

<http://www.raven1.net> revived by www.hearingvoices-is-voicetoskull.com

www.raven1.net

by Eleanor White from Sudbury in Ontario, Canada

converted to PDF by Cliff Huylebroeck from Dendermonde in Belgium

1. Foreword	2
2. Index	3
3. Pages in almost alphabetical order	17
4. Text files in alphabetical order	4391
5. PDF documents in alphabetical order	4491

Foreword

How I made the document:

1. I copied the www.raven1.net website on February 4, 2009 and May 26, 2010 using Offline Explorer (I think version 5.9).
2. I copied files of the same type to a separate folder: HTML, style sheets, text, images and PDF.
3. I searched and replaced the links using regular expressions using the CodeWarrior IDE 4.0.4.
4. I made a new HTML file with “revived by” remarks using the same program.
5. I converted it to a Word 2000 document.
6. I imported the pages one by one into this document by opening them in Internet Explorer 8 or Word 2000, depending on what showed the best result, and then used copy and paste.
7. I converted it to an OpenOffice 3.3 document.
8. I improved it page by page (style, justification, space between the alineas, bold style, size of tables and images).
9. 287 images are missing.
I saw no easy way to verify which images are missing.
They seem to be mostly ads from deleted frames.
You can still download the original files from
www.hearingvoices-is-voicetoskull.com/Downloads.htm.
10. I made the index.
11. I exported it as a PDF.
12. I appended the PDF files to the end using PDF Split and Merge 2.2.1.

Index

Russian Psychotronics Human Rights Group Sends Information to Mind Justice

[Mind Justice Home Page](#)

Background information:

Emilia Cherkova was featured in an article mentioning Lopatin also. The article is The Moscow Times, July 11, 1995 by Owen Matthews. Here is the relevant excerpt:

"...'Ecology and Living Environment' an environmental and civil liberties group which claims a membership of 500 people in Moscow... Emilia Cherkova, an ex-member of Zelenograd's local council... Lopatin calls for legislation, which would "bring Russia into line with Bulgaria, the only other country to outlaw such equipment specifically."

Another article, Delovoi mir, "Business News", 2 15 92, "...Emilia Chirkova, a Deputy of the Zelenograd Svet and member of the Human Rights Commission."

Another article from "Zelenogradskaya Gazeta", 1991, ".... is E. C. Chirkova, the national deputy of the city council of the city of Zelenograd, the member of the Commission on Human Rights."

Emilia Cherkova was also mentioned in the second book being translated by Cahra, "Psychotronic War from Myth to Facts" by Igor Vinokurov and Gorgij Gurtovoj, Moscow, 1993.

Here is the December 2001 letter of Appeal from Emilia Cherkova and her Russian human rights group. Translation by Ramon Ruelas.

On the activity of the public organization "Moscow Committee for the Ecology of Dwellings": against psycho-physical (psychotronic) violence against the population

MOSCOW COMMITTEE FOR ECOLOGICAL DWELLING

AN APPEAL TO THE WORLD COMMUNITY

The Moscow Committee for Ecological Dwellings: against psychotronic violence (Russian Federation) appeals to the World Community with a request for the conducting of an international investigation into the genocide of the people of Russia, into the facts about the large-scale application of psychotronic (psycho-physical) weapons against citizens of the Russian Federation. Our organization was created in the year 1990 for the purpose of

attracting the attention of the general public and that of the government toward the problem of psychotronic terrorism and for assisting citizens in protecting their legitimate rights and freedoms -in particular, the right to reside in safety in ones own dwelling. The Committee is registered with the Management of the Justice of Moscow 15.08.1994. registration No. 3383. From the data cited in scientific publications, from the mass media and from the numerous complaints by citizens in various instances, it is known that psychotronic weapons are used for the conducting of bio-medical cybernetic experiments, for the control and management, and for the zombification of citizens of the Russian Federation, as well as for military and for repressive purposes. For the improvement of these types of weapons, any category of the population could be secretly chosen as victims, including younger people, children and pregnant women, and there are eliminated by these types of weapons also: scientists, writers, artists, composers, progressive figures --the very color of the nation. The socially active citizens who are exposing the application of psychotronic weapons as a new type of weapon of mass [destruction], are being subjected to particularly severe terrorism. The complete absence of any control of the development and the illegal distribution of these weapons, allow for the structures owning them to apply the entire arsenal of psycho-technological devices, methods and apparatuses for the psycho-physical manipulation of humans, their behavior, their consciousness, their gene-pools --on any person from the President on down to the ordinary citizen. Psychotronic terrorism has transformed the apartments of Russians into torture chambers. For the amplification (strengthening) of the effects of psychotronic influences, with the application of electromagnetic (in these cases, laser, CVCh., MICROWAVE, x-ray), torsional, leptonic, gravitational, as well as acoustic, infra-sonic and ultra-sonic effects, psychotropic and narcotic preparations, gases and various chemical substances and others, are also used. At the same time, methods of retaliatory psychiatry are used against persons who are trying to stop the violence and who turn, therefore, to law enforcement agencies In connection with the lack of protection in Russia of citizens on the part of the state, on a given command victims are exposed not only to physical terrorism, but also to moral, economic and genetic terrorism, since the effects of psychotronic method destroy the gene-pool of the people and leads to a total degradation [of it]. Numerous appeals during the course of the last 9 years by the Moscow Committee for Ecological Dwelling to all governmental levels, to the President, to the Administration, to the Governmental Duma, with the demand for an investigation into the available facts on mass experiments -including international -on the citizens of Russia, a genocide of people, and also for the demand to a stop the psychotronic terrorism and to forbid the further development and manufacturing of psychotronic weapons through the establishment of rigid controls on the part of the public and the government regarding scientific activities in this area, -- did not produce any results. Therefore, we are compelled to address the World Community regarding the above stated problem, as similar crimes (mass terrorism, the genocide of a nation) are subject to the jurisdiction of an International Tribunal.

Chairman, MKEZh

Chirkov E.S.

Vice-chairman, MKEZh

Petukhov A.JA.

Moscow committee of ecology of dwelling (MKEZh.): Against psychotronic violence asks for the rendering of financial help for the purchase of office equipment and for the publication of documentary and informational-analytical materials. Last Hero

Russian Federal Law on Electromagnetic Weapons

[C.A.H.R.A. Home Page](#)

This is a Russian federal law, see ISBN number below, and it establishes "the laws for the circulation of civilian and military weapons" including the "use of radio-active radiations and biological factors; -weapons and other objects, the affects of the operations of which are based on the use of electro- magnetic, light, thermal, infra-sonic or ultra-sonic radiations and which have [exiting] parameters, exceeding the magnitude of established governmental standards of the Russian Federation and corresponding norms of Federal governmental organs in the area of the health department,"

Here is the whole law thanks to Emilia Cherkova and her human rights group in Russia.
Translation by Ramon Ruelas.

Article 6. Essentially, establishing of the [laws for] the circulation of civilian and military weapons

Within the territory of the Russian Federation is prohibited:

1. the circulation of weapons, in a civilian and military capacity, weapons: of fire-arms of long-barrels with a magazine capacity (rounds) of more than 10 cartridges, having a barrel length, or a barrel length with casing of less than 500 mm. and normal-length weapons less than 800 mm, and also those having a construction which allow for making their lengths less than 800 mm and with which is not lost the possibility of the execution of firing [the weapons];
 - of fire-arms weapon which has a shape in imitation of other objects;
 - of smooth-bore fire-arms weapons prepared for cartridges from fire-arms weapons with sawed-off barrels;
 - of bludgeons, knuckle-dusters, [***], boomerangs and other special adaptations for use in the capacity of weapons, objects [pellets/ammunition] and missile operation, with the exclusion of sporting [shells];

- cartridges with armour-piercing bullets, [flares/incendiaries], explosives or tracer-bullets, and also cartridges with [pellets/small-shot] [shells/ammunition] for gas pistols and revolvers
 - weapons and other objects, the affects of the operation of which are based on the use of radio-active radiations and biological factors;
 - **weapons and other objects, the affects of the operations of which are based on the use of electro- magnetic, light, thermal, infra-sonic or ultra-sonic radiations and which have [exiting] parameters, exceeding the magnitude of established governmental standards of the Russian Federation and corresponding norms of Federal governmental organs in the area of the health department, and also any of these indicated weapons and objects produced beyond the boundaries of the territory of the Russian Federation;"**
 - gas weapons, ammunition, nerve-paralysing, poisonous, and also other material not distributed for use by the Ministry of Health of the Russian Federation, gas weapons with the capabilities of causing severe damage to the health of any person who is located a distance greater than one meter;
 - weapons and cartridges for these, having technical characteristics not in correspondence with the criminal-law requirements of the Minister of Internal Affairs of the Russian Federation, in agreement with the Governmental committee of the Russian Federation for the standardization, metrology and certification;
 - barrel-less fire-arms weapons for self-defense, electro-shock apparatus and spark [discharger] and which have [exiting] parameters exceeding the magnitude of established governmental standards of the Russian Federation and corresponding to the norms of the Minister of Health of the Russian Federation, and also any of these indicated types of weapons and objects produced beyond the boundaries of the territory of the Russian Federation;"
2. the keeping of or the use of in a non-sporting situations, of objects and sporting fire-arms weapons with sawed-off barrels, or of sporting pneumatic weapons with a muzzle energy greater than 7.5 [Ddj] and a calibre greater than 4.5 mm, and also of sporting [weapons with] [condensed] breech- mechanism and missile weapons, with the exclusion of the keeping of and use of bows and cross-bows for the conducting of scientific-research and prophylactic [preventive] work connected with the immobilization and injecting of subjects of the animal world;
 3. the setting up of, by civilian and military, of weapons adapted for silent firing [aiming] (in firing facilities, ranges), and night vision sights, with the exclusion of sights for hunting, the periodic use of which are established by the Government of the Russian Federation, and also their sale;
 4. sending [forwarding] of weapons [by post<?>];
 5. the carrying by a civilian of weapons when conducting meetings, street marches, demonstrations, picketing and other mass, public measures.
 6. the carrying by a civilian, for the purpose of self-defense, of long-barrel fire-arms weapons and condensed [shortened or sawed-off] weapons with the exclusion of the cases of transporting or conveying the indicated weapons;

7. the sale, transfer, acquisition of weapons and cartridges [ammunition] for them, carried out only for exporting in correspondence with technical conditions of responding to the demands of a country-importer.

Translator's note: the [***] I could not find..

[Ddj] in 2) above --I think is joules (unit of work, energy), ---where our "J" is transliterated as "dj", so that [Jim = Djym]

Also: "[exiting] parameters" --I don't know what this refers to as I am not familiar with weapons. It may mean penetrating force through a specific material of a specific width, not sure.

Federal Assembly --Parliament of the Russian Federation

Governmental Duma

Committee on Safety

Resolution

From the 30th of November of the year 2000 No. 28/3

Regarding the draft of the Federal Law

"About the submission of addendum to Article 6 of the Federal Law "About weapons"

Having examined the draft of the Federal law "About the Submission of addendum to Article 6 of the Federal law "About Weapons", The Committee of the Governmental Duma for Safety has ruled:

1. To recommend that the Governmental Duma adopt the draft of the Federal law "About the submission of addendum to Article 6 of the Federal Law "About weapons" in the first reading.
2. To appoint a second speaker in accordance with the directive on law-drafting from the deputy of the Governmental Duma [Iljukhin] Victor Ivanovich.
3. To authorize the actual Resolution with the text of the [law-drafting] and all of its supporting documents in the Soviet Governmental Duma, for inclusion in the [law-drafts] of the day's plenary meeting of the Governmental Duma for the 20th of December of the year 2000.

Committee Representative
A.I. Gurov

Resolution

The Law-draft proposes an addendum to Article 6 of the Federal law "About Weapons" status, in accordance with which, in the territory of the Russian Federation, is prohibited the circulation in a civilian capacity and military, weapons and other objects, the offensive [attack] operations of which are based on the use of electro-magnetic radiation, infra-sonic radiation and ultra-sonic radiation.

The achievements of contemporary science and technically predetermined informational and psychological technologies allow for the creation of means and methods of secret, remote influencing on the psyches and physiology of a person or of a group of people.

There exists a wide spectre [range] of devices with capabilities of guaranteeing the alteration of the mental capacities of a person, to program his behavior, to breakdown adequate reactions and to artificially foster symptoms of dependency.

Audio-visual influencing is accomplished through auditory or optical channels, when very weak, low-thresholds of irritation, which are not consciously perceived, are instilled deeply into the subconsciousness and imperceptibly orients the thinking and behavior of a person in an predetermined fashion.

With the aid of ultra-sonics, [devices {not legible}] or mechanical influences of [expansive] frequencies greater than 100 Hz, not noticed by a person, exert influences on the mental structures and nervous system, resulting in pain in the head, dizziness, a deterioration of the vision and of breathing [functions], and convulsions which can lead to the loss of consciousness.

The use of infra-sonic (very low-frequency, lower than 16 Hz) of a low intensity (of about 120 decibels) causes nausea, ringing in the ears, a deterioration of the vision, and generalized suffering. The sonic [sounds{effects}] of medium intensity (up to 130 decibels) break down the organs of digestion and the brain, resulting in paralysis and sometimes blindness. The effects of infra-sonics of an intensity of 130 decibels and higher can cause in the subject the stoppage of the heart.

Under the influence of ultra-high frequency radiation, there appears a breakdown in the interpretation of reality, weariness, dizziness, head pains; and the heart, the brain and the central nervous system can also be damaged. In the capacity of an [transmitive{as opposed to receptive}] antenna, for the transmission of such waves can be used telephonic equipment [devices], heating and sewer pipes, televisions, and fire-prevention [pipe/water supply systems{not legible}].

In practically the entire world, work on "methods of hidden influencing on the psyches of humans" are considered a [high] priority and enter into the roll of the most important technologies of the XXI century. The [intelligence agencies] of government insert into their military doctrines articles about the priority of the application on the front lines -in regional conflicts -of non-lethal weapons which allow for the attainment of victory with the least amount of losses, not only among its own troops, but also among the troops of the opposition.

At the initiative of the USA, within the framework of NATO, there was created a special workers group for the perspective use of devices of non-lethal effects for the coordination of [developments/breakthroughs] conducted in this field in Great Britain, France, Germany and Denmark. Generators were created in Frankfurt Institute for Chemical Technologies

(Germany), intended for the treatment [dealing with/management] of large crowds in conditions of mass disorder. The transmissions of the latest French [devices{not legible}] are capable of not only penetrating through concrete and armour (plating), but also they can very quickly break them down. According to reports in means of mass information, the British army, in the year 1995, conducted in Northern Ireland field [real-time] testing of non-lethal weapons for dispersal of crowds. There are also available facts regarding the application of electro-magnetic weapons against subjects in Yugoslavia in the year 1999.

The creation of infra-sonic devices of [attack] was declared a priority in the USA, among all of the developments [in the field of] non-lethal weapons. According to the evaluation of military specialists, the American army, with the aid of un-manned, lethal devices, is capable -with the aid of a SVCh. (ultra-high frequency) generator --of stopping -at a distance of several hundred meters from shore, an enemy ship of a sea landing force. According to the appraisal of the Stockholm International Institute of World Problems (SIPRI), in the next two years, expenditures in the USA for the development and purchase of non-lethal weapons will exceed a billion dollars.

At the present time, through the Federal law "About Weapons," is it forbidden within the territory of the Russian Federation, in a civilian capacity and armed services, the circulation of weapons and other objects, the offensive operations of which are based only on the uses of radioactive radiation and biological factors, but they do not account for the development of informational and psychological technologies, the applications of which enable hidden influencing on the psyches and physiologies of people. This led to, in the Russian Congress, the possibility of the addendum to the Federal law "About Weapons," which bear the aforementioned characteristics. This does not [weaken] the structure of the existing laws and is completely in keeping with its basic direction --the preservation [defense] of the lives of and the health of citizens and in guaranteeing public safety.

On the basis of the included, it is proposed that the draft of the Federal law "About the submission of addendum to Article 6 of the Federal Law "About weapons," introduced by the Assembly of the Krasnojarskii region, be adopted in the first reading.

Hear Gloria Naylor [here](#) read an excerpt from *1996* during a conference call with fellow targets.

Eleanor White's bottom line assessment: "1996 is a priceless gift to the cause of truth, freedom and justice." Let me start by giving the author's accomplishments as listed on the book's dust jacket:

***1996* was written by Gloria Naylor, who is a writer for theater, film and television and the author of novels which include *The Women of Brewster Place* (1983 National Book Award Winner), *Mama Day* and *Bailey's Cafe*. She also edited the anthology, *Children of the Night: The Best Short Stories by Black Writers 1967 to the Present*. Her novels now mark their twelfth language translation.**

She has been distinguished with numerous honors including Senior Fellow, The Society for the Humanities, Cornell University; The President's Medal, Brooklyn College; and visiting professor, University of Kent, Canterbury, England.

Ms. Naylor has won Guggenheim and National Endowment for the Arts fellowships for her novels; for her screen writing, and she has been awarded the New York Foundation for the Arts Fellowship. In April of 1994, *Bailey's Cafe* enjoyed a successful run during its world premier at the Hartford Stage Company.

Tragically, like other victims of what I call "organized stalking and electronic harassment", Gloria's successful career encountered severe destructive, criminal interference, starting in 1996. Gloria uses the name "mind control" for this interference, often used by many targets.

One powerful goal of "VS/EH", as I abbreviate it, is indeed the control of the target's mind. Mind control is certainly not the full story, but if a reader does a search on the phrase "mind control", they will locate a great deal of information by and about the targets of organized stalking and electronic harassment.

The first thing some people considering reading *1996* may wonder is "What the heck IS organized stalking and electronic harassment? Or mind control? I've never heard of those things."

For more detailed information, rather than try to provide that here, I recommend some web sites which have been specifically set up to tell the story to people who are totally unaware. The wording of these sites has been pruned back so an unaware visitor is going to find matter of fact, plain language information, without being blasted by full technical details. These "OS/EH lite" sites have already been successful in persuading two groups which are the very hardest to persuade - targets' family members, and professionals - that they really do need to take our claims seriously:

<http://www.catchcanada.net>

<http://www.multistalkervictims.org>

[Site information as of January 17, 2006. Those sites link to others.]

For this review, let me summarize organized stalking and electronic harassment as a now tightly networked covert entity, organized and protected by high level public officials, which uses many 'operatives' to destroy a selected target's privacy, peace, quality of life, and ability to use their talents to earn a living. Stalking by many different operatives, intrusions into the target's home, car and workplace (while the target is away), and use of electronic technology to silently attack the target's mind and body through walls combine to turn a target's life into an inescapable nightmare.

Furthermore, the harassment is very carefully designed to make the target appear to be mentally ill if they complain to public officials or the medical establishment. This is done by using events which are a normal part of living, in rotation so no one event happens often enough that a casual observer will notice. The harassment events are repeated endlessly and exaggerated, just enough so that the target will notice.

You see, the target sees ALL of these "skits", while casual observers will only see the harassment occasionally. And of course, the casual observer does not experience, say, electronic sleep deprivation every single night for months, years, or decades.

The casual observer is also not a target of lies told to neighbours, co-workers, friends, and even family by these very well organized criminals. The lies often paint the target as some sort of criminal, hence, you may hear the term vigilante talking about organized stalking.

This, reader, is why, if you have not been a target, you probably don't know about this current day nightmare known as organized stalking and electronic harassment. By the way, it is common for this VS/EH to continue for LIFE. It does not cease if you move, and that includes moving to other nations.

The book *1996*, is Gloria Naylor's RESPONSE to a decade of targeting by multiple stalkers and through wall electronic technology. The book is a skilled writer's contribution to the fight to expose and stop these crimes. Gloria tells the story of 1996 - the year in which her nightmare started. Some of her material took place later, but a one year snapshot of a target's experience is sufficient to show what we endure. Following years just grind on with more of the same type of harassment, even though the exact harassment modes are rotated from some sort of "master menu", apparently to make it difficult for the target to convince others the harassment is real.

Gloria Naylor was faced with the problem of how to present her story, given that the cover up by public officials, and their almost seamless denial, make it impossible for targets to know very much about the operations. Gloria settled on a unique way to tell her story, and the end result is a very readable book. Here is how she describes *1996* in her own words:

"1996 is not a novel, nor is it non-fiction. It is a conflation [blend] of the two genres."

In other words, Gloria's own story is fact, and she uses her powers of observation and intellect to create very believable fictional characters, in the service of the U.S. National Security Agency, to show how these operations might well be organized and carried out.

As a target since 1980 myself, I found all of Gloria's suppositions about the covert operations quite plausible.

At this point, reader, you may be shaking your head and denying that public officials of the United States Government would ever be so corrupt as to carry out such extensive and expensive harassment programs. Without going in to detail here, I urge you to learn something about two examples of exactly such extensive and expensive government crime which took place from the 1950s to the 1970s: The CIA's MKULTRA programs, and the FBI's COINTELPRO operations. If you take a close look, you will find the false media spin on MKULTRA, that it involved a few unwitting adults getting LSD in their drinks, doesn't even scratch the surface. (The real MKULTRA rivalled the Nazi medical experiments in terms of atrocity.)

MKULTRA-era programs included the development of electronic anti-mind and anti-body weapons of just the sort which Gloria Naylor describes. I'm now a retired engineer and have been a ham radio operator for half a century, and I assure you, reader, that most of what Gloria Naylor describes can be done using technologies which are now available, are not secret, and can be had by anyone with an upper middle class income. And the technology which isn't yet in the public domain has been publicly hinted at by U.S. Government agencies which oversee scientific research.

Gloria's book itself should provide targets of organized stalking and electronic harassment with a not too long (126 pages of story, the rest being appendices) and easy reading story which can be used to explain to reluctant family members, friends, (and hopefully even medical and public officials) what we targets are going through. The fact that Gloria is an accomplished author certainly won't hurt!

In 1996, Gloria had reached the stage in her profession where she could just afford "a summer place" on one of the Sea Islands along the coast of South Carolina. This is a great stage in anyone's life. I wondered, as I read the book, what Gloria may have done to "deserve" her submission to the covert harassment establishment, which is the typical covert harassment establishment characteristic of dictatorships. I can't help thinking that her gifts as a writer, being black and being a woman might have been enough to trigger jealousy. Many of the targets who keep in touch simply don't know why our names were submitted to the torturers.

She relates a "problem neighbour" who had cats who wandered into Gloria's yard and made messes in her garden. Could this have started it all? As a 26-year veteran target, I can't be sure - this problem neighbour could have been a designated perpetrator, recruited before Gloria moved there to enjoy the warm season of 1996. VS/EH perpetrators do that - frequently, they have already been recruited and are ready to start their particular harassment assignment the day we move to a new location.

On the fiction side of *1996*, you will see how her problem neighbour has ties to the U.S. National Security Agency. Quite plausible. Although the CIA and FBI were the historical agencies using VS/EH tactics, there is no principle of physics or politics that says the NSA couldn't be the source of her torment.

Also on the fiction side, Gloria postulates that, as her harassment unfolds, people involved in her harassment are given several different versions of the "awful truth" about her. This is borne out by small bits and pieces of information our on line membership of several hundred

targets are able to glean once in a great while. We are accused of things like we are criminals, drug users, drug dealers, prostitutes, or child sex abusers. This readily allows the supervisors to recruit ordinary citizens to make life Hell for the target.

One book which provides a rare look behind the scenes at the community level harassment "corps" is private investigator David Lawson's 2001 book titled ["Terrorist Stalking in America"](#). Local "do good" organizations make excellent harasser recruiting agencies, and Gloria speculates that one such group was a factor in her first year as a target.

When an author acquires a summer place, and intends to continue writing, the peace and quiet of a rural spot are highly valued. Can you guess, reader, what one of the first (and most consistent) forms of harassment a target might likely notice at the beginning?

Gloria describes her local street perps very well. Here is a sample paragraph:

"They are young and old, Jew and gentile, black and white, and brown and yellow. ... Some are in it for a cause, others for the money. They walk when they're told to walk, sit where they're told to sit, and follow when they're told to follow. Above all, they drive when they're told to drive. ... Most don't notice the lone black woman walking down [the street], and for the few who do, it doesn't register. Most don't question what all this means, and for the few who have the courage to ask, they're told, in so many words, to mind their business and just do what they've signed up to do. They're part of a puzzle that's overseen by greater minds than theirs. And there is always someone to replace them if they're unhappy. Of those few who have the courage to ask, most stay."

As a veteran target, I can tell you that we do indeed see quite a few "just following orders" perpetrators. However, as with other characters on the fictional side of *1996*, we do also see quite a few very sick harassers who clearly enjoy their "work."

During the year 1996, Gloria was forced to cut her potentially long (due to her summer place being in South Carolina and with direct exposure to the Gulf Stream) summer short, due to the harassment. In my 26 years as a target, I have noticed that many things, such as sleep (when allowed at all), or a good meal, or a satisfying walk in the woods or piece of creative work are often "cut short" by some sort of pronounced upsurge in harassment. A pattern that happens over and over, endlessly, as one harassment crew is rotated in to our location, and another goes on to another target. One of our members, Patricia Mougey of Toledo Ohio, lives in a close-spaced neighbourhood of detached housing, and being retired, she sees and hears a great deal of what the perpetrators do, and even some of their interaction with each other. In her 40+ years of this harassment, she has seen clearly that harassment crews definitely rotate. And each crew has trainees.

Back in her brownstone home in New York City, Gloria encountered a new, very common horror, something the United States Army calls "voice to skull". The Army's acronym, from their on line thesaurus, is "V2K" for this technology. Voice to skull has been unclassified and available to anyone who could hire a microwave engineer to assemble a voice to skull transmitter since 1974. It is simply an enhancement to the phenomenon discovered in World War II in which radar technicians who stood in line with moderately powerful radar dishes

heard the train of microwave pulses as a buzz in their heads. No implants are required for "V2K" to work.

Gloria then encountered a further technology which IS secret at the moment, the ability to read minds through walls, electronically. When we think things silently to ourselves, as words, even though our vocal muscles don't form audible words, there are enough tiny electric currents sent to the vocal cords that these can be picked up by electronic equipment. One practical use for this "mind reading" technology was announced in 2004 as being a research project by NASA for use in detecting "terrorists" at airports.

The proposed equipment was an array of pickups which each air passenger would momentarily stand under, providing the equipment with a short sampling of the magnetic fields given off by the brain's electric currents. Computers would then convert those magnetic signals into signs of criminal intent. Further conversion into words has been discussed seriously, but at this moment, we don't have a documented unclassified piece of equipment we can point to as being able to do that.

But after all, conversion of a collection of waveforms into words is exactly what "you talk - it types" software does every day.

Following the mainstream news stories about this equipment, the media suddenly fell silent and have remained silent. Some of us who are targets have had thought reading demonstrated on us. The way this is done is by setting up a harassment event which could only have been anticipated if the perpetrators had actually read our thoughts.

One quick example of a demonstration I experienced was when I ordered 16 topographic maps of various locations in New England. As I pondered which ones to order, I thought about some of the quadrangles, but rejected them. My written order was absolutely perfect - the 16 I had chosen were numbered and named correctly.

When the order arrived, three of the 16 maps were not the ones I had ordered. But ALL of the three were chosen from the few I had thought about then rejected. ALL three. These maps were not adjacent to each other in the indexes, so this was not a simple order picking error. Interpret that as you choose; that plus other demonstrations, plus the NASA mind reading announcements in the media, have me convinced.

Gloria shared a very interesting twist of the non-fiction side of her story during [this telephone conference](#) with our membership. Logically, some targets of electronic harassment, given that transmitting voice through walls into the skull of a target does mimic mental illness, will opt to see a psychiatrist. Gloria did this, and predictably, was placed on anti-psychotic medication. After waiting for the medication to work, which it did not (as in all targets' medication trials), the psychiatrist actually revealed to Gloria that he knew about this harassment crime syndrome, yet did not tell her.

His excuse was that he needed to see if the medication would stop the voice to skull, so he would have a dependable way to see if Gloria was either truly mentally ill, or a target. I tend to suspect that there are other doctors who also know quite well about this modern day "extra-judicial corrections system" but don't let on about it, causing our members untold grief, not to mention expense! I won't speculate here about their motives.

In this review, I haven't said much about the actual text written by Gloria Naylor. I guess that's because to me, the significance of this book is not it's excellent literary value, but that it is published at all! Since 2001 we have only had David Lawson's *Terrorist Stalking in America* as "artillery support" for our fight, now we have what I consider a second "big gun" on the firing line!

GOD BLESS AND KEEP YOU WELL AND STRONG, GLORIA NAYLOR! (Ditto, Third World Press!)

Abstract: An apparatus for the treatment of neuropsychic and somatic disorders wherein light-, sound-, VHF electromagnetic field-pulses and radiation from light-, sound-, VHF electromagnetic field- and heat-sources, respectively, are simultaneously applied by means of a control unit to the patient's central nervous system with a predetermined repetition rate. The light radiation and sound radiation sources are made so as to exert an adequate and monotonous influence of the light-and sound-radiation on the patient's visual analyzers and auditory analyzers, respectively.

First Claim: [Show all 8 claims](#)

What is claimed is:

1. An apparatus for the treatment of neuropsychic and somatic diseases, said apparatus comprising a control unit means for simultaneously periodically activating apparatus connected thereto in a pulsed manner at a selected repetition rate; a light-radiation source essentially comprising at least one electric bulb electrically connected with said control unit means, such that light pulses are generated by said light-radiation source influencing the central nervous system of the patient having one of said diseases who faces said source; a sound radiation source essentially comprising an electric generator of pulse oscillations, a small dynamic loud-speaker means for converting said oscillations into acoustic signals imitating the sound of falling drops of water, said electric generator being electrically connected with said control unit means for actuation thereby whereby sound pulses of said sound-radiation source influence the central nervous system of the patient; a VHF electromagnetic-field source essentially comprising a generator of sinusoidal electric oscillations of the waves metric range, electrically connected with said control unit means and disposed in proximity to the patient's ganglia, pulses from said VHF electromagnetic field source acting upon the nervous system of the patient; said light-radiation source producing an adequate and monotonous action of the light-radiation of the patient's visual analyzer; said sound radiation source producing an adequate and monotonous influence of the sound radiation on the patient's auditory analyzer; said control unit means controlling said light-radiation, sound-radiation and VHF electromagnetic-field source so as to provide for a simultaneous generation of said light, sound and VHF electromagnetic pulses and directing said pulses to act upon the patient's central nervous system, all said pulses following at a predetermined repetition rate and ensuring suppression of the patient's nervous activity; and a power supply means to supply said lightradiation, sound-radiation and VHF electromagnetic-field sources and said control unit.

Background/Summary: [Show background/summary](#)

Description of
Preferred
Embodiments:

The apparatus for the treatment of neuropsychic disorders comprises, in accordance with the present invention, source I through 4 (FIGS I and 2) of light radiation, sound radiation and VHF electromagnetic field radiation, heat radiation respectively, wherein light pulses, sound pulses, VHF electromagnetic pulses and heat radiation act upon the central nervous system of a patient (not shown in the drawing). The apparatus also includes control unit 5 which is electrically connected with said sources I through 4 and controls the same so as to enable them to send to the central nervous system simultaneous light radiation pulses, sound radiation pulses, heat radiation pulses and VHF electromagnetic field radiation pulses at an assigned pulse repetition rate thereby causing a state of inhibition in the patient under treatment.

The sources I through 4 are oriented in respect of the patient as follows: the light radiation source I is placed at the level of the patient's eyes at a distance of 40 to 50 cm therefrom;

the sound radiation source 2 is placed in the proximity of the patient under treatment at a distance of 40 to 50 cm him;

the VHF electromagnetic field radiation source 3 is placed in the immediate proximity of the patient's ganglia, preferably at the level of carotid sinuses, 3 to 4 cm away from the patient's skin surface, as is the case with the present apparatus;

the heat radiation source 4 is also placed close to the patient's skin surface, i.e., in the immediate proximity of the face skin surface.

The sources I and 2 of light radiation and sound radiation, respectively, provide for an adequate and monotonous action thereof upon the visual and auditory analyzers.

According to the first embodiment of the apparatus for the treatment of neuropsychic and somatic disorders (FIG. I) the control unit 5 is a chopper with a cam mechanism 6 and contacts 7 through 10. The cams of the cam mechanism 6 are rotated by an electric motor II fed from a power supply unit, which is mains supply in this specific case. The electric motor II makes 60 r.p.m. thereby providing for an assigned pulse repetition rate of sixty pulses per minute of light radiation pulses, sound radiation pulses, VHF electromagnetic field radiation pulses and heat radiation pulses.

Light radiation source I is an incandescent lamp, blue in colour, which is electrically connected with a secondary winding 14 of a transformer 15 through a resistor 12 which serves to control the intensity of light radiation, contacts 7 of the vibrator and a switch 13, the transformer 15 being in turn electrically connected with the a.c. Mains.

Sound radiation source 2 is a small-size loudspeaker 16 which is electrically connected with another secondary winding 21 of the transformer 15 through a diode 17, variable resistor 18, constant resistor 19, contacts 8 of the vibrator and switch 20. The sound radiation source provides for an imitation of rain drop noise. Besides, it can be employed to imitate the noise of the surf.

The VHF electromagnetic field radiation sources 3 is a push-pull oscillator 22 with an inductance coil 23 and resistor 24. Electrodes 25 make the load of

said oscillator 22. The VHF electromagnetic field source is fitted with a switch 26 and controlled by the contacts 10 of the chopper.

The heat radiation source 4 is a hot spiral wire 27 which is surrounded by a screen 28 made of thermal insulator. The heat flow from the hot wire is removed by means of a blower 29 rotated by an electric motor 30. The heat radiation 4 is controlled by a switch 31 via the contacts 9 of the vibrator.

The present device is equipped with a common mains switch 32. The sources 1, 2 and 4 of light radiation, sound radiation and heat radiation, respectively, are mounted in the same casing (not shown in the drawing).

According to the second embodiment of the present apparatus the control unit 5 is an electronic timer made of cold cathode thyatron 33 with an electromagnetic relay 34, potentiometer 35 and resistor 36 in the plate circuit thereof. The electronic timer also includes a capacitor 37 and a resistor 38. The electronic timer has contacts 39 through 42. The potentiometer 35 controls the assigned pulses repetition rate of VHF electromagnetic field radiation, light radiation, sound radiation and heat radiation within the 10 to 100 pulses per second range, depending upon the patient's individual features.

The light radiation source I includes two incandescent lamps 43 and 44, green in colour, which are installed symmetrically in respect of the patient's sagittal sinus plane, at the eye level. This position provides for a better therapeutic effect because the patient is no longer subject to light beam convergence action whenever use is made of the Paurquignet effect. The light radiation intensity is controlled by the resistor 12. The light source I is equipped with a signal lamp 45.

The sound radiation source 2 is not substantially different from that in the first embodiment as described above. The difference between them consists in the presence of a capacitor 46. The sound radiation source 2 is equipped with a signal lamp 47.

The VHF electromagnetic field source is the same as that of the first embodiment, with a signal lamp 48 added.

The heat radiation source 4 is the same as that of the first embodiment but the blower is not shown in FIG.2.

The light radiation source I is electrically connected with a bridge-type d.c. power supply unit 50 through a resistor 12, switch 49 and contacts 39 of the electronic timer.

The sound radiation source 2 is electrically connected with the d.c. power supply unit 50 through a switch 51 and contacts 40 of the electronic timer. The VHF electromagnetic field source 3 is equipped with a switch 52.

The hot spiral wire 27 of the heat radiation source 4 is fed from the mains through a switch 53, while the electric motor 30 of the blower 29 is fed from the d.c. power supply unit 50 via a variable resistor 54, switch 55 and contacts 42 of the electronic timer.

In accordance with the second embodiment of the present apparatus it can be switched on and off by means of the mains switch 56.

The principle of operation of the apparatus according to the first embodiments as follows.

The patient is either put to bed or seated in a deep arm-chair. The

apparatus is moved to the head of said bed or chair. The electrodes 25 of the VHF electromagnetic field source are mounted at the level of carotid sinuses 3 to 4 centimetres away from the surface of the neck skin.

The casing, with the sources 1, 2 and 4 of light radiation, sound radiation and heat radiation mounted therein, is placed above the patient's head at a distance from 40 to 50 centimetres from his face. The apparatus is switched on by means of the mains switch 32. The switches 13, 20, 26 and 31 are used to turn on the sources 1 through 4 of light radiation, sound radiation, VHF electromagnetic field radiation and heat radiation.

Due to this procedure the patient's receptors are simultaneously acted upon by 60 p/min pulses of blue light radiation, sound radiation which is made similar to the rain drop noise, VHF electromagnetic field radiation as well as by heat radiation, all these having an effect on the retina, on the auditory sensory endings, carotid sensory ganglia and thermal receptors in the face skin, respectively.

A simultaneous transmission of the pulses and heat radiation is due to contacts 7 through 10 of the vibrator. The length of the pulse effect added to that of heat radiation as obtained by means of the cam mechanism 6 amounts to 15×10^{-2} sec.

The nerve pulses due to the action by stimuli, such as pulses of light radiation, sound radiation, VHF electromagnetic pulse radiation, as well as heat radiation, are transmitted to the thalamus opticus (sensory collector) via sensory nerve filament and sympathetic nerve trunk.

The simultaneous arrival of brain wave impulses at the thalamus opticus provides for an intensified rhythmic activity of its neural formations due to the interference effect. The rhythm of superimposed stimuli as then synchronized with the activities of the thalamus opticus neural formations (external synchronization). The rhythm as assigned by the apparatus is adopted by the subcortical neural formations being transmitted from the thalamus opticus to the subcortical fields of the visual, auditory and cutaneous analyzers. In the appropriate cortical centres of visual, auditory, and cutaneous analyzers. In the appropriate cortical centres of visual analysers the mono-tonous pulses cause focuses of inhibition to be formed which would intensify in strength and irradiate in space in the course of the same treatment session as well as due to the successive sessions. The primary focus inhibition, once and whenever it occurred, would spread all over the cortical field bringing about natural sleep. During the initial treatment sessions the extent of irradiation may be quite insignificant because of the patient's inhibition inertia due to this or that neuropsychic disorder in the patient under treatment. In the course of successive treatment session the trace responses as retained in above-said cortical centres would cause the stimuli to be accumulated so that the inhibition tends to be intensified.

Besides, in the course of successive treatment sessions new conditioned reflex associations are put into effect either because of the procedure itself or due to its specific time, or because of any other isolated factor, all contributing to the irradiation of inhibition phenomena throughout the cortical centres in the cerebral hemispheres.

The whole system of stimuli which is addressed to the patient's organism makes use of the first signal system channels, i.e., the receptor zones of the appropriate analyzers, so that the second signal system channels (mind, intellect, psyche) are avoided thereby providing for a curative effect, no matter the patient's psychic condition or his attitude towards the treatment procedure. Besides, the second signal system channels, once unblocked, affords some

opportunities for a simultaneous suggestive and rhythm therapy action thereby increasing the treatment effect.

The present invention makes use of a plurality of sources which are distant stimuli of different physical nature being such oscillatory phenomena as act upon the receptors to the adequate physiologic extents giving rise to no alterations which would exceed the physiologic constants limits involved. That is why the action exerted upon the patient's organism is mild and humane. Besides, provision is made both for a separate control of every factor and for a joint application of a required combination thereof so that the electrohypnotic treatment could be quite individual.

The second embodiment of this apparatus is based on the same principles of operation as the first embodiment thereof. The difference can be described as follows.

By means of a potentiometer 35 in conjunction with the electronic timer the pulse repetition rate of light pulses, sound pulses, VHF electromagnetic field pulses, as well as heat radiation, can be made to vary with due regard to the patient's individual characteristics.

The possibility of alterations both in pulse repetition rate and in the operation made of the apparatus under consideration provides for a controlled variation of biorhythms in the appropriate range as suggested by the principle of rhythm assimilation named after A.A.Ukhtomsky.

In the second embodiment of the apparatus, the light radiation pulses are sent by incandescent lamps 43 and 44, green in color, which are mounted at eye level and symmetrical with respect to sinus plane, so that the convergence effect is eliminated (the eyeball convergence would give birth to a stimulation focus thereby preventing the progress of somnolent inhibition).

The application of green light permits utilization of Paurquignet's effect to achieve an optimum influence on the visual analyzers.

The following procedure is recommended for the treatment of neuropsychic and somatic disorders using the apparatus of the present invention.

At a first treatment session the duration of the VHF exposure should be 10 minutes, at a second one - 15 minutes, at a third one - 20 minutes, at a fourth one - 25 minutes, and at all succeeding sessions it should be 30 minutes. The other radiation sources may be operated for 30 to 60 minutes. On the average, 30 minutes is required for one treatment-session. The patient may lie with his face upwards and eyes open, though it would be better for him to close his eyes to be ready to fall asleep. At the first treatment-session, the intensities of sound-, light-, and heat-radiation are selected to suit the particular patient.

Using the second embodiment of the apparatus, during the first minutes of the treatment session, the pulse repetition rate should be 20 to 40 pulses per minute (instead of 50 to 60 pulses per minute which is the normal case).

During the successive treatment-sessions the intensity of the exposure may remain the same as that used at the first session. The pulse repetition rate, however, may be gradually decreased later on from session to session.

The development of inhibition processes at a treatment-session is characterized by a very gradual progress. This manifests itself in a somewhat slower pulse, lower integument temperature and arterial pressure, relaxation

of skeletal muscles, onset of somnolence.

With each successive session the onset of all these phenomena takes less time while the phenomena themselves become more pronounced, bringing about a general improvement of the patient's state of health accompanied with a better sleep at night.

