W. C. Sullivan to C. D. DeLoach, 7/19/66, Subject: "Black Bag" Jobs.

18 Memorandum from the FBI to the Senate Select Committee, September 23, 1975.

19 Staff summary of interview with former FBI Agent 1, 9/5/75, p. 3.

20 Ibid, p. 4.

21 Ibid, p. 4.

22 Staff Summary, FBI Special Agent 1 Interview, 9/5/75, p. 4; FBI Special Agent 1 Interview, 6/27/75, p. 4.

23 Staff Summary, FBI Special Agent 2 Interview, 9/10/75, p. 2.

23a FBI Special Agent 1 Interview, 9/5/75.

The Committee did not conduct a detailed examination of all operational techniques and procedures involved in surreptitious entry operations.

24 Unaddressed memorandum from J. Edgar Hoover, Director, 6/22/64.

25 FBI Special Agent 2 Interview, 9/10/75. pp. 1-4.

26 FBI Special Agent 1 Interview, 9/5/75, p. 5.

27 FBI Special Agent 1 Interview, 9/5/75, pp. 5, 8.

28 Memorandum from the FBI to the Select Committee, 9/23/75, p. 1. The FBI compiled a list of the "domestic subversive" targets, based "upon recollections of Special Agents who have knowledge of such activities, and review of those files identified by recollection as being targets of surreptitious entries." The Bureau admits that this list is "incomplete."

The Select Committee has reviewed this list and has determined that the specific targets listed fell within what was understood at the time of the surreptitious entries to be the "domestic subversive" category, as defined in FBI Manual Section 87 as permissible targets for full investigations (committee Staff Memorandum, September 25, 1975.) [See the discussion of the overbreadth of FBI full investigations in the Report on 'the Development of FBI Domestic Intelligence Investigations; 1916-1976.]

29 Memorandum from W. C. Sullivan to C. D. DeLoach, 7/19/66, p. 2.

30 Memorandum from W. C. Sullivan to C. D. DeLoach, p. 2.

31 Staff Summary, Interview of Former FBI Special Agent 3, 5/21/75, p. 4.

32 Memorandum from the FBI to Senate Select Committee, 9/23/75.

33 Memorandum from the FBI to Senate Select Committee, 1/13/76.

34 Memorandum from the FBI to Senate Select Committee, 1/13/76.

35 Sixth Supplementary Response to Requests for Production of Documents of Defendant Director of the Federal Bureau of Investigations, Socialist Workers Party, et al, v. Attorney General, et al, 73 Civ. 3160 (S.D.N.Y.), 3/24/76.

36 Memorandum from the FBI to Senate Select Committee, 10/17/75, p. 3. The FBI reporting of these statistics does not make clear how many of these installations, if any, were included in the estimate of the number of surreptitious entries cited above.

37 Memorandum from the FBI to Senate Select Committee, 10/17/75, pp. 4-5. See Appendix for the complete yearly breakdown of these statistics.

38 These materials have been described by the FBI as a response to the Socialist Workers Party request for "documents relating to any intelligence gathering burglaries perpetrated by or with knowledge of the F.B.I. against the S.W.P., the Y.S.A. (Young Socialist Alliance) or anyone suspected to be a leader or member thereof." (Sixth Supplementary Response to Requests for Production of Documents of Defendant Director of the Federal Bureau of Investigation, Socialist Worker's Party, et al. v. Attorney General, et al., 73 Civ. 3160 (S.D.N.Y.), 3/24/76.)

39 This method of filing of documents relating to the operational details of surreptitious entries should be distinguished from the "Do Not File" procedure which led to the destruction of documents recording the authorization of surreptitious entries.

40 Memoranda from New York Field Office to FBI Headquarters, 6/23/60 and 9/26/62.

41 Several memoranda describe the "security aspects" of the FBI agents' plans for securing entry into the headquarters of the Young Socialist Alliance. One reads as follows:

"The headquarters entrance is a store front on the street level. There is only one entrance to the headquarters. The door is locked with a Master padlock only. . . .

"The entrance to the building is located approximately 75 feet on the north side of [the] Street from Second Avenue. The headquarters is a street front located adjacent to the entrance to the apartment building. . . . East of the headquarters store front are located 4 similar store fronts within the same building. These are described as follows from the headquarters going east: New York Telephone Company; empty store front; law office; empty store front.

"There are 4 floors of apartment dwellings above these store fronts in the building.

"There is a street light located on the north side of [the] Street, approximately five store fronts east of the headquarters. Inasmuch as the nearest other street light is located on the southeast corner of [the street] and Second [street], the immediate area of the headquarters is reasonably dark in evening hours.

"Previous spot checks on numerous occasions have shown that there is a very limited amount of pedestrian and automobile traffic after 12 Midnight. These spot checks have also shown that the lights of the apartments in the building are darkened.

"Entrance will be made between the hours of 12 Midnight and 4 AM, June 30, 1960." (Memorandum from FBI Headquarters to New York Field Office, 6/23/60.)

When the YSA headquarters moved in 1962, the "security aspects" of the FBI's entry plans were re-evaluated:

"This building is a three-story edifice approximately 25 feet wide by 75 feet in depth. The second and third floors are loft premises. The first floor is occupied by [a paint company]. The entrance to the second and third floors of the building is a door located beside the paint store. This door leads directly to stair flights to the second and third floors and is secured with a cylinder lock. This entrance does not connect with the paint store on the street level. . . .

"The third floor loft of this building is occupied by an artist . . . who maintains a studio. This individual pursues his profession, together with holding occasional art classes, in this loft. This activity transpires during the daytime. [The artist] does not reside on these premises and is not known to frequent the premises in the evening hours.

"The YSA Headquarters are located on the second floor left space. The YSA moved into these headquarters on 9/21/62. Numerous spot checks of the area have shown very limited pedestrian and automobile traffic after midnight. The buildings adjacent to this location . . . on both sides of the street, are commercial establishments and lofts, and contain no residence.

"It has been ascertained that the paint store at this building closes at 6:00 p.m. and that all of the commercial establishments in this area close business between 5:00 and 6:00 p.m. . . .

"Entrance will be made between the hours of twelve midnight and 4:00 a.m., on 9/28/62." Memorandum from FBI Headquarters to New York Field Office, 9/26/62.

42 Memorandum from Los Angeles Field Office to New York Field Office, 6/16/60; memorandum from Los Angeles Field Office to FBI Headquarters, 6/17/60.

59 Memorandum from FBI Headquarters to New York Field Office, 7/10/61.

60 Memorandum from FBI Headquarters to New York Field Office, 10/30/64.

61 Memorandum from FBI Headquarters to New York Field Office, 4/30/65.

62 Memorandum from FBI Headquarters to New York Field Office, 12/17/65.

63 Memorandum from FBI Headquarters, to New York Field Office, 4/22/66.

64 Memorandum from FBI Headquarters to New York Field Office, 7/10/64; memorandum from FBI Headquarters to New York Field Office, 5/14/65; memorandum from FBI Headquarters to New York Field Office, 7/16/65. 65 Memorandum from FBI Headquarters to New York Field Office, 4/30/65.

66 omitted in original.

67 Memorandum from W. C. Sullivan to C. DeLoach, 7/19/66, p. 3.

68 Memorandum from Hoover to Tolson and DeLoach, 1/6/67. Hoover's motivation for issuing this order in 1966 is unclear. His order came during the same period in which the Bureau's mail opening programs were halted. (See the report on "CIA and FBI Mail Opening", Sec. III -- Termination of the FBI Mail Opening Programs, for a discussion of the possible motivation for Hoover's termination of both mail opening activities and surreptitious entries.) One agent who participated in "black bag" operations indicated that he was unaware of any previous FBI opposition to them. (FBI Special Agent 1 Interview, 9/5/75, p. 8)

69 Memorandum from Director, FBI, to Attorney General, 6/26/75, p. 1. Even today Justice Department policy permits warrantless surreptitious entries, both to install microphones and for other purposes in the area of "foreign espionage or intelligence." See pp. 369-371.

70 See pp. 369-371.

71 Memorandum from the FBI to Senate Select Committee, 9/23/75.

72 Memorandum from Tom Charles Huston to H. R. Haldeman, 7/70, p. 2.

73 Memorandum from Huston to H.R. Haldeman, 7/70, p. 3.

74 memorandum from Hoover to Mitchell, 7/27/70. p. 3.

75 See report on The Huston Plan: Sec. VI, Rescission of the Huston Plan: A Time for Reconsideration.

76 For a full treatment of memoranda between FBI Director Hoover and successive Attorneys General on microphone installation policy and an analysis of legal developments in the field of electronic surveillance, see Report on FBI Electronic Surveillance.

77 Memorandum from Holtzoff to Hoover, 7/4/44. Holtzoff also advised the FBI that it could legally use cooperating sources or informants to obtain access to private materials:

"Where a person (A), having possession of the membership records of an organization, is told by a person (B) who is a member of the same organization but who is working in conjunction with the Bureau, that a particular place is a safe one in which to leave the membership records of the organization. After the records have been so left agents of this Bureau who have the legal permission of (B) enter the premises where the material was left, obtain the records and remove them to another place where they are completely photographed. The records are then returned to their original place where they are subsequently obtained by the depositor (A). It can be assured that both the Agent and the person (B) can testify on behalf of the Government.

The foregoing evidence is probably admissible. No entry to the subject's premises was involved, nor was the property abstracted from him. He left it voluntarily in the possession of (B) whose possession was lawful and who thereafter was in a position to grant permission to Bureau Agents to photograph it."

78 Memorandum from McGrath to Hoover, 2/26/52.

79 Memorandum from Brownell to Hoover, 5/20/54. See full discussion in Report on FBI Electronic Surveillance.

80 Memorandum from Katzenbach to Hoover, 9/27/65. See full discussion in Report on FBI Electronic Surveillance.

81 Memorandum from Director, FBI, to Attorney General Byron White, 5/4/61.

82 Memorandum from C. A. Evans to A. Belmont, 7/7/71.

83 Courtney Evans, testimony, 12/1/75, p. 24.

84 Evans, 12/1/75, p. 25.

85 Evans, 12/1/75, pp. 25,29.

86 Evans, 12/1/75, p. 31; Memorandum from Evans to Belmont, 8/17/61.

87 Department of Justice Letter, Acting Assistant Attorney General John C. Keeney to Hugh E. Kline, Clerk of U.S. Court of Appeals for the District of Columbia, 5/9/75.

88 Letter from Keeney to Hugh Kline, clerk of U.S. Court of Appeals for the District of Columbia, 5/9/75.

89 Memorandum from the FBI to Senate Select Committee, 7/16/75.

90 Memorandum from the FBI to Senate Select Committee, 6/26/75.

In contrast to the surreptitious entries conducted against "domestic subversive" targets until 1966, one such foreign intelligence operation studied by the Committee demonstrated an FBI pattern of conscientiously obtaining authorization from executive branch officials outside the Bureau: the CIA initially requested the aid of the FBI in performing the operation; the FBI secured State Department approval and then submitted the plan to the Attorney General for his authorization. (Committee staff summary of FBI memoranda.)

92 407 U.S. 297, 309, n. 8 (1972). The Keith case did not specifically address the question of the legality of "black bag jobs." However, by holding that the President's constitutional powers do not enable him to authorize warrantless electronic surveillance of domestic organizations, the logic of the decision compels the conclusion that warrantless surreptitious entries are unconstitutional.

93 Senate Select Committee Report on "Intelligence Activities and the Rights of Americans," Recommendations 51-54, pp. 327-328.

The Committee made the following recommendation to restrict the use of the technique of warrantless surreptitious entry (referred to as "unauthorized entry" -- entry unauthorized by the target):

"Unauthorized entry should be conducted only upon judicial warrant issued on probable cause to believe that the place to be searched contains evidence of a crime, except unauthorized entry, including surreptitious entry, against foreigners who are officers, employees, or conscious agents of a foreign power should be permitted upon judicial warrant under the standards which apply to electronic surveillance described in Recommendation 52." (Recommendation 54, P. 328.)

This recommendation on "unauthorized entry" incorporates by reference the standards set forth in Recommendation 52 on electronic surveillance:

"All non-consensual electronic surveillance should be conducted pursuant to judicial warrants issued under authority of Title III of the Omnibus Crime Control and Safe Streets Act of 1968.

"The Act should be amended to provide, with respect to electronic surveillance of foreigners in the United States, that a warrant may issue if

"(a) There is probable cause that the target is an officer, employee or conscious agent of a foreign power.

"(b) The Attorney General has certified that the surveillance is likely to reveal information necessary to the protection of the nation against actual or potential attack or other hostile acts of force of a foreign power; to obtain foreign intelligence information deemed essential to the security of the United States; or to protect national security information against hostile foreign intelligence activity.

"(c) With respect to any such electronic surveillance, the judge should adopt procedures to minimize the acquisition and retention of non-foreign intelligence information about Americans.

"(d) Such electronic surveillance should be exempt from the disclosure requirements of Title III of the 1968 Act as to foreigners generally and as to Americans if they are involved in hostile foreign intelligence activity (except where disclosure is called for in connection with the defense in the case of criminal prosecution)." (Recommendation 54, pp. 327-28.)

It should be noted that there are well established exceptions to the warrant requirement for searches in exigent circumstances.

**THE DEVELOPMENT OF FBI DOMESTIC INTELLIGENCE INVESTIGATIONS**

**I. INTRODUCTION**

During the past forty years, FBI intelligence investigations have been one of the federal government's main resources for the protection of domestic security. The executive branch, not the Congress, took the initiative in 1936 to establish the Bureau's intelligence structure. Until this Committee's investigation, there has never been a substantial inquiry by the Congress into the policies and practices of the FBI and the executive for the conduct of domestic intelligence investigations. The purpose of this report is to set forth chronologically the development of these policies and practices, as shown by the materials obtained by the Committee from the FBI and the Justice Department.

*A. Scope of the Report*

There are several major limits on the scope of this report and of the inquiry it represents. Since it spans sixty years of American history, the report does not purport to be an exhaustive discussion of all the outside events which were the setting for policy decisions and the development of Bureau programs. Nor does this report touch on many of the most controversial cases in the FBI's past, such as the Hiss and Rosenberg cases, which have recently been the subject of extensive historical reconsideration on the basis of materials made public under the Freedom of Information Act. Rather, the narrative which follows concentrates on the Bureau's general policies and formal programs, with specific illustrations of what appear to be typical applications of these investigative standards. <sup>1</sup>

Furthermore, the Committee has not attempted to secure from the FBI and the Justice Department an exhaustive compilation of all policy materials relating to domestic intelligence over the entire period since 1936. For example, the Committee has reviewed all versions of the FBI Manual Sections pertaining to intelligence only as far back as 1960. The same cut-off date was used in the Committee's requests for such basic policy documents as the "SAC Letters" (regular instructions to the Special Agents in Charge of all FBI field offices from Bureau headquarters) and memoranda recording decisions of the FBI's Executive Conference (composed of all Bureau executives at the level of Assistant Director and above). However, substantial information about pre-1960 intelligence policies was obtained in connection with the Committee's review of the FBI's Security Index and related programs going back to 1939. Other materials on the FBI's overall policy mandate from the President were located in the various Presidential libraries; and the Bureau volunteered to the Committee an extensive collection of documents on its operations as part of an analysis of the origins of its legal authority to conduct domestic intelligence investigations. <sup>2</sup>

The most significant omission from this report is the FBI's foreign counterintelligence policies. While they are mentioned from time to time as part of the larger context for the Bureau's intelligence operations as a whole, they are not considered in the

same depth as FBI domestic intelligence investigations not directed specifically at the activities of hostile foreign intelligence services in this country. 3

Nevertheless, it is essential to examine the nature of foreign counterintelligence investigations in order to understand the origins of FBI domestic intelligence. Counterintelligence investigations are a necessary response to the threat of espionage and related hostile intelligence activities of foreign governments. Foreign espionage is a tangible and obvious danger; and clandestine investigations of foreign agents are a minimal intrusion upon the rights of Americans (even if some foreign agents are citizens). The crimes a foreign agent may commit on behalf of his principal are extraordinarily serious, for they may result in disclosure of the nation's most sensitive defense information to a foreign adversary. The positive foreign intelligence by-product of counterintelligence may have great significance, since it can alert the United States to impending hostilities and provide information about the larger intentions and objectives of other nations.

Before World War II the governments of Nazi Germany, Japan, and the Soviet Union mounted intelligence efforts directed at the United States. While their extent was not fully known at the time, there were sufficient indications as early as the mid-1930s. Given the international climate and the activities of German and Soviet officials in the United States, there was every reason to believe that this country needed a counterintelligence capability to identify and possibly disrupt the work of hostile intelligence services.

From today's perspective it is harder to understand the nature of the domestic threats to security which, along with foreign espionage, were the reasons for establishing the FBI's intelligence program in the 1930s. President Roosevelt and the Congress were not just concerned about spies and foreign agents in the pre-World War II period. They saw a threat which combined both foreign and domestic elements, and FBI intelligence was assigned to deal with it. Only by a closer examination of the historical record can this assignment be fully explained. Factors of political belief and association, group membership and nationality affiliation, became the criteria for intelligence investigations before the war; and the continued to be used through the Cold War period to the 1960s and early 1970s.

Therefore, this report describes how the policy assumptions behind FBI domestic intelligence were established in 1930s and 1940s and became unquestioned dogma as the years went by. In the 1960s, new and unexpected events occurred which did not fit these established concepts. There was no longer a consensus among Americans as to the nature of government's proper response to home-grown dissidents who might engage in violence as a form of political protest, to racist groups using force to deprive others of their civil rights, to civil disorders growing out of minority frustrations, or to large-scale protest demonstrations. Presidents and Attorneys General turned to the FBI for intelligence about these matters without adequate controls. The resulting confusion and mistakes of the past ten years called into question some of the fundamental assumptions underlying the FBI intelligence programs of the previous three decades.

#### *B. Issues Presented*

Domestic intelligence investigations involve much more than the neutral collection of information. Intelligence gathering is a process including many kinds of activity. The ordinary means of collecting information inevitably has an adverse impact on the rights of individuals. The recruitment of informants paid to supply information about their acquaintances is a fundamental tool of intelligence. By arranging for what is in effect a government agent to intrude into the private relationships among people, the FBI substantially interferes with free association. 4 Moreover, like all investigations, intelligence collection involves extensive interviews with the subjects of investigation, their friends, employers, neighbors, school officials, sources of credit, and anyone else who may know something about their back ground and activities. The interview is not a neutral event. The way a person is looked upon by those around him can be significantly affected when they know he is someone "of interest" to the government. These consequences are the necessary price of investigations of crime, and they may be justified to satisfy other compelling governmental interests. But FBI domestic intelligence gathering has gone far beyond criminal investigation and, in many instances, beyond a reasonable definition of compelling necessity. No act of Congress has supplied clear legal standards against which to measure the propriety of domestic intelligence investigations. Instead, the executive branch has been on its own with vague legal concepts of "emergency power" or "war power" or other imprecise doctrines of inherent presidential authority. These problems have been compounded by practices of secrecy. Congress was often not informed or did not seek information. Even within the executive branch, the FBI assumed it had a general mandate and thus frequently did not advise its superiors of specific policies. The judiciary had no role at all because clandestine investigations did not lead to prosecutions. 5

The FBI's experience in the conduct of domestic intelligence investigations over the past forty years, as it is set forth in this report, argues strongly for discarding outdated ideas and striking a new balance between security and liberty. The dangers of domestic intelligence are real, not imaginary. They underscore the need to circumscribe carefully any intelligence operations carried out by the federal government within the United States or against Americans anywhere else in the world. Equally important, they demonstrate the need for Congress to assert its lawmaking power, for the executive to abandon inflated doctrines of presidential authority, and for an end to the excessive secrecy which destroys the effectiveness of the rule of law.

## **II. HISTORICAL ANTECEDENTS -- WORLD WAR I, THE "RED SCARE," AND ATTORNEY GENERAL HARLAN FISKE STONE'S REFORMS**

### *A. Pre- World War I Programs*

The first federal domestic intelligence programs originated shortly before the United States entered World War I in 1917. The initial threat perceived by federal officials was the activity of German agents, including sabotage and espionage, directed at the United States in the period before America entered the war. Although the neutrality laws were on the books, no federal statute made espionage or sabotage a crime. Attorney General Thomas W. Gregory proposed such legislation in 1916, but Congress took no action before American entry into the war. Nonetheless, the Executive Branch went ahead with development of a domestic security intelligence capability.

Several federal agencies expanded their operations. The Secret Service, which was established in the Treasury Department to investigate counterfeiting in 1865, had served as the main civilian intelligence agency during the Spanish-American War. With \$50,000 in War Department funds, the Secret Service had organized an emergency auxiliary force to track down Spanish spies, placed hundreds of civilians under surveillance, and asked the Army to arrest a number of alleged spies. <sup>6</sup> After the assassination of President McKinley by an anarchist in 1901, the Secret Service was authorized to protect the President. Its agents were also assigned to the Justice Department as investigators until 1908 when Congress forbade the practice. In 1915 Secretary of State William Jennings Bryan decided that German diplomats should be investigated for possible espionage, and he requested and received President Wilson's permission to use the Secret Service. <sup>7</sup>

The military had performed extensive security intelligence functions during the Civil War, although operations were largely delegated to commanders in the field. When the military discontinued its surveillance program after the Civil War, Allan Pinkerton who had worked for the War Department under President Lincoln founded a private detective agency. The Pinkerton agency and other private detective forces served both government and private employers in later years, frequently to spy upon labor organizing activities. <sup>8</sup> In the years immediately before American entry into World War I, military intelligence lacked the resources to engage in intelligence operations. Therefore, preparation for war rested largely with the Secret Service and its main competitor, the Justice Department's Bureau of Investigation.

The Justice Department's investigative authority stemmed from an appropriations statute first enacted in 1871, allowing the Attorney General to expend funds for "the detection and prosecution of crimes against the United States." <sup>9</sup> The Attorney General initially employed several permanent investigators and supplemented them with either private detectives or Secret Service agents. When Congress prohibited such use of Secret Service personnel in 1908, Attorney General Charles J. Bonaparte issued an order authorizing creation of the Bureau of Investigation. There was no formal Congressional authorization for the Bureau, but once it was established its appropriations were regularly approved by Congress. Members of the House Appropriations Committee debated with Attorney General Bonaparte over the need for safeguards against abuse by the new Bureau. Bonaparte emphasized, "The Attorney General knows, or ought to know, at all times what they are doing." Some Congressmen thought more limits were needed, but nothing was done to circumscribe the Bureau's powers. <sup>10</sup>

Passage of the Mann Act and other federal statutes prohibiting interstate traffic in stolen goods, obscene materials, and prizefight films soon expanded the criminal investigative responsibilities of the Justice Department and its Bureau of Investigation.

By 1916 Attorney General Gregory had expanded the Bureau's personnel from 100 to 300 agents, primarily to investigate possible violations of the neutrality laws. The Attorney General objected to the Secret Service's investigations of activities which did not involve actual violations of federal laws. However, when President Wilson and Secretary of State Robert Lansing expressed continued interest in such investigations, Attorney General Gregory went to Congress for an amendment to the Justice Department's appropriations statute which would allow the Bureau to do what the Secret Service had already begun doing. With the agreement of the State Department, the statute was revised to permit the Attorney General to appoint officials not only to detect federal crimes, but also "to conduct such other investigations regarding official matters under the control of the Department of Justice or the Department of State, as may be directed by the Attorney General." <sup>11</sup> This amendment to the appropriations statute was intended to be an indirect form of authorization for investigations by the Bureau of Investigations, although a State Department request was seen as a prerequisite for such inquiries. <sup>12</sup>

Under the direction of A. Bruce Bielaski, the Bureau concentrated at first on investigations of potential enemy aliens in the United States. According to the authoritative history of the Justice Department,

The Bureau of Investigation made an index of aliens under suspicion. At the end of March 1917, just before the entrance of the United States into the war, the chief of the Bureau submitted a list of five classes of persons. One class, ninety-eight in number, should be arrested immediately on declaration of war. One hundred and forty should be required to give bond. Five hundred and seventy-four were strongly suspected. Five hundred and eighty-nine had not been fully cleared of suspicion. Three hundred and sixty-seven had been cleared of specific offenses. Others, after investigation, had been eliminated from the lists. <sup>13</sup>

Theoretically, the threat of dangerous aliens was the responsibility of the Immigration Bureau in the Labor Department. As early as 1903 Congress had enacted legislation requiring the deportation within three years of entry of persons holding anarchistic beliefs or advocating "the overthrow by force or violence of the Government of the United States." <sup>14</sup> In early 1917 the immigration laws were amended to eliminate the three-year limit and require deportation of any alien "found advocating or teaching the unlawful destruction of property ... or the overthrow by force or violence of the Government of the United States." <sup>15</sup> Nevertheless, the Immigration Bureau lacked the men, ability, and time to conduct the kind of investigations contemplated by the statute. <sup>16</sup>

As the United States entered World War I, domestic security investigations were the province of two competing civilian agencies -- the Secret Service and the Bureau of Investigation -- soon to be joined by military intelligence and an extensive private intelligence network called the American Protective League.

#### *B. Domestic Intelligence in World War I*

Shortly after the declaration of war, Congress considerably strengthened the legal basis for federal investigations by enacting the Espionage Act of 1917, the Selective Service and Training Act, and other statutes designed to use criminal sanctions to assist the war effort. But Congress did not clarify the jurisdiction of the various civilian and military intelligence agencies. The Secretary of War established a Military Intelligence Section under Colonel Ralph Van Doman, who immediately began training intelligence officers and organizing civilian volunteers to protect defense plants. By the end of 1917 the MIS had branch offices throughout the United States to conduct investigations of military personnel and civilians working for the War Department. MIS agents cooperated with British intelligence in Mexico, with their joint efforts leading to the arrest of a German espionage agent during the war. <sup>17</sup>

A major expansion of federal intelligence activity took place with the formation of the American Protective League, which worked directly with the Bureau of Investigation and military intelligence. A recent FBI study recounts how the added burdens of wartime work led to the creation of the League:

To respond to the problem, Attorney General Thomas W. Gregory and then Bureau Chief A. Bruce Bielaski, conceived what they felt might suffice to answer the problem. The American Protective League (APL) composed of well-meaning private individuals, was formed as a citizens auxiliary to "assist" the Bureau Of Investigation. In addition to the authorized auxiliary, ad hoc groups took it upon themselves to "investigate" what they felt were un-American activities. Though the intentions of both groups were undoubtedly patriotic and in some instances beneficial, the overall result was the denial of constitutional safeguards and administrative confusion. To see the problem, one need only consider the mass deprivation of rights incident to the deserter and selective service violator raids in New York and New Jersey in 1918, wherein 35 Agents assisted by 2,000 APL operatives, 2,350 military personnel, and several hundred police rounded up some 50,000 men without warrants of sufficient probable cause for arrest. Of the 50,000 arrestees, approximately 1,500 were inducted into the military service and 15,000 were referred to draft boards. 18

The FBI study also cites the recollections of an Agent of the Bureau of Investigation during World War I regarding the duplication of effort:

How did we function with relation to other agencies, both federal and state? In answering this query, I might say that while our relationship with the Army and Navy Departments, was extremely cordial at all times, nevertheless there was at all times an enormous overlapping of investigative activities among the various agencies charged with winning the war. There were probably seven or eight such active organizations operating at full force during war days and it was not an uncommon experience for an Agent of this Bureau to call upon an individual in the course of his investigation, to find out that six or seven other government agencies had been around to interview the party about the same matter. 19

The Secret Service opposed the utilization of American Protective League volunteers and recommended, through Treasury Secretary McAdoo, establishment of a centralized body to coordinate domestic intelligence work. The Treasury Department's proposal was rejected in early 1918, because of the objections of Colonel Van Deman, Bureau Chief Bielaski, and the Attorney General's Special Assistant for war matters, John Lord O'Brien. Thereafter the role of the Secret Service in intelligence operations diminished in importance. 20

During World War I the threat to the nation's security and the war effort was perceived by both government and private intelligence agencies as extending far beyond activities of enemy agents. Criticism of the war, opposition to the draft, expression of pro-German or pacifist sympathies, and militant labor organizing efforts were all considered dangerous and targeted for investigation and often prosecution under federal or state statutes. The federal Espionage Act forbade making false statements with intent to interfere with the success of the military, attempting to cause insubordination, and obstructing recruitment of troops. 21 With little guidance from the Attorney General, the United States Attorneys across the country brought nearly 2,000 prosecutions under the Espionage Act for disloyal utterances. 22 Not until the last month of the war did Attorney General Gregory require federal prosecutors to obtain approval from Washington before bringing Espionage Act prosecutions. John Lord O'Brien, the Attorney General's Special Assistant, recalled "the immense pressure brought to bear throughout the war upon the Department of Justice in all parts of the country for indiscriminate prosecution demanded in behalf of a policy of wholesale repression and restraint of public opinion." 23

In addition to providing information for Espionage Act prosecutions intelligence operations laid the foundation for the arrest and internment of enemy aliens. About 6,300 aliens were arrested, of which some 2,300 were turned over to military authorities for internment and the remainder released or placed on parole. 24

#### *C. The Post-war "Red Scare" and the "Palmer Raids"*

The end of the war in 1918 did not bring about the termination of domestic intelligence operations. The Bureau of Investigation shifted its attention from critics of the war to the activities of radical and anarchist groups. The new threat was dramatized vividly by a series of terrorist bombings in 1919, including an explosion on the doorstep of Attorney General A. Mitchell Palmer's residence. Congress resounded with calls for action, although the applicable provisions of the Espionage Act had expired at the end of the war and no new federal criminal statute was enacted to replace it. Instead, state statutes and the deportation provisions of the Immigration Act became the basis for the federal response.

Attorney General Palmer authorized two major revisions in Justice Department intelligence operations in 1919. First, he established a General Intelligence Division in the Justice Department, headed by J. Edgar Hoover, who had served during the war as head of the Department's program for compiling information on enemy aliens. At the same time, Palmer appointed William J. Flynn, former head of the Secret Service, as Director of the Bureau of Investigation.

Less than two weeks after the GID was established, Flynn ordered a major expansion of Bureau investigations "of anarchistic and similar classes, Bolshevism, and kindred agitations advocating change in the present form of government by force or violence, the promotion of sedition and revolution, bomb throwing, and similar activities." Since the only available federal law was the deportation statute, Flynn stressed that the investigations "should be particularly directed to persons not citizens of the United States." Nevertheless, he also directed Bureau agents to "make full investigations of similar activities of citizens of the United States with a view to securing evidence which may be of use in prosecutions under the present existing state or federal laws or under legislation of that nature which may hereinafter be enacted." (Emphasis supplied.) The instructions discussed the provisions of the recent amendments to the Immigration Act, which expanded the grounds for deportation to include membership in revolutionary organizations as well as individual advocacy of violent overthrow of the government. 25 Director Flynn concluded by urging Bureau agents to "constantly keep in mind the necessity of preserving the cover of our confidential informants." 26

The results of these investigations were reported to the Department's General Intelligence Division for analysis and evaluation. Overall direction of the work of the GID under Hoover and the Bureau under Flynn was placed in the hands of an Assistant Attorney General, Francis P. Garvan, who had been a division chief in the New York district attorney's office before the war. 27

Historians have documented fully the tremendous pressures placed on Attorney General Palmer, not just by his subordinates, but by public opinion, other members of President Wilson's cabinet, and the Congress to act decisively against the radical threat in 1919. For example, Secretary of State Lansing declared in a private memorandum written in July, "It is no time to temporize or compromise; no time to be timid or undecided; no time to remain passive. We are face to face with an inveterate enemy of the present social order." The Senate unanimously passed a resolution demanding that Palmer inform it whether he had yet begun legal proceedings against those who preached anarchy and sedition. According to his biographer, after passage of the Senate resolution Palmer decided that the "very liberal" provisions of the Bill of Rights were expendable and that in a time of emergency there were "no limits" on the power of the government "other than the extent of the emergency." 28

The principal result of the Justice Department's intelligence activities, in coordination with Immigration Bureau investigations, was the infamous "Palmer raids" on the night of January 2, 1920. Bureau of Investigation and Immigration Bureau agents in thirty-three cities rounded up some ten thousand persons believed to be members of the Communist and Communist Labor Parties, including many citizens and many individuals not members of either party. A summary of the abuses of due process of law incident to the raids includes "indiscriminate arrests of the innocent with the guilty, unlawful seizures by federal detectives, intimidating preliminary interrogations of aliens held incommunicado, highhanded levying of excessive bail, and denial of counsel." 29 Apart from the unavoidable administrative confusion in such a large-scale operation, these abuses have been attributed to several crucial decisions by federal officials.

The first was Director Flynn's instruction to Bureau agents that, in order to preserve "the cover of our confidential informants," they should "in no case ... rely upon the testimony of such cover informants during deportation proceedings." 30 Consequently, Flynn's assistant, Frank Burke, advised the Immigration Bureau that informants should not be called as witnesses and that immigration inspectors should "make an effort to obtain from the subject a statement as to his affiliations." The success of eliciting incriminating admissions depended, in turn, upon decisions which made possible the prolonged detention and interrogation of arrested persons without access to counsel. In previous deportation proceedings, defense attorneys had urged aliens to remain silent. Therefore, it was necessary to amend the immigration regulation which allowed "attorneys employed by arrested persons to participate in the conduct of hearings from their very commencement." 31 The head of the Justice Department's General Intelligence Division, J. Edgar Hoover, reiterated this request for a modification of immigration procedures. 32 Three days before the raids the regulation was revised to permit hearings to begin without the presence of counsel.

Another barrier to effective interrogation was the alien's right to bail. Three weeks after the round-up, J. Edgar Hoover advised the Immigration Bureau that to allow aliens out on bail to see their lawyers "defeats the ends of justice" and made the revision of immigration regulations "virtually of no value." 33 Hoover later told immigration officials that since the purpose of the raids was to suppress agitation, he could not see the sense in letting radicals spread their propaganda while out on bail. 34 He also urged the Immigration Bureau to hold all aliens against whom there was no proof on the chance that evidence might be uncovered at some future date "in other sections of the country." 35 However, despite the Justice Department's pleas, the Secretary of Labor ordered a return to previous policies after the raids, once again allowing detained aliens access to legal counsel and admission to bail if hearings were delayed. 36

An advantage of the amended Immigration Act had been that aliens could be deported simply for membership in a revolutionary group, without any evidence of their individual activity.

J. Edgar Hoover urged literal application of the law to all members regardless of the individual's intent or the circumstances involved in his joining the organization. 37 Nevertheless, the Labor Department refused to deport automatically every Communist Party alien, instead adopting a policy of differentiating between "conscious" and "unconscious" membership, declining to deport those whose membership in the Socialist Party had been transferred to the Communist Party without the member's knowledge and those whose cases were based on self-incrimination without counsel or illegally seized membership records. Assistant Secretary of Labor Louis F. Post, who strongly opposed the Justice Department's position, also defied Congressional threats of impeachment in his vigorous defense of due process of law. 38

During the months following the "Palmer raids", a group of distinguished lawyers and law professors prepared a report denouncing the violation of law by the Justice Department. They included Dean Roscoe Pound, Felix Frankfurter, and Zechariah Chafee, Jr. of the Harvard Law School, Ernst Freund of the University of Chicago Law School, and other eminent lawyers and legal scholars. The committee found federal agents guilty of using third-degree tortures, making illegal searches and arrests, using agents provocateurs, and forcing aliens to incriminate themselves. Its report described federal intelligence operations in the following terms:

We do not question the right of the Department of Justice to use its agents in the Bureau of Investigation to ascertain when the law is being violated. But the American people have never tolerated the use of undercover provocative agents or "agents provocateurs" such as have been familiar in old Russia or Spain. Such agents have been introduced by the Department of Justice into radical movements, have reached positions of influence therein, have occupied themselves with informing upon or instigating acts which might be declared criminal, and at the express direction of Washington have brought about meetings of radicals in order to make possible wholesale arrests at such meetings.

39

The initial reaction of the head of the Justice Department's General Intelligence Division to such criticism was to search the files, including military intelligence files, for evidence that critics had radical associations or beliefs. 40

The work of the General Intelligence Division was summarized by J. Edgar Hoover in a report prepared later in 1920. Even though federal criminal statutes were "inadequate to properly handle the radical situation," Hoover stressed the "need in the absence of legislation to enable the federal government adequately to defend and protect itself and its institutions [from] not only aliens within the borders of the United States, but also American citizens who are engaged in unlawful agitation." Therefore, in addition to providing intelligence for use in the deportation of aliens, the GID supplied information to state authorities for the prosecution of American citizens under the broader state sedition laws.

The GID also had expanded "to cover more general intelligence work, including not only the radical activities in the United States and abroad, but also the studying of matters of an international nature, as well as economic and industrial disturbances incident thereto." Hoover described the GID's relationship to the Bureau of Investigation:

While the General Intelligence Division has not participated in the investigations of the overt acts of radicals in the United States, its solo function being that of collecting evidence and preparing the same for proper presentation to the necessary authorities, it has however by a careful review system of the reports received from the field agents of the Bureau of Investigation, kept in close and intimate touch with the detail of the investigative work.

The GID developed an elaborate system for recording the results of Bureau surveillance:

In order that the information which was obtained upon the radical movements might be readily accessible for use by the persons charged with the supervision of these investigations and prosecutions, there has been established as a part of this division a card index system, numbering over 150,000 cards, giving detailed data not only upon individual agitators connected with the radical movement, but also upon organizations, associations, societies, publications and social conditions existing in certain localities. This card index makes it possible to determine and ascertain in a few moments the numerous ramifications of individuals connected with the radical movement and their activities in the United States, thus facilitating the investigations considerably. It is so classified that a card for a particular city will show the various organizations existing in that city, together with their membership rolls and the names of the officers thereof.

The report said little about any tangible accomplishments in the prevention of terrorist violence or the apprehension of persons responsible for specific acts of violence. Instead, groups and individuals were characterized as having "dedicated themselves to the carrying out of anarchistic ideas and tactics"; as "urging the workers to rise up against the Government of the United States"; as having "openly advocated the overthrow of constitutions, governments and churches"; as being "the cause of a considerable amount of the industrial and economic unrest"; as "openly urging the workers to engage in armed revolt"; as being "pledged to the tactics of force and violence"; as being "affiliated with the III International formed at Moscow" and under "party discipline regulated by Lenin and Trotsky"; and as "propagandists" appealing directly to "the negro" for support in the revolutionary movement.

The only references to particular illegal acts were that one group had participated in an "outlawed strike" against the railroads, that one anarchist group member had assassinated the king of Italy, and that Communists had smuggled diamonds into the United States to finance propaganda. The head of the GID did not claim to have identified terrorists whose bombings had aroused public furor. Instead, Hoover reported that the mass arrests and deportations "had resulted in the wrecking of the communist parties in this country" and that "the radical press, which prior to January 2nd had been so flagrantly attacking the Government of the United States and advocating its overthrow by force and violence, ceased its pernicious activities." State sedition prosecutions had served to protect "against the agitation of persons having for their intent and purpose the overthrow of the Government of the United States." Finally, the GID's work had "enabled the government to study the situation from a more intelligence and broader viewpoint." 41

Parallel to the Justice Department and Immigration Bureau operations, military intelligence continued its wartime surveillance into the post-war era. After a temporary cut-back in early 1919, the Military Intelligence Division resumed investigations aimed at strikes, labor unrest, radicals, and the foreign language press. The American Protective League disbanded, but its former members still served as volunteer agents for military intelligence as well as for the Bureau of Investigation. While the military did not play a significant role in the "Palmer raids," troops were called upon in 1919 to control race riots in several cities and to maintain order during a steel strike in Gary, Indiana, where the city was placed under "modified martial law." Following the 1920 round-up of aliens, J. Edgar Hoover arranged for mutual cooperation between the GID and military intelligence. Reports from the Bureau of Investigation would be shared with the military, and investigations conducted at military request. In return, military intelligence agreed to provide Hoover with information from foreign sources, since the State Department had refused to do so and Hoover was prohibited from having agents or informants outside the United States. 42

The domestic intelligence structure as finally established in 1920 remained essentially intact until Attorney General Harlan Fiske Stone took office in 1924. Under the Harding Administration and Attorney General Harry Daugherty, the GID was made a part of the Bureau of Investigation under Director William J. Burns, with J. Edgar Hoover becoming an Assistant Director of the Bureau. Although the deportation program was strictly limited by Labor Department policies, the Bureau still supplied results of its surveillance operations to state authorities for the prosecution of Communists. 43 Hoover also prepared a lengthy report for the Secretary of State on Communist activities in the United States. The State Department submitted the information to the Senate to back up its opposition to a resolution to grant diplomatic recognition to the Soviet Union. 44 During this period, the Bureau spelled out its domestic intelligence activities in annual reports to Congress, including summaries of investigative findings on the role of Communists in education, athletic clubs, publications, labor unions, women's groups, and Negro groups. Radical propaganda was "being spread in the churches, schools and colleges throughout the country." The Bureau also told Congress that it was furnishing information for prosecutions under state laws punishing "criminal syndicalism and anarchy." 45

#### *D. Attorney General Stone's Reforms*

In April, 1924, a new Attorney General took charge of a scandalridden Department of Justice. Harlan Fiske Stone, former Dean of the Columbia Law School, had been appointed by President Calvin Coolidge to replace the late President Warren Harding's political crony Harry Daugherty. Stone confronted more than simply corruption in the Justice Department when he took office. The Department's Bureau of Investigation had become a secret political police force. As Stone recalled later, "The organization was lawless, maintaining many activities which were without any authority in federal statute's and engaging in many practices which were brutal and tyrannical in the extreme." 46 Attorney General Stone asked for the resignation of the Bureau Director William J. Burns, former head of the Burns Detective Agency, and directed that the activities of the Bureau "be limited strictly to investigations of violations of law, under my direction or under the direction of an Assistant Attorney General regularly conducting the work of the Department of Justice." Stone also ordered a review of the entire personnel of the Bureau, the removal of "those who are incompetent and unreliable," and the future selection of "men of known good character and ability, giving preference to men who have had some legal training." 47 The Attorney General chose the young career Bureau official, J. Edgar Hoover, as Acting Director to implement these reforms, largely because of Hoover's reputation within the Justice Department as an honest and efficient administrator. 48

A principal problem Stone faced was the Bureau's domestic intelligence operation. He was vividly aware of the violations of individual rights committed in the name of domestic security at the time of the 1920 "Palmer raids." He had joined a committee of protest against Attorney General Palmer's round-up of radical aliens for deportation and had urged a Congressional investigation. When a Senate Judiciary Subcommittee began hearings in 1921, its first order of business was a letter from Stone calling for "a thoroughgoing investigation of the conduct of the Department of Justice in connection with the deportation cases." 49

In considering J. Edgar Hoover for the position of permanent Director of the Bureau of Investigation, Attorney General Stone was aware that he had played a major role in the "Palmer raids" as head of the Justice Department's General Intelligence Division. Roger Baldwin of the American Civil Liberties Union told Stone that he was skeptical of Hoover's ability to reform the Bureau. With the Attorney General's knowledge, Baldwin met with Hoover to discuss the future of the Bureau. Hoover assured Baldwin that he had played an "unwilling part" in the activities of Palmer, Daugherty, and Burns. He said he regretted their tactics but had not been in a position to do anything about them. He intended to help Stone build an efficient law enforcement agency, employing law school graduates, severing connections with private detective agencies, and not issuing propaganda. Most important from the American Civil Liberties Union's point of view, the Bureau's "radical division" would be disbanded. Baldwin wrote Stone "I think we were wrong in our estimate of his attitude," and announced to the press that the ACLU believed the Justice Department's "red-hunting" days were over. 50

When Attorney General Stone arrived in 1924, he requested a review of the applicability of the federal criminal statutes to Communist activities in the United States. Various patriotic organizations had urged that Communists be prosecuted under the federal seditious conspiracy law, but the courts had ruled that this Civil War statute required proof of a definite plan to use force against the government. 51 Justice Department lawyers also rejected prosecution under the Logan Act, enacted in the 1790s to punish hostile communications between American citizens and a foreign government. 52 These conclusions buttressed the Attorney General's decision to abolish the Bureau's domestic intelligence operations, although Stone told Roger Baldwin of the ACLU that he had no authority to destroy the Bureau's intelligence files, without an Act of Congress. 53

Attorney General Stone may also have contemplated the possibility of future investigations under Congress' prewar revision of the Justice Department appropriations statute. He asked Acting Director Hoover whether the Bureau would have the authority to investigate Soviet and Communist activities within the United States for the State Department in connection with the question of recognition of the Soviet government. Hoover replied that the appropriations act did allow such investigations, upon formal request by the Secretary of State and approval of the Attorney General. The Acting Director stressed that such investigations "should be conducted on an entirely different line than previously conducted by the Bureau of Investigation" and that there should be no publicity "because any publicity would materially hamper the obtaining of successful results." 54

After 1924, the Bureau of Investigation continued to receive information volunteered to it about Communist activities, and Bureau field offices were ordered to forward such data to headquarters. But the Bureau made "no investigations of such activities, inasmuch as it does not appear that there is any violation of a Federal Penal Statute involved." 55 Military intelligence officers still had a duty, under an Army emergency plan, to gather information "with reference to the economical, industrial and radical conditions, to observe incidents and events that may develop into strikes, riots, or other disorders, and to investigate and report upon the industrial and radical situation." However, by 1925 the military lacked adequate personnel and requested the Bureau of Investigation to provide information on "radical conditions." 56 J. Edgar Hoover replied that the Bureau had discontinued "general investigations into radical activities," but would communicate to the military any information received from specific investigations of federal violations "which may appear to be of interest" to the military. 57

Despite the curtailment of federal intelligence operations, it would be misleading to say that domestic intelligence activity ceased in the United States after 1924. The efforts of state and local authorities to investigate possible violations of state sedition laws continued in many parts of the country. Moreover, private industry engaged the services of detectives and informers to conduct surveillance of labor organizing activities. These industrial espionage programs reached their peak in the early 1930s. A Senate committee investigation in 1936 exposed these tactics and influenced at least one private detective firm, the Pinkerton Agency, to discontinue its anti-labor spying. The Senate inquiry documented the efficient techniques developed by labor spies for destroying unions. They wreaked havoc on union locals, generating mistrust, inciting violence, and reporting the identities of union members to hostile employers. 58

On one major occasion early in the Depression, military intelligence was reactivated temporarily. Army Chief of Staff Douglas MacArthur ordered corps area commanders in mid-1931 to submit reports on subversive activities in their areas. When the "bonus marchers" began arriving in Washington in 1932 to demand veteran benefits, military intelligence agents investigated Communist influence with the help of American Legion officials, reserve officers, and other volunteers. Military intelligence reports exaggerating the threat of "insurrectionists" among the veteran protesters contributed to the decision to use troops in a mass assault to clear the demonstrators out of Washington. Criticism of this operation led military authorities to instruct that intelligence officers be more discreet although they continued to gather intelligence on civilian groups. 59

Therefore, while Attorney General Stone had stopped the Justice Department's intelligence efforts in 1924, safeguards did not exist against state, private or military intelligence operations. Moreover, the Bureau of Investigation retained its massive domestic intelligence files from the 1916-1924 period, as well as the vague legal authority under the appropriations act to conduct investigations going beyond the detection of federal crimes if a future Attorney General and Secretary of State should direct it to do so. Nevertheless, when Congressman Hamilton Fish and members of a Special House Committee to Investigate Communist Activities in the United States proposed legislation authorizing the Bureau of Investigation to investigate "Communist and revolutionary activity" in 1931, Director Hoover opposed it. He told Congressman Fish that it would be better to enact a criminal statute and not expand the Bureau's power beyond criminal investigation, especially since the Bureau had "never been established by legislation" and operated "solely on an appropriation bill." 60 Hoover advised the Attorney General a year later,

The work of the Bureau of Investigation at this time is . . . of an open character not in any manner subject to criticism, and the operations of the Bureau of Investigation may be given the closest scrutiny at all times. . . . The conditions will materially differ were the Bureau to embark upon a policy of investigative activity into conditions which, from a federal standpoint, have not been declared illegal and in connection with which no prosecution might be instituted. The Department and the Bureau would undoubtedly be subject to charges in the matter of alleged secret and undesirable methods . . . as well as to allegations involving charges of the use of "Agents Provocateur."

Hoover assumed that the Immigration Bureau with jurisdiction to deport Communist aliens conducted such investigation and, if it did not, "would be subject to criticism for its laxity along these lines." Thus, the Director's position was not based on opposition to the idea of domestic intelligence itself, but rather on his concern for possible criticism of the Bureau if it were to resume "undercover" activities which would be necessary "to secure a foothold in Communistic inner circles" and "to keep fully informed as to changing policies and secret propaganda on the part of Communists." 61

### III. THE ESTABLISHMENT OF A PERMANENT DOMESTIC INTELLIGENCE STRUCTURE, 1936-1945

Perhaps it is a universal truth that the loss of liberty at home is to be charged to provisions against danger real or pretended from abroad.

-James Madison, Letter to Thomas Jefferson, May 13, 1798

Since 1936 the Federal Bureau of Investigation has been the primary civilian agency charged with domestic intelligence responsibilities. However, the origins of this assignment have been clouded because the memoranda recording President Franklin Roosevelt's first instructions have not previously been made public. These and other directives of the President were described generally in the authorized history of the FBI. 62 But the full texts and other materials shed more light on the circumstances for and consequences of Roosevelt's decisions. The basic orders and agreements governing the relations between the FBI and the military intelligence agencies have also been kept confidential until recent years. 63 Although President Roosevelt's 1940 directive authorizing warrantless wiretapping by the FBI for national security purposes has long been a matter of record, the FBI's practices for breaking-and-entering and clandestine mail opening were closely held secrets. The scope of prewar domestic intelligence and the joint plans of the FBI and the Justice Department for compiling a Custodial Detention List of American citizens have never been publicly examined.

#### *A. The 1936 Roosevelt Directive*

In August 1936, President Roosevelt issued the first of a series of instructions establishing the basic domestic intelligence structure and policies for the federal government. The President used his executive authority to determine which of the several competing civilian agencies of the government would carry out domestic intelligence investigations, to set up machinery for coordination between military intelligence and the FBI, and to lay down the general objectives of domestic intelligence going beyond criminal investigation. From the beginning Roosevelt "desired the matter to be handled quite confidentially." 64 When Attorney General Homer Cummings submitted to the President a joint FBI-military plan for domestic intelligence in 1938, he advised that additional legislation was not required and that the plan "should be handled in strictest confidence." The Attorney General enclosed a memorandum prepared by FBI Director J. Edgar Hoover which stated:

In considering the steps to be taken for the expansion of the present structure of intelligence work, it is believed imperative that it be proceeded with, with the utmost degree of secrecy in order to avoid criticism or objections which might be raised to such an expansion by either ill-informed persons or individuals having some ulterior motive .... Consequently, it would seem undesirable to seek any special legislation which would draw attention to the fact that it was proposed to develop a special counterespionage drive of any great magnitude. 65

Thus, the President's orders were kept secret, and Congress was deliberately excluded from the policymaking progress until after war broke out in Europe in 1939. Possibly if President Roosevelt had gone to Congress with a proposal for domestic intelligence in 1936 or 1938, legislation might not have been enacted and the nation's security could have been jeopardized. Perhaps a public announcement of the President's actions would have put the nation's potential adversaries on notice of his intentions. But these benefits must be weighed against the cost to constitutional government of unilateral executive actions directly affecting the rights of citizens.

There were legitimate grounds for concern about the need for domestic intelligence by 1936. Two years earlier the President had ordered the FBI to conduct a more limited intelligence investigation of "the activity of the Nazi movement in this country." The FBI, in cooperation with the Secret Service and the Immigration Bureau, conducted a one-time investigation, described by FBI Director Hoover as "a so-called intelligence investigation." It concentrated on "the Nazi group, with particular reference to the antiracial activities and any anti-American activities having any possible connection with official representatives of the German government in the United States." 66

In January 1936, the Secretary of War advised the Attorney General that there was "definite indication" of foreign espionage in the United States and that in an emergency "some organizations . . . would probably attempt to cripple our war effort through sabotage." He urged the Justice Department to establish "a counterespionage service among civilians to prevent foreign espionage in the United States and to collect information so that in case of an emergency any persons intending to cripple our war effort by means of espionage or sabotage may be taken into custody." 67 - In addition to these foreign-related dangers, President Roosevelt was alerted to right-wing domestic threats. The FBI Director met with retired General Smedley Butler and reported to Roosevelt on "the effort of Father Coughlin to have General Butler lead an expedition to Mexico." 68

The nature of the President's interest is also reflected in the information FBI Director Hoover provided at their crucial meeting in August 1936. Except for a reference to Hoover's previous report on Father Coughlin and General Butler, it dealt exclusively with Communist activities. According to the FBI Director, the West Coast longshoremen's union headed by Harry Bridges "was practically controlled by Communists," the Communists "had" very definite plans to get control of "the United Mine Workers union led by John L. Lewis, and the Newspaper Guild had "strong Communist leanings." Director Hoover's memorandum of his conversation with the President continued:

I told him that my information was that the Communists had planned to get control of these three groups and by doing so they would be able at any time to paralyze the country in that they stop all shipping in and out through the Bridges organization; stop the operation of industry through the Mining Union of Lewis; and stop publication of any newspapers of the country through the Newspaper Guild.

I also related to him the activities which have recently occurred with Governmental service inspired by Communists, particularly in some of the Departments and in the National Labor Relations Board.

I likewise informed him that I had received information to the effect that the Communist Internationale in Moscow had recently issued instructions for all Communists to vote for President Roosevelt and against Governor Landon because of the fact that Governor Landon is opposed to class warfare.

This memorandum indicates that the FBI was already gathering domestic intelligence about Communist activities inside and outside the government. After hearing Director Hoover's report, President Roosevelt expressed a desire for more systematic intelligence about "subversive activities in the United States, particularly Fascism and Communism." He wanted "a broad picture of the general movement and its activities as may affect the economic and political life of the country as a whole." 69 Whether or not the FBI Director exaggerated the threat, no President could afford to ignore such dire warnings without some further investigation.

President Roosevelt clearly understood that Communist and Fascist activities were an international problem tied to potentially hostile foreign governments. At Hoover's suggestion, Secretary of State Cordell Hull met with the President and the FBI Director to review the situation. Hoover's memorandum of this meeting stated:

The President pointed out that both of these movements were international in scope and that Communism particularly was directed from Moscow, and that there had been certain indications that Oumanski, attached to the Russian Soviet Embassy, was a leading figure in some of the activities in this country, so consequently, it was a matter which fell within the scope of foreign affairs over which the State Department would have a right to request an inquiry to be made.

President Roosevelt and Secretary Hull also considered "the making of a protest, either formally or informally, to the Russian Government relative to its interference with affairs in this country." "I Thus, it was the international character of Communism and Fascism that both justified the Secretary of State's request and underlay the President's desire for domestic intelligence. 71

#### *B. The Original Legal Authority for Domestic Intelligence*

Despite its secrecy, President Roosevelt's initial request for domestic intelligence investigations did have a degree of statutory authorization. The provision in the Justice Department appropriations statute enacted before World War I allowed the Attorney General to direct the FBI to conduct investigations for the State Department. However, it became clear by 1938 that these investigations would not be terminated; and the President ceased relying on the procedure for State Department requests by mid-1939. Presidential directives issued in 1939 attempted to link domestic intelligence to the investigation of espionage and sabotage, even though the FBI's actual mandate extended beyond the investigation of violations of law to encompass "subversive activities" generally and "counterespionage" operations. These directives created legal confusion which has persisted until the present day. There was no attempt to clarify what domestic intelligence functions were authorized by statute and what functions were based on an implicit claim of inherent presidential power.

J. Edgar Hoover was particularly sensitive to this issue, since Attorney General Stone had ordered that the activities of the Bureau "be limited strictly to investigations of violations of law." 72 President Roosevelt sought to breach that line in 1936. His desire for "a broad picture" of the effects of Communism and Fascism on "the economic and political life of the country as a whole" went far beyond the investigation of violations of law. Nevertheless, Director Hoover advised Roosevelt that there was statutory authority for this type of investigation. Hoover told him that the FBI appropriation contained "a provision that it might investigate any matters referred to it by the Department of State and that if the State Department should ask for us to conduct such an investigation we could do so under our present authority in the appropriation already granted." 73 The President, in turn, told Secretary Hull that the FBI could make "a survey" of Communist and Fascist activities because "under the Appropriation Act this Bureau would have authority to make such investigation if asked to do so by the Secretary of State." 74

Director Hoover's reliance on the specific provision of the appropriations statute meant that FBI domestic intelligence was not initiated solely through an exercise of the President's independent constitutional power. In fact, Attorney General Stone had

been aware of the implications of this provision in 1924. 75 Although there is no record that Attorney General Stone ever approved this type of inquiry, he clearly contemplated the possibility of at least a closed-end investigation for the State Department.

Thus, in compliance with Hoover's wishes, Secretary Hull "asked that the investigation be made," and the President asked Hoover to "speak to the Attorney General." 76 The FBI Director's memorandum of his conversation with Attorney General Cummings stated:

In talking with the Attorney General today concerning the radical situation, I informed him of the conference which I had with the President on September 1, 1936 [sic], at which time the Secretary of State, at the President's suggestion, requested of me, the representative of the Department of Justice, to have investigation made of the subversive activities in this country, including communism and fascism. I transmitted this request to the Attorney General, and the Attorney General verbally directed me to proceed with this investigation and to coordinate, as the President suggested, information upon these matters in the possession of the Military Intelligence Division, the Naval Intelligence Division, and the State Department. This, therefore, is the authority upon which to proceed in the conduct of this investigation, which should, of course, be handled in a most discreet and confidential manner. 77

These memoranda indicate clearly that Director Hoover was relying on the specific provisions of the appropriations statute. He followed almost to the letter the steps he had described to Attorney General Stone in 1924 as the necessary prerequisites for an investigation of Communist activities.

### *C. The FBI Intelligence Program, 1936-1938*

Instructions were issued to FBI agents immediately after Director Hoover's meetings with the President and the Secretary of State. FBI field offices were ordered "to obtain from all possible sources information concerning subversive activities being conducted in the United States by Communists, Fascists, representatives or advocates of other organizations or groups advocating the overthrow or replacement of the Government of the United States by illegal methods." 78 Theoretically, this directive included purely domestic matters besides the international Communist and Fascist movements. There is no indication, however, that the President or the Attorney General were advised of this order; and the communications between the FBI Director and his superiors made no mention of advocacy of overthrow of the government. Instead, the terms used in 1936 were "general intelligence" and "subversive activities."