During the treatment session, the patient experiences gentle, tranquilizing sensations, which result in psychical relaxation and, gradual transference from vigilance to sleep. An active reproduction of inhibition of processes, if regularly repeated, each treatment-session makes a sort of training the patient for a better neuro-dynamic performance.

Clinical applications of the proposed apparatus are as follows. The apparatus of the present invention may be used for the treatment of patients in the 4 to 70 years bracket. One hundred patients, 4 to 18 years old, and 200 patients over 18 years old underwent the appropriate treatment. Among these patients were the following cases: neurasthenia, neurosis involving delusion, insomnia, asthenic, depressive and reactive states, postinfections and traumatic cerebraesthesia, diencephalic syndrome, vegeto-vascular dystonia, hypertension, bronchial asthma, stammering, rheumatic Sydenham's chorea.

The treatment was effected with respect to ambulatory clinic- and hospital patients.

No side effects, complications or harmful actions were observed.

Contraindications: infectious diseases, cancer, schizophrenia in its advanced stage (e.g., involving delirious phenomena), and hyperthyreosis.

The apparatus of the present invention for treating neuropsychic and somatic diseases is a physical therapy apparatus to be used for treating insomnia, hypertension, infantile stammering, and other diseases arising from nervous exhaustion and prostration, nervous break-down.

This apparatus is reliable, convenient, safe and simple to control and use, portable, and if necessary, may be placed at the bed-head when dealing with a bed case.

The use of the apparatus is not confined to any age-bracket. Even infants were effectively treated. The apparatus may be used in hospitals as well as in out-patient clinics.

The operation of the apparatus is quite economical: its power consumption is very small. The treatment sessions are effected by para medical personnel. Not to disturb the patient a remote control from an adjacent room may be exercised.

For the first time in medical practice, thanks to the apparatus of the present invention, use is made of a complex of four physical factors acting simultaneously on the respective receptors, said factors operating with predetermined rhythm pattern, and the sources of respective radiation being placed at a predetermined distance from the patient's receptors, so that it could bring about such a state of the nervous system which is characteristic of rest and sleep.

The synergetic action of the factors used in the apparatus result not in a simple sum of respective effects produced by each of said factors, but creates quite a new qualitative phenomenon, wherein interference - and resonance-processes, associated with the radiation from the pertinent sources, cause the inhibition process to be irradiated within the brain centres, which is a

distinguishing feature of the present type rhythm therapy.

Apparatus and method for remotely monitoring and altering brain waves

Abstract

Apparatus for and method of sensing brain waves at a position remote from a subject whereby electromagnetic signals of different frequencies are simultaneously transmitted to the brain of the subject in which the signals interfere with one another to yield a waveform which is modulated by the subject's brain waves. The interference waveform which is representative of the brain wave activity is re-transmitted by the brain to a receiver where it is demodulated and amplified. The demodulated waveform is then displayed for visual viewing and routed to a computer for further processing and analysis. The demodulated waveform also can be used to produce a compensating signal which is transmitted back to the brain to effect a desired change in electrical activity therein.

Claims

1. Brain wave monitoring apparatus comprising

means for producing a base frequency signal,

means for producing a first signal having a frequency related to that of the base frequency and at a predetermined phase related thereto,

means for transmitting both said base frequency and said first signals to the brain of the subject being monitored,

means for receiving a second signal transmitted by the brain of the subject being monitored in response to both said base frequency and said first signals,

mixing means for producing from said base frequency signal and said received second signal a response signal having a frequency related to that of the base frequency, and

means for interpreting said response signal.

2. Apparatus as in claim 1 where said receiving means comprises

means for isolating the transmitted signals from the received second signals.

3. Apparatus as in claim 2 further comprising a band pass filter with an input connected to said isolating means and an output connected to said mixing means.

4. Apparatus as in claim 1 further comprising means for amplifying said response signal.

5. Apparatus as in claim 4 further comprising means for demodulating said amplified response signal.

6. Apparatus as in claim 5 further comprising interpreting means connected to the output of said demodulator means.

7. Apparatus according to claim 1 further comprising

means for producing an electromagnetic wave control signal dependent on said response signal, and

means for transmitting said control signal to the brain of said subject.

8. Apparatus as in claim 7 wherein said transmitting means comprises means for directing the electromagnetic wave control signal to a predetermined part of the brain.

9. A process for monitoring brain wave activity of a subject comprising the steps of

transmitting at least two electromagnetic energy signals of different frequencies to the brain of the subject being monitored,

receiving an electromagnetic energy signal resulting from the mixing of said two signals in the brain modulated by the brain wave activity and retransmitted by the brain in response to said transmitted energy signals, and,

interpreting said received signal.

10. A process as in claim 9 further comprising the step of transmitting a further electromagnetic wave signal to the brain to vary the brain wave activity.

11. A process as in claim 10 wherein the step of transmitting the further signals comprises obtaining a standard signal,

comparing said received electromagnetic energy signals with said standard signal,

producing a compensating signal corresponding to the comparison between said received electromagnetic energy signals and the standard signal, and

transmitting the compensating signals to the brain of the subject being monitored.

Description

BACKGROUND OF THE INVENTION

Medical science has found brain waves to be a useful barometer of organic functions. Measurements of electrical activity in the brain have been instrumental in detecting physical and psychic disorder, measuring stress, determining sleep patterns, and monitoring body metabolism.

The present art for measurement of brain waves employs electroencephalographs including probes with sensors which are attached to the skull of the subject under study at points proximate to the regions of the brain being monitored. Electrical contact between the sensors and apparatus employed to process the detected brain waves is maintained by a plurality of wires extending from the sensors to the apparatus. The necessity for physically attaching the measuring apparatus to the subject imposes several limitations on the measurement process. The subject may experience discomfort, particularly if the measurements are to be made over extended periods of time. His bodily movements are restricted and he is generally confined to the immediate vicinity of the measuring apparatus. Furthermore, measurements cannot be made while the subject is conscious without his awareness. The comprehensiveness of the measurements is also limited since the finite number of probes employed to monitor local regions of brain wave activity do not permit observation of the total brain wave profile in a single test.

SUMMARY OF THE INVENTION

The present invention relates to apparatus and a method for monitoring brain waves wherein all components of the apparatus employed are remote from the test subject. More specifically, high frequency transmitters are operated to radiate electromagnetic energy of different

frequencies through antennas which are capable of scanning the entire brain of the test subject or any desired region thereof. The signals of different frequencies penetrate the skull of the subject and impinge upon the brain where they mix to yield an interference wave modulated by radiations from the brain's natural electrical activity. The modulated interference wave is re-transmitted by the brain and received by an antenna at a remote station where it is demodulated, and processed to provide a profile of the subject's brain waves. In addition to passively monitoring his brain waves, the subject's neurological processes may be affected by transmitting to his brain, through a transmitter, compensating signals. The latter signals can be derived from the received and processed brain waves.

OBJECTS OF THE INVENTION

It is therefore an object of the invention to remotely monitor electrical activity in the entire brain or selected local regions thereof with a single measurement.

Another object is the monitoring of a subject's brain wave activity through transmission and reception of electromagnetic waves.

Still another object is to monitor brain wave activity from a position remote from the subject.

A further object is to provide a method and apparatus for affecting brain wave activity by transmitting electromagnetic signals thereto.

DESCRIPTION OF THE DRAWINGS

Other and further objects of the invention will appear from the following description and the accompanying drawings, which form part of the instant specification and which are to be read in conjunction therewith, and in which like reference numerals are used to indicate like parts in the various views;

FIG. 1 is a block diagram showing the interconnection of the components of the apparatus of the invention;

FIG. 2 is a block diagram showing signal flow in one embodiment of the apparatus.

DESCRIPTION OF THE PREFERRED EMBODIMENT

Referring to the drawings, specifically FIG. 1, a high frequency transmitter 2 produces and supplies two electromagnetic wave signals through suitable coupling means 14 to an antenna 4. The signals are directed by the antenna 4 to the skull 6 of the subject 8 being examined. The two signals from the antenna 4, which travel independently, penetrate the skull 6 and impinge upon the tissue of the brain 10.

Within the tissue of the brain 10, the signals combine, much in the manner of a conventional mixing process technique, with each section of the brain having a different modulating action. The resulting waveform of the two signals has its greatest amplitude when the two signals are in phase and thus reinforcing one another. When the signals are exactly 180.degree. out of phase the combination produces a resultant waveform of minimum amplitude. If the amplitudes of the two signals transmitted to the subject are maintained at identical levels, the resultant interference waveform, absent influences of external radiation, may be expected to

assume zero intensity when maximum interference occurs, the number of such points being equal to the difference in frequencies of the incident signals. However, interference by radiation from electrical activity within the brain 10 causes the waveform resulting from interference of the two transmitted signals to vary from the expected result, i.e., the interference waveform is modulated by the brain waves. It is believed that this is due to the fact that brain waves produce electric charges each of which has a component of electromagnetic radiation associated with it. The electromagnetic radiation produced by the brain waves in turn reacts with the signals transmitted to the brain from the external source.

The modulated interference waveform is re-transmitted from the brain 10, back through the skull 6. A quantity of energy is re-transmitted sufficient to enable it to be picked up by the antenna 4. This can be controlled, within limits, by adjusting the absolute and relative intensities of the signals, originally transmitted to the brain. Of course, the level of the transmitted energy should be kept below that which may be harmful to the subject.

The antenna passes the received signal to a receiver 12 through the antenna electronics 14. Within the receiver the wave is amplified by conventional RF amplifiers 16 and demodulated by conventional detector and modulator electronics 18. The demodulated wave, representing the intra-brain electrical activity, is amplified by amplifiers 20 and the resulting information in electronic form is stored in buffer circuitry 22. From the buffers 22 the information is fed to a suitable visual display 24, for example one employing a cathode ray tube, light emitting diodes, liquid crystals, or a mechanical plotter. The information may also be channeled to a computer 26 for further processing and analysis with the output of the computer displayed by heretofore mentioned suitable means.

In addition to channeling its information to display devices 24, the computer 26 can also produce signals to control an auxiliary transmitter 28. Transmitter 28 is used to produce a compensating signal which is transmitted to the brain 10 of the subject 8 by the antenna 4. In a preferred embodiment of the invention, the compensating signal is derived as a function of the received brain wave signals, although it can be produced separately. The compensating signals affect electrical activity within the brain 10.

Various configurations of suitable apparatus and electronic circuitry may be utilized to form the system generally shown in FIG. 1 and one of the many possible configurations is illustrated in FIG. 2. In the example shown therein, two signals, one of 100 MHz and the other of 210 MHz are transmitted simultaneously and combine in the brain 10 to form a resultant wave of frequency equal to the difference in frequencies of the incident signals, i.e., 110 MHz. The sum of the two incident frequencies is also available, but is discarded in subsequent filtering. The 100 MHz signal is obtained at the output 37 of an RF power divider 34 into which a 100 MHz signal generated by an oscillator 30 is injected. The oscillator 30 is of a conventional type employing either crystals for fixed frequency circuits or a tunable circuit set to oscillate at 100 MHz. It can be a pulse generator, square wave generator or sinusoidal wave generator. The RF power divider can be any conventional VHF, UHF or SHF frequency range device constructed to provide, at each of three outputs, a signal identical in frequency to that applied to its input.

The 210 MHz signal is derived from the same 100 MHz oscillator 30 and RF power divider 34 as the 100 MHz signal, operating in concert with a frequency doubler 36 and 10 MHz oscillator 32. The frequency doubler can be any conventional device which provides at its output a signal with frequency equal to twice the frequency of a signal applied at its input.

The 10 MHz oscillator can also be of conventional type similar to the 100 MHz oscillator herebefore described. A 100 MHz signal from the output 39 of the RF power divider 34 is fed through the frequency doubler 36 and the resulting 200 MHz signal is applied to a mixer 40. The mixer 40 can be any conventional VHF, UHF or SHF frequency range device capable of accepting two input signals of differing frequencies and providing two output signals with frequencies equal to the sum and difference in frequencies respectively of the input signals. A 10 MHz signal from the oscillator 32 is also applied to the mixer 40. The 200 MHz signal from the doubler 36 and the 10 MHz signal from the oscillator 32 combine in the mixer 40 to form a signal with a frequency of 210 MHz equal to the sum of the frequencies of the 200 MHz and 10 MHz signals.

The 210 MHz signal is one of the signals transmitted to the brain 10 of the subject being monitored. In the arrangement shown in FIG. 2, an antenna 41 is used to transmit the 210 MHz signal and another antenna 43 is used to transmit the 100 MHz signal. Of course, a single antenna capable of operating at 100 MHz and 210 MHz frequencies may be used to transmit both signals. The scan angle, direction and rate may be controlled mechanically, e.g., by a reversing motor, or electronically, e.g., by energizing elements in the antenna in proper synchronization. Thus, the antenna(s) can be of either fixed or rotary conventional types.

A second 100 MHz signal derived from output terminal 37 of the three-way power divider 34 is applied to a circulator 38 and emerges therefrom with a desired phase shift. The circulator 38 can be of any conventional type wherein a signal applied to an input port emerges from an output port with an appropriate phase shift. The 100 MHz signal is then transmitted to the brain 10 of the subject being monitored via the antenna 43 as the second component of the dual signal transmission. The antenna 43 can be of conventional type similar to antenna 41 herebefore described. As previously noted, these two antennas may be combined in a single unit.

The transmitted 100 and 210 MHz signal components mix within the tissue in the brain 10 and interfere with one another yielding a signal of a frequency of 110 MHz, the difference in frequencies of the two incident components, modulated by electromagnetic emissions from the brain, i.e., the brain wave activity being monitored. This modulated 110 MHz signal is radiated into space.

The 110 MHz signal, modulated by brain wave activity, is picked up by an antenna 45 and channeled back through the circulator 38 where it undergoes an appropriate phase shift. The circulator 38 isolates the transmitted signals from the received signal. Any suitable diplexer or duplexer can be used. The antenna 45 can be of conventional type similar to antennas 41 and 43. It can be combined with them in a single unit or it can be separate. The received modulated 110 MHz signal is then applied to a band pass filter 42, to eliminate undesirable harmonics and extraneous noise, and the filtered 110 MHz signal is inserted into a mixer 44 into which has also been introduced a component of the 100 MHz signal from the source 30 distributed by the RF power divider 34. The filter 42 can be any conventional band pass filter. The mixer 44 may also be of conventional type similar to the mixer 40 herebefore described.

The 100 MHz and 110 MHz signals combine in the mixer 44 to yield a signal of frequency equal to the difference in frequencies of the two component signals, i.e., 10 MHz still modulated by the monitored brain wave activity. The 10 MHz signal is amplified in an IF amplifier 46 and channeled to a demodulator 48. The IF amplifier and demodulator 48 can both be of conventional types. The type of demodulator selected will depend on the

characteristics of the signals transmitted to and received from the brain, and the information desired to be obtained. The brain may modulate the amplitude, frequency and/or phase of the interference waveform. Certain of these parameters will be more sensitive to corresponding brain wave characteristics than others. Selection of amplitude, frequency or phase demodulation means is governed by the choice of brain wave characteristic to be monitored. If desired, several different types of demodulators can be provided and used alternately or at the same time.

The demodulated signal which is representative of the monitored brain wave activity is passed through audio amplifiers 50 a, b, c which may be of conventional type where it is amplified and routed to displays 58 a, b, c and a computer 60. The displays 58 a, b, c present the raw brain wave signals from the amplifiers 50 a, b, c. The computer 60 processes the amplified brain wave signals to derive information suitable for viewing, e.g., by suppressing, compressing, or expanding elements thereof, or combining them with other information-bearing signals and presents that information on a display 62. The displays can be conventional ones such as the types herebefore mentioned employing electronic visual displays or mechanical plotters 58b. The computer can also be of conventional type, either analog or digital, or a hybrid.

A profile of the entire brain wave emission pattern may be monitored or select areas of the brain may be observed in a single measurement simply by altering the scan angle and direction of the antennas. There is no physical contact between the subject and the monitoring apparatus. The computer 60 also can determine a compensating waveform for transmission to the brain 10 to alter the natural brain waves in a desired fashion. The closed loop compensating system permits instantaneous and continuous modification of the brain wave response pattern.

In performing the brain wave pattern modification function, the computer 60 can be furnished with an external standard signal from a source 70 representative of brain wave activity associated with a desired neurological response. The region of the brain responsible for the response is monitored and the received signal, indicative of the brain wave activity therein, is compared with the standard signal. The computer 60 is programmed to determine a compensating signal, responsive to the difference between the standard signal and received signal. The compensating signal, when transmitted to the monitored region of the brain, modulates the natural brain wave activity therein toward a reproduction of the standard signal, thereby changing the neurological response of the subject.

The computer 60 controls an auxiliary transmitter 64 which transmits the compensating signal to the brain 10 of the subject via an antenna 66. The transmitter 64 is of the high frequency type commonly used in radar applications. The antenna 66 can be similar to antennas 41, 43 and 45 and can be combined with them. Through these means, brain wave activity may be altered and deviations from a desired norm may be compensated. Brain waves may be monitored and control signals transmitted to the brain from a remote station.

It is to be noted that the configuration described is one of many possibilities which may be formulated without departing from the spirit of my invention. The transmitters can be monostatic or bistatic. They also can be single, dual, or multiple frequency devices. The transmitted signal can be continuous wave, pulse, FM, or any combination of these as well as other transmission forms. Typical operating frequencies for the transmitters range from 1

MHz to 40 GHz but may be altered to suit the particular function being monitored and the characteristics of the specific subject.

The individual components of the system for monitoring and controlling brain wave activity may be of conventional type commonly employed in radar systems.

Various subassemblies of the brain wave monitoring and control apparatus may be added, substituted or combined. Thus, separate antennas or a single multi-mode antenna may be used for transmission and reception. Additional displays and computers may be added to present and analyze select components of the monitored brain waves.

Modulation of the interference signal retransmitted by the brain may be of amplitude, frequency and/or phase. Appropriate demodulators may be used to decipher the subject's brain activity and select components of his brain waves may be analyzed by computer to determine his mental state and monitor his thought processes.

As will be appreciated by those familiar with the art, apparatus and method of the subject invention has numerous uses. Persons in critical positions such as drivers and pilots can be continuously monitored with provision for activation of an emergency device in the event of human failure. Seizures, sleepiness and dreaming can be detected. Bodily functions such as pulse rate, heartbeat regularity and others also can be monitored and occurrences of hallucinations can be detected. The system also permits medical diagnoses of patients, inaccessible to physicians, from remote stations.

Abstract

A method and apparatus for simulation of hearing in mammals by introduction of a plurality of microwaves into the region of the auditory cortex is shown and described. A microphone is used to transform sound signals into electrical signals which are in turn analyzed and processed to provide controls for generating a plurality of microwave signals at different frequencies. The multifrequency microwaves are then applied to the brain in the region of the auditory cortex. By this method sounds are perceived by the mammal which are representative of the original sound received by the microphone.

Hearing system

Abstract

Sound is induced in the head of a person by radiating the head with microwaves in the range of 100 megahertz to 10,000 megahertz that are modulated with a particular waveform. The waveform consists of frequency modulated bursts. Each burst is made up of ten to twenty uniformly spaced pulses grouped tightly together. The burst width is between 500 nanoseconds and 100 microseconds. The pulse width is in the range of 10 nanoseconds to 1 microsecond. The bursts are frequency modulated by the audio input to create the sensation of hearing in the person whose head is irradiated.

Method and system for altering consciousness

Abstract

A system for altering the states of human consciousness involves the simultaneous application of multiple stimuli, preferable sounds, having differing frequencies and wave forms. The relationship between the frequencies of the several stimuli is exhibited by the equation

$$g=s^{(n/4)} \cdot \text{multidot} \cdot f$$

where:

f=frequency of one stimulus;

g=frequency of the other stimuli of stimulus; and

n=a positive or negative integer which is different for each other stimulus.

Silent subliminal presentation system

Abstract

A silent communications system in which nonaural carriers, in the very low or very high audio frequency range or in the adjacent ultrasonic frequency spectrum, are amplitude or frequency modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use of loudspeakers, earphones or piezoelectric transducers. The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic or optical media for delayed or repeated transmission to the listener.

Claims

1. A silent communications system, comprising:

(a) amplitude modulated carrier means for generating signals located in non-aural portions of the audio and in the lower portion of the ultrasonic frequency spectrum said signals modulated with information to be perceived by a listener's brain and,

(b) acoustic and ultrasonic transducer means for propagating said signals, for inducement into the brain, of the listener, and,

(c) recording means for storing said modulated signals on mechanical, magnetic and optical media for delayed or repeated transmissions to the listener.

2. A silent communications system, comprising:

(a) frequency modulated carrier means for generating signals located in non-aural portions of the audio and in the lower portion of the ultrasonic frequency spectrum, said signals modulated with information to be perceived by a listener's brain, and;

(b) acoustic and ultrasonic transducer means for propagating said signals, for inducement into the brain of the listener, and;

(c) recording means for storing said modulated signals on mechanical, magnetic and optical media for delayed or repeated transmissions to the listener.

3. A silent communications system, comprising:

(a) a combination of amplitude and frequency modulated carrier means for generating signals located in non-aural portions of the audio and in the lower portion of the ultrasonic frequency spectrum, said signals modulated with information to be perceived by a listener's brain, and

(b) acoustic and ultrasonic transducer means for propagating said signals, for inducement into the brain of the listener;

(c) recording means for storing said modulated signals on mechanical, magnetic and optical media for delayed or repeated transmissions to the listener.

Description

BACKGROUND--FIELD OF THE INVENTION

This invention relates in general to electronic audio signal processing and, in particular, to subliminal presentation techniques.

BACKGROUND--DESCRIPTION OF PRIOR ART

Subliminal learning enjoys wide use today and subliminal tapes are being manufactured by a number of companies in the United States alone. Several decades of scientific study indicate

that subliminal messages can influence a human's attitudes and behavior. Subliminal, in these discussions, can be defined as "below the threshold of audibility to the conscious mind." To be effective however, the subliminally transmitted information (called affirmations by those in the profession) must be presented to the listener's ear in such a fashion that they can be perceived and "decoded" by the listener's subconscious mind. We are referring to audio information in this discussion, however, information could be inputted into the subject's subconscious mind through any of the body's sensors, such as touch, smell, sight or hearing. As an example, early development work in the subliminal field utilized motion pictures and slide projections as the medium. Early research into visual and auditory subliminal stimulation effects is exemplified by U.S. Pat. Nos. 3,060,795 of Corrigan, et al. and 3,278,676 of Becker. U.S. Pat. No. 4,395,600 of Lundy and Tyler is representative of later developments in today's subliminal message techniques.

The majority of the audio subliminal tapes available today are prepared using one basic technique. That is, the verbal affirmations are mixed with, and recorded at a lower level than, a "foreground" of music or sounds of ocean surf or a bubbling mountain brook or other similar "masking" sounds. The affirmations are generally recorded 5 decibels (db) or so below the "foreground" programming and regenerative automatic gain control is usually applied to permit the affirmations to change their recorded amplitude in direct proportion to the short term averaged amplitude of the continually varying "foreground" material. In other words, the volume of the affirmations will follow or track the volume changes of the "foreground" programming, but at a lower volume level. Circuit provisions are also usually included to "gate" the affirmations off when the music amplitude is low or zero. This insures that the affirmations cannot be heard during quiet program periods. Thus, today's subliminal affirmations can be characterized as being "masked" by music or other sounds, of constantly changing amplitude and of being reduced or cut off entirely during periods of low or quiet "foreground" programming.

One of the principal, and most widely objected to, deficiencies in available subliminal tape presentation techniques is that the presence of the "foreground" material is intrusive to both the listener and to anyone else in the immediate area. No matter what "foreground" material is chosen, the fact remains that this material can be heard by anyone within its range and presents a definite distraction to other activities such as conversation, thought, desire to listen to other programming such as radio or television, need to concentrate, etc. Additionally, and because the tapes are used repeatedly by the same listener, any "foreground" music or material eventually becomes monotonously tiring to that listener.

It is the purpose of the following described invention to eliminate or greatly reduce all of the above deficiencies. Although its application to the magnetic tape medium is described in the following discussion, the technique is equally applicable to most other desired transmission mediums, such as Compact Disc, videocassettes, digital tape recorders, Public Address (PA) systems, background music installations, computer software programs, random access memory (RAM), read only memory (ROM), "live", real time applications and other mediums now in existence or to be developed in the future.

Implemented on tape cassettes, for example, the subliminal presentation described here is inaudible i.e., high audio or ultrasonic frequencies, the affirmations are presented at a constant, high amplitude level, and they occupy their own "clear channel", non-masked frequency allocations. If desired, the previously described "foreground" music or other material can be added to the tape through use of an audio mixer. The "silent" recordings are inaudible to the user or by others present and are therefore very effective for use during

periods of sleep or when in the presence of others. Additionally, the basic requirements of subliminal stimulation are met. That is, the affirmations are efficiently transmitted to the ear and, while undetected by the conscious mind, are perceived by and efficiently decoded by the subconscious mind.

OBJECTS OF THE INVENTION

Accordingly, several objects and advantages of my invention are:

(a) to provide a technique for producing a subliminal presentation which is inaudible to the listeners(s), yet is perceived and demodulated (decoded) by the ear for use by the subconscious mind.

(b) to provide a technique for transmitting inaudible subliminal information to the listener(s) at a constant, high level of signal strength and on a clear band of frequencies.

(c) to provide a technique for producing inaudible subliminal presentations to which music or other "foreground" programming may be added, if desired.

Still further objects and advantages will become apparent from a consideration of the ensuing description and drawings.

BRIEF DESCRIPTION OF THE DRAWINGS

In the drawings, the first digit of each component number also refers to the figure number where that component can be located.

FIG. 1 represents the block diagram of a suitable system which will generate a frequency modulated (FM) signal at 14,500 Hz.

FIG. 2 represents an approximation of the frequency response curve of the human ear and the signal decoding process.

FIG. 3 represents the block diagram of a suitable system which will generate a single sideband, suppressed carrier, amplitude modulated (AM) signal at 14,500 Hz.

REFERENCE NUMERALS IN DRAWINGS

36 mixer
37 heterodyne oscillator (469.5 KHz)
38 bandpass filter
39 output signal

DETAILED DESCRIPTION OF A PREFERRED EMBODIMENT

Please refer now to FIG. 1 and FIG. 2, which are drawings of a preferred implementation of the invention.

The principle of operation of the silent subliminal presentation system is as follows:

An audio signal in the upper frequency region of the audio spectrum (for example, 14,500 Hz) is modulated with the desired information. The type of modulation may be any type suitable for subliminal applications; frequency modulation (FM), phase modulation (PM), upper single sideband with suppressed carrier, amplitude modulation (AM), tone modulation, etc.

For broadest application, the high audio frequency selected as the carrier frequency must meet two basic criteria:

(1) be high enough in the audio spectrum that its presence to the human ear is essentially unnoticed or undetectable (without the listener being informed that the signal is actually present) and,

(2) be low enough in the audio spectrum that it (and its modulation content) can produce a useful output power from home entertainment type cassette or reel-to-reel magnetic recorders.

This would also include, of course, small portable and automobile tape decks.

Alternatively, the output of the system can be fed directly into an audio amplifier and its speaker/earphone system, Public Address system, etc.

FIG. 1 provides the block diagram of an example of a system capable of generating the desired silent frequency modulated carrier.

The modulation information is inputted into the microphone 11. Other suitable input devices may be substituted for microphone 11, such as a tape recorder or a radio. The microphone 11 is connected to the preamplifier 12 and should have provisions for adjusting its gain in order that the optimum modulation index can be set in the frequency modulator 13. The frequency modulator 13 modulates the frequency of oscillator 14 which has been adjusted for an output of 14,500 Hz as described above. The output of oscillator 14 is fed through a suitable bandpass filter 15 into the tape recorder or directly into a suitable amplifier/speaker system. It is the purpose of the bandpass filter to remove or attenuate audible products of the modulation process in order to maintain as audibly silent an output as practical.

On the receiving end, FIG. 2 represents an approximate and idealized frequency response curve of the human ear. The frequency modulated carrier (centered at 14,500 Hz), as generated above and played through a tape recorder or amplifier/speaker system, is shown on FIG. 2 as speaker output 26, impinging upon the upper slope of the ear's response curve at point 25. The frequency modulated excursions of the speaker output 26 swing between points 23 and 24 on the ear's upper response curve. Because the response curve between points 23 and 25 is relatively linear, this action results in a relatively linear demodulation of the original modulation intelligence, which is passed on subliminally to the inner ear. The amplitude of the demodulated output is not high enough to be detected by the conscious mind but is sufficient in amplitude to be detected by the subconscious mind. In the field of communications engineering design, the above demodulation process is known as slope detection and was used in early FM receiver design. In those receivers, the response curve was formed by the action of a tuned (inductive/capacitance) circuit. In our case, the response curve is formed by the natural response curve of the human ear. The same slope detection technique can be performed at the low frequency end of the human ear response curve. This region is indicated on FIG. 2 as between points 21 and 22. This region, however, has a much smaller available bandwidth and is therefore more restricted as to the amount of information that can be transmitted in an inaudible manner.

In practice, the listener adjusts the volume control of the tape recorder or amplifier to a level just below that at which the listener hears an audible sound or noise from the speaker of the tape recorder. If the recording process is properly done, a spectrum analyzer or a calibrated sound level meter will reveal a strong signal emanating from the tape recorder speaker. A calibrated sound level meter, at a distance of 1 meter (with C weighting and referenced to the standard of 0.0002 micro bar) will typically indicate a silent power output of from 60 to 70 decibels. This is equivalent to the audio power of a loud conversation, yet, in the described system, is inaudible or unnoticed by the listener.

FIG. 3 illustrates a system which generates a suitable amplitude modulated (AM) signal, instead of the frequency modulated (FM) system described above. The output is a modulated, single sideband (SSB), suppressed carrier (AM) signal at 14,500 Hz.

The block diagram represents a common scheme for generating an SSB signal and will be briefly described.

The desired subliminal information is spoken into microphone 31. This signal is amplified by speech amplifier 32 and injected into one port of balanced modulator 33. A continuous wave signal of 455 KHz is generated by carrier oscillator 34 and is injected into the second port of balanced modulator 33. The output of balanced modulator 33 is a double sideband, suppressed carrier signal at 455 KHz. This signal is fed through filter 35, causing one of the two sidebands to be removed. This signal is fed into one port of mixer 36. A continuous wave signal at a frequency of 469.5 KHz from heterodyne oscillator 37 is fed into the other port of mixer 36, resulting in an output of the original subliminal audio information but translated 14,500 Hz higher in frequency. The bandpass filter 38 attenuates signals and noise outside of the frequencies of interest. The amplitude modulated audio output signal is shown as output 39.

Thus, as stated earlier, my invention provides a new system for subliminal presentations which is:

- (a) silent,
- (b) outputs a constant, high level modulated signal and,
- (c) occupies a band of clear channel frequencies.

The foregoing description of the preferred embodiment of the invention has been presented for the purposes of illustration and description. It is not intended to be exhaustive or to limit the invention to the precise form disclosed. Many modifications and variations are possible in light of the above discussions. It is intended that the scope of the invention be limited not only by this detailed description, but rather by the claims appended hereto.

Method of and apparatus for inducing desired states of consciousness

Abstract

Improved methods and apparatus for entraining human brain patterns, employing frequency following response (FFR) techniques, facilitate attainment of desired states of consciousness. In one embodiment, a plurality of electroencephalogram (EEG) waveforms, characteristic of a given state of consciousness, are combined to yield an EEG waveform to which subjects may be susceptible more readily. In another embodiment, sleep patterns are reproduced based on observed brain patterns during portions of a sleep cycle; entrainment principles are applied to induce sleep. In yet another embodiment, entrainment principles are applied in the work environment, to induce and maintain a desired level of consciousness. A portable device also is described.

Claims

1. A method of inducing desired states of consciousness in human beings, comprising the following steps:

combining a plurality of replicated electroencephalogram (EEG) waveforms, each indicative of a particular desired state of consciousness, to produce a combined EEG waveform;

superimposing said combined EEG waveform on two separate sets of carrier waves using stereo sound;

creating differential beat frequencies between said sets of carrier waves based on said superimposing step; and

providing the resulting signals in audio form to respective ears of a human being, to induce said state of consciousness.

2. A method as claimed in claim 1, wherein said combining step comprises mathematically averaging said EEG waveforms to produce said combined EEG waveform.

3. A method as claimed in claim 1, further comprising the step of repeating said combining, superimposing, and creating steps for each of a set of desired states of consciousness, and producing a cycle of sets of resulting audio signals, said providing step comprising providing said cycle of sets of resulting audio signals to respective ears of a human being, to induce each of said desired states of consciousness in cyclic fashion.

4. A method as claimed in claim 3, wherein said cycle corresponds to human sleep patterns, said desired states of consciousness comprising wakefulness, alpha sleep, delta sleep, and theta sleep.

5. A method as claimed in claim 3, wherein said cycle corresponds to human sleep patterns, said desired states of consciousness comprising alpha sleep, delta sleep, and theta sleep, said cycle being approximately 90 minutes long.

6. A method as claimed in claim 5, said method further comprising the steps of providing a plurality of repetitions of said cycle, followed by providing a set of audio signals containing a binaural beat at a frequency indicative of beta consciousness.

7. A method as claimed in claim 1, wherein said creating step includes the step of combining pink sound with said sets of carrier waves by shifting of said pink sound with respect to said combined EEG waveform from one stereo audio channel to another, with cyclic changes in amplitude, frequency, and rate of panning.

8. Apparatus for facilitating sleep in a human subject, comprising:

means for setting a wake-up time to select a desired sleep duration;

means for generating a first sequence of signals in a cycle corresponding to a human sleep pattern, frequencies of said signals in said first sequence being substantially equal to frequencies of human brain patterns at different levels of sleep;

means for repeating said cycle a plurality of times based on the selected wake-up time; and

means for waking up said human subject at the selected wake-up time.

9. Apparatus as claimed in claim 8, wherein said means for waking up said human subject comprises means for generating a second sequence of signals a predetermined time before the selected wake-up time, frequencies of said signals in said second sequence being substantially equal to frequencies of human brain patterns at or near an awakened state.

10. Apparatus as claimed in claim 9, wherein said predetermined time is approximately five minutes.

11. Apparatus as claimed in claim 8, wherein said first sequence of frequencies comprises, in order, alpha frequencies, theta frequencies, delta frequencies, and theta frequencies.

12. Apparatus as claimed in claim 8, further comprising means for generating phased pink sound in conjunction with said first sequence of frequencies.

13. Apparatus as claimed in claim 8, wherein said first sequence of signals comprises a plurality of sets of combined brainwaves, each of said sets corresponding to a different level of sleep, said combined brainwaves within a given set being constituted by combined electroencephalogram (EEG) waveforms of a plurality of individuals, taken when said individuals had attained a different respective level of sleep.

14. Apparatus as claimed in claim 13, wherein said EEG waveforms are mathematically averaged.

15. Apparatus for awakening an individual using brain pattern entrainment, said apparatus comprising:

means for selecting a wake-up time;

means for keeping time; and

means, operative a predetermined period before said wake-up time as determined by said means for keeping time, for producing a first sequence of signals having frequencies in the theta-alpha range, followed by a second sequence of signals having frequencies in the beta-gamma range.

16. Apparatus as claimed in claim 15, wherein said means for producing said first and second sequences of signals comprises means for producing said second sequence of signals at a higher amplitude than said first sequence of signals.

17. Apparatus as claimed in claim 15, wherein said first sequence of signals comprises a plurality of sets of combined brainwaves, each of said sets corresponding to a different level of consciousness, said combined brainwaves within a given set being constituted by combined

electroencephalogram (EEG) waveforms of a plurality of individuals, taken when said individuals had attained a different respective level of consciousness.

18. Apparatus as claimed in claim 16, wherein said EEG waveforms are mathematically averaged.

19. Apparatus for inducing a desired state of consciousness, said apparatus comprising:

means for detecting presence of a predetermined level of ambient noise;

means, responsive to said detecting means, for generating signals having frequencies substantially equal to frequencies of human brain patterns when said ambient noise is present; and

means for selecting said signals in accordance with desired human activity in said areas.

20. Apparatus as claimed in claim 19, further comprising timer means, connected to said generating means, for generating said signals for a predetermined time set by said timer means.

21. Apparatus as claimed in claim 19, wherein said timer means is connected to said selecting means to enable selection of different ones of said signals in accordance with desired human activity at different times of day.

22. Apparatus as claimed in claim 19, wherein said generating means comprises means, responsive to said detecting means, for increasing an amplitude of said signals in response to an increase in amplitude of said ambient noise, and for decreasing an amplitude of said signals in response to a decrease in amplitude of said ambient noise.

23. Apparatus as claimed in claim 22, wherein said generating means further comprises means for discontinuing said signals when said ambient noise falls below said predetermined level.

24. Apparatus as claimed in claim 19, wherein said generating means comprises a digital signal processor and a read-only memory (ROM) connected to said digital signal processor, said ROM storing a plurality of sets of signals, each of said sets of signals having frequencies substantially equal to human brain patterns at a desired state of consciousness.

25. Apparatus as claimed in claim 24, wherein each of said sets of signals comprises a plurality of sets of combined brainwaves, each of said sets corresponding to a different level of consciousness, said combined brainwaves within a given set being constituted by combined electroencephalogram (EEG) waveforms of a plurality of individuals, taken when said individuals had attained a different respective state of consciousness.

26. Apparatus as claimed in claim 25, wherein said EEG waveforms are mathematically averaged.

27. Apparatus for awakening an individual using brain pattern entrainment, said apparatus comprising:

means for selecting a wake-up time; and

means, operative a predetermined period before said wake-up time, for producing a first sequence of signals having frequencies in a first predetermined range corresponding to a first state of consciousness, followed by a second sequence of signals having frequencies in a second predetermined range corresponding to a second state of consciousness.

28. Apparatus as claimed in claim 27, wherein said first predetermined range is the theta-alpha range, and said second predetermined range is the beta-gamma range.

Description

CROSS-REFERENCE TO RELATED APPLICATION

The present application is related to copending application No. 07/514,460, filed Apr. 16, 1990 now U.S. Pat. No. 5,213,562.

BACKGROUND OF THE INVENTION

1. Field of the Invention

The present invention relates to an improved method of inducing desired states of consciousness, including different levels of sleep, in human beings, using a technique known as frequency following response (FFR), developed by the present inventor. The invention also relates to apparatus for performing the method. A number of areas of applicability of the invention are described, in accordance with different preferred embodiments.

2. Description of the Background Art

In a prior patent, U.S. Pat. No. 3,884,218, the present inventor described a method of inducing different levels of sleep, using the FFR technique, in which brain waves could be made to follow superimposed frequency patterns. These frequency patterns were provided as sine waves, at frequencies known to correspond to different levels of sleep, such as alpha (exhibiting brain wave activity in the range of 8-12 Hz), theta (6-8 Hz), and delta (1-4 Hz). EEGs exhibiting frequencies between 12 and 30 Hz (known as a beta range) are characteristic of awake individuals, though beta activity at even higher frequencies has been observed in different types of mental activities. Gamma activity has been characterized as all activity above 30 Hz; until recently, it has not been possible to monitor brain activity in the gamma range. (It should be noted that the boundaries between gamma and beta, beta and alpha, alpha and theta, and theta and delta are somewhat arbitrary; the foregoing delineations are intended to be exemplary and not limiting.)

The present inventor discovered that the human brain could be entrained to output brain wave patterns these different frequencies. While frequencies corresponding to these different levels of sleep are not audible, by superimposing those frequencies on some type of sound, such as music, it was determined to be possible to induce desired levels of sleep. The individual listening to the music would "hear" the low frequencies, with the desired effect on brain activity.

An improvement on the inventor's patented technique, to induce varied states of alertness, is the subject of copending Application No. 07/514,460, the contents of which are hereby incorporated herein by reference. This copending application describes a general FFR

technique using what is known as a binaural beat phenomenon, details of which are provided in that application. Briefly, a binaural beat is produced by sending signals at different frequencies (some Hz apart, depending on the desired effect) to an individual's left and right ears. The difference between the frequencies defines the frequency of the binaural beat. Using this technique, the desired frequency can be introduced into the individual's brain activity, inducing the desired state of consciousness.

The induction of FFR in the human brain in this manner results in the synchronization of activity in the hemispheres of the brain. FIG. 1A shows brain activity without FFR, and FIG. 1B shows brain activity with FFR. The inventor has coined the term HEMI-SYNC (for Hemisphere Synchronization) to describe this phenomenon.

The copending application describes a technique wherein, in one form, sine waves having a frequency corresponding to a consciousness state are superimposed on two different carrier frequencies to form two different signals to set up the binaural beat. In another form, an actual brain pattern, based on an electroencephalogram (EEG) waveform indicative of that consciousness state is superimposed on the different carrier frequencies to form two different signals. In use, each signal is provided to one ear of a subject. The difference in carrier frequencies sets up the binaural beat.

Another, more limited application of the binaural beat phenomenon is found in U.S. Pat. No. 4,834,701. In contrast to the narrow range of frequencies discussed in that patent, in the above-mentioned copending application, the applicability of the binaural beat phenomenon is investigated over a much wider range of frequencies, spanning the spectrum of brain activity.

Through additional investigation involving mapping of brain activities of different individuals, the present inventor has discovered some significance to the fact that, while brain waves at certain frequencies are characteristic of different levels of sleep, brain patterns of different individuals still vary. The inventor has investigated possible enhancements to the FFR effect by making it more generic among individuals, yet still more specific to brain activity than a simple sine wave, or an EEG of a particular individual.

Another area of investigation being performed by the present inventor relates to human sleep patterns. Based on current knowledge of human sleep patterns, it appears that sleep is composed of a series of 90-minute cycles. As stated earlier, the beta stage is one of alertness. The first sleep state is alpha, or mental and physical relaxation. The second is theta, or light sleep. Next is delta, or deep sleep. The inventor has investigated the possibility of providing FFR waveforms in cyclic patterns, replicating these human sleep patterns, to facilitate sleep. Another possibility is to take advantage of the cyclic nature of sleep patterns to provide a more gentle wake-up for a sleeper.

In considering the need for alertness during activities such as work, the inventor also considered how it might be possible to introduce FFR waveforms into ambient noise in one's surroundings to facilitate maintenance of desired states of consciousness. Particularly in environments such as factories, or in offices where office equipment puts out consistent types of noise, it would be desirable to be able to introduce a binaural beat into that noise at different frequencies, to enhance the degree of alertness of factory or office workers as desired.

SUMMARY OF THE INVENTION

In view of the foregoing, according to one aspect of the invention, EEGs for a number of individuals in different states of consciousness are sampled, and EEG waveforms for the group of individuals, corresponding to each identifiable state of consciousness, are combined. A binaural beat then is generated using the combined EEGs.

According to this aspect of the invention, it has been determined that using groups of EEG waveforms from different individuals and combining them to obtain a representative waveform yields a waveform that a person's brain is more likely to replicate than an individual EEG waveform, or a sine wave representation of the EEG waveform. The combination may be simple averaging, though other combination techniques, such as weighted averaging, for combining different numbers of EEG waveforms as desired, are contemplated. Now that the inventor has discovered that combinations of EEG waveforms provide a particularly effective entrainment environment, it will be seen that various ways of combining these waveforms may yield greater or lesser effects.

In accordance with another aspect of the invention, a method for replicating cyclic sleep patterns for a desired sleep period is provided. In a preferred embodiment according to this aspect of the invention, a subject is led from beta, to alpha, to theta, to delta, then back to theta, then alpha, then a rapid-eye movement (REM) or light dreaming sleep, in a sequence of 90-minute cycles, during a sleep period of desired duration. After the expiration of the period, the subject may wake up voluntarily. Alternatively, the invention can provide a gentle external stimulus to lead the subject to a beta state.

With respect to this aspect of the invention, an apparatus is provided which automatically leads an individual through these cyclic sleep patterns, and enables the individual to set a desired sleep period. This device preferably takes advantage of the techniques to be described relative to the first-mentioned aspect of the invention, but is not so limited. The inventive contributions of this second aspect of the invention are considered to lie in the combination of hardware itself which generates the desired sequence of binaural beats, as opposed to the particular software which determines the nature of those binaural beats. In one form, the invention is constituted by an alarm clock which provides a fade-in theta-alpha signal followed by a strong beta-gamma signal shortly before a desired wake-up time.

According to yet another embodiment of the invention, selectable mind-affecting sound patterns are provided to supplement constant ambient noise in any environment. When the noise is not present, the patterns are not provided. The patterns vary in amplitude in accordance with changes in the environmental noise.

In accordance with still another embodiment of the invention, a portable system is provided to enable the wearer to introduce binaural beat signals of frequencies that are selectable in accordance with a desired level of awareness. Depending on the level of sophistication of the device, the binaural beat may be generated using the combined EEG waveforms of the first aspect of the invention, but this last aspect of the invention is not so limited.

BRIEF DESCRIPTION OF THE DRAWINGS

The foregoing and other aspects of the invention will be understood by those of working skill in this technological field by reference to the following detailed description of the preferred embodiments of the invention, read in conjunction with the accompanying drawings, wherein:

FIGS. 1A-1C and 1D-1F taken from the above-mentioned copending application, show one example of the results which can be achieved using the inventive techniques;

FIG. 2 is a block diagram of the hardware according to a second embodiment of the invention, and FIGS. 3-5 are more detailed schematics therefor;

FIGS. 6A-6J are drawings, similar to FIGS. 1A and 1B, but showing brain activity during various stages of a sleep cycle, using a technique in accordance with the second embodiment of the invention;

FIG. 7 is a block diagram of hardware in accordance with a third embodiment of the invention;

FIG. 8A is a block diagram of hardware in accordance with a fourth embodiment of the invention, and FIG. 8B a schematic of that hardware; and

FIGS. 9A-9M are graphs of different possible effects of the embodiment of FIGS. 8A and 8B, showing a baseline brain pattern, selected stimulus frequencies and corresponding stimulus waves, and associated response waves.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

The method according to a first preferred embodiment of the invention, which has been developed through extensive experimentation, derives from the empirically-observed phenomenon that brain patterns of human subjects are entrained more readily to brain patterns which more closely match their own. In prior implementations of the FFR technique, such as in the inventor's prior patent, in which sine waves having frequencies corresponding to desired levels of sleep were superimposed upon a given frequency, entrainment did occur. Use of the binaural beat phenomenon yielded better results, through synchronization of the hemispheres of the brain.

However, simple repetitive frequencies, or even combinations of such frequencies within different ranges, do not represent brain patterns per se, but rather provide entrainment environments for the brain to follow. It has been determined that, the more closely the entrainment environment parallels normal brain function at different levels of consciousness, the more effective the entrainment effect. This phenomenon is what led to the improvement disclosed in the above-mentioned copending application.

As a further improvement on that technique, as mentioned above, the present inventor investigated the possibility of creating more generic models of brain function at different levels of consciousness. As a result of that investigation, it was determined that combinations of EEG waveforms from different individuals functioning at the same identifiable level of consciousness (e.g. alpha sleep, theta sleep, or delta sleep) provided a superior entrainment environment. In the inventive method according to this aspect of the invention, the brain patterns of 40 to 50 individuals were combined to yield the entrainment environment.

One area of applicability of the techniques of the present invention is in the area of sleep therapy. Many individuals suffer from sleep disorders to varying degrees. It is possible to provide a suitable entrainment environment, based on known sleep cycles prevalent in humans, to help individuals to regulate their sleep patterns, and thus help to solve their sleep disorders. One embodiment of the invention, shown in FIG. 2 and also in FIGS. 3-5,

implements the inventive techniques in what the inventor calls a Sleep Processor to aid in the regulation of human sleep cycles.

In FIG. 2, a read-only memory (ROM) 10 stores frequency sequences corresponding to different parts of a human sleep cycle. The stored frequency sequences may be in accordance with a predetermined algorithm, or alternatively may provide a less complex entrainment environment, such as simple averaging. A digital signal processor (DSP) 20 selects different ones of these sequences based on the current time and the time to which an alarm is set. The time is displayed on display 30, and is set using time set 40. The alarm is set to a desired wake-up time using alarm set 50.

During operation, the DSP 20 accesses the ROM 10 and provides an output to a pulse code modulator unit (PCM) 60 accordingly. The PCM 60 provides an output to each of left and right channel speakers 70, 80 which are provided in close proximity to the ears of a human subject. Using headphones enhances the effect.

Some additional detail of operation of the DSP 20 in one aspect of this embodiment now will be provided. A serial port in the DSP 20 generates an interrupt at a 50 KHz rate. An interrupt handler in the DSP 20 computes the various sounds, in one form, by generating sine waves using a pair of integrators:

$$\text{cosine} = \text{cosine} + \text{frequency} \cdot \text{time} \cdot \text{sine}$$
$$\text{sine} = \text{sine} - \text{frequency} \cdot \text{time} \cdot \text{cosine}$$

The Sleep Processors needs ten frequencies, five for each channel, and all of these frequencies are generated at the same time. The results are multiplied by ten envelopes, most of which are zero at any moment.

Noise is generated by a well-known 16-bit shift-register algorithm. This algorithm generates a noise signal that repeats every 65535 samples, or about every five seconds. The noise is filtered to sound more like pink or red noise, and less like white noise, and is written into a delay line in RAM. For each channel, the filtered noise is averaged with an earlier sample from the delay line, thus imparting a comb filter response to it.

An additional low-frequency sine/cosine pair is generated, to sweep the comb filter delay. 32-bit arithmetic is used here. The approximate sweep rate is about 1/8 Hz. The low-frequency sine wave is used directly to sweep the delay on one channel. The delay on the other channel is controlled by some mix of the sine and cosine waves. By choosing these and other coefficients properly, any phase and amplitude relationship between the left and right sweep can be obtained. The comb filtered noise for each channel is multiplied by a noise envelope value.

The device is operated as follows. A desired wake-up time is set, much like an alarm clock, and the desired volume is selected. A start/stop button then is pressed to start the cycles for the selected sleep period. Throughout the sleep period, the device repeats a 90 minute cycle of sound that leads the subject through alpha, theta, delta, and back to dreaming sleep. Five minutes before the scheduled wake-up time, a beta signal is introduced to bring the subject back to complete physical wakefulness. When the subject wakes up, he/she hits the start/stop button again to stop the sound sequence.

The sounds produced by the DSP 20 include binaural beat carrier sound patterns utilizing both amplitude and frequency modulation, masking pink sound (a known type of sound described in the copending application), and, optionally, occasional single-word voiced affirmations. The binaural beat audio signals may be in the form of appropriate sine waves, or alternatively may be replicas of actual EEG brain waveforms. In the latter case, either the just-described combined EEG waveforms or a single EEG waveform (as described in the copending application) may be used. The entire pattern of sound and control is generated algorithmically.

One aspect of the effectiveness of the device of FIGS. 2-5 is the spacing of sound carriers at related frequencies so as to engender binaural beat signals not only from channel to channel, but also monaurally, in each audio channel. In this preferred embodiment, three binaural beat frequency signals are created between audio carrier channels, and two amplitude beats per channel also are created, yielding a total of seven beat signals. The inventor has coined the term *Septon* for this set of beat signals. One example of a *septon* is as follows:

Left Channel	Right Channel
200 Hz carrier	
(4 Hz binaural beat)	
(4 Hz monaural beat)	204 Hz carrier
204 Hz carrier	(4 Hz monaural beat)
(4 Hz binaural beat)	
(4 Hz monaural beat)	208 Hz carrier
208 Hz carrier	(4 Hz monaural beat)
(4 Hz binaural beat)	
	212 Hz carrier

A standard program according to this preferred embodiment would employ the following sound sequence:

0-5 minutes:

Signal Group A (comprised of replicated EEG waveforms having dominant values in the alpha range)

Signal Group B (15 dB below Group A, generated simultaneously with the sounds of Group A, and comprised of replicated EEG waveforms having dominant values in the theta range)

Phased Pink Sound (six seconds, peak-to-peak, on both left and right channels, 20 dB below Group A)

Voice Inserts (repeated at 40 second intervals, 10 dB below Group A, simultaneously with the other sounds, and comprising short sequences of phrases like "relax" "let go", and "sleep")

5-20 minutes:

Signal Group B

Signal Group C (20 dB below Group B, generated simultaneously with Group B, and comprised of replicated EEG waveforms having dominant values in the delta range)

Phased Pink Sound (15 dB below Group B, having a duration as in the first interval)

Voice Inserts (10 dB below Group B, comprised as above)

20-40 minutes:

Signal Group C

Signal Group D (10 dB below Group C, generated simultaneously with Group C, and comprised of replicated EEG waveforms having dominant values in the lower delta range)

Phased Pink Sound (10 dB below Group C, having a duration as in the first interval)

Voice Inserts (20 dB below Group C, comprised as above) 40-65 minutes:

Signal Group D

Phased Pink Sound (10 dB below Group D, having a duration as in the first interval)

Voice Inserts (20 dB below Group D, comprised as above) 65-80 minutes:

Signal Group C

Signal Group D (10 dB below Group C, generated simultaneously with Group C)

Phased Pink Sound (15 dB below Group C, having a duration as in the first interval)

NO voice inserts

80-90 minutes:

Signal Group B

Signal Group C (10 dB below B, generated simultaneously with Group B)

Phased Pink Sound (15 dB below Group B, having a duration as in the first interval)

NO voice inserts

The foregoing sequence is repeated through the sleep period until the wakeup sequence, approximately five minutes before the set wake-up time:

Signal Group AA (a wakeup sequence, comprising replicated EEG waveforms having dominant values in the beta range, or alternatively a 400 Hz/416 Hz envelope yielding frequencies in the beta range)

Voice inserts (10 dB below Group AA, comprised of short phrases such as "waking up", "refreshed", "bright", and repeated at intervals)

One variation of the foregoing embodiment is an alarm clock which, instead of sounding a loud alarm or other jarring noise at wake-up time, starts a gentle sequence of signals some minutes before, to bring an individual up gently through the various levels of sleep to full wakefulness. A fade-in theta-alpha signal may be provided, followed by a stronger beta-gamma signal.

FIGS. 6A to 6J show the effects of the just-described "sleep processor" embodiment. Column 1 shows distribution of delta frequencies; column 2 shows distribution of theta frequencies; and column 3 shows distribution of alpha frequencies. The top row of graphs is the actual pattern observed in the individual, and the bottom row is the baseline pattern.

FIG. 6A corresponds to a normal waking state. Dominant alpha activity is shown in the occipital area of the brain. In FIG. 6B, pink noise has been applied, without any beat frequencies. A narrower focus of waking state is shown.

In FIG. 6C, a signal sequence corresponding to Signal Group A has been applied. Some gain in theta frequencies are seen, with rapid diffusion of alpha frequencies and movement toward the vertex of the head. In FIG. 6D, a signal sequence corresponding to Signal Group B has been applied. There is further diffusion of alpha frequencies, with some movement of delta and theta activity toward the pre-frontal cortex of the brain.

In FIG. 6E, a signal sequence corresponding to Signal Group C has been applied. There is rapid diffusion of alpha frequencies, and increased power of theta and delta frequencies. In FIG. 6F, a signal sequence corresponding to Signal Group D has been applied. Alpha frequencies are diffused further toward the pre-frontal cortex, and there is a marked increase in theta and delta frequencies.

FIG. 6G, continuing application of Signal Group D frequencies, shows a marked increase in delta activity in the pre-frontal cortex, with a steady decrease in alpha activity at the vertex. In FIG. 6H, another binaural beat stimulation has been applied, and characteristics of stage 3 and 4 sleep may be observed. In FIG. 6I, further evidence of the further binaural beat stimulation is observed. Delta is the dominant frequency here. Alpha and theta activity has moved to the prefrontal cortex. Finally, FIG. 6J shows early awakening activity, with a diffusion of delta activity.

FIG. 7 is a block diagram of hardware in accordance with another embodiment of the invention, having application to the work environment, or anywhere a constant source of noise is present, to allow workers, for example, to maintain a desired state of awareness. The device may contain suitable digital signal processor circuitry, as in the preceding embodiment. One difference is that the operation of the device is keyed to the presence of ambient noise, not to a given time duration or selected sleep period.

The device of FIG. 7 includes a sound generator 200 which, as just mentioned, may comprise a digital signal processor. The generator 200 outputs sound patterns via one or more speakers (left and right channel speakers 210, 220 are shown). A sound level detector 230 detects the level of ambient noise in the room, and provides a signal to the sound generator 200, or activates a cut-off switch (not shown), to discontinue output of the sound generator 200 when the ambient noise level drops below a predetermined level.

The sound level detector also preferably provides a signal to the sound generator 200 to boost the sound pattern output when the ambient noise level increases, so that the effect of the

provision of the sound pattern is commensurate with the noise level in the room. Alternatively, the user may simply adjust the volume manually, using one or more knobs (not shown) on the sound generator 200.

A timer 240 may be provided to control the duration of provision of the selected sound pattern, or even to change the sound pattern at different times of day by controlling a selector 250 which the user accesses to select a particular sound pattern to be output. The user may select a given sound pattern in the morning, and the timer 240 may change that pattern automatically, based on a need at different times of day for sound patterns providing different states of alertness.

The sound pattern produced by the device of FIG. 7 varies automatically in amplitude in accordance with changes in the ambient noise, and is discontinued when the noise stops. As a result, the sound remains unobtrusive. Depending on the setting, the produced sound pattern can enhance wakefulness, promote relaxation (as, for example, in rest areas in the workplace), reduce anxiety and stress, or focus attention, among other characteristics.

The basic system of FIG. 7 produces and inserts four different sound patterns which are selected manually so as to merge the output into the constant ambient noise. More sound patterns are possible, depending on the desired overall capabilities of the system. Various modifications are possible. For example, a programmable version may be provided, which changes the form of the sound patterns throughout a work day or night, in accordance with the responses desired.

Selectability of patterns may be accomplished differently in a model intended for use in conjunction with a computer system. The computer operator can input a selection, and may vary that selection as desired throughout the work day.

FIG. 8A is a diagram of a portable embodiment of the invention, for use in providing a desired level of consciousness on an individualized basis. A signal generator 300 preferably includes a digital signal processor 310 and a ROM 320 for storing predetermined signals or sequences of signals which correspond to various desired states of awareness. The signal generator 300 may be a simple tone generator or pair of tone generators which provide outputs to speakers or headphones 330 (such as button-sized headphones) to set up a binaural beat. Output of pink sound or phased pink sound by the generator 300 is desirable to facilitate defocusing of the listener and consequent ability to concentrate on the sounds being produced. A selector 340 enables a user to instruct the signal generator 300 to output signals corresponding to the level of consciousness (e.g. focused concentration, relaxation, alertness) that a user desires.

FIG. 8B shows a schematic of this embodiment, which the inventor calls a "Mood Minder". This embodiment includes a selector for selecting one of four possible types of signals, corresponding to four respective levels of awareness: awake and alert; concentration; attention; and relaxation. However, the invention is not so limited, as the generator 300 may be capable of producing other possible types of signals. Alternatively, pre-set patterns in the generator 300 may vary when specialized use is required. The key to this embodiment is its portability, enabling the user to carry the device everywhere. The device is battery-operated, and is small enough to fit in an upper coat pocket, for example.

FIGS. 9A-9M show examples of prestored patterns produced by the generator 300, and of results achieved in use. FIG. 9A shows baseline brain waves, with relative power output

shown at the right for different frequencies. FIGS. 9B, 9E, 9H, and 9K show the stimulus frequencies produced for four different respective states of consciousness. FIGS. 9C, 9F, 9I, and 9L show the stimulus waves corresponding to the superposition of the stimulus frequencies on the baseline wave. FIGS. 9D, 9G, 9J, and 9M show the results achieved in use. As can be seen, the peak-to-peak amplitudes for the response brain waves correspond closely to those of the stimulus waves.

While the present invention has been described in detail with reference to preferred embodiments, various modifications within the scope and spirit of the invention will be apparent to those of working skill in this technological field. Consequently, the invention should be considered as limited only by the scope of the appended claims.

United States Patent	6,011,991
Mardirossian	Jan. 4, 2000

Communication system and method including brain wave analysis and/or use of brain activity

Abstract

A system and method for enabling human beings to communicate by way of their monitored brain activity. The brain activity of an individual is monitored and transmitted to a remote location (e.g. by satellite). At the remote location, the monitored brain activity is compared with pre-recorded normalized brain activity curves, waveforms, or patterns to determine if a match or substantial match is found. If such a match is found, then the computer at the remote location determines that the individual was attempting to communicate the word, phrase, or thought corresponding to the matched stored normalized signal.

Subliminal acoustic manipulation of nervous systems

Abstract

In human subjects, sensory resonances can be excited by subliminal atmospheric acoustic pulses that are tuned to the resonance frequency. The 1/2 Hz sensory resonance affects the autonomic nervous system and may cause relaxation, drowsiness, or sexual excitement, depending on the precise acoustic frequency near 1/2 Hz used. The effects of the 2.5 Hz resonance include slowing of certain cortical processes, sleepiness, and disorientation. For these effects to occur, the acoustic intensity must lie in a certain deeply subliminal range. Suitable apparatus consists of a portable battery-powered source of weak subaudio acoustic radiation. The method and apparatus can be used by the general public as an aid to relaxation, sleep, or sexual arousal, and clinically for the control and perhaps treatment of insomnia, tremors, epileptic seizures, and anxiety disorders. There is further application as a nonlethal weapon that can be used in law enforcement standoff situations, for causing drowsiness and disorientation in targeted subjects. It is then preferable to use venting acoustic monopoles in the form of a device that inhales and exhales air with subaudio frequency.

Apparatus for audibly communicating speech using the radio frequency hearing effect

Abstract

A modulation process with a fully suppressed carrier and input preprocessor filtering to produce an encoded output; for amplitude modulation (AM) and audio speech preprocessor filtering, intelligible subjective sound is produced when the encoded signal is demodulated using the RF Hearing Effect. Suitable forms of carrier suppressed modulation include single sideband (SSB) and carrier suppressed amplitude modulation (CSAM), with both sidebands present.

Parent Case Text

This application is a division of U.S. patent application Ser. No. 08/766,687 filed on Dec. 13, 1996, now U.S. Pat. No. 6,470,214, and claims the benefit of the foregoing filing date.

Claims

What is claimed is:

1. An apparatus for communicating an audio signal $a(t)$, comprising:

an audio predistortion filter having a filter function $A_s(f)$ for producing a first output signal $a(t)A_s(f)$ from the audio signal $a(t)$;

means for adding a bias A to the first output signal, to produce a second output signal $a(t)A_s(f)+A$;

a square root processor for producing a third output signal $(a(t)A_s(f)+A)^{1/2}$ responsive to the second output signal; and

a modulator for producing a double sideband output signal responsive to the third output signal, having a carrier frequency of ω_c , and being mathematically described by $(a(t)A_s(f)+A)^{1/2} \sin(\omega_c t)$; and

transmitting the double sideband output signal to a demodulator, whereby the audio signal $a(t)$ is recovered from the double sideband output signal.

2. The communication apparatus defined in claim 1 wherein:

the double sideband output signal has RF power; and

the demodulator is for converting the RF power into acoustic pressure waves.

3. The communication apparatus defined in claim 2 wherein:

the demodulator converts the RF power into the acoustic pressure waves by means of thermal expansion and contraction, whereby

the acoustic pressure waves approximate the audio signal $a(t)$.

4. The communication apparatus defined in claim 2 wherein the demodulator includes a mass that expands and contracts responsive to the RF power of the double sideband output signal.

5. The communication apparatus defined in claim 4 wherein the mass is approximately spherical.

6. The communication apparatus defined in claim 1 wherein:

the double sideband output signal is comprised of a first sideband component and a second sideband component; and

means for suppressing the second sideband component, whereby

the demodulator recovers the audio signal $a(t)$ solely from the first sideband component.

7. The communication apparatus defined in claim 1 wherein the audio predistortion filter is a low-pass filter.

8. The communication apparatus defined in claim 7 wherein the audio predistortion filter is a digital processor.

9. The communication apparatus defined in claim 1 wherein:

the square root processor is a diode biased by a voltage source, in series with a resistance, whereby

a voltage across the diode is proportional to a square root of the second output signal $a(t)A_s(t) + A$.

10. The communication apparatus defined in claim 1 wherein the modulator is a balanced modulator.

11. The communication apparatus defined in claim 1 wherein:

the audio signal $a(t)$ includes a high frequency component; and

the audio predistortion filter de-emphasizes the high frequency component by approximately 40 dB per decade.

Description

BACKGROUND OF THE INVENTION

This invention relates to the modulating of signals on carriers, which are transmitted and the signals intelligibly recovered, and more particularly, to the modulation of speech on a carrier and the intelligible recover of the speech by means of the Radio Frequency Hearing Effect.

The Radio Frequency ("RF") Hearing Effect was first noticed during World War II as a subjective "click" produced by a pulsed radar signal when the transmitted power is above a "threshold" level. Below the threshold level, the click cannot be heard.

The discovery of the Radio Frequency Hearing Effect suggested that a pulsed RF carrier could be encoded with an amplitude modulated ("AM") envelope. In one approach to pulsed carrier modulation, it was assumed that the "click" of the pulsed carrier was similar to a data sample and could be used to synthesize both simple and complex tones such as speech. Although pulsed carrier modulation can induce a subjective sensation for simple tones, it severely distorts the complex waveforms of speech, as has been confirmed experimentally.

The presence of this kind of distortion has prevented the click process for the encoding of intelligible speech. An example is provided by AM sampled data modulation

Upon demodulation the perceived speech signal has some of the envelope characteristics of an audio signal. Consequently a message can be recognized as speech when a listener is pre-advised that speech has been sent. However, if the listener does not know the content of the message, the audio signal is unintelligible.

The attempt to use the click process to encode speech has been based on the assumption that if simple tones can be encoded, speech can be encoded as well, but this is not so. A simple tone

can contain several distortions and still be perceived as a tone whereas the same degree of distortion applied to speech renders it unintelligible.

SUMMARY OF THE INVENTION

In accomplishing the foregoing and related object the invention uses a modulation process with a fully suppressed carrier and pre-processor filtering of the input to produce an encoded output. Where amplitude modulation (AM) is employed and the pre-processor filtering is of audio speech input, intelligible subjective sound is produced when the encoded signal is demodulated by means of the RF Hearing Effect. Suitable forms of carrier suppressed modulation include single sideband (SSB) and carrier suppressed amplitude modulation (CSAM), with both sidebands present.

The invention further provides for analysis of the RE hearing phenomena based on an RF to acoustic transducer model. Analysis of the model suggests a new modulation process which permits the RF Hearing Effect to be used following the transmission of encoded speech.

In accordance with one aspect of the invention the preprocessing of an input speech signal takes place with a filter that de-emphasizes the high frequency content of the input speech signal. The de-emphasis can provide a signal reduction of about 40 dB (decibels) per decade. Further processing of the speech signal then takes place by adding a bias level and taking a root of the predistorted waveform. The resultant signal is used to modulated an RF carrier in the AM fully suppressed carrier mode, with single or double sidebands.

The modulated RF signal is demodulated by an RF to acoustic demodulator that produces an intelligible acoustic replication of the original input speech.

The RF Hearing Effect is explained and analyzed as a thermal to acoustic demodulating process. Energy absorption in a medium, such as the head, causes mechanical expansion and contraction, and thus an acoustic signal.

When the expansion and contraction take place in the head of an animal, the acoustic signal is passed by conduction to the inner ear where it is further processed as if it were an acoustic signal from the outer ear.

The RF to Acoustic Demodulator thus has characteristics which permit the conversion of the RF energy input to an acoustic output.

Accordingly, it is an object of the invention to provide a novel technique for the intelligible encoding of signals. A related object is to provide for the intelligible encoding of speech.

Another object of the invention is to make use of the Radio Frequency ("RF") Hearing Effect in the intelligible demodulation of encoded signals, including speech.

Still another object of the invention is to suitably encode a pulsed RF carrier with an amplitude modulated ("AM") envelope such that the modulation will be intelligibly demodulated by means of the RF Hearing Effect. A related object is to permit a message to be identified and understood as speech when a listener does not know beforehand that the message is speech.

Other aspects of the invention will be come apparent after considering several illustrative embodiments, taken in conjunction with the drawings.

DESCRIPTION OF THE DRAWINGS

FIG. 1 is a block diagram model of RF to Acoustic Demodulation Process making use of the Radio Frequency ("RF") Hearing Effect;

FIG. 2 is a spherical demodulator and radiator having a specific acoustic impedance for demodulation using the RF Hearing Effect;

FIG. 3 is a diagram illustrating the overall process and constituents of the invention; and

FIG. 4 is an illustrative circuit and wiring diagram for the components of FIG. 3.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

With reference to the drawings, FIG. 1 illustrates the RF to acoustic demodulation process of the invention. Ordinarily an acoustic signal A reaches the outer ear E of the head H and traverses first to the inner ear I and then to the acoustic receptors of the brain B. A modulated RF signal, however, enters a demodulator D, which is illustratively provided by the mass M of the brain, and is approximated, as shown in FIG. 2, by a sphere S of radius r in the head H. The radius r of the sphere S is about 7 cm to make the sphere S equivalent to about the volume of the brain B. It will be appreciated that where the demodulator D, which can be an external component, is not employed with the acoustic receptors of the brain B, it can have other forms.

The sphere S, or its equivalent ellipsoid or similar solid, absorbs RF power which causes an increase in temperature that in turn causes an expansion and contraction which results in an acoustic wave. As a first approximation, it is assumed that the RF power is absorbed uniformly in the brain. Where the demodulator D is external to the brain B, the medium and/or RF carrier frequency can be selected to assure sufficiently uniform absorption.

For the modulated RF signal of FIG. 1, the power absorbed in the sphere S is proportional to the power waveform of the modulated RF signal. The absorption rate is characterized quantitatively in terms of the SAR (Specific Absorption Rate) in the units of absorbed watts per kilogram per incident watt per square centimeter.

The temperature of the sphere S is taken as following the integrated heat input from the power waveform, i.e. the process is approximated as being adiabatic, at least for short term intervals on the order of a few minutes.

The radial expansion of the sphere follows temperature and is converted to sound pressure, p(t), determined by the radial velocity (U.sub.r) multiplied by the real part of the specific acoustic impedance (Z.sub.s) of the sphere, as indicated in equation (1), below.

$$Z_{\text{sub.s}} = \rho_{\text{sub.o}} c(jkr) / (1 + jkr) = \rho_{\text{sub.o}} c jf/f_{\text{sub.c}} / (1 + jf/f_{\text{sub.c}}) \quad (1)$$

Where:

$\rho_{\text{sub.o}}$ = density, 1000 kg/m.³ for water

c = speed of sound, 1560 m/s, in water @ 37.degree. C.

k = wave number, 2.pi./wavelength

r =sphere radius, in meters (m)

f =audio frequency

$f_{sub.c}$ =lower cutoff break frequency, $=c/(2\pi r)$

j =the 90 degree phase-shift operator

The specific acoustic impedance for a sphere of 7 cm radius, on the order of the size of the brain, has a lower cut-off break frequency of about 3,547 Hertz (Hz) for the parameters given for equation (1). The essential frequency range of speech is about 300 to 3000 Hz, i.e., below the cut-off frequency. It is therefore the Real part ($R_{sub.e}$) of $Z_{sub.s}$ times the radial particle velocity ($U_{sub.r}$) which determines the sound pressure, $p(t)$. The real part of $Z_{sub.s}$ is given by equation (1a), below:

$$R_{sub.e} (Z_{sub.s}) = \rho_{sub.o} c (f/f_{sub.c})^{sup.2} / (1 + (f/f_{sub.c})^{sup.2}) \quad (1a)$$

In the speech spectrum, which is below the brain cut-off frequency, the sphere S is an acoustic filter which "rolls off", i.e. decreases in amplitude at -40 dB per decade with decreasing frequency. In addition to any other demodulation processes to be analyzed below, the filter characteristics of the sphere will modify the acoustic signal with a 40 dB per decade slope in favor of the high frequencies.

Results for an AM Modulated Single Tone

An RF carrier with amplitude $A_{sub.c}$ at frequency $\omega_{sub.c}$ is AM modulated 100 percent with a single tone audio signal at frequency $\omega_{sub.1}$. The voltage (time) equation of this modulated signal is given by equation (2), below:

$$V(t) = A_{sub.c} \sin(\omega_{sub.c} t) (1 + \sin(\omega_{sub.a} t)) \quad (2)$$

The power signal is $V(t)^{sup.2}$ as given by equation (3), below:

$$P(t) = A_{sub.c}^{sup.2} [3/4 + \sin(\omega_{sub.3} t) - 1/4 \cos(2\omega_{sub.3} t) - 3/4 \cos(2\omega_{sub.c} t) - \cos(2\omega_{sub.c} t) \sin(\omega_{sub.3} t) + 1/4 \cos(2\omega_{sub.c} t) \cos(2\omega_{sub.3} t)] \quad (3)$$

To find the energy absorbed in the sphere, the time integral of equation (3) is taken times absorption coefficient, K . The result is divided by the specific heat, SH to obtain the temperature of the sphere and then multiplied by the volume expansion coefficient, M_v to obtain the change in volume. The change in volume is related to the change in radius by equation (4), below:

$$dV/V = 3dr/r \quad (4)$$

To obtain the amplitude of the radius change, there is multiplication by the radius and division by three. The rms radial surface velocity, $U_{sub.r}$ is determined by multiplying the time derivative by r and dividing by $2^{sup.1/2}$. The result, $U_{sub.r}$, is proportional to the power function, $P(t)$ in equation (5), below.

$$U_{sub.r} = 0.3535 P(t) r K M_{sub.v} / (3SH) \quad (5)$$

The acoustic pressure, $p(t)$, is given in equation (6), below, as the result of multiplying equation (5) by the Real part of the specific acoustic impedance, $R_{sub.e}(1)$.

$$p(t) = R_{sub.e} \{Z_{sub.s} U_{sub.r}\} = R_{sub.e} (Z_{sub.s}) U_{sub.r} \quad (6)$$

The SPL (Sound Pressure Level), in acoustic dB, is approximated as $20 \log[p(t)/2E-5]$. The standard acoustic reference level of $2E-5$ Newtons per square meter is based on a signal in air; however, the head has a water-like consistency. Therefore, the subjective level in acoustic dB is only approximate, but sufficient for first order accuracy.

In a single tone case the incident RF power, $P(t)$, from equation (3) has two terms as shown in equation (7), below, which are in the hearing range.

$$\sin(\omega_{sub.a} t) - 1/4 \cos(2\omega_{sub.a} t) \quad (7)$$

This is converted to the acoustic pressure wave, $p(t)$, by multiplying by the specific acoustic impedance calculated at the two frequencies. Therefore, the resulting pressure wave as indicated in equation (8), below, becomes

$$p(t) = C[Z_{sub.s}(\omega_{sub.a}) \sin(\omega_{sub.a} t) - 1/4 Z_{sub.s}(2\omega_{sub.a}) \cos(2\omega_{sub.a} t)] \quad (8)$$

The result is an audio frequency and a second harmonic at about 1/4 amplitude. Thus using an RF carrier, AM modulated by a single tone, the pressure wave audio signal will consist of the audio tone and a second harmonic at about -6 dB, if the specific acoustic impedances at the two frequencies are the same. However, from equation (1) the break frequency of a model 7 cm sphere is 3.547 Hz. Most of the speech spectrum is below this frequency therefore the specific acoustic impedance is reactive and the real component is given by equation (8a), below:

$$R_{sub.e} \{Z_{sub.s}(f)\} = \rho_{sub.o} c(f/f_{sub.c})^{sup.2} / (1 + (f/f_{sub.c})) \quad (8a)$$

Below the cutoff frequency the real part of the impedance varies as the square of the frequency or gives a boost of 40 dB per decade. Therefore, if the input modulation signal is 1 kHz, the second harmonic will have a boost of about 4 times in amplitude, or 12 dB, due to the variation of the real part of the specific acoustic impedance with frequency. So the second harmonic pressure term in equation (8) is actually four times the power or 6 dB higher than the fundamental term. If the second harmonic falls above the cutoff frequency then the boost begins to fall back to 0 dB. However, for most of the speech spectrum there is a severe distortion and strong boost of the high frequency distortion components.

Results for Two Tone AM Modulation Analysis

Because of the distortion attending single tone modulation, predistortion of the modulation could be attempted such that the resulting demodulated pressure wave will not contain harmonic distortion. This will not work, however, because of the non-linear cross-products of two-tone modulation are quite different from single tone modulation as shown below.

Nevertheless, two-tone modulation distortion provides an insight for the design of a corrective process for a complex modulation signal such as speech. The nature of the distortion is defined in terms of relative amplitudes and frequencies.

Equation (8b) is that of an AM modulated carrier for the two-tone case where ω_{a1} and ω_{a2} are of equal amplitude and together modulate the carrier to a maximum peak value of 100 percent. The total modulated RF signal is given by equation (8b), below:

$$V(t) = A_c \sin(\omega_c t) [1 + \frac{1}{2} \sin(\omega_{a1} t) + \frac{1}{2} \sin(\omega_{a2} t)]$$

The square of (8b) is the power signal, which has the same form as the particle velocity, $U_r(t)$, of equation (9), below.

From the square of (8b) the following frequencies and relative amplitudes are obtained for the particle velocity wave, $U_r(t)$, which are in the audio range;

$$U_r(t) = C [\sin(\omega_{a1} t) + \sin(\omega_{a2} t) + \frac{1}{4} \cos((\omega_{a1} - \omega_{a2})t) + \frac{1}{4} \cos((\omega_{a1} + \omega_{a2})t) - \frac{1}{8} \cos(2\omega_{a1} t) - \frac{1}{8} \cos(2\omega_{a2} t)] \quad (9)$$

If the frequencies in equation (9) are below the cut-off frequency, the impedance boost correction will result in a pressure wave with relative amplitudes given in equation (9a), below:

$$p(t) = C' [\sin(\omega_{a1} t) + b \sin(\omega_{a2} t) + \frac{(1-b)^2}{4} \cos((\omega_{a1} - \omega_{a2})t) + \frac{(1+b)^2}{4} \cos((\omega_{a1} + \omega_{a2})t) - \frac{1}{2} \cos(2\omega_{a1} t) - \frac{b^2}{2} \cos(2\omega_{a2} t)] \quad (9a)$$

where: $b = \omega_{a2} / \omega_{a1}$ and $\omega_{a2} > \omega_{a1}$

Equation (9a) contains a correction factor, b , for the specific acoustic impedance variation with frequency. The first two terms of (9a) are the two tones of the input modulation with the relative amplitudes modified by the impedance correction factor. The other terms are the distortion cross products which are quite different from the single tone distortion case. In addition to the second harmonics, there are sum and difference frequencies. From this two-tone analysis it is obvious that more complex multiple tone modulations, such as speech, will be severely distorted with even more complicated cross-product and sum and difference components. This is not unexpected since the process which creates the distortion is nonlinear. This leads to the conclusion that a simple passive predistortion filter will not work on a speech signal modulated on an RF carrier by a conventional AM process, because the distortion is a function of the signal by a nonlinear process.

However, the serious distortion problem can be overcome by means of the invention which exploits the characteristics of a different type of RF modulation process in addition to special signal processing.

AM Modulation With Fully Suppressed Carrier for the Intelligible Encoding of Speech by the Invention for Compatibility With the RF Hearing Phenomena

The equation for AM modulation with a fully suppressed carrier is given by equation (10), below:

$$V(t) = a(t) \sin(\omega_c t) \quad (10)$$

This modulation is commonly accomplished in hardware by means of a circuit known as a balanced modulator, as disclosed, for example in "Radio Engineering", Frederick E. Terman, p.481-3, McGraw-Hill, 1947.

The power signal has the same form as the particle velocity signal which is obtained from the square of equation (10) as shown in equation (11), below:

$$P(t) = C U_{\text{sub.r}} = a(t)^2 / 2 - (a(t)^2 / 2) \cos(2 \omega_{\text{sub.chi.}} t) \quad (11)$$

From inspection of equations (10) and (11) it is seen that, if the input audio signal, $a(t)$, is pre-processed by taking the square root and then modulating the carrier, the audio term in the particle velocity equation will be an exact, undistorted, replication of the input audio signal. Since the audio signal from a microphone is bipolar, it must be modified by adding a very low frequency (essential d.c.) bias term, A , such that the resultant sum, $[a(t)+A] > 0.0$, is always positive. This is necessary in order to insure a real square root. The use of a custom digital speech processor implements the addition of the term A , i.e. as shown in equation (10*), below:

$$V(t) = (a(t)+A)^{1/2} \sin(\omega_{\text{sub.c}} t) \quad (10^*)$$

The pressure wave is given by equation (11*), below:

$$p(t) = C U_{\text{sub.r}} = A/2 + a(t)/2 - (a(t)/2) \cos(2 \omega_{\text{sub.c}} t) - (A/2) \cos(2 \omega_{\text{sub.c}} t) \quad (11^*)$$

When the second term of the pressure wave of equation (11*) is processed through the specific acoustic impedance it will result in the replication of the input audio signal but will be modified by the filter characteristics of the Real part of the specific acoustic impedance, $R_{\text{sub.e}} \{Z_{\text{sub.s}}(f)\}$, as given in equation (8a). The first term of equation (11*) is the d.c. bias, which is added to obtain a real square root; it will not be audible or cause distortion. The third and fourth terms of (11*) are a.c. terms at twice the carrier frequency and therefore will not distort or interfere with the audio range signal, $a(t)$.

Since the filter characteristic of equation (7) is a linear process in amplitude, the audio input can be predistorted before the modulation is applied to the carrier and then the pressure or wound wave audio signal, which is the result of the velocity wave times the impedance function, $R_{\text{sub.e}} \{Z_{\text{sub.s}}(f)\}$, will be the true replication of the original input audio signal.

A diagram illustrating the overall system 30 and process of the invention is shown in FIG. 3. Then input signal $a(t)$ is applied to an Audio Predistortion Filter 31 with a filter function $As(f)$ to produce a signal $a(t)As(f)$, which is applied to a Square Root Processor 32, providing an output $=(a(t)As(f)+A)^{1/2}$, which goes to a balanced modulator 33. The modulation process known as suppressed carrier, produces a double sideband output $=(a(t)As(f)+A)^{1/2} \sin(\omega_{\text{sub.c}} t)$, where $\omega_{\text{sub.c}}$ is the carrier frequency. If one of the sidebands and the carrier are suppressed (not shown) the result is single sideband (SSB) modulation and will function in the same manner discussed above for the purposes of implementing the invention. However, the AM double sideband suppressed carrier as described is more easily implemented.

The output of the balanced modulator is applied to a spherical demodulator 34, which recovers the input signal $a(t)$ that is applied to the inner ear 35 and then to the acoustic receptors in the brain 36.