Following the Hoover-Roosevelt meetings, FBI officials also began developing a systematic organization for intelligence information "concerning subversive activities." The following general classifications were adopted:

- Maritime Industry
- Activities in Government Affairs
- Activities in the Steel Industry
- Activities in the Coal Industry
- Activities in the Newspaper Field
- Activities in the Clothing, Garment and Fur Industries
- General Strike Activities
- Activities in the Armed Forces of the United States
- Activities in Educational Institutions
- General Activities - Communist Party and Affiliated Organizations
- Activities of the Fascists
- Anti-Fascists Movements
- Activities in Organized Labor Organizations

Steps were also taken to determine whether certain individuals were "available for service in the capacity of an informant," "to index the material previously submitted," and to "prepare memoranda dealing individually with those persons whose names appear prominently at the present time in the subversive circles." The Director was to receive daily memoranda on "major developments in any field" of subversive activities. 79

The President's instructions had dealt with relations between the FBI and other federal agencies. At his initial meeting with Hoover, the President said that the Secret Service "had assured him that they had informants in every Communist group," but Roosevelt believed this "was solely for the purpose of getting any information upon plots upon his life." He told Hoover that the Secret Service "was not to be brought in on this investigation as they should confine themselves strictly to the matter of protecting his life and the survey which he desired to have made was on a much broader field." In addition, the President suggested that Hoover "endeavor to coordinate any investigation along similar lines which might be made by the Military or Naval Intelligence Services." 80 The Director told his subordinates that he had advised the Attorney General that he would "coordinate, as the President suggested, information upon these matters in the possession of the Military Intelligence Division, the Naval Intelligence Division, and the State Department." 81

The FBI and military intelligence proceeded along these lines in 1937-1938. The President designated Attorney General Cummings "as Chairman of a Committee to inquire into the so-called espionage situation" in October 1938, and to report on the need for "an additional appropriation for domestic intelligence." The Attorney General advised the President that a "well defined system" was functioning, made up of the FBI, the Military Intelligence Division, and the Office of Naval Intelligence, whose heads were "in frequent contact and are operating in harmony." He recommended that the appropriations be increased by \$35,000 each for MID and ONI and by \$300,000 for the FBI. He also submitted a plan prepared by Director Hoover in consultation with the military agencies. He observed that "no additional legislation to accomplish the general objectives seems to be required" and that "the matter should be handled in strictest confidence." 82

The FBI Director's memorandum spelled out the reasons why legislation was considered undesirable. Hoover believed the FBI's expansion could "be covered" by the language in the appropriations statute relating to "other investigations" conducted for the State Department: 83

Under this provision investigations have been conducted in years past for the State Department of matters which do not in themselves constitute a specific violation of a Federal Criminal Statute, such as subversive activities. Consequently, this provision is believed to be sufficiently broad to cover any expansion of the present intelligence and counter-espionage work which it may be deemed necessary to carry on....

In considering the steps to be taken for the expansion of the present structure of intelligence work, it is believed imperative that it be proceeded with, with [sic] the utmost degree of secrecy in order to avoid criticism or objections which might be raised to such an expansion by either ill-informed persons or individuals having some ulterior motive. The word 'espionage' has long been a word that has been repugnant to the American people and it is believed that the structure which is already in existence is much broader than espionage or counterespionage, but covers in a true sense real intelligence values to the three services interested, namely, the Navy, the Army, and Justice. Consequently, it would seem undesirable to seek any special legislation which would draw attention to the fact that it was proposed to develop a special counterespionage drive of any great magnitude. 84

Hoover noted that Army and Navy Intelligence did not need additional legislation "since their activities ... are limited to matters concerning their respective services."

The FBI Director reviewed the current and proposed future operations of each of the three intelligence agencies. The FBI had set up a General Intelligence Section to investigate and correlate information dealing with "activities of either a subversive or a so-called intelligence type." Each FBI field office had "developed contacts with various persons in professional, business, and law enforcement fields" to obtain this information. The following was a break-down of the subject matter in the Intelligence Section files: "Maritime; government; industry (steel, automobile, coal, mining, and miscellaneous); general strikes; armed forces; educational institutions; Fascist; Nazi; organized labor; Negroes; youth; strikes; newspaper field; and miscellaneous." All information "of a subversive or general intelligence character pertaining to any of the above" was reviewed and filed at FBI headquarters, with index cards on individuals which made it possible to identify the persons "engaged in any particular activity, either in any section of the country or in a particular industry or movement." This index then included "approximately 2500 names ... of the various types of individuals engaged in activities of Communism, Nazism, and various types of foreign espionage." In addition, the FBI had "developed a rather extensive library of general intelligence matters, including sixty-five daily, weekly, and monthly publications, as well as many pamphlets and volumes dealing with general intelligence activities." From both investigative sources and research, the FBI from time to time prepared "charts ... to show the growth and extent of certain activities." 85

The Office of Naval Intelligence and the Military Intelligence Division were concerned with "subversive activities that undermine the loyalty and efficiency" of Army and Navy personnel or civilians involved in military construction and maintenance; with sabotage of military facilities or of "agencies contributing to the efficiency" of the military; and with "spy activities that may result in divulgence of information to foreign countries or to persons when such divulgence is contrary to the interests of our national defense." However, MID and ONI lacked trained investigators, and they relied on the FBI "to conduct investigative activity in strictly civilian matters of a domestic character." The three agencies exchanged information of interest to one another, both in the field and at headquarters in Washington.

For the future, all three agencies agreed that other federal agencies should be excluded from intelligence work since others were "less interested in matters of general intelligence and counter-intelligence" and because "the more circumscribed this program is, the more effective it will be and the less danger there is of its becoming a matter of general public knowledge." The FBI hoped to expand its personnel so that it could assign an agent specializing in intelligence to each of its forty-five field offices and could reopen offices in Hawaii, Alaska, and Puerto Rico. Additional funds would also be used to expand FBI facilities for "specialized training in general intelligence work." 86

Director Hoover met with the President in November 1938 and learned that he had instructed the Budget Bureau "to include in the Appropriations estimate \$50,000 for Military Intelligence, \$50,000 for Naval Intelligence and \$150,000 for the Federal

Bureau of Investigation to handle counter-espionage activities." The President also said "that he had approved the plan which [Hoover] had prepared and which had been sent to him by the Attorney General," except for the revised budget figures. 87

*D. FBI Intelligence Authority and "Subversion."*

There is no evidence that either the Congress in 1916 or Attorney General Stone in 1924 intended the provision of the appropriations statute to authorize the establishment of a permanent domestic intelligence structure. Yet Director Hoover advised the Attorney General and the President in 1938 that the statute was "sufficiently broad to cover any expansion of the present intelligence and counter-espionage work which it may be deemed necessary to carry on." 88 Because of their reluctance to seek new legislation in order to keep the program secret, Attorney General Cummings and President Roosevelt did not question the FBI Director's interpretation. Nevertheless, the President's approval of Director Hoover's 1938 plan for joint FBI-military domestic intelligence was a substantial exercise of independent presidential power.

The precise nature of FBI authority to investigate "subversion" became confusing in 1938-1939. Despite the references in Director Hoover's 1998 memorandum to "subversion," Attorney General Cummings cited only the President's interest in the "so-called espionage situation." 88a, Cummings' successor, Attorney General Frank Murphy, appears to have abandoned the term "subversive activities." 89 Moreover, when Director Hoover provided Attorney General Murphy a copy of his 1938 plan, he described it (without mentioning "subversion") as a program "intended to ascertain the identity of persons engaged in espionage, counter-espionage, and sabotage of a nature not within the specific provisions of prevailing statutes." 91

Moreover, a shift away from the authority of the appropriations provision, which was linked to the State Department's request, became necessary in 1939 when the FBI resisted an attempt by the State Department to coordinate domestic intelligence investigations. Director Hoover urged Attorney General Frank Murphy in March 1939 to discuss the situation with the President and persuade him to "take appropriate action with reference to other governmental agencies, including the State Department, which are attempting to literally chisel into this type of work. . . ." The Director acknowledged that the FBI required "the specific authorization of the State Department" where the subject of an investigation "enjoys any diplomatic status," but he knew of "no instance in connection with the handling of the espionage work in which the State Department has had any occasion to be in any manner or degree dissatisfied with or apprehensive of the action taken by Bureau agents." 91

Director Hoover was also concerned that the State Department would allow other Federal investigative agencies, including the Secret Service and other Treasury Department units, to conduct domestic intelligence investigations. 92 The FBI cited the following example in communications to the Attorney General in 1939:

On the West Coast recently a representative of the Alcohol Tax Unit of the Treasury Department endeavored to induce a Corps Area Intelligence Officer of the War Department to utilize the services of that agency in the handling of all investigations involving espionage, counter-espionage, and sabotage....

A case was recently brought to the Bureau's attention in which a complaint involving potential espionage in a middle western state was referred through routine channels of a Treasury Department investigative agency and delayed in such a manner before reference ultimately in Washington to the office of Military Intelligence and then to the Federal Bureau of Investigation, that a period of some six weeks elapsed .... 93

During a recent investigation . . . an attorney and Commander of the American Legion Post ... disclosed that a Committee of that Post of the American Legion is conducting an investigation relating to un-American activities on behalf of the Operator in Charge of the Secret Service, New York city. 94

Consequently, at the FBI Director's request, the Justice Department asked the Secret Service, the Bureau of Internal Revenue, the Narcotics Bureau, the Customs Service, the Coast Guard, and the Post Office Department to instruct their personnel that information "relating to espionage and subversive activities" should be promptly forwarded to the FBI. 95

The Justice Department letter did not solve the problem, mainly because of the State Department's continued intervention. Director Hoover advised Attorney General Frank Murphy "that the Treasury Department and the State Department were reluctant to concede jurisdiction" to the FBI and that a conference had been held in the office of an Assistant Secretary of State "at which time subtle protests against the handling of cases of this type in the Justice Department were uttered." Hoover protested this "continual bickering" among Departments, especially "in view of the serious world conditions which are hourly growing more alarming." 96

Two months later the problem remained unresolved. Assistant Secretary of State George S. Messersmith took on the role of "coordinator" of a committee composed of representatives of the War, Navy, Treasury, Post Office, and Justice Departments. The FBI Director learned that under the proposed procedures, any agency receiving information would refer it to the State Department which, after analysis, would transmit the data to that agency which it believed should conduct the substantive investigation. FBI and Justice Department officials prepared a memorandum for possible presentation to the President, pointing out the disadvantages of this procedure:

The inter-departmental committee by its operations of necessity causes delay which may be fatal to a successful investigation. It also results in a duplication of investigative effort ... because of the lack of knowledge of one agency that another agency is working upon the same investigation. The State department coordinator is not in a position to evaluate properly the respective investigative ability of the representatives of particular departments in a manner comparable to that which the men actually in charge of an investigative agency may evaluate the proper merit of his own men. 97

Endorsing this view, Attorney General Murphy wrote the President to urge abandonment of this interdepartmental committee, and "a concentration of investigation of all espionage, counterespionage, and sabotage matters" in the FBI, the G-2 section of the War Department, and the Office of Naval Intelligence. The directors of these agencies would "function as a committee for the purpose of coordinating the activities of their subordinates." To buttress his recommendation, the Attorney General pointed out that the FBI and military intelligence:

... have not only gathered a tremendous reservoir of information concerning foreign agencies operating in the United States, but have also perfected methods of investigation and have developed channels for the exchange of information, which are both efficient and so mobile and elastic as to permit prompt expansion in the event of an emergency.

Murphy stressed that the FBI was "a highly skilled investigative force supported by the resources of an exceedingly efficient, well equipped, and adequately manned technical laboratory and identification division." This identification data, related "to more than ten million persons, including a very large number of individuals of foreign extraction." The Attorney General added, "As a result of an exchange of data between the Departments of Justice, War and Navy, comprehensive indices have been prepared." 98

President Roosevelt agreed to the Attorney General's proposal and sent a confidential directive drafted by FBI and Justice Department officials to the heads of the relevant departments. This June 1939 directive was the closest thing to a formal charter for FBI and military domestic intelligence. It read as follows:

It is my desire that the investigation of all espionage, counterespionage, and sabotage matters be controlled and handled by the Federal Bureau of Investigation of the Department of Justice, the Military Intelligence Division of the War Department, and the Office of Naval Intelligence in the Navy Department. The directors of these three agencies are to function as a committee to coordinate their activities.

No investigations should be conducted by any investigative agency of the Government into matters involving actually *or potentially* any espionage, counterespionage, or sabotage, except by the three agencies mentioned above.

I shall be glad if you will instruct the heads of all other investigative agencies than the three named, to refer immediately to the nearest office of the Federal Bureau of Investigation any data, information, or material that may come to their notice bearing directly *or indirectly* on espionage, counterespionage, or sabotage. 99 [Emphasis added.]

The legal implications of this directive are clouded by its failure to use the term "subversive activities" and its references instead to potential espionage or sabotage and to information bearing indirectly on espionage or sabotage. This language may have been an effort by the Justice Department and the FBI to deal with the problem of legal authority posed by the break with the State Department. Since the FBI no longer wanted to base its domestic intelligence investigations on State Department requests, some other way had to be found to retain a semblance of congressional authorization. Yet the scope of the FBI's assignment made this a troublesome point. In 1936, President Roosevelt had wanted intelligence about Communist and Fascist activities generally, not just data bearing on potential espionage or sabotage; and the 1938 plan provided for the FBI to investigate "activities of either a subversive or a so-called intelligence type." 100 There is no indication that the President's June 1939 directive had the intent or effect of limiting domestic intelligence to the investigation of violations of law.

Consistent with the FBI Director's earlier desires, these arrangements were kept secret until September 1939 when war broke out in Europe. At that time Director Hoover decided that secrecy created more problems than it solved, especially with regard to the activities of local law enforcement. He learned that the New York City Police Department had "created a special sabotage squad of fifty detectives ... and that this squad will be augmented in the rather near future to comprise 150 men." There had been "considerable publicity" with the result that private citizens were likely to transmit information concerning sabotage "to the New York City Police Department rather than to the FBI." Calling this development to the attention of the Attorney General, the Director strongly urged that the President "issue a statement or request addressed to all police officials in the United States" asking them to turn over to the FBI "any information obtained pertaining to espionage, counterespionage, sabotage, and neutrality regulations." 101

A document to this effect was immediately drafted in the Attorney General's office and dispatched by messenger to the White House with a note from the Attorney General suggesting that it be issued in the form of "a public statement". In recording his discussion that day with the Attorney General's assistant, Alexander Holtzoff, FBI official E. A. Tamm referred to the statement as "an Executive Order". Tamm also talked with the Attorney General regarding "the order":

Mr. Murphy stated that when he was preparing this he tried to make it as strong as possible. He requested that I relay this to Mr. Hoover as soon as possible and stated he knew the Director would be very glad to hear this. Mr. Murphy stated he prepared this on the basis of the memorandum which the Director forwarded to him. 103

The President's statement (or order or Executive Order) read as follows:

The Attorney General has been requested by me to instruct the Federal Bureau of Investigation of the Department of Justice to take charge of investigative work in matters relating to espionage, sabotage, and violations of the neutrality regulations.

This task must be conducted in a comprehensive and effective manner on a national basis, and all information must be carefully sifted out and correlated in order to avoid confusion and irresponsibility.

To this end I request all police officers, sheriffs, and other law enforcement officers in the United States promptly to turn over to the nearest representative of the Federal Bureau of Investigation any information obtained by them relating to espionage, counterespionage, sabotage, subversive activities and violations of the neutrality laws. 104

The statement was widely reported in the press, along with the following remarks by Attorney General Murphy at a news conference held the same day:

Foreign agents and those engaged in espionage will no longer find this country a happy hunting ground for their activities. There will be no repetition of the confusion and laxity and indifference of twenty years ago.

We have opened many new FBI offices throughout the land. Our men are well prepared and well trained. At the same time, if you want this work done in a reasonable and responsible way it must not turn into a witch hunt. We must do no wrong to any man.

Your government asks you to cooperate with it. You can turn in any information to the nearest local representative of the Federal Bureau of Investigation. 105

Three weeks later Murphy reiterated that the government would "not act on the basis of hysteria." He added, "Twenty years ago inhuman and cruel things were done in the name of justice; sometimes vigilantes and others took over the work. We do not want such things done today, for the work has now been localized in the FBI." 106

Two days after issuing the FBI statement, President Roosevelt proclaimed a national emergency "in connection with and to the extent necessary for the proper observance, safeguarding, and enforcing of the neutrality of the United States and the strengthening of our national defense within the limits of peacetime authorizations." The proclamation added, "Specific directions and authorizations will be given from time to time for carrying out these two purposes." 107

Thereupon, he issued an Executive Order directing the Attorney General to "increase the personnel of the Federal Bureau of Investigation, Department of Justice, in such number, not exceeding 150, as he shall find necessary for the proper performance of the additional duties imposed upon the Department of Justice in connection with the national emergency." 108 President Roosevelt told a press conference that the purpose of this order expanding the government's investigative personnel was to protect the country against "some of the things that happened" before World War I:

There was sabotage; there was a great deal of propaganda by both belligerents, and a good many definite plans laid in this country by foreign governments to try to sway American public opinion.... It is to guard against that, and against the spread by any foreign nation of propaganda in this country which would tend to be subversive -- I believe that is the word -- of our form of government. 109

President Roosevelt never formally authorized the FBI or military intelligence to conduct domestic intelligence investigations of "subversive activities," except for his oral instruction in 1936 and 1938. His written directives were limited to investigations of espionage, sabotage, and violations of the neutrality regulations. Nevertheless, the President clearly knew of and approved informally the broad investigations of "subversive activities" carried out by the FBI.

President Roosevelt did use the term "subversive activities" in a directive to Attorney General Robert Jackson on wiretapping in 1940. This directive referred to the activities of other nations "engaged in the organization of propaganda of so-called 'fifth columns' and in 'preparation for sabotage.'" The Attorney General was directed to authorize wiretapping "of persons suspected of subversive activities against the Government of the United States, including suspected spies." The President also instructed that such wiretaps be limited "insofar as possible to aliens." 110

With respect to investigations generally, however, the confusion as to precisely what President Roosevelt authorized is indicated by Attorney General Francis Biddle's description of FBI jurisdiction in 1942 and by a new Presidential statement in 1943. Biddle issued a lengthy order defining the duties of the various parts of the Justice Department in September 1942. The pertinent section relating to the FBI stated that it had a duty to "investigate" criminal offenses against the United States and to act as a "clearing house" for the handling of "espionage, sabotage, and other subversive matters." 111 This latter "clearing-house" function was characterized as a duty to "carry out" the President's directive of September 6, 1939.

Four months later, President Roosevelt renewed his public appeal for "police cooperation" and added a request that "patriotic organizations" cooperate with the FBI. This statement described his September 1939 order as granting "investigative" authority to the FBI and not simply a "clearing-house" function. However, the President defined that authority as limited to "espionage, sabotage, and violation of the neutrality regulations" without any mention of "subversion." 113

The statement was consistent with Attorney General Biddle's internal directive later in 1943 that the Justice Department's "proper function" was "investigating the activities of persons who may have violated the law." 114 A similar problem is involved with the authority for "counterespionage" operations by the FBI and military intelligence. President Roosevelt's confidential order of June 1939 explicitly authorized the FBI and military intelligence to handle counterespionage matters, and the 1938 plan used the terms "counter-espionage" and "counterintelligence." However, none of the President's public directives formally authorized counterespionage measures going beyond investigation; and the Justice Department's regulations made no reference to this responsibility.

*E. Congress and FBI Intelligence*

Congress accepted this executive action as a necessary and inevitable measure to cope with the emergency conditions arising from the war in Europe.

In November 1939, FBI Director Hoover linked FBI intelligence to both the President's September 6 statement and his September 8 proclamation and order during testimony on an emergency supplemental appropriation bill. He told the House Appropriations Committee that establishment of a General Intelligence Division "was made necessary by the President's proclamation directing that all complaints of violations of the national defense statutes and proclamations be reported to the Federal Bureau of Investigation." When asked "by what authority" the FBI was expending funds for intelligence work beyond its existing appropriation, Hoover replied, "By authority of the President's proclamation directing the Attorney General to authorize an increase in the staff of the Federal Bureau of Investigation by 150 special agents and such additional clerical personnel and equipment as would be needed." 115 The following exchange then took place between Congressman Woodrum and the Director:

Mr. WOODRUM. Will these additional people be kept on through the next fiscal year?

Mr. HOOVER. If the emergency continues.

Mr. WOODRUM. If the emergency does not continue you anticipate the force will be reduced?

Mr. HOOVER. Yes. For instance, we have opened 10 new field offices to conduct this work in various parts of the country. We opened another office in Savannah, one in Baltimore, one at Albany, in manufacturing and shipping centers as well as points wherein huge naval bases are maintained.

Mr. WOODRUM. And if the emergency ceases the need for the additional force will cease?

Mr. HOOVER. Yes.

Director Hoover also pointed out that this expansion would increase the number of FBI agents from 797 to 947. 116 In his next appearance before the Appropriations Committee, the Director dropped reference to the President's proclamation of emergency and relied for his "authority" on the "formal statement" of September 6 which he described as "directing that there be coordinated under the Federal Bureau of Investigation all the matters of investigative work relating to espionage, sabotage, and violations of the neutrality regulations, and any other subversive activities." 117

Six months later the Director told the Appropriations Committee that the FBI had a National Defense Division to "handle and direct all investigations dealing with espionage, sabotage, national-defense matters, and violations of the neutrality statutes." He once again cited the President's "order of September 6, 1939," saying that it "directed the Bureau to coordinate the functions on national defense matters in intelligence work." 118 In early 1941, Director Hoover had this exchange with members of the Appropriations Committee:

Mr. LUDLOW. At the close of the present emergency, when peace comes, it would mean that such of this emergency work necessarily will be discontinued.

Mr. HOOVER. This is correct.

Mr. TABER. Is your set-up for the national-defense work separate from the other work?

Mr. HOOVER. It is.

Mr. TABER. Is it operated as a separate division?

Mr. HOOVER. Yes. In the field our field offices are under instructions to utilize approximately 50 percent of the personnel on national defense work and the other 50 percent on the regular work.

Mr. TABER. But if some rush comes up, you might have to vary that?

Mr. HOOVER. That is correct.

Mr. TABER. According to the situation.

Mr. HOOVER. According to the emergency that might arise. If the national emergency should terminate, the structure dealing with national defense can immediately be discontinued or very materially curtailed according to the wishes of Congress.

The FBI was seeking a deficiency appropriation for "700 additional field agents, 500 of whom would be used on national defense investigations, and 200 on the investigation of violations of the Selective Service Act." 119

The FBI Director's appropriations testimony in 1939 and 1940 spelled out certain aspects of FBI intelligence programs and policies. The Director stated in 1939 that the General Intelligence Division had "compiled extensive indices of individuals, groups, and organizations engaged in . . . subversive activities, in espionage activities, or any activities that are possibly detrimental to the internal security of the United States." Hoover added,

These indexes have been arranged not only alphabetically but also geographically, so that at any time, should we enter into the conflict abroad, we would be able to go into any of these communities and identify individuals and groups who might be a source of grave danger to the security of this country. Their backgrounds and activities are known to the Bureau. These indexes will be extremely important and valuable in grave emergency.

The FBI had established a translation section "to review various foreign-language material" and a code section for "decoding any messages which we are able to intercept or obtain." With the agreement of military intelligence, the FBI also handled the protection of defense plants and advised industry officials on security measures. 120 The FBI Director reiterated these points in early 1940, adding that military and naval intelligence were "conducting no investigations in matters other than those connected with the military forces." He described the "general index" as being "available ... so that in the event of any greater emergency . . . we will be able to locate immediately these various persons who may need to be the subject of further investigation by the Federal authorities." 121 Later in 1940 the Director said that the "general intelligence index" included the names of persons "who may become potential enemies to our internal security, such as known espionage agents, known saboteurs, leading members of the Communist Party, and the bund." The last referred to various pro-Nazi organizations of German-Americans. 122

There was one important side effect of the confused legal basis for domestic intelligence. It allowed the Attorney General to deflect criticism of the FBI from another congressional source in 1940. Since the President's formal public directive could be construed as simply designating the FBI to take charge of the investigation of espionage, sabotage, and neutrality violations, Attorney General Robert Jackson was able to respond to criticism from Senator George Norris by declaring:

Mr. Hoover is in agreement with me that the principles which Attorney General Stone laid down in 1924 when the Federal Bureau of Investigation was reorganized and Mr. Hoover appointed as Director are sound, and that the usefulness of the Bureau depends upon a faithful adherence to those limitations.

The Federal Bureau of Investigation will confine its activities to the investigation of violation of Federal statutes, the collecting of evidence in cases in which the United States is or may be a party in interest, and the service of process issued by the courts. 123

Attorney General Jackson may have hoped to circumscribe FBI domestic intelligence within these limits, but the program developed in 1936-1939 went far beyond them. Consequently, the Attorney General's statement was at best a misleading description of executive policy.

Congress did have an opportunity in 1940 to enact a basic legislative charter for FBI intelligence. Representative Emmanuel Celler introduced a joint resolution which provided:

That the Federal Bureau of Investigation of the Department of Justice be authorized and directed to conduct investigations, subject to the direction of the Attorney General, to ascertain, prevent, and frustrate any interference with the national defense by sabotage, treason, seditious conspiracy (as defined in 18 U.S.C. 6), espionage, violations of the neutrality laws, or in any other manner.

The resolution would have permitted FBI wiretapping for these purposes under the specific authorization of the Attorney General. 124 The measure was endorsed by Attorney General Robert Jackson, but it was not passed. Consequently, except for the FBI Director's appropriations testimony, Congress played no role in authorizing the establishment of domestic intelligence operations.

Instead, Congress enacted two general statutes to deal with "subversive activities". The Smith Act of 1940 made it a federal crime to urge military insubordination or advocate the violent overthrow of the government. 125 And the Voorhis Act of 1941 required the registration of all "subversive" organizations having foreign links and advocating the violent overthrow of the government. 126 The Smith Act has been described as containing "the most drastic restrictions on freedom of speech ever enacted in the United States during peace." It was passed with little publicity and only brief floor debate as part of the Alien Registration Act of 1940, which appeared to most observers to deal only with fingerprinting foreigners. 127

The Smith Act and the Voorhis Act, along with the previously enacted Foreign Agents Registration Act of 1938, offer an insight into the way threats to domestic security were perceived before World War II. The Foreign Agents Registration Act was the product of an investigation of pro-Nazi and Communist activities by the Special House Committee on Un-American Activities headed by Representatives John McCormack and Samuel Dickstein in 1935-1936. The Committee's principal recommendation was legislation requiring the registration of foreign agents disseminating propaganda in the United States. 128 The Smith Act and the Voorhis Act carried this idea beyond "foreign agents". Thus, the Smith Act has been authoritatively described in the following terms: "From its inception this act was intended to combat and resist the organization of Fascist and Communist groups owing allegiance to foreign governments whose operations and activities were clearly contrary and dangerous to the Government of the United States." 129

In other words, the danger to domestic security was understood as including American citizens whose political activities might lead them to serve the interests of opposing nations. Attorney General Jackson used the term "Fifth Column" in 1940 to characterize "that portion of our population which is ready to give assistance or encouragement in any form to invading or opposing ideologies." He told a conference of state officials that the FBI's intelligence mission involved "steady surveillance

over individuals and groups within the United States who are so sympathetic with the systems or designs of foreign dictators as to make them a likely source of federal law violation." 130

The assumption that such persons and organizations posed a direct and immediate threat to the nation's security was not seriously questioned, although there was disagreement over the need for criminal prosecution or registration of "subversives" because of their political advocacy. Attorney General Jackson could endorse FBI domestic intelligence surveillance at the same time as he warned against prosecution of "subversive activity." It was a dangerous concept, Jackson told federal prosecutors, because there were "no definite standards to determine what constitutes a 'subversive activity,' such as we have for murder or larceny." Attorney General Jackson added,

Activities which seem benevolent or helpful to wage earners, persons on relief, or those who are disadvantaged in the struggle for existence may be regarded as "subversive" by those whose property interests might be burdened thereby. Those who are in office are apt to regard as "subversive" the activities of any of those who would bring about a change of administration. Some of our soundest constitutional doctrines were once punished as subversive. We must not forget that it was not so long ago that both the term "Republican" and the term "Democrat" were epithets with sinister meaning to denote persons of radical tendencies that were "subversive" of the order of things then dominant. 131

However, political organizations directly controlled by a potential enemy nation were considered to be different, especially when war was already underway in Europe. Germany and the Soviet Union (who, it should be remembered, were allied by treaty in 1939-1941) directed the international Nazi and Communist movements with well-organized followings in the United States.

In his effort to discourage prosecutions and to persuade the nation that FBI intelligence could handle any threats, Attorney General Jackson failed to acknowledge the risks to individual rights from unregulated federal surveillance. With no clear legislative or executive standards to keep it within the intended bounds, the FBI (and military intelligence in its sphere) had almost complete discretion to decide how far domestic intelligence investigations would extend. Only in retrospect as a Justice of the Supreme Court did Robert Jackson recognize these dangers. Shortly before his death in 1954 he wrote:

I cannot say that our country could have no central police without becoming totalitarian, but I can say with great conviction that it cannot become totalitarian without a centralized national police. . . . All that is necessary is to have a national police competent to investigate all manner of offenses, and then, in the parlance of the streets, it will have enough on enough people, *even if it does not elect to prosecute them*, so that it will find no opposition to its policies. Even those who are supposed to supervise it are likely to fear it. I believe that the safeguard of our liberty lies in limiting any national policing or investigative organization, first of all to a small number strictly federal offenses, and second to *nonpolitical* ones. The fact that we may have confidence in the administration of a federal investigative agency under its existing head does not mean that it may not revert again to the days when the Department of Justice was headed by men to whom the investigative power was a weapon to be used for their own purposes. 132 [Emphasis added.]

#### *F. The Scope of FBI Domestic Intelligence*

A central feature of the FBI domestic intelligence program authorized by President Roosevelt was its broad investigative scope. The breadth of intelligence-gathering most clearly demonstrates why the program could not have been based on any reasonable interpretation of the power to investigate violations of law. The investigations were built upon a theory of "subversive infiltration" which remained an essential part of domestic intelligence thereafter. This theory persisted over the decades in the same way the Roosevelt directives continued in effect as the basis for legal authority. Moreover, there was a direct link between the policy of investigating "subversive" influence and the reliance on inherent executive power. The purpose of such investigations was not to assist in the enforcement of criminal laws, but rather to supply the President and other executive officials with information believed to be of value for making decisions and developing governmental policies. This "pure intelligence" function was precisely what President Roosevelt meant when he asked for "a broad picture" of the impact of Communism and Fascism on American life.

A second purpose for broad domestic intelligence investigations was to compile an extensive body of information for use in the event of an emergency or actual war. This information would supply the basis for taking preventive measures against groups or individuals disposed to interfere with the national defense effort. If such interference might take the form of sabotage or other illegal disruptions of defense production and military discipline, the collection of preventive intelligence was related to law enforcement. But the relationship was often remote and highly speculative, based on political affiliations and group membership rather than any tangible evidence of preparation to commit criminal acts. As the likelihood of American involvement in the war moved closer, preventive intelligence investigations focused on whether individuals should be placed on a Custodial Detention List for possible arrest in case of war. This program was developed jointly by the FBI and a special Justice Department unit in 1940-1941.

These two objectives -- "pure intelligence" and preventive intelligence -- were closely related to one another. Investigations designed to produce information about subversive infiltration also identified individuals thought potentially dangerous to the country's security. Likewise, investigations of persons alleged to be security threats contributed to the overall domestic intelligence picture.

Internal FBI instructions described the scope of surveillance in detail. On September 2, 1939, all FBI field offices were ordered to review their files and secure information from "reliable contacts" in order to prepare reports on "persons of German, Italian, and Communist sympathies," as well as other persons "whose interest may be directed primarily to the interest of some other nation than the United States." Such information included "a list of the subscribers" and officers of all German and Italian language newspapers in the United States, language newspapers published by the Communist Party or "its affiliated organizations," and both foreign and English language newspapers "of pronounced or notorious Nationalistic sympathies." FBI

offices were also instructed to identify members of all German and Italian societies, "whether they be of a fraternal character or of some other nature," and of "any other organization, regardless of nationality, which might have pronounced Nationalistic tendencies." 133

In October 1939 the FBI was investigating the Communist Party and the German American Bund, using such techniques as "the employment of informants," "research into publications," "the soliciting and obtaining of assistance and information from political emigres, and organizations which have for their purpose the maintenance of files of information bearing upon this type of study and inquiry," and "the attendance of mass meetings and public demonstrations." The compilation of information on other organizations and groups "expressing nationalist leanings" continued pursuant to the September 1939 instructions. In addition, the FBI was conducting "confidential inquiries" regarding "the various so-called radical and fascist organizations in the United States" for the purpose of identifying their "leading personnel, purposes and aims, and the part they are likely to play at a time of national crisis." 134

In November 1939, the FBI began preparing a list of specific individuals "on whom information is available indicating strongly that [their] presence at liberty in this country in time of war or national emergency would constitute a menace to the public peace and safety of the United States Government." The list, comprised persons "with strong Nazi tendencies" and "with strong Communist tendencies." The citizenship status of each individual was determined, and cards prepared summarizing the reasons for placing him on the list. 135

FBI field offices were instructed to obtain information on such persons from "public and private records, confidential sources of information, newspaper morgues, [sic] public libraries, employment records, school records, et cetera." FBI agents were to keep the purpose of their inquiries "entirely confidential" and to reply to questions by stating as a cover that the investigation was being made in connection with "the Registration Act requiring agents of foreign principals to register with the State Department." 136 FBI headquarters supervisors divided the list into two categories:

Class #1. Those to be apprehended and interned immediately upon the outbreak of hostilities between the Government of the United States and the Government they serve, support, or owe allegiance to.

Class #2. Those who should be watched carefully at and subsequent to the outbreak of hostilities because their previous activities indicate the possibility but not the probability that they will act in a manner adverse to the best interests of the Government of the United States. 137

This program was described as a "custodial detention" list in June 1940, and field offices were again instructed to furnish information on persons possessing "Communitic, Fascist, Nazi or other nationalistic background." 138

The primary subjects of FBI intelligence surveillance under this program in mid-1940 were active Communists (including Communist candidates for public offices, party officers and organizers, speakers at Communist rallies, writers of Communist books or articles, individuals "attending Communistic meetings where revolutionary preachings are given," Communists in strategic operations "or holding any position of potential influence," and Communist agitators who participate "in meetings or demonstrations accompanied by violence"), all members of the German American Bund and similar organizations, Italian Fascist organizations, and American Fascist groups such as "Silver Shirts, Ku Klux Klan, White Camelia, and similar organizations." 139 Director Hoover summarized these "subversive activities" in a memorandum to the Justice Department:

the holding of official positions in organizations such as the German-American Bund and Communist groups; the distribution of literature and propaganda favorable to a foreign power and opposed to the American way of life; agitators who are adherents of foreign ideologies who have for their purpose the stirring up of internal strike [sic], class hatreds and the development of activities which in time of war would be a serious handicap in a program of internal security and national defense . . . 140

Director Hoover claimed publicly in 1940 that advocates of foreign "isms" had "succeeded in boring into every phase of American life, masquerading behind front organizations." 141 Intelligence about "front" groups was transmitted to the White House. For example, in 1937 the Attorney General had sent an FBI report on a proposed pilgrimage to Washington to urge passage of legislation to benefit American youth. The report stated that the American Youth Congress, which sponsored the pilgrimage, was understood to be strongly Communistic. 142 Later reports in 1937 described the Communist Party's role in plans by the Workers Alliance for nationwide demonstrations protesting the plight of the unemployed, as well as the Alliance's plans to lobby Congress in support of the federal relief system. 143

FBI investigations and reports (which went into Justice Department and FBI permanent files) covered entirely lawful domestic political activities. For example, one local group checked by the Bureau was called the League for Fair Play, which furnished "speakers to Rotary and Kiwanis Clubs and to schools and colleges." The FBI reported in 1941 that:

the organization was formed in 1937, apparently by two Ministers and a businessman for the purpose of furthering fair play, tolerance, adherence to the Constitution, democracy, liberty, justice, understanding and good will among all creeds, races and classes of the United States.

A synopsis of the report stated, "No indications of Communist activities." 144 In 1944 the FBI prepared a more extensive intelligence report on an active political group, the Independent Voters of Illinois, apparently because it was the target of Communist "infiltration." The Independent Voters group was reported to have been formed:

for the purpose of developing neighborhood political units to help in the re-election of President Roosevelt and the election of progressive congressmen. Apparently, IVI endorsed or aided Democrats for the most part, although it was stated to be "independent". It does not appear that it entered its own candidates or that it endorsed any Communists. IVI sought to help

elect those candidates who would favor fighting inflation, oppose race and class discrimination, favor international cooperation, support a "full-employment program," oppose Fascism, etc. 145

Thus, the Bureau gathered data about left-liberal groups in its search for subversive "influence." At the opposite end of the political spectrum, the activities of numerous right-wing groups like the Christian Front and Christian Mobilizers (followers of Father Coughlin), the American Destiny Party, the American Nationalist Party, and even the less extreme "America First" movement were reported by the FBI. 146

The Bureau even looked into a Bronx, New York, child care center which was "apparently dominated and run" by Communists to determine whether it was being used as a "front" for carrying out the Communist program. 147

One example, of the nature of continuing intelligence investigations is the FBI's reports on the NAACP. The Washington, D.C. Field Office opened the case in 1941 because of a request from the Navy Department for an investigation of protests against racial discrimination in the Navy by "fifteen colored mess attendants." FBI agents used an informant to determine the NAACP's "connections with the communist part and other communist controlled organizations." 148

FBI headquarters sent a request to the Oklahoma City Field Office in August 1941 for an investigation of "Communist Party domination" of the NAACP in connection with the development of "Nationalistic Tendency Charts." The field office report concluded, on the basis of an informant's reports, "that there is a strong tendency for the NAACP to steer clear of Communistic activities. Nevertheless, there is a strong movement on the part of the Communists to attempt to dominate this group through an infiltration of Communistic doctrines. Consequently, the activities of the NAACP will be closely observed and scrutinized in the future." 149

FBI informants subsequently reported on NAACP conferences at Hampton, Virginia, in the fall of 1941 and at Los Angeles in the summer of 1942. These investigations were conducted "to follow the activities of the NAACP and determine further the advancement of the Communist group has made into that organization." 150 Similar reports came to headquarters from field offices in Richmond, Virginia; Springfield and Chicago, Illinois; Boston, Massachusetts; Oklahoma City, Oklahoma; Indianapolis, Indiana; Savannah, Georgia; and Louisville, Kentucky, in 1942-1943. Informants were used to report on efforts "to place before the NAACP certain policies or ideas which . . . may be favorable to the Communist Party." 151 An informant attended an NAACP convention in South Carolina in June 1943 and reported on his conversations with NAACP counsel Thurgood Marshall. The informant believed that Marshall was "a loyal American" and "would not permit anything radical to be done." 152

Informants for the Oklahoma City Field Office reported on Communist efforts to "infiltrate" the NAACP and advised that the Communist Party would "be active" at a forthcoming NAACP conference. 153 On the other hand, an informant for the Chicago office reported "no evidence that there is any Communist infiltration in the Chicago branch." 154 And informants for the Detroit office advised that there were "numerous contacts by the CP members and NAACP members, some collaboration on issues which affect negroes, presence of CP members at NAACP meetings, interest of CP in NAACP, but no evidence of CP control." 155

FBI investigation of the NAACP reflected in these and other reports to headquarters produced massive information in Bureau files about the organization, its members, their legitimate activities to oppose racial discrimination, and internal disputes within some of the chapters. One thirty-five page report contained the names of approximately 250 individuals and groups, all indexed in a table of contents. 156 The reports and their summaries contained little if any information about specific activities or planned activities in violation of federal law.

The scope of the information compiled through these investigations of alleged Communist "infiltration" is indicated by an FBI estimate that by 1944 "almost 1,000,000 people knowingly or unknowingly had been drawn into Communist Front activity."

#### *G. The Custodial Detention Program*

The epitome of preventive intelligence was the Custodial Detention Program established by the FBI and the Justice Department in 1940-1941. It should not be confused with the internment of Japanese-Americans in 1942. Both the FBI and military intelligence opposed the massive infringement of human rights which occurred in 1942 when 112,000 Japanese and Japanese-Americans were placed in detention camps -- a decision made by President Roosevelt and ratified by the Congress. The authoritative histories stress the crucial influence of the Army's Provost Marshal General and his "empire-building" machinations, especially in reaction to a pre-war decision transferring responsibility for alien enemy internment to the Justice Department. 158

The mass detention of American citizens solely on the basis of race was exactly what the Custodial Detention Program was designed to prevent. Its purpose was to enable the government to make individual decisions as to the dangerousness of enemy aliens and citizens who might be arrested in the event of war. Moreover, when the program was implemented after Pearl Harbor, it was limited to dangerous enemy aliens; and the plans for internment of potentially dangerous American citizens were never carried out.

The most significant aspects of the Custodial Detention Program bear upon the relationship between the FBI and the Attorney General. Director Hoover opposed Attorney General Robert Jackson's attempt in 1940 to require Departmental supervision; and when Attorney General Francis Biddle abolished the Custodial Detention List in 1943, the FBI Director did not comply with his order.

Director Hoover asked Attorney General Jackson in June 1940 for policy guidance "concerning a suspect list of individuals whose arrest might be considered necessary in the event the United States becomes involved in war." 159 Secretary of War Henry L. Stimson advised the Attorney General in August that the War Department had emergency plans providing "for the

custody of such alien enemies as may be ordered interned" and suggested that they be discussed between military and Justice Department officials. 160 To deal with these matters, Attorney General Jackson assigned responsibility to the head of a newly created Neutrality Laws Unit in the Justice Department. This Unit was later renamed the Special War Policies Unit and undertook Departmental planning for the war, as well as analysis and evaluation of FBI intelligence reports and the review of names placed on the Custodial Detention List.

The FBI Director initially resisted the plan for Justice Department supervision. He told the head of the Special Unit that the Department's program created "the very definite possibility of disclosure of certain counter-espionage activities." 161 Hoover added,

The personnel which would handle this work upon the behalf of the Department ... should be selected with a great deal of care. We in the FBI have endeavored to assure the utmost secrecy and confidential character of our reports and records. To turn over to the Department this great collection of material in toto ... means that the Department must assume the same responsibility for any leaks or disclosure which might be prejudicial to the continued internal security of our country. Obviously, the identity of many of our confidential informants will become known to such personnel.... The life and safety of these informants are at stake if their identities should become known to any outside persons.

Hoover also feared that if the Department took any overt administrative action or prosecution, "the identity of confidential informants now used by the Bureau would become known." This would "cut off that source of information in so far as continued counter-espionage might be concerned in that case." He claimed that if the Attorney General approved the plan, it would mean the Justice Department was "ready to abandon its facilities for obtaining information in the subversives field." 162

Attorney General Jackson refused to give in to the FBI Director. After five months of negotiation, the FBI was ordered to transmit its "dossiers" to the Justice Department Unit. 163 To satisfy the FBI's concerns, the Department agreed that any formal proceeding would be postponed or suspended if the FBI indicated that it "might interfere with sound investigative techniques." The FBI was assured that the plan "does not involve any abandonment by the Department of its present facilities for obtaining information in connection with subversive activities by surveillance or counterespionage." There would be "no public disclosure of any confidential informants ... without the prior approval of the Bureau." 164 Thus, from 1941 until 1943 the Justice Department had the machinery to oversee at least this aspect of FBI domestic intelligence.

The wartime detention plans envisioned entirely civilian proceedings for arrest of alien enemies following a Presidential proclamation pursuant to statutory provisions, and all warrants would be authorized and issued by the Attorney General. 165 Separate instructions stated that, with respect to American citizens on the list and "not subject to internment," a Departmental committee would consider whether specific persons should be prosecuted under the Smith Act of 1940 "or some other appropriate statute" in the event of war. 166

FBI instructions to the field reiterated the types of organizations whose members should be investigated under the Custodial Detention Program. In addition to the groups listed in 1940, the order included the Socialist Workers Party (Trotskyite), the Proletarian Party, Lovestoneites, "or any of the other Communist organizations, or ... their numerous 'front' organizations," as well as persons reported as "pronouncedly pro-Japanese." 167

FBI officials were concerned that the Department plan did not provide sufficiently for action against citizens. In addition to the Smith Act of 1940, FBI officials pointed out to the Department "the possibility of utilizing denaturalization proceedings." At the FBI's request, the Special Departmental Unit prepared "a study of the control of citizens suspected of subversive activities." As later summarized by the FBI, the study stressed:

... the great need for a federal overall plan of legislation to control suspected citizens, rather than isolated statutes which would care for particular citizens.... It was pointed out that the British system of defense legislation had been to enact a general enabling statute under which the executive authority is permitted to promulgate rules and regulations having the effect of law, and it was suggested that, if this country entered the war, a similar type of statute should be enacted which would enable the President to set up a system of regulations subject to immediate change and addition as the need arose. 168

Attorney General Francis Biddle did not endorse this position. Instead, the Department's Special Unit relied upon recently enacted specific statutes as the basis for its planning. These included the Foreign Agents Registration Act of 1938, the Smith Act of 1940 making it a federal crime to urge military insubordination or advocate the violent overthrow of the government, and the Voorhis Act of 1941 requiring the registration of organizations having foreign ties and advocating the violent overthrow of the government.

Acting at "the post-investigative level," the Special War Policies Unit considered these and other statutes as the basis for coordinating "affirmative action on the internal security front." Its annual report in 1942 stated:

The Unit deals with new forms of political warfare. As part of its equipment, it has engaged analysts with special experience and schooling in the field of political organization and ideologies. The Unit has not only sought to collate information regarding dangerous individuals and organizations; it has sought to bring together a trained staff equipped to understand the methods, beliefs, relationships and subversive techniques of such individuals and organizations for the purposes of initiating appropriate action. 169

During the period 1941-1943 the Special Unit included a Foreign Agents Registration Section, a Sedition Section, an Organizations and Propaganda Analysis Section, and a Subversives Administration composed of a Nazi and Fascist Section

and a Communist Section. The Special Unit initiated such wartime measures as the internment of several thousand enemy aliens, the denaturalization of members of the German-American Bund who had become American citizens, sedition prosecutions, exclusion of publications from the mails, and prosecution of foreign propaganda agents. The Unit received and analyzed reports from the FBI, the State Department, the Office of War Information, and the Office of Strategic Services. Attorney General Biddle abolished the Special Unit in July 1943 and transferred its prosecutive functions to the Criminal Division. 170

In 1943, Attorney General Francis Biddle also decided that the Custodial Detention List had outlived its usefulness and that it was based on faulty assumptions. His directive to the FBI and the Departmental Unit stated:

There is no statutory authorization or other present justification for keeping a "custodial detention" list of citizens. The Department fulfills its proper function by investigating the activities of persons who may have violated the law. It is not aided in this work by classifying persons as to dangerousness.

Apart from these general considerations, it is now clear to me that this classification system is inherently unreliable.

The evidence used for the purpose of making the classifications was inadequate; the standards applied to the evidence for the purpose of making the classifications were defective; and finally, the notion that it is possible to make a valid determination as to how dangerous a person is in the abstract and without reference to time, environment, and other relevant circumstances, is impractical, unwise, and dangerous. 171

Upon receipt of this order, the FBI Director did not abolish the FBI's list. Instead, he changed its name from Custodial Detention List to Security Index. 172 The new index continued to be composed of individuals "who may be dangerous or potentially dangerous to the public safety or internal security of the United States." Instructions to the field stated:

The fact that the Security Index and Security Index Cards are prepared and maintained should be considered strictly confidential, and should at no time be mentioned or alluded to in investigative reports, or discussed with agencies or individuals outside the Bureau other than duly qualified representatives of the Office of Naval Intelligence and the Military Intelligence Division, and then only on a strictly confidential basis. 173

The Attorney General and the Justice Department were apparently not informed of the FBI's decision to continue the program for dangerousness classification under a different name.

Moreover, FBI investigations did not conform to Attorney General Biddle's statement that the Justice Department's proper function was investigation of "the activities of persons who may have violated the law." The FBI Director's instructions at the end of the war emphasized that the Bureau investigated activities "of prosecutive or intelligence significance." 174 However, towards the end of the war, the FBI did limit substantially its investigation of individual Communists. Orders to the field requiring investigation of every member of the Communist Political Association (as the Party was named in 1943-1945) were modified in 1944, when field offices were instructed to confine their investigations to "key figures in the national or regional units of the CPA." This directive received "widely varying interpretations" in the field, and many offices "continued to open cases on the basis of membership alone." Further instructions in April 1945 stated that investigations were restricted to "key figures" or "potential key figures" rather than on all members as had been the policy before 1944. Security Index cards were "prepared only on those individuals of the greatest importance to the Communist movement." 175

At the end of the war the head of the FBI Intelligence Division, D. M. Ladd, recommended to Director Hoover another cutback in operations. This proposal was approved by the FBI Executive Conference; and the State Department and the Justice Department's Criminal Division were advised of the changes. 176 FBI field offices were

... instructed to immediately discontinue all general individual security matter investigations in all nationalistic categories with the specific exceptions of cases involving Communists, Russians, individuals whose nationalistic tendencies result from ideological or organizational affiliation with Marxist groups such as the Socialist Workers Party, the Workers Party, the Revolutionary Workers League or other groups of similar character and members of the Nationalist Party of Puerto Rico.

The FBI would open "no new general individual security matter investigations ... unless they fall within the above specific exceptions." However, the instructions permitted the field to continue investigating "individuals whose activities are of paramount intelligence importance such as individuals closely allied with political or other groups abroad, individuals prominent in organizational activity of significance or individuals falling within similar categories." The instructions added,

It is realized, of course, that in connection with the intelligence jurisdiction of the Bureau it will be necessary to investigate the activities and affiliations of certain individuals considered key figures in nationalistic and related activities or considered leaders of importance in various foreign nationality groups .... If in such an instance you have any question as to the advisability or desirability of instituting such an investigation in view of the above instructions, you should, of course, refer the matter to the Bureau for appropriate decision.

This flexibility specifically allowed for the investigation of "fascist individuals of prosecutive or intelligence significance." 177

## *H. FBI Wartime Operations*

A review of FBI intelligence work during World War II would not be complete without brief mention of several other activities. In 1940 President Roosevelt authorized the FBI with the approval of the Attorney General to conduct electronic surveillance of "persons suspected of subversive activities against the Government of the United States, including suspected spies." 178 The Federal Communications Commission denied the FBI access before the war to international communications on the grounds that such intercepts violated the Federal Communications Act of 1934. 179 However, military intelligence had secretly formed a Signals Intelligence Service to intercept international radio communications; and Naval intelligence arranged with RCA to get copies of Japanese cable traffic to and from Hawaii, although other cable companies used by the Japanese refused to violate the statute against interception before Pearl Harbor. 180 Moreover, the FBI developed "champering" or surreptitious mail opening techniques and the practice of surreptitious entry was used by the FBI in intelligence operations. 181

Several basic internal memoranda and agreements spelled out the policies governing the relationships between FBI and military intelligence in this period. The military concentrated more heavily on what it perceived as potential threats to the armed forces, while the FBI developed a wider and more sophisticated approach to the gathering of intelligence about "subversive activities" generally. An example of the Army's policy was an intelligence plan approved in 1936 for the Sixth Corps Area which covered Illinois, Michigan, and Wisconsin. It called for the collection and indexing of the names of several thousand groups, ranging from the American Civil Liberties Union to pacifist student groups alleged to be Communist-dominated. Sources of information were to be the Justice Department, the Treasury Department, the Post Office Department, local state police, and private intelligence bureaus employed by businessmen to keep track of organized labor. 182 The joint FBI-military intelligence plan prepared in 1938 stated that the Office of Naval Intelligence and the Military Intelligence Division (G-2) were concerned with "subversive activities that undermine the loyalty and efficiency" of Army and Navy personnel or civilians involved in military construction and maintenance. Since ONI and MID lacked trained investigators, they relied before the war on the FBI "to conduct investigative activity in strictly civilian matters of a domestic character." The three agencies exchanged information of interest to one another, both in the field and at headquarters in Washington. 183

The FBI, ONI, and MID entered into a Delimitation Agreement in June 1940 pursuant to the authority of President Roosevelt's 1939 directives. As revised in February 1942, the Agreement covered "investigation of all activities coming under the categories of espionage, counterespionage, subversion and sabotage." It provided that the FBI would be responsible for all investigations "involving civilians in the United States" and for keeping ONI and MID informed of "important developments . . . including the names of individuals definitely known to be connected with subversive activities." 184 As a result of this Agreement and prior cooperation, military intelligence could compile extensive files on civilians from the information disseminated to it by the FBI. For example, in May 1939 the MID transmitted a request from the Ninth Corps Area on the West Coast for the names and locations of "alien and disloyal American sabotage and espionage organizations," organizations planning to take advantage of war-time hardships to overthrow the government, "citizens opposed to our participation in war and conducting anti-war propaganda," and potential enemy nationals who should be interned in case of an "international emergency." 185

Moreover, despite the FBI-military agreement, the Counter Intelligence Corps of the Army (CIC) gradually undertook wider investigation of civilian "subversive activity" as part of a preventive security program which used voluntary informants and investigators to collect information. 186

The FBI developed a substantial foreign intelligence operation in Latin America during the war. On June 24, 1940, President Roosevelt issued a directive assigning foreign intelligence responsibilities in the Western Hemisphere to a Special Intelligence Service of the FBI. SIS furnished the State Department, the military, and other governmental agencies with intelligence regarding "financial, economic, political and subversive activities detrimental to the security of the United States." SIS assisted several Latin American countries "in training police and organizing anti-espionage and anti-sabotage defenses." When another foreign intelligence agency, the Office of Strategic Services, was established in 1941, it sought to enter the Latin American field until President Roosevelt made clear that jurisdiction belonged to SIS. 187

There was constant friction throughout the war between the FBI and the OSS. Despite the President's orders, OSS operatives went to Latin America. Within the United States OSS officers are reported to have secretly entered the Spanish embassy in Washington to photograph documents. The FBI Director apparently learned of the operation, but instead of registering a protest he waited until OSS returned a second time and then had FBI cars outside turn on their sirens. When OSS protested to the White House, the President's aides reportedly ordered the embassy entry project turned over to the FBI. 188 A similar incident occurred in 1945 when OSS security officers illegally entered the offices of Amerasia magazine in the search for confidential government documents. 189 This illegal entry made it impossible for the Justice Department to prosecute vigorously on the basis of the subsequent FBI investigation, for fear of exposing the "taint" which started the inquiry.

Director Hoover's most serious conflict with OSS involved a weighing of the respective needs of foreign intelligence and internal security. In 1944, the head of OSS, William Donovan, negotiated an agreement with the Soviet Union for an exchange of missions between OSS and the NKVD (the Soviet intelligence and secret police organization). Both the American military representative in Moscow and Ambassador Averill Harriman hoped the exchange would improve Soviet-American relations. 190 When Hoover learned of the plan, he warned Presidential aide Harry Hopkins of the potential danger of espionage if the NKVD were "officially authorized to operate in the United States where quite obviously it will be able to function without any appropriate restraint upon its activities." The Director also advised Attorney General Biddle that secret NKVD agents were already "attempting to obtain highly confidential information concerning War Department secrets." Thus, the exchange of intelligence missions was blocked. 191 The FBI was also greatly concerned about the OSS policy of employing American Communists to work with the anti-Nazi underground in Europe, although OSS did dismiss some persons suspected of having links with Soviet intelligence. 192

The FBI was not withdrawn from the foreign intelligence field until 1946. At the end of the war President Truman abolished the Office of Strategic Services and dispersed its functions to the War and State Departments. The FBI proposed expanding its wartime Western Hemisphere intelligence system to a world-wide basis, with the Army and Navy handling matters of importance to the military. Instead, the President formed a National Intelligence Authority with representatives of the State,

War, and Navy Departments to direct the foreign intelligence activities of a Central Intelligence Group. The Central Intelligence Group was authorized to conduct all foreign espionage and counterespionage operations in June 1946. Director Hoover immediately terminated the operations of the FBI's Special Intelligence Service; and in some countries SIS officers destroyed their files rather than transfer them to the new agency. 193

#### IV. DOMESTIC INTELLIGENCE IN THE COLD WAR ERA: 1945-1963

If, in the long run, the beliefs expressed in proletarian dictatorship are destined to be accepted by the dominant forces of the community, the only meaning of free speech is that they should be given their chance and have their way.

-- Mr. Justice Oliver Wendell Holmes, Dissenting in *Gitlow v. New York*, 268 U.S. 652 (1925).

The situation with which Justices Holmes and Brandeis were concerned in *Gitlow* was a comparatively isolated event. . . . They were not confronted with any situation comparable to the instant one -- the development of an apparatus designed and dedicated to the overthrow of the Government, in the context of world crisis after crisis.

-- Mr. Chief Justice Fred Vinson, Opinion in *Dennis v. United States*, 341 U.S. 494 (1951).

##### *A. The Anti-communist Consensus*

During the Cold War period the domestic intelligence activities of the Federal Government were rooted in a firm national consensus regarding the danger to the United States from international Communism. No distinction was made between the threats posed by the Soviet Union and by Communists within this country. At the peak of international tension during the Korean War, the Supreme Court upheld the conviction of Communist Party leaders under the Smith Act for conspiracy to advocate violent overthrow of the government. The conspiratorial nature of the Communist Party and its ideological links with the Soviet Union at a time of stress in Soviet-American relations were cited by the Court as the reasons for its decision. 194

In the same environment, Congress enacted the Internal Security Act of 1950 over President Truman's veto. Its two main provisions were the Subversive Activities Control Act to register Communist and Communist "front" groups and individual Communists, and the Emergency Detention Act for the internment in an emergency of persons who might engage in espionage or sabotage. Congress made findings that the Communist Party was "a disciplined organization" operating in this nation "under Soviet Union control" with the aim of installing "a Soviet style dictatorship." 195 Going even further in 1954, Congress passed the Communist Control Act which provided that the Communist Party was "not entitled to any of the rights, privileges, and immunities attendant upon legal bodies created under the jurisdiction of the laws of the United States." 196 These statutes buttressed the intelligence authority of the FBI, even though Congress never enacted legislation directly authorizing FBI domestic intelligence. 197

By the mid-1950s, gradual relaxation of international tensions between the United States and the Soviet Union, coupled with a decline in domestic Communist influence after the Smith Act prosecutions, slowed the momentum for suppression. The Supreme Court reversed Smith Act convictions of second-string Communist leaders in 1957, holding that the government must show advocacy "of action and not merely abstract doctrine." 198 However, as late as 1961, the Court sustained the constitutionality under the First Amendment of the requirement that the Communist Party register with the Subversive Activities Control Board. 199

The degree of consensus in favor of repression of the Communist Party should not be overstated. In contrast to the Congressional enthusiasm, President Truman was concerned about the risks to constitutional government. According to one White House staff member's notes during the debate over the Internal Security Act of 1950, "The President said that the situation . . . was the worst it had been since the Alien and Sedition Laws of 1798, that a lot of people on the Hill should know better but had been stampeded into running with their tails between their legs." Truman said he would veto the bill "regardless of how politically unpopular it was -- election year or no election year." 200

Throughout the period there was a confusing mixture of secrecy and disclosure, both within the executive branch and between the executive and Congress. On matters such as the Emergency Detention Program, the FBI and the Justice Department joined in disregarding the will of Congress. Unilateral executive action was frequently substituted for legislation, sometimes with the full knowledge and consent of Congress and on other occasions without informing Congress or by advising only a select group of legislators. There is no question that both Congress and the public expected the FBI to gather domestic intelligence about Communists. But the broad scope of FBI investigations, its specific programs for achieving "pure intelligence" and preventive intelligence objectives, and its use of intrusive techniques and disruptive counterintelligence measures against domestic "subversives" were not fully known by anyone outside the Bureau.