The various components 31-33 of FIG. 3 are easily implemented as shown, for example by the corresponding components 41-42 in FIG. 4, where the Filter 41 can take the form of a low pass filter, such as a constant-K filter formed by series inductor L and a shunt capacitor C. Other low-pass filters are shown, for example, in the ITT Federal Handbook, 4th Ed., 1949. As a result the filter output is $AS(f)$ a $1/f$.^{sup.2}. The Root Processor 42 can be implemented by any square-law device, such as the diode D biased by a battery B and in series with a large impedance (resistance) R, so that the voltage developed across the diode D is proportional to the square root of the input voltage $a(t)As(f)$. The balanced modulator 43, as discussed in Terman, op.cit., has symmetrical diodes A1 and A2 with the modulating voltage M applied in opposite phase to the diodes A1 and A2 through an input transformer T1, with the carrier, O, applied commonly to the diodes in the same phase, while the modulating signal is applied to the diodes in opposite phase so that the carrier cancels in the primary of the output transformer T2 and the secondary output is the desired double side band output.

Finally the Spherical Demodulator 45 is the brain as discussed above, or an equivalent mass that provides uniform expansion and contraction due to thermal effects of RF energy.

The invention provides a new and useful encoding for speech on an RF carrier such that the speech will be intelligible to a human subject by means of the RF hearing demodulation phenomena. Features of the invention include the use of AM fully suppressed carrier modulation, the preprocessing of an input speech signal by a compensation filter to de-emphasize the high frequency content by 40 dB per decade and the further processing of the audio signal by adding a bias term to permit the taking of the square root of the signal before the AM suppressed carrier modulation process.

The invention may also be implemented using the same audio signal processing and Single Sideband (SSB) modulation in place of AM suppressed carrier modulation. The same signal processing may also be used on Conventional AM modulation contains both sideband and the carrier; however, there is a serious disadvantage. The carrier is always present with AM modulation, even when there is no signal. The carrier power does not contain any information but contributes substantially to the heating of the thermal-acoustic demodulator, i.e. the brain, which is undesirable. The degree of this extraneous heating is more than twice the heating caused by the signal or information power in the RF signal. Therefore conventional AM modulation is an inefficient and poor choice compared to the double side-band suppressed carrier and the SSB types of transmissions.

The invention further may be implemented using various degrees of speech compression commonly used with all types of AM modulation. Speech compression is implemented by raising the level of the low amplitude portions of the speech waveform and limiting or compressing the high peak amplitudes of the speech waveform. Speech compression increases the average power content of the waveform and thus loudness. Speech compression introduces some distortion, so that a balance must be made between the increase in distortion and the increase in loudness to obtain the optimum result.

Another implementation is by digital signal processing of the input signal through to the modulation of the RF carrier.

Mind Control is no longer science fiction. The Learning Channel science program called "Future Fantastic, I, Robot", Dec 17th 1997 featured Han Moravec. He is a well established scientist who studies robotics and reported that within the near future, it will be possible to put a person's personality into a computer and a computer personality into a person. The program also stated that the U.S. government has a highly classified cyborg program, a program to replace human functions with machine and computer parts.

And on the Discovery channel on December 29th 1997 a program entitled "Non lethal weapons Shoot Not to Kill", electromagnetic weapons were demonstrated that can paralyze and disorient a terrorist, or be used against a crowd or in a siege. Since the 1960s, there have been allegations that the U.S. and other governments have been experimenting on people without their consent in a highly classified weapon testing program to control the mind using electromagnetic technology. These weapons work on the hypothesis that electromagnetic signals from outside sources can mimic the mind and body's electromagnetic signals. Proof in support of the allegations are growing.

Most scientists have agreed that mind control is theoretically possible in this lifetime and many sign national security oaths which prevent them from discussing their research in this area. But they will discuss the logical implications of the research into mind control. Here is one of many articles about mind control from the New York Times Magazine, November 15, 1970, "Brain Researcher Jose Delgado Asks-'What Kind of Humans Would We Like To Construct?'" Delgado said;

"The human race is at an evolutionary turning point. We're very close to having the power to construct our own mental functions, through a knowledge of genetics (which I think will be complete within the next 25 years); and through a knowledge of the cerebral mechanisms which underlie our behavior."

In the same article Dr. Morton Reiser, chairman of the Yale department of psychiatry stated;

there are 'probably some frightening potentials' in Delgado's work. "If you can use computer technology to send an unmanned space satellite to the moon, then it doesn't seem utterly impossible that one day our computers will be sophisticated enough to be used to put thoughts into people's heads. ...Suppose, for instance, there was someone with uncontrollable rage reactions which were due to something detectable in the nervous system. The computer could send back a stimulus to inhibit that response. I don't think that's science fiction..."

There is ample evidence that the U.S. government has funded behavior control research for intelligence purposes. This related quote is from *Journey Into Madness, The True Story of Secret CIA Mind Control and Medical Abuse* by Gordon Thomas, Bantam Books, 1989. Mr. Thomas is a former producer for the BBC, a veteran foreign correspondent and investigative journalist who has reported from many hot spots around the world.

"Dr. Gottlieb and behaviorists of ORD [Office of Research and Development, CIA, Central Intelligence Agency] shared [Dr.] Jose Delgado's views that the day must come when the technique would be perfected for making not only animals but humans respond to electrically transmitted signals" ... "Like Dr. Delgado [Yale University], the neurosurgeon (Dr. Heath of Tulane University) concluded that ESB [electronic stimulation of the brain] could control memory, impulses, feelings and could evoke hallucinations as well as fear and pleasure. It could literally manipulate the human will-at will."

And the actions of government officials from the 1940s to the present support a classified history of military mind control research. From *The Mind Manipulators*, by Alan Schefflin, 1978 p. 214.

In 1964, Richard Helms, the CIA's Deputy Director for Plans, responded to a question from J. Lee Rankin, the General Counsel for the President's Commission on the Assassination of President Kennedy, about Soviet brainwashing techniques. Mr. Helms suggested that the Soviets were locked in a "battle for the minds of men." Helms was echoing Allen Dulles, who, as the newly installed Director of the CIA, had addressed a national meeting of Princeton alumni on April 10, 1953, at Hot Springs, Virginia, as follows. In the past few years we have become accustomed to hearing much about the battle for men's minds-the war of ideologies -and indeed our Government has been driven by the international tension we call the 'cold war' to take positive steps to recognize psychological warfare and to play an active role in it. I wonder, however, whether we clearly perceive the magnitude of the problem, whether we realize how sinister the battle for men's minds has become in Soviet hands. We

might call it, in its new form, "brain warfare. The Helms memorandum was classified in 1974 and is Warren Commission document no. 1131. The Dulles speech was excerpted in U.S. News and World Report (May 8, 1953), p. 54, under the title "Brain Warfare-Russia's Secret Weapon."

The problem of mind control is complicated and covers a long time period. There are historical reasons in support of victim's allegations. A pervasive cold war mentality has been rampant for 50 years and is inhuman and unnecessary. This attitude also created an as yet unreported electromagnetic weapon testing program on U.S. citizens. Writing about radiation experimentation, David C. Morrison reported in the National Journal 11/26/94 p. 2806 "Unalterably launched into a post-postwar era, we still struggle in a thousand ways great and small with the aftermath of the cold War's murderous rivalry. Among those consequences, obviously, is the total-war mentality that spawned the use of unsuspecting human guinea pigs."

In the same article, Army Air Forces General Curtis E. LeMay who directed the killing of 900,000-some people in the terror bombing of Japan stated "There are no innocent civilians..., so it doesn't bother me so much to be killing innocent bystanders".

The many related facts that the government bureaucracy does not want the U.S. public to put together form an undeniable proof of mind control. While mind control may not be in the form of mainstream publications, it is irrefutable and inevitably will be common public knowledge, just as the radiation problem is today.

[Contents](#)

The Problem: a Classified Arms Race Between the Super Powers to Control the Human Mind and Body with Electromagnetic Technologies

The big picture is that there is a classified arms race between the super powers to develop and control human behavior using electromagnetic and neurological technologies. International treaty discussions on electromagnetic weapons have been reported in the Bulletin of Atomic Scientists, Sept/Oct 1994 p.44, subsection "Non-lethal" weapons may violate treaties" by Barbara Hatch Rosenberg, director of the Chemical and Biological Weapons Program of the Federation of American Scientists. On electromagnetic weapons she writes: "These weapons are said to cause temporary or permanent blindness, interference with mental processes, modification of behavior and emotional response, seizures, severe pain, dizziness, nausea and diarrhea, or disruption of internal organ functions in various other ways. ...In addition, under the Certain Conventional Weapons Convention, international discussions are now underway that may lead to the development of specific new protocols covering electromagnetic weapons. ...The current surge of interest in electromagnetic technologies makes the adoption of a protocol explicitly outlawing the use of these dehumanizing weapons an urgent matter.

There is much proof of the major world power, the U.S. and its development of this technology. Just one example is from the Atlantic Monthly, The Zap Gap, March 1987 by Chuck de Caro, p. 28;

There have been many far-out hypothetical armaments in the news since Star Wars went from being a movie to being a weapons system, so it is perhaps understandable that when Defense Secretary Caspar Weinberger made a clipped reference in a 1983 speech to "radio-frequency

weapons," reaction was minimal. The last thing most congressmen and commentators want is another sheaf of physics equations to sift through. Yet radio-frequency (RF) weapons, which are rarely mentioned in the general press, appear closest to realization than the energy beams and supermissiles of Star Wars."

There are over 25 articles from the 1970s to the 1990s on Russia, once a super power and it's development of this technology. See Articles on Russian Mind Control and Electromagnetic Technologies, 1997 Fort Bragg, CA, Flatland Books. Walter Bowart's Operation Mind Control 1978, discussed Vietnam veteran accounts of the use of mind control technology. David Guyatt wrote an article on Feb. 1996 for the International Committee of the Red Cross Symposium. The Symposium was entitled The Medical Profession and the Effects of Weapons. Guyatt reported in 1989 that a Department of Defense medical engineer "sourced a story claiming that the context of conditioning, microwaves and other modalities had regularly been used against the Palestinians.

The new weapons are revolutionary and affect every citizen's future. The New York Times, Dec. 29, 1965 p 28 covered the speakers at an American Association for the Advancement of Science meeting. It was entitled "Controlling the Mind". Prof. David Krech of the University of California suggested that probable future capabilities for controlling human minds contain more serious implications than even the successes of the nuclear physicists." ...time must not be wasted if these new capabilities are to be harnessed for the benefit of free societies rather than perverted to destroy them and enslave their citizens." Public input and discussion of the development of these new weapons and their use should belatedly begin.

Two points are critical to remember. One, the government is torturing U.S. citizens with this technology and two, the U.S. public has the right to have a say in the use and development of this technology. This is a massive human rights violation actively covered up by the U.S. government. For the last 50 years, electromagnetic and neurological weapon testing programs have been classified under the national security act according to government policy. So it is imperative that the U.S. public demand that it be declassified. In the meantime, the U.S. public can review the factual and documented information on this government policy and decide for themselves.

[Contents](#)

Supporting Documentation in Spite of the National Security Act

Here is just one example of how victims cannot get around the national security act. In a letter from the National Security Agency, March 19, 1997 to Cheryl Welsh;

"On 21 October 1996 the DIA [Defense Intelligence Agency] referred one responsive NSA-originated document relating to a Soviet mind control system to this Agency for our review and direct response to you. ...The information is classified because its disclosure could reasonably be expected to cause exceptionally grave damage to the national security."

And here is an example of why victims cannot get this human rights issue into mainstream publications. This is an article from the Washington Post, April 27th, May 3, 1992 Weekend Edition, p 34 "Playing I Spy With That Alleged New Openness at the CIA" by George Lardner Jr.

The task forced, headed by then-CIA public affairs director Joseph DeTrani, also touted what it saw as the accomplishments of the agency's existing media program. ... "PAO {the public affairs office} now has relationships with reporters from every major wire service, newspaper, news weekly and television network in the nation." the report said. "This has helped us turn some 'intelligence failure' stories into 'intelligence success' stories, and it has contributed to the accuracy of countless others. "In many instances," the report continued, "we have persuaded reporters to postpone change, hold or even scrap stories that could have adversely affected national security interests or jeopardized sources and methods."

The balance of national security and individual rights and freedoms is severely skewed in favor of government abuse, (see CAHRA website under Ex-Con, subheading national security). An important remedy would be to release classified documents for court cases. And the legal standard of proof for allegations of illegal experimentation and illegal operational intelligence programs should take into account the 50 year government cover up of electromagnetic technology and its health effects, (see CAHRA website Timeline under Louis Slesin).

There is significant Russian research on electromagnetic health effects. See Paul Brodeur's Zapping of America, 1977. This book also covers the politics involved in electromagnetic weapon programs. One of many articles that never reached the front pages of mainstream press include the article in the March-April 1988 21st Century, p. 50 entitled "Bioelectromagnetics How Radiofrequency Waves Interact with Living Systems, By James W. Frazer PhD and Joyce E Frazer. The subtitle is "The nonthermal effects of electromagnetic radiation on living cells offer clues as to what is life, as well as to understanding Soviet research on the possibility of controlling human thought and emotional experience."

Here is another example of Russian research. Declassified DIA document.

MEMORANDUM FOR THE RECORD SUBJECT; Briefing of NSC [National Security Council] Ad Hoc Committee on NIEMR [nonionizing electromagnetic radiation] bio-effects...1. On Wednesday, 26 February 1975, I briefed an ad hoc committee convened by [blank] of the National Security Council for the purpose of studying implications of Soviet research of the biological effects of non-ionizing electromagnetic radiation. My briefing consisted of a discussion of recent intelligence reports and Soviet and Host European research on the subject. 2. I was assisted in the briefing by [blank] the Navy Medical Research Institute and [blank] the Office of Telecommunication Policy. Executive Offices of the President. ...

The Soviets have explored electromagnetic technology for military uses since at least the 1950s. From The Zapping of America by Paul Brodeur, 1977, ISBN 0 393 06427 1. On page 301, there was a quote from Dr. Milton Zaret, who worked on the 1965 CIA Project Pandora, a program to determine the purpose of the microwaves bombarding the Soviet Embassy by the Russians which started in 1962. Jack Anderson broke the story. Dr. Zaret stated, "When I analyzed the Soviet literature for Project Pandora, back in the 60s, it was very clear that such an encoding impressed onto a carrier wave lengths could have a CNS [central nervous system] effect.

In the Agent Orange class action court case, the years long legal battle did not serve justice. The chemical manufacturers had the advantage of money while the legal proof of damage from Agent Orange required by law to win the court case was extremely difficult to obtain. See GI Guinea Pigs How the Pentagon Exposed Our troops to Dangers More Deadly Than

War: Agent Orange and Atomic Radiation by Michael Uhl and Tod Ensign, 1980. The current electromagnetic weapon testing program has the same imbalance of justice as the Agent Orange case. Many more examples can be given. The solution is there, but it has been impossible for victims to get the problem into mainstream media so that the public is aware of the problem and will no doubt be appalled and ready to act.

Experts and professionals and several independent articles and sources clearly support that government mind control is real but has been completely out of public awareness. There are news programs and series, conferences, military documents, books, government reports and international treaty discussions about electromagnetic technologies. One of the best articles is "The Development of New Anti-personnel Weapons" by Louis Doswald-Beck, Nov 1, 1990 in the International Review of the Red Cross. It states that "In spite of the rarity of publications on this subject and the fact that it is usually strictly classified information ...very small amounts of electromagnetic radiation could appreciably alter the function of living cells." It further states that "Research work in this field has been carried out in almost all industrialized countries, and especially by great powers, with a view to using these phenomena for anti-materiel or antipersonnel purposes."

U.S. News and World Report July 7, 1997 discusses behavior altering electromagnetic weapons in a front page article. Defense News 1993 discusses Russia's mind control weapons in great detail, specifically electromagnetic signals beamed into soldier's brains. The United States Air Force Scientific Advisory Board 1996, New World Vistas describes future uses of electromagnetic technology and creating the mental illness phenomena of hearing voices with microwaves for use on terrorists.

Many scientists have lost government funding for speaking out about electromagnetic health effects, (refer to CAHRA website under Timeline.) This type of censoring of information has prevented a balanced picture of electromagnetic health effects and a court case would reflect this bias.

The Military Use of Electromagnetic and Neurological Technology

Here are examples of government's development of this technology. From the Future Agenda Congressional Clearinghouse on the Future, Chairman Albert Gore Jr., 1982, p 35;

Trends in weaponry. Although not an immediate issue, there is some speculation that the distant future may bring totally new weapons of broad-scale destruction. These kinds of weapons might include climatological weapons, new electronic devices such as high-energy directed beams and mind-control mechanisms. Whether or not these weapons could or should be developed, and the means of defense against them in the event of enemy deployment, may be subject to debate in the coming years.

Books include Mind Wars 1984 by Ron McRae, associate of reporter Jack Anderson. McRae wrote on page 62;

"In 1977, Samuel Koslov, assistant secretary of the navy for research and development, learned the navy had a contract with Stanford Research Institute to study ELF [extremely low

frequency] and mind control. ...Currently research into the effects of ELF on the human brain are well-funded and highly classified."

The cable TV program "Weapons of War" on the Learning Channel on September 21, 1997 featured Dr. Michael Persinger of Laurentian University, Canada. He described weapons using "psycho or influence technology" and electromagnetic frequencies to control what people think, for psychological warfare purposes.

Conferences include "Federal Regulation of Medical Devices for the Nineties", Nov 5, 1994. Keynote Speaker, Dr. John H. Gibbons, took the oath of office as Assistant to the President for Science and Technology and Director Office of Science and Technology Policy White House Science Advisor on Feb. 2, 1993. Remote monitoring and surgery or "telepresence" surgery for battlefields were discussed. Recent advances in high rate information sensing, processing and transmission from the remote battlefield setting were illustrated.

Military documents include "Low Intensity Conflict and Modern Technology " by Lt. Col Dean, June 1986. Capt. Paul Tyler wrote this section;

"Potential Military Applications of EMR. The potential applications of artificial electromagnetic fields are wide ranging and can be used in many military or quasi-military situations. Some of these potential uses include dealing with terrorist groups, crowd control, controlling breaches of security at military installations and antipersonnel techniques in tactical warfare. In all of these cases the EM systems would be

used to produce mild to severe physiological disruption or perceptual distortion or disorientation."

[Contents](#)

Examples of the Operational Use of Electromagnetic and Neurological Weapons

Examples of government abuse of this technology already exist. There is a long unpublicized history of EMF and neurological research. And here is one of the practical applications of that research. The women protesters at their peace camp at Greenham Commons military base in England were targeted with radiation and antipersonnel weapons in 1985 as reported in The Nation, vol. 244, March 14, 1987, p 313. They were protesting against cruise missiles at the U.S. Air Force base in southern England. Their reported symptoms matched "microwave sickness." Dr. Rosalie Berrell, Kim Besley, a former radar engineer and members of Electronics For Peace, all took measurements at Greenham and there were strong electromagnetic radiation levels, up to 100 times higher than adjacent areas. This was reported in the publication, Peace and Freedom, Jan./Feb 1989 p 24.

In the publication Science for the People, an article dated Sept/Oct 1987 p 23 reported the following. The City Limits newspaper claimed that the British Ministry of Defense was probably using its new intruder detection system CLASSIC (Covert Local Area Sensory System for Intruder Classification) at Greenham. The newspaper The Manchester Guardian wrote that "The U.S. employs an intruder detection system called BISS (Base Installation Security System) which operates... 'on a sufficiently high frequency to bounce radar waves off the body moving in the vicinity of a perimeter fence.' In 1972, the U.S. Army Equipment and

Research Center published a study entitled Analysis of Microwaves for Barrier Warfare. Many other similar sources of information were listed.

As reported in Connexions 29 1989 p 3, in 1985, women at Seneca Womens' Peace Encampment in New York started to suffer from similar symptoms. And after filing an injunction at Newbury County Court in Jan 1988, the women named as plaintiffs have had their homes and cars broken into, papers stolen and mail opened but the zapping stopped. Peace and Freedom reported use of EMR weapons at Molesworth (USAFE), at the Peace Farm (Pantex bomb factory, Texas) and in Central American and elsewhere. The well-established Women's International League for Peace and Freedom went as far as to form the Ad Hoc Committee on EMR Weapons in New York.

Here is a second example. From Electromagnetism and Life, Dr. R.O. Becker, p 227. "The possibility that the Soviet Union might be ahead of the USA in EM weapons systems has persisted at least since the discovery of the irradiation of the U.S. Moscow embassy in 1953." And in the Washington Times, Nov. 15, 1972, "The Russian Government is continuing to bombard the U.S. Embassy in Moscow with microwave radiation, according to U.S. officials." The pulsed "emanations originate from a residential building across the street that is believed to be staffed by Russian security officials." In 1976, the Globe reported that Ambassador Walter Stoessel "developed a rare blood disease similar to leukemia and was suffering headaches and bleeding from the eyes. Two of his irradiated predecessors, Ambassador Charles Bohlen and Ambassador Llewellyn Thompson, died of cancers." These are many more examples of the use of this technology by the superpowers.

[Contents](#)

Political Uses of Electromagnetic Intelligence Tools and Cia Operations

There are innumerable cases of the political uses of this technology. Of course, the evidence is not irrefutable since necessary documents are classified. But there is enough evidence to call for an investigation. At the September 21, 1977 Senate hearing on MKULTRA, the CIA's Program of Research in Behavioral Modification, Dr. Gottlieb, who had been director of the CIA's mind control experiments, warned congress of Russia's current use of intelligence weapons against the U.S. government. He stated that President Nixon was most likely targeted by the Russians in an attempt to influence U.S. officials. with some type of intelligence tool. On a 1972 trip to Russia, President Nixon and his staff had reported 'inappropriate behavior' including crying without provocation. In the same senate hearing, Gottlieb reported that the CIA was interested in how radiofrequency waves would affect behavior. James Mills, a UPI news reporter and the author of The Power, the fictional account of mind control, researched his book by going to Russian scientific institutions. On the TV interview Paranormal Warfare- a Secret Military Power? with Larry King Live on Sept. 12, 1990 transcript #127, Mills stated that many people believed that electromagnetic weapons were used on President Nixon in the incident reported by Dr. Gottlieb.

Here is another example. Major newspapers such as the Feb. 14, 1992 USA Today, have reported allegations by Saddam Hussein that the CIA targeted him with mind control and "the CIA used psychotronics and biocommunication to cause a blood clot in the brain or heart...". Heart attacks, suicides, assassinations, blackmail, all can be done remotely leaving no trace of evidence to tie it to the perpetrator.

The San Francisco Chronicle, Sept. 30, 1996 article entitled "Natural Law Party Nearly Unknown, But on the Ballot, Libertarian ideals, science, transcendental meditation" discussed "...seeking to bring the 'light of science' into politics through means that by any description are unconventional - including 'mapping' politicians' brains to catalog intelligence, creativity and stability in a crisis." This statement was made by Natural Law Party vice president candidate Mike Tompkins, who was "schooled at Andover and Harvard and worked as a consultant in 'human development' in the fields of health care, education and corrections." This rumor needs further investigation and is an example of the many leads, false or otherwise that are available.

Here is an example of Russia's political use of mind control technology. July 16, 1981, David Brinkley News Program No. 47592, David Brinkley stated, "it is known the Russians are working hard on controlling the human mind by remote electronic means." On the same show he interviewed Dr. William Van Bise, a radio engineer who investigated the Russian Woodpecker radio signal broadcast across the United States in the 1970s. Dr. Van Bise had evidence that the Russian radio signal was "at a frequency that the human body sort of operates at-10 Hertz is right in the range of biologic frequencies.". In reply to a question Bise stated that the easiest way to disrupt the mental process would be with microwaves.

The U.S. public needs to know that many seemingly unconnected facts are adding up to a government cover up. Hi tech intelligence tools and weapons are operational today without public awareness and accountability and have been for many years.

[Contents](#)

Advanced Electromagnetic Intelligence Tools-yet Another Classified Intelligence Program after Cointelpro

Victims such as Delores Hejazi and investigative reporter Alex Constantine are reporting Cointelpro tactics when complaining or disagreeing with agencies such as the CIA and the IRS. Hejazi wrote a letter of complaint to the IRS and her problems began. She was systematically discredited and became suicidal and eventually refused treatment for her throat cancer. She died recently and was unable to get an investigation of her claim as reported in the 6-28-91 Cleveland Plains Dealer newspaper "of being repeatedly attacked and tortured by government agencies, beam weaponry and laser technology."

Alex Constantine, a Los Angeles reporter, investigated the McMartin child abuse case and was subsequently targeted with electromagnetic intelligence tools. In spite of the discrediting and disrupting techniques that he has endured to this day, Constantine's reporting now includes two books on the topic of government mind control.

As described in Encyclopedia Britannica, Cointelpro was an FBI counterintelligence program in the 1960s designed to disrupt groups and neutralize individuals deemed to be threats to domestic security using intelligence-gathering techniques of surveillance, discrediting the target and harassment. It was used extensively on Martin Luther King. Today intelligence agencies are using hi tech electromagnetic tools to accomplish the same illegal goals.

It is well documented in congressional reports that the FBI targeted anti-Vietnam groups and labor groups in the 1970s. The House Judiciary Committee, Subcommittee on Civil and Constitutional Rights, Hearings Nov. 1975 pp 9,44 reported on the FBI "Counterintelligence

Program". While there were examples of egregious improper conduct, the overwhelming bulk of the FBI programs were clearly legitimate. Twelve legal objectives were listed, including use of informants to disrupt a group's activities and establishing sham organizations for disruptive purposes. Illegal FBI activities listed in this report included investigating the love life of a group leader for dissemination to the press. As reported in The Berkeley Barb newspaper on Jan. 11-17, 1974, The National Caucus of Labor Committees reported a CIA and Soviet Psycho-Sexual Brainwashing Plot to infiltrate their organization. The claim sounded so bizarre that it was dismissed as "crazy". This is another of a countless number of claims which were never seriously investigated.

Today, the Militia is alleging government harassment. Several newspaper articles are reporting this claim. "Government Wants Me Dead" reported the Associated Press, 5-14-95. Court records show that Indiana national militia leader and attorney Linda Thompson "told a deputy at the Marion County Prosecutor's Office that the government was trying to kill her with radio frequency weapons." This is plausible in light of the Discovery channel TV program, Sci Trek, Shoot Not to Kill, Nonlethal Weapons which aired on Dec. 29, 1997. Electromagnetic weapons were used to cause abdominal pain to stop a protester and acoustic sound waves disoriented a group of demonstrators. Many police departments around the country have nonlethal weapons. According to the July 7, 1997 U.S. News and World Report article on electromagnetic weapons, "And for a good 40 years the U.S. military has quietly been pursuing weapons of this sort. Much of this work is still secret..."

Time magazine June 26, 1995 reported on Mark Koerneke, of the Michigan Militia who believes that there are "Americans enslaved and implanted with microchips." This is a plausible claim as the government funded behavioral control research in the 1970s which included implanting electrodes to control violence by a Harvard Medical School professor and others.

There is much more plausible evidence of governmental implants and microchips. In the Southern California Law Review, Feb. 1974 Vol. 47 no.2, Michael Shapiro wrote the article Legislating the Control of Behavior Control. On page 239 he quotes P. London, Behavior Control 4-5 1969;

Means are being found in all the crafts and sciences of man, society, and life, that will soon make possible precise control over much of people's individual actions, thoughts, emotions, moods, and wills...

...Electronic miniaturization and improvements in surgery increasingly exploit discoveries of the exact locations in the brain where various behavioral functions are managed:

...radio remote controls over epileptic seizures, sexual desire, and speech patterns are already operational.

The U.S. public should have the facts so that they can decide. Unfortunately, the U.S. government is not going to talk about their illegal behavior or classified research. The U.S. public should be aware of the numerous claims that the U.S. government have used and continue to use electromagnetic weapons to control the so-called subversive and anti-government elements of society. Unfortunately the CIA and other government institutions have not been responsive to claims of abuse. Government officials should not be above the

law and have different rules which allow illegal acts to go unreported as a result of classified work under the national security law.

[Contents](#)

Whistleblowers Silenced with Electromagnetic Harassment Technologies and Tools

The April 10, 1988 San Francisco Chronicle reported Secret Agent for the Feds Now Lives in Fear of Them. Rex Niles was an FBI whistleblower and his "unprecedented cooperation" led to the conviction of 19 industry buyers and supervisors on fraud, tax evasion and kickback charges. Government officials estimate that Niles had handed over millions in under-the-table payments of leading electronics contractors. He participated in the Federal Witness Protection Program and now he is suing the government. He reported "an assault of microwaves and x-rays" and had documented proof of high levels of radiation. He was harassed in many ways, including lack of sleep and he described a noise campaign which included "aggravating his conscious as well as my subconscious mind."

Here are the facts. Knowledge of electromagnetic technology is available in unclassified as well as highly classified sources. Just one example is as follows. On the 1986 Special Report CNN news program, Chuck DeCaro asked the Pentagon repeatedly about microwave weapons and after months of waiting, the Pentagon replied, "Radiofrequency weapons are too sensitive to discuss." There is a documented and recent congressional reports of illegal domestic surveillance and harassment of so called anti-government types of people by intelligence agencies such as the NSA, the FBI and the CIA.

Additionally, government lying and cover up is commonplace, for example in the Iran-Contra case and the Gulf War Syndrome. The book Whistleblowers, Exposing Corruption In Government and Industry by Myron Peretz Glazer and Penina Migdal Glazer, 1989 documented a history of the loss of jobs and harassment of whistleblowers. One famous whistleblower, Karen Silkwood was killed in a mysterious car crash while on her way to a news reporter and important documents of radiation worker's unsafe conditions were somehow lost. Rex Niles was a competent and successful businessman and he has physical proof of high radiofrequency levels. Yet he was considered mentally ill and his claim was not investigated.

A 40 year old professional woman who reported investor fraud to the FBI in 1986 was subsequently targeted. She is an environmental, health and safety engineer and is now targeted with surveillance, documented high levels of radiation, mercury poisoning, stolen work records and more. She believes that she is being systematically discredited and harassed in order to stop her whistleblowing activities.

Here is another tragic example. A nurse filed a workmen's compensation claim in 1996 because of a diagnosed allergy to latex gloves. Electronic harassment began a few months later. This nurse reported a cluster of symptoms that matched known intelligence harassment techniques. She reported harassment such as numerous break-ins of her car and apartment with objects rearranged, phone tampering, inexplicable electrical equipment problems, noise campaigns which disrupted her sleep and discrediting techniques of physical electromagnetic harassment. If she naturally discussed her symptoms, it was designed to sound paranoid and "crazy". Physical evidence was disregarded and her complaint was ignored as that of a sick

person. The increasing numbers of cases need to be investigated in depth and not superficially dismissed.

[Contents](#)

Reports of Prison Experimentation

Since the 1960s, U.S. prisoners have reported physical and psychological torture with remote electromagnetic technologies. John Ginter and many other prisoners describe a strikingly similar cluster of torture techniques that matches the development and description of electromagnetic technology.

Behavioral control experiments on prisoners has a long history. For example, in the 1974 Congressional hearing entitled Individual Rights and the Federal Role in Behavior Modification, abuses at California's Vacaville prison in the early 1970s included psychosurgery and behavior control drug experimentation using a paralyzing drug called anectine. Anectine causes a prolonged seizure of the respiratory system that some have described as "worse than dying." Researchers stated that they had tested it in an aversive treatment program as "a means of suppressing hazardous behavior {e.g., repeated assaults, attempted suicide.}" In the 1974 Southern California Law Review Vol. 47:247 in an article entitled Legislating the Control of Behavior Control, Michael H. Shapiro commented about the illegal Vacaville prison experiments;

"Such gross assaults upon personal autonomy should dispatch any notions that officialdom in general or the medical profession in particular can safely be left to their own devices in determining the nation and occasions for intervention in human mentation for purposes of achieving mind/behavior control."

Dr. L.J. West, director of the UCLA Neuropsychiatric Institute proposed a new Center for the Study of Violent Behavior which would have used prisoners at Vacaville and other sites. It was heavily supported by Governor Reagan. The 4-1-73 San Francisco Chronicle article stated "Although the description does not say brain surgery will necessarily be carried out, West says it's one means possible to control violent behavior. ...The most potentially controversial project is called "Violence Prediction and Brain Waves."

In a Los Angeles Times article dated 4-16-73, West denied that psychosurgery would be performed at the Center. But leaked copies of the proposals stated otherwise. The Center was not approved, in part a result of heavy public opposition.

Dr. West also has a long history of behavior control research. A government memorandum entitled "Interrogation Techniques," dated 1-14-53 stated, "If the services of Major Louis J. West, USAF (MC), a trained hypnotist, can be obtained and another man well grounded in conventional psychological interrogation ...a well-balanced interrogation research center could be established ..." According to the New York Times, Dr. West worked on LSD experiments financed by the CIA.

Dr. West is still at UCLA and is listed as a contributor to the 1996 USAF Scientific Advisory Board's "New World Vistas" report. He is believed to be the anonymous author of a paper in this report entitled "Biological Process Control". This paper describes the future use of electromagnetic technology on the human system that "would render an opponent incapable

of taking any meaningful action involving any higher motor skills, (e.g. using weapons, operating tracking systems)."

It is a fact that nobody likes to admit but torture is an ancient and well established institution of socialized human behavior. As reported in New York Times Magazine, Dec. 28, 1997 in the article To Hell and Back "The primary purpose of torture is not to elicit information--it produces lies more often than truths--but to break the victim's personality. In this torture is wildly successful." Whether torture is now high-tech and occurs in prisons or to whistleblowers or to control "dissidents" it is still just another form of the act of torture and is a part of human nature always to be watchful for and prevented.

Nonconsensual Classified Government Experimentation

Cheryl Welsh, a government major at California State University, Sacramento described her case as "like an electronic prison." Any and all electrical systems in her environment, including the brain are targeted, controlled and manipulated 24 hours a day. The technique of stimulus, response as in a psychology experiment are used to find weaknesses and a breaking point." The CIA's LSD and military man-break experiments used extremes of stress in similar way. Welsh's case is like the unwitting radiation victims who went to hospitals and were experimented on. She too happened to be in the wrong place at the wrong time when the U.S. government was looking for unwitting victims to establish baseline studies for military purposes.

Welsh has alleged that scientists are studying her brain to establish the limits of the technology. In the 1940s, the effects of a radiation dose of a plutonium vitamin were not known. Similarly, science has not established the military uses and health effects of microwaves and other electromagnetic frequencies. Like radiation victims, electromagnetic victims today are discounted. In spite of these hurdles to overcome, Cheryl is determined to stop this ongoing experimentation and to prove that it is real, even if it is invisible and classified.

Here is a book excerpt in support of her allegations. From Mind Wars by Ron McRae, St. Martin's Press, 1984. Mr. McRae served five years in the Navy and worked with columnist Jack Anderson in 1979. He is a correspondent for The Economist.

There is, according to the best sources, a real threat in the electronic manipulation of the human mind. The possibility arose from research that attempted to explain telepathy electromagnetically. Unfortunately, although the researchers did not discover, as they sought, that thoughts could influence long-range electromagnetic radiation, they did discover that long-range electromagnetic radiation might influence the mind. According to Barbara Honegger [Barbara Honegger was on the Reagan White House staff], "the fundamental reason for the increased interest" in psychic warfare, and the area where the Pentagon spends most of its estimated six-million-dollar annual budget for psychic or related research, "is initial results coming out of laboratories in the United States and Canada that certain amplitude and frequency combinations of external electromagnetic radiation in the brain-wave frequency range are capable of bypassing the external sensory mechanism of organisms, including humans, and indirectly stimulating higher-level neuronal structures in the brain. This

electronic stimulation is known to produce mental changes at a distance, including hallucinations in various sensory modalities, particularly auditory.

There are over 1,000 networking victims, according to the organization Citizens Against Human Rights Abuse, one of several human rights groups documenting this issue. They all describe torture, which makes sense as the U.S. government is developing electromagnetic weapons that kill. Victims are describing several sets or clusters of symptoms and it would support the logical conclusion that today, there are many different classified government experiments and umbrella projects and so there are different descriptions. Every nerve of the body and mind can be remotely targeted, manipulated and controlled. Pain can be inflicted and used along with behavior modification techniques.

This quote is another of the many fact in support of victim's allegations. From *The Mind Manipulators*, A non-fiction account by Alan W. Schefflin and Edward M. Opton, Jr., Paddington Press Ltd. 1978. Mr. Schefflin taught at Georgetown University and Mr. Opton is a graduate of Yale, Duke and UC Berkeley. The book jacket stated;

Ten thousand pages of formerly top secret U.S. army and C.I.A. documents prove that for twenty-five years United States government agencies undertook the most extensive mind-manipulation program in the history of the world. Every conceivable method for molding the mind was explored and refined, many of them tested on unwitting American citizens.

Psychologists, psychiatrists physicians, prison officials, scientists, lawyers and politicians have, for decades, been involved in mind-control research in hospitals, laboratories, universities, mental institutions, medical offices, prisons and schools.

Thoughts can be read remotely and played back; another person will repeat exactly what the victim just thought. Brainwashing and personality breaking techniques are used. Microwave hearing, the hearing of voices beamed into the victim's head via microwaves is reported in most cases. There are many articles in the open literature discussing "microwave hearing". Dr. Becker wrote the book *Body Electric* in 1985 and reported that "in 1973 Dr. Joseph C. Sharp of the Walter Reed Army Institute of Research heard and understood spoken words beamed to him in an echo-free isolation chamber via a pulsed-microwave audiogram (an analog of the words' sound vibrations) beamed into his brain. Such a device has obvious applications in a covert operation designed to drive a target crazy with "voices" or undetectable instructions to a programmed assassin."

Victims also allege that dreams and memories are manipulated. Movements and consciousness, heart rate and many bodily functions are reportedly monitored and controlled. These and other symptoms can be correlated to the past well documented mind control research and the extrapolation to the highly likely fact that the mind control research is continuing and is as classified as a Manhattan Project. One example of the history of mind control research is from *The Search for the Manchurian Candidate* by John Marks, Times Books, 1979 p. 164.

Chapter 10 The Gittinger Assessment System. While on the CIA payroll, toiling to find ways to manipulate people, Gittinger created a unique system for assessing personality and predicting future behavior. He called his method-appropriately-the Personality Assessment System(PAS)....it was Gittinger, the staff psychologist, who sold his PAS system to cynical, anti-gimmick case officers in the Agency's Clandestine Services. And during the Cuban

missile crisis, it was Gittinger who was summoned to the White House to give his advice on how Khrushchev would react to American pressure. ...He was building a unique data base on all phases of human behavior and he needed samples of as many distinct groups as possible. ...In huge numbers, the Wechslers,[a personality test] came flowing in-29,000 sets in all by the early 1970s-each one accompanied by biographic data. ...In 1962 Gittinger and his co-workers moved their base of operations from the Human Ecology headquarters in New York to a CIA proprietary company, set up especially for them in Washington and called Psychological Assessment Associates. ...In 1973 John Gittinger and his longtime associate John Winne, ...published a basic description of the PAS in a professional journal. ...In 1974, I wrote about Gittinger's work in Rolling Stone magazine. Gittinger was disturbed that disclosure of his CIA connection would hurt his professional reputation. ...He saw no ethical problems looking for people's weaknesses"... ...In August 1977 Gittinger publicly testified in Senate hearings.

Another example is from The Mind Control Papers, ISBN 0-915509-35-3, 1980. Published in Freedom News Journal. Based on released CIA documents.

17 December 1963 Memorandum for: Deputy Director of Central Intelligence. Subject: Testing of Psychochemicals and Related Material. By brain-computer radio communication cognitive manifestations such as thoughts and visual impressions or emotions, behaviour and psychological reactions can continually be registered, making it possible for secret police authorities, medical scientists and the state to observe an individual in a deeper and more comprehensive way than the person could possibly do himself. As far as we are able to ascertain, documents which trace the developments in this gruesome science have been drafted as long ago as 1951 when the CIA decided to coordinate efforts with the army, navy and air force, and Project Artichoke was born. A 1952 memorandum describes its mission as follows: Evaluation and development of any method by which we can get information from a person against his will and without his knowledge. Can we get control of an individual to the point where he will do our bidding against his will and even against such fundamental laws of nature such as self preservation? How could we counter such measures if they are used against us?

[Contents](#)

Innumerable Victims Not Getting Help: One Major Obstacle

Most victims are labeled mentally ill but in fact are reporting a cluster of similar symptoms and have physical evidence to prove that mental illness is not the cause. Usually relatives, police or lawyers who have no knowledge of the technology demand a psychiatric evaluation and that is the end of any chance of justice for the victim. As is common practice, the psychiatric diagnosis is made based on the patient's account and the doctor or therapist's training. While the patient may present personal reports of high or unusual radioactivity and newspaper accounts of the current practice of surveillance of prisoners via satellite and scientific papers on classified electromagnetic weapons and reports on unclassified nonlethal weapons development over the last 40 years, this has not stopped a mentally ill diagnosis. Even with a history of long term good mental health, the psychiatrist has diagnosed schizophrenia. The fact that "microwave hearing" or "synthetic telepathy" is a documented military weapon is considered irrelevant.

Headlines such as "FBI Wanted to Test Mind Control Device on Koresh " by the Press Association Newsfile, March 3, 1994 have not been linked to the current victim's situation. Most psychiatrists have not considered the possibility that the U.S. government would today test electromagnetic weapons on the victim in their office. This alleged experimentation is rooted in Cold War mentality and because the guilty scientists don't want to get caught and the U.S. government does not want a public outcry, the alleged illegal experimentation stays classified and continues. Here is an example from *The Search for the Manchurian Candidate* by John Marks, p 59.

The CIA's secrecy was also clearly aimed at the folks back home. As a 1963 Inspector General's report stated, "Research in the manipulation of human behavior is considered by many authorities in medicine and related fields to be professionally unethical"; therefore, openness would put "in jeopardy" the reputations of the outside researchers. Moreover, the CIA Inspector General declared that disclosures of certain MKULTRA activities could result in "serious adverse reaction" among the American public.