##### *B. The Post-War Expansion of FBI Domestic Intelligence*

In February 1946, Assistant Director Ladd of the FBI Intelligence Division recommended reconsideration of previous restrictive policies and the institution of a broader program aimed at the Communist Party. Ladd advised Director Hoover:

The Soviet Union is obviously endeavoring to extend its power and influence in every direction and the history of the Communist movement in this country clearly shows that the Communist Party, USA has consistently acted as the instrumentality in support of the foreign policy of the USSR.

The Communist Party has succeeded in gaining control of, or extensively infiltrating a large number of trade unions, many of which operate in industries vital to the national defense....

In the event of a conflict with the Soviet Union, it would not be sufficient to disrupt the normal operations of the Communist Party by apprehending only its leaders or more important figures. Any members of the Party occupied in any industry would be in a position to hamper the efforts of the United States by individual action and undoubtedly the great majority of them would do so....

It is also pointed out that the Russian Government has sent and is sending to this country a number of individuals without proper credentials or travel documents and that in the event of a breach of diplomatic relations there would undoubtedly be a considerable number of these people in the United States.

Therefore, Ladd recommended "re-establishing the original policy of investigating all known members of the Communist Party" and reinstating "the policy of preparing security index cards on all members of the Party."

He observed that "the greatest difficulty" with apprehending all Communists if war broke out was "the necessity of finding legal authorization." While enemy aliens could be interned, the only statutes available for the arrest of citizens were the Smith Act, the rebellion and insurrection statutes, and the seditious conspiracy law. These laws were inadequate because "it might be extremely difficult to prove that members of the Party knew the purpose of the Party to overthrow the Government by force and violence" under the Smith Act and "some overt act would be necessary" before the other statutes could be invoked. Hence, he proposed advising the Attorney General of the FBI's plans and the need for "a study as to the action which could be taken in the event of an emergency." 201

Consequently, Director Hoover informed Attorney General Tom C. Clark that the FBI had "found it necessary to intensify its investigation of Communist Party activities and Soviet espionage cases." The FBI was also "taking steps to list all members of the Communist Party and any others who would be dangerous in the event of a break in diplomatic relations with the Soviet Union, or other serious crisis, involving the United States and the U.S.S.R." The FBI Director added that it might be necessary in a crisis "to immediately detain a large number of American citizens." He suggested that a study be made "to determine what legislation is available or should be sought to authorize effective action ... in the event of a serious emergency." 202

Assistant Director Ladd proposed another FBI program which was not called to the Attorney General's attention. He told the Director, "Apart from the legal problems involved, another difficulty of considerable proportions which would probably be encountered in the event of extensive arrests of Communists would be a flood of propaganda from Leftist and so-called Liberal sources." To counteract this possibility, he made the following recommendation:

It is believed that an effort should be made now to prepare educational material which can be released through available channels so that in the event of an emergency we will have an informed public opinion.

To a large extent the power and influence of the Communist Party in this country, which is out of all proportion to the actual size of the Party, derives from the support which the Party receives from "Liberal" sources and from its connections in the labor unions. The Party earns its support by championing individual causes which are also sponsored by the Liberal elements. It is believed, however, that, in truth, Communism is the most reactionary, intolerant and bigoted force in existence and that it would be possible to assemble educational materials which would incontrovertibly establish the truth.

Therefore, material could be assembled for dissemination to show that Communists would abolish or subjugate labor unions and churches if they came to power. Such material would undermine Communist influence in unions and support for the Party from "persons prominent in religious circles." Additional material could be assembled "indicating the basically Russian nature of the Communist Party in this country." Ladd proposed a two-day training conference for "Communist supervisors" from eighteen or twenty key field offices so that they might have "a complete understanding . . . of the Bureau's policies and desires. . . ." These recommendations were approved by the FBI Executive Conference. 203

### *C. The Federal Loyalty-Security Program*

In 1947, President Truman established by executive order a Federal Employee Loyalty Program. 204 Its basic features were retained in the Federal Employee Security Program authorized by President Eisenhower in Executive Order 10450, which is still in effect with some modifications today. 205 The program originated out of serious and well-founded concern that Soviet intelligence was using the Communist Party as an effective vehicle for the recruitment of espionage agents. However, from the outset it swept far beyond this counterespionage purpose to satisfy more speculative preventive intelligence objectives. The program was designed as much to protect the government from the "subversive" ideas of federal employees as it was to detect potential espionage agents.

The basic outlines of the employee security program were developed in 1946-1947 by a Temporary Commission on Employee Loyalty. Its understanding of the problem was shaped largely by the report of a Canadian Royal Commission in June 1946. The Royal Commission had investigated an extensive Soviet espionage operation in Canada, which was disclosed by a defector from the Soviet Embassy. Its report described how employees of the Canadian government had communicated secret information to Soviet intelligence. The report concluded that "membership in Communist organizations or sympathy towards Communist ideologies was the primary force which caused these agents" to work for Soviet intelligence. It explained that "secret members or adherents of the Communist Party," who were attracted to Communism by its propaganda for social reform, had been developed into espionage agents. The Royal Commission recommended additional security measures "to

prevent the infiltration into positions of trust under the Government of persons likely to commit" such acts of espionage. 206 The impact of the report in the United States was that "questions of thought and attitudes took on new importance, as factors of safety in the eyes of all those concerned with national security." 207

A subcommittee of the House Civil Service Committee recommended shortly after release of the Canadian commission report that the President appoint an interdepartmental committee to study employee security practices. FBI Director Hoover suggested to Attorney General Clark whom he should appoint to such a committee "if it is set up." 208 When President Truman appointed a Commission on Employee Loyalty in November 1946, the FBI Director's suggested Justice Department representative was made chairman, and the other members represented the Departments of State, War, Navy, and Treasury, and the Civil Service Commission.

The President's Commission had less success than its Canadian counterpart in discovering the dimensions of the problem in the United States. FBI Assistant Director D. M. Ladd told the Commission that there were "a substantial number of disloyal persons in government service" and that the Communist Party "had established a separate group for infiltration of the government." He also called the Commission's attention to "a publication of the U.S. Chamber of Commerce" which had expressed the opinion "that Communists in the government have reached a serious stage." The War Department representative on the Commission then stated that it "should have something more than reports from the Chamber of Commerce, FBI, and Congress, to determine the size of the problem." However, when Assistant Director Ladd was asked later "for the approximate number of names in subversive files ... and whether the Bureau had a file of names of persons who could be picked up in the event of a war with Russia," the FBI official "declined to answer because this matter was not within the scope of the Commission." The meeting ended with "general agreement that Mr. Hoover should be asked to appear ...." 209 Thereafter, the Commission prepared a lengthy list of questions for the FBI; but instead of Director Hoover appearing, Attorney General Clark testified in a session where no minutes were taken.

The Attorney General supplemented his "informal" appearance with a memorandum which stated that the number of subversive persons in the government had "not yet reached serious proportions," but that the possibility of "even one disloyal person" entering government service constituted a "serious threat." 210 Thus, the President's Commission accepted its foreclosure from conducting any serious evaluation of FBI intelligence operations or FBI intelligence data on the extent of the danger. One Commission staff member observed that these were felt to be "matters exclusively for the consideration of the counterintelligence agencies." 211

It is impossible to determine fully the effect of the autonomy of FBI counterespionage on the government's ability to formulate appropriate security policies. Nevertheless, this record suggests that executive officials were forced to make decisions without full knowledge. They had to depend on the FBI's estimate of the problem, rather than being able to make their own assessment on the basis of complete information. With respect to the employee loyalty program in 1947, the FBI's view prevailed on three crucial issues -- the broad definition of the threat of "subversive influence," the secrecy of FBI informants and electronic surveillance, and the exclusive power of the FBI to investigate allegations of disloyalty.

Although Director Hoover did not testify before the President's Commission, he submitted a general memorandum on the types of activities of "subversive or disloyal persons" in government service which would "constitute a threat" to the nation's security. The danger as he saw it was not limited to espionage or the recruitment of others for espionage. It extended to "influencing" the formation and execution of government policies "so that those policies will either favor the foreign country of their ideological choice or will weaken the United States Government domestically or abroad to the ultimate advantage of the ... foreign power." Consequently, he urged that attention be given to the association of government employees with "front" organizations. These included not only established "fronts" but, also "temporary organizations, 'spontaneous' campaigns, and pressure movements so frequently used by subversive groups." If a disloyal employee was affiliated with such "fronts", he could be expected to influence government policy in the direction taken by the group. 212

The President's Commission accepted Director Hoover's position on the threat, as well as the view endorsed later by a Presidential Commission on Civil Rights that there also was a danger from "those who would subvert our democracy by ... destroying the civil rights of some groups." 213 Thus, the standards for determining employee loyalty included criterion based on membership in or association with groups designated on an "Attorney General's list" as:

totalitarian, fascist, communist, or subversive, or as having adopted a policy of advocating or approving the commission of acts of force or violence to deny others their rights under the Constitution of the United States, or as seeking to alter the form of government of the United States by unconstitutional means. 214

The executive orders provided a substantive legal basis for the FBI's investigation of allegedly "subversive" organizations which might fall within these categories. 215

The FBI also succeeded in protecting the secrecy of its informants and electronic surveillance. The Commission initially recommended that the FBI be required to make available to department heads upon request "all investigative material and information available to the investigative agency on any employee of the requesting department." Director Hoover protested that the FBI had "steadfastly refused to reveal the identities of its confidential informants." He advised the Attorney General that the proposal "would also apparently contemplate the revealing of our techniques, including among others, technical surveillances which are authorized by you." The Director assured the Attorney General that the FBI would make "information available to other agencies to evaluate the reliability of our informants" without divulging their identities. 216 The Commission revised its report to satisfy the FBI. 217

Director Hoover was still concerned that the Commission (and the President's executive order) did not give the FBI exclusive power to investigate allegedly subversive employees. 218 He went so far as to threaten "to withdraw from this field of investigation rather than to engage in a tug of war with the Civil Service Commission." 219 According to notes of presidential aide George Elsey, President Truman felt "very strongly anti-FBI" on the issue and wanted "to be sure and hold FBI down, afraid of 'Gestapo'." 220 Presidential aide Clark Clifford reviewed the situation and came down on the side of the FBI as "better qualified" than the Civil Service Commission. 221 Nevertheless, the President insisted on a compromise which gave

Civil Service "discretion" to call on the FBI "if it wishes." 222 The FBI Director objected to this "confusion" as to the FBI's jurisdiction. 223

Justice Department officials warned the White House that Congress would "find flaws" with this arrangement; and President Truman noted "J. Edgar will in all probability get this backward looking Congress to give him what he wants. It's dangerous." 224 President Truman was correct. The administration's budget request of \$16 million for Civil Service and \$8.7 million for the FBI to conduct loyalty investigations was revised in Congress to allocate \$7.4 million to the FBI and only \$3 million to the Civil Service Commission. 225 The issue was finally resolved to the FBI's satisfaction. President Truman issued a statement to all department heads declaring that there were "to be no exceptions" to the general rule that the FBI would make all loyalty investigations. 226

The rationale for investigating groups under the authority of the loyalty-security program changed over the years. Such investigations supplied a body of intelligence data against which to check the names of prospective federal employees. 227 By the mid-1950s, the Communist Party and other groups fitting the standards for the Attorney General's list were no longer extensively used by Soviet intelligence for espionage recruitment. 228 Therefore, FBI investigations of such groups became -- in combination with the "name check" of Bureau files -- almost entirely a means for monitoring the political background of prospective federal employees. They also came to serve a pure intelligence function of keeping the Attorney General informed of "subversive" influence and infiltration. 229

No organizations were formally added to the Attorney General's list after 1955. Groups designated prior to that time included numerous defunct German and Japanese societies, Communist and Communist "front" organizations, the Socialist Workers Party, the Nationalist Party of Puerto Rico, and several Ku Klux Klan organizations. 230 However, the FBI's "name check" reports on prospective employees were never limited to information about groups on the list. The list's criteria were independent standards for evaluating an employee's background, regardless of whether a group was formally designated by the Attorney General. 231

After 1955, a substitute for designation on the Attorney General's list was the FBI's "characterization" or "thumb-nail sketch" of a group. Thus, if a "name check" uncovered information about a prospective employee's association with a group which might fall under the categories for the list, the FBI would report the data and attach a "characterization" of the organization setting forth pertinent facts relating to the standards for the list. 232 This procedure made it unnecessary for the Attorney General to add groups to the formal list, since FBI "characterizations" served the same purpose within the executive branch.

#### *D. The Emergency Detention Program, 1946-1950*

The development of plans during this period for emergency detention of dangerous persons and for intelligence about such persons took place entirely within the executive branch. In contrast to the employee security program, these plans were not only withheld from the public and Congress but were framed in terms which disregarded the legislation enacted by Congress. Director Hoover's decision to ignore Attorney General Biddle's 1943 directive abolishing the wartime Custodial Detention List had been an example of the inability of the Attorney General to control domestic intelligence operations. In the 1950s the FBI and the Justice Department collaborated in a decision to disregard the attempt by Congress to provide statutory direction for the Emergency Detention Program. This is not to say that the Justice Department itself was fully aware of the FBI's activities in this area. The FBI kept secret from the Department its most sweeping list of potentially dangerous persons, first called the "Communist Index" and later renamed the "Reserve Index," as well as its targeting programs for intensive investigation of "key figures" and "top functionaries" and its own detention priorities labeled "Detcom" and "Comsab".

Director Hoover advised Attorney General Clark in March 1946 of the existence of its Security Index, although he did not say that it had existed since Attorney General Biddle's 1943 directive. The Index listed persons "who would be dangerous or potentially dangerous in the event of . . . serious crisis, involving the United States and the U.S.S.R." 233 The Justice Department then prepared a memorandum concluding that the available options for action in an emergency were a declaration of martial law or suspension of the privilege of the writ of habeas corpus. 234 The FBI Director recommended going to Congress to secure "statutory backing for detention." 235

After a conference between Department and FBI officials, the FBI submitted a lengthy analysis of its standards for classifying potentially dangerous persons. The memorandum gave specific examples of "Communists and Communist sympathizers whose names appear in the Bureau's Security Index." However, the FBI did not provide any specific examples in the category "Espionage Suspects and Government Employees in Communist Underground." Assistant Director Ladd advised Director Hoover of the reason for excluding any such examples:

The Bureau has identified over 100 persons who are logically suspected of being in the Government Communist Underground; however, at the present time, the Bureau does not have evidence, whether admissible or otherwise, reflecting actual membership in the Communist Party. It is believed that for security reasons, examples of these logical suspects should not be set forth at this time.

The Director noted, "I most certainly agree. There are too many leaks." 236

The FBI memorandum explained that potentially dangerous persons included not only "every convinced and dependable member of the Communist Party," but also other individuals "who regard the Soviet Union as the exponent and champion of a superior way of life." The FBI listed:

known members of the Communist Party, USA; strongly suspected members of the Communist Party, USA; and persons who have given evidence through their activities, utterances and affiliations of their adherence to the aims and objectives of the Party and the Soviet Union.

The FBI provided a breakdown of the "fields of endeavor not directly identified with the Communist Party" where Communists on the Security Index were "promoting Communist Party objectives and principles." These, included:

A. Organized Labor. -- The Bureau has followed closely Communist infiltration of labor and is continually endeavoring to identify Communists in the labor movement.

B. Communist "Front" Organizations. -- There are numerous of these organizations which not only serve as political and pressure instruments, but also as media for recruiting and raising funds for the Communist Party.

C. Exploitation of Racial Groups and Conditions. -- In many areas of the country where racial tension has been prevalent, conspiratorial activity on the part of Communists could very easily instigate race riots.

D. Nationality Groups. -- Communists have worked actively and intensely among various foreign language groups, endeavoring to control their political thinking and attempting to utilize them as pressure and propaganda media.

E. Youth. -- [The leading "front"] organization could be effectively used, in the event of war with the Soviet Union, to urge draft evasion, "conscientious" objection and insubordination in the armed forces.

F. Propaganda Activities. -- Communists have utilized several organizations in the United States to propagandize [for] the Soviet Union.

G. Political Work. -- The Communists look upon obtaining informers in the major political parties or in other political bodies . . . as an excellent means of obtaining advice, political appointments, and other political influence.

H. Education and Cultural Work. -- In the field of cultural work the Communist penetration of the motion picture industry is one of the best examples.

I. Science and Research. -- In this field it is well established that the Communists and the Soviets are extremely anxious and desirous of obtaining the secret of the atomic bomb and other highly confidential and highly important scientific developments. Furthermore, existing scientific groups have been infiltrated by Communists with the view in mind of propagandizing the relinquishment of the secret of the atomic bomb by the United States....

In addition, the FBI gave examples from the Security Index of "persons holding important positions who have shown sympathy for Communist objectives and policies" and therefore "might possibly serve the Community Party and/or the Soviet Union should war break out." Finally, the FBI pointed out that the Security Index included "Trotskyite Communists or members of such non-Stalinist groups as the Socialist Workers Party. . . ." Although such groups were "opposed to the Stalinist-Communist rule in the Soviet Union," many of them looked upon the Soviet Union "as the center for world revolution." Thus it was "entirely possible" in the event of a war that these groups "would engage in activities aimed at our national security and at hampering of our war effort." 237

The Justice Department raised no objection to the FBI's standards, although it ignored the FBI Director's idea for legislation.

The FBI proceeded under this authority until late 1947, when Director Hoover objected to the Justice Department's tentative plans (based on suspension of habeas corpus) and again stressed the need for "appropriate legislation." 238 In response, a "blind memorandum" was prepared in the Justice Department. As summarized and quoted by the FBI, it stated, "The present is no time to seek legislation. To ask for it would only bring on a loud and acrimonious discussion...." In an emergency the President could issue a proclamation suspending the writ of habeas corpus which Congress could ratify later if it "is in a position to assemble -- and if it is not, then the situation has obviously become so desperate that the President's actions will not be questioned." What was needed was "sufficient courage to withstand the courts ... if they should act" and "a campaign of education directed to the proposition that Communism is dangerous." This educational purpose would be served by prosecuting Communist leaders under the Smith Act. 239

In view of the Justice Department's position, the FBI Intelligence Division recommended reviewing the Security Index to keep it up-to-date, developing a "plan of action" for the apprehension of dangerous persons, and studying more carefully the information on persons most likely to be "saboteurs and espionage agents." The Intelligence Division also agreed with the Justice Department on the need to prosecute Communist leaders under the Smith Act so as to "obtain a Federal adjudication establishing the Communist Party as illegal for advocating the overthrow of government by force and violence."

. . . it is felt that as a broad but an immediate objective of the Bureau that it work earnestly to urge prosecution of important officials and functionaries of the Communist Party, particularly under Sections 10-13 of Title 18, United States Code. Prosecution of Party officials and responsible functionaries would, in turn, result in a judicial precedent being set that the Communist Party as an organization is illegal; that it advocates the overthrow of the government by force and violence; and finally that the patriotism of Communists is not directed towards the United States but towards the Soviet Union and world Communism. Once this precedent is set then individual members and close adherents or sympathizers can be readily dealt with as substantive violators. This in turn has an important bearing on the Bureau's position should there be no legislative or administrative authority

available at the time of the outbreak of hostilities which would permit the immediate apprehension of both aliens and citizens of the dangerous category.

Finally, the Intelligence Division proposed that Bureau inspectors review "the investigation of Communist activities in all field offices," since Bureau headquarters officials had "no way of knowing the contents of field office files concerning all potentially dangerous persons." The inspectors would make sure that the field was "following those dangerous and potentially dangerous persons as closely as possible." 240

Thereafter, FBI Director Hoover again advised the Attorney General that he disagreed with the Justice Department's position against legislation, suggesting that it would "be adopted readily by Congress." Hoover also observed that the Attorney General "might wish to consider the prosecution well in advance of such an emergency of the Communist Party under [the Smith Act] . . . thereby obtaining judicial recognition of the aims and purposes of the Communist Party." 241

Instructions were issued to FBI field offices setting priorities for an intensified investigation of "Security Index subjects" and preparation of "a Communist Index (as distinguished from the Security Index) which will contain information on all known Communist Party members." Procedures for handling Security Index data were revised, and the field offices were asked for suggestions on how best to implement a detention program. 242

Numerous draft proclamations and orders were prepared by the Justice Department and compiled in an "Attorney General's Portfolio" for use in an emergency. The FBI began using IBM punch cards for the storage and retrieval of its Security Index data. 243 Lists of the names of persons on the Security Index were forwarded periodically to the Internal Security Section of the Justice Department's Criminal Division, beginning in October 1948. 244

The Emergency Detention Plan finally took shape in 1949, pursuant to an agreement executed on February 11 by Secretary of Defense James Forrestal and Attorney General Clark. The purpose of the agreement was "to provide maximum security with respect to the apprehension and detention of those persons who, in the event of war or other occasion upon which Presidential Proclamations, Executive Orders, and applicable statutes come into operation, are to be taken into custody and held pending further disposition." The agreement provided "that the entire program of apprehending and detaining civilians in such an emergency is the responsibility of the Attorney General. . . ." It also stated that the FBI was "designated by the Attorney General as the agency charged with the complete responsibility of investigating and apprehending the persons to be detained." 245

The Assistant to the Attorney General asked the FBI in September 1949 for "the standards upon which decisions are based to incorporate names in the Security Index list or to remove them." 246 Director Hoover replied,

The basic qualification required for inclusion of an individual in the security index is that such an individual is potentially dangerous or would be dangerous in the event of an emergency to the internal security of this country. The elements going into measuring an individual's potential dangerousness or dangerousness in the event of an emergency consist of two broad elements: (1) membership, affiliation or activity indicating sympathy with the principal tenets of the Communist Party or similar ideological groups and the Nationalist Party of Puerto Rico; and (2) a showing of one or more of the following:

- a. activity in the organization, promoting its aims and purposes;
- b. training in the organization, indicating a knowledge of its ultimate aims and purposes;
- c. a position in a mass organization of some kind where his affiliation or sympathy as set forth in element one will determine the destiny of the mass organization;
- d. employment or connection with an industry or facility vital to the national defense, health and welfare;
- e. possessing a potential for committing espionage or sabotage.

No individual was included on the Index until he had been "investigated by the Bureau"; and deletions were made "when an individual no longer fits the standards for inclusion . . . ." 247

These general standards represented several different programs developed within the FBI in connection with the Security Index. Field offices were instructed to give special attention to "top functionaries" and "key figures" in the Communist Party. In addition, a "Comsab program" concentrated on Communists with a potential for sabotage "either because of their training or because of their position relative to vital or strategic installations or industry." Finally, under the plans for the detention of Communists, the FBI had a "Detcom program" which was concerned with the individuals "to be given priority arrest in the event of . . . an emergency." Priority under the Detcom program was given to "all top functionaries, all key figures, all individuals tabbed under the Comsab program," and "any other individual who, though he does not fall in the above groups, should be given priority arrest because of some peculiar circumstances." 248

If an individual did not meet the standards for the Security Index because investigation failed "to reflect sufficient disloyal information," he was considered for the Communist Index which was "a comprehensive compilation of individuals of interest to the internal security." Names for both the Communist Index and the Security Index would be produced by "loyalty of government employee investigations" and by "espionage and foreign intelligence investigations," as well as by "all other types of investigations." The reports of any FBI investigation of persons on the Security or Communist Index, regardless of the subject, were to be sent to the Security Index Desk at FBI headquarters. Finally, FBI personnel were instructed that "no

mention must be made in any investigative report relating to the classifications of top functionaries and key figures, nor to the Detcom or Comsab Programs, nor to the Security Index or the Communist Index. These investigative procedures and administrative aids are confidential and should not be known to any outside agency." 249 A review of FBI documents indicates that only the Security Index was made known to Justice Department officials.

In July 1950, when the Congress and the President were considering the Emergency Detention Act, Attorney General McGrath asked the FBI for an analysis of the Security Index. 250 The FBI provided the following breakdown of the statistics by "Nationalistic Tendency or Organizational Affiliation:"

|                                  |        |
|----------------------------------|--------|
| Communist Party, USA             | 11,491 |
| Socialist Workers Party          | 308    |
| Independent Socialist League     | 45     |
| Nationalist Party of Puerto Rico | 77     |
| Independent Labor League         | 2      |
| Revolutionary Workers League     | 1      |
| Proletarian Party of America     | 6      |
| Total                            | 11,930 |

Of these, 9,258 were native born citizens, 2,281 were naturalized citizens, 296 were aliens, and 95 were of unknown nationality. 251

By early 1951, the total had increased to 13,901 names as the result of an FBI decision after the outbreak of the Korean War to broaden "the basis for inclusion in the Security Index to include all active members of the Communist Party." The size of the Communist Index, as contrasted with the Security Index, was indicated by the figures from the New York field office which had 2,897 names on the Security Index and 42,000 names on the Communist Index. Since the Communist Index was based on "allegations of Communist activity," it was "a measure of investigations performed." If this proportion applied "throughout the field," as the FBI memorandum suggested, then the Communist Indexes in the field offices contained over 200,000 names. 252

#### *E. The Emergency Detention Act of 1950 and FBI/Justice Department Noncompliance*

There is no indication that Congress was advised of these plans or the role of the Smith Act prosecution in them. When Congress was considering the Emergency Detention Act of 1950, President Truman's staff advised him that he could safely veto the measure in view of the government's power to use the Smith Act in an emergency. One of his aides said the Justice Department could "arrest immediately all principal national and local leaders of the Communist Party in the United States under the Smith Act, and bail could be set sufficiently high so that they could not be sprung." 253

The Emergency Detention Act of 1950 set forth specific standards for the apprehension of persons in the event of an "internal security emergency" declared by the President. The basic criterion was whether there was "reasonable ground to believe that such person probably will engage in, or probably will conspire with others to engage in, acts of espionage and sabotage." The statute provided for hearings after arrest before presidentially appointed hearing officers, review by an administrative board, and appeal to the U.S. Court of Appeals. 254 Nevertheless, the FBI and the Justice Department made no changes in either the Security Index criteria or the previous detention plans to bring them into conformity with the statute.

Shortly after passage of the Detention Act, according to an FBI memorandum, Attorney General J. Howard McGrath advised Director Hoover to disregard it and "proceed with the program as previously outlined." Justice Department officials were quoted as recognizing that the act was "undoubtedly in conflict with the Department's proposed detention program," but that the act's provisions were "unworkable." 255

The Justice Department also advised the FBI that it did not have adequate personnel to review the placement of names on the Security Index and that in an emergency "all persons now or hereafter included by the Bureau on the Security Index should be considered subjects for immediate apprehension, thus resolving any possible doubtful cases in favor of the Government in the interests of the national security." 256

The FBI continued to furnish Security Index names to the Justice Department, with one exception. The names of certain espionage subjects were not made available to the Department "for security reasons." An internal FBI memorandum stated that apprehension of such persons in an emergency "would destroy chances of penetration and control of an operating Soviet espionage parallel or would destroy known chances of penetration and control of a 'sleeper' parallel." 257 These counterespionage investigations were supervised by the Espionage Section of the FBI Intelligence Division, while all other

domestic intelligence investigations under the Security Index program and related programs were supervised in the Division's Internal Security Section. 258 There was also a category for "prominent persons" who were given special review since their apprehension "might cause the Bureau some embarrassment because these individuals would hold themselves out as martyrs" and thus "result in considerable adverse publicity and criticism of the FBI." 259

By May 1951, the Security Index had grown to 15,390 names, of which over 14,000 were Communists. FBI officials decided to urge the Justice Department to pass on each name (except espionage subjects) so that, among other reasons, "the Bureau would not be open to an allegation of using Police State tactics." 260 FBI Intelligence Division officials discussed the matter with officials of the Justice Department's Criminal Division, who advised that Criminal Division attorneys would conduct the reviews under the supervision of a former FBI agent and four other Division officials. FBI Director Hoover noted after this meeting, "What do our files show on these five? Can't we get names of the attorneys making the reviews?" 261

The Justice Department also undertook to revise the Security Index standards "so as to conform more closely" to the provisions of the Emergency Detention Act of 1950. 262 An FBI study of the Department's standards concluded that they needed further revision so that the FBI could continue to list the persons it believed to be dangerous. There was a, "wide disparity" between the FBI standards and Departmental criteria. 263

The FBI analysis of this problem disclosed how little the Justice Department knew about the scope and purposes of FBI domestic intelligence operations. In at least three areas of vital significance to the Bureau, the Departmental standards showed almost total ignorance of FBI intelligence programs. This lack of knowledge went far beyond the Department's unawareness of the "top functionaries," "key figures," "Comsab," and "Communist Index" programs deliberately kept secret by the FBI. The Justice Department failed to take account of the FBI programs aimed at "Marxist-type or other revolutionary groups" not controlled by the Communist Party, at Communist sympathizers who had not positively "discontinued such associations," and at subjects of "Nationalistic Tendency" or foreign intelligence investigations. 264 The FBI informed the Justice Department of these disparities. Among the examples of Security Index subjects not covered by the Departmental standards were the following:

Individuals whose party membership or affiliation in a revolutionary group has not been proven, but who have committed past acts of violence during strikes, riots, or demonstrations, and, because of anarchist or revolutionary beliefs, are likely to seize upon the opportunity presented by a national emergency to endanger the public safety and welfare.

A number of individuals are now carried on the Security Index who were placed thereon several years ago ... yet concerning whom we have no developed current activity of a subversive nature. These individuals have not been removed from the Security Index in the absence of positive indication of disaffection or cessation of the activities which caused them to be placed on the index. Bearing in mind the instructions of the Communist Party relative to "sleepers" and underground activities ... we have no assurance that these individuals are not a continued potential threat ... and, indeed, have strong reason to believe to the contrary.

Individuals ... whose association and activities are closely affiliated with individuals or organizations having a definite foreign interest or connection contrary and detrimental to the interests of the United States. Examples are certain employees and associates of Amtorg, Tass News Agency, United Nations, foreign legations, etc.

The FBI Director asked for "a prompt resolution of the problem" posed by the disparity between FBI and Justice Department criteria. 265

It took over a year for the Justice Department to decide that the proposed standards, based on the act of 1950, would be set aside in view of the FBI's desires. In discussions between FBI and Justice Department officials in 1952, the Department officials made clear that they intended to proceed under pre-1950 plans in the event of an emergency. Criminal Division official Raymond Whearty told FBI intelligence executives in March 1952 that the FBI should operate under the "Attorney General's Portfolio" rather than the 1950 act because of the latter's "unworkability." 266 The standards in the "portfolio" used by Justice Department attorneys in reviewing Security Index names still differed from the FBI's criteria. Director Hoover noted, "I can't understand the Department having one set of standards and approving a different set for FBI." 267

After meeting with Deputy Attorney General Ross Malone, an Intelligence Division official summarized the differences between the 1950 Act and the "Portfolio":

There are contained among the 19,577 individuals listed in our Security Index the names of many persons whom we consider dangerous but who *do not fall within the standards* set forth in the Internal Security Act of 1950....

The fact that the Internal Security Act of 1960 does not provide for suspension of the Writ of Habeas Corpus would prove a definite hindrance to the execution of necessary measures....

The lack of provision in the act for measures to be taken in the event of threatened invasion precludes the President from taking action against potentially dangerous persons prior to an actual invasion, insurrection, or declaration of war.

The provision in the Act for apprehension of subjects by individual warrants is a factor which would be a detrimental, time-consuming procedure as compared to the use of one *master warrant of arrest* for all subjects apprehended as provided in the Department's Portfolio.

The apparent lack of provision in the Act for *searches* and for confiscation of contraband would be a definite deterrent to our operation . . . . 268 [Emphasis added.]

Director Hoover then repeated his request for "a definite and clear cut answer" from the Department. 269 Attorney General James McGranery replied:

I wish to assure you that it is the Department's intention to proceed under the program as outlined in the Department's Portfolio invoking the standards now used. This approval, of course, indicates agreement with your Bureau's concepts of the Detention Program and the Security Index standards as outlined in your memorandum of June, 28, 1951 . . . . 270

This directive was classified "Top Secret". For security reasons there were only three copies made of the "Portfolio", two kept by the FBI and one by the Attorney General. 271

FBI records reveal no change in this policy under Attorney General Herbert Brownell during 1953-1954. In April 1953, Attorney General Brownell granted authority to the FBI "to implement the apprehension and search and seizure provisions of this program immediately upon ascertaining that a major surprise attack upon Washington, D.C., has occurred . . . . The Attorney General also repeated previous instructions "to apprehend all individuals listed in the Security Index in the event that the . . . program is implemented prior to the completion of the review of the individual cases by the Criminal Division." 272

By the end of 1954, the size of the Security Index had increased to 26,174, of whom 11,033 were designated under the Detcom and Comsab programs for priority apprehension. At that time the Intelligence Division decided to revise the Detcom and Comsab standards, reducing the number by fifty percent to "permit a more efficient handling of the arrests." 273 Shortly thereafter, in response to a request from Attorney General Brownell, the FBI Director provided the Department the "general criteria" used for the Security Index. 274 After a meeting between officials of the FBI Intelligence Division and the Justice Department, Director Hoover advised the Assistant Attorney General for the Internal Security Division "that there was no area of disagreement between the Department and this Bureau on the criteria or concepts regarding dangerousness" and that FBI standards were "not all-inclusive. . . ." 275

On its own initiative the FBI decided in early 1955 to revise the Security Index criteria, primarily because all cases were not being reviewed by Justice Department attorneys and FBI officials wanted to "minimize the inevitable criticism of the dual role" the Bureau had in both investigating and passing on "the soundness of these cases." 276 Soon thereafter the FBI reorganized the work of its Intelligence Division to create a new Subversives Control Section for the supervision of the Security Index and related programs for the investigation of individuals. The Internal Security Section continued to supervise investigations of subversive organizations and individuals considered to be "top functionaries" and "key figures" in those organizations. 277 The result of the revision of Security Index standards was to reduce its size to 12,870 by mid-1958. The new standards still differed from the 1950 act and the Department's "Portfolio". To aid in applying the criteria, FBI agents were instructed frequently to interview the individual. "Refusal to cooperate" with such an interview was "taken into consideration along with other facts" in determining his dangerousness. 278

The cancelled Security Index cards on individuals taken off the Index after 1955 were retained in the field offices. This was done because they remained "potential threats and in case of an all-out emergency, their identities should be readily accessible to permit restudy of their cases." These cards would be destroyed only if the subject agreed to become an FBI source or informant or "otherwise indicates complete defection from subversive groups." 279

Thus, the cancelled cards served as a supplementary detention list which remained available despite the new, tighter standards for the Security Index itself. In 1956, the FBI decided to use these cancelled cards as the basis for a revised Communist Index, since this Index had "grown unwieldy" and was "serving very little purpose." There is no indication in FBI records that the Justice Department was ever advised of the existence of the Communist Index. The Communist Index was reviewed in 1959 and reduced from 17,783 to 12,784 names. 280 In mid-1959 the Security Index included 11,982 names. 281

The Communist Index was renamed the Reserve Index in 1960, and subdivided in-to two sections. Section A was to include

. . . those individuals whose subversive activities do not bring them within the SI criteria but who, in a time of national emergency, are in a position to influence others against the national interests or are likely to furnish financial or other material aid to subversive elements due to their subversive associations and ideology. Included therein would be individuals falling within the following categories: (1) Professors, teachers and educators; (2) Labor Union organizers and leaders; (3) Writers, lecturers, newsmen and others in the mass media field; (4) Lawyers, doctors and scientists; (5) Other potentially influential persons on a local or national level; (6) Individuals who could potentially furnish financial or material aid. This section could well include the names of such individuals as Norman Mailer, a novelist and author of "The Naked and the Dead" and an admitted "leftist", and ----- a former history teacher who was recently fired for praising Premier Khrushchev before his history class and stating that the pilot of the U-2 plane should be executed by the Reds.

Section B would follow the standards for the Communist Index, with the additional criterion "membership in the Nation of Islam." The purpose of the Reserve Index was to "have a special group of individuals listed therein who should receive priority consideration with respect to investigation and/or other action following the apprehension of our SI subjects." 282 The FBI disseminated investigative reports on Reserve Index subjects to the Justice Department, but there is no indication that the Department was advised of the existence of the Index itself. 283

Throughout the 1950s, supervision of the collection of intelligence information about individuals for the Security Index, the Communist Index, and the Detcom programs was a major function of the FBI Intelligence Division. In addition, the "key

figure" and "top functionary" programs were operated separately from the Indexes and Detcom. The purpose of these two programs was "to select for special attention those individuals in a subversive movement who are of outstanding importance to the effectiveness of the movement." Field offices were instructed to obtain photographs and handwriting specimens, and to maintain intelligence coverage of the subject's activities through "contact with informants" and "established sources."

#### *F. The Scope of FBI "Subversion" Investigations*

While the Bureau targeted "key figures" and "top functionaries" for special attention, the scope of the FBI program for security intelligence investigations of individuals was far wider. The FBI Manual stated, "It is not possible to formulate any hard-and-fast standards by which the dangerousness of individual members or affiliates of revolutionary organizations may be automatically measured because of manner revolutionary organizations function and great scope and variety of activities." Individuals were investigated if they were "members in basic revolutionary organizations" or were "espousing the line of revolutionary movements." The Manual added, "Where there is doubt an individual may be a current threat to the internal security of the nation, the question should be resolved in the interest of security and investigation conducted." Anonymous allegations could start an FBI investigation if they were "sufficiently specific and of sufficient weight." On the other hand, prior approval from FBI headquarters was required for investigating students, faculty members, and U.S. or foreign government officials. Investigations were to be "thorough and exhaustive," developing "all pertinent information concerning the subject's background and subversive activity."

The FBI took the following steps if it learned that 'any individual on whom we have subversive derogatory information' planned travel abroad:

Information concerning, these subjects' proposed travel abroad, including information concerning their subversive activities, is furnished by the Bureau to the Department of State, *the Central Intelligence Agency*, and [FBI] legal attaches if the proposed travel is in areas covered by such and, frequently, requests are made of one or all of the above to place stops with appropriate security services abroad to be advised of the activities of these subjects. [Emphasis added.]

Domestic investigative techniques included a review of existing FBI files, coverage by confidential informants, physical surveillance, photographic surveillance, public source records, records of private firms, and interviews with the subject. 285

In addition to the policies for intelligence investigations of individuals, the FBI had substantial programs for collecting intelligence about "Marxist revolutionary-type organizations" including a "Cominfil" program aimed at groups suspected of being infiltrated by Communists. The purpose of these programs was not only to obtain evidence for possible prosecution, but also "to follow closely the activities of these organizations from an intelligence viewpoint to have a day-to-day appraisal of the strength, dangerousness, and activities of these organizations seeking the overthrow of the U.S. Government." 286

The FBI Manual did not define "subversive" groups in terms of their links to a foreign government. Instead, they were "Marxist revolutionary-type" organizations "seeking the overthrow of the U.S. Government." 287 One purpose of investigation was possible prosecution under the Smith Act. But no prosecutions were initiated under that Act after 1957. 288 The Justice Department advised the FBI in 1956 that such a prosecution required "an actual plan for a violent revolution." 289 The Department's position in 1960 was that "incitement to action in the foreseeable future" was needed. 290 The First Amendment required:

something more than language of prophecy and prediction and implied threats against the Government to establish the existence of a clear and present danger to the nation and its citizens. 291

Despite the strict requirements for prosecution, the FBI kept on investigating "subversive" organizations "from an intelligence viewpoint" to appraise their "strength" and "dangerousness." 292

The FBI's broadest program for collecting intelligence was carried out under the heading COMINFIL, for Communist infiltration. 293

The FBI collected intelligence about Communist influence under the following categories:

Political activities

Legislative activities

Domestic administration issues

Negro question

Youth matters

Women's matters

Farmers' matters

Cultural activities

Veterans' matters

Religion

Education

Industry 294

FBI investigations covered "the entire spectrum of the social and labor movement in the country." 295 The purpose was pure intelligence -- to "fortify" the government against "subversive pressures" 191 or to "strengthen" the government against "subversive campaigns." 297 In other words, the COMINFIL program supplied the Attorney General and the President with political intelligence about groups seeking to influence national policy, so that they might assess whether Communists were involved. 298

The FBI said it was not concerned with the "legitimate activities" of "nonsubversive groups," but only with whether Communists were "gaining a dominant role." 299 Nevertheless, COMINFIL reports inevitably described such "legitimate activities" unrelated whatsoever to the role of alleged "subversives." The FBI Manual required prior approval from FBI headquarters before opening a COMINFIL investigation. The techniques used included contacting established sources and informants and pretext interviews with members of the organization. 300

An example of one such investigation was the FBI's COMINFIL case on the NAACP. In 1957, the New York Field Office prepared a 137-page report covering the intelligence gathered during the previous year. Copies were disseminated to the three military intelligence agencies. The report described the national section of the NAACP, its growth and membership, its officers and directors, its national convention, its stand on communism and the role in its state and local chapters of alleged Communists, members of Communist front groups, and the Socialist Workers Party. A synopsis of the report discussed the size of the NAACP and added,

NAACP 47th Annual Convention held June 26 to July 1, 1956, in San Francisco, California. Convention reaffirmed and extended 1950 resolution against Communism. Resolution bars NAACP membership to individuals with Communist affiliations. Informant, who has furnished reliable information in the past, advised that there was no activity at the convention which could be termed Communist activity. Informant, who has furnished reliable information in the past, advised that two individuals of national CP status would attend convention. NAACP in letter dated 11/3/55 to branch presidents instructs branches to be alert for Communists in the organization and see that no persons of questionable reputations are permitted to obtain positions in NAACP branches. The CP, USA continued to consider NAACP as main Negro mass organization and desires program to win leadership among Negro organizations. September 1956 issue of "Political Affairs" carried an article entitled "The NAACP Convention." Various attempts have been made by the CP to infiltrate and dominate certain NAACP branches throughout the United States and its territories. Identities of known CP members in various branches throughout the United States set forth. 301

The report was based on information supplied by 151 informants or confidential sources, including at least four who attended the NAACP national convention; most of the informants or sources provided data on individuals with subversive connections who had either joined or associated with the NAACP.

Other reports from field offices in Boston, Seattle, Philadelphia, and Milwaukee provide additional examples of the scope of FBI intelligence coverage of the NAACP. In Boston, informants provided membership figures, and the FBI compiled lists of officers from public sources. 302 An informant in Seattle obtained a list of officers and reported on a meeting where signatures were gathered on a "petition directed to President Eisenhower" and plans announced for two members to go to Washington, D.C., for a "Prayer Pilgrimage. The Philadelphia office used an informant to discover the officers and total membership of the NAACP chapter and to learn its general objective -- "to seek the enactment of new civil rights laws." 304 A Milwaukee informant also provided a list of officers. 305 Although these reports concentrated on information about alleged Communist infiltration, they all included data on individuals and activities such as the above having no connection with "subversive activity."

The FBI and the Justice Department both justified the continuation of COMINFIL investigations, despite the Communist Party's decline in the fifties and early sixties, on the theory that the Party was "seeking to repair its losses" with the "hope" of being able to "move in" on movements with "laudable objectives." 306 The FBI reported to the White House in 1961 that the Communist Party had "attempted" to take advantage of "racial disturbances" in the South and had "endeavored" to bring "pressure to bear" on government officials "through the press, labor unions, and student groups." At that time the FBI had under investigation "two hundred known or suspected communist front and communist-infiltrated organizations." 101 By not stating how effective the "attempts" and "endeavors" of the Communists were, and by not indicating whether they were becoming more or less successful, the FBI offered a deficient rationale for its sweeping intelligence collection policy. 308

By 1960 the FBI had opened approximately 432,000 headquarters files on individuals and groups in the "subversive" intelligence field. Between 1960 and 1963 an additional 9,000 such files were opened. 309

Apart from domestic intelligence programs aimed at the Communist Party, Communist infiltration, and other "revolutionary" groups such as the Socialist Workers Party and the Nationalist Party of Puerto Rico, the FBI had extensive programs in the foreign intelligence and counterintelligence areas. Within the FBI Intelligence Division, a separate Counterintelligence Branch supervised investigations and other operations directed against hostile foreign intelligence services and espionage activities.

This branch took over supervision of cases of Communists suspected of being involved in espionage activity. The Counterintelligence Branch included an Espionage Section, a Liaison Section, and a Nationalities Section. The Internal Security (or domestic intelligence) Branch included the Internal Security Section for organizations, the Subversives Control Section for individuals, and a Research Section.

#### *G. The Justice Department and FBI Intelligence Investigations*

The Justice Department supplied only the most general guidance to the FBI for the investigation of organizations. An example is the FBI's intelligence investigation of the Nation of Islam. As early as 1952, the Criminal Division advised the FBI that the Nation of Islam would not then be placed on the "Attorney General's list," but that available information indicated that the organization "may be a fit subject for designation . . ." under the employee security program. 310 The following year the Criminal Division told the FBI that "the evidence presently available is insufficient to establish a violation of the Smith Act," but that the FBI should continue to furnish investigative reports "with a view to possible future prosecution under the Smith Act." 311 In 1955, the FBI asked the Department's Internal Security Division whether it should continue to include leading members of the Nation of Islam on the Security Index. 312 The Internal Security Division replied six months later that the evidence did not warrant designation for the "Attorney General's list," but that "statements and activities on the part of individual members of the Cult indicating anarchistic and revolutionary beliefs should be considered in making a judgment as to whether or not such individual members come within the revised Security Index criteria." 313 Shortly thereafter, the Internal Security Division advised that the evidence was still "insufficient to constitute a violation of the Smith Act," since the statements of group leaders were "more in the realm of prophecy than of an actual plan for a violent revolution." 314

Nevertheless, the FBI continued to investigate and supply reports to the Justice Department under the authority of the employee security program and the emergency detention program. 315 In June 1959, Director Hoover noted on an internal FBI memorandum, "Is there no action Dept. can take against the NOI?" 316 Therefore, the FBI asked the Internal Security Division to review the reports submitted by the Bureau and "advise whether any type of legal action against the NOI is feasible in the light of this additional information." 317 The Internal Security Division replied that the FBI reports "failed to disclose the type of evidence required" for a Smith Act prosecution, but that designation for the "Attorney General's list" was "under consideration." Upon receipt of this memorandum, Director Hoover noted, "They always come up with more reasons for no positive action and none for constructive approach." 318

Nearly a year later, the Internal Security Division advised the FBI that there were "a number of legal problems" with designation of the Nation of Islam for the "Attorney General's list" because the language of the group's leaders "concerning the destruction of the government usually has been couched in terms of prophecy or prediction rather than in terms of incitement to action in the foreseeable future." Nevertheless, the Division would continue to review any "additional information furnished by the Bureau relative to the criteria" of the employee security program. 319

Director Hoover was still dissatisfied, noting on the FBI's Current Intelligence Analysis for August 31, 1960, "Has the Department ruled on the NOI or are they still 'considering' it?" Hoover believed "nothing would be gained" by writing the Internal Security Division again, and suggested "an overall memo on NOI be sent A.G. stressing vicious character and statements of this outfit." 320 Consequently, the FBI sent Attorney General William Rogers a summary of the most inflammatory rhetoric of the group and asked him to "consider whether there is any legal action that can be taken or whether the organization can be designated pursuant to the provisions of Executive Order 10450." 321

In reply, the Internal Security Division explained again that "the First Amendment would require something more than language of prophecy and prediction and implied threats against the Government to establish the existence of a clear and present danger to the nation and its citizens." Moreover, there was insufficient evidence to meet the criterion of Executive Order 10450 "that it has adopted a policy of advocating or approving the commission of . . . acts of violence to deny others their constitutional rights." Nevertheless, the FBI was requested to "continue its investigation . . . because of the semi-secret and violent nature of this organization, and the continuing tendency on the part of some of its leaders to use language of implied threats against the Government . . . . Director Hoover noted on this memorandum, "Just stalling!" 322

Thus, for a decade the FBI continued to conduct an intelligence investigation of the Nation of Islam, despite the lack of any evidence to justify federal prosecution or other legal action by the Justice Department. Although the Department had an entire division concerned with internal security matters, it failed almost totally to provide the FBI guidance or direction.

The Internal Security Division contained a Subversive Activities Section to supervise prosecution of Communists under the Smith Act and related statutes (over one hundred Party leaders were prosecuted in the 1950s), a Subversive Organizations Section to enforce the Subversive Activities Control Act against Communist and Communist-front groups and to make designations for the Employee Security Program, an Appeals and Research Section to handle the voluminous appellate litigation and consider legislation, and a Foreign Agents Registration Section. In 1955, the Division received 101,470 memoranda and reports from the FBI. 323 The Assistant Attorney General in charge of the Internal Security Division from 1958 until 1970, J. Walter Yeagley, was a former official of the FBI Intelligence Division; and his principal deputy, John Doherty, had been FBI Director Hoover's liaison with the White House in the early 1950s.

#### *H. FBI Investigations of "Hate Groups" and "Racial Matters"*

During the 1950s the FBI also developed investigative programs in the area of "racial matters," including racial disturbances and "Klan-type organizations, hate organizations, and associated individuals." As early as 1947, designations for the Attorney General's list required data on any organization which advocated the commission of acts of force or violence to deny persons their constitutional rights. 324 At that time President Truman's Committee on Civil Rights endorsed "the principles of disclosure . . . to deal with those who would subvert our democracy by revolution or by encouraging disunity and destroying the civil rights of some groups." 325 The first "Attorney General's list" of subversive organizations for the employee loyalty program included various Ku Klux Klan organizations.

The FBI program for Klan-type and hate organizations required investigation of "organizations and associated individuals that . . . have adopted a policy or have allegedly adopted a policy of advocating, condoning, or inciting the use of force or violence to deny others their rights under the Constitution." The intelligence sought included information about the structure, objectives, publications and propaganda, and finances of the organizations, as well as the officers, membership, recruiting activities, and meetings of each klavern or local chapter. Hate groups which did not "qualify for investigation" under these standards were followed "through public source material and established sources." 326

FBI field offices were, instructed to "conduct no investigation regarding individual acts of violence allegedly or actually committed by an organization in absence of information indicating violation within Bureau's jurisdiction." Nevertheless, the FBI used its informants and sources within the groups to determine which group was involved in "each such incident" and "whether action taken was on initiative of individual members or with knowledge or approval of leadership." Individual investigations were opened "on officers, leaders, and active workers in these organizations to determine whether they have been involved in acts of violence or have a definite potential for future acts of violence." Names of members attending meetings were "indexed from informants' statements," and names of new members were furnished to FBI headquarters "for indexing purposes." Informants were "developed in all such organizations." However, field offices were cautioned,

Wholesale investigations of individuals of these organizations should not be conducted and investigations of individual members should be initiated only on a most selective basis. Individuals investigated should be those who are key personnel who actually formulate and carry out the organization's policy and not those individuals who merely attend meetings on a regular basis. 327

This restriction was imposed in mid-1959, after supervision of Klan-type and hate matters were transferred from the FBI Intelligence Division to the General Investigative Division.

Nevertheless, the Bureau used its "established sources" to monitor the activities of hate groups which did not "qualify" under the violence standard. 328 Thus, the FBI collected and disseminated intelligence about the John Birch Society and its founder, Robert Welch, in 1959. 329 The activities of another right-wing spokesman, Gerald L. K. Smith who headed the Christian Nationalist Crusade, were the subject of FBI reports even after the Justice Department had concluded that there was no federal law violation and no basis for putting the group on the "Attorney General's list." 330

Under the FBI program for "General Racial Matters," the Bureau gathered intelligence on "race riots, civil demonstrations, and similar developments." These developments included "proposed or actual activities of individuals, officials, committees, legislatures, organizations, etc., in the racial field." Although the FBI realized it did not have "investigative jurisdiction over such general racial matters," the Manual stated, "As an intelligence function the Bureau does have the responsibility of advising appropriate Government agencies and officials on both a national and local level of all pertinent information obtained concerning such incidents." FBI responsibilities were also based on the long standing agreement with military intelligence:

Insofar as Federal jurisdiction in general racial matters is concerned, U.S. Army regulations place responsibility upon the Army to keep advised of any developments of a civil disturbance nature which may require the rendering of assistance to civil authorities or the intervention of Federal troops. OSI and ONI have a collateral responsibility under Army in such matters and copies of pertinent documents disseminated to Army concerning such matters should be furnished to OSI and ONI. 331

The need for federal troops to control civil disturbances was vividly demonstrated in the Little Rock school desegregation events of 1957-1958.

The President was informed during these years of the FBI's "racial matters" intelligence activities. At a Cabinet briefing in 1958, Director Hoover stated:

. . . we investigate such fanatical and so-called "hate" groups as the Negro Nation of Islam; the Ku Klux Klan; the National States Rights Party, an anti-Jewish and anti-Negro organization; and the "Confederate Underground." The latter is a name which has been mentioned on a number of occasions in recent bombing threats and other forms of violence.

Since January 1, 1957, there have been over 90 bombings, or attempted bombings, in the United States. Of these, at least 69 have involved Negro victims and at least eight Jewish religious and educational facilities. . . .

Recognizing the danger to the national welfare from a general pattern of organized terrorism, the FBI has moved in to expand its assistance to local law enforcement. . . . We are closely checking the activities of individuals prominently involved in racial incidents, such as [a leader of] the Seaboard White Citizens Council of Washington. As a further aid to local law enforcement agencies, the FBI has scheduled a series of special conferences . . . to discuss our cooperative services regarding bombings and threats of bombings against religious and educational institutions.

Our entry into these cases at this new level is not to be interpreted as an attempt on our part to usurp the jurisdiction of local authorities. To give the FBI this jurisdiction would relieve local governments of the basic responsibility to maintain law and order, and the ultimate responsibility rightfully rests at the local level. 332

Director Hoover's sensitivity to possible criticism for exceeding the FBI's jurisdiction was reflected in a warning to the field offices that racial matters were "extremely delicate and great care must be exercised in the approach to such matters." 333

There was greater emphasis on right-wing extremism in FBI domestic intelligence policy during 1960-1963. In January 1963, FBI field offices received a thirty-two page set of instructions on how to characterize "Klan-type and hate-type organizations." Field offices were advised that individual and group activities had to be "specifically identified with the correct Klan organization." 334

Instructions to FBI field offices in June 1963 specifically emphasized investigations of "rightist or extremist" groups, based not only on the FBI's criminal investigative jurisdiction and its authority under the Federal Employee Security Program, but also on a general intelligence premise:

"Rightist or extremist" groups operating in the anti-communist field are being formed practically on a daily basis. I wish to re-emphasize the necessity for the field to be alert to, and advise the Bureau concerning, *the formation and identities of such groups*. The field should *also* be alert to the activities of such groups which come within the purview of Executive Order 10450 or are in violation of Federal statutes over which the Bureau has investigative jurisdiction. Investigations, where warranted, should be initiated and handled pursuant to Bureau policy relating to the specific substantive violation. You are reminded that anticommunism should not militate against checking on a group if it is engaged in unlawful activities in violation of Federal statutes over which the Bureau has investigative jurisdiction.

Investigations of groups in this field *whose activities are not in violation* of any statutes over which the Bureau has jurisdiction are not to be conducted without specific Bureau authority. A request for authority to investigate such a group should include the basis for your recommendations regarding investigation. 335 [Emphasis added.]

Thus, the FBI developed a program for collecting general intelligence on right-wing extremism. There is no further reference to this program in comparable instructions to the field issued after 1963.

#### *I. Legal Authority for Domestic Intelligence*

During the 1945-1963 period, there were two formal presidential statements (or directives) on FBI domestic intelligence authority: one by President Truman in MO and the other by President Eisenhower in 1953. These statements specifically authorized FBI investigation of "subversive activities," unlike the more ambiguous Roosevelt directives. Moreover, a confidential directive of the National Security Council in 1949 granted authority to the FBI and military intelligence for counterespionage operations and the investigation of "subversive activities." The power of the National Security Council to issue this order was based, in part, on the National Security Act of 1947. That act also created the Central Intelligence Agency, with a prohibition against its performance of "law enforcement or internal security functions" and a limitation on the authority of the Director of Central Intelligence to inspect FBI intelligence.

The action of the National Security Council in 1949 greatly strengthened the independence of the FBI. The line of authority for FBI and military domestic intelligence now flowed from the National Security Council to an Interdepartmental Intelligence Conference (IIC), composed of the FBI Director (as chairman) and the heads of the military intelligence agencies. This chain of command bypassed the Attorney General. A member of the National Security Council staff in the White House was assigned to serve as the point of contact between the IIC and the NSC. The Attorney General was, as a practical matter, regularly involved in major White House decisions. 336 This arrangement continued until 1962, when President Kennedy placed the Interdepartmental Intelligence Conference under the direct authority of the Attorney General. 337

The testimony before Congress and the floor debate at the time of consideration of the National Security Act of 1947 did not clarify the authority of the FBI. Nevertheless, the legislative history supporting the intent of Congress to exclude the CIA from domestic intelligence was extensive. The restriction against "police, law enforcement or internal security functions" appeared first in President Truman's directive establishing the Central Intelligence Group in January 1946. 338 General Vandenberg, then serving as Director of Central Intelligence, testified in 1947 that this restriction was intended to "draw the lines very sharply between the CIG and the FBI" and to "assure that the Central Intelligence Group can never become a Gestapo or security police." 339 Proponents of the creation of the Central Intelligence Agency cited the FBI as a model. For example, Allen Dulles stated:

The success of the FBI has been due not only to the ability of the director and the high qualities of his chief assistants, but to the fact that that director has been on that particular job for a sufficient period of years to build up public confidence, an esprit de corps in his organization, and a high prestige. We should seek the same results for our intelligence service, which will operate in the foreign field, and on items of foreign information. 340

Secretary of the Navy James Forrestal testified that the purposes of the CIA were "limited definitely to purposes outside of this country, except the collation of information gathered by other Government agencies." The FBI was relied upon "for domestic activities." 341 In the House floor debate, Congressman Holifield stressed that the work of the CIA "is strictly in the field of secret foreign intelligence -- what is known as clandestine intelligence. They have no right in the domestic field to collect information of a clandestine military nature. They can evaluate it; yes." 342

Congressmen were also concerned with a provision of the original bill establishing the CIA which gave its Director the power to make "inspection" of the intelligence operations of other government agencies. Congressman Busby urged an amendment "to eliminate the possibility of its [the CIA's] going into the records and books of the FBI because the FBI does not go outside the United States. It is only concerned with internal intelligence and investigations in the United States." 343 Congressman Judd introduced such an amendment "primarily to protect the FBI." He stated:

I do not believe we ought to give this Director of Central Intelligence power to reach into the operations of J. Edgar Hoover and the FBI, which are in the domestic field. . . . All the intelligence the FBI has . . . must be available to the Director of Central Intelligence if it relates to the national security. But the Director of Central Intelligence will not have the right to inspect their operations.

Congressman Judd feared the DCI "coming in and finding out who their agents are, what and where their nets are, how they operate, and thus destroy their effectiveness." He believed the FBI was "too valuable an agency to be tampered with." The amendment was adopted. 344

Consequently, the National Security Act of 1947 contained two sections specifically applying to domestic intelligence. First, it provided that the CIA "shall have no police, subpoena, law-enforcement powers, or internal security functions." Second, it excluded the FBI from the "inspection" powers of the Director of Central Intelligence and provided only "that upon the written request of the Director of Central Intelligence, the Director of the Federal Bureau of Investigation shall make available to the Director of Central Intelligence such information for correlation, evaluation, and dissemination as may be essential to the national security." 345

The only indication of legislative intent regarding the type of information to be made available by the FBI appeared in the House debate. Congressman Judd was asked, "If the FBI has information about fifth-column activities and subversive information affecting the national defense, would that be open to the Central Intelligence Agency?" The sponsor of the amendment replied, "Yes." 346

There was no general restatement of the FBI's domestic security intelligence responsibilities at this time. This issue arose first in 1948, when the Secretary of Defense recommended to the National Security Council that it consider how best to coordinate internal security matters. The NSC directed its executive secretary to conduct an internal security survey, and a report was submitted in August 1948. 347

In 1948 there were also political developments in Congress and the forthcoming presidential election campaign, including the allegations of Elizabeth Bentley and Whittaker Chambers before the House Un-American Activities Committee regarding Communists in government service and charges that the administration's security procedures were lax. In this context, Attorney General Clark advised the President that he should make "a statement concerning investigations in the internal security field." The draft read as follows:

On September 6, 1939, and again on January 8, 1943, a Presidential directive was issued providing that the Federal Bureau of Investigation should take charge of investigative work in matters relating to espionage, sabotage, subversive activities, and similar matters. It was requested that all law enforcement officers in the United States, and all patriotic organizations and individuals, promptly turn over to the Federal Bureau of Investigation any information concerning these matters.

The Federal Bureau of Investigation has fully carried out its responsibilities with respect to the internal security of the United States, under these directives. The cooperation rendered to the Federal Bureau of Investigation in accordance with the directives has been of invaluable assistance to it.

I wish to emphasize at this time that these directives continue in full force and effect.

Investigations in matters relating to the internal security of the United States to be effective must be conducted in a comprehensive manner, on a national basis, and by a single central agency. The Federal Bureau of Investigation is the agency designated for this purpose. At this time, I request that all information concerning any activities within the United States, its territories or possessions, believed to be of a subversive nature, be reported promptly to the Federal Bureau of Investigation. 348

Attorney General Clark's recommendation of a presidential statement on FBI authority was made the day after he met with White House aides Clark Clifford, Charles Murphy, and George Elsey to discuss how the President should handle the Bentley and Chambers allegations. At that meeting it had been decided that the President should not make a statement on the espionage allegations and that consideration would be given to "referring the question of Soviet espionage in the Federal Government to a bipartisan commission, such as the Hoover Commission." 349

Upon receiving the Attorney General's proposed statement, presidential aide George Elsey asked Admiral Souers, Executive Secretary of the National Security Council, "to undertake a review of the statement, with a view to limiting the excessive authority granted to the FBI, and in such other ways as he finds desirable in the light of his experience in the National Security Council." 350 However, the revised draft by Admiral Souers made no substantial change except to include reference to "the intelligence services of the military forces." Mr. Elsey and Admiral Souers passed the matter on to White House aide Stephen Spingarn, who met with Assistant Director Ladd of the FBI. Ladd urged "early issuance of the statement by the President" and stated that its purpose "was to spike vigilante activity in the internal security field by private organizations and persons." After this meeting, Spingarn advised Clark Clifford that "the issuance of such a statement at this time by the President might give rise to the impression that he was making a rather transparent show of activity on this matter as a result of needling from Congressional quarters. . . ." 351

Nevertheless, the Justice Department did release a statement criticizing the "political activity" of the House Committee on Un-American Activities, and declaring that "all individuals and groups involved in activities potentially dangerous to the security of the nation are subject to the continuous but quiet watchfulness of the Federal Bureau of investigation." 352

After the 1948 presidential election, the National Security Council addressed formally the problem of coordination in the internal security field. An understanding was reached by the Secretary of Defense, the Attorney General, and the Director of the FBI on February 1, 1949; and recommendations were submitted thereafter to the President for the establishment under the

NSC of two committees -- the Interdepartmental Intelligence Conference and the Interdepartmental Committee on Internal Security -- and the designation of an NSC Representative on Internal Security "to perform coordinating and advisory functions with the IIC and the ICIS ...." 353 The President approved these recommendations and issued a directive on coordination of internal security. 354

The National Security Council then approved charters for the IIC and the ICIS. They recited the provisions of Section 101 of the National Security Act of 1947, which authorized the NSC to "advise the President with respect to the integration of domestic, foreign, and military policies relating to the national security," and also the President's directive of March 1949. The purpose of the IIC, composed of the FBI and military intelligence agencies, was to "effect the coordination of all investigation of domestic espionage, counterespionage, sabotage, subversion, and other related intelligence matters affecting internal security." The ICIS, made up of representatives from the Departments of State, Treasury, Justice, and the military, was assigned responsibility for coordinating all non-investigatory internal security activities. 355

The Delimitations Agreement between the FBI and the military intelligence agencies was also revised in 1949. It allocated responsibilities among the agencies for the "investigation of all activities coming under the categories of espionage, counterespionage, subversion, and sabotage." Each agency was obliged "to exchange freely and directly with the other subscribing organizations all information of mutual interest." The FBI had specific responsibility for advising the military agencies of "developments concerning the strength, composition, and intentions of civilian groups within its cognizance which are classed as subversive and whose activities are a potential danger to the security of the United States." The military agencies were limited to investigations directly involving military personnel, civilian employees of the military, and areas under military control. 356

A supplementary agreement in June 1949 required FBI and military intelligence officials in the field to "maintain close personal liaison" and to pay "particular attention . . . to avoiding any duplication in connection with the use of informers." The supplementary agreement also stated, "Where there is doubt as to whether or not one of the other agencies is interested in information collected, it should be transmitted to the other agency." 357

After the outbreak of the Korean War and in the midst of congressional consideration of new internal security legislation in 1950, the IIC under the chairmanship of FBI Director Hoover recommended to the NSC "that a Presidential statement be issued to bring up to date and clarify prior Presidential Directives . . . outlining the responsibilities of the Federal Bureau of Investigation in connection with espionage, sabotage, subversive activities and related matters." Attorney General McGrath forwarded the draft to the President's counsel. 358

The NSC approved a revised version of the draft, and it was made public on July 24, 1950. There is no record of why it chose the broader interpretation of the Roosevelt directives and declared that they had provided that the FBI:

should take charge of investigate work in matters relating to espionage, sabotage, *subversive activities and related matters*. 359 [Emphasis added.]

President Roosevelt's directives had not used this language. (See pp. ---- above.) [sic] Moreover, President Truman's domestic policy aides were surprised by the release of the statement. One noted, "This is the most inscrutable Presidential statement I've seen in a long time." Another asked, "How in H----- did this get out?" A third replied, "Don't know -- I thought you were handling." 360 Even before the statement was issued, one of these aides had warned the President's counsel that the Justice Department was attempting "an end run." 361

Despite this concern among his assistants, President Truman's statement clearly placed him on record as endorsing FBI investigations of "subversive activities." Neither the President's statement nor the secret NSC charter nor the confidential Delimitations Agreement defined "subversive activities" or "subversion."

The President's announcement gave the FBI an opportunity to make a statement of its own. The FBI statement denounced "hysteria, witch-hunts and vigilantes" and affirmed the need for "protecting the innocent as well as . . . identifying the enemies within our midst." Nevertheless, the FBI advanced the following view of the threat:

The forces which are most anxious to weaken our internal security are not always easy to identify. Communists have been trained in deceit and secretly work toward the day when they hope to replace our American way of life with a Communist dictatorship. They utilize cleverly camouflaged movements, such as some peace groups and civil rights organizations, to achieve their sinister purposes. While they as individuals are difficult to identify, the Communist Party line is clear. Its first concern is the advancement of Soviet Russia and the godless Communist cause. It is important to learn to know the enemies of the American way of life. 362

Shortly after President Eisenhower took office in 1953, the FBI advised the White House that its "internal security responsibility" went beyond "statutory" authority. The Bureau attached a copy of the Truman statement, but not the Roosevelt directive. The FBI again interpreted the Roosevelt directive as saying that it had authorized "investigative work" related to "subversive activities." 363

In December 1953, President Eisenhower issued a statement reiterating President Truman's "directive" (including its interpretation of Roosevelt's orders) and extending it to matters under the Atomic Energy Act. 364 On the day this statement was released, Director Hoover and Attorney General Herbert Brownell attended a National Security Council meeting to discuss "additional funds" for FBI counterintelligence coverage." Director Hoover's memorandum after the meeting stated that the President "wanted to have" the "additional counterintelligence coverage." 365 There was no reference to "subversive activities."

President Kennedy issued no public statement comparable to the Roosevelt, Truman, and Eisenhower "directives." However, in 1962 he did transfer the Interdepartmental Intelligence Conference from under the National Security Council to "the supervision of the Attorney General." 366 In 1964, Attorney General Robert Kennedy re-issued the IIC charter, citing as authority the President's 1962 order and directing the IIC (still composed of the FBI and military intelligence agencies) to continue:

the coordination of all investigation of domestic espionage, counterespionage, sabotage, and subversion, and other related intelligence matters affecting internal security.

The charter added that it did not "modify" or "affect" the previous "Presidential Directives" relating to the duties of the FBI, and that the Delimitations Agreement between the FBI and military intelligence "shall remain in full force and effect." 367

Thus, the Kennedy administration made no change in the vague mandate for domestic intelligence activities, but merely placed formal control in the hands of the Attorney General.

#### *J. FBI Intelligence and International Tension, 1961-1963*

The basic policy theme for the entire 1945-1963 period is stated in a report for the National Security Council on the "Internal Security Program" in 1954:

Communist doctrine provides that a period of peace is to be used to consolidate and strengthen the Communist forces in the world while at the same time weakening and dividing the democratic nations including disruption of the internal life of these nations economically, politically and socially. Thus the present Soviet "peace tactics" emphasize that our internal security protective coverage must be maintained at a high level. Soviet Russia can continue to increase subversive, disruptive tactics without risk or cost to herself commensurate with the potential beneficial results to the Soviet cause.

The Internal Security Program was formulated on the assumption of a continuance of peacetime "cold war" conditions. However, it includes the elements to be expanded for a wartime operation. 368

The scope and techniques of domestic security intelligence operations during this period cannot be fully understood without recognizing that this assumption prevailed throughout all branches of the United States government. 369

In 1961, Director Hoover submitted a report to President Kennedy's Special Assistant for National Security, McGeorge Bundy, on the status of the internal security programs of the Interdepartmental Intelligence Conference. It began by reviewing the charter of the IIC and the Delimitations Agreement among the FBI and military intelligence agencies. The primary objective of the "investigative program" was "to counter the ever-increasing and continual threat from international communism and Soviet-bloc espionage and subversion." 370

In addition to reviewing counterespionage operations, the report described programs for "identification and investigation of potentially dangerous persons in the United States" and for "coverage of Communist Party activities." The most significant recent change in operations was expanded coverage of Cuban groups. The FBI's Security Index program was explained in the following terms:

The FBI maintains a current list of individuals, both citizens and aliens, to be considered for apprehension and detention, if necessary, in a period of emergency. Approximately 12,000 individuals are listed at this time. This list is kept current on a daily basis by the addition of new individuals whose activities make them potentially dangerous to the United States, and by the deletion of individuals who are no longer engaged in subversive activities. Included on the list of potentially dangerous individuals are nearly 200 persons who are engaged in pro-Castro Cuban activities or who sympathize strongly with such activities. In addition to members of the Communist Party, it also includes certain members of such organizations as the Nationalist Party of Puerto Rico, the Nation of Islam, and the Socialist Workers Party.

The FBI's "intensive coverage" of Cuban activities was required because of "the close ties between the Castro government of Cuba and the Soviet bloc." Particular attention was paid to the "July 26 Movement", which had been required to register under the Foreign Agents Registration Act, and to "the Fair Play for Cuba Committee." Regarding the latter, the report stated:

The Fair Play for Cuba Committee is the principal outlet for pro-Castro propaganda and agitation on the part of U.S. nationals sympathetic to the Castro regime. There are indications that this organization is receiving funds from the Cuban Government. In addition, investigation has shown that this group has been heavily infiltrated by the Communist Party, USA (CPUSA), and the Socialist Workers Party (SWP). . . . In fact, some chapters of the group have been directly organized by and under the complete control of the CPUSA or the SWP.

Finally, with respect to coverage of the Communist Party and related groups, the report stated:

The CPUSA is active in agitation and spreading dissension in the U.S., and during the current racial disturbances in the South, it *has attempted* to take full advantage of the situation. The Party *has endeavored* to bring pressure to bear on state and Federal officials through the press, labor unions, and student groups....

At the present time, the FBI has under investigation two hundred known or suspected communist front and communist-infiltrated organizations. Many of these organizations are national in scope with chapters in various cities throughout the United States. These groups represent transmission belts through which the CPUSA *can* further its line. 371 [Emphasis added.]

The report did not say how effective the "attempts" and "endeavors" of the Communists were, nor did it indicate Communist success was increasing or decreasing.

The question of pro-Cuban activities had arisen earlier at a National Security Council meeting in May 1961 after the Bay of Pigs invasion. Director Hoover attended at the request of the Attorney General. Hoover recorded after the meeting that he had "outlined to the President the fact that the FBI had intensified its coverage of Cubans in this country, both anti-Castro groups and pro-Castro groups." He had also "commented briefly upon the activities of the Fair Play for Cuba Committee and the elements in back of it." 372

An FBI intelligence program aimed at Castro sympathizers had originally begun in November 1960 when field offices were instructed to consider "recommending for the Security Index those individuals who are not now on the Security Index but who . . . would be deemed dangerous or potentially dangerous to the internal security of the U.S. in the event of an emergency involving Cuba and the U.S." Such individuals included both Cubans and non-Cubans "who have been engaged in substantial activities in furtherance of the aims and purpose of the Cuban government, in support of pro-Castro groups or organizations or in furtherance of the communist or subversive infiltration of pro-Castro groups." 373

After the Bay of Pigs invasion in 1961, FBI field officers were advised that "increasing anti-United States attitudes and demonstrations stemming from the Cuban situation and 'cold war' tensions are cause for concern" and that pro-Castro groups might "react militantly to an emergency situation." In particular, the activities of the Fair Play for Cuba Committee revealed "the capacity of a nationality group organization to mobilize its efforts in such a situation so as to arrange demonstrations and influence public opinion." Hence, all field offices were to "be most alert to the possibility of demonstrations by nationality groups which could lead to incidents involving violence." 374

Further instructions covered both pro-Castro and anti-Castro groups:

The failure of the recent invasion attempt by Cuban rebel forces has accentuated the problem of investigating anti-Castro and pro-Castro groups and individuals in the United States. In addition to discharging our security and criminal responsibilities we are faced with the necessity of acquiring and providing other agencies informative and valid intelligence data relative to the objectives and activities of both factions as well as data regarding key personalities. . . .

In order to discharge these investigative and intelligence responsibilities with maximum effectiveness it is essential that particular attention be afforded the development on a broadly expanded basis of sources and informants in a position to provide knowledgeable data regarding pro-Castro and anti-Castro activities. 375

At the time of the Cuban missile crisis in 1962, the FBI intensified its program for placing pro-Cubans on the Security Index and established a special "Cuban Section" of the Index. Among the activities to be considered in placing Cuban aliens on the Index included:

(1) participation in organizations supporting the Castro regime, (2) participation in picket lines formed in support of the Cuban Government, (3) contacts with Cuban agents operating in this country on behalf of the Cuban Government, or (4) statements or activities on a subject's part establishing reasonable grounds to believe that his loyalty would lie with the Cuban Government in the event of armed conflict between the United States and Cuba. 376

This program would have made it possible for the President, at the height of the Cuban missile crisis, to declare an "internal security emergency" and order the arrest and detention of those persons deemed "potentially dangerous" because of their pro-Castro sympathies.

In 1962 there were 11,165 persons on the Security Index, 969 persons in Section A of the Reserve Index, and approximately 10,000 persons in Section B of the Reserve Index. An internal FBI memorandum stated, "Essentially, all of the individuals included therein fall within the emergency detention provisions in the Internal Security Act of 1950 as well as the emergency detention provisions of the Attorney General's Portfolio." 377 There is no indication that Justice Department officials under the Kennedy Administration were informed of the existence of the Reserve Index.

In late 1963 the Security Index contained the names of 10,519 individuals, of whom 1,967 were designated for the Detcom Priority Apprehension Program because "their training, violent tendencies and prominence in subversive activity represent the greatest threat in time of a national emergency . . . ." 378 The procedures for Justice Department review of the Security Index were described as follows:

The Department does not review individual cases prior to the time they are placed on the Security Index. . . . In July 1955 the Department advised that it would engage in reviewing a "sampling" of our Security Index cases and it has been so engaged since. We furnish the Department each month a list of our Security Index subjects for attachment to the Master Warrant of Arrest maintained by the Department should an emergency occur requiring their apprehension and from this list the Department selects cases for reviewing. For information, as of today approximately 59.4 percent of the Security Index cases have been reviewed and approved by the Department.

We request the Department to conduct specific review of a Security Index case when such a subject becomes (1) a U.S. Government employee, (2) a foreign government employee, and (3) an employee of the United Nations. We also request the Department to specifically review a case previously reviewed and approved by it prior to taking action with respect to removing a subject's name from the Security Index. These reviews are generally conducted by the Department within a thirty-day period.

379

The date of this December 1963 memorandum, in response to a request by Director Hoover, indicates high-level concern that Lee Harvey Oswald was not on the Security Index.

Following the Kennedy assassination, the FBI Intelligence Division proposed "a broadening of the factors which must be considered in evaluating an individual's dangerousness." Six new criteria were added:

1. Contacts with Sino-Soviet-bloc establishments (including Cuba) where purpose of contact cannot be determined or contact indicates communist sympathies.
2. Contacts with Sino-Soviet-bloc, Cuban, or Yugoslav intelligence agents where purpose of contact cannot be determined or contact indicates communist sympathies.
3. Individuals who have defected, revoked or sought revocation of their United States citizenship in favor of a Sino-Soviet-bloc country, who have returned to the United States, and who have taken no positive steps to counteract such action.
4. Statements or activities on a subject's part establishing reasonable grounds to believe that his loyalty would lie with communist nations in the event of armed conflict between the United States and communist nations.
5. Training and/or participation in espionage, sabotage, or intelligence activities.
6. A history of emotional instability or irrational behavior on the part of an individual with a subversive background whose prior acts depict a propensity for violence and hatred against organized government.

It was pointed out that such criteria were "sufficiently elastic so that when applied with the necessary judgment the complex questions which arise can be resolved." 380

These FBI domestic intelligence policies in 1961-1963 indicated the central purpose of the Bureau's internal security assignment. International tensions were still sufficiently intense that the FBI could reasonably anticipate the possibility of an "internal security emergency." The basic assumptions which had prevailed since World War II had not been seriously questioned, and now events were viewed within that framework.

## **V. FBI INTELLIGENCE AND DOMESTIC UNREST, 1964-1974**

"Mr. J. Edgar Hoover and the FBI had developed into an extraordinarily independent agency within our Government. It is hard to exaggerate that. Mr. Hoover, in effect, took orders only from himself, sometimes from an Attorney General, usually from a President, and that was it. He had created a kind of kingdom of which he was very jealous....

"Mr. Hoover built a position which I think is almost unparalleled in the administrative branch of our Government, a combination of professional performance on the job, some element of fear, very astute relations with the Congress, and very effective public relations."

--Testimony of former Secretary of State Dean Rusk before the Senate Foreign Relations Committee, July 23, 1974.

During the tumultuous years of the mid- and late-1960s and early 1970s, the FBI and other executive officials confronted entirely new domestic security problems which did not fit the assumptions of the past. Civil rights demonstrations, the violent Klan reaction, urban ghetto disturbances, and protests against the Vietnam War raised substantially different concerns for federal executives. They were essentially law enforcement matters, requiring effective criminal investigation of violent acts, improved police-community relations in the cities, and careful planning to insure peaceful demonstrations. Nevertheless, the FBI approached them within the framework of its domestic intelligence operations, based on the concepts of previous decades; and the Justice Department did not attempt in any significant way to reorient the Bureau away from its preoccupation with Communist "influence." Instead, Attorneys General simply added new assignments for FBI intelligence, in broad requests containing little guidance and even less control.

### *A. Klan Intelligence*

During the first half of 1964 officials of the Justice Department -- including Attorney General Kennedy, Deputy Attorney General Nicholas Katzenbach, and Assistant Attorney General Burke Marshall of the Civil Rights Division -- were increasingly concerned about the spread of Ku Klux Klan activity and violence in Mississippi and parts of Louisiana and Alabama. Attorney General Kennedy sent a team of lawyers experienced in organized crime investigations to Mississippi. Based on their report and his own findings, Assistant Attorney General Marshall prepared a memorandum for the Attorney

General to send to President Johnson in June 1964. Its purpose was to encourage the FBI "to develop its own procedures for the collection of intelligence." The memo to the President stated, in part:

... it seems to me that consideration should be given by the Federal Bureau of Investigation to new procedures for identification of individuals who may be or have been involved in acts of terrorism, and to the possible participation in such acts by law enforcement officials or at least their toleration of terrorist activity. In the past the procedures used by the Bureau for gaining information on known, local Klan groups have been successful in many places, and the information gathering techniques used by the Bureau on Communist or Communist related organizations have of course been spectacularly efficient.

The unique difficulty that seems to me to be presented by the situation in Mississippi (which is duplicated in parts of Alabama and Louisiana at least) is in gathering information on fundamentally lawless activities which have the sanction of local law enforcement agencies, political officials and a substantial segment of the white population. The techniques followed in the use of specially trained, special assignment agents in the infiltration of Communist groups should be of value. If you approve, it might be desirable to take up with the Bureau the possibility of developing a similar effort to meet this new problem. 381

Shortly thereafter, when three civil rights workers disappeared in Mississippi, President Johnson called on former CIA Director Allen Dulles to evaluate the situation. After conferring with the Attorney General, the FBI Director, and other Justice Department officials, Dulles flew to Jackson, Mississippi. There he met with the Governor, the head of the highway patrol, civic business leaders, black and white religious leaders, and civil rights workers. Upon his return to Washington, Dulles recommended to the President that a substantial increase be made in the number of FBI agents in Mississippi to help "control the terrorist activities". He announced publicly that the President appeared to favor his proposal and had indicated it would be implemented very shortly. 382

According to an account based on FBI sources, President Johnson directed J. Edgar Hoover "to put people after the Klan and study it from one county to the next. I want the FBI to have the best intelligence system possible to check on the activities of these people." 383

Another account suggests that Hoover initially told the President to send Federal marshals or troops to Mississippi, but Finally agreed that the FBI would take on the assignment. 384 Consequently, the FBI opened a new field office in Jackson, Mississippi, in July 1964. In addition, the Justice Department's Civil Rights Division set up a special unit as "a central clearing house for information on Klan and Klan-type organizations and on acts of violence and intimidation found to have been encouraged by the Klan." The unit maintained a current listing of Klan membership; compiled information on the organization of Klan federations and Klaverns and the relationship among different groups; monitored trends toward growth or attrition, recruiting activities, and changes in support for the Klan movement in particular areas; and reviewed and recommended action against Klan organizations where members were acting to violate Federal statutes. 385

At FBI headquarters the supervision of investigations of Klan and hate groups was transferred from the General Investigative Division to the Domestic Intelligence Division, where it had been prior to 1958. The Inspection Division prepared a study of the matter before the 1964 shift occurred. This study recalled that "one of the prime factors" in the 1958 decision had been "the almost complete absence of Communist Party activity in the racial area;" another factor had been the need to "streamline operations." Because the General Investigative Division handled "the investigation of individual cases, i.e., bombings, murders, police brutality, etc.," there was an advantage in "having the hate group informants and intelligence functions with the substantive civil rights cases." This argument was repeated by officials opposed to the transfer in 1964:

[One official] believes the transfer of functions would create an undesirable division of authority and responsibility; that our best chance to break major civil rights cases such as bombings, murders, etc., is through information developed from the inside as a result of coverage established in the community where the crime occurred; i.e., informants and sources in the Klan, hate groups, subversive organizations, but also sources not connected with any group, who will report potential violence and individuals prone to violence. We are following the policy of aggressively seeking out persons addicted to violence even though they have not violated a federal law as yet. He feels that the Division that is going to investigate these cases should forge the necessary tools to use for this purpose.

The contrary argument was based on "the premise that organizations like the KKK and supporting groups are essentially subversive in that they hold principles and recommend courses of action that are inimical to the Constitution as are the viewpoints of the Communist Party." The Domestic Intelligence Division had experienced with aggressive techniques in the area of "subversion:"

[Another official] feels that the DID over the years has developed wide experience in the penetration of subversive organizations through informants, anonymous sources, sophisticated microphone and technical surveillances, interview programs of highly specialized nature, etc., and that his division could put this experience to excellent use in penetrating the Klan and other hate groups.

It was also suggested that the Domestic Intelligence Division "would be in a position to launch a disruptive counterintelligence program against the Klan and other hate groups with the same effectiveness that they are now doing insofar as the Communist Party is concerned."

The Inspection Division agreed that the Domestic Intelligence Division had "achieved noteworthy results in infiltrating the Communist Party and Soviet intelligence operations" and that "this experience and knowhow could be put to good advantage in penetrating the Klan and other hate groups." The Inspection Division also "felt that a study of counterintelligence and

disruption tactics against the Klan certainly merits further consideration." On the basis of this recommendation, Director Hoover approved the transfer. 386

Former Attorney General Nicholas Katzenbach vigorously defended the FBI's broad intelligence-gathering program against the Klan in his testimony before the Select Committee:

The Klan program involved the investigation and prosecution of persons who engaged in and who were committed to the violent deprivation of constitutionally guaranteed rights of others through murders, kidnappings, beatings and threats of violence -- all in contravention of federal and state laws.... The Bureau was investigating and attempting to prevent violence. To equate such efforts with surveillance or harassment of persons exercising constitutionally guaranteed rights is in my view unmitigated nonsense....

It is true that the FBI program with respect to the Klan made extensive use of informers. That is true of virtually every criminal investigation with which I am familiar. In an effort to detect, prevent, and prosecute acts of violence, President Johnson, Attorney General Kennedy, Mr. Allen Dulles, myself and others urged the Bureau to develop an effective informant program, similar to that which they had developed with respect to the Communist Party. It is true that these techniques did in fact disrupt Klan activities, sowed deep mistrust among Klan members, and made Klan members aware of the extensive informant system of the FBI and the fact that they were under constant observation. Klan members were interviewed and reinterviewed openly -- a fact which appeared in the public press at the time. They were openly surveilled. These techniques were designed to deter violence -- to prevent murder, bombings and beatings. In my judgment they were successful. I was aware of them and I authorized them. In the same circumstances I would do so again today. 387

Mr. Katzenbach spoke of the FBI's intensive investigation of individuals and groups with a "propensity for violence." The FBI Manual did, in fact, attempt to focus Klan intelligence investigations in this manner. The basic standard for opening an investigation was whether organizations or individuals "have adopted a policy or have allegedly adopted a policy of advocating, condoning, or inciting the use of force or violence to deny others their rights under the Constitution." The FBI Manual stressed:

The fundamental objective is to identify those who may be engaged in or responsible for acts of violence, and care must be taken to avoid becoming involved in widespread, nebulous investigation which does not go to the heart of the problem at hand. When a case is opened, it should receive immediate and continuous attention until the initial allegation is resolved. The case should be promptly closed if it is definitely determined that it does not fall within the criteria set out . . . above.

. . . wholesale investigations of individuals associated with these organizations should not be undertaken. Individuals investigated should be those key personnel who have the propensity for violence and actually formulate and carry out the organization's policies and not those individuals who merely attend meetings on a regular basis.

However, general intelligence collection did go beyond these limits. Field officers were instructed to "follow through public source material and established sources activities of organizations which do not qualify for investigation under above standards." 388

The Domestic Intelligence Division chafed under these restrictions, which were held over from when Klan investigations had been under the General Investigative Division. Assistant Director William C. Sullivan, head of the Intelligence Division, told the FBI Executives Conference in 1966 that

. . . in his strong opinion the FBI is not adequately coping with the problems created by the Ku Klux Klan. He had in mind bombings, beatings, civil rights violations, etc. Mr. Sullivan pointed out that there are 14,000 members of the Klans in the United States today. The FBI's policy calls for investigating all officers of the Klan and all Klan members who are violence prone. He said there are 4,500 officers and to date we have investigated only 1,500 of them, and only 300 violence-prone of whom there are many more.

Sullivan specifically cited the problem in North Carolina where there were 152 Klaverns and the FBI needed informant coverage of 81. He urged that the Bureau give "sufficient manpower . . . and direction to seriously disrupt and reduce their activities and practices." 389

Thereafter, in 1967 the FBI Manual was revised to direct field offices specifically to furnish "details concerning rallies [and] demonstrations" by Klan or hate-type organizations. 390 In 1969 these instructions were broadened to "include full details concerning the speeches made at the rallies or demonstrations, as well as the identities of the speakers." 391

In 1971 the criteria for investigating individuals were widened still further. Special Agents in Charge of field offices were instructed to investigate not only persons with "a potential for violence," but also anyone else "who in judgment of SAC should be subject of investigation due to extremist activities." 392

Thus, the FBI gradually expanded its Klan intelligence investigations, moving beyond information related to possible violence. By 1971 the FBI program for investigating Klan and hate-groups delegated virtually unlimited discretion to the field and specifically required FBI agents to report on lawful political speeches.

For example, the FBI's collection of intelligence about "white militant groups" included groups "known to sponsor demonstrations against integration and against the bussing of Negro students to white schools." As soon as a new organization of this sort was formed, the Bureau used its informers and "established sources" to determine "the aims and purposes of the organization, its leaders, approximate membership" and other "background data" bearing upon "the militancy" of the group. 393

#### *B. FBI Intelligence and the Black Community*

Events in 1964 also led to a substantial change in FBI intelligence programs dealing with black "extremists" and civil disorders, in addition to the Klan. During the first urban ghetto riots in the summer of 1964, President Johnson instructed the FBI to investigate their origins and extent. The Bureau's report was made public in late September. The FBI had surveyed nine cities where riots had occurred and gathered information "from public officials, police officers, clergymen, leaders of responsible organizations and individuals considered to be reliable." The basis for the inquiry was explained in the most general terms:

It is a truism that the first duty of all government is to maintain order, else there is no government. Keeping the peace in this country is essentially the responsibility of the state government. Where lawless conditions arise, however, with similar characteristics from coast to coast, the matter is one of national concern even though there is no direct connection between the events and *even though no federal law is violated*. [Emphasis added.]

The FBI's findings served to reassure the public: there was no evidence "that the riots were organized on a national basis," none of the incidents was a "race riot" involving interracial violence; and none was a "direct outgrowth of conventional civil rights protest." However, the FBI did report the role of "a Marxist-Leninist group following the more violent Chinese Communist line" and other individuals "with histories of Communist affiliation" in alleged attempts to instigate riot activity. The FBI also called attention to the growth of black militancy, asserting that "a number of violent agitators" had arisen. Without mentioning his name, the FBI report described the activities of Malcolm X as one example of a leader urging blacks "to abandon the doctrine of non-violence." 394

These developments in the North and the increasing number of civil rights demonstrations in the South were the background for an expansion of the FBI program for collecting intelligence on "General Racial Matters" in early 1965. The FBI Manual was revised to cover demonstrations, racial violence and riots. These revisions included the following:

In order that the Bureau's information will be complete regarding planned racial activity, such as demonstrations, rallies, marches, or threatened opposition to activity of this kind, each office must assume responsibility for following up the planned activity and promptly advising the Bureau by teletype of subsequent developments even though the development may be a postponement or cancellation of the planned activity.

In the event of an outbreak of mob violence or rioting ... you must: Immediately launch a vigorous investigation to determine the causes and forces behind the threatened or actual mob violence or rioting and whether there is an organized pattern underlying it emanating from subversive or radical groups or other outside sources . . . [and] afford specific assignments to informants, and keep them assigned, to determine the underlying cause of the mob violence or riot. . . . 395

At this time the FBI Director testified before the House Appropriations Committee that the FBI was following "the racial situation from an intelligence viewpoint." The Justice Department reported that this intelligence had already made it possible for the Civil Rights Division to keep "a close and continuing watch on civil rights demonstrations which totaled 2,422 in almost all states during the year ending April 1964." 396

In late 1966 after two more "long hot summers," including the 1965 Watts riot in Los Angeles and many smaller-scale disorders, the FBI instituted a program for preparing semi-monthly summaries of possible racial violence in major urban areas. Field offices were instructed to conduct "a continuing survey to develop advance information concerning racial developments which clearly point to the possibility of mob violence and riotous conditions."

This survey should afford the Bureau a realistic, comprehensive picture of the existing racial conditions in major urban areas on a current basis and this can only be accomplished by maintaining a constant and effective check on existing conditions through racial, criminal, and security informants and through established logical sources. Information ... should cover the following categories:

(1) Name of community....

(2) General racial conditions....

(3) Current evaluation of violence potential....

(4) Identities of organizations involved in local racial situations. Such organizations may include not only civil rights organizations but also subversive organizations, black nationalist organizations, Klan organizations, hate-type groups, and others. Include a concise summary of the general programs of such organizations relating to the racial issue. In particular include any indications of subversive or radical infiltration of organizations and any indication that organizations involved in the racial issue advocate or may resort to extralegal action or violence.

(5) Identities of leaders and individuals involved. Include the identity of leaders and individuals in the civil rights movement as well as readily available personal background data, any pertinent information contained in office files showing affiliation or association with Klan-type, communist or related subversive organizations and/or statements made by such individuals advocating racial violence and/or extralegal activity.

(6) Existence of channels of communication between minority leaders and local officials. . . .

(7) Objectives sought by minority community, and possible points of contention. . . . Describe the number, character, and intensity of the techniques used by the minority community, such as picketing or sit-in demonstrations, to enforce their demands.

(8) Reaction of leaders and members of the community to minority demands . . . 397

The Bureau concentrated investigations in this field on "black nationalist groups," described as "hate-type organizations" with a "propensity for violence and civil disorder." 398 The term "militant black nationalist" was not defined with any precision. Such "racial militants" were deemed a "threat to the internal security" because of their "anarchistic tendencies" 399 or their "propensity for fomenting racial disorder." 400 Leaders and members of "black nationalist" groups were investigated under the Emergency Detention Program for placement on the FBI's Security Index. 401

The standards were so vague, however, that the FBI included Dr. Martin Luther King and his nonviolent Southern Christian Leadership Conference in the "radical and violence-prone" category, because Dr. King might "abandon his supposed 'obedience' to 'white, liberal doctrines' (nonviolence) and embrace black nationalism." 402

Another leading civil rights group, the Council on Racial Equality (CORE), which had "negligible" Communist infiltration, was investigated under the "Racial Matters" Program because the Bureau concluded that it was moving "away from a legitimate civil rights organization" and was "assuming a militant black nationalist posture." The FBI reached this conclusion on the grounds that "some leaders in their public statements" had condoned "violence as a means of attaining Negro rights." The investigation was intensified, even though there was as yet no information that its members "advocate violence" or "participate in actual violence." 403

The Justice Department provided little guidance for FBI intelligence investigations. The Nation of Islam again provides an example. In 1962, the FBI asked if the group could be prosecuted or designated for the "Attorney General's list." In reply, the Internal Security Division repeated its earlier position that there was not "sufficient evidence to warrant prosecutive action," but that the FBI should "continue its investigation ... because of the radical, semi-secret, and violent nature of this organization, and the continuing tendency on the part of some of its leaders to use language of implied threats against the Government." 404 Although the Division did not mention the Security Index, the FBI believed that the investigation was conducted primarily so that leaders and/or active members could be considered "for apprehension during the period of a national emergency and for inclusion in the Security Index." 405

The FBI again asked for the Justice Department's opinion in 1963. An official of the FBI Domestic Intelligence Division observed to his superior, "Inasmuch as the Department is in possession of all pertinent information regarding the NOI and its teachings, it appears the Department is trying to get the Bureau to do the Department's work." 406

The Internal Security Division replied only that there was "insufficient evidence" for prosecution and said nothing about further investigation. 407

Nevertheless, the FBI did continue investigating "because of the radical, semisecret and violent nature of the organization." In 1964, it once again asked for the Department's opinion "as to whether the activities of the NOI come within the criteria of Executive Order 10450 or whether its activities are in violation of any other Federal statute." 408 The Internal Security Division's answer reiterated that there was "insufficient evidence" for prosecution, and went into greater detail regarding applicability of the criteria for the Employee Security Program under Executive Order 10450:

The activities reported must be shown to be more than mere prophecies or utterances made with the hope of ultimate attainment of their desired aims. For example, while teaching that the white man must be exterminated they do not say by whom or how. There should be available evidence to show that the advocacy or approval of the commission of acts of violence to deny others their Constitutional rights is calculated to incite the members to action now or in the foreseeable future. Evidence is needed to show the specific acts taken by particular individual leaders in advocating or approving acts of force and violence; not that "heads will roll in the streets", which could be merely a prediction, but rather what specific plan of action, direction or urging has been made to bring about such an event; not the abstract teaching that Allah will cause the desired event, but the concrete steps taken by specific individual leaders to effectuate their goals. It is fully realized that such evidence is not easily obtained even if it exists; and finally there seems to be some indication that the leaders are becoming more cautious in their utterances. 409

Despite this formal opinion, the FBI continued to investigate and to furnish the results to the Department in reports and memoranda.

FBI intelligence officials assumed they could go ahead not only because the Justice Department did not say "stop the investigation," but also because the FBI still included "names of appropriate Nation of Islam officials ... in our Security Index" (which was reviewed by the Internal Security Division). In mid-1966 an FBI intelligence official observed, "The Department apparently has no intention of authorizing prosecution of the Nation of Islam, in absence of the Nation of Islam causing large-

scale riots, or virtual insurrection. However, it appears to be in the Bureau's best interests to put the Department on record once again as to whether a prosecutable violation exists...." 410

This time the Internal Security Division specifically asked the FBI to continue "active investigation ... for possible violation of Federal statutes or for possible designation under the provisions of Executive Order 10450." This request was made despite the Division's conclusion that there was still "insufficient evidence" and that in the previous two years there had "been no significant changes as to the character and tactics of the organization." The only reason offered for this Departmental instruction to continue the investigation was that the group's leaders "advocate disobedience of any law contrary to the beliefs of Muslims." 411

There were no further FBI requests for Departmental opinion or instructions provided by the Internal Security Division regarding the continued intelligence investigation of the Nation of Islam from 1966 until 1973.

### *C. COMINFIL Investigations -- "Racial Matters"*

In June 1964, the FBI established a "special desk" in the Domestic Intelligence Division to supervise an "intensification of the investigation of communist influence in racial matters."<sup>1</sup> 412 The chief of the Division's Internal Security Section stressed that civil rights was "the primary domestic issue on the political front today," and that "both sides" in the Senate debate on the Civil Rights Bill might "ask the Bureau" for information about "communist penetration into the racial movement." Thus, the FBI had to be prepared to make "a proper presentation of the facts." The Bureau's Inspection Division endorsed this step, noting that the "urgency" for the FBI to "stay ahead" of the situation was tied not only to the civil rights bill, but to "the complex political situations in an election year where civil rights and social disturbances will play a key role in campaign efforts and possibly election results." 413 Instructions to the field in August 1964 stated:

There are clear and unmistakable signs that we are in the midst of a social revolution with the racial movement at its core. The Bureau, in meeting its responsibilities in this area, is an integral part of this revolution. 414

The part the FBI played in this "revolution" in American race relations was not a noble one. Director Hoover's formal statement to the Appropriations Committee, published in April 1964, discussed at great length the "Communist interest in Negro activities." He concluded that "Communist influence" in the "Negro movement" was "vitally important" because "it can be the means through which large masses are caused to ... succumb to the party's propaganda lures." The number of Negroes recruited by the Communists was "not the important thing." Rather, Director Hoover said it was "an old Communist principle" that: "Communism must be built with non-Communist hands." 415

Director Hoover's public and private message in 1964, on this and other occasions, was that the "importance of the Communist influence in the Negro movement" could not be "ignored or minimized." 416 Most Americans at that time would not have questioned Hoover's preeminence as an expert on Communism. 417 Nevertheless, Bureau records indicate that he rejected the findings of the FBI's most experienced intelligence officials on this issue, that he influenced his subordinates to abandon their own judgments and to exaggerate Communist influence in the civil rights movement, and that these subordinates then instituted massive investigative efforts to find every possible bit of evidence of Communist links in order to substantiate the Directors preconception. 418

The August 1963 March on Washington had a dramatic impact on the nation -- and devastating consequences within the FBI. Shortly before the March, Bureau intelligence officials summarized the results of extensive investigations (initiated a month before the March). 419 There was no evidence that the March was "actually initiated" or "controlled" by Communists, although they did plan to participate. There had been "an obvious failure" of the Communists "to appreciably infiltrate, influence, or control large numbers of American Negroes." The report concluded that "time alone will tell" whether the Communists would have "great success" in the future. 421

Director Hoover, upon reading the report, sharply rejected its finding that Communist influence was "infinitesimal." 422 His subordinates got the message. "The Director is correct," wrote the head of the Domestic Intelligence Division, adding, "We regret greatly that the memorandum did not measure up to what the Director has a right to expect from our analysis." 423

The Division head advised another Bureau official: "It is obvious that we did not put the proper interpretation upon the facts which we gave to the Director." He promised to "do everything that is humanly possible to develop all facts nationwide relative to Communist penetration and influence over Negro leaders and their organizations." 424

This exchange set in motion a disastrous series of events. The Domestic Intelligence Division recommended asking the Attorney General to approve a wiretap on Dr. Martin Luther King, 425 intensifying field investigations to uncover "communist influence on the Negro" using "all possible investigative techniques," and expanding COINTELPRO operations using "aggressive tactics" to "neutralize or disrupt the Party's activities in the Negro field." 426 After a sarcastic initial rejection of these plans, Director Hoover approved a new Intelligence Division memorandum on "Communism and the Negro Movement -- A Current Analysis" and noted, "I am glad that you recognize at last that there exists such influence." 427

Approving a recommendation after a December 1963 conference that the Bureau take Dr. King "off his pedestal" and promote someone else to be his successor as the new "national Negro leader," FBI Director Hoover observed:

I am glad to see that "light" has finally, though dismally delayed, come to the Domestic Int. Div. I struggled for months to get over the fact that the Communists were taking over the racial movement but [illegible] couldn't or wouldn't see it. 428

Director Hoover's exaggeration of Communist influence in the civil rights movement (especially his 1964 appropriations testimony) risked poisoning the political climate in the months before passage of the 1964 Civil Rights Act. 429 And the investigation of the civil rights movement to uncover any shred of evidence of Communist influence added massive reports to the files of the Bureau and other agencies on lawful political activity and law-abiding Americans.

To achieve this end FBI Manual provisions for internal security intelligence were revised substantially without any outside supervision. New instructions were added to intensify FBI intelligence investigations of Communist influence in the civil rights movement and in protest demonstrations. First of all, field offices were to identify all Negro members of the Communist Party. Second, a new program codenamed CIRM (Communist Influence in Racial Matters) was instituted. Quarterly reports from the field offices were to include information on:

... communist infiltration in various organizations, such as the Congress of Racial Equality, Student Non-Violent Coordinating Committee, and the like; investigations of subversive individuals active in the racial movements; investigations of communist fronts and other miscellaneous organizations; and racial disturbances and other racial matters. ... These reports shall be designed to precisely spell out the full extent of the communist influence in racial matters. They should separate words and intentions from actions; mere participation from direct influence; and the bona fide communist from the mere "do-gooder". They should not include information concerning legitimate efforts in the racial movement where there is no communist taint.

The FBI Manual also required field office reports on protest activities where Communists might be involved including:

Information on communist direction and influences of and participation in racial demonstrations, disturbances, drives, boycotts, and any other similar activities with racial overtones. This part will illustrate how communist activities *attempt* to exploit radical situations and expand communist influence, thus furthering communist objectives.... [Emphasis added.]

Under each subheading include such information as nature of event; sponsoring and participating groups; total participants; number and identities of subversives involved; specifics as to whether subversives directed, controlled, instigated, or merely participated; whether violence resulted and, if so, whether subversives involved; arrests of subversives and court disposition; and any other information believed pertinent to the over-all picture of communist influence. Efforts by supporting groups to avoid communist involvement should also be reported. If a particular event had no communist involvement, it should, of course, not be included in the report.

The last restriction had somewhat less effect, because FBI offices were advised that "the term 'communist' should be interpreted in its broad sense as including persons not only adhering to the principles of the CPUSA itself, but also to such splinter and offshoot groups as the Socialist Workers Party, Progressive Labor Party, and the like." Whenever a group was subject to Communist influence, field offices had to report:

... pertinent data as to the national headquarters, as well as any local affiliates.... The number of members, nationally and by locals, should be indicated. Include under each organization information as to officers and others in positions of influence who have present *or past* subversive connections; information as to other subversives who are merely members; specific evidence of influence wielded by subversives; policy concerning communist participation in the organization's activities, such as prohibition of communists holding office or membership (if no such stated policy, so indicate); and use and distribution of communist propaganda. [Emphasis added.] 430

These instructions continued in effect until the early 1970's. Their application to Dr. Martin Luther King, Jr., and the Southern Christian Leadership Conference are described elsewhere. 430a

Under this program the FBI also intensified investigations of moderate groups like the NAACP, which had been under investigation since the 1940's. For example, the Detroit office relied on six informants to "follow and report on all efforts by the Communist Party to infiltrate the NAACP." 431

The New York Field Office used sixteen informants and confidential sources "to follow CP infiltration of the national organization of the NAACP and local branches of the NAACP." All the national officers and board members of the NAACP were listed, and any data in FBI files on their past associations with subversives were included. Most of this information went back to the 1940's. Copies of the report were disseminated to local military intelligence officers. 432

The FBI's Chicago office prepared a Letterhead Memorandum (a report designed for dissemination to other Executive Branch agencies) on the plans of Communist leaders to have "the Party forces" at the NAACP National Convention press for certain policies. The memorandum did not indicate how extensive or influential these "Party forces" would be. 433 The St. Louis office used eleven informants and confidential sources to "follow and report interest and activity of the CP and SWP in the NAACP in St. Louis." 434 The New York office reported changes in the leadership and board of the NAACP in 1966, once again going back in FBI files to uncover any subversive associations in the 1940's. 435 The FBI did close cases on specific chapters where there were very few Communists involved. 436 In order to reach the point of closing a case, however, FBI offices submitted reports listing all officers of the NAACP chapters and the number of members. Membership figures were sometimes obtained by "pretext telephone call ... utilizing the pretext to being interested in joining that branch of the NAACP." (Copies of all reports were disseminated to local military intelligence offices "in view of their interest in matters pertaining to infiltration of the NAACP.") 437

*D. COMINFIL Investigations -- The Antiwar Movement and Student Groups*

The scope of FBI intelligence investigations of Communist infiltration of civil rights groups was matched, if not exceeded, by its investigations of Communist links to the antiwar movement. As early as 1964 the FBI reported publicly that the Communist Party was conducting "an intensive campaign for the withdrawal of American forces from South Vietnam." 438

In April 1965, President Johnson's Assistant for National Security Affairs, McGeorge Bundy, asked the FBI for information concerning the Communist role in criticism of American policy in Vietnam. The following day Director Hoover met with the President to discuss this matter. According to Hoover's account:

The President informed me that he was quite concerned over the anti-Vietnam situation that has developed in this country and he appreciated particularly the material that we sent him yesterday containing clippings from various columnists in the country who had attributed the agitation in this country to the communists as there was no doubt in his mind but that they were behind the disturbances that have already occurred. He said he had just received from Mr. McCone, the outgoing Director of the Central Intelligence Agency, a letter in which the Central Intelligence Agency stated that their intelligence showed that the Chinese and North Vietnamese believe that by intensifying the agitation in this country, particularly on the college campus levels it would so confuse and divide the Americans that our troops in South Vietnam would have to be withdrawn in order to preserve order here and it would enable North Vietnam to move in at once.... He stated he would like me to take prompt and immediate steps to brief at least two Senators and two Congressmen, preferably one of each Party, on the demonstrations in this country of the anti-Vietnam groups so that they might in turn not only make speeches upon the floors of Congress but also publicly....

I informed the President that I had just received word this morning before coming to the White House that plans had been made from May 3 to May 9 to demonstrate in 85 cities of this country by the Students for Democratic Society, which is largely infiltrated by communists and which has been woven into the civil rights situation which we know has large communist influence. I told the President we were preparing a memorandum on the Students for Democratic Society which I would try to get to him by tomorrow....

I also told the President that we were preparing, in response the request he had made through Honorable McGeorge Bundy at the White House an over-all memorandum on the Vietnam demonstrations and communist influence in the same. . . .

Director Hoover issued the following instructions to his subordinates after his meeting with the President:

... I want prepared immediately a memorandum which I can transmit to the President containing what we know about the Students for Democratic Society. While I realize we may not be able to technically state that it is an actual communist organization, certainly we do know there are communists in it. It is somewhat similar to the situation we found in the Selma-to-Birmingham March in which we were able to identify 75 communists from New York City as being in that march even though there were many others in the march who were not communists and we could not be certain it was a communist demonstration. What I want to get to the President is the background *with emphasis upon the communist influence therein* so that he will know exactly what the picture is. [Emphasis added.]

I believe we should intensify through all field offices the instructions to endeavor to penetrate the Students for Democratic Society so that we will have proper informant coverage similar to what we have in the Ku Klux Klan and the Communist Party itself.

The Director also issued instructions for the overall memorandum on antiwar demonstrations "so that it can be used publicly by prominent officials of the Administration whom the President intends to send in various parts of the country to speak on the Vietnam situation."

I want it prepared in such a manner that there will be nothing to uncover our informant coverage but be a good, strong memorandum that will pinpoint that these demonstrations which have occurred, particularly on the campuses of the colleges and universities have been largely participated in by communists even though they may not have initiated them but they at least have joined and forced the issue such as has been done at Berkeley, California, and as they are doing at Ohio State University at the present time. Give this matter immediate attention and top priority as the President is quite concerned about the situation and wants prompt and quick action. 439

The resulting report on "Communist Activities Relative to United States Policy on Vietnam" presented extensive information showing the Communist Party's desire to influence antiwar activity -- by sending letters to the President and Congressmen, issuing press releases, delivering speeches on campuses and elsewhere, distributing Party propaganda, and participating in protest demonstrations. Only one antiwar group other than the Party itself was reported as being significantly influenced -- the W.E.B. DuBois Clubs allegedly formed in 1964 "as a result of a mandate by the Communist Party." The Party had instructed its district leaders "to organize activities in the trade-union movement, in youth groups and in religious organizations until peace is achieved." The extent or success of this effort was not discussed. Instead, a recent demonstration of some 15,000 persons in Washington, D.C., "was not communist instituted, dominated or controlled," although party members participated. Party members also were "participants" in a "vigil" at the LBJ ranch. 440

FBI field offices were instructed in 1965 to intensify their investigation of "subversive activity" among student groups. 441 However, in 1967, there was concern that FBI intelligence activity on college campuses might be exposed by the controversy over CIA links with the National Student Association. Therefore, field offices were advised:

It is possible that this current controversy could focus attention on the Bureau's investigations of student groups on college campuses. It is also possible that student groups such as the Students for a Democratic Society and the W.E.B. DuBois Clubs of America could use this controversy as a vehicle to create some incident to embarrass the Bureau by claiming that we are infringing on academic freedom by investigating such groups. You should, therefore, bear in mind that in our continuing investigations to keep abreast of subversive influence on campus groups, in discharging our responsibilities in the internal security field, such investigations should be conducted in a most discreet and circumspect manner. Good judgment and common sense must prevail so that the Bureau is not compromised or placed in an embarrassing position.

Field offices were reminded that existing FBI policy required approval from headquarters before investigating individuals or groups "connected with an institution of learning," before interviewing students or faculty members, and before developing a student or faculty member "as an informant or source." These interviews or contacts were also to "be made away from the campus." 442

When the Katzenbach committee issued its report on CIA involvement with student groups, FBI Director Hoover canceled all outstanding authorizations "to contact students, graduate students, and professors of educational institutions in security matters ... [including] established sources, informants, and other sources." Field offices were instructed to request new authority from FBI headquarters "where contacts with such individuals are particularly important and necessary." 443

Thus, at least one dimension of the FBI's expanding domestic intelligence program in the 1960s was temporarily cut back to avoid criticism. Director Hoover's restrictions imposed in 1966-1967 on the use of other sensitive techniques, including electronic surveillance and surreptitious entries, are discussed elsewhere. 443a

The FBI's desires for intelligence conflicted directly with its fear of "embarrassment." Shortly after the cutback in campus coverage, the FBI formally characterized the Students for a Democratic Society for the first time. The characterization (or "thumbnail sketch") stressed the following information on "subversive" connections with SDS.

Gus Hall, General Secretary, Communist Party, USA, when interviewed by a representative of United Press International in San Francisco, California, on May 14, 1965, described the SDS as a part of the "responsible left" which the Party has "going for us." At the June, 1965, SDS National Convention, an anticommunist proviso was removed from the SDS constitution. In the October 7, 1966, issue of "New Left Notes," the official publication of SDS, an SDS spokesman stated that there are some communists in SDS and they are welcome. 444

As intelligence investigations of SDS chapters expanded, FBI officials realized that the restrictions on campus contacts "impose problems for the field." Field offices were advised to stress "the development of noncampus informants and sources" to maintain intelligence coverage of "subversive" activity at educational institutions. 445 Shortly thereafter, the restriction was lifted for contacts on campuses with "established sources functioning in an administrative capacity such as a Registrar, Director of Admissions, Dean of Men, Dean of Women and Security Officer, and their subordinates." Headquarters approval was still needed to contact students or professors. 446

An example of the scope of these investigations is the coverage of various antiwar teachins and conferences sponsored by the Universities Committee on Problems of War and Peace. A forty-one page report from the Philadelphia office, based on coverage by thirteen informants and confidential sources, described in complete detail a "public hearing on Vietnam."

A Communist Party official had "urged all CP members" in the area to attend, and one of the organizers was alleged to have been a Communist in the early 1950s. Upon receipt from an informant of a list of the speakers, the FBI culled its files for data on their backgrounds. One was described by a source as a Young Socialist Alliance "sympathizer." Another was a conscientious objector to military service. A third had contributed \$5.00 to the National Committee to Abolish the House Committee on un-American Activities. A speaker representing the W.E.B. DuBois Club was identified as a Communist. The FBI covered the meeting with an informant who reported practically verbatim the remarks of all the speakers, including the following:

The Chairman of the Philadelphia Ethical Society;

A representative of the American Civil Liberties Union;

A representative of the United Electrical Workers;

A spokesman for the Young Americans for Freedom;

A member of the staff of the "Catholic Worker";

A minister of the African Methodist Episcopal Church;

A minister of the Episcopal Church;

A representative of the Philadelphia Area Committee to End the War in Vietnam;

A professor of industrial economics at Columbia University;

A representative of the Inter-University Committee for Debate on Foreign Policy;

A member of Women's Strike for Peace who had traveled to North Vietnam;

A member of Women's International League for Peace and Freedom who had visited South Vietnam;

A chaplain from Rutgers University;

A professor of political science from Villanova University;

Another member of Young Americans for Freedom;

The former Charge d'Affaires in the South Vietnamese Embassy.

This informant's report was so extensive as to be the equivalent of a tape recording, although the FBI report does not indicate that the informant was "wired." Another informant reported the remarks of additional participants:

An official of the Committee for a Sane Nuclear Policy;

A minister of the Church of the Brethren;

A Unitarian minister;

A representative of United World Federalists;

A member of Students for a Democratic Society;

A member of the Socialist Workers Party;

A spokesman for the W.E.B. DuBois Clubs.

The report was prepared as a Letterhead Memorandum with fourteen copies for possible dissemination by the FBI to other Executive branch agencies. Copies were disseminated to military intelligence agencies, the State Department, and the Internal Security and Civil Rights Divisions of the Justice Department. 447

Even where there was no specific prior indication of Communist involvement, the FBI investigated emerging "New Left" groups such as "Free Universities" attached to various college campuses. For example, when an article appeared in a Detroit newspaper stating that a "Free University" was being formed in Ann Arbor, Michigan, and that it was "anti institutional," FBI headquarters instructed the Detroit Field Office to "ascertain through established sources the origin of this group and the identity of the individuals who are responsible for the formation of the group and whether any of these individuals have subversive backgrounds." A note on the instruction stated:

Several "Free Universities" have been formed in large cities recently by the Communist Party and other subversive groups. We are therefore conducting discreet investigations through established sources regarding all such "Free Universities" that come to the Bureau's attention to determine whether they are in any way connected with subversive groups. 448

The field office contacted five informants and confidential sources, prepared a ten-page letterhead memorandum describing in detail the formation, curriculum content, and associates of the group -- including several members of Students for a Democratic Society and the Socialist Workers Party. Although no further investigation was recommended, the report was disseminated to local military intelligence and Secret Service office, military intelligence and Secret Service headquarters in Washington, the State Department, and Internal Security Division of the Justice Department. 449

Intelligence developed under what the Bureau called its VIDEM Program on Vietnam demonstrations was teletyped to headquarters "for immediate dissemination to the White House and other interested Government agencies, followed by . . . routine dissemination to the intelligence community." 450 The White House not only received the product of FBI intelligence on antiwar demonstrations, but it also asked the Bureau to conduct "name checks" of its files on dozens of persons who signed telegrams critical of U.S. Vietnam policy. 451 An assistant to President Johnson also requested that the FBI monitor the televised hearings of the Senate Foreign Relations Committee on Vietnam policy and prepare a memorandum comparing statements of Senators William Fulbright and Wayne Morse with "the Communist Party line." 452 Another White House aide requested name checks on persons whose names appeared in the Congressional Record as signers of letters to Senator Morse expressing support for his criticism of U.S. Vietnam policy. 453

A similar request was channeled through Attorney General Ramsey Clark, who supplied a Presidential aide (at the latter's request) with a summary of information concerning the National Committee for a Sane Nuclear Policy. 454 This same aide

summarized for the President an FBI memorandum on "peace" demonstrations, pinpointing those particular examples which gave evidence that (as quoted from the Bureau report):

The Communist Party and other organizations are continuing their efforts to force the United States to change its present policy toward Vietnam 455

The exaggeration of Communist participation, both by the FBI and White House staff members, could only have had the effect of reinforcing President Johnson's original tendency to discount dissent against the Vietnam War as "Communist inspired." It is impossible to measure the larger impact on the fortunes of the nation from this distorted perception at the very highest policymaking level.