Victim's allegations are plausible since scientists would need to know the human effects of electromagnetic weapons. The proof is growing as the governments now want to use this technology and are declassifying some of it. Here is an article that describes weapons that match victim's symptoms. *STILL UNDER WRAPS*, *Aviation Week & Space Technology*, June 7, 1993 p. 35.

The recent Branch Davidian Standoff in Waco, Tex., prompted interagency debates about deploying new nonlethal, disabling weapons, according to a congressional aide. The Army, Air Force and Central Intelligence Agency all have developed some of the specialized arms. One is an optical munitions that produces bright laser lights causing temporary blindness. Low-frequency acoustic beams can inflict disabling pain. High-tech power generators can destroy electrical devices, including communications. In the end, it was decided to keep information about the weapons under wraps. This was done to avoid tipping off potential foes about how far the technology has advanced.

The fact that the U.S. government has a well-documented history of illegal behavior control experiments on U.S. citizens is not linked to the fact that there are abundant examples of recent experimentation and government abuse such as the Gulf War Syndrome in which veterans were misdiagnosed with stress-related illnesses. Again, this has not been linked to the current victim and a diagnosis of psychosis or delusions is made if the patient discusses government surveillance, even though government motive and technology is documented and presented.

Also, the ordinary victim has tremendous financial and practical problems in presenting proof of radiofrequency weapons used on themselves. Microwave sickness is still controversial and not well documented in the U.S. medical literature. Many other problems exist such as the fact that the perpetrators could easily turn off the signals when the victim attempted to monitor for signals with a spectrum analyzer, which is very expensive equipment.

Victims of torture and traumatic experiences have difficulty describing their experience to others. It often sounds 'crazy' and is very painful to recount. This is no small problem as seen in the following example. The New York Times, Dec 21, 1997 article "Learning to Assess Accounts of Torture" reported that immigration officers took classes to identify signs of torture so that they could "better judge whether refugees are truly the victims of torture and

deserve Government protection." Immigration officers were taught to listen to refugee's accounts of why they must stay in the U.S "without touching off an onslaught of traumatic memories for the refugee."... "Torture survivors are arriving with symptoms that are becoming more difficult to discern." ... "Tragically, torturers around the world are becoming increasingly sophisticated in the methods they use" said Dr. Allen S. Keller. The training included discussions of sleep deprivation, mock executions and other forms of psychological torment that leave no telltale marks."

Slowly, medical doctors are realizing that the technology exists and victims allegations are based in reality. On November 24, 1997 in the Spotlight, Dr. Byron T. Weeks, MD and retired reserve colonel USAF, MC wrote in support of Shirley Allen, the Illinois woman who was under a six week siege by state police. Her relatives wanted her to go for a mental health exam and she refused. Mrs. Allen, a 51 year old widow and nurse "... is a citizen with an exemplary record, who has never committed a crime against society....She has not been a demonstrable threat to her neighbors, and is almost universally respected as an upstanding citizen." She was deprived of water, plumbing, electricity and heat by authorities until the siege ended by force. "Widespread criticism of police was reported at the national level according to the Illinois Sun-Times Oct. 31, 1997. Mrs. Allen claimed someone was "directing radar waves" at her. Dr. Weeks stated "This may not be as irrational as it sounds, in view of the reported use of Extra-Low Frequency (ELF) electromagnetic waves, attuned to the human brain waves, that can induce visual and auditory hallucinations."

A lawyer and psychiatrist have submitted letters of support of two more mind control victims. The letters were recopied with background information in U.S. GOVERNMENT MIND CONTROL EXPERIMENTS ON CHILDREN COMPILED BY JON RAPPAPORT, (213) 243 9005. Author's Note: Originally, Valerie Wolf and her patients were invited to testify before the Committee because doctors named by these patients as involved in administering mind control had also previously, been named by radiation victims as doctors who gave them doses of radiation. ADVISORY COMMITTEE ON HUMAN RADIATION EXPERIMENTS, 1726 M ST. N.W., SUITE 600 WASHINGTON, D.C. 20036.

The Advisory Committee on Human Radiation Experiments is a 14-member committee of nationally recognized experts in the areas of bioethics, history of science, radiation biology and oncology, epidemiology, law and nuclear medicine. The Committee also includes a public representative. Appointed by the President in April 1994, the members are to prepare a report due in 1995, about the use of human beings as subjects of federally funded research using ionizing radiation.

Valerie Wolf, therapist: "I am here to talk about a possible link between radiation and mind control experimentation that began in the late 1940's. The main reason that mind control research is being mentioned is because people are alleging that they were exposed, as children to mind control, radiation, drugs and chemical experimentation which were administered by the same doctors who are known to have been involved in conducting both radiation and mind control research. Written documentation has been provided revealing the names of people and the names of the research projects in statements from people across the country. It is also important to understand that mind control techniques and follow ups into adulthood may have been used to intimidate these particular research subjects into not talking about their victimization in government research."

Dr. Colin Ross, psychiatrist and author of books on dissociative identity disorder (DID): "I became interested in CIA and military mind control when patients with DID began describing involvement in mind control research occurring on military bases and in hospital settings. ...I began to do background reading and research on mind control in 1992. ...Drs. Orne and West (UCLA) are still alive. ...They and many other still living individuals could be called to testify at hearings. ...Although the reality of this research is not documented, the possibility that it is real is so serious that a formal investigation is warranted. Although some or many of the DID patients' memories may be distorted or inaccurate, it is not plausible that the CIA and military intelligence agencies simply stopped this research in 1973, as they claim. ...I would be pleased to testify at length at any hearings on CIA and military mind control. Sincerely, Colin Ross, M.D.

March 9, 1995, To Whom It May Concern: My name is Alan W. Schefflin. I am a Professor of Law at Santa Clara University Law School, and a judicially recognized expert in mind and behavior control. I co-authored a nonfiction book about government mind control programs entitled "The Mind Manipulators," which was published in a dozen countries....I am writing in support of the testimony of Claudia S. Mullen and for the purpose of encouraging the opening of secret government files on radiation and on mind control. ...I know that many of the stories that will be told by witnesses will sound unbelievable. Please do not dismiss them out of hand. ...Release of remaining documents on secret government experiments is in the public interest and would not threaten national security. ...It would be my pleasure to supply any additional information requested. Sincerely, Alan W. Schefflin, Professor of Law.

The British Medical Journal Volume 315, July 12, 1997 p.72 by Robin M. Coupland, Surgeon and editor of the SIrUS Project, International Committee of the Red Cross wrote an article entitled "Non-lethal weapons: precipitating a new arms race, Medicine must guard against its knowledge being used for weapon development". He wrote about "...devices generating infrasound or electromagnetic waves, and devices for riot control." He then states "Rather than sutured wounds, skin grafts, or amputations, will the soldiers who have survived battlefields of the future return home with psychoses, epilepsy, and blindness inflicted by weapons designed to do exactly that?" It is critical that physicians and psychiatrists are aware of this problem, investigate and speak out.

Victims Are Not Getting Help: How Health and Human Rights Issues Are Handled by Our Present System

A good analogy of why victims have not been helped and the problems involved, can be found in the history of smoking and tobacco companies. Since the 1960s, the harmful health effects of cigarette smoking has been known but that did not stop the tobacco companies from exploiting and profiting from cigarettes for 50 years. The dark side of human nature and entrenched government bureaucracy are a few of the underlying reasons. Similarly, nonconsensual government experimentation using electromagnetic technologies has not been resolved for almost 50 years.

The August 31, 1997 New York Times Magazine article by Michael D'Antonio entitled Atomic Guinea Pigs stated the following.

For decades, those who claimed to be victims of clandestine radiation experiments conducted by the United States government were dismissed as paranoid. At the Department of Energy, which oversees America's nuclear-weapons research, these people were referred to collectively as "the Crazies." but the opening of cold-war archives has brought the Crazies in from the fringe.

It is a consistent pattern of human nature to call the victim crazy. This is repeating for hundreds of electromagnetic victims. Also, governments such as Russia have used psychiatric illness to frame 'enemies of the state' such as Alexandr Solzhenitsyn and Andre Sakarov. To a lesser extent, the U.S. has discredited 'subversive elements' in counterintelligence programs, (The Watergate burglars broke into the psychiatrist's office of Daniel Ellsberg of Pentagon Papers fame, to steal his records, ostensibly to find damaging evidence.) Knowing these facts of human nature and political repression should help in correcting this problem. When Seymour Hersh, the highly respected investigative journalist wrote books and articles on biological warfare in the 1960s, he was reported to have "regularly received twenty-page reports from various persons alleging incredible CIA ventures into brainwashing and mind-control, Frankensteinian technology, conspiracy with the UFO monsters." This was reported in *Psychic Warfare*, edited by John White, 1988. In an essay by Michael Rossman, p 142-3, he also reported receiving letters about victims of experiments in telepathic control conducted by military psychologists. Another victim reported parapsychological means of a spying plot. Rossman then concluded " I thought you were crazy. ...Nor had I collected until now the data to suggest plausibly that the CIA et al. might actually have had the means and purposes to do what you [the victim] describe."

I can only add the innumerable accounts of victims trying to obtain help from the U.N., the ACLU, the FBI, the Department of Justice, the FCC, Congress, lawyers, etc. Some electromagnetic scientists such as Dr. Ross Adey at UCLA and authors such as Dr. Robert Becker, (Electromagnetic Man) and Paul Brodeur, author of *The Zapping of America*, all have reported hundreds of letters from victims dating back to the 1960s. Martin Cannon, a mind control researcher wrote in the British magazine, *Lobster* an article entitled *Mind Control and the American Government*, 1993 that many senate and congressional and state representatives have a 'wavie' file, allegations and pleas for help by victims of clandestine bombardment with non-ionizing radiation or microwaves. Mary Ann Dufresne of Senator Glenn's office has received volumes of mail from victims alleging illegal experimentation. (Per phone call November 1997.) Senator Glenn is the sponsor of S193, the Human Research Subject Protections Act of 1997, which has stalled in the Committee on Labor and Human Resources.

This is large group of people that have not been helped for a very long time. Now is the time to do something about this.

Brian Wronge is a typical case of an implant victim who did not get help. Maitefa Angaza of *The City Sun*, Dec. 21, 1993 in an article, "SciFact-Not Fiction: High-Tech Slavery Is Here" reported Wronge's allegations of experimentation and his fears of being harmed if he exposed this. He was "shuffled back and forth to several prisons and psychiatric facilities in an attempt, he believes to build a criminal and psychiatric profile on him and discredit any charges he might make in the future."

Roger Hutcheon of the Physicians for Human Rights (PHR) followed up on Wonge's story in a *City Sun* article entitled "Implant Victim Refused Help by Humanitarian Physicians". "The

Boston chapter of PHR refused last month to examine or treat government implant victim Brian Wronge, against protest of some of its members." A CT scan report by MRI-CT Scanning Inc. and MRI report by Diagnostc Imaging Associates, both of New York were both positive for "paramagnetic metallic foreign bodies" in his head and chest in 1991.

"A federal Eastern District court judge Justice Reena Raggi, has Wronge's lawsuit against the state of New York pending, instructing Wronge to find a surgeon to remove one of the implants. However, in the three years since the may 1991 lab reports, no surgeon would remove the implants, usually citing FBI retaliation as the reason." "The PHR board, according to director Eric Stover, decided in a meeting in mid-June to refuse assistance to Wronge." PHR formed in 1986, has a large membership and a documented mandate of this group is 1. To stop torture that is committed by a government.

Again, this fits the history of government mind control. A Washington Post August 7, 1977 article by John Wilhelm stated that Dr. Andrea Puharich invented a miniature tooth radio, reportedly for the CIA, back in the 1950s. He presented a paper in 1952 to a Pentagon conference entitled "On the Possible Usefulness of ESP in Psychological Warfare".

And the negative impact of the national security act on victim's efforts to obtain help cannot be overemphasized. After 50 years of classified research, there is overwhelming evidence that the military and corporations are involved in mind control. And there is no oversight mechanism to stop the pattern of electromagnetic technology abuses. This is a compelling example. From Angels Don't Play This Haarp, Advances in Tesla Technology, by Dr. Nick Begich and Jeane Manning, Earthpulse Press, 1995.

Page 5. The HAARP (High-frequency Active Auroral Research Project) story, when first viewed from a limited exterior viewpoint, looks like a harmless research project. When viewed from a wider perspective, we begin to see that HAARP is a secret undertaking that is not unlike the Manhattan Project which gave us the atomic bomb.

P. 104-6. E-Systems was the subject of a lengthy article in the Washington Post by staff writer John Mintz {October 24, 1994, p. A1,A10.}. He disclosed that E-Systems' technologies were "part of the central nervous system for the nation's intelligence community". \$1.8 billion of their \$2.1 billion in sales, was for classified projects. A large part of the projects came from the National Security Agency (N.S.A.) and Central Intelligence Agency (C.I.A.) and other intelligence organizations. Many of the company employees are former personnel from the N.S.A., C.I.A. and military retirees. People with highly technical backgrounds and a history of working in government intelligence circles are hired by the company almost automatically, according to the Washington Post article. Retired Navy Admiral William Raborn, C.I.A. director under Lyndon B. Johnson, for years served on the board of directors.¹³⁹ Did the C.I.A.'s favorite contractor and, the world of high-tech transmitters and joined in the HAARP program?

E-Systems was one of the featured stories in a CBS, 60 Minutes segment which was aired February 26, 1995. The report echoed the assertions which were made in the Washington Post article. The company was described as an organization operating in the "black world" --an area so secret that employees are not permitted by law to discuss anything about their work except with those individuals who have an official "need to know" classification. Of the company's annual sales, 85 percent was for classified work, with an estimated \$800 million involved in projects so sensitive that the government denies that the projects even exist. The

story went on to paint a picture of an organization which thrives on contracts issued by the C.I.A., N.S.A. and military intelligence organizations.¹⁴⁰ (E-Systems, 60 Minutes, CBS News, N.Y., N.Y., February 26, 1995.

P. 106. Could the marriage of technologies in these companies create the possibility of those types of uses contemplated in intelligence bloodless warfare and manipulation of mental functioning? E-Systems has amassed huge capabilities for the most secret organizations in the country, and the gained control of the HAARP technologies. (And now Raytheon owns E-Systems, according to the authors.)

There are complex contributing factors to the problem of government mind control. This has been an overview of some of the main points.

[Contents](#)

Conclusion

The evidence is growing. Government mind control is no longer science fiction. The problem is very serious and relevant to every U.S. citizen's future. This is the weapon that intelligence, military and police agencies have always pursued, a weapon of total control over the enemy. The world super powers are motivated to keep this powerful technology classified and have resources that victims do not. It is up to the U.S. public to stop nonconsensual experimentation and illegal domestic intelligence programs using electromagnetic and neurological technologies on U.S. citizens.

[International Organizations' Involvement](#)

[Chronology of Newspaper and Periodical Articles](#)

[Some Conclusions](#)

[C.A.H.R.A. Home Page](#)

This article will list **two United Nations documents** which reflect the development of electromagnetic anti-personnel weapons. Then an article and book by **international human rights organizations** which are also working on this issue will be summarized. Finally, there is a **chronology of newspaper and journal articles from 1977 to 1998** documenting the international discussions on electromagnetic arms control and a short **conclusion**. Important points are **highlighted** so that the article can be skimmed.

There is overwhelming evidence of electromagnetic technology development for anti-personnel military purposes, as this article will demonstrate. Victims are coming forward in all major countries and are **claiming that their governments are experimenting on them with electromagnetic technology in a cruel, inhumane fashion**. The following factual documentation strengthens the claims of government nonconsensual experimentation, especially when this technology has its roots in cold war mentality and in light of the fact that **all major countries have a long history of electromagnetic weapons research and development**.

The main point of this article is that while people have good intentions, reality is very different. It is so critical to know this about people and to plan for this glaring problem. People do terrible things like radiation experiments. The nuclear arms race took on a life of its own and no one accepts the blame for spending billions of dollars on the arms race. Deception and rationalization and economic factors are a few of the main driving forces behind what is actually happening today. **This same pattern has and is occurring with electromagnetic weapons.**

Compelling and irrefutable evidence is presented in this article. In time, victims will break through the unfortunate patterns of human nature such as not wanting to believe that abuses are happening today. Victims are suffering horribly and that is why this is an urgent problem. Hopefully this article will speed up the process.

UN Committee on Disarmament Discussed Electromagnetic Weapons from 1979 to 1998

One excellent book is *The United Nations and Disarmament: 1945-1985* by the UN Department for Disarmament Affairs. (1985) New York, UN Publication Sales No. E.85.IX.6. It describes electromagnetic weapons issues from 1975 through 1985. This East West political disagreement, as described in this excerpt from pages 114-116, continues today.

New types of weapons of mass destruction and new systems of such weapons; radiological weapons

The question of new weapons of mass destruction has been under continuous consideration in the General Assembly and in the Conference on Disarmament for a number of years. The item "Prohibition of the development and manufacture of new types of weapons of mass destruction and new systems of such weapons" was first included in the agenda of the General Assembly in 1975 **at the initiative of the Soviet Union**, which submitted a draft international agreement. The topic is at present on the agenda of the Conference on Disarmament.

The Soviet Union and other socialist States in the Conference advocate a general prohibition of the development of new types and systems of weapons of mass destruction, on the ground that it is always more difficult to eliminate weapons after they are deployed than to ban their development and manufacture. With respect to the scope of the prohibition, those States have suggested that new types of weapons of mass destruction should include any type of weapon based on qualitatively new principles of action with regard to method of use, the target to be attacked or the nature of impact. **Most Western countries, while agreeing that the subject should be kept under review, have taken a different approach, namely, that new scientific developments should be dealt with individually as they arise and appear to have a weapons potential.** They have also held that the various developments pointed out by the Eastern European States as potential new weapons of mass destruction fall within categories that

have already been identified and should be covered in that context, rather than as new weapons of mass destruction.

The Final Document of the 1978 special session of the General Assembly stated in paragraph 77 that in order to help prevent a qualitative arms race and so that scientific and technological achievements might ultimately be used solely for peaceful purposes, effective measures should be taken to avoid the danger and prevent the emergence of new types of weapons of mass destruction based on new scientific principles and achievements. The same year, the General Assembly, at its regular session, adopted two separate resolutions on the issue, one sponsored by the Western States and the other by the Eastern European States, reflecting the respective approaches.

Subsequently, **the Soviet Union clarified its position** by calling for a comprehensive agreement on the prohibition of new weapons of mass destruction that would be accompanied by a list of specific types to be banned, with the possibility of adding to the list in the future and the possibility of concluding separate agreements on specific new types of weapons as they emerged. To that end, **in 1979, the Soviet Union submitted a document to the Committee on Disarmament in which it listed some types of potential weapons of mass destruction, such as:**

- a. Radiological weapons (using radioactive materials) which could produce harmful radiation effects similar to effect of a nuclear explosion;
- b. Particle-beam weapons based on the use of charged or neutral particles **to affect biological targets**. Sufficiently powerful bundles of particles could be produced in accelerators used for research; in some operating accelerators, the energy of accelerated particles attained hundreds of millions of electron volts. Reduction of the size and weight of accelerator systems and power sources could permit their use as weapons;
- c. **Infrasonic "acoustic radiation" weapons. they would utilize harmful effects of infrasonic oscillations on biocurrents of the brain and nervous system;**
- d. **Electromagnetic weapons operating at certain radio-frequency radiations, which could have injurious effects on human organs. Within a few years, devices capable of directional transmission of electromagnetic radiation of enormous power over distances of several hundred kilometres might be developed, and radiation density in excess of safety standards could be produced over areas measuring dozens of square kilometres.**

In response, the United States and other Western countries, while expressing readiness to work out agreements on specific types of weapons which might be identified, took the position that a single treaty on the subject of all potential new weapons of mass destruction would have to be so general in its scope and so vague in its definitions that it would not be effective.

Every year since 1979, the General Assembly, on the initiative of Eastern European and non-aligned States, has adopted resolutions on the issue which, in the light of the different positions held, **have not received the support of Western States in the voting.** In its resolutions, the Assembly, among other things, has requested the negotiating body in Geneva to conduct negotiations, with the assistance of qualified government experts, **with a view to preparing a draft comprehensive agreement on the prohibition of the development and manufacture of new types of weapons of mass destruction and new systems of such weapons and,** where necessary, specific agreements on particular types of such weapons. **Since 1981, the General Assembly has further called upon the permanent members of the Security Council and other militarily important States to make declarations renouncing the creating of new types and systems of weapons of mass destruction, to be subsequently approved by the Security council.**

In the Committee on Disarmament, the issue was discussed mainly during plenary meetings. In 1981 and 1982, periodic informal meetings were held with the participation of experts in order to identify cases which might require particular consideration and which would justify the opening of specific negotiations.

At its 1983 and 1984 sessions, that negotiating body discussed the question at plenary meetings and intends to do so in 1985. The item under which the matter is considered is entitled: "New types of weapons of mass destruction and new systems of such weapons; radiological weapons". The Soviet Union and other socialist States have stressed the need for an *ad hoc* group of qualified governmental experts to elaborate both a general agreement and separate agreements on specific new weapons of mass destruction. **Western States, while restating their view on the matter have pointed out anew that no such weapon has been identified so far** and that the so-called nuclear neutron bomb, for example, about which concern has been expressed, could not be considered as a new weapon as is clearly a nuclear weapon and not based on new scientific principles. During the debate it has also been suggested that **the more powerfully armed states should adopt unilateral measures to prevent the use of scientific and technical discoveries for military purposes.** Because of these differences of approach, it has not been possible to establish an *ad hoc* group or other subsidiary body of governmental experts.

Prohibition Negotiations

This very important document, to follow in its entirety, described electromagnetic technology in detail. **This clearly and irrefutably establishes the fact that the superpowers were concerned and undoubtedly were developing electromagnetic anti-personnel weapons in 1979. This is worth reading. Mr. Harlan Girard of the International Committee on Offensive Microwave Weapons found this document at the UN library in New York.**

The title is: "Negotiations on the question of the prohibition of new types of weapons of mass destruction and new systems of such weapons".

U.N Committee on Disarmament document CD/35 10 July 1979 by V.L. Issraelyan, Representative of the USSR to the Committee on Disarmament.

Union of Soviet socialist Republics

Negotiations on the question of the prohibition of new types of weapons of mass destruction and new systems of such weapons

In the context of the current scientific and technological revolution and the unprecedented increase in the role of science in accelerating the general progress of mankind, there is, quite objectively, a growing danger of scientific and technological achievements being used to develop new weapons and, what is particularly dangerous, to develop new types and systems of weapons of mass destruction. As everyone knows, the process by which new weapons are developed -- once started -- is extremely difficult to stop. It is therefore vitally important, without waiting for any such irreversible turn of events, to obviate the very possibility of new types of weapons of mass destruction being developed.

To this end, the Soviet Union submitted a draft "agreement-on the prohibition of the development and manufacture of new types of weapons of mass destruction and new systems of such weapons" to the General Assembly of the United Nations in 1975. The General Assembly requested the Committee on Disarmament to work out the text of a draft international agreement on this question.

[Contents](#)

Subject of negotiations

Taking account of the progress made in the discussion of this draft agreement, the Soviet Union submitted an expanded draft agreement on the prohibition of the development and manufacture of new types of weapons of mass destruction and new systems of such weapons to the Committee on Disarmament in August 1977 (CCD/511/Rev.1). In this document, the Soviets Union drew attention to the question that must be resolved before all others, namely, that of the subject and scope of the prohibition of systems of weapons of mass destruction that is as close as possible to the 1948 forum on which there is already broad agreement among many States.

In order to make it easier to arrive at a generally-acceptable solution to the question of the scope of the prohibition, the Soviet Union considered that it would be useful for the agreement to contain both a general definition of the new types of weapons of mass destruction to be prohibited and a list of the specific type and systems of such weapons. This approach is reflected in the expanded draft agreement, the annex to which contains an approximate list of types and systems of weapons of mass destruction, including:

1. Radiological means acting with the aid of radioactive materials;
2. Technical means of inflicting radiation injury based on the use of charged or neutral particles to affect biological targets;

3. Infrasonic means using acoustic radiation to affect biological targets;

4. Means using electromagnetic radiation to affect biological target.

In order to accommodate the views of members of the Committee on Disarmament, the Soviet side had the expanded draft agreement provide for the possibility, should the need arise, of prohibiting specific new types and systems of weapons of mass destruction on the basis of separate agreements.

Thus, the proposals of the USSR on the scope and subject of the prohibition provide for:

- a. The conclusion of a comprehensive agreement on the prohibition of the development and manufacture of new types and systems of weapons of mass destruction, with a list of specific types of weapons to be prohibited;
- b. The possibility of supplementing the list of prohibited new types of weapons of mass destruction in the future; and
- c. the possibility of concluding separate agreements on specific new types of weapons of mass destruction.

Scientific and technical basis for the possible development of certain new types of weapons of mass destruction

The approximate list of possible new types and systems of weapons of mass destruction covers physical effects, the harmful or fatal consequences of which for the human organism have already been thoroughly investigated; the general level and orientations of the corresponding fields of science and technology are such that these physical effects might find a practical application in real weapons in the foreseeable future.

[Contents](#)

Radiological weapons

The danger of radiological weapons being developed is based on the existence in principle of the possibility of using radioactive materials in order to injure, damage or cause harm by means of the radioactive radiation produced when such materials decay.

The way in which radioactive materials affect human beings has been adequately studied and consists in the destruction of biological structures under the influence of the ionizing radiation resulting from the radioactive decay of such materials. There is every reason to believe that the effects of radiological weapons, should they be developed, would be similar to the effects of the radioactive materials which are formed in nuclear explosions and which cause the radioactive contamination of the area. The danger of radiological weapons appearing is increased by the rapid development of nuclear industry and technology in many countries of the world; this creates the objective conditions necessary for the widespread dissemination of radioactive materials and increases the potential danger of such materials being used to develop radiological weapons.

There is broad international agreement on the question of the need to prevent the possible emergence of radiological weapons. The joint USSR-United States negotiations on major elements of a treaty prohibiting the development, production, stockpiling and use of radiological weapons have now been successfully completed and the agreed proposals on this question have been submitted to the Committee on Disarmament for consideration.

[Contents](#)

2. Technical means of inflicting radiation injury based on the use of charged or neutral particles to affect biological targets

The danger with regard to the development of technical means of inflicting radiation injury based on the use of charged or neutral particles lies in the existence of the possibility of in principle using bundles of charged or neutral particles (electrons, protons, neutral atoms, etc.) to cause injury to biological target, and in the existence -- even now-- of the scientific and technological basis for the possible future development of sources of such particles that could be used for these purposes. It has been established with a considerable degree of certainty that the way in which the particles that can be used for such purposes cause injury is in many respects similar to the way in which the radiation from a nuclear explosion causes injury.

Sufficiently powerful bundles of charged or neutral particles can now be produced in, for example, the accelerators which are being widely used both for research on high-energy physics and the atomic nucleus and of work in other fields of science and technology, including agriculture and medicine. Several countries are already operating or installing proton accelerators in which the energy of the accelerated particles attains hundreds of millions of electron volts, high-current accelerators of the meson facility type and high-current continuous or pulsed electron accelerators. Several countries are carrying out intensive work on the development of fundamentally new methods of accelerating charged particles, and, taken together with the success achieved with regard to the development of superconducting materials, this opens up real possibilities of reducing the size and weight of accelerator systems and the sources of energy used to operate them and, in theory, paves the way in the foreseeable future for the development of powerful accelerator devices-- whose weight and dimensions could permit their use as weapons. Direct confirmation of the possibility of this happening is provided by the programme of work being carried out in the United States with a view to developing weapons using bundles of accelerated charged or neutral particles, as may be seen from published accounts of hearings in the United States Congress and other material that has appeared in the United States press.

[Contents](#)

3. Infrasonic means using acoustic radiation to affect biological targets

Weapons based on the utilization of the radiation of acoustic generators in the infrasonic range may become one of the possible new types of weapons of mass destruction. Data to be found in scientific literature convincingly demonstrate the existence of a wide spectrum of damaging effects of infrasonic oscillations on the human organism and other biological targets. The mechanism of such effects can be of the most widely varying kind -- mechanical, biological or neurochemical. Evidence of the danger of the damaging effects of such oscillations on human beings is, in particular, offered by the fact that many countries have already introduced health regulations in respect of maximum admissible acoustic effects.

Particular concern is caused by available data concerning the harmful effects of low-power infrasonic oscillations on biocurrents of the brain and the nervous system as a whole and, thereby, on the psychic condition and intellect of human beings. In assessing the potential danger of the utilization of infrasound as a weapon of mass destruction, great importance attaches to its basic physical property --that of practically unimpeded propagation over large distances without noticeable attenuation. The development of powerful engines in connexion with advances in rocket technology, supersonic aircraft and in other areas of technology offers a technical basis for creation of powerful long-range installations with characteristics which may make such installations suitable for use as infrasonic weapons.(Editor's note. This is a strikingly similar description of the Russian Woodpecker radio signal broadcast over the United States in 1976.(See CAHRA website under Timeline 1976).

[Contents](#)

4. Means using electromagnetic radiation to affect biological targets

As a result of research into the effects of electromagnetic radiation on biological targets, the existence of harmful effects of radio-frequency radiations within a wide range of frequencies on such vitally important organs of the human as the heart, the brain and the central nervous system may now be regarded as a firmly established fact. Assessments quoted in international literature of the potential danger of the development of a new weapons of mass destruction are based on the results of research into the so-called "non-thermal" effects of electromagnetic radiation on biological targets. These effects may take the form of damage to or disruption of the functioning of the internal organs and systems of the human organism or of changes in its functioning.

As regards the possibility of devising technical means of generating electromagnetic radiation, many countries already have a highly developed technical base in the field of radio engineering and radio electronics. Powerful high-frequency generators, radar devices and other radio engineering installations serving various purposes have been developed and brought into use. The development of these means reflects a common trend in that efforts are being made to improve their characteristics, increase their efficiency and reduce their dimensions. Data available in the scientific literature show that the peak capacity of electromagnetic radiation generators has increased almost a hundredfold during the past four years alone. It is expected that, in the next five or six years, means capable of the directional transmission of electromagnetic radiation density in excess of known safety standards will be attainable in areas measuring dozens of square kilometres.

It is therefore to be expected that, taking into account further achievements in science and technology, it may be possible in time to devise means of generating powerful electromagnetic oscillations whose parameters could make those means suitable for use as a new type of weapon of mass destruction.

During the course of the discussion in the Committee on Disarmament of the question of the prohibition of new types and systems of weapons of mass destruction, Soviet experts as well as experts from a number of other countries adduced concrete scientific data and facts which convincingly demonstrate that, in view of the present level of science and technology in certain areas, it is scientifically justified to speak of the possibility of developing corresponding new types of weapons of mass destruction, and in particular those listed in the annex to the expanded draft agreement. It is practically no longer possible at the present time

to dispute the fact that the possibility of developing new types and systems of weapons of mass destruction -- the consequences of whose emergence are as yet difficult to foresee -- exists, and that the problem of the comprehensive prohibition of the development, manufacture and stockpiling of new types and systems of such weapons is therefore a pressing one.

[Contents](#)

Organizational measures

Taking into account the approach adopted by the Western countries to the solution of the problem of the prohibitions of new types and systems of weapons of mass destruction, the Soviet Union took yet another constructive step, and on 28 March 1978 proposed the establishment, under the auspices of the Committee on Disarmament, of an ad hoc group of qualified governmental experts to consider the question of possible areas of the development of new types and systems of weapons of mass destruction to be included in the initial list of the types of such weapons to be prohibited under a comprehensive agreement. This would ensure an even more comprehensive study and identification of potentially dangerous areas as regards the development of new types of weapons of mass destruction. A group of this kind could continuously observe developments in this field and, at the very earliest stage of the possible emergence of new types of weapons of mass destruction, make appropriate recommendations to the Committee on Disarmament.

[Contents](#)

Other negotiations

The conduct of negotiations on the prohibition of new types of weapons of mass destruction and new systems of such weapons will be without prejudice to bilateral and multilateral negotiations relating to various aspects of arms limitation and disarmament.

The world's concern at the danger of the development of weapons of mass destruction is reflected in paragraph 39 of the Final Document adopted by the specific session of the United Nations General Assembly in 1978, which emphasizes that:

"Qualitative and quantitative disarmament measures are both important for halting the arms race. Efforts to that end must include negotiations on the limitation and cessation of the qualitative improvement of armaments, especially weapons of mass destruction and the development of new means of warfare so that ultimately scientific and technological achievements may be used solely for peaceful purposes".

The decision proposed by the Soviet Union makes it possible to achieve the prohibition of the development and manufacture of new types and systems of weapons of mass destruction in potentially dangerous areas already detected and also, in principle, to erect a barrier against the possible emergence of such weapons as a result of progress in other spheres of science and technology.

Editor's note: This is the end of the article.

International Organizations' Involvement

The history of electromagnetic weapons can be also be found in international documents such as the International Committee of the Red Cross Report. Review Conference of the 1980 Convention page 158 entitled **Future Weapons**.

"The Conference of Government Experts that met in Lucerne and Lugano in 1974 and 1976, and whose findings served as a basis for the United Nations conference that adopted the 1980 convention, discussed a number of **futuristic weapons. these included laser weapons, microwave, infrasound, and light-flash devices, environmental warfare and electronic warfare**. The experts recognized that at that time it was too early to consider specific restrictions on devices that were only at the research stage. However, the majority stress the **importance of keeping a close watch on developments in order to introduce specific prohibitions or limitations that might be necessary before the weapon in question became widely accepted**. ...as regards the futuristic weapons discussed at the Lucerne/Lugano Conference, developments in laser technology have raised the possibility of one disturbing application, namely, the use of lasers as anti-personnel weapons to damage eyesight. This matter is referred to above under the heading "Blinding weapons". There has also been further research into other new technologies, in particular **directed energy weapons such as high-power microwave and infrasound devices**. ...In particular, it is important to ensure that new weapons do not have indiscriminate effects and that they do not contravene the rule prohibiting the use of weapons of a nature to cause **unnecessary suffering or superfluous injury** to combatants."

The Stockholm International Peace Research Institute was also actively reporting on electromagnetic weapons in the 1978 book **Anti-personnel Weapons** in the chapter entitled Electric, acoustic and electromagnetic-wave weapons. Here are some very important excerpts.

SIPRI, Stockholm International Peace Research Institute. (1978). **Anti-personnel Weapons**. Crane, Russak & Company, New York.

Chapter 8. Electric, acoustic and electromagnetic-wave weapons

p.203. "It has also been suggested that at **very low frequencies, resonances may be set up at other sites in the body, such as the heart, with various physiological effects, including possibly death, as a result. It appears that these phenomena have been investigated with a view to possible military applications.**"

p. 205 "It has been known for many years that the human brain is dependent for its **normal functioning on a regular input of sensory stimuli. Sensory deprivation leads to hallucinations and finally to mental breakdown**. ...the technique 'clearly amounted to brutality' and was 'dangerous both to the immediate mental health of the individual subjected to this treatment and to the long-term health of some subjects' (Amnesty International 1971).

p. 206 "**Stroboscopic flashing has also been considered for use against demonstrators in civil disturbances**. At 5-15 Hz, it can cause various physical symptoms and it is believed that

it may **initiate epileptic seizures in a small proportion of people. The fact that flashing lights can precipitate epileptic fits has been known for many years,...** ...Possible military potential was investigated in the 1960s and a device known as the Photic Driver was developed by a British company, Allen International (New Scientist, 29 March 1973). The use of a Photic Driver by South African police during interrogation of prisoners has been reported."

p. 208 "There has been speculation on **the use of lasers as weapons** for some time (e.g., Meyer-Arendt, 1968; Foley, 1972; Born, 1976). ...It can be calculated that a 1kW CO2 laser beam will cause a localized soft tissue burn 1 cm deep over an area of 1 cm² within one second. ...Firstly, it means that the human eye is particularly sensitive to laser beams.

p. 208 The proliferation of high-power radio transmitters and powerful radars employing **microwaves has stimulated some research into the biological effects of such waves (Harrison, 1973; Lebowitz, 1972).** Microwaves are already widely used for the rapid heating of foods, and the possibility of using them as weapons provoked some discussion at the Lucerne Conference of Government Experts (ICRC, 1974). Military research into the effects of microwaves on animals and materials is continuing (U.S. Army Research and Development News Magazine, March-April 1977).

A Chronology of Newspaper and Periodical Articles on the International Electromagnetic Weapons Arms Control Debate From 1977 to 1998

1977, August 22,. Soviet Propose Ban on 'Exotic' Weapons. Aviation Week and Space Technology. pg. 21.

"Soviet Union last week proposed to the Trilateral Nuclear Arms Limitation Conference in Geneva a comprehensive agreement on development of so-called exotic weapons, including those involving charged or neutral particles. ...The Soviet proposed that development and manufacture of four general classes of weapons be prohibited. These included: **...Infrasonic means of using acoustic radiation to affect biological targets. Means of using electromagnetic radiation to affect biological targets.**

The U.S. later told the Soviets that while it viewed the Soviet proposal "with interest" it felt that **the best way to prevent development and manufacture of exotic new weapons is to keep the entire field of weapons development under review, identify new weapons or weapons concepts and then specifically tailor methods of control for each new type of weapon "to assure compliance."** The U.S. said it did not believe that nations needed to wait until a new weapon was developed to seek ways of controlling it, but that it did not believe a single treaty could cover all possible developments.

1979, June 27. Gromyko's Press Conference. BBC Summary of World Broadcasts. Part 1 the USSR;C. the aftermath of Salt-2;Su/6152/C/7; Lexis-Nexis.

Gromyko discussed new types and new systems of weapons of mass destruction and other arms negotiations.

1979, July 25. Soviet-US Initiative to Ban Radiological Weapons. Commentary by Antonin Kostka. BBC Summary of World Broadcasts. Part 2 Eastern Europe: A. International Affairs:1. General and Western Affairs;EE/6176/A1/2 Lexis-Nexis.

"...concerning a ban on the development and manufacture of **new types of mass annihilation weapons and new systems of such weapons** ...Practice has shown on more than one occasion that it is much easier and simpler to ban weapons which exist only on the drawing board than those which have been prepared for use in military arsenals. **The convention on banning devices which enable the environment to be modified for military or other hostile purposes is a very eloquent example of this.** ...The hardware of destruction advances and improves so fast that the progress of disarmament negotiations is constantly behind the development of weaponry."

1980, July 22. Chemical and Radiological Weapons. BBC Summary of World Broadcasts. Part 1 The USSR; A. International Affairs;1. General and Western Affairs; SU/6477/A1/3; Lexis-Nexis.

"The Soviet Union views the banning of radiological weapons as part of the solution of the problem of **an all-embracing ban on new types and systems of weapons of mass destruction.** ...The forthcoming ban on radiological weapons is an important confirmation of the timeliness of the Soviet initiative on the banning of the creation of new types and systems of weapons of mass destruction."

1982, May 26. Buckman, John. The U.N. and Disarmament: The Second Special Session. Heritage Foundation Reports. A UN Assessment Project Study; No 186.

This article **discussed new types of weapons of mass destruction and new systems of such weapons and the political currents** surrounding the Second Special Session on Disarmament(SSOD-II) in New York June, 1982 by the UN General Assembly. "...SSOD-II also will provide another chance for Third World countries to 'internationalize' nuclear reduction efforts and for some Soviet-inspired 'peace groups' to further their attempts at harassing and discrediting the U.S. and the West. ...Massive demonstrations are being planned with the Session with the predictable veteran radical groups churning out their usual anti-military diatribes. ...**Various "non-governmental organizations" (NGOs) are officially recognized by the U.N. as spokesmen for citizens on a host of issues,** and are accorded accreditation to take part in sessions and meetings. ...While most of the groups are legitimate associations representing the full spectrum of political ideology, no fewer than eleven of them have been identified by the State Department as "fronts" for the Soviet Union."

1983, January 27. Soviet Delegation to UN Disarmament Committee Session in Geneva. BBC Summary of World Broadcasts. Part 1 The USSR; A. International Affairs:1. General and Western Affairs;Su/7242/A1/4. Lexis-Nexis.

Editor's note: Israelyan is author of 1979 important UN document cited above. "Text of report of statement by **Viktor Israelyan**, head of Soviet delegation. ...However the work of the Committee has recently been marking time **principally because of the obstruction position of the USA and several of its NATO allies.** The USA justifies the concept that nuclear wars, whether limited protracted or otherwise, are possible. **New types of weapons, including**

weapons of mass destruction, are being designed and produced. The danger of war, above all nuclear war, is increasing."

1986, January 21. Press Conference on Gorbachev's Nuclear Arms Elimination Proposals. BBC Summary of World Broadcasts. Tass for abroad. Part1 The USSR; A. International Affairs; 1.General and Western Affairs;SU/8162/A1/1. Lexis-Nexis.

Editor's comment. The speaker who is answering is not identified in this article. "[Answer] **Weapons based on new physical principles would include, amongst others, means in which physical principles which have not been used hitherto are used to strike at personnel, military equipment and objectives. Amongst weapons of this kind one might include beam, radio-wave, infrasonic geophysical and genetic weapons. In their strike characteristics these types of weapons might be no less dangerous than mass strike weapons. The Soviet Union considers it necessary to establish a ban on the development of arms of this kind. The Soviet union has not carried out, nor does it intend to carry out either tests of such arms, or -even less so - the deployment of them. It will seek to ensure that all other countries do not do so either.**"

1986, Jan.27. Pravda Editorial on Gorbachev's Programme of Nuclear Disarmament. BBC Summary of World Broadcasts. Part 1 The USSR; A. International Affairs;1. general and Western Affairs; SU/8167/A1/1. **Pravda 25 Jan 86.** Lexis-Nexis.