#### *E. Civil Disturbance Intelligence*

While no explicit directive from the Attorney General authorized the FBI's collection of intelligence about protest demonstrations in the early sixties, the Justice Department's Civil Rights Division made "oral requests" to the FBI for intelligence, including for example a tape recording of a speech by Governor-elect George Wallace of Alabama in late 1962 456 and "photographic coverage" of a civil rights demonstration on the 100th anniversary of the Emancipation Proclamation. 457 The FBI advised the Division of information from a "confidential source" about plans for a demonstration in Virginia, including background data on its "sponsor" and the intention to make "a test case." 458 The Division prepared regular summaries of information from the Bureau on "demonstrations and other racial matters." 459

The only formal directive on this intelligence activity was sent by Attorney General Kennedy to U.S. Attorneys throughout the South in May 1963. It instructed them to "make a survey" to ascertain "any places where racial demonstrations are expected within the next 30 days" and to make "assessments of situations" in their districts. The FBI was "asked to cooperate" with the U.S. Attorneys. 460

During the first small-scale Northern ghetto disturbances in the summer of 1964, President Johnson ordered the FBI to investigate their origins and extent. 461 However, after the FBI submitted a report on the Watts riots in Los Angeles in 1965, Attorney General Nicholas Katzenbach advised President Johnson that the FBI would only investigate "directly" the possible "subversive involvement." He did not believe the FBI should conduct a "general investigation" of "other aspects of the riot." The President approved this "limited investigation." 462 As described earlier (at pp. 475-477), internal Bureau instructions in 1965 and 1966 went far beyond this limitation.

Instructions to all FBI offices in 1966 stressed the need for "expanding awareness and alertness" regarding demonstrations against the Vietnam War. Director Hoover stated:

There are increasing indications that the public is losing patience with the continued succession of demonstrations which have been occurring in all parts of the nation. This rising tide of public indignation is more and more creating waves of retributive action directed at the demonstrators. Increasingly, irate spectators are rejecting their passive roles and expressing their opposition and indignation toward the demonstrators by attacking them physically.

On the other hand, leaders of many of the groups involved in demonstrations have been exhorting their followers to more "direct action tactics" to gain their ends. Thus, the demonstrations have been marked by a growing militancy. Clearly, the situation is one in which the conflict of interests produces a growing tension. With summer approaching, the potentialities for violent outbreaks will increase immeasurably, whether demonstrations are directed at opposition toward United States foreign policy in Vietnam or protests involving racial issues.

We must not only intensify and expand our coverage to insure prompt and accurate reporting of violent outbreaks of this nature but also to insure that advance signs of such outbreaks are detected and disseminated to appropriate authorities.

I want to stress to you that the emphasis in these matters must be on advance detection. Post mortem reporting is of secondary consequence. We are an intelligence agency and as such are expected to know what is going to or is likely to happen. National, state, and local authorities rely upon us to obtain this information so they can take appropriate action to avert disastrous outbreaks. 463

The urban riots of the summer of 1967 greatly intensified FBI domestic intelligence operations. Equally important, the Detroit and Newark riots brought other agencies of the Federal government into the picture. A Presidential Commission was established to study civil disorders, the Attorney General reexamined the intelligence capabilities of the Justice Department, and the use of Federal troops in riot torn cities led to widespread military intelligence surveillance of civilians. It was a period of intense pressure and little coordination. Antiwar protests under the banner of "Resistance to Illegitimate Authority" culminated in a massive march on the Pentagon in October 1967. The combination of ghetto violence, the highly-publicized militant rhetoric of figures like Stokely Carmichael and H. Rap Brown, widening protest against the Vietnam war, and increasing acts of civil disobedience during antiwar demonstrations generated intense demands for domestic intelligence.

In late July 1967 President Johnson created the National Advisory Commission on Civil Disorders to investigate and make recommendations with respect to:

(1) The origins of the recent major civil disorders in our cities, including the basic causes and factors leading to such disorders and the influence, if any, of organizations or individuals dedicated to the incitement or encouragement of violence.

(2) The development of methods and techniques for averting or controlling such disorders . . .

The President directed the FBI, in particular, to "provide investigative information and assistance" to the Commission. The President stated publicly that the FBI would "continue to exercise its full authority to investigate these riots, in accordance with my standing instructions, and continue to search for evidence of conspiracy." 464

Director Hoover appeared before the Commission on August 1, 1967. He discussed the role in certain disturbances of "rabble-rousers who initiate action and then disappear," and he identified Martin Luther King, Floyd McKissick (of the Congress of Racial Equality), and Rap Brown and Stokely Carmichael (of SNCC) as "vociferous firebrands who are very militant in nature and who at times incite great numbers to activity." When asked about proposed Federal antiriot legislation, Hoover expressed the "opinion that any law which allowed law enforcement the opportunity to arrest militant and vicious rabble-rousers like Carmichael and Brown would be healthy to have on the books." New York Mayor John Lindsay asked the FBI Director "if it would be possible to total up and fully identify the number of militant Negroes and whites who were in the same category as Carmichael and Brown" so that the Commission could learn "just exactly what the hard core in this country amounted to." Director Hoover replied "that the FBI, through its intelligence gathering, was of course capable of identifying and totaling up such individuals." Mayor Lindsay also asked "if the FBI had any intelligence regarding Negroes or white groups shifting money or firearms to foreign countries." Hoover answered "that the FBI had no such intelligence," but that Stokely Carmichael's travel to Cuba and other countries "should not be overlooked." Lindsay then observed that "such travels were apparently not widespread."

In his discussion of the riots in Watts, Newark, and Detroit, the FBI Director pointed out that the FBI "had no intelligence reflecting an overall organized conspiracy" and "that many of the riots occurred as the result of an incidental spark." However, he added "that the communist and other subversive forces always, while not initiating the riots, certainly attempted to exploit them once the riot started." The chairman, Governor Otto Kerner, asked that FBI reports be made available to the Commission. Director Hoover replied:

... that it should be definitely understood that the FBI cannot make individual investigations, but that the FBI would be most willing to make inquiries in communities where there are allegations of subversive influences, involvement of out-of-state influences, and the like.... [V]olumes on subversive organizations, as well as a rundown on major disorders and riots of this summer, would be left with the Commission at this time.

Following his meeting with the Commission, Director Hoover ordered his subordinates to intensify their collection of intelligence about "vociferous rabble-rousers." 465

Parallel with the FBI's expansion of domestic intelligence operations in 1967-1968, the Justice Department developed a mechanism for the analysis and evaluation of civil disturbance intelligence. Indeed, one substantial basis for FBI intelligence authority in this period was a memorandum from Attorney General Ramsey Clark to Director Hoover in September 1967:

Although the bulk of criminal offenses occurring in the course of recent riots have been local rather than federal in nature, the question as to whether there was an organization which (a) had made advanced plans for, and (b) was active during any of the riots in the summer of 1967 is one that cannot always be readily resolved by local authorities. In view of the seriousness of the riot activity across the country, it is most important that you use the maximum resources, investigative and intelligence, to collect and report all facts bearing upon the question as to whether there has been or is a scheme or conspiracy by *any group of whatever size, effectiveness or affiliation*, to plan, promote or aggravate riot activity. [Emphasis added.]

Attorney General Clark listed numerous Federal statutes which "could be applicable" in a specific situation, including criminal statutes on rebellion or insurrection, seditious conspiracy, advocacy of violent overthrow of the government (Smith Act), activities affecting the armed forces, Selective Service, interstate travel to commit arson or transport explosives, assault on a Federal officer, destruction of government property, firearms regulation, and crimes on Federal reservations. The Attorney General added:

I appreciate that the Bureau has constantly been alert to this problem and is currently submitting intelligence reports to us about riots and about the activity of certain groups and individuals before, during and after a riot. Indeed, the President has said both publicly and privately that the FBI is conducting extensive and comprehensive investigations of these matters.

There persists, however, a widespread belief that there is more organized activity in the riots than we presently know about. We must recognize, I believe, that this is a relatively new area of investigation and intelligence reporting for the FBI and the Department of Justice. We have not heretofore had to deal with the *possibility of an organized pattern of violence, constituting a violation of federal law*, by a group of persons who make the urban ghetto their base of operation and whose activities may not have been regularly monitored by existing intelligence sources.

In these circumstances, we must make certain that every attempt is being made to get all information bearing upon these problems; to take every step possible to determine whether the rioting is pre-planned or organized; and, if so, to determine the identity of the people and interests involved; and to deter this activity by prompt and vigorous legal action.

As a part of the broad investigation which must necessarily be conducted ... sources or informants in black nationalist organizations, SNCC and other less publicized groups should be developed and expanded to determine the size and purpose of these groups and their relationship to other groups, *and also* to determine the whereabouts of persons who might be involved in instigating riot activity in violation of federal law. Further, we need to investigate fully allegations of conspiratorial activity that come to our attention from outside sources . . . 466 [Emphasis added.]

In furtherance of the Attorney General's instructions, the FBI advised its field offices in October 1967 that there was "a definite need to develop additional penetrative coverage of the militant black nationalist groups and the ghetto areas immediately to be in a position to have maximum intelligence in anticipation of another outburst of racial violence next summer." For this purpose the FBI instituted a program for "the development of ghetto-type racial informants." In addition, the FBI intensified its existing "Black Nationalist Groups TOPLEV Informant Program." Racial informants were to be, "directed to obtain information concerning individuals who may be stockpiling firebombs, Molotov cocktails, weapons, and to identify any groups of terrorists who may be planning on carrying out a type of guerrilla warfare during riotous situations." 467

In contrast to previous policies for centralizing domestic intelligence investigations of "subversives," local police were encouraged to establish intelligence programs both for their use and to feed into the Federal intelligence gathering process, thus greatly expanding the domestic intelligence apparatus and making it harder to control.

In reaction to civil disorders in 1965-1966, Attorney General Nicholas Katzenbach had turned to the newly-created President's Commission on Law Enforcement and Administration of Justice for advice. After holding a conference with police and National Guard officials, the crime commission urged police not to react with too much force to disorder "in the course of demonstrations," but to make advance plans for "a true riot situation." This meant that police should establish "procedures for the acquisition and channeling of intelligence" for the use of "those who need it." 468 Former Assistant Attorney General Vinson recalls the Justice Department's concern that local police did not have "any useful intelligence or knowledge about ghettos, about black communities in the big cities." 469

During the winter of 1967-1968, the Justice Department and the National Advisory Commission on Civil Disorders reiterated the message that local police should set up "intelligence units" to gather and disseminate information on "potential" civil disorders. These units would use "undercover police personnel and informants" and draw on "community leaders, agencies, and organizations in the ghetto." 470 The Commission also urged that these local units be linked to "a national center and clearinghouse" in the Justice Department. 471 The unstated consequence of these recommendations was that the FBI, having regular liaison with local police, served as the channel (and supplementary repository) for this intelligence data.

These federal policies led to the proliferation of police intelligence activities, often without adequate controls. For example, a recent state grand jury report on the Chicago Police Department's "Security Section" revealed its "close working relationship" with federal intelligence agencies, including Army intelligence and the FBI. The report found that the police intelligence system produced "inherently inaccurate and distortive data" which contaminated Federal intelligence. For example, one police officer testified that he listed "any person" who attended two "public meetings" of a group as a "member." This conclusion was forwarded "as a fact" to the FBI. Subsequently, an agency seeking "background information" on that person from the Bureau would be told that the individual was "a member." The grand jury stated:

Since federal agencies accepted data from the Security Section without questioning the procedures followed, or methods used to gain information, the federal government cannot escape responsibility for the harm done to untold numbers of innocent persons. 472

Several urban police departments have more recently attempted to set "guidelines" for their security intelligence activities. 473

#### *F. The Justice Department and the IDIU*

Joseph Califano, who was President Johnson's assistant in 1967, has testified that the Newark and Detroit riots were a "shattering experience" for Justice Department officials and "for us in the White House." They were concerned about the "lack of intelligence," since they "didn't know what the black groups were" in Detroit. Consequently, "there was a desire to have the Justice Department have better intelligence, for lack of a better term, about dissident groups;" and this "precipitated the intelligence unit" set up by Attorney General Ramsey Clark in late 1967. The President and the White House staff were saying, "There must be a way to predict violence. We've got to know more about this." 474

In 1966 the Justice Department had started an informal "Summer Project," staffed by a handful of law students, to pull together data from the newspapers, the U.S. Attorneys, and "some Bureau material" for the purpose, according to former Assistant Attorney General Fred Vinson, Jr., of finding out "what's going on in the black community." 475 Vinson has recalled that many people "jumped to a conspiracy theory," and the government "would have been remiss" if it had not investigated. 476

In September 1967 Attorney General Ramsey Clark asked Assistant Attorney General John Doar to review the Department's "facilities for keeping abreast of information we receive about organizations and individuals who may or may not be a force to be taken into account in evaluating the causes of civil disorder in urban areas." After conferring with Assistant Attorneys General Fred Vinson of the Criminal Division and J. Walter Yeagley of the Internal Security Division, Doar reported their joint recommendation that the Department establish "a single intelligence unit to analyze the FBI information we receive about certain persons and groups who make the urban ghetto their base of operation." Doar also proposed that other Divisions of the Justice Department, including the Community Relations Service, should "funnel information to this unit." He recognized that the Community Relations Service risked losing "its credibility with people in the ghetto," but he believed the Department could develop safeguards to maintain "the confidentiality of the information." In addition, Doar recommended,

Other agencies of the government might become a source of intelligence information. This is a sensitive area, but the poverty programs, the Labor Department programs, and the Neighborhood Legal Services, all have access to facts which a unit in the Department might find helpful. At the very least the intelligence unit should know where the poverty programs are operating, where the Neighborhood Legal Services are located, who is staffed there so that if there were a need in a particular area the unit would know where to go to get additional factual material.

Other investigative agencies of the federal government might also furnish intelligence information, for example, the intelligence unit of the Internal Revenue Service. I found that in Detroit this unit under the direction of John Olszewski, had by far the best knowledge of the Negro areas in Detroit. According to Olszewski, the Alcohol, Tax and Tobacco Unit has the best intelligence on the geography of ghetto areas. The Narcotics Bureau is another possibility, and, finally, my experience in Detroit suggests that the Post Office Department might be helpful. Perhaps utilization of other agencies intelligence potential is too big and difficult a task, but I raise it for your consideration.

Beyond the FBI and other governmental sources Doar expected that the unit would become familiar with "the literature" -- including Jack Newfield's *The Prophetic Minority*, Howard Zinn's *The New Abolitionists*, and writings on the "New Left" by Andrew Kopkind and Nicholas von Hoffman -- and with the work produced by the Institute for Policy Studies and Studies on the Left. The unit would undertake "critical analysis" of intelligence data and prepare periodic reports and evaluations for the Attorney General "on the Organizations, on individuals and on particular urban areas."

It is evident from Assistant Attorney General Doar's memorandum that the primary purpose was to have a unit that would "include conclusions and recommendations" in its civil disturbance intelligence reports. This was a function the FBI would not perform. Instead, FBI reports to the Department normally carried the form statement: "This document contains neither recommendations nor conclusions of the FBI." Doar described current procedures for evaluation of intelligence:

The Internal Security Division has been engaged in evaluating FBI reports involving several thousand alleged Communists in order to determine their individual dangerousness (2300 per year). It also reviews FBI reports on more than 125 organizations and their officers. Internal Security says that it received 16,192 FBI reports and memoranda last year . . .

I note from Mr. Yeagley's memorandum ... that for the most part he restricts his lawyers to summarizing the pertinent facts in the memorandum and has discouraged them from injecting personal opinions or indulging any prognostication. He limits analysis to the recognition of whether particular information represents a fact, a probable fact or only a possible fact, or is pure fiction in evaluating material found in FBI reports, publications or other source material. I am not sure that I understand this distinction.

Doar also presented a sample from the FBI memoranda which came to the Civil Rights Division and showed the broad range of FBI intelligence reports. He did not recommend placing any limits on FBI intelligence collection. Instead, he proposed "that the scope be very broad initially."

We have not taken a broad spectrum approach to collection and analysis of intelligence. Rather, we have focused narrowly on individuals, a limited number of traditional subversive groups, and intelligence information about a suspect who may have become a subject of a specific statutory violation. As the unit became knowledgeable and sophisticated and could make reasonable judgments and could measure the influence of particular groups or organizations, then it could narrow its spectrum to a more limited target.

Doar anticipated that the unit would need five or six lawyers and six to eight college graduate research analysts. The lawyers would go out in the field to "become familiar with urban areas." 477

Attorney General Clark did not implement Doar's plan at once, but appointed a committee to study the matter further. In the meantime the Internal Security Division began "compiling an index and abstracts on individuals and organizations connected with civil disturbance matters." Approximately 1400 cards were prepared in the first two months. The Departmental committee made its report in December 1967. A careful review of the FBI's intelligence reports to the Internal Security Division disclosed that reports and files were being maintained on approximately 400 organizations, more than one-third relating directly "to the civil disturbance problem (due to a characterization as black power, new left, pacifist, pro-Red Chinese, anti-Vietnam War, pro-Castro, etc.)." The committee recommended that the new intelligence unit collate this data so as to develop "a master index on individuals, or organizations, and by cities." Departmental attorneys would prepare "monographs" on particularly important organizations, including "a statement of its purposes, its relevant activities within the past few years, the location of the headquarters and all branch offices of the organization, activities and significant background information concerning its officers and active members, etc." The unit would also draw on the Departmental files on individuals maintained under the Emergency Detention Program, which contained "brief synopses of approximately 10,000 individuals who are members of the Communist Party, the SWP, the Nation of Islam, etc." However, the committee stressed that the unit's "primary goal ... must be the meaningful evaluation of information received rather than preparation of an exhaustive index." There was also a potential for "computerizing the master index." Possible links to other government agencies were suggested:

As he becomes familiar with the subjects involved, the head of the Intelligence Unit should develop contacts with other intelligence gathering agencies. Since this may represent a duplication of the liaison established with the FBI, it should be undertaken with care. Possible sources of outside intelligence include the President's Commission on Civil Disorders, various corresponding state agencies such as the New Jersey Blue Ribbon Commission, CIA, State Department, Army Intelligence, National Security Agency, and Office of Economic Opportunity. In addition, other

federal agencies may have relevant information. These perhaps would include Department of Labor, Migration and Unemployment studies, Department of Housing and Urban Development surveys and Model City applications, the Treasury Department's Alcohol and Tobacco Tax Unit and Narcotics Bureau, and the general background information available from the Post Office Department Postal Inspector's Branch.

The committee did not seriously consider assigning the unit's analysis and evaluation functions to the FBI. It was divided as to whether the unit should be placed in the Internal Security Division or directly under the Attorney General and the Deputy Attorney General. In either case, there was a pressing need for "coordination" because of "the heavy flow of FBI reports to the Attorney General, the Deputy Attorney General, and the Internal Security, Criminal, and Civil Rights Divisions." On the other hand, it did "not seem wise to establish an elaborate organizational structure" because it was "impossible to tell how long the Intelligence Unit will need to exist." 477a

Attorney General Clark adopted the committee's recommendation and established a permanent Interdivision Information Unit (IDIU). He noted that it would "take over and extend the activities of the so-called Summer Project of the past two years" (in the Criminal Division). The IDIU was placed under the supervision of a Committee composed of the Director of the Community Relations Services and the Assistant Attorneys General in charge of the Civil Rights, Criminal, and Internal Security Divisions. The IDIU "charter" stated:

The Unit shall function for the purposes and within the guidelines expressed in my memorandum of November 9 and the report of December 6, 1967. It is enough to state here that, in the main, it shall be responsible for reviewing and reducing to quickly retrievable form all information that may come to this Department relating to organizations and individuals throughout the country who may play a role, *whether purposefully or not*, either in instigating or spreading civil disorders, or *in preventing or checking them*. 478 [Emphasis added.]

The memorandum of November 9, appointing the study committee had also stated:

It is imperative that the Department seek and obtain the most comprehensive intelligence possible regarding organized or other purposeful stimulation of domestic dissention, civil disorders, and riots. To carry out these responsibilities we must make full use of, and *constantly endeavor to increase* and refine, the intelligence available to us, both from internal *and external sources*, concerning organizations and individuals throughout the country who may play a role either in instigating or spreading disorders or in preventing or checking them. However, we do not now adequately use, such intelligence or develop and implement methods of improving intelligence. Thus, we do not have any systematic means at present of compiling and analyzing the voluminous information about various persons or organizations furnished to us by the FBI, and we make very little effort *to obtain information elsewhere*. 479 [Emphasis added.]

Finally, the committee report had formally defined the IDIU's responsibilities as follows:

1. Gathering facts from sources within and without the Department relating to organizations and individuals whose activities are or may be related to planning for or participating in civil disturbances.
2. Systematically collating, evaluating and recording such information so that it is subject to convenient and expeditious recalls.
3. Preparing periodic intelligence summaries, from time to time, or as directed by the Attorney General on persons, organizations and places including therein estimates and evaluations of potential disturbances.
4. Report immediately to the Attorney General the receipt of information indicating plans or attempts by individuals or organizations to foster or promote civil disorders, including therewith an evaluation of the source and pertinent background material.
5. Recommending to the Attorney General means for obtaining additional intelligence.
6. Consulting with the Assistant Attorneys General of Internal Security, Criminal and Civil Rights Divisions and the Director of the Community Relations Service on each of the above functions. 480

The IDIU, later renamed the Interdivisional Intelligence Unit, obtained computer facilities in 1968 and continued to function as the Attorney General's main source of civil disturbance intelligence analysis until 1971, when the Intelligence Evaluation Committee was created in the aftermath of the "Huston Plan." 480a The IDIU and the IEC both existed from 1970 until 1973, when the IEC was abolished. The IDIU has been renamed the Civil Disturbance Unit and remains, on a more limited basis, the Attorney General's principal source for regular summaries of information about civil disturbances.

The IDIU's work in 1968 was summarized as follows by Assistant Attorney General Yeagley:

The Unit, immediately upon its establishment, embarked on an information retrieval system utilizing automatic data processing, which ... constitutes probably the best information retrieval system in the Department. In pursuit of its duties, the analysts and attorneys during the year 1968 reviewed more than 32,000 FBI investigative reports, teletypes, *army intelligence reports* and other material

concerning individuals and organizations involved primarily in the area of *racial agitation*. In addition, but on a more selective basis, the Unit has also followed certain other activities, when related.... Information concerning individuals and organizations who are the subjects of the reports coming into the Unit is abstracted by the analysts and put on special forms for automatic data processing. The information input concerns itself with data regarding disturbances and incidents such as individual fire bombings, gunfire, attacks on police or other officials, vandalism, etc., which may occur in a particular locality which appear to be caused by or to contribute to racial unrest. [Emphasis added.]

The computer system could generate reports listing all individuals "who are members or affiliates of any particular organization," as well as their location and travel. IDIU also had the capability to produce reports on:

All incidents relating to *specific issues* or specific coded events such as all Black Power activity or all incidents relating to convention demonstrations or all information to some future and planned specific demonstration, such as we had in connection with the Chicago Democratic Convention and the demonstrations on Inaugural weekend in Washington. 481

A later review of IDIU operations states that "1968 entries in the IDIU files include numerous anti-war activists and other dissidents." 482

The IDIU's receipt and use of Army intelligence reports in 1968 had the effect, if perhaps not the full intent, of providing the Attorney General's implicit authorization for a vast expansion of military surveillance of civilians during this period. At a White House meeting in January 1968, Attorney General Clark told those present (including Defense Department officials) that "every resource" must be used in the domestic intelligence effort, although he asked the Army to be more selective in the reports it sent to the Justice Department. 411 The Army's intelligence collection plans of February 1, 1968, and May 2, 1968, were circulated to the Justice Department; and Army intelligence officers received specific oral requests from the Justice Department. 483a There was never a formal decision by civilian officials in the Defense Department or the Justice Department which explicitly authorized Army surveillance of civilian political activity. However, the practice was accepted without challenge by those responsible officials who received the intelligence product. For example, Deputy Attorney General Warren Christopher thanked an Army intelligence officer for the Army's spot reports and daily summaries, although he explained that the FBI would be in charge of distributing intelligence to other agencies and that the IDIU provided analyses for intradepartmental use only. 484

As a result of the long-standing Delimitations Agreement, the FBI and military intelligence shared their intelligence product. Consequently, FBI reports constituted a substantial part of the information about civilians stored in the Army's computerized data banks. Likewise, the military's surveillance efforts complemented the FBI's intelligence coverage, especially with respect to groups which could be infiltrated by Army intelligence agents more readily than by FBI agents or FBI-recruited informants. Thus, by the end of 1968 a massive domestic intelligence apparatus had been established in response to ghetto riots, militant black rhetoric, antiwar protest activity, and campus disruptions. To a great extent each component of the structure -- FBI, IDIU, military -- set its own generalized standards and priorities.

In the first year of the Nixon Administration, Attorney General John Mitchell and Deputy Attorney General Richard Kleindienst sought to bring greater order and coherence to the domestic intelligence operations set in motion by their predecessors. The Attorney General and the Secretary of Defense developed an "Interdepartmental Action Plan for Civil Disturbances" under which the Attorney General was designated "as the chief civilian officer in charge of coordinating all Federal Government activities relating to civil disturbances." The plan provided:

Under the supervision of the Attorney General, raw intelligence data pertaining to civil disturbances will be acquired *from such sources of the Government as may be available*. Such data will be transmitted to the Intelligence Unit of the Department of Justice, and it will be evaluated on a continuing basis by representatives from various departments of the Government. After evaluations have been made, the data will be disseminated to the Attorney General, the Secretary of Defense, and the White House. [Emphasis added.]

During the early stages of a crisis in which it appears that a request for Federal military assistance may be forthcoming, the intelligence organization of the Department of Justice will alert the Attorney General and the Secretary of Defense. It is expected that responsible State and local officials will promptly inform the Attorney General of the situation and will thereafter keep him informed of developments. When advised that a serious disturbance is in the making, the Attorney General will immediately inform the President.

If time permits, the Attorney General and the Secretary of Defense may dispatch their personal representatives to the disturbance area to appraise the situation before any decision is made to commit Federal forces. Such action can help to assure that the Federal Government responds in accordance with the realities of the situation as perceived by its own observers. 485

The plan formalized the use of civil disturbance teams to be sent out from Washington when IDIU evaluations indicated possible serious disorder. However, it did not clarify which federal agencies would collect civil disturbance intelligence, thus permitting the Army to continue its surveillance of civilian activity. Military intelligence operations continued unabated until 1970, when public exposure and Congressional criticism led to a substantial curtailment. 486

Pursuant to the plan, the first Intelligence Evaluation Committee was created to advise the Attorney General as to the steps to be taken in case of possible serious disorders. Its members included the heads of the Internal Security and Criminal Divisions, the Community Relations Service, and the IDIU, as well as representatives from the Civil Rights Division, the Secret Service,

and Army Intelligence. The chairman was the Assistant to the Director of the FBI, Cartha DeLoach. This prominent role for the FBI was a significant departure from previous practice under Attorney General Clark. 487 The head of the IDIU, James T. Devine, described its functions in 1970:

The Information Unit is responsible for collecting, analyzing, and computerizing all intelligence information received by the Department in the area of civil disorders *and campus disturbances*. This intelligence encompasses information on both events and individuals past, prior, and during actual disorders. Intelligence information is received from the FBI, the U.S. Attorneys, Bureau of Narcotics and Dangerous Drugs, Military Intelligence, Alcohol, Tobacco, and Firearms Division of the Treasury Department and other intelligence gathering bodies within the Executive Branch. These intelligence reports run in excess of 42,000 a year. [Emphasis added.]

The Unit produces a daily morning and evening report on disturbances nation-wide and a summation weekly report....

The Unit produces a complete print-out of all intelligence within the ADP system on a weekly basis for study as to the degree of civil disturbance intensity throughout various sections of the country. Upon request by concerned citizens, special printouts are made on such subjects as BPP [Black Panther Party] activities, foreign travel, assaults on police, bombings during a given period, high school disorders, etc.... [Emphasis added.]

The Chief ... is chargeable with the intelligence briefing of all Civil Disturbance teams prior to their commitment to a given area. Intelligence briefings are also provided on an intermittent basis to senior officials of the Department of Defense. This office is further charged with maintaining liaison with Chiefs of Police, Public Safety Directors and the offices of Mayors and State Governors as a situation warrants. 488

The references to campus disturbances, the Black Panther Party, and foreign travel indicate some of the highest priorities for domestic intelligence in 1969-1970. In addition Assistant Attorney General Jerris Leonard of the Civil Rights Division, who was assigned as the Attorney General's Chief of Staff for the Civil Disturbance Group, arranged in 1970 for the Justice Department "to make available for examination or copying, to designated officials of the Central Intelligence Agency, computerized tapes of information submitted by the IDIU." An inquiry in 1975 concluded that the Department "initiated the transaction by requesting the CIA to check against its own sources whether any of the individuals on the IDIU list were engaged in foreign travel, or received foreign assistance, or funding. At the time, it was provided to the CIA, the IDIU subject list contained records of approximately ten to twelve thousand individuals. The records contained identifying information, aliases, brief narratives and file sources of the data, including FBI inputs." 489 An examination of the IDIU computer printout in 1971 disclosed such prominent names as Rev. Ralph Abernathy, Cesar Chavez, Bosley Crowther (former New York Times film critic), Sammy Davis, Jr., Charles Evers, James Farmer, Seymour Hersh, Julius Hobson, and Mrs. Coretta King. Organizations noted in the computer printout included the NAACP, the Congress of Racial Equality, the Institute for Policy Studies, VISTA, United Farm Workers of California, and the Urban League. Many ordinary people who were not prominent nationally had their names included in the IDIU subject data listing. One was described as "a local civil rights worker," another as "Student at Merritt College and member of Peace and Freedom Party as of mid '68," and another as "a breaded militant who writes and recites poetry." 490

There were some congressional misgivings expressed about the Justice Department's procedures for handling demonstrations in Washington, D.C. To allay these concerns, the Department prepared a report on *Demonstration and Dissent in the Nation's Capital*. With respect to intelligence, the report stated:

Accurate and complete information is essential for the planning necessary to achieve peaceful demonstrations and for dealing with disorders. It is not only important to know how many are coming at a particular time, but who they might be and why they are coming. *This kind of relevant information is freely available to anyone*; it is only necessary to collect it in one place and, having collected it, to evaluate it in order to make value judgments and to formulate a plan of action. To provide the concerned departments and agencies with reliable information, there has been established within the Department of Justice an Interdivisional Information Unit (IDIU) and an Intelligence Evaluation Committee. Whenever the information indicates a large demonstration may occur, all intelligence concerning that potential demonstration is reviewed by the Intelligence Evaluation Committee. The Intelligence Evaluation Committee is composed of officials of the Executive Branch experienced with demonstrations and in assessing the potential for disorders. The Intelligence Evaluation Committee weighs all of the available information and reports its conclusions regarding the potential for disorder to the Attorney General. 491 [Emphasis added.]

The Justice Department report did not make clear that the IDIU and the first IEC received and evaluated not only publicly available information, but also data provided from clandestine intelligence investigations by the FBI and military intelligence.

In 1971, Assistant Attorney General Robert Mardian issued new guidelines" for the IDIU, which stated in part:

... IDIU must analyze and monitor all information relating to past civil disorders as well as information relating to the potential for civil disorder .... [W]e must identify and understand the philosophies of organizations and individuals who have engaged in civil disorder or have demonstrated a propensity to do so.

In carrying out our purpose, it is imperative that the analysts involved keep clearly in mind that IDIU is not an investigative agency. Its mission, reduced to its simplest essential, is merely the indexing and

filing of information collected by investigatory agencies, principally the FBI, and information furnished by the news media in a quickly retrievable form.

. . . [W]e must take every reasonable precaution to insure that the identity of individuals included in our indexes be protected from unauthorized or inadvertent disclosure. We must keep clearly in mind that it is the use to which the information is put rather than the collection of the information itself that gives rise to the greatest possibility of abuse .... 492

These "guidelines" were prepared shortly before Assistant Attorney General Mardian and other Justice Department officials were called to testify before the Senate Subcommittee on Constitutional Rights, which was inquiring into military surveillance and other domestic intelligence collection programs. At those hearings Mardian did explain that IDIU relied on FBI reports for most of its information; but Justice Department officials did not disclose the reorganized IEC, nor did they provide the Subcommittee with FBI's standards of intelligence collection. 493

Assistant Attorney General William Rehnquist defended the power of the executive to collect any information which was "legitimately related to the statutory *or constitutional* authority of the executive branch to enforce the laws." [Emphasis added.] He cited the Supreme Court's opinion in *In Re Neagle*, 135 U.S. 1, 64 (1890), interpreting the President's duty to "take care that the Laws be faithfully executed" under Article 11, section 3 of the Constitution. The Court had construed the word "Laws" to encompass not only statutes enacted by Congress, but also "the right, duties and obligations growing out of the Constitution itself, our international relations, and all the protection implied by the nature of government under the Constitution." Assistant Attorney General Rehnquist also cited as a basis for gathering intelligence about both protest demonstrations and ghetto unrest Article IV, section 4 of the Constitution which provides, "The United States shall guarantee every State in this Union a Republican Form of Government and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic violence." This provision had traditionally been understood as authorizing the President to dispatch federal troops under implementing statutes passed in 1792 and the 1860's. But the Justice Department now asserted that it was "another basis of the information gathering authority of the Executive Branch," therefore justifying "investigative activities . . . directed to determine the possibility of domestic violence occurring at a particular place or at a, particular time." 494

#### G. "New Left" Intelligence

The FBI collected intelligence under its VIDEM (Vietnam Demonstration) and STAG (Student Agitation) programs on "anti-Government demonstrations and protest rallies" which the Bureau considered "disruptive." Field offices were warned against "incomplete and nonspecific reporting," which neglected such details as "number of protesters present, identities of organizations, and identities of speakers and leading activists." Although every person arrested at a demonstration was not automatically investigated by the FBI, all that was needed to open an individual case was some "propensity for violence" or association with "subversive or revolutionary activity." 491

After the disorders at Columbia University and other campuses, in 1968, FBI field offices were instructed:

The most recent outbreak of violence on college campuses represents a direct challenge to law and order and a substantial threat to the stability of society in general. The Bureau has an urgent and pressing responsibility *to keep the intelligence community informed* of plans of new left groups and student activists to engage in acts of lawlessness on the campus. We can only fulfill this responsibility through the development of high quality informants who are in a position to report on the plans of student activists to engage in disruptive activities on the campus. [Emphasis added.]

In view of the increased agitational activity taking place on college campuses, each office is instructed to immediately expand both its coverage and investigation of campus-based new left groups and black nationalist organizations with the objective of determining *in advance* the plans of these elements to engage in violence or disruptive activities on the campus. It cannot be too strongly emphasized that all offices are expected to develop and maintain adequate sources to enable the Bureau to determine *in advance* and promptly report agitational activities being planned by campus based groups. In carrying out these instructions, you should, of course, be guided by existing regulations which require that Bureau authorization be obtained prior to the development of informants and sources on college campuses ... 496

The possibility of "embarrassment" placed some limits on intelligence operations, especially when there was adverse publicity. The following is one example:

At a recent antidraft demonstration, a Bureau Agent posing as a newsman was recognized by a representative of a newspaper that has been traditionally hostile to the FBI. The Special Agent involved was attempting to identify the demonstrators and those who were burning their draft cards, and to record statements of various individuals participating in the demonstration. A distorted news item regarding the Agent's activities appeared in a subsequent issue of that paper reflecting the Bureau in an unfavorable light.

Consequently, you should instruct your Agent personnel that, henceforth, no matter what the justification, they are not to pose as newsmen or representatives of any wire service for the purpose of establishing an investigative cover. 497

The FBI attempted to define the "New Left," but with little success. Field offices were told that it was a "subversive force" dedicated to destroying our "traditional values." Although it had "no definable ideology," it was seen as having "strong

Marxist, existentialist, nihilist and anarchist overtones." Field offices were instructed that "proper areas of inquiry" regarding the subjects of "New Left" investigations were "public statements, the writings and the leadership activities" which might establish their "rejection of law and order" and thus their "potential threat to the security of the United States." Such persons would also be placed on the Security Index because of these "anarchistic tendencies," even if the Bureau could not prove "membership in a subversive organization." 498

Later instructions to the field stated that the term "New Left" did not refer to "a definite organization," but to a "loosely bound, freewheeling, college-oriented movement" and to the "more extreme and militant anti-Vietnam war and antidraft protest organizations." These instructions initiated a "comprehensive study of the whole movement" for the purpose of assessing its "dangerousness." Quarterly reports were to be prepared, and "subfiles" opened, under the following headings:

Organizations ("when organized, objectives, locality in which active, whether part of a national organization");

Membership (and "sympathizers" -- use "best available informants and sources");

Finances (including identity of "angels" and funds from "foreign sources");

Communist influence;

Publications ("describe publications, show circulation and principal members of editorial staff")

Violence;

Religion ("support of movement by religious groups or individuals");

Race Relations;

Political Activities ("details relating to position taken on political matters including efforts to influence public opinion, the electorate and Government bodies")

Ideology;

Education ("courses given together with any educational outlines and assigned or suggested reading");

Social Reform ("demonstrations aimed at social reform")

Labor ("all activity in the labor field");

Public Appearances of Leaders ("on radio and television" and "before groups, such as labor, church and minority groups," including "summary of subject matter discussed");

Factionalism;

Security Measures;

International Relations ("travel in foreign countries," "attacks on United States foreign policy");

Mass Media ("indications of support of New Left by mass media").

Through these massive reports, the FBI hoped to discover "the true nature of the New Left movement." 499 Few Bureau programs better reflect "pure intelligence" objectives going far beyond even the most generous definition of "preventive intelligence."

The FBI prepared a study of "Youth in Rebellion" early in 1969. This "comprehensive document on new left and black extremist activities" was designed to review the "worldwide ramifications of these movements as well as their impact on the internal security of the country." 500 When the FBI completed this report, the Internal Security Division of the Justice Department specifically authorized the FBI to conduct investigations "to determine whether there is any underlying subversive group giving illegal directions and guidance to the numerous campus disorders throughout the country." The Internal Security Division also submitted "suggested areas of particular interest for future investigative efforts." 501 These instructions were generally comparable to Attorney General Clark's September 1967 memorandum regarding ghetto riots and civil disturbance intelligence. Both were taken by the FBI as broad authorizations for domestic intelligence investigations. 502

An additional request from the Internal Security Division in March 1969 advised the FBI that the Justice Department was "considering the possibility of conducting a grand jury investigation of some future serious campus disorder" with a view towards prosecution under the antiriot act, the Smith Act, the Voorhis Act, and statutes on seditious conspiracy and insurrection. Consequently, the Internal Security Division asked the FBI:

... to secure in advance the names of any persons planning activities which might fall within the proscription of any of the foregoing statutes. It would also be important for us to know the identities of the officials of any participating organizations who have custody or control of records concerning the activities of such organizations which we would seek to obtain by means of subpoenas duces tecum.

It would also be most helpful if you were able to furnish us with the names of any individuals who appear at more than one campus either before, during, or after any active disorder or riot and the identities of those persons from outside the campus who might be instigators of these incidents.

The FBI was asked to use not only its "existing sources" but also "any other source you may be able to develop...." 503

Despite the pressure for greater intelligence about campus groups, Director Hoover decided "that additional student informants cannot be developed." Nevertheless, the FBI field offices were instructed to intensify their efforts: "It is ... recognized that with the graduation of senior classes, you will lose a certain percentage of your existing student informant coverage. This decreasing percent of coverage will not be accepted as an excuse for not developing the necessary information." 504 One way to achieve this result without the FBI recruiting additional student informants was to have local police do so. Thus, when field offices were reminded of the need for gathering intelligence so that the Justice Department could provide "data regarding developing situations having a potential for violence," FBI headquarters stressed the need for "in-depth liaison with local law enforcement agencies." 505 The restriction on new campus informants was finally relaxed, although field officers were still forbidden to develop informants "under the age of 21" and procedures were instituted "for tight controls and great selectivity in this most sensitive area."

Upon initial contact with a potential student informant or source, informant or source should be requested to execute a brief signed written statement for the field file to the effect that such individual has voluntarily furnished information to the FBI because of his concern of individuals and groups *acting against the interests of his government* and that he understands that the FBI is not interested in the legitimate activities of educational institutions. [Emphasis added.]

Field offices were also to submit quarterly reports assessing the productivity of each student informant so as "to justify the continued utilization of the source." 506 FBI Intelligence Division officials were greatly dissatisfied with these limits, as became clear in the preparation of the "Huston Plan" in 1970. 507

FBI intelligence surveillance of the New Left was further expanded in early 1970 after an explosion at a New York City townhouse killed several youthful bomb-makers and dramatized the violence potential of the Weatherman faction of SDS. Because members of the Weatherman faction were believed to live in communes, all FBI field officers were instructed:

For the purposes of Bureau investigations, a commune is defined as a group of individuals residing in one location who practice communal living, i.e., they share income and adhere to the philosophy of a Marxist-Leninist-Maoist oriented violent revolution.

A rebuttable presumption exists that persons having a past history of participation in violent leftist radical activity, or leftist terrorist activity, living in a communal relationship constitutes a commune within the above definition.

When information is received by an office that indicates a commune exists, falling within the above definition, it is incumbent upon that office to conduct sufficient investigation to determine the identity of all members. Each member must be investigated as a suspected extremist within the framework of existing instructions to determine whether they should be included on the Security Index. Every effort must be made by the office to obtain informant and/or sophisticated coverage of the commune and its participants to develop advance knowledge of any planned violence so that preventative action can be initiated and prosecutive action brought to bear where possible. 508

To conduct more intensive investigations of "terrorism by New Left extremists," the FBI Intelligence Division requested that additional manpower be assigned. Director Hoover noted, "O.K. but it must be kept in mind that we will get no additional personnel until July 1971 so whatever personnel is needed now will have to come from cutbacks in other programs." 509 To a significant extent these resources were drawn away from the FBI's counterintelligence effort against hostile foreign intelligence operations in the United States. 510

By the time of the widespread disturbances following the Cambodian invasion and Kent State, the Intelligence Division believed 451 additional agents were needed for New Left investigations, with an increase to 741 "for peak periods." The Intelligence Division explained the need for more agents in the following terms:

The tragic, violent aftermath of violence and destruction on our campuses following the President's speech on Cambodia is a clear warning of the impact of New Left terrorist philosophy and advocacy of street action. The ability of radical activists to seize a controversial issue and whip up violent reaction among large crowds is again demonstrated. The threat to the Nation's ability to function in a crisis situation posed by New Left extremists has never been more clearly drawn. This grave threat requires immediate and positive steps be taken to fulfill our responsibilities for protection of the internal security of the Nation. 511

Subsequent instructions to the field stressed intensified investigation of persons adhering to the "Weatherman ideology of violence and revolution", and again observed that "communal living follows Weatherman lifestyle and is good guide to individual's adherence to Weatherman ideology." Persons who used "terroristic tactics in furtherance of revolution" were to be

considered "for inclusion in Priority I of Security Index." Field offices were directed to "begin shifting personnel to this work from other work areas, except for personnel specifically designated for organized crime work...." 512

#### *H. Target Lists and the Security Index*

After meeting with the President's Commission on Civil Disorders in 1967, FBI Director Hoover instructed "that an index be compiled of racial agitators and individuals who have demonstrated a propensity for fomenting racial discord." 513 Standards for the Rabble Rouser Index were then sent to the field:

The Index will consist of the names, identifying data, and background information of individuals who are known rabble rousers and who have demonstrated by their actions and speeches that they have a propensity for fomenting racial disorder. It is desired that only individuals of prominence who are of national interest be included on this index. Particular consideration should be given to recommending those individuals in this category who travel extensively ... The fact that an individual is on the Security Index or Reserve Index does not preclude his inclusion on the Rabble Rouser Index. 514

The initial effect of the Rabble Rouser Index was to collect in files at FBI headquarters all information from the field offices about persons on the Index. Field offices were also to provide information about their "possible foreign travel." 515 The first Index contained less than 100 names. 516

At the same time as the creation of the Rabble Rouser Index, the FBI instituted a COINTELPRO program aimed at disrupting and discrediting black nationalist or black "extremist" groups and individuals. The Rabble Rouser Index served as a convenient list of primary targets for COINTELPRO activity. 517 Within the FBI Domestic Intelligence Division, there was a substantial reorganization to take account of these new functions in 1967. The Subversives Control Section was abolished and its supervision of investigations of individual "subversives" -- both "Old Left" and "New Left" -- were transferred back to the Internal Security Section. A new Racial Matters Section was established to supervise intelligence investigations of black and white "extremist" groups.

The standards for the Rabble Rouser Index were broadened in November 1967 to cover persons with a "propensity for fomenting" any disorders affecting the "internal security," not just racial disorders, and to include persons of local as well as national interest. A rabble rouser was defined "as a person who tries to arouse people to violent action by appealing to their emotions, prejudices, et cetera; a demagogue." The purpose of this expansion to develop a nationwide index "of agitators of all types whose activities have a bearing on the national security." This included "black nationalists, white supremacists, Puerto Rican nationalists, anti-Vietnam demonstration leaders, and other extremists." 518 Standardized forms for automatic data processing of the Index by computer included the following organizational affiliation categories:

American Nazi Party

Anti-Vietnam

Black Nationalist

Black Panther Party

Communist

Congress of Racial Equality

Ku Klux Klan

Latin American

Minuteman

Nation of Islam

National States Rights Party

Progressive Labor Party

Nationalist groups advocating Independence for Puerto Rico

Revolutionary Action Movement

Southern Christian Leadership Conference

Students for a Democratic Society

Student Nonviolent Coordinating Committee

Socialist Workers Party

Workers World Party

Miscellaneous 519

The overlap with the Security Index is indicated by the inclusion in 1968 of Students for a Democratic Society and the Student Nonviolent Coordinating Committee in a list of organizational affiliations for the Security Index. By 1968 the Security Index also contained persons without organizational affiliation designated "Anarchist" and "Black Nationalist." 520

The Rabble Rouser Index was renamed the Agitator Index in March 1968, and field offices were directed to obtain a photograph of each person on the Index. 521

The Domestic Intelligence Division also stressed the dangerousness of the "New Left" movement and the need to include its "leading activists" on the Security Index.

The emergence of the new left movement as a subversive force dedicated to the complete destruction of the traditional values of our democratic society presents the Bureau with an unprecedented challenge in the security field. Although the new left has no definable ideology of its own, it does have strong Marxist, existentialist, nihilist and anarchist overtones. While mere membership in a new left group is not sufficient to establish that an individual is a potential threat to the internal security of the United States, it must be recognized that many individuals affiliated with the new left movement do, in fact, engage in violence or unlawful activities, and their potential dangerousness is clearly demonstrated by their statements, conduct and actions.

The Bureau has recently noted that in many instances security investigations of these individuals are not being initiated. In some cases, subjects are not being recommended for inclusion on the Security Index merely because no membership in a basic revolutionary organization could be established. Since the new left is basically anarchist, many of the leading activists in it are not members of any basic revolutionary group. It should be borne in mind that even if a subject's membership in a subversive organization cannot be proven, his inclusion on the Security Index may often be justified because of activities which establish his anarchistic tendencies. In this regard, you should constantly bear in mind *the public statements, the writings and the leadership activities* of subjects of security investigations which establish them as anarchists *are proper areas of inquiry*. Such activity should be actively pursued through investigation with the ultimate view of including them on the Security Index. It is entirely possible, therefore, that a subject without any organizational affiliation can qualify for the Security Index by virtue of his public pronouncements and activities which establish *his rejection of law and order* and reveal him to be *a potential threat* to the security of the United States. [Emphasis added.]

Field offices were cautioned, however, "that mere dissent and opposition to the Governmental policies pursued in a legal constitutional manner are not sufficient to warrant inclusion in the Security Index." Agents were to report information "to show the potential threat and not merely show anti-Vietnam or peace group sentiments without also revealing advocacy of violence or unlawful action which would justify an investigation." 522

At the same time that these instructions were issued, the FBI instituted a COINTELPRO program against the "New Left." The Agitator Index and the Security Index served as indicators of the prime subjects for efforts under COINTELPRO to disrupt groups and discredit individuals in the "New Left." 523

The FBI did not develop its new Security Index policies alone. As the Commission on Civil Disorders had encouraged the FBI to identify "rabble rousers," so President Johnson ordered a comprehensive review of the Government's emergency plans after the October 1967 March on the Pentagon against the Vietnam war.

Attorney General Ramsey Clark was appointed chairman of a committee to review the Presidential Emergency Action Documents (PEADs) prepared under the Emergency Detention Program. Subsequent decisions were summarized in an FBI memorandum:

After extensive review, in which the FBI participated, a proposal was submitted to the President that certain documents be revised. It was proposed that the Emergency Detention Program be revised to agree with the provisions of the Emergency Detention Act [of 1950].

The Internal Security Division (ISD) of the Department has raised questions as to the ability to discharge the responsibilities of the Attorney General under the Emergency Detention Act of 1950. By letter dated 2/26/68 the Department requested a conference with the FBI for the purpose of reviewing the implementation of the Emergency Detention Program ...

One of the changes in PEAD pertains to the definition of "dangerous individual". The document, which has been approved by the President, now states, "The Attorney General acting through such officers and agents as he may designate for the purpose, shall apprehend, and by order detain, pursuant to the provisions of the Emergency Detention Act, each person as to whom there is reasonable ground

to believe that such person probably will engage in, or probably will conspire with others to engage in, acts of espionage and sabotage, including acts of terrorism or assassination and any interference with or threat to the survival and effective operation of the national, state, and local governments and of the national defense effort." As used in this section, the term "person," shall mean any citizen or national of the United States, or any citizen, subject or national of any foreign nation, or any stateless person.

The above is an all encompassing definition of a "dangerous person". This will extend the criteria for the Security Index.

During the conference of 4/22/68 with ISD, the definition of a dangerous individual was discussed, and it was decided that Item D of the SI criteria should be expanded to include the definition as stated in the new PEAD 6...

With the emergence of the New Left and the intensification of activities by the racial militants and black nationalists, who are not affiliated with basic revolutionary organizations but because of their anarchist tendencies do present a threat to the internal security of the United States, it has become apparent that these individuals warrant inclusion on the SI.

Many individuals on the SI, because of their violent tendencies and their representation of top leadership of subversive organizations, are scheduled for priority apprehension. The administrative procedures developed to make these apprehensions are referred to as the Detcom Program. In an all-out emergency, all subjects whose names are in the SI will be considered for immediate apprehension.

The new priorities for apprehension under Detention Program were described as follows:

*Priority I.* -- Top national and state leadership of basic subversive organizations, leaders of anarchistic groups, individuals who have shown greatest propensity for violence, as well as those who have special training in sabotage, espionage, guerrilla warfare, etc....

*Priority II.* -- Second level leadership and individuals who present significant threat but are in less influential positions than Priority II . . .

*Priority III.* -- All other individuals on SI. Made up mainly of rank and file members . . .

Results of FBI investigations would continue to be provided to the Justice Department "for its concurrence and approval of the persons listed for apprehension ". 524

The FBI formally requested Departmental approval for the broader Security Index criteria and the standards for the Priority Apprehension Program. 525 Even though the Department's formal reply was that the criteria were "under study," the FBI went ahead with Manual revisions and new instructions to the field. 526 There was "informal" Departmental approval for these changes, as noted in a later memorandum. 527

The Justice Department's Office of Legal Counsel eventually approved a modified version of the Security Index criteria in September 1968. Since this was the first time since 1955 that the Department had fully considered the matter, it is important to stress that the previous policy of disregarding the Emergency Detention Act of 1950 was now formally abandoned. If an emergency occurred, the Attorney General would abide by "the requirement that any person actually detained will be entitled to a hearing at which time the evidence will have to satisfy the standards of ... the Emergency Detention Act". However, the Security Index criteria themselves could be less precise because of "the needed flexibility and discretion at the operating level in order to carry on an effective surveillance program." As revised by the Office of Legal Counsel, the Security Index criteria read as follows:

A. Membership or participation in the activities of a basic revolutionary organization within the last 5 years as shown by overt acts or statements established through reliable sources, informants or individuals.

B. Subject has had membership or participation in the affairs of one or more front organizations which adhere to the policies and doctrines of a basic revolutionary organization, in a leadership capacity or by active substantial participation in the furtherance of those aims and purposes of the front organization which coincide with those of a basic revolutionary organization, within the last three years as shown by overt acts or statements established through reliable sources, informants, or individuals.

C. Investigation has developed information that an individual, though *not a member of or a participant* in the activities of a basic revolutionary or front organization, has *anarchistic or revolutionary beliefs* and is likely to seize upon the opportunity presented by a national emergency to commit acts of espionage or sabotage, including acts of terrorism, assassination, or *any interference with* or threat to the survival and *effective operation* of the national, state and local governments and of the defense effort. [Emphasis added.]

D. Although investigation has failed to establish the facts required by (A), (B) or (C) above, either as to the substance of those criteria or because there have been no overt acts or statements within the time

limits prescribed, facts have been developed which clearly and unmistakably depict the subject as a dangerous individual who could be expected to commit acts of the kind described in (C) above. 528

The Internal Security Division forwarded the Office of Legal Counsel's memorandum to the FBI, and the Bureau agreed that it would "be guided by these revised criteria of 1968." The FBI Manual was changed accordingly. 529

Their expanding size made the Agitator Index and the Security Index less valuable for most efficiently concentrating FBI intelligence investigations. Consequently, the Domestic Intelligence Division developed more refined tools for this purpose -- including the Key Activist Program and the Black Nationalist Photograph Album. Instructions went out to ten major field offices in January 1968 to designate certain persons as "Key Activists," defined as "individuals in the Students for a Democratic Society and the anti-Vietnam war groups [who] are extremely active and most vocal *in their statements* denouncing the United States and calling for civil disobedience and other forms of unlawful and disruptive acts." [Emphasis added.] There was to be "an intensive investigation" of each Key Activist:

... with the objective of developing detailed and complete information regarding their day-to-day activities and future plans for staging demonstrations and disruptive acts directed against the Government. Because of their leadership and prominence in the 'new left' movement, as well as the growing militancy of this movement, each office must maintain high-level informant coverage on these individuals so that the Bureau is kept abreast of their day-to-day activities as well as the organizations they are affiliated with, to develop information regarding their sources of funds, foreign contracts, and future plans.

In the event adequate live informant coverage is not immediately available on these individuals, other types of coverage such as technical surveillances and physical surveillances should be considered as temporary measures to establish the necessary coverage. 530

In May 1968, the FBI obtained the Federal income tax returns for Key Activists and, in some instances, used this and other intelligence information as part of COINTELPRO operations to disrupt an individual's activities. 531

The Key Activist Program was expanded to virtually all field offices in October 1968. The offices were instructed to recommend additional persons for the program and to "consider if the individual was rendered ineffective would it curtail such [disruptive] activity in his area of influence." The importance of the program was explained by stressing "the shift to violence in the New Left movement."

Sabotage, arson, bombing, and a variety of obstructive tactics have been openly advocated during the past year. In September, 1968, within a five-day period three ROTC establishments were sabotaged and a fourth threatened. In addition, a Central Intelligence Agency office at Ann Arbor, Michigan, was bombed during that month. These instances of openly made plans for violence and the brazen follow through of action are examples of the problems facing the Bureau in this field and the absolute necessity for intensive investigative efforts in these matters. Successful prosecution is the best deterrent to such unlawful activity. Intensive investigations of Key Activists under this Program are logically expected to result in prosecutions under substantive violations within the Bureau's investigative jurisdiction. 532

While the FBI considered Federal prosecution a "logical" result, it should be noted that Key Activists were not chosen because they were suspected of having committed or planning to commit any specific Federal crime.

A counterpart to the Key Activist Program for the "New Left" was the Black Nationalist Photograph Album, which grew out of a conference of FBI agents from forty-two field offices. The conferences recommended concentrating on no more than fifty prominent "militant black nationalists" who traveled extensively. Each field office would have a copy of the Album, including photographs and "biographical data," so that they could be identified "should they turn up in different areas of the country." 533

The Key Activist Program, the Black Nationalist Photograph Album, the Agitator Index, and the revised Security Index identified the prime subjects for domestic intelligence investigation. However, the scope of inquiry went far beyond these defined targets. Inflammatory reports about possible, "catastrophes" intensified headquarters pressures on the field to produce more intelligence in 1968:

Recently we have been advised by informants that militant black nationalist organizations, as well as independent Negro extremists are talking of taking such action as dynamiting the Empire State Building in New York City, throwing dynamite on the floor of the New York Stock Exchange, and possibly assassinating some white political candidates as a means of retaliating for the killing of Martin Luther King, Jr. We have also received information that militant black racial extremists feel that all white people should be killed and one has stated that he believes if the right contact is made with the White House staff, a plan might be formulated to poison 500 to 600 people attending functions at the White House.

... With the increased number of violent statements coming to the attention of the Bureau, you must be alert to promptly run out all rumors of violence connected with racial activity for the purpose of either proving or disproving these rumors.

In addition, our experience in the past has shown that often when an individual is confronted concerning a violent statement he is alleged to have made, it will deter him from taking any such

action. In view of this, whenever possible, interview individuals who are alleged to have made violent statements . . . . 534

This latter form of deterrent "preventive action" proceeded independently from FBI COINTELPRO operations.

In early 1969, the FBI stepped up its Key Activist Program. Reports on Key Activists were to be made every ninety days, and "particular effort" was to be made "to obtain recordings of or reliable witnesses to inflammatory speeches or statements made which may subsequently become subject to criminal proceedings." 535 The FBI Intelligence Division also compiled a Key Activist Album containing photographs and biographies of each Key Activist for distribution to all field Offices. 536 At this time there were 55 individuals covered by the program. To expand this number, FBI field offices were instructed to investigate all persons connected with the regional offices of Students for a Democratic Society -- to determine whether they should be included in the Security Index or the Key Activist Program. 537

The Black Nationalist Photograph Album was also expanded in early 1969 "to include the photographs of the principal leaders of any black extremist organization," not just those specifically known to travel. 538 Later in the year the FBI broadened the scope of its Racial Calendar, which had been established in 1968 to advise each field office of "the dates of black nationalist type conferences and . . . racial events and anniversaries." Because of increasing cooperation between "black extremists and white subversives," the Racial Calendar would now include demonstrations and conferences "of the antifascist, antidraft and anti-Vietnam variety" which would "easily develop into a racial event." 539

In anticipation of possible racial unrest in the summer of 1969, FBI headquarters reemphasized to the field the need for "developing a network of ghetto-type informants . . . to enable you to advise appropriate local and Federal authorities in advance of potential large scale racial violence." The FBI was particularly concerned that the "radical Negro students on college campuses" would seek "to promote racial violence" in the ghettos. Therefore, it was deemed necessary "to thoroughly saturate every level of activity in the ghetto." 540

#### I. Investigations of "Foreign Influence" on Domestic Unrest

The FBI was increasingly interested in possible foreign influence on domestic violence and protest, partly at the urging of President Johnson. As early as 1963 the FBI Manual had authorized requests for CIA investigations of Americans abroad for internal security purposes. Prior thereto the sole purpose of advising the CIA of foreign travel by domestic "subversives" was "to place stops with appropriate security services abroad to be advised of the activities of these subjects." 541 This provision was revised as follows in 1963:

Information concerning these subjects' proposed travel abroad, including information concerning their subversive activities, is furnished by the Bureau to the Department of State, Central Intelligence Agency, and legal attaches if the proposed travel is in areas covered by such. . . . In the cover letter accompanying the letterhead memorandum, indicate *extent of foreign investigation recommended* or whether only *stops* should be placed with appropriate security services abroad. 542 [Emphasis added.]

It was through these procedures that the FBI secured the assistance of the CIA in the investigation of antiwar activists and black militant leaders who traveled overseas. 543

In 1966 the FBI and CIA negotiated an informal agreement to regularize their "coordination." This agreement had as its "heart" that the CIA would "seek concurrence and coordination of the FBI" before engaging in clandestine activity in the United States, and that the FBI would "concur and coordinate if the proposed action does not conflict with any operation, current or planned, including active investigation [by] the FBI." 544 Moreover, when an agent recruited by the CIA abroad arrived in the United States, the FBI would "be advised" and the two agencies would "confer regarding the handling of the agent in the United States." The CIA could "continue" its "handling" of the agent for "foreign intelligence" purposes, and the FBI would also become involved where there were "internal security factors," 545 although it was recognized that CIA might continue to "handle" the agent in the United States and provide the Bureau with "information" bearing on "internal security matters."

The term "internal security factors" used in the agreement meant that CIA agents were used after 1966 to report on domestic "dissidents" for the FBI. There were instances where, according to the former FBI liaison with CIA:

CIA had penetrations abroad in radical, revolutionary organizations and the individual was coming here to attend a conference, a meeting, and would be associating with leading dissidents, and the question came up, can he be of any use to us, can we have access to him during that period.

In most instances, because he was here for a relatively short period, we would levy the requirement or the request upon the CIA to find out what was taking place at the meetings to get his assessment of the individuals that he was meeting, and any other general intelligence that he could collect from his associations with the people who were of interest to us. 546

The policies embodied in the 1966 agreement and the practice under it clearly involved the CIA in the performance of "internal security functions." At no time was Congress asked to amend the 1947 Act to modify its ban against CIA "internal security functions."

As previously noted (p. 484), President Johnson and Director Hoover had been seeking proof that Communists were behind the antiwar movement since 1965. The CIA increasingly was drawn into that quest, in part in response to Bureau requests. Joseph Califano, a principal assistant to President Johnson, testified that high governmental officials could not believe that

a cause that is so clearly right for the country, as they perceive it, would be so widely attacked if there were not some [foreign] force behind it. 547

The same pressures and beliefs led to FBI investigations of possible "foreign influence" on "militant black nationalists" and radical students.

Within the United States the FBI established intelligence coverage on domestic groups if a Communist country appeared interested in exercising influence. For example, on the basis of information that a black American fugitive was in the People's Republic of China and that the Chinese government was making propaganda statements "to promote and abet racial strife in this country," the FBI instructed its field offices in 1967 "to be on the alert constantly for information indicating Chicom attempts to influence groups or individuals involved in the racial movement and ... that development of live informants who can become knowledgeable of such attempts is vital." 548 Similarly, information that Cuba had plans for "the use of American Negroes, Indians, and Communists to methodically sabotage our installations throughout the Western Hemisphere" and that Cuban officials had offered arms and assistance to "Puerto Rican revolutionary groups" led the FBI to alert its informants in defense plants and to ask its "trustworthy police contacts ... to alert their racial and security informants" so that they would report information about "dissident groups, including 'black nationalist' organizations, which have potential for carrying out sabotage or other disruptive activities on behalf of Cuba." 549

In addition to these specific problems, the FBI issued general instructions to the field for collecting intelligence on "foreign influences in the Black Nationalist movement":

The potential for foreign influences in these matters certainly exists as evidenced by wide travel in communist countries of such militant black nationalists as Stokely Carmichael who, within the recent past, has visited, such far flung places as Cuba, North Vietnam, Czechoslovakia, Algeria, United Arab Republic, and other countries abroad. Other individuals connected with the Student Nonviolent Coordinating Committee as well as individuals affiliated with other black nationalist organizations are known to have traveled in communist countries.

Each office should review its files for the identities of any known black nationalists who have traveled to Iron Curtain countries and other communist countries during the past two years ... [I]n instances in which investigations have not been conducted, penetrative investigations should be initiated at this time looking toward developing any information regarding contacts on the part of these individuals with foreign elements and looking toward developing any additional information having a bearing upon whether the individual involved is currently subjected to foreign influence or direction....

During your investigative coverage of all militant black nationalists, be most alert to any foreign travel. Advise the Bureau promptly of such in order that appropriate overseas investigations may be conducted to establish activities and contacts abroad.

In addition, each office should submit a letterhead memorandum ... to include indications of foreign support, direction, guidance or influence, as well as a listing of individual black nationalists ... who have traveled to communist countries within the past two years.... 550

The FBI passed such information on to the CIA, which in turn began to place individual black nationalists on a "watch list" for the interception of international communications by the National Security Agency. 551 One purpose for the FBI effort to obtain income tax returns of Key Activists was "to determine whether their income supports their ability to travel throughout this country, and abroad as part of the New Left revolt." 552

The IDIU's transfer of its computer printout to the CIA was just one instance of the substantial flow of domestic intelligence to and from the foreign intelligence agencies. The FBI was the main channel for mobilizing foreign intelligence resources and techniques against domestic targets. The FBI began submitting names of citizens engaged in domestic protest and violence to the CIA not only for investigation abroad (as had been the case before 1969), but also for placement on a "watch list" to be used in conjunction with the CIA's mail opening project. 553 Similar lists of names went from the FBI to the National Security Agency, for use on a "watch list" for monitoring other channels of international communication. 554

In 1970 these agencies attempted to obtain formal authorization to use these techniques, and to resume previously forbidden methods such as FBI "black bag jobs," for domestic intelligence purposes. 555 These efforts to broaden intelligence surveillance resulted largely from intense pressures from the White House to determine whether there was foreign direction or financing of domestic protest activity. Rather than relying on intelligence coverage of foreign governments and their officials or agents, the FBI and the foreign intelligence agencies targeted American citizens in the hope of finding foreign influence even when there was no prior indication of contact with foreign agents.

A good picture of the FBI's basic approach to the issue of foreign influence is provided by a memorandum prepared in the Intelligence Division early in 1969 summarizing its "coverage of the New Left:"

Foreign influence of the New Left movement offers us a fertile field to develop valuable intelligence data. To date there is no real cohesiveness between international New Left groups, but such an effort was initiated in September, 1968, at an International Student Conference at Columbia University. This conference disclosed that despite the factionalism and confusion now so prevalent, *there is great potential* for the development of an international student revolutionary movement. We are initiating investigations aimed at identifying prominent foreign New Left leaders and activists and to increase our reservoir of background information regarding foreign New Left organizations. This also

encompasses travel on the part of groups or individuals either to or from the U.S., and will include international conferences....

Furthermore, it is apparent that the old-line communist groups such as the Communist Party, USA, the Progressive Labor Party, the Socialist Workers Party, and particularly its youth affiliate, the Young Socialist Alliance are *making a determined effort* to move into the New Left movement to exert a greater influence and control over its future activities. More and more we see the New Left movement *holding up as heroes* international communists such as Fidel Castro, Ho Chi Minh, and Mao Tse-tung. More and more we also see old-line leftist groups *influencing the thinking* of the New Left along Marxist lines and giving direction to *attacks against the police in general and the FBI in particular*, to drive us off the campuses; as well as attacks against the new administration *to degrade President Nixon*. We can expect this activity to intensify greatly in the future. 556 [Emphasis added.]

There was no mention of, or apparent concern for, direct influence or control of the "New Left" by agents of hostile foreign powers. Instead, the stress was almost entirely upon ideological links and similarities, and the threat of dangerous ideas.

White House interest in the financing of New Left protest activities intensified FBI intelligence investigations in early 1970. In response to a specific request, the FBI furnished the White House "material concerning income sources of revolutionary groups" in February 1970. FBI officials observed that this request was "indicative of high-level interest" in the question. Consequently, the Intelligence Division instructed field offices "to develop information indicative of support of the New Left Movement by tax-exempt charitable foundations or financial 'angels' . . . as well as support by politically oriented groups such as the Vietnam Moratorium Committee to End the War in Vietnam." The field was advised that such support might include "furnishing bail money to arrested demonstrators, furnishing printing equipment or office space, and underwriting the cost of conventions or rallies." FBI officials realized, however, that "direct intensive financial investigation of large foundations, prominent wealthy individuals, . . . or politically oriented groups such as the Vietnam Moratorium Committee" might result in "embarrassment to the bureau." 557

It was in this climate of stress that the Assistant Director in charge of the Intelligence Division, William C. Sullivan, and the chief of the Internal Security Section, Charles D. Brennan, played influential roles in the development of the "Huston Plan" in June 1970. 558 These officials saw the threat as essentially domestic in nature. Mr. Brennan has testified that the FBI "never developed any information to indicate that communist sources abroad were financing the anti-war activities in the United States." The only significant foreign connections were that "many activists in the anti war movement had traveled to foreign countries, had attended communist conferences in various countries abroad and appeared to be getting some degree of propaganda, if not indirectly some guidance which they applied in the conduct of the anti-war demonstrations here." 559

Mr. Brennan gave one example of this influence:

They attended conferences in various ... countries abroad which were sponsored by Communists. The peace movement in the United States was generally discussed and I recall in one instance, for example, where several of the activists were involved in the policy committee of the anti-war activities ... and attended conferences where these issues were the subject of discussion with many Communist representatives. And at the time, the general feeling of the anti-war movement here was that the next step in the stage should be protest demonstrations around the United States.

It is my recollection that information at the Communist Conference abroad led to the conclusion that there should be instead a concentrated demonstration in Washington, D.C. And following the return of these individuals to this country, I think they served to project that view and indeed we did have a concentrated demonstration in Washington, D.C., and it is my recollection that when that demonstration took place, there were also concerted demonstrations at American embassies in many foreign countries on the same day.

This kind of indirect "guidance" was not matched by financial support or direct control. Mr. Brennan stated, "I personally held the feeling that we were dealing with what I term credit card revolutionaries, and that the individuals involved in this type of activity in the United States had ample resources of their own ... to finance these activities. I never saw anything to the contrary." 560 Nevertheless, Brennan pointed out that the FBI was "constantly being asked by the White House as to whether or not there was foreign funding ... and in response to that, then I felt it was necessary for us to try to respond to the question." 561

From Brennan's point of view, the problem was much broader than foreign influence. He explained:

I think you have to look at the social, political, and economic complexities that were related, which built tremendous pressures on the White House, and these, I think, stem from the thousands of bombings, the arsons, the disruptions, the disorder. Our academic communities were being totally disrupted, and I think that a vast majority of American people were subjecting the representatives of Congress and ... the White House staff and other people in Government to a great deal of pressure, as to why these things were taking place and why something wasn't being done about these, and I think in a broader context, then, the FBI was getting a tremendous amount of pressure from the White House, in response to the overall problem. 562

In addition to these outside pressures, FBI intelligence officials themselves had their own reasons for conducting extensive intelligence investigations. This view is illustrated in the following testimony when Brennan was asked about decisions expanding intelligence coverage in the fall of 1970:

I believe[d] that the leaders of the New Left movement had publicly professed their determination to act to overthrow the government of the United States. And I felt that with them on public record as having this basic objective, anyone who joined in membership in their cause, possibly should have their names recorded for future reference in FBI files. And I was reminded of the circumstances of the 1930's, when a great deal of individuals, who at that time were involved and concerned as a result of the economic depression, they became involved with communist activities.

A great deal of communist cells developed, and many of the individuals who, at that time, were in colleges, subsequently were employed in sensitive positions of government, and government had no record of their previous communist involvement. I did not want to see a repetition of that sort of circumstances come about.

So that when individuals did profess themselves to be in adherence to concepts which aimed at, or called for the overthrow of the government, I did feel that the FBI had the responsibility to record that type of information so if they ever obtained sensitive government positions that could be made known, and known to the agency for which they were going to go to work. 563

Brennan admitted that this policy meant putting greater emphasis on FBI domestic intelligence and less on counterintelligence operations directed at hostile foreign intelligence activities in the United States. He stated, "I personally felt that the domestic situation had a higher priority at that particular given time." 564

Brennan advanced one additional reason for domestic intelligence investigations, completely separate and apart from prevention or prosecution of violent crime and maintenance of the government's security against disloyal employees. He stated:

I think that basically intelligence investigations are designed not specifically for prosecutive intent, but basically to develop intelligence information which will be provided to officials of the United States Government to enable them to possibly consider *new types of legislation* which may be affecting the security of the country. 565 [Emphasis added.]

This "pure intelligence" function meant that even if Congress had not made an activity a Federal crime, the FBI could be authorized to investigate it so that the President and Congress could consider making it a crime.

#### *J. Intensifications After the 1970 "Huston Plan."*

There are several dimensions to the expansion of FBI domestic intelligence operations during the fall of 1970, in the aftermath of the "Huston Plan." Field offices were instructed in mid-September "to immediately institute an aggressive policy of developing new productive informants who can infiltrate the ranks of terrorist organizations, their collectives, communes and stalls of their underground newspapers." Specifically implementing one of the provisions of the "Huston Plan," the FBI authorized its field offices "to develop student security and racial informants who are 18 years of age or older." This removal of the previous restriction on recruiting informants under the age of twenty-one presented the field "with a tremendous opportunity to expand your coverage." 566

Further intensifications occurred following a series of conferences held at FBI headquarters for domestic intelligence supervisors from the field. There is some dispute as to whether the decisions made at this time were the result of the recommendations made at these conferences, of an attempt by FBI executives to implement certain elements of the "Huston Plan," or of Director Hoover's desire to increase caseload statistics in order to justify a larger appropriation for the FBI. All three factors contributed to some extent.

The head of the FBI Domestic Intelligence Division, William C. Sullivan, was promoted in the summer of 1970 to be Assistant to the Director in charge of all investigative and intelligence activities. His successor as Assistant Director for the Domestic Intelligence Division was Charles D. Brennan, previously chief of the Internal Security Section. Both men had participated in drafting the "Huston Plan" and were now in positions of greater influence within the Bureau.

Brennan has testified that their success in persuading the FBI Executives' Conference to expand domestic intelligence coverage was partly due to "budgetary considerations." He stated:

I believe ... that the Bureau of the Budget had questioned the Bureau's appropriation request, pointing to a drop in what was categorized as certain types of security cases, and apparently it involved a practice whereby there were cases listed which consisted mostly of name checks and the like, and because of this apparent drop in security cases, the budget question [was] whether or not the Bureau's request for appropriations was consistent. And this, as I understand, was the basis on which they suddenly saw a need to open a number or more cases. 567

The relationship between the "Huston Plan" and the intensification programs in the fall of 1970 was described by Mr. Brennan in the following exchange with Committee counsel:

Mr. BRENNAN. The Huston Plan really had nothing to do with it. What was essential here was the recognition of what was taking place inside the country and the recognition of the individuals, whether the Division, whose responsibility it was to cope with the growing violence, to recommend the types of action and programs which they thought necessary to cope with the problem.

Q. Well, let me ask this question another way. Did these programs emanate from Mr. Hoover, Mr. Tolson, or any other part of the Bureau, except the Domestic Intelligence Division?

Mr. BRENNAN. Definitely not. They emanated from individuals within the Domestic Intelligence Division with the exception of the opening of a number of cases which you mentioned, which were the subject of the discussion at the Executive Conference.

Q. But, on the whole, it represented an effort by intelligence professionals who recognized what they perceived to be the extreme nature of the domestic violence in this country.

Mr. BRENNAN. Right, definitely.

Q. And these same individuals would have been much happier if the Huston Plan had been implemented at the same time. Is that correct?

Mr. BRENNAN. Yes, I think so. The general feeling was that there was a greater need for the types of sophisticated techniques which had been eliminated. This would have given us a greater capacity to cope with the problem.

Q. This program was the next best thing. Is that correct?

Mr. BRENNAN. Well, you did everything that you did consistent with your continuing determination to try to do your job.

Q. And this was done in spite of Mr. Hoover and some of the top executives of the FBI.

Mr. BRENNAN. Mostly, I think, it was done over their grudging acquiescence. 568

The decisions of the FBI Executive Conference increasing the domestic intelligence caseload were recorded in the following memorandum:

*Lifting of existing moratorium on report writing and investigation of Priority II and Priority III, Security Index cases.*

There are approximately 10,690 individuals currently included in Priority II and Priority III of the Security Index. Virtually no investigation has been conducted regarding approximately 6,924 of these individuals since the imposition of the moratorium in February, 1969. Many of these individuals have changed residence and/or employment and their whereabouts are unknown. To fulfill our current responsibilities, we should know where they are. . . .

*Black Student Unions and similar groups on college campuses.*

In 1967, black students began forming their own groups to project their demands, many of which indicate a commitment to black nationalism. These groups are autonomous and have a strong sense of common purpose. The Black Panther Party has made open efforts to organize the Black Student Unions nationally and other black extremist groups have used these organizations to project their extremism and separatism.

Campus disorders involving black students increased 23 percent in the 1969-1970 school year over the previous year indicating that these groups represent a real potential for violence and disruption. In the past, we have opened cases on these organizations following evidence of black extremist activities; however, in view of the vast increase in violence on college campuses, it is felt that every Black Student Union and similar group, *regardless of their past or present involvement in disorders*, should be the subject of a discreet preliminary inquiry through established sources and informants to determine background, aims and purposes, leaders and key activists. It is estimated that this would cause the field to open approximately 4,000 cases involving organizations and the key activists and leaders connected therewith. [Emphasis added.]

*Students for a Democratic Society (SDS) and militant New Left campus organizations.*

At the end of the 1969-1970 academic year, the various factions of the SDS, excluding the Weatherman faction, which has become an organization in its own right, consisted of a membership of approximately 2,500 individuals. In addition to the SDS groups, there are about 252 totally independent groups on college campuses which are pro-communist New Left-type and are followers of the SDS ideology. It is estimated that the membership of these organizations consists of about 4,000 members. At the present time, we are conducting investigations of all these organizations but have not, in the past, initiated investigations of the individual members of such organizations, with the exceptions of the key activists and individuals who are known to be violence prone.

Major campuses across the nation have been completely disrupted by violent demonstrations, bombings, arsons and other terroristic acts perpetrated by these organizations. It is, therefore, proposed that cases be opened *on all individuals* belonging to such organizations to determine whether they have a propensity for violence. If this proposal were implemented, it is estimated that the field would be required to open approximately 6,500 new cases. 569 [Emphasis added.]

Subsequent instructions to the field regarding Black Student Unions stressed the need to "target informants and sources to develop information regarding these groups on a continuing basis to fulfill our responsibilities and to develop such coverage where none exists. 570

The directive on New Left campus groups stated, in part:

As you are aware, SDS and other similar subversive campus-oriented groups are clearly symbolic of violence and Marxist-Leninist revolution on the Nation's campuses. As their intent has crystallized, the *adherence to this philosophy* of revolution and violence is, of necessity, more inherent among members and followers. These groups are undoubtedly the breeding ground for revolutionaries, extremists and terrorists. Logic and good judgment should be used in these investigations, bearing in mind the objective is to identify *potential* and actual extremists, revolutionaries and terrorists and to assess their threat to the internal security of the Government. [Emphasis added.]

Field offices were also reminded, "Each individual investigated should be considered for inclusion on the Security Index." 571

The Domestic Intelligence Division convened a conference of racial intelligence supervisors from the field in late October 1970. In preparation for this conference, Division officials and Assistant to the Director Sullivan proposed that a Justice Department representative be invited to attend a session on the Black Panther Party. The chief of the Racial Intelligence Section explained:

One of our primary objectives in the investigation of the BPP is to develop information which could be used to prosecute the Party and its leaders. The Department has had in operation for little over a year a special task force looking into all phases of BPP operations and currently is presenting evidence to a Federal Grand Jury looking towards indictments of BPP leaders on Smith Act violations. We have not received any concrete information from the Department which would indicate prosecutions are imminent.

The Section Chief added "that these discussions will impress the Departmental representative as to our seriousness in our efforts to put the violent BPP leaders in jail as quickly as possible." Assistant to the Director Sullivan appended a note stating, "The Department needs to be not only educated to some of the ugly realities of the Black Panthers, but also the Department needs to be pushed into getting some prosecutive action underway. People about the country are beginning to wonder why something isn't being done." The proposal was rejected. Associate Director Clyde Tolson wrote, "I doubt the wisdom of this." And Director Hoover noted, "I agree with Tolson." 572

One of the recommendations growing out of the conference was a revision of the Agitator Index, which was described as "a ready reference to individuals who have demonstrated a propensity for fomenting disorder of racial and/or security nature." The Agitator Index was viewed as "a valuable and necessary administrative tool," although it was observed that the Justice Department had "not been advised as to the establishment of the AI." Since many of the "extremist and revolutionary" individuals on the Agitator Index were now included in the Security Index, however, field offices were instructed to delete persons on the Security Index from the Agitator Index. 573

There was serious concern at the conference about the contemporaneous events in Canada, where terrorist activities in Quebec had led the Canadian government to impose a state of emergency and suspend certain legal guarantees. Of equal concern were the reports that at least one antiwar group in the United States -- the East Coast Conspiracy to Save Lives, involving Father Philip Berrigan -- was considering the kidnapping of American government officials. Summarizing the conference results, the head of the Racial Intelligence Section stated,

The conference was most timely and productive in light of the present terroristic activities in Canada and the imminent concern of the White House concerning the probability of extremist groups taking action against Government officials or their families.

The topics discussed at the conference covered the entire spectrum of the problems inherent in investigating and developing informants in the BPP as well as related extremist matters. These topics included detailed discussion concerning the need for full penetration of extremist groups to obtain information concerning terroristic activities which may be aimed against Government officials. In addition, the conference took note that maximum attention should be given to the extremist activities in Canada in connection with our investigations as well as intensifying our investigations having international ramifications . . . . 574

The conference also reviewed COINTELPRO operations directed against black extremists:

Our experience over the past year and the growth of our knowledge regarding black extremist activities have resulted in utilization of increasing number of sophisticated techniques. . . . Among highly successful tangible results realized during the past year, as a result of this program, were the disbandment of a Black Panther Party (BPP) front group in . . . Mississippi; the transfer of an energetic

organizer and key leader of the . . . BPP chapter to a less influential post . . . ; and the complete disruption of a planned conference of the violence-prone Republic of New Africa . . . . 575

Following the conference, FBI intelligence officials developed a Key Black Extremist program for concentrated investigation and COINTELPRO operations. The program was justified in the following terms:

The information submitted by the field indicates that there is a need for intensified coverage on a group of black extremists who are either key leaders or activists and are *particularly extreme, agitative, anti-Government, and vocal in their calls for terrorism* and violence. Leaders of the violence-prone Black Panther Party have indicated that the "revolution" is entering the beginning phases of actual armed struggle and our investigations indicate there are certain extremists more likely to resort to or to order terrorism as a tactic and therefore require particular attention. [Emphasis added.]

FBI officials envisioned that about ninety cases would be involved. 576 All field offices were sent a list of Key Black Extremists (KBEs) and instructed to "remain alert for additions to the KBE list." The following measures were to be taken:

- (1) All KBEs must be included in Priority I of the Security Index....
- (2) All KBEs must be included in the Black Nationalist Photograph Album (BNPA)....
- (3) All aspects of the finances of a KBE must be determined. Bank accounts must be monitored. Safe deposit boxes, investments, and hidden assets must be located and available information regarding them must be reported.
- (4) Continuing consideration must be given by each office to develop means to neutralize the effectiveness of each KBE. Any counterintelligence proposal must be approved by the Bureau prior to implementation.
- (5) Obtain suitable handwriting specimens of each KBE to be placed in the National Security File in the Laboratory....
- (6) Particular efforts should be made to obtain records of and/or reliable witnesses to inflammatory statements made which may subsequently become subject to criminal proceedings....
- (7) Where there appears to be a possible violation of a statute within the investigative Jurisdiction of the Bureau, the ... possible violation [should be] vigorously investigated in accordance with existing instructions.
- (8) Particular attention must be paid to travel by a KBE and every effort made to determine financial arrangements for such travel....
- (9) The Federal income tax returns of all KBEs must be checked annually in accordance with existing instructions. Reports on all KBEs were to be submitted every ninety days, and the field offices were urged to use "initiative and imagination in order that the desired results are achieved." 577

#### *K. The 1971 Inspection Reports*

The annual inspection of the FBI Domestic Intelligence Division in January 1971 reflected the increasing intensification of FBI domestic surveillance programs. The role of the Inspection Division was to encourage more aggressive measures. One example involved the East Coast Conspiracy to Save Lives (ECCSL), the group associated with Father Philip Berrigan which allegedly had planned to kidnap government officials. Inspector E. S. Miller advised the Domestic Intelligence Division:

The field should be appropriately instructed to keep the Bureau fully advised of all demonstrations, vigils, harassment tactics, etc., conducted by sympathetic groups and followers of the ECCSL. Such vigils and demonstrations should be afforded sufficient appropriate coverage to develop identities and backgrounds of leading activists and sponsors of such sympathetic activities.

Field offices should also be alerted to other retaliatory actions by sympathetic groups attempting to capitalize on the "persecution" theory thereby exploiting the recent indictments as a sympathetic rallying point for more conspiratorial activities. 578

The Inspector also recommended using the facilities of the FBI Identification Division and the computerized National Crime Information Center for intelligence purposes in locating members of the Venceremos Brigade (VB) who had visited Cuba:

While no evidence has been received that those persons who travel to Cuba received guerrilla warfare training in Cuba, they were constantly told that they were the vanguard of the Revolution in the United States....

Inasmuch as some of the VB members have indicated they were going underground and the fact that a majority have not been located for interview, you should consider placing name stops in the Identification Division so that if these persons are arrested or an inquiry is made by local law enforcement authorities, this fact will be immediately brought to the attention of the Bureau. In addition, a stop file is now being set up by the NCIC Unit for persons other than fugitives concerning whom the Bureau has an interest.... Every effort should be made to utilize stops with the Identification Division and the NCIC Unit on these persons. 579

This proposal was implemented shortly thereafter and the field advised "to submit stop notices for Identification Division and NCIC, concerning Venceremos Brigade (VB) subjects whose whereabouts are not known. . . ." 580 Although Inspector Miller criticized to some extent the Domestic Intelligence Division's shortcomings in the foreign counterintelligence field, he placed great emphasis on the opportunities in the domestic area:

You should bear in mind that the attitude and instructions expressed by the President, the Director, and many of the legislators in Congress, have been to curtail the militant actions and violent activities on the part of a significant group of young people in the United States today. The thinking of the Supreme Court of the United States with its several recent changes may be along the lines of suppressing the activities of those who openly espouse the overthrow of all forms of democratic authority in the United States. In addition, the Internal Security Division of the Department of Justice has been specifically enlarged and strengthened to deal with these matters. 581

The details of many of the FBI's most disruptive COINTELPRO operations were set out in the Inspection Report as significant "accomplishments" of the Domestic Intelligence Division.

Among additional measures taken in 1971 were the following, as summarized in the next Inspection Report prepared in August-September:

In March, 1971, a coalition of leftist individuals including subversives and extremists under the sponsorship of the Clergy and Laymen Concerned About Vietnam, American Friends Service Committee, and Fellowship of Reconciliation traveled to Paris, where they were in contact with the North Vietnamese and other elements antagonistic to the U.S. We developed two informants to participate in this travel and as a result, identified all 170 people in attendance, their activities contacts, and objectives. All information developed was afforded dissemination to appropriate government agencies and we were commended by one intelligence agency for the excellent coverage. 582

...

Through the Key Activist Program, we have focused investigative attention on the leaders of the New Left Movement with the aim of prosecuting these leaders under appropriate statutes, federal or local, wherever possible. This program has proved successful in that we have been able to follow closely the activities of these individuals and furnish interested agencies and high government officials with information concerning their subversive and agitational activities. Of particular note is the fact that more than half of the 73 individuals designated as Key Activists are subjects of some type of prosecutive action. 583

...

Extremist intelligence information gathered through our informants and investigations makes up a major portion of the Bureau's sophisticated document which is disseminated to the White House and other high level government agencies. This document captioned "FBI Summary of Extremist Activities" furnishes the White House and other agencies with a digest of the extremist problem in the United States. 584

...

By airtel to all offices dated 6/15/71 the field was advised that a new "Stop Index" program had been instituted in the National Crime Information Center (NCIC). This program is for Bureau use only and concerns extremists who are in Priority I of the Security Index and who are not already carried in the NCIC wanted persons file. Through this program, the field obtains prompt notice from NCIC by telephone whenever a police agency makes inquiry concerning one of

By SAC Letter 71-37 (E) dated 8/10/71 captioned "Security Flash Notices Regarding Security Index Subjects", the field was advised of new procedures which enable the Identification Division to better disseminate arrest information on Security Index subjects for whom no fingerprints are on file in the Identification Division. This is accomplished by periodic submission by the field of Security Flash Notices ... which determine if fingerprints of a Security Index subject have been received since the last check and if so, a stop is placed in the fingerprint record to assure that the field is advised of all subsequent fingerprint submissions. The Security Flash Notice is periodically submitted at different intervals depending on the priority of the subject's Security Index status. 585

...

*New University Conference (NUC)*

The NUC, composed of radical professors, graduate students, and teachers, is committed to the growth of a revolutionary socialist movement in the U.S., with educational institutions and professional associations being their main targets. In Bureau airtel 6/4/71, the attention of Chicago Division, Office of Origin, was directed to the fact that the NUC claimed 42 national chapters plus 15 pre-chapter groupings, with 675 national members, and anticipated further expansion. Chicago Division was instructed to ensure appropriate leads were set out to confirm the existence of all NUC chapters and to conduct appropriate investigations in accordance with Bureau instructions relating to investigations of organizations connected with institutions of learning. It was further instructed these investigations should include information concerning the leaders and leading activists, aims and objectives and the activities of these chapters. 586

...

*Vietnam Veterans Against the War (VVAW)*

Letter to all offices dated 8/3/71 instructed each office to initiate a survey to determine existence of VVAW. This action was necessary in the light of increasing indication that the VVAW may be a target for infiltration by subversive groups such as the Communist Party USA and the Socialist Workers Party and their respective youth groups. VVAW has also been involved in aiding and financing U.S. deserters, including false identity papers and reportedly in one area has a cache of arms. VVAW has become increasingly active in the antiwar field and must be considered a prime target for infiltration. 587

...

Computerized Telephone Number File (CTNF) was expanded on 2/26/71, to include telephone numbers of black, New Left, and other ethnic extremists. As a result, black extremist groups, black extremist Security Index subjects, and individuals included in the Black Nationalist Photograph Album have been entered into the CTNF. This has proven to be extremely valuable investigative tool and has saved the field considerable investigative time in ascertaining subscribers of telephone numbers since "hits" are made on 15.5% of numbers checked against the file. 588

During 1971, Assistant to the Director Sullivan and Assistant Director Brennan made proposals for major reorganization of the Domestic Intelligence Division, Sullivan suggested that it be divided into two separate divisions one for Domestic Intelligence (including a New Left Section, an Extremist Intelligence Section, and an Internal Security Section) and the other for Counterespionage -- Foreign Intelligence. In addition, Brennan proposed that supervision of specific antiriot and bombing criminal investigations be transferred from the General Investigative Division to the Domestic Intelligence Division. These recommendations were examined in the second 1971 Inspection Report.

Regarding the proposal for two separate divisions, Assistant Director Brennan stated that the advantage of having "smaller divisions thus allowing for tighter and more effective, supervision" was outweighed by the disadvantages:

(a) The nature of the work of DID does not readily lend itself to division. The interrelationship of foreign influence in domestic subversion cases is well established and requires close coordination within the Division.... Our goal should be to obtain maximum utilization of the knowledge and expertise of supervisory personnel, and division of DID would obviously result in diffusion of related talents....

(b) Budgetary considerations and administrative efficiency would be affected by imposing an additional Divisional superstructure....

Brennan noted that when Sullivan had originally made the proposal in a memorandum to Associate Director Tolson in June 1971, Director Hoover had noted, "I do not approve. We do not have any provision for another Assistant Director and all hearings before Budget Bureau and Congress have been concluded for Fiscal Year 1972." 589

Assistant Director Brennan's proposal for shifting bombing cases was not a new one. In 1968, the Inspection Division had conducted a study of the desirability of transferring antiriot and bombing investigations from the General Investigative Division to the Domestic Intelligence Division. The two divisions had jointly proposed the shift because the specific criminal investigations in these cases were "so interrelated with the gathering of intelligence in the racial and security fields that overlap constantly occurs." The Inspection Division had endorsed the transfer:

The logic of the proposed reassignments appears unassailable. In both categories of cases the principle involved is the same, namely, that individual violations of applicable statutes arising from the activities of subversive organizations or groups should be supervised within the same division (DID) that has the basic and continuing responsibility for supervision of the overall investigations of these organizations and groups as well as of the members thereof and the development of informants within the groups. The obvious benefit . . . is the avoidance of duplication of supervisory reviews of these interrelated matters and the ready identification of individuals who may be involved in a specific violation with persons already under investigation from an intelligence standpoint. Informants who may be utilized in specific violations or who are developed in the course of investigation of such

violations must of necessity be closely correlated with the supervision of these informant programs which now rests with DID . . . . 590

Despite this general agreement among middle-level FBI executives, the 1968 recommendation was not implemented. Associate Director Tolson and Director Hoover were "opposed to this proposed transfer of duties." One consideration which weighed against the shift was that the Justice Department divided supervision of these criminal cases: "antiriot cases are handled in the Criminal Division of the Department, racial bombings in the Civil Rights Division and nationalist bombings in the Internal Security Division." 591

By 1971 the Justice Department had consolidated these responsibilities. Assistant Director Brennan pointed out that the Department had "moved to invest the Internal Security Division with the overall responsibility of prosecuting terrorist activities regarding above-mentioned matters." Consequently, he contended that "similar reorganization within the FBI would "enhance more effective supervision." Assistant Director Rosen of the General Investigative Division agreed:

As a practical matter substantially all antiriot laws investigations involve extremists and political terrorists. With regard to bombings, substantially all investigations deal at the outset with unknown subjects and it would be most impractical to attempt to delineate between bombings which do or do not involve terrorists. Since the act of bombing is in itself an act of terror it is logical to assume at the outset that terrorists are involved and the types of bombings delegated to the FBI by the Department's guidelines are limited to those targets most likely to be selected by political terrorists. (These targets pertain to Government property or functions, federally funded projects, diplomatic establishments, colleges and universities, and those probably perpetrated by terrorists.) 592

The joint recommendation of Assistant Directors Brennan and Rosen was carried out later in 1971, and the unit in the General Investigative Division which supervised bombing investigations was transferred to the Domestic Intelligence Division. 593

*L. The "New" Internal Security Division and Turmoil in the FBI, 1971.*

In late 1970, the Justice Department's Intelligence Evaluation Committee was secretly reconstituted as a permanent body including officials from the Central Intelligence Agency and the National Security Agency. This reorganization implemented one feature of the "Huston Plan," and the new IEC assumed broader functions in preparing regular domestic intelligence evaluations for the White House. 594 The creation of a new IEC was one of several measures taken in late 1970 and early 1971 by Assistant Attorney General Robert Mardian, who replaced J. Walter Yeagley as head of the Internal Security Division. Under Mardian the Internal Security Division took over from the Criminal Division the supervision of prosecutions in cases of extremist violence and Selective Service violations.

One of Assistant Attorney General Mardian's most significant actions in 1971, from the viewpoint of domestic intelligence, was the preparation of a new Executive Order on federal employee security. Its first purpose was to update the standards for evaluating the "subversive activity" of potential Federal employees. In addition, the order was designed to reinvigorate the Subversive Activities Control Board, which had been created by the Internal Security Act of 1950 to register Communist organizations and their members. 595 The Supreme Court had declared the provision for registration of individuals unconstitutional as a violation of the privilege against self-incrimination in 1965. 596 According to Assistant Attorney General Mardian, there was a "problem resulting from the fact that the Attorney General's list has not been updated for 17 years -- a failure which required Federal agencies to individually evaluate information regarding membership in allegedly subversive organizations based on raw data furnished by the Federal Bureau of Investigation or other governmental sources." Mardian expected that the SACB would be able to "deal specifically with the revolutionary/terrorist organizations which have recently become a part of our history." 597

FBI intelligence Investigations of organizations were based in part on the standards for the "Attorney General's list" under Executive Order 10450, issued by President Eisenhower in 1953. Consequently, the new Executive Order 11605 issued by President Nixon in 1971, amending Executive Order 10450, substantially redefined FBI authority. The basic definitions of "subversive" organizations in the two orders compare as follows:

*Executive Order 10450 (1953)*

. . . totalitarian, fascist, communist, or subversive, or having adopted a policy of advocating or approving the commission of acts of force or violence to deny others their rights under the Constitution of the United States, or seeking to alter the form of government of the United States by unconstitutional means.

*Executive Order 11605 (1971)*

. . . totalitarian, fascist, communist, or subversive, or which has adopted a policy of *unlawfully* advocating the commission of acts of force or violence to deny others their rights under the Constitution *or laws* of the United States *or of any State*, or which seeks to overthrow the government of the United States *or any State or subdivision thereof* by unlawful means. [Emphasis added.]

The 1971 order was more restrictive in its requirement of "unlawful" advocacy, but it was far broader in extending to state and local matters. The breadth of the order is shown in its more detailed standards for designation of an organization by the SACB. A group could be put on the "SACB list" if it:

engages in, unlawfully advocates, or adopts as a means of obtaining any of its purposes or objectives

(1) The commission of acts of force or violence or other unlawful acts to deny others their rights or benefits guaranteed by the Constitution or laws of the United States or of the several States or political subdivisions thereof; or

(2) The unlawful damage or destruction of property; or injury to persons; or

(3) The overthrow or destruction of the government of the United States or the government of any State, Territory, district, or possession thereof, or the government of any political subdivision therein, by unlawful means; or

(4) The commission of acts which violate laws pertaining to treason, rebellion, or insurrection, riots or civil disorders, seditious conspiracy, sabotage, trading with the enemy, obstruction of the recruiting and enlistment service of the United States, impeding officers of the United States, or related crimes or offenses. 598

Testifying before the House Appropriations Subcommittee, Assistant Attorney General Mardian linked the new order directly with FBI investigations: "We have a new brand of radical in this country and we are trying to address ourselves to the new situation. With the investigative effort of the FBI we hope to present petitions to the Board in accordance with requirements of the Executive Order." 599

FBI intelligence officials anticipated that the Executive Order would have a substantial 'impact on their operations, as indicated in the Inspection Report:

The implementation of Executive Order 11605 will affect primarily the work of the New Left Section, Extremist Intelligence Section and Internal Security Section....

So far, the Department has indicated that it intends to initiate proceedings against the Black Panther Party, Progressive Labor Party, Young Socialist Alliance, and Ku Klux Klan; however, we have not as yet had any specific requirements levied upon by the Department in these cases. Based on past experience, it can be anticipated the services of one supervisor, full time, will be required to prepare each of these cases for presentation to the SACB.

The language of Executive Order 11605 is very broad and generally coincides with the basis for our investigation of extremist groups. Conceivably, consistent with manpower available, proceedings could be initiated on most of the organizations we have under investigation although the Department has not indicated at this time that they will undertake any wholesale action. 600

From the outset the Executive Order was the subject of serious criticism in the United States Senate, primarily on the ground that the President did not have the power to assign this new function to a Board created by statute to perform different duties. Congress ultimately refused to appropriate funds for the implementation of the order. Nevertheless, the order's provision broadening the definition of "subversive" groups still remained in effect as the standard for evaluating prospective federal employees and for FBI investigations conducted for the federal employee security program.

Hearings on Army surveillance before the Senate Subcommittee on Constitutional Rights in the spring of 1971, and the furor over the SACB order, marked the beginning of a change in the climate of opinion regarding domestic intelligence. In this environment Director Hoover and his top associates expressed growing concern over the close relationship established by Assistant to the Director William C. Sullivan and other FBI intelligence officials with Assistant Attorney General Mardian in the Justice Department.

A memorandum of an Executives Conference meeting in June 1971 exemplifies the increasing tensions within the FBI. Director Hoover's "instructions relative to being very careful in our dealings with Assistant Attorney General Mardian" were pointed out. It was made clear that Assistant Director Dwight Dalbey of the Office of Legal Counsel was to attend "at any time officials of the Department are being contacted on any policy consideration which affects the Bureau." It was specifically noted "that this was not done in connection with a recent conference held between Supervisors of the Domestic Intelligence Division and Deputy Assistant Attorney General A. William Olsen of the Internal Security Division of the Department at which time discussion ensued as to proposed changes in procedure requesting Attorney General authority for electronic surveillance." 601 The conflicts within the FBI that had been muted at the time of the "Huston Plan" in 1970 were now coming into the open.

One of the issues which triggered the break between Director Hoover and Assistant to the Director Sullivan had little to do with domestic intelligence. Instead, it involved an expansion of the number of FBI Legal Attache offices abroad. The details of the controversy need not be reviewed here. What is most significant is that five days after the Executives Conference meeting described above, Sullivan began expressing strong opposition to the program for expanding Legal Attache offices. 602 Director Hoover solicited the views of other FBI officials, who supported the expansion. Sullivan then replied most forcefully, making the following statements among others:

I have read the comments of the above-named men. It was somewhat more than mildly distressing and saddening to me to observe the lack of objectivity, originality, and independent thinking in their remarks. The uniformity and monolithic character of their thinking constitutes its own rebuttal. While I am certain it was not the intention of these important Bureau officials, who occupy unique roles, to create the impression in the reader's mind that they said what they did because they thought this was what the Director wanted them to say, nevertheless it seems to me this is the impression conveyed.

... [T]he evidence points to the fact that, because of racial conflict, student and academic revolution, and possible increase in unemployment, this country is heading into ever more troubled waters, and the Bureau had better be fully prepared to cope with the difficulties which lie ahead. This cannot be done if we spread ourselves too thin and finance operations which do not give us proper returns for the dollars spent....

Lastly, I am not unmindful of the fact that the Director pointed out that we could get along quite well without an expensive domestic liaison section and, therefore, he dissolved it. Applying the Director's reasoning foreign liaison, I think certainly the conclusion is valid that we can at least reduce it, with benefits to the Bureau. 603

The final passage had reference to Director Hoover's decisions in 1970, first, to abolish the position of FBI liaison officer with the CIA, and then to eliminate the entire FBI Liaison Section dealing with other federal agencies. 604

Upon reviewing Sullivan's second memorandum, one high FBI official advised Director Hoover that it appeared "more definite to me that he is more on the side of CIA, State Department and Military Intelligence Agencies, than the FBI." This official added, "There has to be something wrong for him to do such an abrupt about face at this time, after agreeing with what we have done in the past and now being unalterably opposed to any further expansion ...." 605

Within less than a month, Director Hoover had appointed W. Mark Felt, formerly Assistant Director in charge of the Inspection Division, to a newly created position as Sullivan's superior. During this period, Sullivan gave Assistant Attorney General Mardian the FBI's documents recording the authorization for and dissemination of information from certain wiretaps placed on executive officials and journalists during 1969-1971. The absence of these materials was not discovered by other FBI officials until after Sullivan was forced to resign in September 1971. 606

Additional friction within the FBI developed in mid-1971 during the investigation of the "Pentagon Papers" matter and Daniel Ellsberg.

Assistant Director C. D. Brennan of the Domestic Intelligence Division considered the "Pentagon Papers" case a matter of overriding importance, especially in view of the White House interest. Brennan's views were summarized in an Inspection Report:

... [H]e commented upon the fact that the Ellsberg case might be a landmark in historical significance in view of the long range potential regarding governmental operations and the FBI's role in relation thereto. He stated that the leak in this case represented a deliberate and determined effort on the part of certain individuals to seriously disrupt and destroy the government's capacity to carry out effectively its foreign policy in various areas. Mr. Brennan noted that the past 15 to 20 years had witnessed the evolution of a new breed of fanatics who were determined to disrupt and destroy governmental operations and to alter this country's foreign policy. He further noted that the movement supported by these fanatics bordered on treason which must be dealt with if our current form of government is to survive.

In early July 1971 Director Hoover advised his subordinates that Presidential assistant H. R. Haldeman had called about the Ellsberg case and said that the President wanted regular reports. A month later, Assistant Director Brennan and other officials met with White House aide Gordon Liddy, who was "coordinating all White House interest in this matter." Liddy explained that the White House wanted the case handled as a "Bureau special". Although the FBI devoted substantial resources to the investigation, there was resistance to attempts by Assistant Attorney General Mardian and the Internal Security Division to direct the details of the FBI's inquiry. 607

Moreover, Assistant Director Brennan was removed from his position in the course of the investigation. His replacement as Assistant Director for the Domestic Intelligence Division was Inspector E. S. Miller, who had conducted two inspections of the Division during 1971. 607a

#### *M. The "Administrative Index"*

In the fall of 1971 the FBI confronted the prospect of the first serious Congressional action which might curtail domestic intelligence operations -- repeal of the Emergency Detention Act of 1950. The Inspection Report completed in September 1971 viewed the possibility of repeal without great alarm:

Legislation has been introduced in the 92d Congress to repeal Title II of the ISA of 1950. In the event Title II should be repealed at a future date under new legislation, *the Government's inherent right to protect itself internally* will continue to be safeguarded by the Bureau under its basic responsibility for protecting the Nation's internal security. 608 [Emphasis added.]

Congress passed the repeal measure shortly thereafter. FBI intelligence officials began at once to consider the impact on the Security Index program. They believed the Security Index should still be maintained "since the potential dangerousness of subversives is probably even greater now than before the repeal of the Act, since they no doubt feel safer now to conspire in the destruction of this country." However, they also saw a need to consult the Justice Department "to determine if there is any manner in which the essence of the Security Index and emergency detention of dangerous individuals could be utilized under Presidential powers." 609

The argument for keeping the Security Index in the event of an emergency was elaborated further:

Those listed now or included under existing criteria in the future will continue to represent a potential danger to the national defense. Should this country come under attack from hostile forces, foreign or domestic, there is nothing to preclude the President from going before a joint session of Congress and requesting necessary authority to apprehend and detain those who would constitute a menace to national defense. At this point it would be absolutely essential to have an immediate list, such as the SI, for use in making such apprehensions. The SI, backed by our investigative files, would provide documentation of subversive backgrounds during any hearings which might be required following apprehensions.

The Security Index also served useful purposes in connection with the FBI's day-to-day intelligence operations:

The SI constitutes an extremely valuable list of subversives and malcontents who constantly pose a threat to the safety of the President. Secret Service is provided a constant flow of data, concerning current whereabouts and backgrounds of individuals on the SI. In addition, the SI would immediately pinpoint for our own use the identities of subversives who would require intensified investigative attention to provide evidence of espionage, sabotage, or the like. . . .

Quarterly we have furnished Passport Office of State Department a list of those on Priority I (the most potentially dangerous) so that we can be advised of travel abroad by these subjects. The list is not identified in any way as SI and since it is beneficial to us, it is believed we should continue to send it.

Repeal of the Emergency Detention Act of 1950 was not thought to affect the basis for FBI investigative authority:

Title I of the Internal Security Act of 1950, which relates to Subversive Activities Control Board, strengthened by Executive Order 11605 dated 7/2/71, provides investigative authority as do Smith Act of 1940, Communist Control Act of 1954, Fraud Against the Government, Rebellion and Insurrection, Sedition and Seditious Conspiracy, among others.

However, FBI intelligence officials believed that the Bureau's "Office of Legal Counsel should examine this more critically from a legal standpoint." 610 Assistant Director D. J. Dalbey, head of the Office of Legal Counsel, agreed that the repeal did not affect the FBI's "basic investigative authority:"

Our basic investigative authority for this type of case is in the Presidential directive of September 6, 1939, which still remains in effect, with updatings. In addition to that there is a host of criminal statutes which are particularly applicable to the type of action-oriented subversives with whom we now deal. Principal subversives now carry guns, rob banks to get money, steal arms and ammunition, commit arson, set off bombs, incite riots, and do many other things which violate one or more criminal statutes over which this Bureau has investigative jurisdiction. From a combination of those statutes, plus the original Presidential directive on internal security, we have wide investigative authority.

Assistant Director Dalbey also endorsed the position of FBI intelligence officials regarding the Security Index:

. . . [E]limination of the Emergency Detention Act does not prevent this Bureau from carrying in its files an assessment of each principal subversive which would be sufficient to mark him for Government attention should a need arise in a national emergency.

Bearing in mind that the Emergency Detention Act could as easily be put back in force should an emergency convince Congress of its need, this Bureau would then be expected to have on hand the necessary action information pertaining to individuals.

Nevertheless, the FBI's Legal Counsel strongly urged that "a letter should be written to the Attorney General in which this Bureau asks for a reassessment of our investigative and record-keeping authority concerning subversive matters." This would "protect" the FBI in case "some spokesman of the extreme left" claimed that repeal of the Detention Act did, in fact, eliminate the Bureau's investigative authority. 611

FBI intelligence officials became increasingly concerned about possible "charges by the Bureau's critics that we are evading the will of Congress." They believed it was necessary to "get some written authority from the Attorney General, not only to keep records which, in effect, represent a workable substitute for the Security Index, but also serves as a mandate for our continued investigation of subversive activity and related matters." 612

Thereupon, a letter was sent to Attorney General Mitchell soliciting his views "concerning FBI authority to continue investigations of subversive activity covered, in part, by this [Emergency Detention] Act." The letter cited as bases for continuing FBI authority the Smith Act, the Subversive Activities Control Act of 1950, the Communist Control Act of 1954, statutes relating to espionage, sabotage, rebellion and insurrection, sedition, and seditious conspiracy, as well as "certain Presidential Directives." The line of Presidential directives from President Roosevelt's order of June 26, 1939, through President Eisenhower's statement of December 15, 1953, was reviewed. The FBI Director's letter concluded:

I strongly feel that irrespective of the repeal of the Emergency Detention Act, the Federal Government must take whatever steps are necessary, within the law, to protect itself from all hostile forces bent on its destruction. We, therefore, feel that it is absolutely incumbent upon the FBI to continue investigations of those who pose a threat to the internal security of the country and to maintain an *administrative index* of such individuals as an essential part of our investigative responsibility. Such an

index not only enables the FBI to pinpoint individuals who have exhibited a propensity to conduct acts inimical to national security, but also serves as an extremely valuable list of individuals who pose a continuing threat to the safety of the President and thereby enables us to provide current data to U. S. Secret Service concerning backgrounds and whereabouts of such individuals. 613 [Emphasis added.]

The FBI made no mention of the Agitator Index, which had been abolished earlier in 1971 because "extremist subjects" were now "adequately followed" through the Security Index. 614

There was also no allusion to the theory advanced within the FBI that the new "administrative index" could serve as the basis for a revived Detention Program in some future emergency.

The Attorney General replied that the FBI's authority to investigate subversive activities" on the bases cited by the Bureau was "unaffected by the repeal of the Emergency Detention Act." With respect to the Security Index, the Attorney General advised:

... [T]he repeal of the aforementioned Act does not alter or limit the FBI's authority and responsibility to record, file and index information secured pursuant to its statutory and Presidential authority. An FBI administrative index compiled and maintained to assist the Bureau in making readily retrievable and available the results of its investigations into subversive activities and related matters is not prohibited by repeal of the Emergency Detention Act.

While the Department does not desire a copy of any lists that you may compile on the basis of such records or indices, the Internal Security Division should be furnished a monthly memorandum reflecting the identity of government employees who by significant acts or membership in subversive organizations, have demonstrated a propensity to commit acts inimical to our national security.

The Justice Department was studying what to do with the "Attorney General's portfolio" -- the secret plans for emergency detention." 615 Several months later the FBI was instructed to destroy the materials prepared for the "Attorney General's portfolio." 616

Upon receipt of the Attorney General's memorandum, the FBI reconstituted the Security Index as an Administrative Index (ADEX) with revised standards. FBI intelligence officials explained that, since the Justice Department would no longer review the names on the list, the FBI was "now in a position to make a sole determination as to which individuals should be included in an index of subversive individuals. Previously, the Justice Department had "frequently removed individuals who in the strictest legal interpretation should not be considered for arrest and detention." Under the new procedure the FBI could make its own "determination based not on arrest and detention but rather on overall potential for committing acts inimical to the national defense interest." This meant restructuring the Index so that it no longer stressed "membership in or affiliation with old line revolutionary organizations," such as the Communist Party. Instead, it would concentrate on the "new breed of subversive individual":

He may adhere to old-line revolutionary concepts but he is unaffiliated with any organization. He may belong to or follow one New Left-type group today and another tomorrow. He may simply belong to the loosely knit group of revolutionaries who have no particular political philosophy but who continuously plot the overthrow of our Government. He is the nihilist who seeks only to destroy America.

On the other hand, he may be one of the revolutionary black extremists who, while perhaps influenced by groups such as the Black Panther Party, he is also unaffiliated either permanently or temporarily with any black organization but with a seething hatred of the white establishment will assassinate, explode, or otherwise destroy white America.

The previous Reserve Index, which had never been disclosed to the Justice Department, would now be incorporated into Category IV of the new ADEX. It included "teachers, writers, lawyers, etc." who did not actively participate in subversive activity "but who were nevertheless influential in espousing their respective philosophies." It was estimated that the total case load increase under the ADEX would be "in excess of 23,000 cases the first year," including 17 - 18,000 individuals who "are either now being investigated or who have been investigated in the past." 617

The following standards for placing subjects of "security investigations" on the ADEX were sent out to the field offices:

#### *Category I*

(1) All national leaders of revolutionary organizations whose aims and purposes include the overthrow and destruction of the Government by force and violence or other unconstitutional means, and individuals affiliated therewith who have demonstrated propensity for violence against the person rather than property or have received special training in sabotage, espionage, or guerrilla warfare or have engaged in underground-type operations.

(2) Revolutionaries, though unaffiliated with any specific organization, who have demonstrated by acts or statements a propensity for violence, including acts of terrorism, assassination, or any interference with or threat to the survival and effective operation of national, state, or local Governments and of the defense efforts.

(3) National leaders of black extremist separatist organizations.

(4) Any individual who qualifies for the ADEX should be included in Category I if he is employed in or has access to a key facility.

#### *Category II*

(1) Secondary leadership of revolutionary and black extremist separatist organizations. Secondary leadership would comprise, for example, regional, state, and local leaders who are involved in policy making in fulfilling anti-U.S. objectives of their respective revolutionary organizations and whose activities do not justify their inclusion in Category I.

(2) Active participants in furthering the aims and purposes of the revolutionary or black extremist separatist organization with which affiliated.

(3) Other unaffiliated revolutionaries who have demonstrated by acts or statements a propensity for violence against property rather than persons.

#### *Category III*

(1) Rank-and-file membership in, or participation in activities of, revolutionary organizations within the last five years as evidenced by overt acts or statements established through reliable sources, informants, or individuals.

(2) Leadership or activist position in affiliated fronts of revolutionary organizations within the last three years as shown by overt acts or statements established through reliable sources, informants, or individuals.

(3) An individual who, although not a member of or participant in activities of revolutionary organizations or considered an activist in affiliated fronts, has exhibited a revolutionary ideology and is *likely to seize upon the opportunity presented by national emergency* to commit acts of espionage or sabotage, including acts of terrorism, assassination, or any interference with or threat to the survival and effective operation of national, state, and local Governments and of the defense efforts. [Emphasis added.]

#### *Category IV*

(1) Individuals whose activities do not meet criteria of Categories I, II, or III but who are in a position to influence others to engage in acts inimical to the national defense or are likely to furnish financial aid or other assistance to revolutionary elements *because of their sympathy, associations, or ideology*. [Emphasis added.]

Field offices were also instructed to review the cases of persons on the Reserve Index and, "where appropriate", recommend them for inclusion in the ADEX. 618

The assumption that the ADEX could be used as the basis for detention or other action in an emergency was made clear in the standards for Category III (3). However, when these criteria were supplied to the Justice Department in 1972, the Attorney General did not question the fact that the ADEX was more than just an administrative aid for conducting current investigations. 619

One Bureau memorandum indicates that "representatives of the Department" in fact agreed with the view that there might be "circumstances" where it would be necessary "to quickly identify persons who were a threat to the national security" and that the President could then go to Congress "for emergency legislation permitting apprehension and detention." 620

Thus, although the Attorney General did not formally authorize the ADEX as a continuation of the previous detention list, there was informal Departmental knowledge that the FBI would proceed on that basis. One FBI official later recognized that the ADEX could be "interpreted as a means to circumvent repeal of the Emergency Detention Act." 621

#### *N. Curtailment of FBI Domestic Intelligence*

In 1971, the first serious congressional inquiry into domestic intelligence policy influenced the Army to curtail its extensive surveillance of civilian political activity and led, after Director Hoover's death in 1972, to serious reconsideration by the FBI of the legal basis for its domestic intelligence activities and eventually to a request for clarification of its authority by the Attorney General.