"...At this point it is appropriate to draw attention to the fact that the Soviet programme has been drawn up with due consideration for the fact that the currently prevailing balance of forces in the world is to be maintained at all states of its implementation, but at an ever lower level. No threat to anyone's security will be created at any moment of its implementation." ...They include in particular **beam, radio wave, and infrasonic and genetic weapons which, in terms of their destructive potential, could be no less dangerous than already existing weapons of mass destruction.** ...As for the USA, which is the primary addressee of the Soviet proposals, a statement by President R. Reagan described by the Western press as 'cautious and carefully considered' has been disseminated there. Unfortunately, there has been nothing more than that so far."

1986, November 11.United Nations. U.N. Committee Urges Ban On New Weapons of Mass Destruction. Reuters North European Service. Tuesday, PM Cycle. Lexis-Nexis.

"**The United States cast the only negative vote** when a United Nations Committee reaffirmed the need to **ban the development and manufacture of new weapons of mass destruction.....**The draft, sponsored by the Soviet Union and 18 of its allies, also called on all states, **immediately following identification of any new weapon of mass destruction, to begin negotiations on its prohibition with the simultaneous introduction of a moratorium on its practical development.**"

1988, June 21. Wenrong, Quian. Roundup: A New Trend of Arms Race Between Two Superpowers. Xinhua General Overseas News Service.

"While welcoming the initial progress in the American-Soviet nuclear disarmament, delegates to the U.N. special session on disarmament has advised the world community to pay more attention to the dangerous new trend in the arms race between the two superpowers. Delegates pointed out that the new trend is characterized by an extension into outer space and a shift to

improving the quality of weapons. The Indian delegation said that **"the prospects for real disarmament will remain bleak so long as this technological arms race is allowed to continue unabated."** In the field of nuclear weapons, American and Soviet researchers have increased the emphasis on development of so-called "third generation" nuclear weapons such as the neutron bomb, x-ray laser, gamma ray laser and **microwave weapons**. ...It is worth noting that many new technologies, such as genetic engineering and biotechnology, have been used to produce chemical and biological weapons. ...If the new technologies are utilized for military purposes, **there could be a new race to develop ever more hideous weapons, U.N. delegates warned. Unfortunately the U.S. delegation has expressed its strong opposition to any restrictions on the use of new technologies in military research and development. As for the Soviet Union, there is no sign that it will give up the race to develop new arms systems programs in both nuclear and conventional weapons, ..."**

1993, May 25. Hudson, Richard L. Russia Lifts Secrecy In an Attempt to Sell Military Equipment. Wall Street Journal. International Section.

"Though most state-of-the-art technology remains secret, this week's show reflects **Moscow's desire to sacrifice some secrecy for more sales**. ...Now with state scientific institutes starving for funding, scientists are embarking on commerce by themselves."

1993, July 9. Rubin, Elizabeth. Foreigners Seek Scientific Ties With Russia. Wall Street Journal. B7A.

Editor's comment. Surely history is repeating. America is undoubtedly exploiting the break up of the Soviet Union.

"...Another technology treasure trove believed to be hidden behind the iron curtain is **the potential commercial applications of technologies developed under secrecy for military use**. ...**A new Russian-U.S. joint venture** aims to identify and evaluate these technologies and others for licensing and marketing outside the former Soviet Union. The new Arlington, Va, company, East/West Technology Partners Ltd. brings together the U.S. company BDM International Inc. the International Technology Exchange Corp of Washington, D.C., and a new Russian company, Technology Exhibition and Investment Inc. of Moscow. The Russian partner is able to **open the door on defense research for the joint venture because it is essentially consortium of top Russian scientists, including Yevgeny Velikhov, vice president of the Russian Academy of Sciences and a leader in the Soviet physics establishment.**"

1993, December 23. Press Conference by RF Foreign Ministry Spokesman Grigory Karasin. Official Kremlin Int'l News Broadcast. News/ Current Events. Lexis-Nexis.

"Q: ABC television. Recently, making a tour of Western Europe Mr. Zhirinovsky said **Russia has new weapons, having no analogues in the world, electronic weapons which can destroy any point of the world, and it has unique opportunities. What could you say about such weapons? Do they exist?** And what could you say about Zhirinovsky's statement? Karasin: I should tell you that I briefly heard about this statement from my colleagues. I have not read the materials. But as I have already told you, we stick to the rule to comment on addresses or official statements related to the official political course, to the official real policy. That is why I think that the Foreign Ministry's comments on this would be

improper. Q: And what about these weapons named "**Electron**"? Karasin: **I don't know anything about it.** Any more questions?"

1994, July 15. Testimony July 15, 1994 William Grundmann Director For Combat Support Defense Intelligence Agency House Joint/Economic Economic Conditions In Eastern and Central Europe. Federal Document Clearing House Congressional Testimony. Lexis-Nexis.

"...Russian military leaders have indicated that R&D should emphasize leading technologies such as stealth, precision weapons, command and control, and advanced electronics, and **weapons based on "new physical principles" such as lasers and radio frequency weapons.** **Russia will be hard pressed however, to find resources** for the investments needed to complete development of these technologies and bring them into production in the future. ...to help Russia emerge as a constructive player in European and Asian security systems."

1995, October 20. Press Review. Russian Information Agency ITAR_TASS. Lexis-Nexis.

"Rossiiskaya Gazeta on the development of a psychotronic generator. Specialists at the state-run Research and Production Enterprise Delta have designed **a psychotronic generator which is capable of bending the mind by means of acoustic waves.** The Newspaper's new analyst Albert Valentinov, in an article headlined "**A Secret Signal to Suicide**" sought to have a look behind the stages of research and find out the extent to which the psychotronic generator is hazardous to people."

1997, February 14. Li, Jingchen. Roundup: Disarmament Conference Adopts Vague Agenda. Xinhua News Agency.

"The Conference on Disarmament(cd) today failed to adopt a specific agenda for 1997 but listed eight items in a vague agenda. According to a cd press release, the eight items listed for consideration by the cd are...**new types of weapons of mass destruction and new systems of such weapons,**..." Analysts say that the broad agenda adopted today is a compromise among negotiators just for the session to go on."

1997, September 29. Wilson-Smith, Anthony. Under friendly fire. Maclean's. p 24.

Editor's note: The political currents are complicated and a professional lobbyist would be best in order to figure out a plan of action for victims.

"...The other friction point, which caused Canadian officials to react with disappointment but little surprise, was the U.S. refusal to join close to 90 countries in backing an international treaty spearheaded by Canada that seeks to ban all use of antipersonnel landmines. ...**the most important consequence of the treaty, said lawyer Louise Doswald-Beck of the International Committee of the Red Cross, is that "this will be the first time ever that international humanitarian law has prohibited a weapon in widespread use."** In the wake of Washington's refusal to sign, the pressure on Clinton to reverse his stand appears likely to become even more intense. A group of Nobel Peace Prize laureates, including Desmond Tutu, Mikhail Gorbachev and Lech Walesa, wrote Clinton last week asking him to reconsider."

1998, January 22. Conference On Disarmament Begins First Part of 1998 Session. M2Presswire. Lexis Nexis.

"Opening the meeting , the President of the Conference, Lars Norberg(Sweden), recalled that in 1997 one of the most important events in the field of disarmament was the entry into force of the Chemical Weapons Convention. It was a source of great satisfaction and inspiration to further multilateral disarmament efforts. ...Also this morning, the Conference adopted its agenda, ...**new types of weapons of mass destruction and new systems of such weapons;**"

1998, February 11. Deen, Thalif. UN protocol brings laser blinding ban into force. Jane's Defense Weekly. Vol. 29;No.6:Pg.6. Lexis-Nexis.

Editor's note. This seems to be the likely method of banning electromagnetic weapons at an international level.

"According to the ICRC, this is the **second time in modern times that a lethal weapon has been prohibited before its use in war**; "...The protocol[ban blinding lasers] **highlights the role of international humanitarian law in preventing a horrific new form of suffering for soldiers and civilians alike**, Doswald-Beck[Louise, of the ICRC] said. The ICRC has urged all UN member states to adhere to the protocol as soon as possible and **to adopt national measures to prevent the production, transfer,use and proliferation of blinding laser weapons**. The convention, which was adopted in 1983, has three other protocols. they prohibit the use of booby traps, incendiary weapons and non-detectable fragments in weapons of war."

[Contents](#)

Some Conclusions

The few humanitarian international organizations working on arms control are possible avenues for victims of government experimentation to pursue. At least now the history of international electromagnetic weapons development is irrefutable and lessons can be learned from comparisons with the history of the atomic bomb.

Victims are no match for the resources of the government and the lack of political will. The public must educate and decide for themselves on this issue. Given the incredible odds against them, victims who allege electromagnetic human rights abuses deserve the benefit of the doubt. Because of the seriousness of the allegations and the amount of evidence, **an investigation should be called for**. This is a reasonable request.

It is appallingly evident that **there has been no public protest about the highly classified electromagnetic weapons**, unlike the history of the nuclear arms race. This is a serious problem, the spending of billions of dollars and developing the weapons without public input, not to mention allegations of human rights abuse. Another major point can be drawn from this depressing account of the electromagnetic arms race- **a few people in the international community have made a difference**. The power to make a difference is the hope that victims can count on.

The future of electromagnetic technology is undoubtedly in the hands of the United States and it is interesting to speculate on how the technology will be distributed and controlled globally. There are published accounts of microwave hearing to create the phenomena of hearing

voices and other electromagnetic military and intelligence uses (See CAHRA website). But the remote reading of the victim's thoughts and direct communication with the brain, this sophisticated technology may not be declassified for years. And undoubtedly, the covert use will grow, as published articles have revealed. The effect of multinational corporations, military-industrial connections and economic concerns on the distribution of this technology is difficult to predict. **It goes without saying that it is a loss that this technology is not being used in peaceful and health-enhancing ways.**

Armed with the facts, victims can plan more effectively. For example, there could be a project, as a group rather than individually; and working with the international human rights community on passing international law against "microwave hearing" abuses or working on new protocols banning electromagnetic weapons. Further research is needed. These are a few goals to work towards.

CAHRA is a nonprofit 501(c)3 and cannot act in any political way. This paper is not an attempt to aid or hinder any political act. The views expressed are the opinion of Cheryl Welsh only. Please share your thoughts and ideas with CAHRA.

Cheryl Welsh would like to thank California State University, Sacramento government department, the interlibrary loan service, the reference librarians and special thanks for the use of the incredible Lexis-Nexis computer database.

About "Street Theater"

February 24, 2005

While reading about street theater, be sure to see also:

[David Lawson's investigation](#). David Lawson's books about his infiltration of "street theater" groups and learned a great deal of the workings and motives of these criminal groups.

[COINTELPRO](#)... a series of covert crimes against dissenters of all stripes within the United States during the Cold War and extending to Viet Nam protesters and anti-racism elements. These crimes included infiltration of activist groups, and total destruction of lives and reputations, as well as property, by frequent break-ins. The FBI was the main perpetrator organization. COINTELPRO type activity is half of the non-electronic activity experienced by today's mind control targets, "street theater", explained below, being the other half.

"Street Theater" is a feature of the organized stalking with electronic harassment scene.

"Street theater" is activity performed by persons complicit in the electronic weapons harassment, but are "skits", as opposed to direct bodily attacks performed with the electronic harassment equipment.

These "skits" are designed to imitate "the breaks" of normal living. Additionally, they are performed in such a way that the target, and ONLY the target, knows they are being harassed, but cannot convey to others that this is indeed harassment. Feelings of total hopelessness, and that "everyone is against me" is one apparent purpose of these "skits".

(What is impossible to convey to people who are not targeted is that what is different about mind weapon research skits is QUANTITY. When you encounter "normal breaks of life" several times a day EVERY DAY, you are no longer talking about "normal". Several "breaks" a day, of a type which you might expect every couple of months, is not natural or random. But try explaining this to someone who is not targeted.)

Another apparent purpose of such "skits" is to discredit and isolate the target so that others will regard him or her as a "crank" and a "nut case" when the target complains.

Far from simple "pranks" or "practical jokes", these skits provide the mind weapon researchers with **extremely good cover**. If the target is ever coerced into contact with psychiatry, the psychiatrists' legal powers of imprisonment (without due process of law) dramatically increase and reinforce the isolation and labelling of the target.

Many people know in advance that what they are experiencing will discredit them, and will thus put off complaining about or often, **even admitting to themselves** that they are being targeted.

So although "street theater" seems to have a comedic ring to it, this component of organized stalking is one of the most serious forms of attack on individual targets and is perfect cover for the perpetrators. [Read this essay](#) on how incredibly EASY it can be to set up "perfect crime" street theater.

Street theater takes many diverse forms, and here are a few examples:

- On foot, far more often than in normal life, you have people cutting you off in store or bank lineups. Or you constantly find people getting "in your face" as you walk, both outdoors and especially in buildings and malls.
- While driving, far more often than in normal life, you have cars speeding up to stop signs just ahead of you and brake to a stop part way into the intersection.
- While driving, far more often than in normal life, you find other cars behaving in ways which block your progress. Mall parking lots are favourite places for this type of staged activity. Try explaining that to friends and see how many believe it is deliberate.
- While away from home, more often than in normal life and at times you know you did not leave them, dirt or food droppings appear in your house or apartment.
- While away from home or work, belongings turn up missing and you know for certain they were there when you left. Some days later these belongings may turn up in a place you know they were not, yet you cannot ever convince others this was theft and return.
- While away from home, you find damage to clothing or furniture which you know did not occur from normal wear.
- While at home or at work, you find bizarre, loud, annoying noise incidents which others nearby seem to "not notice" or "don't care about".
- While in the supermarket checkout line, you find someone reaching into your shopping cart to remove an item -- apparent purpose to force you to make another trip to the store prematurely.

These are just some examples of "street theater". The number of variations on this "wear-you-down" activity seems unlimited, based on reports. Obviously the "researchers" put a great deal of priority and work on this aspect of their modern-day atrocities against humanity.

Interestingly, one target found that when she attached an 8.5" x 11" poster, referring viewers to an anti-organized stalking site, on her backpack, street theater in stores stopped instantly. This suggests that perpetrators detailed to operate in stores may have been told lies about the target, and that the supervisors may not want them to learn the full scope of the crime they are involved with.

Those targeted pray that the large number of targeted individuals we know are "out there" will eventually wake up and realize their quality of life is being stolen from them, and assist in exposing this thoroughly illegal activity.

Oblong Rock Configuration and Base of Altar

Trifurcated Tree and Huge Split Tree in Background

Multi-generational Fertility Cult (Abusive Witchcraft) "Sacred Ground", by Ellen Lacter, Ph.D., 3-19-2004

The rock formations in these photographs represent what is most likely the "Sacred Ground" of a ritually-abusive "Multi-generational Fertility Cult". I am referring to "Witchcraft Ritual Abuse", not Wicca.

Witchcraft ritual abuse and Satanic ritual abuse both include human sacrifice and sexual torture of children. However, Satanism and Witchcraft attach very different meanings to these crimes, worship different deities, and are rivals in their failing goals of world domination. See the page on this website entitled; "Overview of the Differences between Satanism and Witchcraft".

Memories of Witchcraft ritual abuse, the personalities affected by these abuses, and Witchcraft programming, are almost always buried more deeply in the unconscious mind than the memories, personalities, and programming associated with Satanic ritual abuse and abuse by groups with political/military agendas. The abusive methods used by Witchcraft affect the psyche and spirit more profoundly, and block memory more effectively. In many cases of ritual abuse, one of the survivors parents (and the lineage on that side) was involved in Satanism, and the other parent (and lineage) was involved in Witchcraft. The side practicing Witchcraft will likely know everything that is happening on the Satanist side, but the Satanist side will not understand very much of what the Witchcraft side is doing.

These pictures are posted here to expose abusive Witchcraft to the light of day, with the goal of helping ritual abuse survivors overcome the effects of Witchcraft ritual abuse.

Witches would have chosen this site as a ritual site because it contains a number of features they view as holy. Note that the photographs of the oblong ring of rocks (about 26 feet in length) include a trifurcated tree, or three trees that have grown together. The number three is sacred in witchcraft. Such a tree would be considered sacred, thus the ring of rocks constructed around it.

Behind this tree is a huge and ancient tree that is split in four parts, with three now lying on the ground, and one still standing. This tree was likely the largest and oldest tree in the area for quite some time. Witches would see it as the most holy tree in the area, signifying the eternalness of Witchcraft. The group would thus choose this site for their "Sacred Ground". In rituals, the witch group would likely dance around this huge tree.

Between the two trees is a pit (about 6 feet in diameter). This pit would signify part of the "womb of mother earth" to Witchcraft. Blood would likely be poured into such a pit.

The oblong ring of rocks and two above-described trees, are situated between two streams, which would make this site especially holy in the eyes of Witchcraft. Both streams run from east to west. The site itself is on an east-west axis, with the tree on the west. This orientation is the strong preference in Witchcraft, and will occur less frequently in Satanic ritual sites.

The oblong ring of rocks has the tree at one end, and a concrete slab at the other end, which was likely used as the base of an altar. This configuration is typical of a Witchcraft site. The actual altar would be stone and laid on the concrete slab for rituals.

In Satanism, the altar would be more likely placed in the center of the ritual site. The site itself would have four corners or a tree in the center. In Satanism, the altar often has space below it, since at times, a fire is lit under the altar.

In both abusive Witchcraft and Satanism, the actual altar would be movable, transported to the site for the ritual, and removed immediately afterwards.

The ground in the middle of the oblong ring of rocks is mounded. In abusive Witchcraft, stones, branches, twigs, and sacred objects attached with spiritual evil in abusive rituals would be buried in this mound.

There is a smaller (about 5 feet in diameter) ring of rocks adjacent to the trifurcated tree, on the south. This may have been used for fire, a necessary element in abusive Witchcraft rituals. Fire, air, earth, and "living water" (a moving stream) are all required. Dancing would occur around the fire, as well as around the huge tree.

The less-defined, more round, and larger circle (about 32 feet in diameter, and about 50 feet to the north of the smaller oblong ring) would also be a place to dance or watch as sexual and death sacrifices occurred to propitiate Witch deities in the smaller oblong circle.

This site is in San Diego County, California. It was revealed following the fires in late October, 2003 that cleared away a great deal of the brush. The site is still well-camouflaged. I hiked past it a number of times before spotting it. It was likely constructed about 50 years ago, judging by the apparent age of the concrete slab, and was likely not used for the past 30 years, when houses were constructed within about 200 yards of the site.

My mentor Stephen Oglevie provided me with these distinctions between Witchcraft and Satanic ritual sites.

I can provide very high-definition images and more views upon request. Contact me via e-mail:

DOCUMENTATION

Human Radiation Experiments

Resources on Experiments Performed by the Atomic Energy Commission and the Department of Defense: *An excellent resource for internet links to information on all aspects of human radiation experimentation. Overview site.*

DOE "Openess" Site: *Gateway site which includes the following links*

RoadMap: *Description of the Site, including a table of contents (Roadmap), list of experiments, sites, index of some photos, links to various reports*

HREX Archives: *Search the government archives, useful for material on other covert projects and personnel*

Multimedia Archives: *Particularly useful are the photographs taken to document the experiments*

Federal Resource Links: *Links to numerous federal agencies*

NON THERAPUTIC studies on children:

Non therapeutic Research On Children: *ACHRE document on experimentation on children*

The Vanderbilt Study: *Vanderbilt University in the 1940s, approximately 829 poor, pregnant Caucasian women were administered tracer doses of radioactive iron. Vanderbilt worked with the Tennessee State Department of Health, and the research was partly funded by the Public Health Service. (bottom of page)*

Other site: *This research was supported by the Nutrition Foundation, Inc., the Rockefeller Foundation, and the Tennessee State Department of Health. The followup study on the children born to these women found one case of leukemia and two cases of sarcoma. There were no malignancies in the control population. The three cases are statistically significant.*

Nasopharyngeal Irradiation: *Implantation of radioactive sources for tonsils or ear infections. Apparently not all sites of experimentation are listed as anecdotal evidence supplies more clinic, hospitals and doctors. (at bottom of page)*

The Fernald School: *Radioactive tracer studies on institutionalized children*

OT-19. Radioisotope Studies at the Fernald State School, Massachusetts

Other Experiments

OT-2. The Use of Iodine-131 Labeled Human Serum Albumin to Evaluate the Peripheral Circulation-1952 at Case Western Reserve University-"young subjects"

OT-3. Use of Iodine-131 Labeled Protein in the Study of Protein Digestion and Absorption in Children With and Without Cystic Fibrosis of the Pancreas -1952 at Case Western Reserve University

OT-7. Uptake of Iodine-131 in Normal Newborn Infants in Iowa City -1963, the University of Iowa, Iowa City

OT-8. Uptake of Iodine-131 in Normal Newborn Infants in Nebraska-1960-VA Hospital, Omaha, Nebraska, and the Department of Radiology, University of Nebraska, College of Medicine

OT-9. Uptake of Iodine-131 in Normal Newborn Infants in Memphis-1952 to 1954-University of Tennessee and John Gaston Hospital

OT-13. Blood Volume Measurements Using Stable Chromium-50 and Radioactive Chromium-51, 1969 to 1972, newborn infants.

OT-20. Uptake of Iodine-131 by Premature Infants in Detroit, 1954, the Pediatric Division. Radioisotope Laboratory of Harper Hospital, Detroit, Michigan

OT-23. Thyroid Uptake and Urinary Excretion of Iodine-131 in Assessing Thyroid Function-1950s, Pediatric Department, University of Arkansas School of Medicine in Little Rock

OT-25. Study of Iodine-131-Thyroxine Metabolism in Adolescent and Adult Human Subjects 1961 to 1964 University of Arkansas Medical Center in Little Rock

OT-27. Thyroid Hormone Secretion Studies Using Iodine-131 1963 TO 1964, University of Arkansas Medical Center, Little Rock, youngest 10yrs.

OT-28. Brain Scanning Studies Using Potassium-42, 1940s, Neurosurgical and Surgical Services and Laboratories of Harvard Medical School, Children's Hospital, and Peter Bent Brigham Hospital in Boston, some as young as 3mos.

OT-30. Serum Level of Protein Bound Iodine-131 in the Diagnosis of Hyperthyroidism 1940s, Medical Research Laboratories, Beth Israel Hospital, and the Department of Medicine, Harvard Medical School, Boston

OT-53. Effect of Phytate on the Absorption of Iron-59 and Iron-55, 1946, Departments of Food Technology and Physics of MIT and Fernald State School in Waverly, Massachusetts.

OT-57. Red Blood-Cell Volumes and Hematocrit in Normal Pregnancy Using Iron-55, 1948 Department of Obstetrics and Gynecology Harvard Medical School, the Boston Lying-In Hospital, and the Radioactivity Center of the Massachusetts Institute of Technology

OT-59. Study of Iron Turnover by Red Blood Cells Using Iron-55 and Iron-59, 1948 to 1949, Harvard Medical School and Radioactivity Center of the Massachusetts Institute of Technology, one 6-year-old girl with aplastic anemia, a 4-year-old boy and a 4-year-old girl with Cooley's anemia

OT-60. Studies of the Metabolism of Maternal Iron in Newborn Infants Using Iron-55, 1948 to 1950, Department of Pediatrics of Harvard Medical School, the Boston Lying-In Hospital, Children's Hospital, Peter Bent Brigham Hospital, Boston and the Radioactivity Center of the Massachusetts Institute of Technology

OT-61. Thyroid Function Studies Using Iodine-131, 1950s, researchers at the Fernald State School, Waverly, Ma; the Harvard Medical School; the Tufts Medical School; and the Massachusetts Institute of Technology

OT-78. Studies of the Transmission of Radioiodine to Infants Through Maternal Breast Milk, 1950s, researchers in the Departments of Medicine, Medical Laboratories and Radiology, University of Tennessee College of Medicine, and the John Gaston Hospital, Memphis

OT-84. Study of Copper Metabolism Using Copper-64 1960s, University of Utah College of Medicine in Salt Lake City, including 72 normal pregnant women (in their third trimester).

OT-89. Cesium-137 and Rubidium-83 Metabolism in Healthy Subjects and Subjects with Muscular Dystrophy, 1965 AND 1972, Departments of Anatomy, Medicine, and Radiological Health at the University of Utah in Salt Lake City, 39 healthy individuals: 5 infants, ages 17 to 143 days; 5 children, ages 5 to 10 years; 23 adults, ages 21 to 52 years, including 6 pregnant females; and 3 children, ages 4 to 11, with Duchenne muscular dystrophy.

OT-94. Potassium Studies in Diseased Patients Using Potassium-42 1950s, Wake Forest College, North Carolina Baptist Hospital in Winston-Salem, North Carolina

OT-101. Study of Cooley's Anemia in Children Using Chromium-51 and Iron-59 1955, University of Washington, Seattle and the Department of Research Children's Hospital in Los Angeles on four children, with Cooley's anemia, a genetic blood disorder. The children, ages 4, 6, 9, and 13

OT-103. Sodium Volume Studies in Children and Adults Using Sodium-24 1949 AND 1951, Washington University, St. Louis; St. Louis Children's Hospital; and St. Louis Maternity Hospital, including 37 male or female infants and children ranging in age from one day to 14 years

OT-104. Estimates of Total-Body Sodium in Infants and Children Using Sodium-24 1950s, Department of Pediatrics, Washington University School of Medicine in St. Louis, and St. Louis Children's Hospital, 21 hospitalized patients ranging in age from 2 weeks to 14 years

UC-41. Use of an Experimental Strontium-90/Yttrium-90 Needle for Radiation Cordotomy Pain Relief, 1960s, Department of Neurological Surgery and Roentgenology, University of Chicago Hospital and Clinics collaborated with the Argonne Cancer Research Hospital, ranging in age from 3 to 71

UR-3. Ingestion of Milk Containing Iodine-131 1963 by a graduate student at University of Rochester ranged in age from 6 years to 50 years; seven were less than 21 years old.

Awards and Activities

- Principal Investigator for the grant entitled "Controlled Orientation of an Acoustically Levitated Object," Eastern Illinois University, Council for Faculty Research, Fiscal Year 1996.
- Principal Investigator for the grant entitled "Acoustic Levitation with Arbitrary Axes of Rotation," Eastern Illinois University, Council for Faculty Research, Fiscal Year 1995.
- Space Grant Fellowship, Tennessee Space Grant Consortium, National Aeronautics and Space Administration, January 1992 - August 1994.
- Co-investigator for the project entitled "Metallic Glass Research in Space," National Aeronautics and Space Administration, Jet Propulsion Laboratory, Fiscal Year 1988.
- Graduate Student Representative, Student/Faculty Advisory Committee on TA Training, University of California, Los Angeles, September 1980 - September 1981.
- Teaching Assistant of the Year, Physics Department, University of California, Los Angeles, June 1980.
- Secretary/Treasurer, Society of Physics Students, Eastern Illinois University Chapter, 1978-1979, member 1977-1978.
- Sparks Scholarship Recipient (freshman physics major that shows outstanding potential), Physics Department, Eastern Illinois University, 1975-1976.
- High School Class Valedictorian, Eldorado High School, Eldorado, Illinois, June 1975.

William Ross Adey, M.D. will be our 1999 **Hans Selye Award** Recipient. He is being honored for his seminal contributions to our understanding of the biologic effects of feeble electromagnetic forces, and for defining the parameters of the "Adey window" of activity. In Congress presentations over the past ten years, he has explained how this has led to new findings, and an emerging paradigm of cell communication at a physical/atomic level, rather than the current chemical/molecular model. Ross has also attracted co-workers from his laboratory, as well as leading authorities like Neils Kuster, Jan Walleczek, Russ Reiter and others to discuss their research which supports this viewpoint, and has also provided novel insights into the nature of stress responses and their clinical implications.

This has allowed Congress participants to appreciate such things as: the effects of electromagnetic fields on melatonin production and its possible role in breast cancer; EMF therapies for Parkinson's and other neurodegenerative diseases; the ability of free radicals to accelerate various oxidative stress manifestations of aging; the crucial role of nitric oxide in carcinogenesis, regulation of blood flow in smaller vessels, and mediating the effects of drugs like Viagra; and how electromagnetic fields are two edged swords that can both harm and heal, - long before these became popular topics.

It is not uncommon for non-physicians to make significant contributions to clinical medicine, or even become involved with patient care. This is especially true for those with doctoral degrees in biology, biochemistry, physics, and other relevant basic sciences. It is far less likely for an accredited and well trained physician to reject a potentially lucrative profession in order to labor in the laboratory, and rarer still to excel in such pursuits to the degree that Ross Adey has. In reviewing his lengthy bibliography of over 400 papers, chapters, and books, I note that it begins with a 1949 case report of a patient with thyrotoxic myopathy, but almost all subsequent publications deal with his basic science interests in such things as electromagnetic field interactions with biological systems, cell membrane organization and intercellular communication, organization of cerebral systems and cellular mechanisms, bioinstrumentation and bioengineering, and computer applications in medical imaging, physiological data analysis, modeling of brain mechanisms and systems, with only aerospace medicine and physiology suggesting a return to the clinical arena. His superb achievements in these areas have been acknowledged by his peers with numerous awards and honors here and abroad, including Fellowship in the American Academy of Arts and Sciences as well as the Institute of Electrical and Electronic Engineers, the D'Arsonval Award from the Bioelectromagnetics Society, the Sechenov medal of the Russian Academy of Medical Sciences, and more recently, appointment as Distinguished Visiting Professor of the Royal Society of Medicine.

Some may wonder how any of this relates to "Stress", or why this Congress and the last should have such a large focus on bioelectromagnetic medicine. I first met Ross Adey 15 years ago, when we were both speakers in a conference entitled "Electromagnetic Fields And Neurobehavioral Function": It was conducted in a former monastery in Priorij Corsendonck, a remote and secluded area of Belgium. Since there was nothing nearby to visit, all the participants spent their meals and evenings together. Ross Adey's presentation dealt with

communication between cells, with emphasis on the role of the cell membrane in the detection and transductive coupling of oscillating electromagnetic fields, demonstrating that activation of intracellular systems responsible for amplification of such signals was calcium dependent. It was seemingly far removed from my concluding paper on the biobehavioral effects of electromagnetic fields and their significance for stress research. However, I was aware of his prior studies of the effect of weak electromagnetic fields on behavior in animals and humans, and his conviction that this could have important clinical implications. I also recalled that during the "Cold War", he was the only American to whom the Russians entrusted their LIDA electrosleep machine. I had ample opportunity to discuss these and other areas of mutual interest during the five days we were together, and was impressed by not only his wide range of interests, but expertise in so many seemingly disparate disciplines. He had been quoted in the press as describing LIDA's effect as similar to Valium, but told me that he did not pursue further research because of concerns about possible adverse effects from repeated use. During this Conference, I also had an opportunity to present some of the animal and very early human research with the Symtonic low energy emission device for the treatment of insomnia. This was being conducted at the Biotonus Clinic in Montreux, Switzerland, under the direction of Dr. Claude Rossel, who joined us for the final day of the conference to report on his latest findings. He was similarly impressed with Ross Adey's acumen and helpful suggestions, and when Claude subsequently conceived the idea of establishing this annual Congress, we both agreed that Ross could play a key role in helping us to achieve the high standards we had set. As indicated above, Ross has been an invaluable and stalwart contributor to these events, and his presence has attracted other pioneers in all aspects of "electromedicine".

For example, at our first Congress, Björn Nordenström demonstrated the remarkable success of his treatment for metastatic lung malignancies based on his theory of an electrical circulatory system in the body. His results have now been confirmed by others in thousands of patients. His new book explains how this energy may resemble chi, with yin and yang representing positive and negative charges, and will hopefully be available for purchase at a reduced rate. At our last Congress, Demetrio Sodi Pallares presented examples of the ability of his magnetotherapy - metabolic protocol to reverse far advanced metastatic cancers and end stage cardiomyopathy. These terminally ill patients, with X-ray evidence of severe and seemingly irreversible pathology, had no signs or symptoms of their diseases one year later, and were leading normal lives, despite any need for their previous medications. He will provide an update on further triumphs at this Congress, and hopefully, his forthcoming new book will also be available. Our Ninth Congress also featured numerous other clinical applications of static as well as time varying magnetic fields, and advances in EMF technologies and devices.

Ross Adey has thus helped us immeasurably to provide a more panoramic perspective of the vast clinical potential of safe bioelectromagnetic approaches for the detection, diagnosis and treatment of disease, as well as the promotion and enhancement of health. One of the major reasons that electromagnetic therapies have not been more widely accepted, or are dismissed as quackery, is the plethora of worthless products making extravagant claims based on lavish testimonials that have no scientific basis or support. It is often difficult for the public, and even doctors and health professionals, to separate those that are authentic or may have potential merit, from others promoted by well intentioned but misguided zealots, as well as charlatans, who capitalize on placebo effects, and the lack of governmental regulations. There are also justifiable concerns that such devices, or certain man made electromagnetic fields emanating from high power lines, cell phones, microwave ovens and other appliances

could pose health hazards, and Ross Adey has been in the forefront of sorting this out.

In addition to organizing and participating in scientific sessions dealing with the above, he has faithfully attended all other presentations and actively participated in their discussion periods. He has commented authoritatively on such things as the growing illegal immigration problem in California, and its disastrous effects on the delivery of health care, environmental pollution, problems related to substance abuse, the health and stress reduction benefits of exercise, interrelationships between stress and cancer, job stress (about which he has recently had extensive first hand knowledge), and numerous other topics. These reflect his wide range of interests and hobbies, which include ham radio, photography, radio astronomy, skiing, backpacking, opera, marathon running (which he continues to actively participate in) and a deep devotion to his native Australia and love of its natural beauty.

From my personal perspective, Ross Adey's greatest contribution has been to change the way we think about communication in the body. These Congresses are devoted to exploring the relationships between stress and health, and in the final analysis, good health depends entirely on good communication - good communication between the constituency of a system, as well as with its external environment. That holds true for all the hierarchy of living systems, ranging upward from the cell, tissue, organ, individual, and family, to a corporation, nation, or society. Good health depends upon good communication within and without. This is a basic tenet of all stress research, starting with Claude Bernard's concept of the need to maintain the stability of the milieu intérieur (internal environment), which Walter Cannon later described as homeostasis, and Hans Selye subsequently demonstrated in his General Adaptation Syndrome. All of these pioneers, as well as current researchers studying neurotransmitter responses to stress, have viewed these at a molecular level, as small chemical messengers fit into specific receptor sites on cell walls, much like a key fits into a certain lock. However, in the final analysis, all communication in the body takes place at a physical and atomic level, as infinitesimally weak electrical signals alter cell membrane permeability to allow the transfer of millions of ions back and forth in milliseconds. This new paradigm of communication allows us to comprehend numerous well documented observations that can not be explained by Newtonian physics, or conventional laws of thermodynamics that govern ionic flux. In leading the development of this new model, Ross Adey has understandably antagonized authorities in the field whose reputations are based on preserving the status quo, as well as powerful groups with vested financial interests in not rocking the boat. I have witnessed this uphill fight over the years, and am pleased to report that the tide is turning, as more and more proof accumulates to support his views.

As this Congress will demonstrate, this has important implications for stress research, and more importantly for the prevention of illness and enhancement of health. In my opinion, it offers the potential for tapping into the vast potential for self-healing that resides in all of us, and will significantly change the practice of medicine in the millennium. Ross has helped us to appreciate and advance our understanding of this.. A good and faithful friend, he has been of invaluable assistance in helping us develop these Congresses. I can think of none more deserving of receiving our 1999 Hans Selye Award than Dr. William Ross Adey. He is a true Renaissance figure, and quite obviously, "A Man For All Seasons."

Paul J. Rosch, M.D., F.A.C.P. President, The American Institute of Stress.

U.S. Navy Contract for Ultrasonic Acoustic Heterodyning Technology

Announced April 12, 2000

This announcement from American Technology Corp., the patent holder for [acoustic heterodyning](#) technology, clearly shows that the use of ultrasound for transmission of voice over significant distances is a reality. When [voice-FM](#) is used in place of normal, hearable audio, you have one method of targetting a person at a distance, even in a crowd, with hypnotic commands which cannot be heard by the ears but which are heard and understood by the mind.

This development in covert hypnosis technology underscores the urgent need for debate and controls on all such anti-personnel weapons-capable technologies, instead of the stone silence all governments have maintained to this date.

FOR IMMEDIATE RELEASE

AMERICAN TECHNOLOGY CORPORATION ANNOUNCES LICENSE WITH THOMSON MULTIMEDIA

NAVSEA Contract

Mr. Brosnan then announced that the PMS 400 division of NAVSEA has awarded a \$218,000 research and development contract to the company and General Dynamics Bath Iron Works to test ATC's patented HyperSonic(TM) Sound technology (HSS(TM)) on board a U.S. Navy Aegis Destroyer under construction at Bath Iron Works. Among its many applications, HSS technology enables ship-to-ship communications without breaking radio silence. HSS can also target selected individuals in a group or in a noisy environment and deliver audio to that person. Bath Iron Works, a General Dynamics Company, supplies technology and shipbuilding services to the U.S. Navy. General Dynamics employs 43,000 people worldwide and has annualized sales of approximately \$10 billion.

Elwood G. Norris, Founder of the company, demonstrated voice and music content with exceptional clarity and bandwidth through the latest, proprietary HSS emitter and modulator technologies to shareholders at the meeting in Escondido, California.

Patents

Mr. Brosnan announced that as of the date of the meeting, the company had been granted nine (9) patents on HSS and has another nine (9) patents pending. Additionally, the company has eight (8) patents pending on its SFT technology and two (2) patents pending on its MFW(TM) subwoofer technology.

NAVSEA AWARDS \$218,000 RESEARCH AND DEVELOPMENT CONTRACT TO BATH IRON WORKS
AND AMERICAN TECHNOLOGY CORPORATION FOR TEST APPLICATION OF HYPERSONIC(TM)
SOUND TECHNOLOGY

(SAN DIEGO, CALIFORNIA - April 12, 2000) - The PMS 400 division of NAVSEA has awarded a \$218,000 research and development contract to General Dynamics Bath Iron Works and American Technology Corporation (NASDAQ: ATCO) to test HyperSonic Sound Technology on board a U.S. Navy Aegis Destroyer under construction at Bath Iron Works.

HyperSonic Sound Technology, under development in the laboratories of American Technology Corporation in San Diego, California, is a revolutionary sound reproduction system. The most important quality of HSS(TM) is the ability to direct or focus sound into a tight beam, similar to the beam of light from a flashlight. No other audio reproduction device available today provides this powerful feature. Not since the development of the "cone" loudspeaker more than 75 years ago has any technology provided such significant departure from conventional speakers and such a remarkable approach to the reproduction of sound.

About Bath Iron Works

Bath Iron Works of Bath, Maine, a leader in surface combatant design and construction, employs 7,600 people. It is a subsidiary of General Dynamics (NYSE:GD), headquartered in Falls Church, Virginia. General Dynamics has leading market positions in shipbuilding and marine systems, land and amphibious combat systems, information systems, and business aviation. The company employs 43,000 people worldwide and has annualized sales of approximately \$10 billion. More information about General Dynamics can be found on the worldwide web at www.generaldynamics.com.

First publicized use of thru-wall/thru-clothing radar!

The significance of this posting is that it is one of a growing number of technologies which operate LIKE the more advanced technologies referred to on this web site.

Eventually, technology like voice to skull, thru wall radar, and acoustic heterodyning will cause the more advanced, classified technologies now in covert usage to be exposed. References to some of these soon-to-be-household-word technologies are on the following page:

[Unclassified advanced devices](#) which are public but not widely known about.

Airport Body Scanner Helps Drug Arrest
by Associated Press - March 12, 1999

MIAMI (AP) -- Hidden behind gray-and-pink carpeted barricades in the customs area of Miami International Airport lies a piece of the latest technology in the fight against international drug trafficking.

The tall gray box sees through clothing and produces images that U.S. Customs Service agents say will help reveal drugs that smugglers are hiding in increasingly sophisticated ways.

On Thursday, Customs Commissioner Raymond Kelly inspected the body-imaging machine that officials said two days earlier had revealed 3 1/2 pounds of marijuana in a bicycle tire strapped around a man's waist.

In that case, the machine produced a pixelated image that distorted the physique of the thin male suspect, making him appear stocky and round, but clearly showed bulges around his middle.

That was enough, though, to provide the first seizure thanks to the machine that's been used on 23 people at the airport since Feb. 1.

"It's as effective as a pat down, but it doesn't look into the body," Kelly said. "We're pretty well committed to using this type of technology. It's a question of getting funding and where we go from here."

Only one other device like it is in use by the Customs Service, in New York City's Kennedy International Airport. Soon other airports may offer travelers who are suspected of carrying drugs, but decline to be patted down by

inspectors, the option of being scanned.

It's part of a plan to improve the image and accountability of an agency that is facing 12 lawsuits nationwide over body searches of airline passengers.

American Psychologist article: 1973 Voice to Skull Demonstration

March 1975

[PDF Verson for Easy Printing](#)

Artificial microwave voice to skull transmission was successfully demonstrated by researcher Dr. Joseph Sharp in 1973, announced at a seminar from the University of Utah in 1974, and in the journal "American Psychologist" in the March, 1975 issue, article title "Microwaves and Behavior" by Dr. Don Justesen.