In February 1971, the Subcommittee on Constitutional Rights of the Senate Judiciary Committee began a series of hearings on federal data banks and the Bill of Rights which marked a crucial turning point in the development of domestic intelligence policy. The Subcommittee, chaired by Senator Sam J. Ervin of North Carolina, reflected growing concern among Americans for the protection of "the privacy of the individual against the 'information power' of government." 622 Senator Ervin declared that a major objective of the inquiry was to look into "programs for taking official note of law-abiding people who are active politically or who participate in community activities on social and political issues." The problem, as Senator Ervin saw it, was that there were citizens who felt "intimidated" by these programs and were "fearful about exercising their rights under the First

Amendment to sign petitions, or to speak and write freely on current issues of Government policy." The ranking minority members of the Subcommittee, Senator Roman Hruska, endorsed the need for a "penetrating and searching" inquiry. 623

Assistant Attorney General Robert Mardian testified before the Constitutional Rights Subcommittee in March 1971. He declared that the Justice Department's IDIU did not itself collect intelligence, but rather it relied upon information from "public sources" and from the FBI. Under questioning, Mardian admitted that neither the Department nor the Bureau had "any specific published regulation or guideline" for the collection of intelligence about civil disturbances. 624 When this statement appeared in the press, Director Hoover asked, "What about this?" 625 In response, FBI officials prepared a summary of the relevant Bureau Manual provisions and submitted it to the Director as the FBI's "Guidelines." 626

There is no indication that the "guidelines" material or the FBI Manual provisions themselves were submitted to, or requested by, the Justice Department in 1971. 627 Indeed, when Deputy Attorney General Richard Kleindienst testified in February 1972 at the hearings on his nomination to be Attorney General, he stated that he was "not sure" what guidelines were used by the FBI. Kleindienst also stated that he believed FBI investigations were "restricted to criminal conduct or the likelihood of criminal conduct." 628 Director Hoover noted on a newspaper report of the testimony, "Prepare succinct memo to him on our guidelines." 629

The FBI's summary of its "guidelines," submitted to the Acting Attorney General, in 1972, stated that the Bureau investigated "any individual" who is "affiliated with or adheres to the principles of" an organization "which has as an objective" the violent overthrow of the government or "other criminal activity detrimental to the National defense." 630 The Bureau also made clear that the purpose of these investigations was not just to "obtain evidence for prosecution," but also

to obtain intelligence data in order to have day-to-day appraisal of strength, dangerousness, and activities of the organization; and to keep the Department of Justice and other affected Government agencies advised.

These investigations were partly based on criminal statutes, although the Bureau admitted that "subversive activity ... often does not clearly involve a specific section of a specific statute." They were also based on the 1939 Roosevelt directives which were said to have been "reiterated *and broadened* by subsequent Directives." 631 [Emphasis added.]

Shortly thereafter (and only two days before Director Hoover's death), the Bureau advised Kleindienst that it was abandoning the use of the term "New Left" and substituting "Revolutionary Activities" so as to more accurately "depict" the "militant, violence-prone revolutionaries with whom we are concerned in our current investigations." 632

After Director Hoover's death in May 1972, FBI intelligence officials prepared a "position paper" for Acting Director L. Patrick Gray, in response to his request for a review of Bureau "authority" for investigations "where there is no direct violation of law." This paper merely recited the various Presidential directives, Executive Orders, delimitations agreements, and general authorizations from the Attorney General, with no attempt at analysis. The need for "intelligence collection" to assure "proper vigilance" was introduced in the following terms:

It is clear that the aspirations of most revolutionary groups far exceed their capability to achieve their ultimate objectives. They are, however, quite capable of eroding the integrity of the democratic system by lesser acts and, if not discouraged or thwarted, might well accumulate the will and power for more decisive action. The dramatic success of the Castro revolution is a sufficient example. 633

At the same time, the FBI Office of Legal Counsel began its own review of the constitutional issues; and one memorandum, anticipating the likelihood of further "congressional intervention," recommended the development of "tight internal controls and carefully developed guidelines." 634

There was a sharp split within the Domestic Intelligence Division over whether or not the Bureau should continue to rely on the various executive orders as a basis for its authority. One official concluded that the FBI had "overstated our authority supposedly derived from Presidential directives," and that the Attorney General should be called upon "to provide legal guidance and advice as to just how much authority we have or need." Other intelligence officials believed that FBI policies might be "undermined" if it attempted to rely solely on "statutory authority." 635 Nevertheless, a new Division position paper concluded that domestic intelligence investigations could practicably be based on the "concept" that their purpose was "to prevent a violation of a statute." The paper also indicated that the ADEX would be revised so that it could not be "interpreted as a means to circumvent repeal of the Emergency Detention Act." 636

One of the arguments for not relying on the authority of the Presidential orders was the risk of abuse of the FBI by the White House:

Over the years it became common practice for White House staff members to telephone requests for information or investigations to Mr. Hoover's office or the office of one of his officials. Such requests were usually considered as being within the constitutional Executive power, and for the most part such requests were completely legitimate and well within the recognized scope of the FBI investigative authority.

Occasionally, however, requests were made and complied with -- which in retrospect appear to have been beyond any recognized Executive authority. An example is a telephone request to furnish all available information to the White House concerning a forthcoming Earth Day rally in 1970. The rally, which was sponsored by groups concerned with pollution and ecology, attracted the attention of a few subversive elements, but appeared to be very much under the control of the sponsors. Senator Edmund S. Muskie spoke at the rally in Washington, D.C., and Rennie Davis, an antiwar activist with a

subversive background, appeared on the same platform with Senator Muskie. A few minor disturbances erupted in some areas, but overall the Earth Day rallies were peaceful and attained their general objective, the calling of attention to environmental problems. Senator Muskie, who learned that the FBI covered the rally in Washington, was incensed that the FBI was involved. We had a poor defense and in this case, at least, it is doubtful that there was any legitimate Executive authority to have the FBI involved. In any event, it would appear that such requests should flow through channels, including the Department of Justice where possible, to assure that unreasonable and improper requests are [not] made for investigative activity. 636a

Acting Director Gray postponed making any formal request for advice from the Attorney General in 1972. 637 Meanwhile, the Domestic Intelligence Division proceeded on its own to revise the pertinent Manual sections and the ADEX standard. One official observed that there were "some individuals now included in ADEX even though they do not realistically pose a threat to the national security." He added that this would leave the Bureau "in a vulnerable position if our guidelines were to be scrutinized by interested Congressional committees." Thus, it was recommended that the list be trimmed to those who were "an actual danger now," reducing the number of persons on the ADEX by two-thirds. 638 The Justice Department was advised of this change. 639

The revision of the Manual was completed by May 1973. It was described as "a major step" away from "heavy reliance upon Presidential Directives" to an approach "based on existing Federal statutes." Draft copies were distributed to the field for suggestions. 640 The field was advised that the "chief statutes" upon which the new criteria were based were those dealing with rebellion or insurrection (18 U.S.C. 2383), seditious conspiracy (18 U.S.C. 2384) and advocating overthrow of the government (18 U.S.C. 2385). The ADEX was to be "strictly an administrative device" and should play no part "in investigative decisions or policies." The revision also eliminated "overemphasis" on the Communist Party. Although field offices were instructed to "close" investigations not meeting the new criteria, headquarters did not want "a massive review on crash basis" of all existing cases. 641

A series of regional conferences were held with field office supervisors to discuss the new standards, after which they were revised to allow greater flexibility. For example, the supervisors saw the need to undertake "preliminary inquiries" before it was known "whether a statutory basis for investigation exists." This specifically applied where a person had "contact with known subversive groups or subjects," but the Bureau did not know "the purpose of the contact." These preliminary investigations could go on for 90 days "to determine whether or not a statutory basis for a full investigation exists." Moreover, at the urging of the field supervisors, the period for a preliminary investigation of an allegedly "subversive organization" was expanded from 45 to 90 days. 642

For the first time in FBI history, a copy of the Manual section for "domestic subversive investigations" was sent to the Attorney General, apparently "in connection with" a request made earlier by Senator Edward M. Kennedy who had asked to see a copy of this section at the time of the confirmation hearings for Attorney General Kleindienst in 1972. 643

After Clarence M. Kelley was confirmed as FBI Director, he requested guidance from the Attorney General. In a memorandum to Attorney General Elliott Richardson, Director Kelley cited Senator Sam J. Ervin's view that the FBI should be prohibited by statute "from investigating any person without that individual's consent, unless the Government has reason to believe that the person has committed a crime or is about to commit a crime." He then summarized the position paper prepared by the Domestic Intelligence Division and the Bureau's current policy of attempting to rely on statutory authority. However, he observed that the statutes upon which the FBI was relying were either "designed for the Civil War era, not the Twentieth Century" (the seditious conspiracy, rebellion and insurrection laws) or had been "reduced to a fragile shell by the Supreme Court" (the Smith Act dealing with advocacy of overthrow). Moreover, it was difficult to fit into the statutory framework groups "such as the Ku Klux Klan, which do not seek to overthrow the Government, but nevertheless are totalitarian in nature and seek to deprive constitutionally guaranteed rights."

Kelley stated that, while the FBI had "statutory authority," it still needed "a definite requirement from the President as to the nature and type of intelligence data *he* requires in the pursuit of *his* responsibilities based on *our* statutory authority." [Emphasis added.] While the statutes gave "authority," an Executive Order "would define our national security objectives." The FBI Director added,

It would appear that the President would rather spell out his own requirements in an Executive Order instead of having Congress tell him what the FBI might do to help him fulfill his obligations and responsibilities as President.

Kelley concluded that it "would be folly" to limit the Bureau to investigations only when a crime "has been committed," since the government has to "defend itself against revolutionary and terrorist efforts to destroy it." Consequently, he urged that the President exercise his "inherent Executive power to *expand* by further *defining* the FBI's investigative authority to enable it to develop advance information" about the plans of "terrorist and revolutionaries who seek to overthrow or destroy the Government." 644 [Emphasis added.]

Director Kelley's request initiated a process of reconsideration of FBI intelligence authority by the Attorney General. Even before Kelley's request, Deputy Attorney General-Designate William Ruckelshaus (who had served for two months as Acting FBI Director between Gray and Kelley), sent a list of questions to the Bureau to begin "an in-depth examination of some of the problems facing the Bureau in the future." 645 The Ruckelshaus study was interrupted by his departure in the "Saturday Night Massacre" of October 1973.

The Ruckelshaus study and Kelley's request were superseded in December 1973, when Acting Attorney General Robert Bork in consultation with Attorney General-Designate William Saxbe gave higher priority to a Departmental inquiry into the FBI's COINTELPRO practices. Responsibility for this inquiry was assigned to a committee headed by Assistant Attorney General Henry Petersen. 646 Even at this stage, however, the Bureau resisted efforts by the Department to look too deeply into its operations. Director Kelley advised the Acting Attorney General that the Department should exclude from its review the FBI's

"extremely sensitive foreign intelligence collection techniques," which were handled within the Bureau "on a strictly need-to-know basis" and thus should not be included in a study "which will be beyond the control of the FBI." 647

As a result, the Petersen committee's review of COINTELPRO did not consider anything more than a brief FBI prepared summary of foreign counterintelligence operations. 648 Moreover, the inquiry into domestic COINTELPRO cases was based mainly on short summaries of each incident compiled by FBI agents, with Department attorneys making only spot checks of the underlying files to assure the accurateness of the summaries. Thus, the inquiry did not consider the complete story of COINTELPRO as reflected in the actual memoranda discussing the reasons for adopting particular tactics and the means by which they were implemented. 649

One Bureau memorandum to the Petersen committee even suggested that the Attorney General did not have authority over the FBI's foreign counterintelligence operations, since the Bureau was accountable in this area directly to the United States Intelligence Board and the National Security Council. The Peterson Committee sharply rejected this view, citing the fact that the ad hoc equivalent of the U.S. Intelligence Board had approved the discredited "Huston plan" in 1970 and declaring, "There can be no doubt that in the area of foreign counterintelligence, as in all its other functions, the FBI is subject to the power and authority of the Attorney General." 650

Thus, while the Bureau was seeking guidance and clarification of its authority, at the same time vestiges remained of its past resistance to outside scrutiny and its desire to rely on Executive authority, rather than statute, for the definition of its intelligence activities.

#### *0. Re-Authorization of FBI Domestic Intelligence*

In the absence of any new standards imposed by the Attorney General via "guidelines" or established by statute, the Bureau continued to conduct domestic intelligence investigations under broad authorizations issued by the Justice Department in 1974. These authorizations were explicitly based on conceptions of inherent executive power, broader in theory than the FBI's own claim, in 1973, that its authority could be found in the criminal statutes.

##### *(1) Executive Order 10450, as amended*

The Federal employee security program continued to be, according to the Justice Department's 1974 instructions, a substantive basis for FBI domestic intelligence investigations. An internal Bureau memorandum stated that this order:

specifically requires the FBI to check the names of all civil applicants and incumbents of the Executive branch against our records. In order to meet this responsibility FBIHQ records must contain identities of all persons connected with subversive or extremist activities, together with necessary identifying information 651

FBI field offices were instructed in mid-1974 to report to Bureau headquarters such data as the following:

Identities of subversive and/or extremist groups or movements (including front groups) with which subject has been identified, period of membership, positions held, and a summary of the type and extent of subversive or extremist activities engaged in by subject (e.g., attendance at meetings or other functions, fund-raising or recruiting activities on behalf of the organization, contributions, etc). 652

In June 1974 President Nixon formally abolished the "Attorney General's list," upon the recommendation of Attorney General Saxbe. However, the President's order retained a revised definition of the types of organizations, association with which would continue to be taken into account in evaluating prospective federal employees. 653 The Justice Department instructed the FBI that it should undertake to "detect organizations with a potential" for falling within the terms of the order and to investigate "individuals who are active either as members of or as affiliates of" such organizations. The Departmental instructions added:

It is not necessary that a crime occur before the investigation is initiated, but only that a reasonable evaluation of the available information suggests that the activities of the organization may fall within the proscription of the Order....

*It is not possible to set definite parameters covering the initiation of investigations of potential organizations falling within the Order but once the investigation reaches a stage that offers a basis for determining that the activities are legal in nature, then the investigation should cease, but if the investigation suggests a determination that the organization is engaged in illegal activities or potentially illegal activities it should continue. [Emphasis added.]*

The Department applied "the same yardstick" to investigations of individuals "when information is received suggesting their involvement. 654

With respect to one organization, the Department advised the Bureau that "despite the abolition" of the Attorney General's list, the group "would still come within the criteria" of the employee security program if it "may have engaged in activities" of the sort proscribed by the revised executive order. 655

##### *(2) Civil Disorders Intelligence*

The Justice Department also instructed the FBI in 1974 that it should not, as the Bureau had suggested, limit its civil disturbance reporting "to those particular situations which are of such a serious nature that Federal military personnel may be called upon for assistance." The Department advised that this suggested "guideline" was "not practical" since it "would place the burden on the Bureau" to make an initial decision as to "whether military personnel may ultimately be needed," and this responsibility rested "legally" with the President. Instead, the FBI was ordered to "continue" to report on

all significant incidents of civil unrest and should not be restricted to situations where, in the judgment of the Bureau, military personnel eventually may be used. 656

Moreover, under this authority the Bureau was also ordered to "continue" reporting on

all disturbances where there are indications that extremist organizations such as the Communist Party, Ku Klux Klan, or Black Panther Party are believed to be involved in efforts to instigate or exploit them.

The instructions specifically declared that the Bureau "should make timely reports of significant disturbances, even when no specific violation of Federal law is indicated." This could be done, at least in part, through "liaison" with local law enforcement agencies. The FBI was expected to "be aware of disturbances and patterns of disorder," although it was not to report "each and every relatively insignificant incident of a strictly local nature." 657

The Justice Department abolished the Intelligence Evaluation Committee, set up in partial implementation of the "Huston Plan," after its existence was publicized in 1973. 658 The IDIU also dismantled its computerized data bank even though the basic functions of the IDIU continued to be performed by a Civil Disturbance Unit in the office of the Deputy Attorney General, and the FBI was under instructions to disseminate its civil disturbance reports to that Unit. 659

FBI officials considered these instructions "significant" because they now gave it "an official, written mandate from the Department." The Department's desires were viewed as "consistent with what we have already been doing for the past several years," although the Bureau Manual was rewritten to "incorporate into it excerpts from the Department's letter." 660

From a legal point of view, the instructions were significant because they relied for authority on the President's powers under Article IV, section 4 of the Constitution to protect the states, upon application of the legislature or the executive, against "domestic violence," as well as upon the statute (10 U.S.C. 331, et seq.) authorizing the use of troops and upon the Presidential directive of 1969 designating the Attorney General as chief civilian officer to coordinate the Government's response to civil disturbances. 661

### (3) "Potential" Crimes

The FBI has recently abolished completely its ADEX, or administrative index of persons considered "dangerous now." However, in 1974, the Justice Department elaborated a theory to support broad power of the Executive branch to investigate groups which represent a "potential threat to the public safety," or which have a "potential" for violating specific statutes. In the case of one group, for example, the Department advised the FBI that the General Crimes Section of the Criminal Division had "recommended continued investigation" on the basis of "potential violations" of the antiriot statutes, 18 U.S.C. 2101-2102. These same instructions added that there need not be a "potential" for violation of any specific statute:

[W]ithout a broad range of intelligence information, the President and the departments and agencies of the Executive branch could not properly and adequately protect our nation's security and enforce *the numerous statutes* pertaining thereto ... [T]he Department, and in particular the Attorney General, must continue to be informed of those organizations that engage in violence which represent *a potential threat to the public safety*. 663 [Emphasis added.]

The Department's theory of executive power was also spelled out in 1974 testimony before the House Internal Security Committee. According to Deputy Assistant Attorney General Kevin Maroney, "the primary basis" for FBI domestic intelligence authority was "the constitutional powers and responsibilities vested in the President under Article II of the Constitution." These powers arise from the President's duty in his oath of office to "preserve, protect, and defend the Constitution of the United States," 664 the Chief Executive's duty to "take care that the laws be faithfully executed," 665 the President's responsibilities as Commander-in-Chief, and his "power to conduct our foreign relations." The latter power was said to relate "more particularly to the Executive's power to conduct foreign intelligence activities here and abroad." Nevertheless, Mr. Maroney added,

We recognize the complexity and difficulty of adequately spelling out the FBI's authority and responsibility to conduct domestic intelligence-type investigations. The concept of national security is admittedly a broad one, while the term subversive activities is even more difficult to define. 666

The chairman of the Internal Security Committee, Rep. Richard H. Ichord, stated at that time that, except in limited areas, the Congress "has not directly imposed upon the FBI clearly defined duties in the acquisition, use, or dissemination of domestic or internal security intelligence. 667 Subsequently, the FBI Intelligence Division revised its 1972-1973 position on its legal authority, and in a paper completed in 1975 it returned to the view "that the intelligence-gathering activities of the FBI have had as their basis the intention of the President to delegate his Constitutional authority," as well as the statutes "pertaining to the national security." 668

The generalized instructions issued by the Justice Department in 1974, when viewed in the larger framework of the theory of executive power upon which they were based, have presented the Congress with the formidable but essential task of developing statutory standards for FBI domestic intelligence to replace vague executive mandates. The record clearly indicates

that, even though the Attorney General has promulgated more precise "guidelines," the broad claims of power in the hands of the Executive branch could readily permit a return to the vague and overbroad domestic intelligence policies of the past. 669

**Footnotes:**

1 Separate Committee Reports deal with the most intrusive investigative techniques (Electronic Surveillance, Surreptitious Entry, Mail Opening, and informants), FBI programs going beyond investigation to the disruption of targeted groups and individuals (COINTELPRO), and one specific case study combining all types of Bureau operations (Dr. Martin Luther King, Jr.).

Edgar Hoover, 2/19/38.
- 68 Confidential memorandum by J. Edgar Hoover, 8/24/36. General Butler also recounted attempts by right-wing elements to persuade him to join plans for an anti-New Deal "coup" to a congressional committee. Arthur M. Schlesinger, Jr., *The Politics of Upheaval* (Boston: Houghton Mifflin, 1960), pp. 82-85.
- 69 Hoover memorandum, 8/24/36.
- 70 Hoover memorandum, 8/25/36.
- 71 Recently, FBI officials have differed in their interpretations of these events. An FBI study in 1972 concluded that "the concern for national security was related to two international movements" in the pre-World War II period and that "there was no national concern for indigenous anarchists or other groups designing to overthrow the Government." FBI Memorandum, *Scope of FBI Authority, Jurisdiction and Responsibility in Domestic Intelligence Investigations*, 7/31/72. However, a later study contends that the Secretary of State's request was a device to satisfy the provisions of the FBI appropriations statute and did not set "jurisdictional limits." The State Department's involvement "did not serve in some way to limit the scope of investigation to foreign or foreign-controlled activities to the exclusion of domestic." FBI Intelligence Division, *An Analysis of FBI Domestic Security Investigations*, 10/28/75. Except for the reference to General Butler and Father Coughlin, FBI records pertaining to the origins and implementation of President Roosevelt's order tend to support the former position.

88a Letter from Cummings to the President, 10/20/38.

89 On 2/7/39, the Assistant to the Attorney General wrote letters to the Secret Service, the Bureau of Internal Revenue, the Narcotics Bureau, the Customs Service, the Coast Guard, and the Postal Inspection Service stating that the FBI and military intelligence had "undertaken activities to investigate matters relating to espionage and subversive activities." (Letter from J. B. Keenan, Assistant to the Attorney General, to F. J. Wilson, Chief, Secret Service, 2/7/39.) A letter from Attorney General Murphy to the Secretary of the Treasury shortly thereafter also referred to "subversive activities." (Letter from Attorney General Murphy to the Secretary of the Treasury, 2/16/39.) However, a similar letter two days later referred only to matters "involving espionage, counterespionage, and sabotage," without mentioning "subversive activities." (Letter from Attorney General Murphy to the Secretary of the Treasury, 2/18/39.) Attorney General Murphy had abandoned this reference, although there is no record of any reasons for doing so.

184 Delimitation of Investigative Duties of the Federal Bureau of Investigation, the Office of Naval intelligence, and the Military Intelligence Division, 2/9/42.

185 Memorandum from Colonel Churchill, Counter Intelligence Branch, MID, to E. A. Tamm, FBI, 5/16/39, and enclosure, "Subject: Essential Items of Domestic Intelligence Information."

186 Victor J. Johanson, "The Role of the Army in the Civilian Arena, 1920-1970." U.S. Army Intelligence Command Study (1971).

The scope of wartime Army intelligence has been summarized as follows: "It reported on radical labor groups, communists, Nazi sympathizers, and 'semiradical' groups concerned with civil liberties and pacifism. The latter, well intentioned but impractical groups as one corps area intelligence officer labeled them, were playing into the hands of the more extreme and realistic radical elements, G-2 still believed that it had a right to investigate 'semi-radicals' because they undermined adherence to the established order by propaganda through newspapers, periodicals, schools, and churches." (Joan M. Jensen, "Military Surveillance of Civilians, 1917-1967," in *Military Intelligence, 1974 Hearings*, pp. 174-175.)

187 Whitehead, *The FBI Story*, pp. 266, 456. President Roosevelt's Directive of December 1941 on the FBI's SIS read as follows:

"In accordance with previous instructions the Federal Bureau of Investigation has set up a Special Intelligence Service covering the Western Hemisphere, with Agents in Mexico, Central America, South America, the Caribbean, and Canada. Close contact and liaison have been established with the Intelligence officials of these countries.

"In order to have all responsibility centered in the Federal Bureau of Investigation in this field, I hereby approve this arrangement and request the heads of all Government Departments and Agencies concerned to clear directly with the Federal Bureau of Investigation in connection with any intelligence work within the sphere indicated.

"The Director of the Federal Bureau of Investigation is authorized and instructed to convene meetings of the chiefs of the various Intelligence Services operating in the Western Hemisphere and to maintain liaison with Intelligence Agencies operating in the Western Hemisphere." (Confidential Directive to the Heads of the Government Departments and Agencies Concerned, 12/41.)

An agreement between the FBI and military intelligence dealing with "Special Intelligence operations in the Western Hemisphere" cited Presidential "instructions" of June 24, 1940 and January 16, 1942. It described FBI responsibilities as follows:

"The Special Intelligence Service will obtain, primarily through undercover operations supplemented when necessary by open operations, economic, political, industrial, financial and subversive information. The Special Intelligence Service will obtain information concerning movements, organizations, and individuals whose activities are prejudicial to the interests of the United States." (Agreement between MID, ONI and FBI for Coordinating Special Intelligence Operations In the Western Hemisphere, 2/25/42.)

Overlap between FBI and OSS operations is indicated by the following sections from a Joint Chiefs of Staff Directive on the functions of the Office of Strategic Services in 1943:

### "3. Secret Intelligence

"a. The Office of Strategic Services is authorized to: (1) Collect secret intelligence in all areas other than the Western Hemisphere by means of espionage and counter-espionage, and evaluate and disseminate such intelligence to authorized agencies. In the Western Hemisphere, bases already established by the Office of Strategic Services in Santiago, Chile, and Buenos Aires, Argentina, may be used as ports of exit and of entry for the purpose of facilitating operations in Europe and Asia, but not for the purpose of conducting operations in South America. The Office of Strategic Services is authorized to have its transient agents from Europe or Asia touching points in the Western Hemisphere transmit information through facilities of the Military Intelligence Service and of the Office of Naval Intelligence.

### "4. Research and Analysis

"The Office of Strategic Services will (1) furnish essential intelligence for the planning and execution of approved strategic services' operations; and (2) furnish such intelligence as is requested by agencies of the Joint Chiefs of Staff, the armed services, and other authorized Government agencies. To accomplish the foregoing no geographical restriction is placed on the research and analysis functions of the Office of Strategic Services. . . ." (Emphasis supplied)

(JCS Directive: Functions of the Office of Strategic Services, JCS 155/11/D, 10/27/43.)

192 Smith, OSS, pp. 10-11.

193 Whitehead, *The FBI Story*, pp. 279-280; Smith, OSS, p. 366.

194 The Court held that the grave and probable danger posed by the Communist Party justified this restriction on free speech under the First Amendment: "The formation by petitioners of such a highly organized conspiracy, with rigidly disciplined members subject to call when the leaders, these petitioners, felt that the time had come for action, coupled with the inflammable nature of world conditions, similar uprisings in other countries, and the touch-and-go nature of our relations with countries with whom petitioners were in the very least ideologically attuned, convince us that their convictions were justified on this score." [*Dennis v. United States*, 341 U.S. 494, 510-511 (1951).]

195 64 Stat. 987 (1950) The Subversive Activities Control Act's registration provision was held not to violate the First Amendment in 1961. [*Communist Party v. Subversive Activities Control Board*, 367 U.S. 1 (1961).] However, registration of Communists under the Act was later held to violate the Fifth Amendment privilege against self incrimination. [*Albertson v. Subversive Activities Control Board*, 382 U.S. 70 (1965).] The Emergency Detention Act was repealed in 1971.

196 68 Stat. 775 (1954), 50 U.S.C. 841-844. The constitutionality of the Communist Control Act of 1954 has never been tested.

197 In light of the facts now known, the Supreme Court overstated the degree to which Congress had explicitly "charged" the FBI with domestic intelligence responsibilities: "Congress has devised an all-embracing program for resistance to the various forms of totalitarian aggression. . . . It has charged the Federal Bureau of Investigation and the Central Intelligence Agency with responsibility for intelligence concerning Communist seditious activities against our Government, and has denominated such activities as part of a world conspiracy." [*Pennsylvania v. Nelson*, 350 U.S. 497, 504-505 (1956).] This decision held that the Federal Government had preempted state sedition laws, citing President Roosevelt's September 1939 statement on FBI investigations and an address by FBI Director Hoover to state law enforcement officials in August 1940.

198 *Yates v. United States*, 354 U.S. 298, 325 (1957).

199 Justice Douglas, who dissented on Fifth Amendment grounds, agreed with the majority on the First Amendment issue:

"The Bill of Rights was designed to give fullest play to the exchange and dissemination of ideas that touch the politics, culture, and other aspects of our life. When an organization is used by a foreign power to make advances here, questions of security are raised beyond the ken of disputation and debate between the people resident here." [*Communist Party v. Subversive Activities Control Board*, 367 U.S. 1, 174 (1961).]

206 Report of the Royal Commission, 6/27/46, pp. 82--83, 686-689. The report described how "a number of young Canadians, public servants and others who begin with a desire to advance causes which they consider worthy, have been induced into joining study groups of the Communist Party. They are persuaded to keep this adherence secret. They have then been led step by step along the ingenious psychological development course ... until under the influence of sophisticated and unscrupulous leaders they have been persuaded to engage in illegal activities directed against the safety and interests of their own society."

220 Memorandum of George M. Elsey, 5/2/47. (Harry S. Truman.)

221 Clifford advised, "Inasmuch as 'undercover' and 'infiltration' tactics may become necessary, duplication will be costly and would jeopardize the success of both FBI and Civil Service." He added that the FBI "has a highly trained, efficiently organized corps of investigators. There are approximately 4,800 FBI agents now, 1,600 of whom are investigating Atomic Energy Commission employees. FBI expects to begin releasing these 1,600 shortly.... Civil Service, on the other hand, has fewer than 100 investigators, none of whom is especially trained in the techniques required in loyalty investigations.... It is precisely because of the dangers that I believe the FBI is a better agency than Civil Service to conduct loyalty investigations for new employees; the more highly trained, organized and administered an agency is, the higher should be its standards." (Memorandum from Clark Clifford to the President, 5/7/47.) (Harry S. Truman Library.)

328 1968 FBI Manual Section 122, p. 1.

329 The FBI has denied that it ever conducted a "security-type investigation" of the Birch Society or Welch, but the Boston Field Office "was instructed in 1959 to obtain background data" on Welch using public sources. (Memorandum from the FBI to the Senate Select Committee, 2/10/76.) A 1963 internal FBI memorandum stated that the Bureau "checked into the background" of the Birch Society "because of its scurrilous attack on President Eisenhower and other high Government officials." (Memorandum from F. J. Baumgardner to W. C. Sullivan, 5/29/63.)

330 Letter from Assistant Attorney General Tompkins to Sherman Adams, Assistant to the President, 11/22/54; letters from J. Edgar Hoover to Robert Cutler, Special Assistant to the President, 10/15/57 and 1/17/58. (Dwight D. Eisenhower Library.)

331 1960 FBI Manual Section 122, pp. 5-6.

332 FBI Director Hoover's Briefing of the President and the Cabinet, 11/6/58.

333 1960 FBI Manual Section 122, p. 6,

334 SAC Letter No. 63-4, 1/23/63.

335 SAC Letter No. 63-27, 6/11/63.

336 The 1950 Truman statement on FBI authority was cleared by Acting Attorney General Peyton Ford; and Attorney General Herbert Brownell took part in the National Security Council meeting where the 1953 statement was approved. (Letter from James S. Lay, Jr., Executive Secretary, NSC, to Attorney General J. Howard McGrath, 7/24/50; Memorandum from J. Edgar Hoover to Attorney General Brownell, 12/29/53.)

337 National Security Action Memorandum 161, 6/9/62.

338 Presidential Directive, Coordination of Federal Foreign Intelligence Activities, 1/22/46, 11 Fed. Reg. 1337.

339 Hearings before the Senate Armed Services Committee on S. 758, 80th Cong. (1947), p. 497.

340 Senate Armed Services Committee Hearings, on S. 758 (1947), pp. 525-526. President Truman had rejected a proposal by FBI Director Hoover in 1945 for expanding the FBI's wartime Special Intelligence Service, which was assigned to the Western Hemisphere, to a world-wide basis. Don Whitehead, The FBI Story (New York, Random House, 1956) p. 279.

341 Hearings before the House Committee on Expenditures in the Executive Departments on H.R. 2319, 80th Cong. (1947), p. 127.

342 93 Cong. Rec. 9430 (1947). Fears that a foreign intelligence agency would intrude into domestic matters went back to 1944, when General William Donovan, head of the Office of Strategic Services, proposed that the OSS be transformed from a wartime basis to a permanent "central intelligence service." Donovan's proposal was leaked to the Chicago Tribune, allegedly by FBI Director Hoover, and it was denounced as a "super-spy system" which would "pry into the lives of citizens at home." [Corey Ford, Donovan of the OSS (Boston: Little Brown, 1970), pp. 303-304.]

343 93 Cong. Rec. 9404 (1947).

344 93 Cong. Rec. 4218-4219 (1947).

345 50 U.S.C. 403 (d) (3) and 403 (e).

346 93 Cong. Rec. 4219 (1947). The following discussion of FBI Director Hoover by Congressman John McCormack appears in the floor debate on the tenure of the CIA Director: "The best we can do is as in the case of J. Edgar Hoover: A man by his personality, a man who impresses himself so much upon his fellow men that permanency accrues by reason of the character of service that he renders. But J. Edgar Hoover has no tenure for life. He has earned it because of his unusual capacity." [93 Cong. Rec. 9445 (1947).]

368 Report on the Internal Security Program, prepared by the Interdepartmental Intelligence Conference and the Interdepartmental Committee on Internal Security, 3/5/54.

369 The Justice Department's 1959 annual report stated:

"Despite the 'thaw,' real or apparent, in the Cold War, the [Communist] Party has continued as an organized force, *constantly seeking to repair its losses and to regain its former position of influence*. In a number of fields its activities are directed ostensibly toward laudable objectives, such as elimination of discrimination by reason of race, low cost housing for the economically underprivileged, and so on. These activities are pursued in large part *as a way of extending the influence of the Party and its contracts with other forces and currents in American life, and with the hope of being able to "move in" on such movements when the time is propitious*. As a conspiratorial activity the Party is still very much alive." (Annual Report of the Attorney General for Fiscal Year 1959, pp. 247-248.) [Emphasis supplied.]

370 J. Edgar Hoover, Chairman, Interdepartmental Intelligence Conference, to McGeorge Bundy, Special Assistant to the President, 7/25/61, enclosing IIC Report, Status of U.S. Internal Security Programs, July 1, 1960, Through June 30, 1961.

471 Ibid, p. 490.

472 "Improper Police Intelligence Activities," A Report by the Extended March 1975 Cook County (Illinois) Grand Jury, 11/10/75. The report also stated:

"Finally, political spying by police lowers the community's respect for law enforcement. Without the respect and support of the community, law enforcement agencies cannot operate effectively. The decision by high police officials to indiscriminately infiltrate community groups makes the difficult job of responsible law enforcement even more difficult."

473 For example, Procedures: Public Security Activities of the Intelligence Division, New York City Police Department, published in "Domestic Intelligence Operations for Internal Security Purposes," Hearings before the Committee on Internal Security, House of Representatives, 93d Cong., 2d Sess. (1974), pp. 3747-3792; and Standards and Procedures: Public Disorder Intelligence Division, Los Angeles Police Department, April 10, 1975.

474 Joseph Califano testimony, 1/27/76, pp. 6-9. Califano states in retrospect that the attempt to "predict violence" was "not a successful undertaking," that "advance intelligence about dissident groups" would not "have been of much help," and that what is "important" is "physical intelligence" about geography, hospitals, power stations, etc. (Califano, 1/27/76, pp. 8, 11-12.)

593 Assistant Director Rosen's reference to Justice Department guidelines pertained to an agreement between the Justice Department and the Bureau of Alcohol, Tobacco, and Firearms of the Treasury Department defining their respective jurisdictions under the antibombing legislation enacted in 1970.

594 See Report on the Huston Plan.

595 The new order assigned to the Subversive Activities Control Board the function of designating organizations for what had been the "Attorney General's list," to be used in evaluating applicants for Federal employment.

596 *Albertson v. Subversive Activities Control Board*, 382 U.S. 70 (1965).

597 Robert C. Mardian, Address before the Atomic Energy Commission Security Conference, Washington, D.C., 10/27/71.

598 Executive Order 11605, 7/2/71.

599 Hearings on the Appropriation for the Department of Justice before the House Subcommittee on Appropriations, 92d Cong., 2d Sess. 673 (1972).

600 Inspection Report, Domestic Intelligence Division, 8/17-9/9/71.

601 Executives Conference Memorandum, 6/2/71. The first Assistant Director for the Office of Legal Counsel was Dwight Dalbey, who had for years been in charge of the legal training of Bureau agents. Dalbey's elevation early in 1971, and Hoover's requirement that he review all legal aspects of FBI policy, including Intelligence matters, were major changes in Bureau procedure. (Memorandum from Hoover to all Bureau Officials and Supervisors, 3/8/71.)

602 Memorandum from W. C. Sullivan to Mr. Tolson. Re: Estimated cost of Proposed Expansion of Foreign Liaison, June 7, 1971.

603 Memorandum from W. C. Sullivan to the Director. Re: FBI Foreign Liaison Program, 6/16/71.

604 See report on the Huston Plan.

605 R. R. Beaver, Memorandum for the Director's Personal Files, Re: W. C. Sullivan, 6/18/71.

606 Memorandum from T. J. Smith to E. S. Miller, 5/13/73; FBI Summary of Interview with Robert Mardian, 5/10/73. William C. Sullivan stated that he "turned over the material, following a discussion in depth with Mr. Mardian relative to security and possible abuses of the material." (Memorandum from W. C. Sullivan to Acting FBI Director Ruckelshaus, 5/11/73.) Robert Mardian recalled that Sullivan told him Director Hoover "might use these tapes for the purpose of preserving his position as Director of the FBI." (Mardian testimony, Senate Watergate Hearings, 7/20/73, p. 2393.)

Former Attorney General John Mitchell recalled that Mardian had indicated to him "that Sullivan was furious over the way he was being treated by the Director and that for this reason he disclosed the information concerning the wiretaps to Mardian." Mitchell also said that Director Hoover had "advised him of the problems he was having with Sullivan," and Mitchell recalled "telling Dir. Hoover that he had no choice but to get rid of Mr. Sullivan." (FBI interview with John Mitchell, 5/12/73.)

607 Inspection Report, Domestic Intelligence Division, 8/17-9/9/71, pp. 4-10.

607a According to former FBI executive W. Mark Felt, Brennan was replaced as a matter "of policy." The purpose was "to put someone else into that spot who was not a protege of Sullivan," as a means of "controlling the Domestic Intelligence Division." It was Felt's understanding "that Director Hoover "felt that Sullivan was out of hand."

Brennan was also disciplined for one aspect of his handling of the "Pentagon Papers" investigation. According to Mark Felt, "Mr. Hoover was convinced that Mr. Brennan deliberately disregarded his instructions" not to interview Louis Marx, father-in-law of Daniel Ellsberg. Felt thought Brennan "got a bum rap" and that "it was an honest error." (Felt, 2/3/76, pp. 67-71.)

608 Inspection Report, Domestic Intelligence Division, 8/17-9/9/71, p. 98.

609 Memorandum from R. D. Cotter to E. S. Miller, Re: Emergency Detention Act, 9/17/71.

610 Memorandum from R. D. Cotter to E. S. Miller, Re: Emergency Detention Act, 9/21/71.

611 Memorandum from D. J. Dalbey to Mr. Tolson, Re: Emergency Detention Act Repeal, 9/24/71.

612 Memorandum from R. D. Cotter to E. S. Miller, Re: Emergency Detention Act Repeal, 9/29/71.

613 Memorandum from the FBI Director to the Attorney General, Re: Emergency Detention Program, 9/30/71.

614 Memorandum from G. C. Moore to C. D. Brennan, Re: Agitator Index, 4/21/71; SAC Letter No. 71-17, 4/27/71.

615 Memorandum from Attorney General John N. Mitchell to the FBI Director, Re: Emergency Detention Program, 10/22/71.

616 Memorandum from Assistant General Robert C. Mardian to the FBI Director, Re: Emergency Detention Program, 2/9/72.

617 Memorandum from T. T. Smith to E. S. Miller, Re: Security Investigations of Individuals, 11/11/71.

618 Memorandum from FBI Headquarters to all SAC's, Re: Security Investigations of Individuals, 11/15/71.

619 Memorandum from the FBI Director to the Attorney General, Re: Security Investigations of Individuals, 2/10/72.

620 Memorandum from T. J. Smith to E. S. Miller, 8/29/72.

621 Domestic intelligence Division, Position Paper: Scope of Authority, Jurisdiction and Responsibility in Domestic Intelligence Investigations, 7/31/72.

622 Federal Data Banks, 1971 Hearings, p. 1.

623 Federal Data Banks, 1971 Hearings, pp. 4, 7.

624 Federal Data Banks, 1971 Hearings, p. 873.

625 Note on news article attached to memorandum from R. D. Cotter to C. D. Brennan, 3/18/71. Hoover also noted on a column in the Washington Post by Alan Barth, "We must get together at once all our guidelines." Routing slip, 3/25/71.

626 Memorandum from R. D. Cotter to C. D. Brennan, 3/25/71.

627 After repeal of the Emergency Detention Act in the fall of 1971, the FBI's Assistant Director for Legal Counsel recommended that the Bureau's request for approval of its new ADEX also include a more general request for reaffirmation of FBI domestic intelligence authority to investigate "subversive activity." (Memorandum from D. J. Dalbey to Mr. Tolson, 9/24/71) The letter to the Attorney General reviewed the line of "Presidential directives" from 1939 to 1953. (Memorandum from Hoover to Mitchell, 9/30/71) The Attorney General replied with a general endorsement of FBI authority to investigate "subversive activities." (Memorandum from Mitchell to Hoover, 10/22/71)

628 Richard Kleindienst testimony, Hearings Before the Senate Judiciary Committee, 2/24/72, p. 64.

629 FBI routing slip attached to Washington Post article, 2/24/72.

630 The summary also stated that "affiliation" with "basic revolutionary front groups" was not a "prerequisite" for investigation, since "other individuals with anarchistic, revolutionary or extremist beliefs" were also investigated. (Attachment to Memorandum from Hoover to Kleindienst, 2/25/72.)

631 Memorandum from Hoover to Kleindienst, 2/25/72 (attachment).

632 Memorandum from the FBI Director to Acting Attorney General Kleindienst, 4/28/72.

633 FBI Domestic Intelligence Division, Position Paper: Investigations of Subversion, 5/19/72. Assistant Director E. S. Miller, head of the Domestic Intelligence Division, withdrew this paper at a conference with Gray and other top Bureau officials; Miller then initiated work on a more extensive position paper, which was completed in July. (T. J. Smith to E. S. Miller, 8/1/72)

634 Memorandum from J. B. Hotis to D. J. Dalbey, 5/18/72.

635 Memorandum from T. J. Smith to H. S. Miller, 8/1/72.

636 Domestic Intelligence Division, Position Paper: Scope of Authority, Jurisdiction and Responsibility in Domestic Intelligence Investigations, 7/31/72.

636a Position Paper, 7/31/72. For an examination of other instances of political abuse of the FBI, see the Final Report on Domestic Intelligence.

637 Gray did order that the Bureau should indicate its "jurisdictional authority" to investigate in every case, "by citing the pertinent provision of the U.S. Code, or other authority," and also that the Bureau should "indicate whether or not an investigation was directed by DJ (Department of Justice), or we opened it without any request from DJ." In the latter case, the Bureau was to "cite our reasons." Note on FBI routing slip, 8/27/72.

638 Memorandum from Smith to Miller, 8/29/72. The anticipated reduction was from 15,259 (the current figure) to 4,786 (the top two priority categories).

639 Memorandum from Gray to Kleindienst, 9/18/72. The basic standard for the revised ADEX read as follows:

"Individuals, whether affiliated with organized groups or not, who have shown a willingness and capability of engaging in treason, rebellion, or insurrection, seditious conspiracy, sabotage, espionage, terrorism, guerrilla warfare, assassination of Government officials or leaders, or other such acts which would result in interference with or a threat to the survival and effective operation of national, state or local government."

640 Memorandum from E. S. Miller to Felt, 5/22/73. This memorandum also stated, looking back on past Bureau policy, that since the FBI's authority to investigate "subversive elements" had never been "seriously challenged until recently," Bureau personnel (and "the general public") had accepted "the FBI's right to handle internal security matters and investigate subversive activities without reference to specific statutes." But the "rationale" based on "Presidential Directives" was no longer "adequate."

641 Memorandum from FBI Headquarters to all SAC's, 6/7/73.

642 Memorandum from FBI Headquarters to all SAC's, 8/8/73.

643 KieIndienst, 'Senate Judiciary Committee, 2/24/72, p. 64; memorandum from Kelley to Richardson, 8/7/73.

661 Memorandum from Petersen to Kelley, 10/22/74; Directive of 4/1/69, discussed at pp. 501-502.

662 omitted in original.

663 Memorandum from Assistant Attorney General Petersen to Kelley, 11/13/74.

664 The opinion of the Supreme Court in *United States v. United States District Court*, 407 U.S. 297 (1972) -- the domestic security wiretapping case -- stated, "Implicit in that duty is the power to protect our Government against those who would subvert or overthrow it by unlawful means."

665 A 19th century Supreme Court opinion was cited as having interpreted the word "laws" broadly to encompass not only statutes enacted by Congress, but also "the rights, duties and obligations growing out of the Constitution itself, our international relations and all the protection implied by the nature of Government under the Constitution." [In *Re Neagle*, 135 U.S. 1 (1890).]

666 Kevin Maroney testimony, Domestic Intelligence Operations for Internal Security Purposes, Hearings before the House Committee on Internal Security, 93d Cong., 2d Sess. (1974), pp. 3332-3335. Mr. Maroney also cited the following from the Supreme Court's opinion in the domestic security wiretapping case: "The gathering of security intelligence is often long range and involves the interrelation of various sources and types of information. The exact targets of such surveillance may be more difficult to identify ... Often, too, the emphasis of domestic intelligence gathering is on the prevention of unlawful activity or the enhancement of the Government's preparedness for some possible crisis or emergency. Thus, the focus of domestic surveillance may be less precise than that directed against more conventional types of crime." (United States v. United States District Court, 407 U.S. 297, 322 (1972).)

667 House Committee on Internal Security Hearings, (1974) pp. 3330-3331.

668 W. Raymond Wannall, Assistant Director for the Intelligence Division, unaddressed memorandum re: "Basis for FBI National Intelligence Investigations," 2/13/75.

669 The "guidelines" for FBI domestic security investigations developed by Attorney General Edward H. Levi and other recent developments are discussed in the Committee's Final Report on Domestic Intelligence.

**DOMESTIC CIA AND FBI MAIL OPENING PROGRAMS**

**PART I: SUMMARY AND PRINCIPAL CONCLUSIONS**

Between 1940 and 1973, two agencies of the federal government -- the CIA and the FBI -- covertly and illegally opened and photographed first class letter mail within the United States. These agencies conducted a total of twelve mail opening programs for lengths of time varying from three weeks to twenty-six years. In a single program alone, more than 215,000 communications were intercepted, opened, and photographed; the photographic copies of these letters, some dated as early as 1955, were indexed, filed, and are retained even today. Information from this and other mail opening programs -- "sanitized" to disguise its true source -- was disseminated within the federal establishment to other members of the intelligence community, the Attorney General, and to the President of the United States.

The stated objective of the CIA programs was the collection of foreign intelligence and counterintelligence information; that of the FBI programs was the collection of counterespionage information. In terms of their respective purposes, seven of the twelve mail opening programs were considered to have been successful by Agency and Bureau officials. One CIA project and three of the FBI programs concededly failed to obtain any significant relevant information. Another CIA operation -- clearly the most massive of all the programs in terms of numbers of letters opened -- was believed to have been of value to the Agency by some officials, but was criticized by many others as having produced only minimally useful foreign intelligence. Despite two unfavorable internal reviews, this program nonetheless continued unabated for twenty years.

While all of these programs responded to the felt intelligence needs of the CIA and the FBI during the "cold war" of the 1950's and early 1960's, once in place they could be -- and sometimes were -- directed against the citizens of this country for the collection of essentially domestic intelligence. In the 1960's and early 1970's, large numbers of American dissidents, including those who challenged the condition of racial minorities and those who opposed the war in Vietnam, were specifically targeted for mail opening by both agencies. In one program, selection of mail on the basis of "personal taste" by agents untrained in foreign intelligence objectives resulted in the interception and opening of the mail of Senators, Congressmen, journalists, businessmen, and even a Presidential candidate.

The first mail opening program began shortly before the United States entered World War II, when representatives of an allied country's censorship agency taught six FBI agents the techniques of "chamfering" (mail opening) for use against Axis diplomatic establishments in Washington, D.C. The program was suspended after the war but reinstituted during the "cold war" in the early 1950's; the method was similar but the targets new. Shortly after this program was reinstituted, the CIA entered the field with a mail opening project in New York designed to intercept mail to and from the Soviet Union. Between 1954 and 1957, the FBI and the CIA each developed second programs, in response to post-war events in Asia, to monitor mail entering the United States from that continent; and the CIA briefly conducted a third operation in New Orleans to intercept

Latin and Central American mail as well. The technique of chamfering was most widely used by the FBI during the period 1959 to 1966: in these years the Bureau operated no fewer than six programs in a total of eight cities in the United States. In July 1966, J. Edgar Hoover ordered an end to all FBI programs, but the Bureau continued to cooperate with the CIA, which acted under no such self-restriction, in connection with the Agency's New York project. In 1969, a fourth CIA program was established in San Francisco and was conducted intermittently until 1971. The era of warrantless mail opening was not ended until 1973, when, in the changed political climate of the times, the political risk -- "flap potential" -- of continuing the CIA's New York project was seen to outweigh its avowed minimal benefit to the Agency.

All of these mail opening programs were initiated by agency officials acting without prior authorization from a President, Attorney General, or Postmaster General; some of them were initiated without prior authorization by the Directors or other senior officials within the agencies themselves. Once initiated, they were carefully guarded and protected from exposure. The record indicates that during the thirty-three years of mail opening, fewer than seven Cabinet level officers were briefed about even one of the projects; only one President may have been informed; and there is no conclusive evidence any Cabinet officer or any President had contemporaneous knowledge that this coverage involved the actual opening -- as opposed to the exterior examination -- of mail. The postal officials whose cooperation was necessary to implement these programs were purposefully not informed of the true nature of the programs; in some cases, it appears that they were deliberately misled. Congressional inquiry was perceived by both CIA and FBI officials as a threat to the security of their programs; during one period of active investigation both agencies contemplated additional security measures to mislead the investigators and protect their programs against disclosure to Congress. Only in rare cases did the CIA and the FBI even inform one another about their programs.

Many of the major participants in these mail opening programs, including senior officials in policy-making positions, believed that their activities were unlawful. Yet the projects were considered to be so sensitive that no definitive legal opinions were ever sought from either the CIA's General Counsel or the Attorney General. The record is clear, in fact, that the perceived illegality of mail opening was a primary reason for closely guarding knowledge of the programs from ranking officials in both the executive and legislative branches of the government.

The legal fears of CIA and FBI officials were firmly based, for sanctity of the mail has been a long-established principle in American jurisprudence. Fourth Amendment restrictions on first class mail opening were recognized as early as 1878, when the Supreme Court wrote in *Ex Parte Jackson*, 96 U.S. 727,733 (1878):

Letters and sealed packages of this kind in the mail are as fully guarded from examination and inspection, except as to their outward form and weight, as if they were retained by the parties forwarding them in their own domiciles. The constitutional guaranty of the right of the people to be secure in their papers against unreasonable searches and seizures extends to their papers, thus closed against inspection, wherever they may be. Whilst in the mail, they can only be opened and examined under like warrant, issued upon similar oath or affirmation, particularly describing the thing to be seized, as is required when papers are subjected to search in one's own household. No law of Congress can place in the hands of officials connected with the postal service any authority to invade the secrecy of letters and such sealed packages in the mail; and all regulations adopted as to mail matter of this kind must be in subordination to the great principle embodied in the fourth amendment of the Constitution.

This principle was re-affirmed as recently as 1970 in *United States v. Van Leeuwen*, 397 U.S. 249, 251 (1970) : "It has long been held," the Supreme Court there wrote, "that first-class mail such as letters and sealed packages subject to letter postage -- as distinguished from newspapers, magazines, pamphlets and other printed matter -- is free from inspection by postal authorities, except in the manner provided by the Fourth Amendment."

Not only the Fourth Amendment's prohibition against unreasonable searches and seizures, but First Amendment values of free speech are involved in the opening of first class mail. As Justice Holmes stated in 1921, in a dissent now embraced by prevailing legal opinion: "The use of the mails is almost as much a part of free speech as the right to use our tongues." *Milwaukee Pub. Co. v. Burleson*, 255 U.S. 407, 437 (1921). Justice William O. Douglas quoted this passage with approval in a 1965 decision which invalidated a procedure whereby incoming third and fourth class propaganda could be indefinitely detained by Postal and Customs officials -- a procedure, incidentally, which had provided cover for three CIA and FBI mail opening programs. *Lamont v. Postmaster General*, 381 U.S. 301, 305 (1965). In 1974, in a case involving censorship of prisoner mail, the Supreme Court also noted that "the addressee as well as the sender of direct personal correspondence derives from the First and Fourteenth Amendments a protection against unjustified governmental interference with the intended communication." *Procunier v. Martinez*, 416 U.S. 396,408-409 (1974).

Statutory as well as constitutional protection has traditionally been accorded first class letter mail. Throughout the entire postwar period in which FBI and CIA mail opening programs were conducted, the statutory framework of legal prohibitions against the unauthorized opening of mail have remained essentially constant. The pertinent statutes, enacted in 1948 and substantially unchanged since then, are set forth below:

1. 18 U.S.C. Sec. 1701:

Whoever knowingly and willfully obstructs or retards the passage of the mail, or any carrier or conveyance carrying the mail, shall be fined not more than \$100 or imprisoned not more than six months, or both. (June 25, 1948, ch. 645, 62 Stat. 778.)

2. 18 U.S.C. Sec. 1702:

Whoever takes any letter, postal card, or package out of any post office or any authorized depository for mail matter, or from any letter or mail carrier, or which has been in any post office or authorized depository, or in the custody of any letter or mail carrier, before it has been delivered to the person to

whom it was directed, with design to obstruct the correspondence, or to pry into the business or secrets of another, or opens, secretes, embezzles, or destroys the same, shall be fined not more than \$2,000 or imprisoned not more than five years, or both. (June 25, 1948, ch. 645, 62 Stat. 778.)

3. 18 U.S.C. Sec. 1703 (b) :

Whoever, without authority, opens, or destroys any mail or package of newspapers not directed to him, shall be fined not more than \$100 or imprisoned not more than one year, or both. (June 25, 1948, ch. 645, 62 Stat. 778; May 24, 1949, ch. 139, Sec. 37, 63 Stat. 95; Aug. 12, 1970, Pub. L. 91-375, § 6 (j) (16), 84 Stat. 778.)

The issue of proper authority for the opening of mail, which is raised by 18 U.S.C. Sec. 1703(b) above, was, until 1960, dealt with in 18 U.S.C. Sec. 1717(c) : "No person other than a duly authorized employee of the Dead Letter office, or other person upon a search warrant authorized by law, shall open any letter not addressed to himself." This section was repealed in 1960 and recodified in essentially similar form at 39 U.S.C. 4057. When the Postal Service was reorganized in 1970, Section 4057 was in turn repealed and substantially recodified at 39 U.S.C. 3623 (d), which provides in part:

No letter of such a class [i.e., first class] of domestic origin shall be opened except under authority of a search warrant authorized by law, or by an officer or employee of the Postal Service for the sole purpose of determining an address at which the letter can be delivered, or pursuant to the authorization of the addressee.

The only persons who can lawfully open first class mail without a warrant, in short, are employees of the Postal Service for a very limited purpose -- not agents of the CIA or FBI.

In the face of the Constitution and these statutes, mail was surreptitiously opened for more than three decades without warrant; without Congressional or clear Presidential authority; frequently without approval by senior agency officials; and, in the case of the most massive program, despite critical internal evaluations as well. Seasoned intelligence officers in both agencies genuinely believed that this activity was important to safeguard the country from foreign adversaries. But to defend the national security, they chose to employ a technique that was neither sanctioned by the laws nor authorized by the elected leaders of the country they sought to protect. And since they defined the nature of our enemies, this technique came to be directed against American dissidents as well as foreigners.

## **PART II: CIA DOMESTIC MAIL OPENING**

### **I. INTRODUCTION AND MAJOR FACTS**

The CIA conducted four mail opening programs within the United States, the longest of which lasted for twenty years. These programs resulted in the opening and photographing of nearly a quarter of a million items of correspondence, the vast majority of which were to or from American residents. While the programs were ostensibly conducted for foreign intelligence and counterintelligence purposes, one former high-ranking CIA official characterized the Agency's use of this technique as a "shotgun" approach to intelligence collection; 2 neither Congressmen, journalists, nor businessmen were immune from mail interception. With cooperation from the FBI, domestic "dissidents" were directly targeted in one of the programs.

The major facts regarding CIA domestic mail opening may be summarized as follows:

a. The CIA conducted four mail opening programs in four cities within the United States for varying lengths of time between 1953 and 1973: New York (1953-1973) ; San Francisco (four separate occasions, each of one to three weeks duration, between 1969 and 1971) ; New Orleans (three weeks in 1957) ; and Hawaii (late 1954 -- late 1955). The mail of twelve individuals in the United States, some of whom were American citizens unconnected with the Agency, was also opened by the CIA in regard to particular cases.

b. The stated purpose of all of the mail opening programs was to obtain useful foreign intelligence and counterintelligence information. At least one of the programs produced no such information, however, and the continuing value of the major program in New York was discounted by many Agency officials.

c. Despite the stated purpose of the programs, numerous domestic dissidents, including peace and civil rights activists, were specifically targeted for mail opening.

d. The random selection of mail for opening, by CIA employees untrained in foreign intelligence objectives and without substantial guidance from their superiors, also resulted in the interception of communications to or from high-ranking United States government officials, as well as journalists, authors, educators, and businessmen.

e. All of the mail opening programs were initiated without the prior approval of any government official outside of the Agency.

f. Only five Cabinet level officials, and possibly one President, were briefed in varying degrees of detail about the New York program during the twenty years it continued, and there is no conclusive evidence that any of these officials ever authorized --

or knew of -- the mail opening aspect of the project. The evidence suggests that in the cases of some of these officials, their professed lack of knowledge about mail opening was due to a stated desire to remain ignorant of the details of the program.

g. No high-ranking government official was ever briefed about three of the four mail opening programs.

h. Postal officials whose cooperation was necessary to effect the programs were purposefully misled as to the purpose of the projects, the question of custody of the letters, and the fact of mail opening itself.

i. One President of the United States, whether through design or negligence, was given false and misleading information about the existence of CIA mail opening programs. In 1970, the Director of Central Intelligence signed a document for submission to the President which stated that all mail opening programs by federal agencies had been discontinued. This Director knew that at that time the most extensive CIA mail opening program continued to operate in New York.

j. Within the Agency itself, two former Directors of Central Intelligence did not authorize and apparently did not even know about any of the mail opening programs that were conducted during their tenure. Another former Director was unaware of at least one mail opening project during his term.

k. Some senior Agency officials whose approvals were sought in connection to one mail opening program were apparently deceived as to its true nature by middle-level officers. The senior officials were requested to authorize a mail cover operation only, but mail opening was both contemplated at the time of the requests and did in fact occur.

l. None of the programs was ever subjected to formal internal evaluation. Such review as did occur concluded that the largest of the programs were poorly administered and without substantial benefit to the CIA. These conclusions were ignored and the project continued.

m. Because of the extreme sensitivity of the projects and the internal pattern of compartmentation, many of those CIA components which could have derived the greatest foreign intelligence value from the product were not even aware of the mail opening programs.

n. Most of the major participants in the mail opening programs believed that the Agency's activities in this area were unlawful. No definitive legal opinion was ever sought from the CIA's General Counsel, and the evidence suggests that knowledge of the programs was purposefully withheld from him for security reasons.

o. The general reaction among Agency officials to the perceived illegality of mail opening was to fabricate "cover stories" for public consumption and to agree on a public denial of CIA domestic mail opening activity in the event such activity were exposed.

p. During periods of active Congressional investigation into invasions of privacy by federal agencies, and when persons knowledgeable of CIA mail openings were in a position to be called to testify before Congress, security precautions for mail opening programs were tightened to reduce the risk of exposure.

q. In part because of his "secrecy agreement" with the Agency, a former CIA employee who was in a position at the Postal Service to force the termination of a mail opening program was inhibited from doing so for several years. His loyalty to the CIA, even after he left its service, prevented him from informing the Postmaster General of its existence.

r. The largest of the mail opening projects was not terminated until 1973, when, in the charged political climate of the times, it was considered too great a "political risk" to continue. It was not terminated because it was perceived to be illegal per se.