Excerpts from that article are below:

The *American Psychologist* is the official journal of the American Psychological Association and, as such, contains archival documents. It also publishes articles on current issues in psychology as well as empirical, theoretical, and practical articles on broad aspects of psychology. Manuscripts must adhere to the instructions on reference citations, preparation of tables and figures, manuscript format, etc., as described in the *Publication Manual of the American Psychological Association* (2nd ed.). Manuscripts that do not conform to the style set forth in the *Manual* will be returned for revision. When in doubt about practices of the Journal, authors should examine a recent issue.

Articles under consideration or accepted by another periodical of general circulation are not acceptable. Also, articles accepted for publication by this Journal may not be reprinted elsewhere without APA permission. Comments should be submitted no later than two months from the date of the issue containing an article on which comment is made in order to ensure timeliness.

Submit manuscripts in triplicate, accompanied by a 100-120-word abstract, to Kenneth B. Little, American Psychological Association, 1200 Seventeenth Street, N.W., Washington, D.C. 20036.

Statements contained in the *American Psychologist* are the personal views of the author and do not constitute APA policy unless so indicated. APA reserves the right to edit all copy and to refuse ads that are not in consonance with the principles of Title VII of the Civil Rights Act of 1964 (Equal Employment Opportunity).

Written permission must be obtained from the APA for copying or reprinting text of more than 500 words, tables, or figures. Address requests to the Permissions Office.

Victor Frankenstein surgically fathered the famous fictional monster, but the fiend was conceptually mothered if not physically spawned by electricity in the form of lightning from the heavens. Perhaps unwittingly, perhaps intuitively, author Mary Shelley (1831) touched a deep truth in the maternal metaphor: Life did originate from electrical discharges into the primeval fog. Indeed, life continues to preserve in all of its earthly forms from the most primitive cell to the most complex organism an elemental dependence on electrical phenomena. Understandably, the curiosity of the scientist about the electrobiological goings-on of the earth's flora and fauna is shared by the layman. A large popular literature is accumulating and embraces experiments and anecdotes that range from the ostensibly respectable to the seemingly bizarre. Recently published texts by Tompkins and Bird (1973) and by Burr (1972, 1973) are not only exemplars of the literature but are rich sources of reference materials. One reads, for example, that plants have nervous systems that yield differing electrical signals on "stimulation" by *kind* or *malevolent thoughts* of human beings (Backster, 1968). One also reads that many Soviet scientists are giving credence and careful study to ESP and related phenomena, not in defiance of Marxian dictates of materialism but quite in keeping with them. The Soviets are championing earlier theoretical notions of Georges Lakhovsky (1934) to the effect that each plant or animal cell is an oscillatory system capable of transmitting and receiving high-frequency electromagnetic energy over a distance. While affirming that electrical events are

Microwaves and Behavior

DON R. JUSTESEN

Laboratories of
Experimental Neuropsychology,
Veterans Administration Hospital,
Kansas City, Missouri

Above image shows the start of the article, with the very important statement about the August 1974 public announcement of the successful transmission of pulsed microwave voice to skull at the University of Utah.

water, for example, in carbon-impregnated plastic and in crumpled sheets of aluminum foil. Even subjects who cannot hear microwaves when directly radiated by them can readily perceive clicking sounds when a piece of energy-absorbing material is interposed between the head and a radiator of pulsed microwave energy. Oddly enough, the mass of the interposed material does not seem to be too critical; I successively used smaller and smaller pieces of material as sonic transducers until it was necessary to impale tiny pieces on a toothpick, yet the clicking sounds induced in the material by microwave pulses were clearly audible to me.

The demonstration of sonic transduction of microwave energy by materials lacking in water lessens the likelihood that a thermohydraulic principle is operating in human perception of the energy. Nonetheless, some form of thermoacoustic transduction probably underlies perception. If so, it is clear that simple heating as such is not a sufficient basis for the Frey effect; the requirement for pulsing of radiations appears to implicate a thermodynamic principle. Frey and Messenger (1973) demonstrated and Guy, Chou, Lin, and Christensen (1975) confirmed that a microwave pulse with a slow rise time is ineffective in producing an auditory response; only if the rise time is short, resulting in effect in a square wave with respect to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur. Thus, the rate of change (the first derivative) of the wave form of the pulse is a critical factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and "communicated" to the "listener." Communication has in fact been demonstrated. A. Guy (Note 1), a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure and opening of which resulted in radiation of a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy. Sharp and Grove (Note 2) found that appropriate modulation of microwave energy can result in direct "wireless" and "receiverless" communication of speech. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed zero reference in the negative direction, a brief pulse of microwave energy was trig-

gered. By radiating themselves with these "voice-modulated" microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words. The sounds heard were not unlike those emitted by persons with artificial larynxes. Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 mW/cm² limit of safe exposure. The capability of communicating directly with a human being by "receiverless radio" has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation a human being can safely be exposed to will probably forestall applications within the near future.

The U.S. limit of 10 mW/cm² is actually an order of magnitude below the density that many investigators believe to be near the threshold for thermal hazards (Schwan, 1970). There are two camps of investigators in the United States, however, who believe that the limit is not sufficiently stringent. In the first camp of conservatives are those who accept the Soviet's belief that there are hazardous effects unrelated to heating from chronic exposures to fields of low density (< 1 mW/cm²): some agree with Milton Zaret (1974), a New York ophthalmologist, who holds that severely debilitating subcapsular lesions of the eyes may develop years, even decades, after exposure to weak microwave fields. Others tend to reject the notion that weak microwave fields produce this anomalous cataract, because of lack of substantiating evidence from the clinic or the laboratory (Appleton & Hirsch, 1975). But these conservatives are possessed of a vague unease simply because the Soviet's limit of continuous permissible exposure is three orders of magnitude below that of the United States.³

The other camp of conservatives tends to reject the possibility of hazardous nonthermal effects,

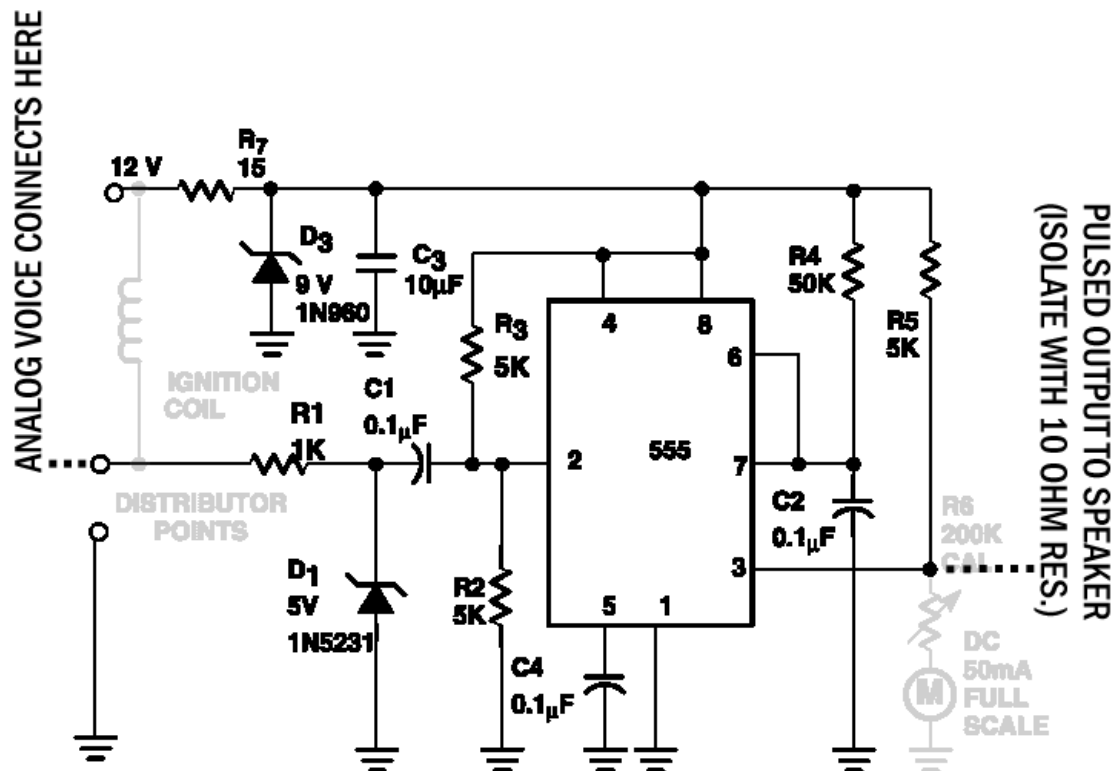

³ The Soviet's exposure limit of 10 μ W/cm² is three orders of magnitude below the exposure limit in the United States, but a different, that is, *emission*, limit holds for microwave ovens purchased for use in the American kitchen. In the United States at the present time, a newly purchased microwave oven may not emit radiation at a density greater than 5 mW/cm² as measured at a distance of 5 cm from the oven's surface. A user who stands 1 m from an oven that emits energy at the maximum permissible quantity would probably be exposed to a density of only a few microwatts per square centimeter—this is because electromagnetic energy when radiated from a point source attenuates markedly as it propagates through space.

Above image gives the description of the successful modulation. Note that the fidelity of current-day voice to skull transmission is much higher after three-plus decades of apparent development.

VOICE CONVERSION TO PULSES, AS USED IN THE SUCCESSFUL DEMONSTRATION OF MICROAVE VOICE-TO-SKULL TECHNOLOGY IN 1973 BY DR. JOSEPH SHARP. THIS IS NOT CLASSIFIED.

Above image illustrates the modulation method used by Dr. Joseph Sharp for the first known successful transmission of voice to skull using pulsed microwave. No implants are required for this form of V2S transmission, and this form of transmission will penetrate non-conducting walls. Image below shows a simple circuit which can duplicate Sharp's modulation method.

USING A 555 CHIP TACHOMETER DRIVER CIRCUIT TO SIMULATE DR. JOSEPH SHARP'S MICROWAVE VOICE TO SKULL VOICE-TO-PULSES CONVERSION METHOD

Above image shows a simple 555 timer chip circuit which can duplicate Joseph Sharp's original modulation method. When output to a loudspeaker, voice and music are recognizable.

NEW DEVICES THAT 'TALK' TO MINDS NEED DEBATE, CONTROLS

by Eleanor White

American Reporter Correspondent

Hamilton, Ont. Canada

HAMILTON, Ont., Canada -- The recent flap over invasive "X-ray" devices at Los Angeles International Airport that can scan the human body more invasively than ever before is just the tip of a technological iceberg which has been growing for half a century and has now yielded devices literally capable of "broadcasting" directly to the human mind.

Yet, in spite of considerable material published over the past half-century, the arrival of a time when any moderately wealthy person can purchase or have devices made to order that can "talk to" the brain and nervous system, has been met with silence. Indeed, in a response (<http://www.raven1.net/nsa1.gif>) to a 1975 request to the National Security Agency (NSA) for information on mind control devices, the NSA said one responsive document obtained from the Russians by the Defense Intelligence Agency could cause "exceptionally grave damage" to national security if released.

The seminal event in the developments that have produced "electronic mind weapons" was the discovery during World War II that radar technicians could hear the buzz of the radar signal in their skulls, no receiver needed, when they worked in close proximity to an energized antenna. Radar signals are a uniform train of short pulses of microwave signal, and the audible effect matches the pulse rate.

This told scientists that by pulsing a radio signal, it is possible to have the signal interact with the brain and nervous system.

Radar hearing was studied on a grant from General Electric in the early 1960s by scientist Dr. Allan Frey, at Cornell University in upstate New York. Dr. Frey's work has been reported in several scientific journals, including the Journal of Applied Physiology, 17(4): 689-692. 1962.

Dr. Frey found that a wide spectrum of "carrier" frequencies, (that is, the "spot on the radio dial" of the test signals,) when pulsed, and from about 125 megahertz (lower TV channel range) well up into the microwave region, could cause buzzes or clicks to be heard by the test subject. If a steady train of uniform, short, sharp pulses was aimed at a test subject's head, a buzz was heard. If a single pulse was transmitted, then the subject heard a pop.

In general, unclassified experiments on human beings lay dormant for the next decade, at least according to information developed by a Canadian organization, Citizens Against Human Rights Abuses (CAHRA), has been able to unearth. The pulses needed to place a signal power of about three-tenths of a watt per square centimeter on the subject's skull in order for the signal to be heard.

For ethical scientists, this power level -- about the same as when basking under an infrared heat lamp -- indicated caution. Further studies at the cellular level have turned up sensitivities

to certain signals far, far below that level. Dr. Ross Adey of the University of California at Riverside, a leading experimenter in this area, has recently warned (<http://electric-words.com/adey/adeyindex.html>) that "there are important biomedical considerations associated with long term exposure to any environmental factor capable of tissue interactions."

Other scientists studied "microwave hearing" by means of exposing animals to various combinations of carrier frequency, pulse shape, and power level. The animals were tested at the simplest level for "startle" response, by applying a simple pulse or pulse train to a caged or restrained animal.

More invasive unclassified experiments were performed in which electrodes were implanted into the brains of the animals, in areas of the brain where vision, sound, and other perceptive functions were known to reside. These electrodes measured the response of each perception region to different signal types.

These animal studies found that various perception effects are frequency and power dependent. That is logically to be expected, since the size of the animal and its sensory organs and brain region vary in size. Size affects how much of the power from an incoming signal is absorbed, and absorption is necessary to generate effects.

One of the most notable scientists in the animal experimental field was Dr. Jose Delgado, Director of Neuropsychiatry at Yale Medical School in the early 1970s. In a segment titled "Special Assignment" on CNN in 1985, Dr. Delgado demonstrated that by mounting a transmitter on an animal, and having received radio signals converted to stimulating pulses fed to implants in the animal's brain, behavior can be dramatically altered. A bull apparently intent on challenging an experimenter with a radio transmitter stopped moving toward the experimenter when the appropriate button on a small transmitter was pressed.

While this was not direct radio signal-to-brain technology, it did demonstrate clearly that the brain can be controlled by electrical stimulation. It also, significantly, demonstrated intent. Demonstration of intent is crucial to anyone interested in arousing public interest in getting electronic mind weapons exposed, debated, and controlled.

Three other effects were discovered during these animal experiments: Window effect, bio-amplification, and bio-detection.

Window effect means that, just as with drugs, there is both a minimum and maximum signal level which will cause a desired effect. Bio-amplification is the more significant phenomenon, as what it means in practical terms is that at just the right frequency and pulse shape, a given effect can be produced with very small power levels, far below power levels required to produce heating. Under grants from the government, Dr. Adey studied how electromagnetic (i.e. "radio") signals interacted with cells down to the molecular level.

Bio-amplification also makes possible signals which do not interfere with radio and TV appliances, and which are extremely hard to detect. Hopping these small signals around in a band of effectiveness makes them virtually impossible to detect.

Bio-detection means that a cell is not simply "stimulated" at a certain signal frequency, but can actually behave according to "modulation" applied to that signal. The old crystal set radios are one of the simplest detectors of "modulation". When voice is superimposed on a

steady carrier frequency, that variation in the signal is called the modulation. The crystal set extracts the voice and causes the attached headphones to reproduce the original voice.

Headphones alone cannot respond to frequencies as high as, say, AM broadcast band signals, and the detector, the crystal or diode, converts the radio signal into a voice signal. Cells can do the same thing. This leads to the next stage in radar-hearing human experimentation: The successful transmission of, first, morse code, and then voice, to a human test subject.

That milestone was apparently been achieved a quarter of a century ago. In the Journal of the American Psychological Association in March 1975, Dr. Don R. Justesen wrote:

"Communication has in fact been demonstrated. A. Guy (Note 1), a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure and opening of which resulted in a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy.

"Sharp and Grove (note 2) found that appropriate modulation of microwave energy can result in "wireless" and "receiverless" communication of speech. The recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed zero reference in the negative direction, a brief pulse of microwave energy was triggered.

"By radiating themselves with these "voice modulated" microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words. The sounds heard were not unlike those emitted by persons with artificial larynxes."

This early '70s success forms the basis for the powerful mind weapons that are still classified today. This writer makes no judgement here as to the truth of the allegations of CAHRA's 300 members, who claim to have been targetted by devices based on technology like this. Pain, manipulation of body parts, and hypnotic effects have all been reported, with a high degree of sameness among those reporting such effects.

However, the experimental results above make it plain that the means to communicate electronically with the brain and nervous system have existed for some time, outside the classified realm.

Audible words may be transmitted, as described above. A more recent technology can be coupled to "microwave hearing" to produce a signal which can carry vocal content which is not consciously audible, but is "audible" to the human mind. This is called "SSSS" or "S-QUAD" or "Silent Sound Spread Spectrum" technology.

The first unclassified patent found by CAHRA is U.S. Patent 5,159,703, by Dr. Oliver Lowery, dated October 27, 1992. This technology converts a hypnotist's voice to non-consciously-audible ultrasound, which can be sent using microwave hearing, or piggybacked on to commercial broadcast sound. This powerful combination of technologies can be used to apply hypnosis, undetectably over months and years.

Britain's ITV News Service, in March of 1991, reported the use of ultrasound carried via a commercial FM channel (100 MHz) to entrain the brains of Iraqi troops to pulse rates set to produce despair, during the Gulf War. Clearly both means and motive exist to use technologies developed over the past half-century. But has there also been a motive for criminal use of such devices?

Part II: Maturity

To recap, new devices which can "talk to" the human brain and nervous system are a reality. They have, in their classified form, been a reality at least since Dr. Joseph Sharp's successful transmission of voice using pulsed microwave radio signals in 1973.

In the first part of this article, scientific research was summarized describing the events which led to Dr. Sharp's success. The chain of events was begun with the World War II discovery that radar signals can be "heard" buzzing within the skull of technicians working in close proximity to energized equipment.

Studies on animals, and Dr. Allan Frey's human experiments at Cornell University showed that this phenomenon is both frequency and power level dependent. Also discovered were that (a) cells assist in amplifying radio signals at certain frequencies, and (b) cells can not only respond to a radio signal, but can actually "detect," that is, "decode" any modulation, such as voice, superimposed on the basic carrier signal.

Finally, brief reference was made to a form of sound conversion, "Silent Sound," in which both mood setting ("brain entrainment") signals and ultrasound voice facsimile can be used to undetectably communicate with the human brain. The radio signal or "microwave hearing" phenomenon can carry "Silent Sound," or, "Silent Sound" can be carried on top of an audible radio or TV sound broadcast.

This capability to carry inaudible "voice" or "mood" signals sets the stage for undetectable and repetitive hypnosis. Although the full details remain classified, the British ITV wire service received reports that the U.S. military used Silent Sound, piggybacked on FM broadcasts to Iraqi troops, to set them up for a quick surrender.

To this point, then, we can see that the potential for extremely invasive, undetectable, and unethical use of these technologies exists. Being undetectable and easy to suspend when witnesses are present, the world's justice systems can offer no remedy should the equipment be used against citizens in their homes and communities.

The question now is: "How likely is it that the unethical, involuntary, aggressive or voyeuristic use of these technologies has happened, is happening, or may be happening, by those who possess these devices?"

To evaluate this likelihood, one must answer this question: "Why would anyone use invasive, silent electronic equipment to both cause pain and discomfort, or, to read the state of mind, including said-to-self vocal thoughts and images, on a non-volunteer subject?"

One word sums the answer up quite thoroughly: "MKULTRA." MKULTRA was originally a collection of 149 psychological warfare and interrogation experiments commissioned in the

1950s by the CIA. These experiments were spurred into existence by the "brainwashing" tactics used on Korean POWs, which involved torture, sensory deprivation, and drugs.

MKULTRA planners decided that for brainwashing and other types of "mind control" activity, it was essential that *involuntary* test subjects be used. (No doubt, too, that volunteers for such horrible experiments would be nearly impossible to recruit.)

Among CAHRA members, and a parallel organization named ACHES-MC (Advocacy Committee for Human Experimentation Survivors - Mind Control), are severely and seemingly permanently mentally damaged survivors of the kidnap / institutional / drugging / torture forms of MKULTRA activity.

Most of the survivors' torment ceased shortly after the exposure of the non-electronic atrocities, by the U.S. Senate Select Committee on Intelligence hearings, chaired first by Senator Frank Church, then by Senator Inouye in the late 1970s. None of the perpetrators of those atrocities were ever brought to trial.

However, even though the perpetrators were not punished, and the neuro-electromagnetic experiments were not brought to light, the MKULTRA experience demonstrates undeniably that a modern, "civilized," western country which places a high value on freedom, still harbors a motive pool capable of unspeakable cruelty.

Add to the MKULTRA experience the continuing revelations of individuals who prey on children (Jeffrey Dahmer and John Wayne Gacy, for example) and it becomes clear that once invasive electronic devices fall into the hands of society's "baddest apples," the devices will be used in the worst possible ways. That is historical certainty, not speculation.

To sum up: We have shown that both the means and the will do exist, and have existed for some time, to carry out what the 300 members of CAHRA and ACHES-MC report.

But there is even more cause for concern: The basic technologies to inject long-term silent hypnosis (which can be used to generate hypnotic body pain) and to read sub-vocalized word-thoughts and even images seen by the target's eyes, can be bought or had built by the average millionaire. Not all "millionaires" are entirely ethical or altruistic.

Here is a list of technologies and their characteristics which can be had by the wealthy at this point in time:

- Through-wall, through-clothing, undetectable passive radar scanners from Millivision Corp., Northampton, Mass. This item also allows perpetrators to see if witnesses or test equipment is set up, and allows the perpetrators to shut down, rather than be detected.
- Radar-based life detectors, used for rescue and law-enforcement, but also available to stalkers and pedophiles. Can also "illuminate" a dwelling's indoor areas for the radar scanners above, for better visibility.
- Simple "brain rhythm entrainment" machines, which are transmitters pulsing at rates which can alter moods without the target realizing a signal is aimed at them. (The first of which was used during the Korean War, the Russian "LIDA" machine.)
- Involuntary voice-to-skull transmitters, capable of forcing a neighbor to listen to inescapable sounds while trying to sleep.

- Modified telephone voice converters, making a hypnotist's voice inaudible to the target's hearing sense, but still audible to certain parts of the mind. Can be transmitted using the pulsed microwave voice-to-skull transmitters. This "silent sound" equipment can also be transmitted over cable TV to the intended target, or over the target's favorite radio channel.

For the more determined aggressive device owner, a ruse involving less-than-ethical doctors can be set up where the new Applied Digital Solutions Inc. satellite-trackable implants can be surreptitiously placed during surgery for other conditions, resulting in the whereabouts of the targetted individual being known at all times to the perpetrator. This type of atrocity lends itself more to large organizations like government agencies or defense and intelligence contractors; and for such agencies this is not difficult to arrange.

What can be done? What should be done? CAHRA is a non-profit organization, meaning, by law anyone speaking or writing on behalf of CAHRA may not attempt to influence legislation either directly or indirectly by way of influencing voters. CAHRA's role is to supply information to others, that others may independently take action they see as appropriate.

Speaking here as Eleanor White, world citizen, and not as an agent of CAHRA, I suggest that the European Parliament's resolutions passed on January 28, 1999, be also passed by the U.S. Congress and the Canadian Parliament. Excerpts from those resolutions follow:

Resolution adopted by the European Parliament, 28.1.99 Environment, security and foreign affairs A4-0005/99:

23. Calls on the European Union to seek to have the new 'non-lethal' weapons technology and the development of new arms strategies also covered and regulated by international conventions; ...

27. Calls for an international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings;

Impetus for making such resolutions can be derived from a speech by Jean-Pierre Changeux, of the Paris Pasteur Institute, published in the prestigious scientific journal *Nature* in January, 1998:

But neuroscience also poses potential risks, he said, arguing that advances in cerebral imaging make the scope for invasion of privacy immense. Although the equipment needed is still highly specialized, it will become commonplace and capable of being used at a distance, he predicted. That will open the way for abuses such as invasion of personal liberty, control of behaviour and brainwashing. These are far from being science-fiction concerns, said Changeux, and constitute "a serious risk to society".

It is hoped the reader will take away from this article the need to get this matter of weapons-capable electronic devices on to the agendas of those we elect and pay to defend our nations from involuntary experimentation and atrocities.

Eleanor White is an engineer and technical advisor to the Ontario-based Citizens Against Human Rights Abuses.

UNIVERSITY OF TECHNOLOGY, SYDNEY

Presents

THE MIND SWITCH

OVERVIEW

The Mind Switch refers to the technology that has been developed which allows a person to turn on and off an electrical appliance, such as a desk lamp or TV in 2-3 seconds using EEG signals, without training.

Proportional control, such as turning up or down the volume of a radio is also possible with the technology. This research is being carried at the University of Technology, Sydney (UTS).

BACKGROUND - General

Early in 1994 while studying the response of the brain to environmental factors Professor Ashley Craig and Mr Paul McIsaac of the Department of Health Sciences at UTS, noticed an effect which appears to be common among all persons.

That effect is an increase in a particular brain signal when a person closes his/her eyes for more than one second.

The important question that Ashley and Paul then asked was could this effect be used to do something useful?, ie - could the control of the brain signal be used, in turn, to control something else?

At this stage Ashley contacted Professor Tony Moon, the Dean of Science at University of Technology, Sydney (UTS), to find out if anyone could help answer the technical questions and design a system that might exploit the apparent change in the signal level when a person closes his/her eyes.

Professor Moon introduced Ashley to Assoc Prof Les Kirkup who is a associate professor in the department of Applied Physics at UTS, who has experience in developing electronics and instrumentation. It was thought he could offer important input to the project.

He was initially skeptical that signals as small as those that are present on the scalp, (where electrodes are placed to pick up brain activity) could be detected reliably and analysed sufficiently quickly to allow activation of an external device, such as a lamp or TV.

The data that had been gathered on signal levels with eyes open and eyes closed showed that a significant increase occurred in the 8-13Hz part of the "brain spectrum" commonly referred to as the "alpha" region.

Les built a detection, discrimination and analysis system based on Ashley and Paul's data and, much to his surprise at least, the first person (Lucy) connected to the system showed the capability of operating a switch which could control an electrical appliance.

BACKGROUND - Technical

Serious work done on brain signals began with Berger in 1929 [Berger 1967]. Since that time the acquisition and analysis of brain signals, referred to as Electroencephalography (EEG) has advanced to such a state that EEG is regularly used to assist in the diagnosis of schizophrenia, epilepsy and brain tumours. [Geddes and Baker, 1989].

EEG has also been used in biofeedback studies in which subjects may learn to modify their EEG signals in response to visual representation of their EEG signals. This control usually takes weeks or months to learn and is not highly reliable.

The system we have developed does *not* rely on any learned skill by an individual. It simply requires a person to close his/her eyes for more than 1 second to effect sufficient change in the signals levels to allow for the reliable operation of a switch.

It turns out that it has been known for many years that increase in signal level occurs upon eye closure, but this is the first example (to our knowledge) of the recognition of its potential and the exploitation of the effect.

The system used to detect the change in signals consists of amplifiers, filters and other signal processing elements (full details are still classified at the moment!). As there are other sources which can generate signals which can interfere with brain signals (and hence cause intermittent switching on and off of appliances) we have developed a noise suppression system which eliminates the effect of those noise sources.

This feature is very important as we are currently developing the technology for disabled persons (we have a three year grant from the Motor Accident Authority of New South Wales, MAA) and reliability is a major issue.

The funding from MAA has allowed us to appoint Mr Andrew Searle who has become a key figure in the technical developments regarding the Mind Switch. In addition Mr Perez Moses is developing new noise suppression techniques to be applied in this work.

Foreword

Our courts serve us best when the law advances the public interest. Occasionally this happens in suits brought solely to protect a private party's personal interest, but more often progress is made through a test case brought and designed to further both public and private goals. Our decade long fight to secure redress for the Canadian victims of CIA brainwashing experiments, *Orlikow, et al. v. United States*,¹ is an example of such a public interest litigation.

But this case involving the CIA goes far beyond the typical public interest litigation precisely because it addresses an area of lawbreaking where normal political and legal remedies are not available. As the late Senator Frank Church concluded, after leading the congressional investigation of the CIA's improper activities in the 1950s and 1960s, that agency was "a rogue elephant" operating outside the law and protected by a shroud of secrecy. This is an account of that rogue elephant's reckless experimentation upon unwitting Canadian citizens, as well as the story of a public interest litigation against an opponent of immense power and dubious purpose.

The forty years since 1950 have been an unprecedented period of national security hysteria fueled by the likes of the Dulles brothers, Joseph McCarthy, J. Edgar Hoover and Richard Helms, and implemented through repressive measures enacted by the state and federal legislatures. In the course of this hysteria, individual liberties have too often been sacrificed in the name of national security. During this period, federal court decisions have occasionally restored liberties and protected traditional constitutional values, but these judicial successes have been few and far between. The clash between liberty and national security has never been as stark as in the inhumane and illegal sponsorship of the Canadian brainwashing experiments by our most powerful national intelligence agency -- an institution that was created to protect and to preserve the very freedoms that were so devastated in those irresponsible experiments. After years of effort, vindication was won through the payment of nearly a million dollars to the CIA's victims by the governments of the United States and Canada in response to the federal suit.

This review of the CIA's actions in the United States and Canada demonstrates how completely unprincipled was the Agency's original brainwashing program, as well as its course of legal manoeuvres years later when it was required to answer for its misconduct. The story of the brainwashing suit and the barriers

that were overcome before the CIA's victims were finally compensated, illustrates both the formidable hurdles presented and the unique satisfactions gleaned in a public interest law suit.

I. HOW A PUBLIC INTEREST CASE BEGINS

There is a pattern to the genesis of public interest lawsuits. A great wrong has been or is being done that involves a violation of an important principle. A potential client comes to you with a plea, often nonsense, that "You're the only one who can or will fight to right this wrong." Indeed, this is the pattern that was followed in the initiation of our litigation against the CIA on behalf of the nine victims of brainwashing experiments at a Montreal psychiatric hospital in the late 1950s and early 1960s.

Early in 1979 Canadian Member of Parliament David Orlikow called our office with a horror story that bordered on the incredible. It seemed that some twenty years earlier, David's wife, Val Orlikow, had suffered a bout of depression following the birth of their daughter and had sought help at the leading psychiatric hospital in Canada -- the Allan Memorial Institute at McGill University in Montreal. Under the "care" of the Director of the Institute, Dr. D. Ewen Cameron, Val was subjected to a number of unorthodox procedures in lieu of generally accepted psychotherapy. In particular, she was given injections of LSD and was exposed to what Dr. Cameron called "psychic driving" -- a procedure used nowhere else in which tape-recorded messages were played hundreds of thousands of times. Not surprisingly, these bizarre procedures did not help Val, but made her condition worse.

It was only in the late seventies that David and Val learned for the first time, from a New York Times story, that Cameron's work had been subsidized by the United States Central Intelligence Agency as part of a secret program to study techniques of brainwashing. The Orlikows wanted to sue the CIA for its part in experiments performed on Val by the now deceased Cameron; they insisted that there was no one else who would take their case and help them right this wrong.

Getting the full story from a potential client is always important, but it is paramount in a public interest litigation, because the suit is brought to advance a

principle as well as to vindicate an individual. Concealed pitfalls, half-truths or distortions will inevitably sabotage both objectives. A lesson learned time and again during the McCarthy period is that a public interest lawyer must insist on the whole story, warts and all. McCarthy's victims had to be induced to tell their whole story despite their fears of confiding in anyone, even their own lawyers. We insisted on all the facts in this case before agreeing to represent the Orlikows and other victims of the CIA's Canadian fiasco. From the beginning and throughout the long fight for justice our clients told us the truth. Without this confidence we would not and could not have properly represented them.

II. INVESTIGATION OF THE LAW

Having established the rough contours of the wrong done to the Orlikows and convinced of their credibility, the next step was to determine whether there is some legal basis for liability on the part of the CIA. Clearly Val and David Orlikow had been victims of some specie of tort, but when the government is involved, the courts have historically been reluctant to drain the public treasury to compensate for the misdeeds of government employees. This judicial reluctance is embodied in the doctrine of sovereign immunity, which excuses governmental liability for such torts. Recognizing the unjustness of this broad immunity imported from English common law, Congress in 1946 enacted the Federal Tort Claims Act providing a limited waiver of sovereign immunity for negligent acts of government employees.² This was our legal basis for suit.

But the Tort Claims Act is a sharply limited basis for liability; the Act does not provide liability for intentional torts, foreign torts, torts by "independent contractors" and torts committed by government employees executing discretionary functions.³ Of these, the foreign torts exception was the most immediately troublesome legal point, because so much of what occurred happened in Montreal outside the United States.⁴

When the Orlikows came to us, the law of foreign torts was rather unsettled; there had been no definitive interpretation by the Supreme Court and only a few federal court rulings had construed this limitation in the Tort Claims Act. Fortunately, a case was then pending in the District of Columbia Circuit that raised exactly this issue, *Sami v. United States*.⁵ We obtained the appellate brief filed by the plaintiff's counsel in the Sami case and agreed with the legal view he argued -- that under the Tort Claims Act that it was the place *where the*

governmental negligence occurred that mattered, not the site where that negligence had its operative impact. After reviewing the *Sami* brief, we were fairly confident that the D.C. Circuit would eventually construe the Tort Claims Act as covering cases like our's where the negligent acts occurred in the United States but had their damaging impact abroad.⁶

A second potential problem was that intentional torts are excluded from the Tort Claims Act waiver of sovereign immunity -- we had to plead and to demonstrate negligence for a recovery. Negligence is, of course, largely a question of fact -- what happened, who was careless, who was reckless, who was injured. To make out a *prima facie* case of negligence, however, one must have an identifiable standard of care that was violated. As a matter of general tort law, a person is required to exercise the prudence of a reasonable person in like circumstances. What that standard means thus depends upon the particular circumstances present in a case.

In our case, a detailed articulation of the duties and responsibilities of those involved in conducting human subject experiments, which was of tremendous public relations value over the course of the suit, was handed to us on a silver platter in the form of the Nuremburg Code. The Nazis' notorious medical experimentation had not only led to the execution of German experimenters after the War Crime Trials at Nuremburg, but resulted in a comprehensive articulation of ethical standards for medical experimentation. These standards explained in great detail the requirements that medical researchers take appropriate measures to protect the health and well-being of their patients who volunteer to undergo experimental procedures. Most importantly, the Nuremburg Code required that the "informed consent" of the patient must be obtained before any experimentation.⁷ This was our key legal standard for negligence in the failure to secure consent.

Val and David Orlikow were adamant that no one had ever told them of any experiment, much less obtained their consent. This seemed to be the clearest possible violation of the standard of care articulated in the Nuremburg Code. The use of LSD and the brainwashing tapes that Val described were a far cry from any accepted psychiatric therapy and their dangers were certainly well-known to the CIA. Knowingly financing such hazardous experimentation without requiring that Cameron take precautions to protect his patients seemed to be another clear violation of standard of the Nuremburg Code. But the detailed statement of these violations would require more facts than the Orlikows could provide.

² 28 U.S.C. 1346(b) grants U.S. District Courts "exclusive jurisdiction of civil

actions on claims against the United States, for money damages ... for injury or loss of property, or personal injury or death caused by the negligent act or wrongful act or omission of any employee of the Government."

³ Virtually all intentional torts are exempted from Tort Claims Act coverage by 28 U.S.C. 2680(h), which excludes "any claim arising out of assault, battery, false imprisonment, false arrest, malicious prosecution, abuse of process, libel, slander, misrepresentation, deceit, or interference with contract rights." 28 U.S.C. 2680 excludes "any claim arising in a foreign country." 28 U.S.C. 2680(a) excludes "Any claim ... based upon the exercise or performance or the failure to exercise or perform a discretionary function or duty on the part of a federal agency or an employee of the Government, whether or not the discretion involved be abused."

⁴ During the 1950s, the CIA's offices where the Agency's negligence had occurred were located in the District of Columbia, so jurisdiction and venue properly lay in that district (28 U.S.C. 1346, 1402).

⁵ 617 F.2d 755 (D.C.Cir 1979).

⁶ Things worked out as we had hoped. About two weeks after we filed our Complaint in the *Orlikow* case, the D.C. Circuit handed down its decision in *Sami*. In that decision, our Court of Appeals ruled that it was the place where the governmental negligence occurred, not the place of the injury, that was controlling. 617 F.2d 755, 761-63 (D.C. Cir. 1979). We could now rely on the *Sami* decision and its gloss on the foreign country exception as the controlling precedent in our case.

⁷ The voluntary consent of the human subject is essential. This means that the person involved should have the legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the subject matter involved as to enable him to make an understanding and enlightened decision.... The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs, or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

United States v. Brandt (The Medical Case), II Trials of War Criminals before the Nuremberg Military Tribunals under Control Council Law No. 10, at 181-82 (1949).

III. INVESTIGATION OF THE FACTS

In some respects, we were lucky in developing the facts needed to make out a case, because much of the legwork had already been done by journalists and Congressional investigations. In 1975 the Rockefeller Commission and the Senate Intelligence Committee had investigated the CIA's domestic abuses and issued detailed reports on them. Most importantly, in 1977 an enterprising author, John Marks, had forced public disclosure under the Freedom of Information Act of thousands of pages of CIA documents that had not been available to the earlier investigations. These documents, which consisted largely of financial records that had been missed in 1973 when the vast bulk of such materials were destroyed, provided an overview of a top secret CIA program of behavior control and brainwashing experiments code-named MKULTRA.⁸

With the assistance of researcher Jay Peterzell and the Center for National Security Studies, Marks interviewed CIA-funded researchers, former CIA officers and victims of the MKULTRA to piece together the remarkable story of the CIA experiments in the U.S. and Canada. Marks' award-winning book ⁹ was the culmination of this effort. Marks agreed to give us free access to his files and Peterzell agreed to work with us in developing the facts. Both resources were invaluable.

In others respects, we faced tremendous obstacles. The trail was over twenty years old. Potential witnesses had died, memories had faded and the surviving victims' health had deteriorated. Despite Marks' success under the Freedom of Information Act, the vast majority of MKULTRA documents had been destroyed. And the defendant was an agency trained in misdirection and steeped in deception. Nonetheless from Congressional hearings and reports, the surviving CIA documents, and the Marks files, we were able to substantiate the following basic facts about the case.

A. Genesis of the MKULTRA Program and the CIA's Negligence in the Death of Dr. Frank Olson.

In the early 1950s the CIA reaction to the unprecedented confessions of U.S. POW's in Korea was one of panic that the Communists had discovered an effective method of "brainwashing" our soldiers. The response was an intensive research and development program code-named "MKULTRA." It was in April of 1953 that Richard Helms, then the head of the CIA's Operations Directorate,

recommended that the Agency explore covert brainwashing techniques for offensive and defensive use, to counter the suspected Soviet and Chinese efforts in that area. CIA Director Allen Dulles promptly approved the MKULTRA Program which was to operate outside the usual CIA administrative channels without "the usual contractual arrangements," and to be highly "compartmented." Dulles also ordered that "exacting control will be maintained over the Project by TSS."¹⁰

Proving negligence was essential to our Tort Claims Act case, and our starting point was the story of the CIA's role in the death of Dr. Frank Olson in an early MKULTRA drug experiment. The Olson tragedy is relevant because it occurred three years prior to the CIA funding of the experiments in Montreal and involved the two key Agency officers who approved that funding -- Sidney Gottlieb and Robert Lashbrook.

In November of 1953, Gottlieb and Lashbrook were directly responsible for an LSD test that preceded the death of Dr. Olson, an Army chemical and biological warfare expert, who had no forewarning that he was to be made an experimental subject. After receiving LSD surreptitiously administered in a glass of cointreau, Dr. Olson suffered a severe depression, was taken by Lashbrook to New York City for consultations with an allergist named Harold Abramson, who had been testing LSD for the CIA as an MKULTRA researcher. Without ever being taken to see a psychiatrist or, indeed, any physician who was independent of the CIA, Dr. Olson fell to his death from the window of a tenth story room he shared with Lashbrook at the New York Statler Hotel.

Although the CIA was able to cover up its responsibility for the Olson death, Dulles ordered an investigation by his General Counsel, Lawrence Houston, who concluded that there had been "culpable negligence" by the CIA officials in charge of MKULTRA and "a death occurred which might have been prevented."¹¹ CIA Inspector General Lyman Kirkpatrick, who also reviewed the Olson tragedy at Dulles' request, recommended that there "should immediately be established a high-level intra-Agency board which should review all TSS experiments and give approval in advance to any in which human beings are involved." Kirkpatrick also recommended that the CIA employees involved in the Olson death should be reprimanded.

Despite these conclusions and recommendations, Gottlieb and Lashbrook continued their activities unreprimanded and unsupervised. Indeed, we had further evidence of the CIA's negligence in the subsequent findings of its CIA Inspector General in 1957 that some of the MKULTRA activities "are considered to be professionally unethical and in some instances border on the illegal" and "are not only unorthodox but unethical and sometimes illegal."¹²

The CIA's failure to take appropriate measures to curb Gottlieb and Lashbrook despite these repeated findings is precisely the kind of negligent omission contemplated by the Tort Claims Act, and seemed to be one sound ground for liability.

B. CIA Negligence in the Funding of the Montreal Experiments

Early in 1957, Dr. D. Ewen Cameron, Director of the Allan Memorial Institute in Montreal, submitted a formal grant application to the "Society for the Investigation of Human Ecology" a CIA front operating at the Cornell University Medical School in New York City. That application proposed to extend brainwashing experimentation which Cameron described as follows:

- i. The breaking down of ongoing patterns of the patient's behavior by means of particularly intensive electroshocks (depatterning).
- ii. The intensive repetition (16 hours a day for 6 or 7 days) of the prearranged verbal signal.
- iii. During this period of intensive repetition the patient is kept in partial sensory isolation.
- iv. Repression of the driving period is carried out by putting the patient, after the conclusion of the period, into continuous sleep for 7-10 days.