## II. NEW YORK CITY MAIL INTERCEPT PROJECT

The CIA's New York mail intercept project, encrypted HTLINGUAL by the Counterintelligence Staff and SRPOINTER by the Office of Security, was the most extensive of all the CIA's mail intercept programs, both in terms of the volume of mail that was opened and in terms of duration. Over the twenty year course of mail openings, more than 215,000 letters to and from the Soviet Union were opened and photographed by CIA agents in New York. Copies of more than 57,000 of these letters were also disseminated to the FBI, which learned of this operation in 1958, levied requirements on it, and received the fruits of the coverage until the project was terminated.

Despite the absence of clear authorization outside the CIA, despite the generally unfavorable internal reviews of the project in 1960 and 1969, and despite the facts that it was generally seen as illegal and that its primary value was believed by many agency officials to accrue to the FBI in the area of domestic intelligence, the momentum generated by this project from its inception in the early 1950's continued unchecked until February of 1973.

### *A. Operation of the Program*

#### *1. The Initial Phase: Mail Covers*

The Original Proposal. -- The New York mail project originated in the spring of 1952 with a proposal by the Soviet (SR) Division, supported by the Chief of the Operations Staff (now the Deputy Director for Operations) and the Office of Security, to scan exteriors of all letters to the Soviet Union and to record, by hand, the names and addresses of the correspondents. While the original plan did not contemplate the opening of mail immediately, it was recognized that "[o]nce our unit was in

position, its activities and influence could be extended gradually, so as to secure from this source every drop of potential intelligence information available." 3 Specifically, it was believed that such a project could:

- "furnish much live ammunition for psychological warfare;
- "produce subjects, who if proven loyal to the United States, might be good agent material because of their contacts within the Soviet Union;
- "offer documentary material for reproduction and subsequent use by our own agents;
- "produce intelligence information when read in the light of other known factors and events; and
- "create a channel for sending communications to American agents inside the Soviet Union." 4

Feasibility Study. -- On July 1, 1952, the Chief of the Special Security Division recommended that "[a]s an initial step . . . we should make contact in the Post Office Department at a very high level, pleading relative ignorance of the situation and asking that we, with their cooperation, make a thorough study of the volume of such mail, the channels through which it passes and particularly, the bottle necks within the United States in which we might place our survey teams." 6 He advised against informing Post Office officials about the ultimate purposes of the project, however, noting that "[a]t the outset . . . as far as the Post Office Department is concerned, our main target could be the securing of names and addresses for investigation and possible future contact." 7

Two CIA officers from the Office of Security and the SR Division met with a representative of the International Division of the Post Office on the very day the Chief of the Special Security Division submitted the above recommendation. At this meeting, the Post Office official agreed to provide the Agency with a complete statement of "U.S.-U.S.S.R. postal accounting." 8

Clifton C. Garner, then Postal Inspector of the Post Office Department, was subsequently contacted by Agency personnel in the Offices of Operations and Security. It had been determined that most mail between the United States and the Soviet Union passed through the Port of New York, and on November 6, 1952, Garner was requested in writing to make arrangements for "one or two designated employees of this organization [i.e., CIA] to work with an inspector of your Department, under conditions determined by you to examine a portion of this mail traffic." 9 While Garner cannot recall receiving this letter," he apparently agreed to make the necessary arrangements: one month later, Henry Montague, then Postal Inspector in Charge of the New York Division, approved the implementation of such an examination. 11

Commencement of the Project. -- The results of the initial survey were felt to be positive, and the project commenced on a full-time basis in February 1953. Henry Montague recalls that shortly prior to the commencement of the project, he had received a telephone call from David Stephens, who replaced Garner as Chief Postal Inspector under President Eisenhower, informing him that CIA agents would come to his office within the next few days to request his cooperation. 12 According to Montague, Stephens instructed him to assist the Agency but warned him that there was to be no tampering with the mail beyond the minimum handling necessary for an exterior examination. When the agents visited Montague shortly thereafter, he specifically told the agents -- and, according to Montague, the agents agreed -- that mail should not be opened. 13 Montague then requested a subordinate in the New York Division to make the necessary arrangements and the CIA representatives were installed in a room in the New York General Post Office.

Briefing the Postmaster General. -- By September 1953, after seven months of operation, the project was considered to be sufficiently productive to merit expansion beyond hand-copying information from the outside of envelopes. A CIA officer of the Soviet Division proposed "the complete photographic coverage of the cover information on all letters posted from the Soviet Union to the U.S. and vice versa." 14 Plans were made within the Agency to effect this type of coverage, but the postal officials who had cooperated thus far balked. It was noted in a January 4, 1954 internal CIA memorandum that "[f]or understandable reasons, postal authorities, at the level of our present dealings, are reluctant to extend that degree of cooperation without orders from above." 15 This memorandum recommended that the Director of Central Intelligence brief both Postmaster General Arthur E. Summerfield and President Eisenhower on the project, and secure the oral approval of the President for photographing the exteriors of letters.

Director Allen Dulles and Richard Helms, then Chief of Operations in the Plans Directorate, met with the Postmaster General and the Chief Postal Inspector, David Stephens, on May 17, 1954. Dulles told Summerfield that the New York project had proven to be very valuable and that the Agency now desired to photograph the exteriors of letter mail from the Soviet Union. No mention was apparently made of mail opening. According to Helms' notes of the meeting, the Postmaster General "did not comment specifically" on the project but seemed receptive. 16 Helms continued: "When the conference broke up, I spoke to David Stevens [sic] privately and asked him if he now had all the authorization he felt he needed. He replied in the affirmative." 17 The second phase of the New York operation -- photographing the exteriors of letters between the United States and the Soviet Union -- began shortly after the Dulles Summerfield meeting. 18

## *2. Subsequent Evolution of the Project*

The CI Staff Take-Over: "More" Mail Opening. -- In November 1955, James Angleton, the Chief of the Counterintelligence (CI) Staff, submitted a proposal to Richard Helms for the further expansion of the New York mail intercept project. Until then, the CIA was only receiving access to a portion of the United States-Soviet Union mail in its New York facility; Angleton recommended that "we gain access to all mail traffic to and from the U.S.S.R. which enters, departs, or transits the United States through the Port of New York." 19 He also suggested that the "raw information acquired be recorded, indexed and analyzed and various components of the Agency furnished items of information which would appear to be helpful to their respective missions." 20 Perhaps most significantly, he recommended a shift in the focus of the project from photographing

the mail to opening it. Even prior to the date this proposal was submitted, some mail opening had occurred "without the knowledge of the Post Office Department on a completely surreptitious basis . . . [by] swiping a letter, processing it at night and returning it the next day." 21 This method, however, permitted agents to open a very limited number of items. Angleton proposed that "more [letters] could be opened" 21a if the Agency acquired a separate room which would be off limits to postal employees and which would house special processing equipment. Because he realized that the Office of Security, which had been running the program to date, did not have sufficient manpower for the proposed expansion, Angleton also recommended that primary responsibility for the project be transferred within the Plans Directorate from O/S to the CI Staff.

This proposal was approved by Helms on December 7, 22 and funds were authorized by the Acting Deputy Director for Plans on March 3, 1956. 23 They were implemented later in 1956 when the intercept location was moved from the General Post Office in Manhattan to a secure room at LaGuardia Airport. While postal officials cooperated to the extent of providing the CIA with the room, their approval was apparently not sought for the opening of mail. 24

FBI "Discovery" of the Project. -- The next significant expansion of the program occurred in January 1958 when the Federal Bureau of Investigation learned of its existence and shortly thereafter began to share in the fruits of the coverage. As early as January 1954 the CIA had contemplated informing the FBI about the project, because it was recognized that "outside of its definite foreign intelligence value . . . there will be produced information affecting Internal Security." 25 Possibly because relations between the CIA and the FBI were strained during the mid-1950's, 26 however, the Bureau was not officially informed about the project until Bureau inquiries relative to a proposed mail intercept program of its own uncovered the existence of the CIA project. Although the FBI never contributed any resources, either human or financial, to the operation of HTLINGUAL, it did levy requirements on the project and received copies of intercepted letters on a regular basis until the project was terminated in 1973. This aspect of the New York mail intercept project is treated in greater detail in Part III below.

The TSD Laboratory. -- The final stage in the evolution of the project occurred in 1960 and 1961. By memorandum of February 25, 1960, James Angleton advised Richard Helms, now Acting Deputy Director for Plans, that the project would benefit from the establishment of a laboratory to examine a selected portion of the opened letters. 27 He noted that at the present time there is no capability for "searching for secret writing and/or microdots; determination as to whether items have been previously opened and technically examined . . . [or] opening items sealed with the more difficult and sophisticated adhesives." 28 A laboratory, he argued, would make these activities feasible as well as enable the project staff "to increase our production about 20 percent." Helms approved the establishment of the laboratory, 29 and it opened, under the direction of the Technical Services Division (TSD), about one year later in March 1961.

### *3. Full Operation of the Program*

Volume of Mail Intercepted. -- According to CIA records, a total of 28,322,796 letters were made available to CIA agents in New York during the twenty year course of the project. 30 Of these, the exteriors of 2,705,706 letters were photographed, and 215,820 letters were actually opened. 31 Mail opening had begun on a relatively small scale. In 1956, for example, only 832 letters were opened. But momentum developed quickly: two years later more than 8,000 letters were opened and by 1961, when the TSD laboratory was established, in excess of 14,000 letters were being opened annually. The height of the project in terms of volume was 1967, when a total of 23,617 letters were opened and analyzed.

Mechanics. -- Mail was physically intercepted at LaGuardia Airport from 1956 until 1962, when the project moved to Idlewild (Kennedy) Airport. At both locations, the mechanics were essentially the same: mail to and from the Soviet Union was delivered each day by a postal clerk to a secure room in which the agents worked. Five days a week, a team of about four Office of Security personnel screened and photographed this mail. The clerk, who received an annual bonus of \$500 from the Agency for his efforts, 32 also helped to sort the mail according to region within the Soviet Union, but he was never informed that selected items would be opened. According to one of the agents who processed the mail, approximately two to six bags, containing a total of 5,000 to 15,000 items of correspondence, would be delivered and sorted each day. 33 The exteriors of as many of these items as possible were photographed with a Diebold machine, and from 35 to 75 letters would be selected for opening daily. 33a Prior to 1969, the agents "swiped" 34 the letters that had been selected for opening from the room by placing them in their pockets or an attache case, and hand carried them to the Office of Security's Manhattan Field Office for opening and photographing. From 1969 to 1973, opening and photographing were conducted at the intercept location itself.

The agents who opened the mail all attended a one-week course called "flaps and seals" (mail opening techniques), which was run by TSD at CIA Headquarters. The basic method of opening the mail was extremely simple, however: the glue on the envelopes was softened by steam from a kettle, and with the aid of a narrow stick the flap was pried open and the letter removed. One of the agents who opened the mail testified that "[y]ou could do it with your own teapot at home." 35 It took approximately five to fifteen seconds to open a single letter. At one point in the 1960's, the CIA developed a type of steam "oven" that was capable of handling about one hundred letters simultaneously, but its performance was judged inadequate and the agents soon returned to the kettle and stick method.

The TSD laboratory, which became operative in 1961, was originally located in the Office of Security's Manhattan Field Office and subsequently transferred to Kennedy Airport. The Office of Security personnel who opened the mail brought it to this laboratory where it was subjected to further chemical and other technical examination for secret writing and censorship techniques by the two or three TSD agents permanently assigned to the project. Because examination was time consuming, it was only possible to test a small portion of those letters which had been opened and photographed.

The original letters, which had been opened, photographed, and possibly subjected to the TSD examination, were re-sealed and returned the next morning to the airport, at which point they would be re-inserted into the mail stream. Total delay time, therefore, averaged one day. The photographic copies were then bundled and sent by registered mail or courier on a near daily basis from the Manhattan Field Office to the Office of Security at CIA Headquarters, which would forward them to CT Staff analysts. These analysts, whose number varied from a minimum of two to a maximum of six, reviewed the contents of the letters and, on the basis of their knowledge of the requirements levied by various CIA components and the FBI, either fully translated or summarized each item of correspondence. The copies of the letters were indexed and retained in the CI Staff

project room at Headquarters (where they are still on file), and appropriate translations and summaries were disseminated within the Agency to the SR Division, the Office of Security, and the CI Staff itself, as well as to the FBI.

## *B. Nature and Value of the Product*

### *1. Selection Criteria*

Letters were selected for opening by two basic methods: (1) on the basis of a list of names known as the "Watch List," and (2) randomly. By one CIA estimate, the "Watch List" accounted for approximately 25% of the total volume of mail that was opened; random selection for 75%. 36

The Watch List. -- The Watch List originated in the mid-1950's, at which time it consisted of only ten to twenty names. With the SR Division, the CI Staff, the Office of Security, and the FBI all contributing names to the list it grew rapidly, however: by the end of the project the Watch List totaled about 600 names. One reason for the growth of the Watch List is that the categories into which these individuals or organizations fell were progressively broadened over the years. In April 1957, for example, a CIA memorandum suggested five narrow categories of names:

- (1) former agents or covert contract personnel who originally came from "the Denied Area" in Europe, were utilized by the Agency, and have now been resettled in the United States or Canada;
- (2) defectors from "the Denied Area" in Europe who were under the control or auspices of the Agency and who have now been resettled in the United States or Canada;
- (3) repatriates from the United States or Canada who were originally brought to the United States or Canada under the auspices of the Agency and who have now returned or will return to the USSR;
- (4) suspected Soviet agents or other individuals either temporarily or permanently residing in the United States, who are known or suspected of being engaged in counterespionage or counterintelligence activities on behalf of the USSR; and
- (5) foreign nationals, originally from the USSR and satellite countries, now residing in the United States and presently being utilized by the Agency in any capacity. 37

Within a short time, the Watch List had expanded far beyond these relatively narrow and well-defined categories. The names of individuals who were in contact with Watch Listed persons and organizations were frequently added to the list themselves, 38 and, as an August 1961 memorandum points out, a very large percentage of the names on the list were placed there because of "leads which came about through the random selection." 39

The focus of the Watch List also changed as it grew. In the early years of the project the names on the list might reasonably have been expected to lead to genuine foreign intelligence or counterintelligence information, but as the project evolved many of the names that were added to the list were far more likely to generate essentially domestic, rather than foreign, intelligence information. In 1969, for example, Richard Ober of the CIA solicited the FBI for names of domestic political radicals and black militants to include on the list. An FBI memorandum states that he "suggested to the Liaison Agent that the Bureau should not overlook the utilization of the agency's Hunter [New York mail opening] project for the development of leads in the New Left and Black Nationalist fields. Ober admitted that traffic involving individuals in these areas might be light but that the Bureau might wish to give consideration to placing stops on certain key personalities." 40 A handwritten notation at the bottom of this memorandum indicated that "stops . . . on black extremists" were not felt to be "Warranted . . . at this time" by the Bureau, but the names of a significant number of anti-war activists and groups were submitted to the CIA, as were the names of several "black extremists" at a later date. 41 From 1958 to 1973, in fact, the FBI alone contributed a total of 286 names to the Watch List. 42

While Bureau requirements clearly augmented the emerging "domestic intelligence" nature of the Watch List, CIA components also contributed generously to this trend. Among the individuals and organizations who came to be placed on the Watch List by the CIA were numerous domestic peace organizations, such as the American Friends Service Committee; political activists, scientists and scientific organizations, such as the Federation of American Scientists; academics with a special interest in the Soviet Union; authors, such as Edward Albee and John Steinbeck; businesses, such as Fred A. Praeger Publishers; and Americans who frequently travelled to or corresponded with the Soviet Union, including one member of the Rockefeller family. 43

The Watch List, in short, originated with a relatively few names which might reasonably be expected to lead to genuine foreign intelligence or counterintelligence information, but expanded well beyond the initial guidelines into the area of essentially domestic intelligence.

Random Selection. -- The documentary record of the CIA suggests that a very large percentage of the letters that were opened in the course of the New York project were to or from individuals who were not on the Watch List at all. One CIA memorandum points out that the "New York Security officers who opened the mail selected about 75 percent at random, and the remaining 25 percent was on the basis of a watchlist compiled by the CI Staff." 44 While there is some evidence that the percentage of random openings may have decreased in the later years of the project, it always represented a significant proportion of the mail that was opened.

The CIA mail "interceptors" were not foreign intelligence or counterintelligence experts. One of the CIA agents who opened the mail in this project testified that other than memorizing the Watch List, he received no instruction at all as to what

categories of mail to select. 45 When asked the basis for opening mail to or from people who were not on the Watch List, this agent replied: "It might be according to individual taste, if you will, your own reading about current events. ... I personally used to like to do Central and South America items [that were missent by the Post Office]. ... [Y]ou never knew what you would hit." 46 He added: "We would try to get a smattering of everything, maybe the academic field or travel agencies or something. I don't recall a specific instruction. I kind of place that under our individual tastes." 47

Indeed, this lack of instruction appears to have been a conscious policy of the Office of Security. A CIA memorandum states that the Inspector General's Office, in its review of the New York project in the early 1960's, 47a "took the position that the security officers who were selecting the mail to be opened should have some understanding of headquarters requirements so that their selection could be halfway informed on the basis of areas of interest.... [But the Office of Security] had a paper by [a CIA officer] which said, in effect, that the present system of purely random selection was best and that it wasn't necessary to develop any sort of coordinated approach.... The Office of Security apparently sees no reason why they should have their personnel trained in intelligence objectives." 48

The large random element in the selection process and the lack of formal intelligence training on the part of the agents who opened the mail combined with the "domestic" evolution of the Watch List to push the project even further from the original foreign intelligence and counterintelligence goals articulated in 1952. Over the twenty-year course of mail opening, the mail that was intercepted included that of many prominent Americans, including at least three United States Senators and a Congressman, one Presidential candidate and numerous educational, business, and civil rights leaders. 49

The "Special Category Items" File. -- The occasional random interception of politicians' mail created a situation for the CIA which was potentially very embarrassing. In August 1971, the selection and opening of a letter from United States Senator Frank Church so concerned a new chief of the CI Staff "Project" that he wrote the Deputy Chief of Counterintelligence, Raymond Rocca: "In order to avoid possible accusations that the CIA engages in the monitoring of the mail of members of the U.S. government, the C/CI may wish to consider the advisability of (a) purging such mail from the files and machine records of the Project and (b) authorizing the issuance of instructions to the 'collectors' to cease the acquisition of such materials." 50 He added: "Instructions would have to define in specific terms what categories of elected or appointed personnel were to be encompassed, and whether they extended to private mail communications." 51 Several months later, in December 1971, a new policy for the handling of such mail was confirmed. An internal CIA memorandum dated December 22, 1971, reads in part:

In accordance with a new policy confirmed yesterday .... Project HTLINGUAL will handle henceforth as follows items originated by or addressed to Elected or Appointed Federal and Senior State Officials (e.g. Governor, Lt. Governor, etc) :

- a. No officials in above categories are to be watchlisted;
- b. No instructions to be issued to interceptors specifically requesting or forbidding the acquisition of items in cited categories; thus acquisition will be left entirely to chance;
- .....
- d. No special-category items shall be carded for inclusion in the HTLINGUAL Machine Records System;
- e. *Dissemination of special-category items will be at the discretion of DC/CI (and/or C/CI) only,*
- f. All special-category items will be filed in a separate file titled "SPECIAL-CATEGORY ITEMS", which will be kept in C/CI/Project's safe ... 52 (emphasis in original)

The new policy, therefore, did not prohibit the opening of letters to or from political figures; it simply created a special filing system for their mail. By the end of the project in 1973, the "Special-Category Items" file contained approximately ten photographs or summaries of correspondence to or from Senators Church and Edward M. Kennedy, one Congressman, and one Governor of an American territory. 53 Because the master index was on microfilm, the analysts were unable to purge all references to those politicians whose correspondence had been opened prior to December 1971.

## 2. Value of the Product

Foreign Intelligence and Counterintelligence. -- There has been considerable debate among CIA officials over the value of the product from the New York operation to the Agency's foreign intelligence and counterintelligence mission. 53a James Angleton, who as Chief of the CI Staff was in charge of the project, was one of its most vocal supporters. He has testified that the New York project "was probably the most important overview [of Soviet intelligence activities] that counterintelligence had." 54 In a February 1973 memorandum for Director Schlesinger, Angleton, contending against termination, summarized some of the benefits to the CIA which resulted from the New York project as follows:

- A. The mail intercept Project ... provides information about Soviet-American contacts and insight into Soviet realities and the scope of Soviet interests in the academic, economic, scientific and governmental fields unavailable from any other source. The Project adds a dimension and a perspective to Soviet interests and activities which cannot be obtained from the limited resources available to this Agency and the FBI.

B. The Project is particularly productive in supporting both the Agency and the FBI in pursuing investigative and operational leads to visiting Soviet students, exchange scientists, academicians and intellectuals, trade specialists and experts from organizations such as . . .

C. In many instances the Project provides the only means of detecting continuing contact between [Soviet] controlled exchange students and Americans.

D. The Project provides information otherwise unavailable about the Soviet contacts and travel of Americans to the Soviet Union. . . .

E. Project material recorded for 18 years gives basic information about Soviet individuals and institutions useful to the analyst looking for specific leads and in gauging trends in Soviet interests and policies. 55

This highly favorable assessment of the value of the product from HTLINGUAL contrasts sharply with the views of many other CIA officers. In a 1961 review of the project by the Inspector General's Office, for example it was written:

The SR (Soviet Union) Division is the project's largest customer in the Agency. Information from the CI Staff flows to the SR Support Branch and from there to the operational branches. It may include operational leads, such as the identities of individuals planning to work or reside in the USSR, or items of interest on conditions inside the country. In our interviews we received the impression that few of the operational leads have ever been converted into operations, and that no tangible operational benefits had accrued to SR Division as a result of this project. We have noted elsewhere that the project should be carefully evaluated, and the value of the product to SR Division should be one of the primary considerations. 56

A second internal review eight years later, in 1969, was no more enthusiastic. John Glennon, a former member of the Inspector General's staff which conducted this review, wrote:

. . . Although at one time this material was useful in Soviet legal travel operations and as positive information on Soviet internal economic and political matters, we find that the Clandestine Service has little interest in it now. Most of the officers we spoke to find it occasionally helpful, but there is no recent evidence of it having provided significant leads or information which have had positive operational results. The Office of Security has found the material to be of very little value. The positive intelligence from this source is meager. 57

In general, he noted that "the take from this program . . . is of little value to this Agency . . ." 57a When Mr. Glennon was asked in recent public hearings whether he still agreed with this basic conclusion, he responded that, if anything, the product was probably even less valuable than he indicated in 1969. 58 Howard Osborn, who was Director of Security from 1964 to 1974, and therefore responsible for the role played by the Office of Security during those years, agreed that his office received no value from the product. He publicly testified that "[w]e got no benefit from it at all.... The product was worthless." 59

Even Richard Helms, who was personally involved with the New York mail project on a decisional level from mid-1954 through the days immediately prior to the 1973 termination, was tepid in his evaluation of the project's value to the Agency. Of the product from 215,820 opened letters and nearly three million photographed envelopes, he said: I thought from time to time that the Agency got useful information out of it." 60

Domestic Intelligence. -- Given the nature of the selection criteria, it is not surprising that a significant -- perhaps the primary -- portion of the product related to domestic, rather than foreign, intelligence concerns. The 1961 review of the project, for example, characterized the product as "largely domestic CI/CE [counterintelligence and counterespionage]." 61 This representation was repeated in the 1969 Inspector General's report 62 and, as developed more fully below, by numerous senior Agency officials in the early 1970's. 63

Only to the extent that the CIA's mission was perceived as encompassing "domestic CI/CE" matters could the Agency itself benefit from this type of information. Thus, Gordon Stewart, the Inspector General whose staff reviewed the New York project and found its positive intelligence value "meager," conceded that the project in 1969 may logically have been valuable in terms of the domestic surveillance activities the Agency was then conducting. He testified that in the late 1960's and early 1970's:

... we were involved in compiling files on subversives in this country, the youth, and so on. And there was an enormous amount of pressure being placed on the Agency by the White House to develop, if possible, a connection between subversive organizations in this country and some external groups, say the Communists or Moscow or something of that sort. It would seem to me to be logical that if that is what you were doing, maybe at one phase this project had been regarded as useful to the Agency. 64

But it is questionable whether analysis of foreign influence on domestic political activity is within the CIA's mandate at all. Such domestic counterintelligence concerns are an aspect of internal security, which is the responsibility of the FBI, not the CIA. 64a

Value to the FBI. -- The Bureau did in fact receive a great deal of product from the New York operation: for all but three years between 1958 and 1973 the FBI actually received more copies or summaries of opened letters than did any single component of the CIA. 65 In view of the large quantity of disseminations to the Bureau and the largely domestic nature of the product

generally, it is understandable that CIA officials assumed that the Bureau benefited significantly from the Agency's coverage. Angleton stressed the importance of this project to the Bureau's operations when he summarized its value for Director Schlesinger in 1973; 66 this point was noted in both of the Inspector General staff's reviews 67 and in the testimony of Howard Osborn 68 and Richard Helms. 69 Several CIA officials, convinced that the project was more valuable to the FBI than to the Agency itself, even recommended that the Bureau should assume operational responsibility for it. 70

Ironically, however, the testimony of Bureau officials suggests that the CIA may have mistaken quantity of product for quality. It is undeniable that the FBI received some benefit from HTLINGUAL. 70a But one senior Bureau official declared that any benefit received by the FBI had to be evaluated in light of the fact that the product was received gratuitously, with the expenditure of neither money nor manpower. 71 He stated that the project did not provide leads to the identification of a single foreign illegal agent and that much of the product received by the FBI was worthless. 72

In short, it is not clear that HTLINGUAL made any substantial contribution to the CIA's legitimate foreign intelligence and counterintelligence mission or even to its questionable domestic intelligence activities; and while Agency officials assumed that the FBI benefitted greatly from their coverage, this assumption probably overestimated the actual value to the Bureau.

### *C. Internal Authorization and Controls*

Unlike the FBI mail opening programs, the CIA's New York project was extremely de-centralized. It germinated and evolved without the prior approval of the Director of Central Intelligence at critical stages. 72a It continued through the tenure of at least two Directors who were apparently not even informed of its existence. Because it had been exempted from the usual approval system, many of the division heads who would normally have to approve any proposed project of this scope were also never briefed and consequently had no opportunity to challenge the necessity or wisdom of the project. It was reviewed by disinterested agency components only twice during its twenty year history, in neither case extensively, and although both these reviews concluded that the operation was seriously flawed it continued until 1973, when largely external events forced its continuance.

#### *1. Authorizations by Directors of Central Intelligence*

Allen Dulles. -- The New York mail project was initiated, and the first contact with the Post Office made, without the apparent authorization -- or even the knowledge -- of Director Allen Dulles. As noted above, two CIA officers of the Office of Security and the SR Division met with a representative of the International Division of the Post Office in July 1952 to secure statistics on the mail flow between the United States and the Soviet Union. It was largely on the basis of this overview that the Office of Security and the SR Division determined that further contact with Postal officials were desirable. CIA documents relating to the early stages of the project, however, make no reference to informing Director Dulles until September 30 of that year. In a memorandum on that date, the Chief of the SR Division wrote the Deputy Director for Plans that "[i]t is requested . . . that DCI be informed of I&S and SR Division intention to initiate action looking toward the most expeditious accumulation of information on all letter envelopes or covers passing through the New York City Post Office originating in the Soviet Union or destined for the Soviet Union." 73

While subsequent documents reflect no explicit authorization from the DCI -- nor even whether or not the DCI was informed of the mail cover operation as per the September 30 request of the Chief of the SR Division -- further contacts were made with the Post Office and the first phase of the project became operational in February 1953.

The first unambiguous documentary indication that the DCI was advised of what was then referred to as SRPOINTER is not found until January 4, 1954. On that date Sheffield Edwards, the Director of Security, wrote to Director Dulles to summarize the anticipated value of the project, to explain the problem regarding the reluctance of postal officials to cooperate with the planned expansion of the project, and to request the Director to meet with the Postmaster General and the President to secure their approval for photographing the exteriors of the envelopes. 74 At this stage, the project was essentially a mail cover operation. No reference was made in that or a subsequent January 1954 memorandum 75 to Director Dulles to the possibility of actually opening the mail.

The only written approvals for the project as it subsequently developed during Dulles' tenure appear to be those of Richard Helms and the Acting Deputy Director for Plans. In December 1955, Helms approved the concept as outlined by James Angleton; 76 in February 1960, he approved establishment of the TSD laboratory. 77 The approval of the Acting Deputy Director for Plans was obtained for funding in March 1956. 78

While it is unclear whether Dulles was ever informed about the laboratory, he was apparently at least made aware of the fact that mail was being opened. In May 1956, he received a memorandum from James Angleton in which Angleton noted that "for some time selected openings have been conducted and the contents examined." 79

John McCone. -- CIA documents do not show that Director John McCone was ever informed about the project. McCone himself testified that he was unaware of it, 80 and his testimony is consistent with that of James Angleton 81 and Howard Osborn. 82

Admiral Raborn. -- There is no evidence that indicates Director Admiral Raborn was ever made aware of the New York project.

Richard Helms. -- The next Director who clearly knew about the New York mail opening project was Richard Helms, who became Acting Director in 1965 and Director in 1966. Helms had been involved with the project since 1954, and, as noted above, had personally approved the expansion of the project to include larger scale mail openings in December 1955 and a laboratory in February 1960. Numerous CIA documents reflect his continuing knowledge of and concern about the project during his tenure as Director.

James Schlesinger. -- James Schlesinger, who succeeded Helms as Director in 1973, also was aware of the project. It was his order in February 1973 that led to its termination after two decades of operation. 82a

## *2. Exemption from Normal Approval System*

The New York mail opening project was initially approved by Helms and the ADD/P outside and it remained outside the normal channels for approval and review of CIA projects. As stated in the 1961 Inspector General's report:

The activity cannot be called a "project" in the usual sense, because it was never processed through the approval system and has no separate funds. The various components involved have been carrying out their responsibilities as part of their normal staff functions. Specific DD/P approval was obtained for certain budgetary practices in 1956 and for the establishment of a TSD lab in 1960, but the normal programming procedures have not been followed for the project as a whole . . . . 83

When the first request for formal approval had been submitted to Helms in November 1955, a branch chief of the CI staff suggested to „James Angleton that "in view of the sensitivity of this project, steps should be taken to have this proposed project approved by the Director without recourse to the normal channels for presentation of projects." 84 The Director himself apparently never formally authorized the project, 84a but the thrust of the branch chief's recommendation was followed. As Angleton later explained, when a typical project "is conceived, it might cut across many jurisdictions to begin with, . . . different geographic divisions and so on, so there would have to be a signoff by the various components, and then it would go before a project review board [whose] members would be drawn from many parts of the clandestine services, and . . . you would have this tremendous opening up of the activity to a great number of people. . . . That is the reason why I think it was excepted from [the usual approval system], and that way it short-circuited the normal project approval process." 85

Because of the perceived sensitivity of the project, in short, the CI Staff did not want those Agency components with no "need to know" to become aware of it. The security of the operation was enhanced by this exemption but the opportunity for critical evaluation by disinterested division heads was lost.

## *3. Administrative Controls*

Internal Review and Evaluation. -- In part because of its exemption from the normal approval system, administrative control over the New York project was lax. It was not a project at all in the formal sense, so there was no mechanism for periodic internal review to determine whether or not its goals were being achieved. During its twenty-year history, the project was reviewed by disinterested Agency components only twice -- in 1961, and again in 1969. Both of these reviews were limited: the first review was part of an evaluation of Office of Security Operations, and so did not encompass the roles played by the CI Staff and TSD; the second review encompassed only the role of the CI Staff.

The Inspector General's staff, which conducted both reviews, concluded that if the project was to continue at all, a more complete evaluation or a mechanism for periodic evaluation of the project was crucial. Specifically, the 1961 study recommended that: "The DD/P and the DD/S direct a coordinated evaluation of this project, with particular emphasis on costs, potential and substantive contributions to the Agency's Mission." 86 And in 1969 the Inspector General's staff wrote that "[f]inally -- and most important -- a schedule for regular re-examination and re-evaluation of the product of the project and of its management, especially with respect to its security, should be established and adhered to." 87

Neither of these recommendations was implemented. The only response to the 1961 recommendation was a five-page summary of the project's mechanics and results by the Director of Security. 88 This summary was apparently felt to constitute a sufficient evaluation, although there is no evidence that the Soviet Division or the FBI -- the entities that were the primary recipients of the project's product -- were ever asked to contribute their respective evaluations. In the case of the 1969 review, the Inspector General did discuss the study's major findings with then-Director Richard Helms, who, according to the Inspector General, "listened intently, as I recall, and that was it." 89 The system of regular re-evaluation which had been recommended was not adopted.

Administrative Problems. -- The primary reason that these two studies concluded that an improved system for evaluation of the project was so essential was their common finding that, in the words of the Inspector General's staff member who conducted the 1969 review, the project "was poorly handled . . . administratively and operationally." 90 The 1961 study determined, for example, that it was impossible to analyze the project in terms of costs versus benefits to the Agency because costs were unknown: "The annual cost of this activity cannot be estimated accurately because both administration and operations have always been decentralized. The costs are budgeted by the contributing components as a part of their regular operating programs." 91 It therefore recommended "that exact cost figures be developed to permit the Agency management to evaluate the activity."

In addition, these studies found that the decentralization and limited knowledge of the project within the Agency inhibited maximum exploitation of the product that was generated. The 1961 study noted that "[t]here is no coordinated procedure for processing information received through the program; each component has its own system. . . . The same material could thus be recorded in several different indices, but there is no assurance that specific items would be caught in ordinary name traces." 92 In the 1969 review, it was suggested that the product might be useful to some Agency components that did not even know about the project.

Even among those components that did receive product from the New York project, there was no procedure for regular feedback to the CI Staff analysts as to what types of product were considered to be valuable. 92a The CI Staff project chief has testified that he may have received a "chance comment" from people in consumer components, but he was not regularly informed about which kinds of material were or were not useful. 93

One of the most serious administrative problems was that no single person with a knowledge of the CIA's intelligence and counterintelligence requirements was in direct control of the project. As the Inspector General's staff wrote in 1961:

Probably the most obvious characteristic of the project is the diffusion of authority. Each unit is responsible for its own interests and in some areas there is little coordination.

... There is no single point in the Agency to which one might look for policy and operational guidance on the project as a whole. Contributing to this situation is the fact that all of the units involved are basically staff rather than command units, and they are accustomed to working in environments somewhat detached from the operational front lines.

... The greatest disadvantages are (a) there can be no effective evaluation of the project if no officer is concerned with all its aspects, and (b) there is no central source of policy guidance in a potentially embarrassing situation. 94

This theme was reiterated in the 1969 report:

If it is decided that CIA should continue to operate the mail intercept project, we believe that several steps should be taken to improve the management of the program and its effectiveness. Among these is the eventual assignment of a chief to the project who has some depth of experience in operations, especially counterintelligence operations, in order to bring to bear on the analysis of the material more seasoned judgment of its intelligence and counterintelligence value. 95

Despite these recommendations for more centralized control over the project by more experienced personnel, the project remained diffuse and informed guidance was almost non-existent.

Mail was opened and the contents analyzed and disseminated, five days a week for nearly twenty years, without a structure for the systematic evaluation of the project, without its true cost being known, without the effective exploitation of potential intelligence and counterintelligence benefits, and without any centralized coordination or guidance by a single officer trained in intelligence and counterintelligence operations. It is at least reasonable to suggest that if prior approval -- and periodic reapproval -- at the highest level of the Agency had been required, its defects would have been recognized and its momentum checked before 1973.

#### *D. External Authorizations*

The New York project lacked a formal structure for authorization by government officials outside as well as inside the CIA: it was never authorized in writing by any such official and the pattern of oral approval is both capricious and obscure. Placed in the light most favorable to the Agency, the CIA obtained the prior oral approval of a Postmaster General for the photographing of envelope exteriors in 1954, and the implied, post facto permission of two Postmasters General, one Attorney General, and one President for both the mail opening and the mail cover aspects of the operation. 95a But the Cabinet officers who were allegedly informed of the mail openings deny such knowledge -- in one case because the official acknowledged that he did not want to know and did not believe that he could or should control Agency projects that affected his own Department. In the case of the President, no documentary record of the briefing exists and the CIA official who allegedly informed him concedes that there is only a "possibility" that he "mentioned" it.

Even by its own accounting, the CIA supplied no information about this project to four Postmasters General, seven Attorneys General, and three Presidents under whom it continued. In at least one instance, knowledge of the project was consciously withheld from a Postmaster General; in another instance, a President, whether knowingly or negligently, was misled about the Agency's mail opening activities, and his apparent refusal to authorize use of this technique went unheeded.

#### *1. Postmasters General*

Arthur E. Summerfield. -- Arthur Summerfield, Postmaster General during the Eisenhower Administration, was informed of the New York mail project in 1954, and, according to CIA memoranda, assented to the photographing of mail by CIA agents in connection with this project. There is no indication, however, that he approved, or was even advised of, the actual opening of mail by the Agency after that became the primary objective of the project in 1955.

As discussed in the project summary above, the first phase of the mail opening program -- hand-copying information from envelope exteriors -- had begun in February 1953 with cooperation from two Chief Postal Inspectors, Clifton Garner and David Stephens. But when Agency officials recommended in late 1953 that the use of photography rather than hand-copying would enable a greater volume of mail to be covered, postal authorities refused to cooperate without the express approval of the Postmaster General. A January 1954 memorandum, from Director of Security Sheffield Edwards to DCI Dulles, suggested that a meeting between Director Dulles and Summerfield was necessary to resolve the problem. 96

The meeting between Dulles and Postmaster General Summerfield finally occurred about five months later, on May 17, 1954. Richard Helms, then Chief of Operations in the Plans Directorate, as well as Chief Postal Inspector Stephens and two other postal officials, were also in attendance. The only record of this meeting, a contemporaneous memorandum to Sheffield Edwards from Helms, reads in part:

... As regards SRPOINTER, the Director told the group how valuable we had found efforts in this field. He then went on to say that we would like to photograph the backs and fronts of first-class mail from the Soviet and satellite areas.

... (When he had finished his exposition, the Postmaster General did not comment specifically but it was clear that he was in favor of giving us any assistance which he could) . . . 97

The Postmaster General's implied approval was apparently for photographing mail only. Richard Helms, moreover, has recently testified that: "It is my opinion today from reading the records that [Summerfield] was not told the mail was being opened or would be opened." 99 Nor is there any documentary or testimonial evidence that suggests that Summerfield was ever advised of mail openings at any time after that became the primary objective of the project in late 1955.

J. Edward Day. -- J. Edward Day, who was Postmaster General under President Kennedy, from January 1961 to August 1963, also met with Director Dulles and others in regard to the New York mail intercept project. The evidence as to whether or not he was informed that mail was actually opened, however, tends to be contradictory.

In January 1961 a new administration was installed in Washington. As Mr. Helms explained:

President Kennedy had just been sworn in. It was also a new party. The Republicans had had the White House and the executive branch before, and now the Democratic Party had it, and I think Mr. Dulles felt under the circumstances that it was desirable to speak to the Postmaster General because if [the New York project] was to go forward, we needed some support for it. 99

On January 27, 1961, less than one week after Day assumed the position of Postmaster General, the Deputy Chief of the Counterintelligence Staff wrote to Richard Helms to give him general background information for a proposed briefing of the Postmaster General and to advise him that:

There is no record in any conversation with any official of the Post Office Department that we have admitted opening mail. All conversations have involved examination of exteriors. It seems to us quite apparent that they must feel sure that we are opening mail. . . .

It is suggested that if the new Postmaster General asks if we open any mail, we confirm that some mail is opened. He should be informed, however, that no other person in the Post Office Department has been so informed. The reasons for this suggestion are (a) Despite all of our care in the selection and clearance of personnel for a knowledge of this project, at some point, someone is likely to blow it. (b) The Postmaster General will have a better understanding of the importance of the project in the event we desire to expand it .... 100

On February 15, 1961, Director Allen Dulles, Richard Helms, and Cornelius Roosevelt, then Chief of TSD, met with the new Postmaster General in his office. What transpired at that meeting is a subject of controversy. The only contemporaneous written record is a memorandum dated February 16, one day after the meeting, from Richard Helms back to the Deputy Chief of the Counterintelligence Staff. Helms wrote:

We gave him [Day] the background, development, and current status, withholding no relevant details.

After we had made our presentation, the Postmaster General requested that we be joined by the Chief Postal Inspector, Mr. Henry Montague. This gentleman confirmed what we had had to say about the project and assured the Postmaster General that the matter had been handled securely, quietly, and that there had been no "reverberations." The meeting ended with the Postmaster General expressing the opinion that the project should be allowed to continue and that he did not want to be informed in any greater detail on its handling. He agreed that the fewer people who knew about it, the better. 101

While Helms cannot specifically recall now whether Day was informed of the fact of mail openings, he strongly suggests that Day must have been so informed. Helms recently testified as follows:

As I say, "withholding no relevant details." I assume when I wrote that I meant what I wrote. . . . I cannot imagine what the point of holding it back from him would have been. We were going down to get his permission to continue the operation, and after all, it was his Post Office, if we had lied to him, and then he had discovered through his Chief Postal Inspector that something else was going on, that would not have been a very wise way to behave, it seems to me. 102

Day's version of these events differs from Helms. Apparently Day did not believe that it was entirely "his Post Office," for in regard to sensitive CIA operations, even those that touched on postal matters, he testified: "It wasn't my responsibility. The CIA had an entirely different kind of responsibility than I did. And what they had to do, they had to do. And I had no control over them." 103 Because of this perception of the role of the Postmaster General vis-a-vis the Agency, he did not wish to know the details of the New York project. According to his account of the meeting, he interrupted Mr. Dulles before being informed that the project involved the opening of mail. Day stated:

. . . Mr. Dulles, after some preliminary visiting and so on, said that he wanted to tell me something very secret, and I said, "do I have to know about it?" And he said, "No."

I said, "My experience is that where there is something that is very secret, it is likely to leak out, and anybody that knew about it is likely to be suspected of having been part of leaking it out, so I would rather not know anything about it."

What additional things were said in connection with him building up to that, I don't know. But I am sure ... that I was not told anything about opening mail. 104

Day's general recollection is given some support by an internal CIA memorandum written more than a decade later by the Chief of the CI Staff Project (HTLINGUAL). This memorandum, written in August 1971 and attached to Helms' February 16, 1961 summary, reads:

The wording of this memo leaves some doubt as to the degree to which Day was made witting. I tend to feel that he was briefed on the "mail surveillance" aspect and NOT the clandestine opening. I find some confirmation in the sentence in para. 2 "This gentleman (i.e. the Inspector Montague) confirmed what we had to say about the Project ..." Montague was NOTWITTING [sic] OF THE clandestine opening and therefore the subject of the briefing of Day must have been mail surveillance only. 105 [Emphasis in original.]

Thus, it cannot be definitely said that Day knew -- or did not know -- of the mail openings. All that is clear is that an Agency memorandum suggests that the CIA was prepared to inform the Postmaster General of this activity, that Helms at the time believed Day had been provided with enough of the "relevant details" to interpret his reaction as generally approving the continuance of the project; and that Day's general belief was that the Postmaster General had no control over and should defer to the Agency's covert operations, even those which might involve the United States mails -- he "would rather not know anything about it." 105a

John A. Gronouski. -- There is no claim by the CIA that Mr. Gronouski, who was Postmaster General from August 1963 until November 1965, was ever informed of the CIA's New York mail intercept project. According to one internal CIA document, consideration was given to the idea of informing him in 1965 at the time of the hearings of the Senate Judiciary Subcommittee on Administrative Practice and Procedure. This subcommittee, chaired by Senator Edward V. Long of Missouri, was investigating the use of mail covers and various other techniques by federal agencies, and CIA officials were seriously concerned about "the dangers inherent in Long's subcommittee activities to the security of the Project's operations ..." 106 The idea of informing Gronouski was quickly rejected, however, "in view of various statements by Gronouski before the Long subcommittee." 107 Since Gronouski had agreed with the Subcommittee that tighter administrative controls on mail covers were necessary and generally supported the principle of the sanctity of the mail, it is reasonable to infer that CIA officials assumed he would not be sympathetic to the technique of mail opening. Such an inference is supported by the next sentence in the memorandum which reflects this conversation: "[Thomas] Karamessines agreed with this thought and suggested that, in his opinion, the President would be more inclined to go along with the idea of the operation."

Lawrence F. O'Brien. -- There is no claim by the CIA that Mr. O'Brien, who was Postmaster General from 1965 to 1968, was ever informed of the project.

W. Marvin Watson. -- Similarly, there is no suggestion that Mr. Watson, who held the office of Postmaster General in 1968 and 1969, was ever told of the project. Richard Helms has testified that he "never felt any need or compulsion to talk to Gronouski or O'Brien or Watson." 108

Winton M. Blount. -- The next Postmaster General briefed about the New York mail intercept project was Winton Blount, who served in that office from the first days of the Nixon Administration in 1969 until October 1971. As with the CIA's briefing of Edward Day, however, it is not clear whether Blount was specifically informed about the mail opening aspect of the operation.

At least two reasons appear to have motivated Richard Helms, now Director of Central Intelligence, to seek a meeting with Postmaster General Blount about the New York project. First, he was strongly urged to do so by William Cotter, a former CIA employee who had been appointed Chief Postal Inspector in April 1969. In Cotter's capacity as Assistant Special Agent in Charge of the Office of Security's Manhattan Field Office during the mid-1950's, he had become aware of the Agency's mail opening project, and although he had no direct connection with the project he knew it continued during the 1960's. As Chief Postal Inspector, he was the only postal official who was aware of the CIA's mail openings, and since his responsibilities included guaranteeing the sanctity of the mail, he was uncomfortable with his knowledge. 108a Partly because Cotter felt bound by his secrecy agreement with the Agency, 109 however, he did not inform the Postmaster General about HTLINGUAL, nor did he initially take any steps to terminate the project. 109a

Cotter's discomfort increased in January 1971 when he received a letter from Dr. Jeremy Stone, Director of the Federation of American Scientists, in which Stone inquired whether the Post Office ever permitted any federal agency to open first class letter mail. 110 Recognizing one of the names on the association's letterhead to be another former CIA employee who was also knowledgeable about the project, Cotter feared that Stone's inquiry may have been based on information supplied by this former agent. He forwarded a copy of the letter to Howard Osborn, then the CIA's Director of Security, and requested a meeting with Helms to discuss his concern about embarrassment to the Agency and to himself if the project were publicly revealed. Helms subsequently did meet with Cotter, who urged him to discuss the project with the Postmaster General. As Cotter later testified:

I felt ... by getting the Postmaster General briefed by the CIA, the most senior people in the project, appropriate legal guidance could be obtained from the chief law officer, the Attorney General, and by pushing up to that arena if the project were unlawful I presumed it would have been stopped. But my concern was to get the top people aware of the project. 111

In addition to pressure from Cotter, the imminent reorganization of the Post Office also motivated Helms to arrange a briefing of Postmaster General Blount. In mid-1971, the Post Office was to become the Postal Service, and he felt that the consequent organization changes might have an adverse effect on the security of the New York operation. 112

Before meeting with the Postmaster General, Helms first spoke with Attorney General Mitchell. At this meeting, which is discussed in greater detail below, Helms recalls that he requested Mitchell's advice "as to whether this thing should be taken up with Mr. Blount because of [the Post Office reorganization]." 113 According to Helms, Mitchell encouraged him to brief the Postmaster General, and a meeting was set up between Mr. Blount and Mr. Helms for June 2, 1971.

The written record of the Blount-Helms meeting on June 2 consists of a "Memorandum for the Record" written by James Angleton which described Helms' comments to top level CIA officials, including Angleton, about his recent briefings of the Attorney General and the Postmaster General. In regard to the Blount briefing, this memorandum reads as follows:

The DCI then indicated that yesterday, 2 June 1971, he had seen Postmaster General Blount. Mr. Blount's reaction ... was entirely positive regarding the operation and its continuation. He opined that "nothing needed to be done," and rejected a momentarily held thought of his to have someone review the legality of the operation as such a review would, of necessity, widen the circle of witting persons. Mr. Helms explained to the PMG that Mr. Cotter, then Chief Postal Inspector, has been aware of the operation for a considerable period of time by virtue of having been on the staff of CIA's New York Field Office. Mr. Helms showed the Postmaster General a few selected examples of the operation's product, including an item relating to Eldridge Cleaver, which attracted the PM's special interest. 114

Helms' subsequent testimony generally supports the accuracy of this memorandum. On the question of whether or not Blount was informed that the New York project involved mail opening, he testified that "[i]t is my recollection that I told him we were opening mail in New York." 115

Blount recalls the meeting with Helms, but does not believe that he was informed about the mail opening aspects of the project. In public session, Mr. Blount testified:

Well, as I recall, Mr. Helms explained to me about a project that he told me had been going on for a great number of years. I don't know whether he said 15 years or what, but there was some indication in my mind that this had been going on for at least 15 years, that it was an ongoing project. It was a project of great sensitivity and great importance to the national security of this country and that he wanted to inform me about it.

... [M]y best recollection is, he told me this was a project in which the Post Office was cooperating with the CIA, that there were a couple of postal employees in New York City that I believe he told me were the only ones who really were involved or know about this project, that the way in which it operated was that the postal employee would remove from the mail stream letters going to the Soviet Union and give it to two or three CIA employees and whatever they did with it, it was reintroduced into the mail stream the next day. That's about the ending of my recollection. 116

He added that he did not recall either asking Helms what was done with the mail or being informed by him that the mail was opened by CIA agents. 117 While he did recall that Eldridge Cleaver's name was "mentioned," he did not believe that he was shown samples of Cleaver's opened mail or that Helms indicated in any way that Cleaver's mail had been opened. 118

On the statement in Angleton's memorandum that he "rejected a momentarily held thought of his to have someone review the legality of the operation", Blount agreed that he considered asking the General Counsel of that Post Office for a legal opinion, but insisted that this consideration was not based on his knowledge or assumption that mail was being opened. 119 Whatever doubts he had about the legality of the operation described by Helms were assuaged when Helms informed him that he had seen or was about to see the Attorney General on this matter. 120 Blount does not recall, however, ever discussing the legality -- or any other aspect of the project -- with the Attorney General personally, he accepted Helms' statement that Mitchell was knowledgeable about the project and "decided to let the Attorney General handle the legality of it." 121

Blount does not recall taking any action on the basis of his briefing by Helms; he made no further inquiries of the CIA or within his own Department about the conduct of the mail project and did not raise the matter with any other Cabinet officer or the President. As he later testified, "[M]y attitude was that if it is legal, I wanted to do what we could do to cooperate with the Central Intelligence Agency on a matter they considered of highest priority to this country and that dealt with national security." 122

Elmer T. Klassen. -- There is no evidence that Elmer Klassen, who succeeded Blount as Postmaster General in 1971 and remained in that position through the termination of the project in 1973, was ever briefed on any aspect of the New York project.

## *2. Chief Postal Inspectors*

The various roles of the Chief Postal Inspectors in regard to the New York mail intercept operation have been alluded to above. It is sufficient here to note that while all of the men who held this office during the course of the project Clifton Garner (until 1953) ; David Stephens (1953 to 1961) ; Henry Montague (1961 to 1969) ; William Cotter (1969 to 1975) -- were apparently aware of the mail cover aspects, only one -- William Cotter -- clearly knew that mail was also being opened by the CIA.

Garner had initially been contacted in November 1952 by CIA officials in the Offices of Operations and Security and apparently consented to the first survey of mail between the United States and the Soviet Union in New York. 122a Montague helped implement this survey and the early operation of the project in 1953 in his position as Postal Inspector in Charge of the New York Region. 122b As Chief Postal Inspector in 1961, he also attended part of the briefing of Edward Day by Allen Dulles, Richard Helms, and Cornelius Roosevelt. 122c Stephens instructed Montague to cooperate with the CIA in regard to the project in 1953 and was present at the Summerfield briefing in May 1954. 122d There is no evidence (or claim by the CIA)

that any of these three men knew that the CIA project involved the opening of mail, however. As noted above, Montague has also testified that Stephens instructed him, and he in turn instructed the CIA agents who visited him in 1953, that mail opening would not be permitted.

William Cotter was therefore the first Chief Postal Inspector who was clearly aware of all aspects of the mail project. Despite his initial reluctance to take any action on the basis of his knowledge, Cotter was instrumental in arranging the Helms-Blount briefing in 1971 and ultimately in the termination of the project in 1973. His role in the project's termination is discussed below. 122e

### *3. Attorneys General*

There is no evidence in the record that any Attorney General before or after John Mitchell was ever informed about the CIA's New York project. At a minimum, Mitchell was briefed about certain CIA mail covers by Richard Helms on June 1, 1971, but as with the Day and Blount briefings, the evidence about Mitchell's knowledge of mail opening and the New York project specifically, tends to be contradictory.

The background for the Mitchell briefing has been described above: William Cotter, concerned about the letter he had received from Jeremy Stone and uncomfortable with his knowledge of the mail openings in New York, urged Richard Helms to discuss the operation with the Postmaster General; in addition, the imminent reorganization of the Post Office cast the future security of the project in doubt. Rather than go to the Postmaster General directly, Helms chose to consult first with the Attorney General, in part to seek Mitchell's opinion as to whether or not Mr. Blount should be informed. As Mr. Helms publicly explained,

... it was quite clear that [Mitchell] had a particular role for the President in sort of keeping an eye on intelligence matters and on covert action matters.... He was sort of, I think, a watchdog for the President, so I have consulted with Mr. Mitchell on a variety of the problems affecting the Agency over time that I would not have gone to the normal Attorney General about, nor would the normal Attorney General have been necessarily privy to these things. 123

According to a CIA memorandum dated June 3, 1971, two days after the June 1 meeting between the Director and the Attorney General, Helms told a group of ranking CIA officials that he had briefed Mitchell about the operation and "Mr. Mitchell fully concurred in the value of the operation and had no 'hang-ups' concerning it." 124 Helms elaborated on this meeting with Mitchell in his recent public testimony, stating that he

told him [Mitchell] about this operation, what it was doing for us, that it had been producing some information on foreign connections, dissidents, and terrorists, a subject in which he was intensely interested, and that we might have a problem when the U.S. Postal Service was founded. And I asked if it wouldn't be a good idea that I go and see the Postmaster General, Mr. Blount, and talk with him about this and see how he felt about it and to get some advice from him. And, it was my recollection that Mr. Mitchell acquiesced in this and said, "Go ahead and talk to Mr. Blount." 125

When asked whether or not he told Mitchell that the project involved the opening of mail, Helms replied: "... I don't recall whether I said specifically we are opening X numbers of letters. But the burden of my discussion with him, I don't see how it could have left any alternative in his mind because how do you find out what somebody is saying to another correspondent unless you have opened the letter?" 126

John Mitchell has acknowledged meeting with Helms on June 1, 1971, and recalls a discussion of "mail covers," but on the basis of his recollection denies that Helms told him mail was opened. 127 He does not remember being informed of any of the details of the New York operation, and believes that even the discussion of mail covers was in relation to an intelligence operation distinct from one that would fit the description of the New York project. 128 The former Attorney General testified that, as he recalled, "the discussion of the mail was ancillary to another discussion that was not extensive, and . . . it had to do with mail covers, or at least I assumed it [did] ..." 129 He added that he had no recollection of Helms' asking his advice as to whether or not the Postmaster General should be briefed on any CIA project, 130 and that the first time he became aware that the CIA had opened mail in the United States was when these operations were publicly revealed in 1974 and 1975. 131

James Angelton testified that he also met with John Mitchell during Mitchell's tenure as Attorney General, described the New York project to him, and showed him some samples of the product, specifically, a copy of a letter from Kathy Boudin. 132 Angelton does not recall the possible date of such a meeting, however.

Mitchell does not recall ever having met with Angelton, or even having heard his name until recently. 133

### *4. Presidents*

There is no documentary evidence that any President ever authorized the CIA's New York mail opening project. With the possible exception of Lyndon Johnson in 1967 or 1968, there is no CIA claim that any President was even informed of it. 133a While proposals were made by CIA officials in 1954 and again in 1965 to advise the President of the existence of HTLINGUAL, it does not appear that these proposals were implemented. In the context of the so called "Huston Plan" deliberations, moreover, CIA officials actually withheld knowledge of the ongoing New York project from the President's representative and from President Nixon himself. And despite President Nixon's eventual refusal to authorize the use of "covert mail coverage" (mail opening) as an intelligence collection technique (after a brief period of approval), the CIA project continued without interruption for another two years.

1954 Proposals to Seek the Approval of President Eisenhower. -- In a January 4, 1954 memorandum from Sheffield Edwards, then Director of Security, to Allen Dulles, Director of Central Intelligence, it was recommended that the Director and the Postmaster General (after having been himself briefed) meet "and then seek oral approval of [the] President." 134 This recommendation was reiterated in a second memorandum from Edwards to Dulles eight days later. 135

In later years, it was assumed by some CIA officers that Dulles had in fact briefed President Eisenhower on the program. The 1969 review of the project by the Inspector General's staff, simply states, without citation: "It is believed that Mr. Dulles briefed President Eisenhower on this subject." 136 Richard Helms has also testified that "I always assumed that Mr. Dulles, before we went to see Mr. Summerfield, had checked this out with President Eisenhower. I do not recall his ever specifically saying [that] to me, that was sort of an assumption on my part, that something of this importance he would have checked out and he would have proceeded on to his appointed task of speaking to the Postmaster General." 137

Summerfield himself had only been informed of the mail cover aspects of the project in 1954, however; the Agency apparently never returned to inform him that mail opening later became the primary program objective. Helms added, moreover, that he had never seen any documentary confirmation of a meeting between Director Dulles and the President in regard to the project. 138 Beyond the proposals themselves and the later undocumented assumptions by CIA officials, there is no evidence that President Eisenhower was ever informed about any aspect of the New York operation.