Cameron also proposed to test drugs such as "LSD 25 and other similar agents" in "depatterning" his patients and to experiment with new methods of "inactivating" the patient during the repetition of verbal signals with other drugs including curare, a drug used in surgery to temporarily paralyze a patient's involuntary muscles.

Cameron's application for funds was dated January 21, 1957 and on February 26, 1957 Gottlieb and other CIA officials approved the application in a Memorandum that simply repeats, without reasoning or explanation, the application virtually in haec verba. Shortly thereafter, Gottlieb's deputy, Lashbrook, approved the first payment to Cameron. Despite the CIA General Counsel's explicit criticism of the "culpable negligence" in the Olson death on the part of Gottlieb and Lashbrook, they called the shots at the Agency on the Cameron application, which was not even reviewed by the CIA own Medical Staff.^{[13](#)}

In all, the CIA provided some \$60,000 over four years for the experiments described in the Cameron application. At no point in any of the surviving CIA

documents is the slightest concern expressed for the rights or well-being of the subjects of these CIA-funded experiments. The casual indifference to Cameron's patients exhibited throughout the CIA's documentary record, particularly after the disastrous Olson LSD experiment, simply reeked of negligence.

C. CIA Negligent Funding of Experiments on Unwitting Subjects

The unambiguous standards for medical experimentation formalized at Nuremburg nearly a decade before the CIA subsidies to Cameron specifically required that "informed consent" be obtained from subjects in medical experimentation. Val and David Orlikow swore that they had never consented to any experimentation at the Allan Memorial Institute and, indeed, the Institute's medical records contained only a telegram from David authorizing Val's admission "for treatment."

The documentary evidence from the CIA contained no mention whatsoever of using volunteers, and it was clear from the application Cameron had submitted that experimental subjects would be drawn from the patient population of the Allan Memorial Institute. Finally, the use of non-volunteers was the modus operandi of the MKULTRA program and its two chief operatives, Gottlieb and Lashbrook; this practice was strongly criticized by two CIA Inspectors General during the late 1950s and early 1960s.¹⁴ This strong circumstantial evidence corroborated the Orlikows' story, strengthened this third aspect of the CIA's negligence in funding the experiments in Montreal.

* * * * *

From each of these three perspectives -- leaving those responsible for Dr. Olson's death in charge of MKULTRA, financing extraordinarily dangerous experiments without taking any precautions, and experimenting upon unwitting, non-volunteer subjects -- it appeared to be a sound prima facie case. But there was one question that we could not answer: Did Cameron know he was working for the CIA? On the one hand there was an express notation in an MKULTRA file that Cameron and his staff were to remain unwitting of their CIA sponsorship.¹⁵ On the other hand there was Cameron's history as a trusted consultant to the U.S. Government who had evaluated Rudolf Hess' competence to stand trial at the end of World War II, and Cameron's peculiar application for funding to the CIA front, which seemed to have less to do with psychiatric therapy than with brainwashing experimentation.

We asked our first expert, Dr. Leon Salzman, an eminent psychiatrist who had practiced and taught in Washington and New York since the 1940s, to review the Cameron application and Val Orlikow's medical records and to discuss them

with us. Dr. Salzman was direct and emphatic, in his expert opinion the application proposed experiments clearly tailored to explore techniques of "brainwashing," and the bizarre combination of procedures offered little if any hope of helping Cameron's patients. Indeed Dr. Salzman's insight was confirmed by the public admission of Cameron's technical assistant, Leonard Rubenstein, in an August 2, 1977 *New York Times* interview that the work Cameron did with CIA funds "was directly related to brainwashing." Rubenstein explained:

They had investigated brainwashing among soldiers who had been in Korea. We in Montreal started ... brainwashing patients instead of using drugs.

Unfortunately all of this was circumstantial. Because Cameron was dead, a definitive answer to the question "what he knew and when he knew it" vis-à-vis his CIA subsidies was likely impossible.

But did it matter whether Cameron knew that the CIA was paying him? Focusing on Cameron's knowledge was looking through the wrong end of the telescope. For purposes of suing the CIA, what mattered was what the CIA knew. On that score, the record couldn't be clearer. Cameron's application set out the experiments in detail and the CIA authorized subsidies for that experimentation. Finally, as Val Orlikow's hospital records made clear, the CIA got what it paid for. Whether Cameron was a witting accomplice or a unknowing dupe was beside the point.

⁸ We later learned when deposing former CIA officer Robert Lashbrook that each of these financial documents were "deliberately written so it would reveal a minimum." Only 56 pages of even these highly sanitized financial records concerning the Montreal project were provided to us by the CIA in discovery.

⁹ J. Marks, *The Search for the "Manchurian Candidate": The CIA and Mind Control* (1977).

¹⁰ TSS is the abbreviation for Technical Services Section, the CIA component responsible for MKULTRA, which a few years later became the Technical Services Division or TSD. The "MK" in "MKULTRA" denotes that the program was conducted by the Technical Services Division.

¹¹ Houston's detailed conclusions were particularly damning:

I am not happy with what seems to me a very casual attitude on the part of TSS representatives to the way this experiment was conducted

and to their remarks that this is just one of the risks running with scientific experimentation. I do not eliminate the need for taking risks, but I do believe, especially when human health or life is at stake, that at least the prudent reasonable measures which can be taken to minimize risk must be taken and failure to do so is culpable negligence. The actions of the various individuals concerned when the effects of the experiment on Dr. Olson became manifest also revealed the failure to observe normal and reasonable precautions.... As a result a death occurred which might have been evented....

¹² Final Report of the Senate Select Committee to Study Governmental Operations with respect to Intelligence Activities, S. Rep. No. 94-755, 94th Cong., 2d Sess. Book I, at 394, 410 (1976).

¹³ The former Chief of the CIA's Medical Staff, Dr. Edward Gunn, testified in 1975 Senate Hearings:

Dr. Gunn. From 1955 to approximately 1959 or 1960, there was at least once a year a meeting that was held with the head of that office. But we never saw more than some very general outline that there was such a research program. We never saw the direct material for a program. We had offered to assist TSD by providing medical support and guidance, but it was always "thank you very much." Senator Kennedy. Were you satisfied that Dr. Gottlieb's group was adequately protecting its subjects? Dr. Gunn. From the standpoint of the Office of Medical Services, we could not, no, because we did not know what they were doing.

Biomedical and Behavioral Research: Joint Hearings before the Subcomm. on Health of the Senate Comm. on Labor and Public Welfare and Subcomm. on Administration, Practice and Procedure of the Senate Comm. on the Judiciary, 94th Cong., 1st Sess. 259 (1975).

¹⁴ Similar concerns were voiced during the mid-1970s, with key CIA officials, such as the Deputy Director for Science and Technology Carl E. Duckett admitting at U.S. Senate hearings that the CIA unwitting drug tests were "wrong" and with the Senate Intelligence Committee concluding that compartmentation was used in the MKULTRA Program to conceal the "unethical and illicit activities" by the CIA. As the Senate Intelligence Committee stated:

Few people, even within the agencies, knew of the programs and there is no evidence that either the executive branch or Congress were ever

informed of them. The highly compartmented nature of these programs may be explained in part by an observation made by the CIA Inspector General that, "the knowledge that the Agency is engaging in unethical and illicit activities would have serious repercussions...."

Final Report of the Senate Select Committee to Study Governmental Operations with respect to Intelligence Activities, S. Rep. No. 94-755, 94th Cong., 2d Sess. Book I, at 385-86 (1976).

¹⁵ In view of the CIA's overwhelming desire to protect MKULTRA researchers from embarrassment when the Agency's role became public --indeed the CIA successfully fought a Freedom of Information Act all the way to the Supreme Court to prevent even the names of some MKULTRA researchers from being made public, *Central Intelligence Agency v. Sims*, 471 U.S. 181 (1985) -- we did not view this notation as particularly credible. Such a covering of the trail would be entirely consistent with protecting Cameron rather than reflecting what actually happened and who knew what.

IV. DECIDING TO TAKE A PUBLIC INTEREST CASE

Deciding whether to proceed with a public interest case requires a lawyer to answer four questions. Will the suit advance a public interest? Is that interest an important one? Can you afford to take the case? And, can you win? Our answer to each of these questions in the CIA brainwashing case was, rather obviously, "yes," but again the considerations that led to that conclusion illustrate the unique nature of a public interest litigation.

A. Defining a "Public Interest"

There are probably as many different definitions of the "public interest" as there are people who think about the concept. We certainly make no claim of being able to define any single position that is the public interest, and do not believe that there is any objective standard for doing so. But the absence of an objective standard does not relieve the ethical lawyer from a professional responsibility to advance the public interest -- as he or she sees it. For example, there are those who honestly believe abortion is murder, while others are adamant that a woman has an absolute right to control her own body and to end an unwanted pregnancy. According to their own view, each side is fighting for the public

interest. Just because other people may argue with your conclusion about where the public interest lies does not mean that you are excused from thinking and acting to promote the public interest.

Here, at least employing our own subjective standard, the public interest seemed clear: "the CIA is not above the law." The rule of law is a cornerstone to our democratic system of government; holding the executive branch legally accountable in the courts is a key means of protecting our civil freedom. Vindicating this principle and extending it to the most secret and deceptive part of the federal government would be a significant stride in advancing the public interest. We concluded that the Orlikow case presented an ideal vehicle for reasserting this important principle.¹⁶

B. Assessing the Importance of a Public Interest

The importance of securing judicial accountability for the CIA was demonstrated time and again, both before and during the litigation. In the words of the late Senator Frank Church, who led the congressional investigation of the CIA's improper and unlawful actions, that agency was "a rogue elephant" in the 1950s and 1960s operating above the law and out of control as it plotted assassinations, illegally spied on thousands of Americans, and even drugged our own citizens in its effort to develop new weapons for its covert arsenal. When those actions were exposed by the congressional committees in the 1970s, the CIA showed some disposition for reform, but those reforms were embodied in internal CIA regulations and Executive Orders, and were thus subject to change whenever a new administration entered office or a new CIA Director took over. We believed that using the Tort Claims Act to secure compensation in a court of law for the CIA's victims would not only complete the public repudiation of these abuses, but would also extend the rule of law to the CIA and serve as a concrete deterrent to future abuses.

Moreover, in the Canadians' case, instead of admitting its wrongdoing and accepting responsibility, the CIA chose simply to ignore the plight of its victims. The importance to all Americans of curbing this continued arrogance by a secret agency of our government could hardly be overstated. We felt that judicial accountability for these past abuses could help to do so.

Finally while the suit was underway, there was a return to business as usual at the CIA. The reforms of the 1970s became dead letters in the 1980s as new Executive Orders and attitudes allowed the CIA to veil more of its activities in a cloak of secrecy, and then CIA Director William Casey adopted an "anything goes" attitude. This had a predictable impact on the Agency, which no longer felt the restraints of the 1970s and returned to the days of the rogue elephant,

advising Central American guerrillas that assassinations are appropriate, sponsoring covert wars throughout the world, and hiding illegal activities behind claims of national security. In short, the CIA was again operating outside the law. Throughout the court fight, these continuing examples of CIA lawlessness reinforced our conclusion that judicial redress was an important means of forcing some restraint upon this Agency's threat to the rights of human beings at home and abroad.

C. "Winability"

The question of whether a public interest case can be won is particularly important because a loss is not only a defeat for the plaintiff but also for the principle. With the documents obtained by John Marks as support, there seemed little question that factually we were on firm ground. As to the law, one should not be faint-hearted. We thought that the pending Sami case offered a way around the foreign country exception, and indeed as the suit unfolded, that most difficult potential legal problem evaporated. More important legally was the Nuremburg Code which provided a codified ethical standard that the CIA could scarcely shrug off. All together it looked like a winner.

In addition, David Orlikow's stature as a respected Member of the Canadian Parliament gave us reason to expect the support of the Canadian Government in the fight. This was an important consideration. We expected that the Canadians would resent an ally who used their citizens as unwitting guinea pigs in brainwashing experiments, and that Canada's support for its citizens would strengthen our hand in seeking prompt recompense by the CIA. These expectations, sadly, were never realized.

D. Affordability

The decision to take a public interest case brings with it a commitment to see the matter through to its conclusion. Neither the Orlikows nor any of the other Canadian victims were in a position to pay us to bring the suit, so a contingency fee under the limitations of the Tort Claims Act was the only option. Although this would mean a long wait for legal fees, if any, we were sufficiently convinced of the importance of this case and its winability to take the case on this basis. In addition, discovery costs would be large, but we were prepared to advance some of those costs from our firm's funds and to seek support from foundations to pay the remainder.¹⁷ For better or worse, we decided to go forward.

¹⁶ The recent spectacle of Col. Oliver North's covert actions and the Reagan

Administration's widespread disdain for this critical principle underscores the need to bring some measure of accountability to those engaged in clandestine activities.

¹⁷ In addition to our own funds, litigation costs, which eventually exceeded \$60,000, were defrayed by two grants of \$20,000 awarded by the J. Roderick MacArthur Foundation through the American Civil Liberties Union, funds raised by David Orlikow and other concerned Canadians, and support provided by the Mental Health Law Project.

V. EFFORT TO SETTLE BEFORE SUIT

Before any lawsuit can be filed under the Tort Claims Act, an administrative claim must be presented to the federal agency that was negligent, which gives the government a chance to settle the case. During 1979, we submitted administrative claims on behalf of Val Orlikow and two other Canadian victims -- Jean Charles Pagé and Robert Logie -- and were somewhat encouraged by the response of CIA General Counsel Daniel B. Silver. On October 11, 1979, Silver wrote us that "the policy of CIA is not to shirk responsibility for the unfortunate acts that occurred in the course of the MKULTRA program," and that he found the experimental research conducted by Dr. Cameron "repugnant."

Nonetheless, when we sought to settle our clients' claims prior to suit, the CIA refused to negotiate on the ground that Cameron's application for funds was "unsolicited." This claim, even if true, seemed legally irrelevant to us. After all, the CIA knew what the experiments would involve and voluntarily provided funds for them. Whether the CIA or Cameron initiated the contacts did not seem to us to have any bearing on the CIA's liability.

But as it turned out, the CIA General Counsel's version of what had happened was untrue -- CIA representatives had gone to Cameron and solicited the application. As we detail below this falsehood, which was even repeated in defendant's formal Answer to our Complaint, was exploded in discovery when retired CIA officer John W. Gittinger told the truth at his deposition -- that he and the CIA had initiated the contacts with Cameron. Despite the fact that Gittinger was well-known within the CIA as having been involved in MKULTRA and was identified in Agency documents as the "Project Monitor" for the McGill experiments, the CIA lawyers didn't even bother to check their facts with him before asserting this groundless defense.

In any event the CIA refused to negotiate settlement, which raised a new legal problem. Our correspondence with the General Counsel contained valuable admissions by the CIA. Could we use these settlement documents in our case? Although Federal Rule of Evidence 408 precludes the admission in court of "[e]vidence of conduct or statements made in compromise negotiations," there is no legal bar upon using such admissions in public debate. Moreover, where the government has relied upon patently spurious grounds for refusing to settle a claim, it is entirely proper to disclose its erroneous position when presenting the evidence that disproves it.

In addition, the Tort Claims Act requires claimants to exhaust administrative remedies by presenting their claims to the Agency involved. Because of this requirement, we were able to include in court documents both the General Counsel's admissions and the false basis for refusing to discuss settlement. In this way, normally excluded evidence played a role in the factual development of the Orlikow case.

VI. PREPARATION OF COMPLAINT

At the same time we were engaged in our pre-litigation effort to settle with the CIA, we were also working hard on the eventual complaint in the case. These two jobs were complementary, since information obtained in the negotiations, such as they were, contributed to the factual development of our case, and the disciplined articulation of legal theories in a formal document aided in our presentation of our clients' claims to the CIA. By the time that we had received the final denial of our clients' claims -- a prerequisite for suit under the Tort Claims Act -- we had nearly completed a detailed complaint.

A. Pleading Facts Consistent with Coverage of the Tort Claims Act

As we have noted, the Tort Claims Act only waives sovereign immunity for torts sounding in negligence. Intentional torts such as assault and battery are not bases for liability under that statute. This limitation posed a potentially significant problem for us, because torts based on medical malpractice, particularly those involving a failure to secure consent, had originally evolved from assault. There was an important distinction in our case, however -- we were seeking recovery from the CIA, not an incompetent physician. Throughout our development of the case we continually tried to keep the focus of debate on the Agency and its recklessness, a strategy that was happily consistent both with

our clients' private interests in financial recompense and the public interest in forcing judicial accountability upon the CIA.

Our investigation of the facts already on the public record had provided a wealth of evidence of the CIA's negligence. Now, aided immeasurably by the unique conceptual insights of our partner, John Silard, we formulated our clients' claims in three categories:

- i. Negligent failure to supervise -- the Olson count;
- ii. Negligent funding of extra-hazardous experimentation -- the brainwashing count; and
- iii. Negligent funding of experimentation on patients who had not volunteered to be experimental subjects -- the Nuremberg count. The final complaint set out these three negligence counts and, with John's brilliant drafting, skillfully avoided the intentional tort exception. Indeed by articulating the wrong in this fashion, an intentional tort defense was practically untenable -- the CIA was in no political position to insist that its torts against our clients were intentional, not negligent.

B. Developing Factual Evidence Corroborating Plaintiffs' Claims

Because the case was so unusual and the underlying facts were so complex, our complaint contained a wealth of detailed allegations concerning the MKULTRA program and the CIA.¹⁸ In addition to the facts concerning the MKULTRA program that we have summarized above, we provided details concerning the three Canadian victims who we then represented. Using facts gleaned from their Allan Memorial Institute medical records we were able to confirm that our clients had indeed been subjected to experimentation as described in the Cameron application to the CIA "front."

These records showed that Val Orlikow, who sought treatment for depression, instead had been subjected to many months of "psychic driving" and 16 LSD trips. Jean-Charles Pagé, who entered the Allan Memorial Institute for treatment of alcoholism, was "depatterned" with and became addicted to powerful barbiturates, and was placed in "continuous sleep" for thirty-six days. Robert Logie, who came to the hospital for treatment of leg pains that were incorrectly diagnosed as psycho-somatic, was depatterned with intensive electroshocks and LSD, and subjected to drug-induced sleep for a period of twenty-three days.¹⁹

Other victims came forward and joined the suit over the next two years until there were nine in all. The Allan medical records confirmed that the six additional patients we came to represent had also been victims of the

brainwashing experimentation during the period of CIA funding. Jeanine Huard, who also sought treatment for depression, was depatterned with intensive electroshocks and drugs, and subjected to psychic driving. Lyvia Stadler, another patient suffering from depression, was subjected to depatterning, psychic driving and prolonged drug-induced sleep. Dr. Mary Morrow, an intern who was admitted to the Allan Memorial after being told by Cameron that she needed "rest," was depatterned with intensive electroshocks and barbiturates. Rita Zimmerman, who sought treatment for alcoholism, was depatterned with 30 electroshock sessions until in Cameron's words she was "incontinent of stool on occasion." Mrs. Zimmerman was also subjected to over a month of psychic driving and some 56 days of drug-induced sleep. Florence Langleben, who sought treatment for anxiety attacks, was depatterned with LSD and intensive electroshocks, and subjected to over a month of psychic driving and some 43 days of drug-induced sleep.

The story of the last of the nine plaintiffs, Louis Weinstein, is perhaps the most stark example of the devastating impact these brainwashing experiments had upon the innocent Canadian victims. At the hospital he was subjected to depatterning with intensive electroshock and LSD, months of psychic driving (sometimes in "sensory isolation" where all he could perceive was the taped messages), and prolonged drug-induced sleep. A successful and prosperous Montreal businessman when he entered the Allan Memorial Institute for treatment of anxiety, Mr. Weinstein lost his business and was unable ever again to support his family.²⁰

In addition, the nine victims, most of whom were by then elderly and frail, never consented to participate in any form of experimentation. David Orlikow sent a telegram authorizing his wife's admission "for treatment." Janine Huard, Mary Morrow, Rita Zimmerman, and Louis Weinstein signed standard hospital admission forms entitled "consent for examinations and treatments." The medical records of the other victims did not contain even such a consent for treatment. The nine and their families could not remember ever being told that they were the subjects of experiments for research or any other purpose, and they were sure that none of them had ever volunteered to be subjects in any experiments or research.

On December 11, 1980 we filed our Complaint against the CIA under the Tort Claims Act.

¹⁸ Of these hundreds of detailed allegations, only one was not confirmed in subsequent discovery and that allegation had been made on "information and

belief"; we had guessed wrong about a name excised from a CIA document released to Marks.

¹⁹ The intensive electroshocks used in these experiments are not the same form of ECT used routinely in the treatment of patients suffering from depression. Both the voltage and the number of shocks administered were greatly increased. Instead of stopping after the procedure had induced one grand mal seizure, subjects were shocked again and again until no further seizures could be elicited. There is no question that this was a profoundly intrusive and destructive form of electroshock, which was far different in kind from that which was conventionally used for therapeutic purposes.

²⁰ The story of the tragic disruption of a family's life is movingly recounted by Louis Weinstein's psychiatrist son, Harvey, in H. Weinstein, *A Father, a Son and the CIA* (1988).

VII. DILEMMA WITH A JUDGE WHO WON'T DECIDE

The CIA's first response to the suit by the Canadians was a harbinger of the Agency's entire litigation strategy: use delay and attrition to wear down the elderly plaintiffs and their 70 year old lead attorney, Joseph Rauh. Unfortunately this strategy was aided by the Judge assigned to the *Orlikow* case who took months to rule on routine motions, and the litigation ground to a halt time after time.

Thus, instead of investigating and answering the detailed factual allegations of our Complaint, the government filed a motion seeking dismissal of the suit on the basis of a group of "boilerplate" defenses -- most prominently, the foreign torts and discretionary function exceptions to the Tort Claims Act, discussed above, and the statute of limitations. Simultaneously, the Agency sought a protective order precluding written interrogatories, oral depositions, document requests and other discovery by the plaintiffs until the Court had ruled on the motion to dismiss the suit.

At this early stage in the litigation -- consideration of a motion to dismiss -- the Court must assume that all factual allegations of the Complaint are true and can only dismiss a suit on legal grounds. After our research in preparing the Complaint, we were confident that none of the boilerplate defenses asserted by the CIA presented a serious threat. Nonetheless, month after month went by and

the Judge failed to rule on the CIA's dilatory request for dismissal. During this protracted delay, our initial written interrogatories remained unanswered and oral depositions could not be scheduled. In short, the case was frozen.

How do you get a dilatory Judge to rule? There is no safe way. Among the alternatives are a letter to the Judge (copy, of course, to opposing counsel); a letter to the Judge's superiors (again with a copy to opposing counsel); a letter to the Administrative Office of the Federal Courts (again with the requisite copy), where it will be forwarded to the Chief Judge of the District Court; or seeking a writ of mandamus from the Court of Appeals to compel a ruling. All of these alternatives carry terrible risks of alienating the person who will ultimately decide the case.

After waiting nearly a year for what should have been a simple and obvious ruling in our favor, it was clear that some action had to be taken despite the risks. We decided that the best course was a letter to the Administrator of the Federal Courts pointing out the advanced age of the plaintiffs and the likelihood that this continuing delay would deny them their day in Court. The Administrator forwarded our letter to the Chief Judge of the District Court, and the CIA's Motion to Dismiss was denied within a week. Now we could finally begin discovery.

But in important ways the damage had already been done. Our clients had lived another year uncompensated and during that time we were unable to advance their case. Most significantly, a key witness, who was to be our first deponent, had died during the delay in ruling on the motion to dismiss. During the late 1950s, James Monroe, a retired Air Force Colonel who had studied brainwashed U.S. POW's in Korea, was the Executive Director of the Society for the Investigation of Human Ecology, the CIA front in New York which served as the conduit for Agency funding of the Montreal brainwashing experiments. Now we would never know what Monroe could tell us as the middleman in the CIA's dealings with McGill University and Dr. Cameron.

Organized Stalking Target Anecdotes

January 20, 2008

This page is to provide a place for multiple stalking victim anecdotes, to give the visitor a quick view of what it's like to be a target of this criminal activity:

Book, "Terrorist Stalking in America", a must read for anyone interested in seeing case information from the perpetrator side.

Lissa: I discovered my husband had been molesting, and had been allowing associates molest, my daughter Jennifer. When I called the police, my husband said "You have no idea what you have done." I then took Jennifer to a pediatrician, then to a children's hospital. By the time I was done, the authorities twisted the story around so that *I* was declared mentally ill, and the children's custody given to my husband. A year later I am still fighting this, and from conversations I understand that if I win, I will probably be killed. The public has no idea how corrupt the justice system is, and what a stranglehold organized pedophile rings have on public officials.

Sally: Frequent thefts and sabotage of my belongings to the point that I now can't afford three meals a day. I experience theft and sabotage of my food and kitchenware.

Liza: Before I realized that I was being targeted for some reason, I used to get a lot of odd damage and stains appearing in my house, but I chalked it up to having a child. There would be no way of knowing what he might have spilled. When the drain pipes from the roof kept repeatedly getting crushed or pulled apart (so that the basement would get water when it rained), I knew it wasn't my son doing it, but I thought maybe it was some kids in the neighbourhood who liked to dismantle drain pipes.

When the screen doors developed tears in them right next to the door handles (which I locked at night), I felt slightly suspicious. When the door locks themselves went askew and my keys didn't work quite as well, I had no idea at the time that this was an indication that my locks had been tampered with.

Looking back, I realize that there was sabotage going on a fair amount. The stains were some kind of engine oil, spread all over the house, including on my son's bed under his sheets. He's not a baby, so he wasn't throwing motor oil around.

Gloria: I put up with this stalking for 13 years, and then suddenly one night, while I was starting to drift off to sleep, I felt what seemed like a bolt of electricity hit the middle of my body. Repeated hits to my stomach and back and ribcage continued for hours. These electro-shock zaps and zings have gone on since 1998, depriving me of sleep. I also get really intense headaches, even though I almost never used to get headaches before the zaps and zings began. The zings cause other types of body pain, too. But the two worst problems for me are the sleep deprivation

and the splitting headaches.

[Eleanor White webmaster talking: I've had things like 'zaps' too while trying to sleep. Or 'bee stings'. And long periods in the night when I can't get back to sleep even though I only drink one cup of decaffeinated coffee once each day. Do any visitors to this site have any idea how a stalker could accomplish these effects?]

Liza: I've had problems with clothing being torn and destroyed. Every coat I have bought for my son in the last two years has had problems with the zipper not working from about the first week onward. My own most recent new coat needed a new zipper within a month, at a cost of \$50 because it was a long zipper. At the same time, it developed several tears in the inner seams. Most recently the metal zipper on my jeans was subtly rendered inoperable by teeth falling out. But metal teeth don't just "fall out" of zippers.

Then the situation got worse, and I knew something wasn't right, and that this wasn't all "random". The walls of my bedroom began to bang at night, very loudly, as though someone was throwing stones at the wall. My furnace got so loud that the whole house shook when it was on, and it was like a train was going through the house. My appliances began to behave strangely - stopping working for a few days - and then starting working again. A lot more happened besides this, but it is impossible to explain and makes me look a little crazy to talk about it.

When I began to suspect someone was behind all of this in the fall of 2002, I encountered all kinds of additional problems, including mail being lost, false charges appearing on my credit card, static and clicks on my phone, lots of hang-ups and problems with my television reception. I suddenly got bug infestations that I had never had before, and I got very sick. I developed diarrhea that lasted for 8 weeks. I felt so sick and tired and my bedroom walls kept doing this banging at night, keeping me awake. I noticed that if I drank bottled water that I felt better. There were no reports of e-coli in my region, but it certainly looked like my water had become unsafe for some reason. Desperate, fearful and not knowing where to turn for help, I fled my house and moved in with my parents. I am 38 years old.

Lynn: Not only are there instances of multi-stalkers, some of these stalkers have followed me from one state to another. Because of my job, I had to make a move from a state in the southwest to a state in the midwest, some two thousand or so miles away. There were very few of us in my work group who made the move. The license plates from the "old" state had very loud colors and were quite noticeable. Even a co-worker noticed a car with plates from the "old" state which was lurking around our new place of employment. He mentioned that he did not recognize the car or the two men who were in the car. I recognized them as two of my stalkers from the "old" state who were now stalking me at my new job location and in my new apartment. These creeps were constantly breaking into my apartment and either stealing my property or in some way trashing it. These two men would also eat lunch frequently at a table next to the table where I and my co-workers would be having lunch. When a person is trying to hang onto a job and working anywhere from 60 to 80 or 90 hours a week, there is no energy or time left to try to "fight" these creeps.

Lynn: Suspending for the moment the belief by some that multiple-stalker incidents could not occur in the United States, I would like to remind everyone that this is a country which recently landed two rovers on the surface of Mars. With that in mind, I will relay the incident of ordering refill pages for the day planner I was using at the time. I called the 800 number and talked to someone named "Paul." He seemed lackadaisical and uninterested in taking my order. I waited for a month for the refills to

arrive and they never did. The company I dealt with had always been very prompt and provided good service before this time. I called the company again and was told they had no record at all of my previous order and they also had no order taker named Paul. If anyone tries to tell you there will be clicks or other noises on a tapped phone line, don't believe it. Consider how much personal information often goes out over the phone: appointments, credit card info, etc. Now consider how much technology has improved since this incident happened to me years ago. If you don't believe me, go outside some night and look up at the planet Mars.

[Eleanor White talking: Incredible as it sounds, multiple stalker victims report that the stalking groups are sometimes able to enlist the aid of various stores and other public service providers. This shows clearly that the multiple stalking "phenomenon" is much larger and runs much deeper than single stalker cases. I have had a number of incidents as described above where commercial organizations have participated in the harassment.]

Lissa: Yesterday, (February 23, 2004) was up there with bizarrest days in my life, of that there is no doubt. I was dialling a number with "911" in the MIDDLE, and got the 911 operator instead!

I was fortunately able to tape the last part of the conversation with the 911 operator who was INSISTANT that I had mis-dialed. Nope - not a chance. Also not a chance that my phone "missed" the first outgoing 4 numbers of the call I was trying to make originally (and which had never happened before).

The police came even though I explained I had not dialed "911".

The cop tried telling me that it was likely the battery in the phone and that they can sometimes go weak and dial crazy numbers. I'm not buying that, (are you?)

He spent a good 15 minutes in my entrance shooting the breeze and then was on his merry way.

I made a few calls and then another and then ANOTHER unintended call to 911. Even though they had the first one on record and I insisted that everything was OK, another cop was dispatched. Took this guy 20 minutes (good thing it wasn't a real case of hostage taking huh?) AND, they had assigned a backup unit to respond as well (but when he got here, he called in and cancelled backup).

Upon entering my home, he said, "I understand you had the pleasure of meeting Constable Marshall earlier on?!" I replied, "Yes, lovely man that he was, and that I'm certain you are, I had not intended to be 'meeting' any of our finer boys in blue today." Naturally, my neighbors all rubbernecked as they drove by my place (ya don't see a ton of cops in driveways out here. Never. Only at my place actually).

I had company expected for dinner. What makes things further odd is that the timing of the cop leaving my driveway was just a couple of minutes ahead of company arriving. This is the first time I've invited my bother and sister-in-law over since all hell broke loose last year. They only live 12 minutes away. Had a good evening with them and my father.

Bizarre, bizarre, bizarre. I'm wondering if it wasn't another sign that I would be heading down the wrong path with either a Child Protective Services lawsuit or pushing ahead with multi-stalking awareness and/or related lawsuit which I'm still pondering.

Grrrrrrrrrrrrrrrrrrrrrrrrr. And then I'll add a @#\$\$%^&*. Somedays, it just

sucks to BE ME (then I see my kids and it doesn't suck so much after all).
:-)

Lynn: Another incident of telephone harassment involved a large department store that has seasonal catalogs. When I still had a good paying job, a home and a life, I used to periodically order things from this store. The store would send out an automated message notifying me my order was ready to pick up.

One day, I received such a message over the phone. It immediately registered with me that I hadn't ordered anything from this store for quite a few months. I got into the car (I still had a car back then), drove all the way down to the department store and inquired as to why I would be getting this message. The catalog department, of course, had no idea and no knowledge of any such message being called out to me. This illustrates how telephone calls can be intercepted or completely fabricated and transmitted to the victim's home number.

(Incidentally, I've always had a non-published number.) This incident was inconvenient and cost me travel time and wear and tear on the car. It also left my home open yet again to invasion and destruction of my property. It left my little dog open to more abuse. Multiply these incidents by thousands of times over many years and perhaps you begin to get an idea of what life is like for some of us.

David: Here are a few things that happen in my life:

- * Cabinet and drawer handles held on by screws are repeatedly loosened ARTIFICIALLY.
- * Magnetic latches on cabinets are loosened ARTIFICIALLY so that the cabinet doors will not latch properly.
- * Wood veneers on drawers and cabinets are partially peeled off ARTIFICIALLY and warped somehow. Severely warped inside veneers also interfere with door latch operation.
- * The car radio speaker balance controls, and car ventilation and heating system controls, are tampered with and became loose and difficult or impossible to operate.
- * Previously opened caps on items such as deodorant and food containers, have been retightened, and excessively so while I'm out.
- * There seems to be much more dirt in my life than there should be. My apartment rapidly accumulates dust and sand, especially on the floors, as if somebody is sprinkling a small amount each time I am out. The dust bunnies are the most puzzling. I thought that they are a combination of spider webs and ordinary dust, but they also happen during the dead of winter, when there are few if any spiders, because there are no insects on which to feed.

[Eleanor White talking: ME TOO on that sprinkling of dirt and dust when I'm out! And, the placing of moths in my apartment when I'm out.]

Eleanor White: A "Terrorist Stalking in America" "classic"

** NOTICE **

This anecdote IN NO WAY implies that the subjects have any connection with the crime of organized stalking whatsoever. This anecdote is simply a story of a scenario that seemed to fit the descriptions of organized stalking operations described in the book "Terrorist Stalking in America" very closely, so closely it SEEMED more than coincidence.

While walking home from picketing in Hamilton, Ontario along Main Street East in late August 2004, I was startled to come across what appeared to me to be a CLASSIC police unmarked "lookalike" car, pictured in David Lawson's book "Terrorist Stalking in America" at an intersection as I waited to cross. The car was one of the full size white Ford sedans of 2000 (+) vintage used all over southern Ontario by police forces.

The car had tinted side windows, one VHF and two cell phone antennas. The licence plate read ANBJ-XXX.

I stood and watched the car heading north on Fairleigh Avenue, and pull into house #XX. Because of the startling resemblance to the stalking group cars described in David Lawson's book, I walked north along Fairleigh Ave. and stopped opposite the house. The house is a two-storey brick detached house, immaculately maintained, and with prominent "ADT" security service stickers on windows, and the "ADT" stop-sign-shaped sign on a post in the lawn.

Two stocky, muscular, middle aged men got out and brought several shopping bags into the house. My impression was that this house is something other than a normal family residence.

I list this here as an anecdote, with the understanding that this could have been set up by the organized stalkers as "bait" to get me to complain and rant about this. I won't do that, but I am posting this in case others find the same type of incident happening to them.

At least one story has been sent in where one senior is being harassed, and that person's spouse is gravely ill. Seniors, with minimal income and no way to fight back. This is how low the perpetrators go when choosing people to group torture. One man in his 80s is being severely harassed.

Anonymous email - September 2004:

I will go through periods where nobody will even talk to me or be bothered.

My sister has just up and stopped talking to me. She's the type of person that would tell me if she had a problem with me but suddenly she doesn't want to hear from me. I contact her and she doesn't answer but will talk with others in the family.

My brother who is a straightforward person also and never seemed to have problems with me most of the time will now argue with me continually and try to nitpick at me and get me into useless debates. If I say it's raining he will say it's sunny outside just for the hell of it.

Even people on the bus I ride to school or work that I am friendly with will stop talking to me and look the other way like they're afraid of me or something and i don't do anything but be nice and mind my business.

People at work will turn on me for no reason and professors at school will sometimes look at me like I'm an alien from another planet. Then, oddly enough, there are times where it will all go away and then suddenly out of the blue it starts up again.

I just got to the point where I said to hell with it. I'll be a hermit and stick to myself. So that's what I do. I stick to myself. No real friends to speak of and I am distant with my own family members. I'm a very strong person but sometimes I swear it feels like I'm going to snap and lose it but then I pull myself together with help from God and go on. It takes strength. A LOT of strength.

Frankiel025@aol.com - September 2004:

I noticed I was being stalked in 1996. There were cars following me everywhere I went. I would say up to 30. I had never had anything like that happen to me before. I was terrified. They seemed to know when I was going to leave the house or work.

People at work started treating me like I was a criminal. My children who are adults and live out of state didn't believe me. I still have a very distant and strained relationship with them. I noticed the stalking from Sept 96 to March of 97. It has ruined my life. I have no friends or family support and it has started again.

I live in Texarkana Texas. There have to be other victims in this town. If you have heard from anybody please let me know. I will try and document what is happening as best I can but it would be so much better if I had someone who knew the hell I am going through. We could help one another. I know you are probably busy but please let me know if you get this email.

In 96, 97 there were strange people who moved into houses on both sides of me. The ones on the north side seemed to know when I would be in my kitchen because as soon as I would walk in the kitchen they would come out in their back yard and stare at me through my window. There were always 5 or 6 of them.

One day I drove by the police dept. to see if they would follow me there. They did. I also saw several of the cars that had been following me parked at the BiState Justice building which houses the police dept. as well as the county courts.

We need to stop these people from torturing people. I have always been a law abiding citizen and have never done anything to deserve this.

John Allman of the United Kingdom, October 2004:

Somebody living in Manchester mentioned organized stalking documented in ancient times, the day he visited my house, a month or so ago. He's writing a book that he hopes will be published when finished, which cites an ancient reference to organized stalking, in Latin.

The day he visited my house, I got the toothache that doesn't stay in one tooth so badly that my visitor decided to leave my house before we'd finished, to spare me further torture. He left, and the toothache stopped immediately.

John

From A. Jones - October 2004:

For about two years now I have seen an increasing number of police in the mix in terms of my organized stalking.

They use a lot of teenagers and borderline mentally retarded as well to cause trouble and say things so that I will react to them. Five minutes later the police will ride by. Or if I'm on the phone and I say I'm going some where there will be a squad car waiting for me or in one case I almost got by a few. Once I was driving with my husband and a squad car came out of nowhere and almost hit us, then he slowly turned around, I guess to catch our emotional response to it. Now I keep a camera on my at all times to take pictures of the cars and license plates.

At every job and every place I have lived there was defamation of character and no support from supervisors or the higher ups who were aware of this.

From Anonymous - November 2004:

I've been group stalked by firefighters and ambulance drivers along with cops. I'm in the Cleveland Ohio area. I also have the sirens go off in morning a lot. I also have planes fly over my house and the pilots are on there loud speakers talking at 6:00 am. My neighbors are all yelling about that all the time.

[Eleanor White commenting: Often, neighbours are co-opted as perps, and will refuse to acknowledge blatant harassment including noise, even though it's so obvious and loud it can't be denied. It is good to hear that in this case, neighbours aren't pulling that classic trick.]

Firemen, Police and other respected members of our community doing "organized harassment/stalking" needs to be exposed.

Firemen doing organized stalking is happening to many people in San Francisco, and it needs to be all over the media.

The organized stalking that a friend of mine is experiencing personally, is really beyond criminal. It is being done by firemen, police, and other people that the target doesn't have any relationship with. A brief account of what they are doing to my friend ; They actually enlist people to help stalk, harass and issue out hate to this person and several other people in SF.

My friend was harassed so much that it became a danger to keep living in their home they had lived in many years. So they have to move out with no place to move to because they are not safe in their own home where they pay rent. Sirens would go off anytime she talks about racism, topics heard on kpfa, its just too many things to list.

When my friend was at home, she was harassed constantly by sounds made in response to everything she said and did in her apartment. My friend was not allowed to sleep through the night for over a year and a half. They enlisted other tenants to watch her like a hawk, when she came home who came to visit, when she left. the fire fighters would verbally taunt her, and make sounds in concert with the tenants in that building. some of the tenants in that are friends with these fire fighters doing the organized stalking and harassing.

When my friend would leave home, the home would be broken into, water and food tampered with, eavesdropping on phone calls, and listening through walls. My friend walks around the city and is followed by police cars, also fire trucks, they actually let my friend know, they don't try to hide their work vehicles. whenever my friend talks about the harassment on the phone, sirens from the fire department, and or

police siren go off as soon as she puts down the phone.

To confuse things even worse, these harassors enlist people who have something in common with the target. For example, they enlist, people of color, gays and lesbians, women, and men., I believe this is done so none of the isms can be used as the reason why the harassment is taking place. It is the saddest thing to me to watch the hell and torture they put my friend through.

And the most hurtful part of all is there isn't much information about this in any media in San Francisco, So the support is very limited for now. My friend is being forced to hide out. My friend is disabled, and to make life even harder, This is so cruel. These Criminals are basically getting away with being abusive which these perps seem to enjoy invoking they have no compassion at all they have made that very clear from their deeds. I sometimes wonder why there isn't more in the media about this, and wonder if it is because people are afraid to report on such activities because they don't want to be the next target.

I hope this write up encourages more people going through it in San Francisco to speak out. It needs to be exposed and stopped.

From "R" - November 2004:

If I were to fully elaborate on each of the following occurrences, I would end up writing a book. Now, a list from Hell. In the last year:

1. A disgustingly obnoxious amount of "street theatre" performances. I give two thumbs down. These have not been limited to cars and pedestrians swarming me, NEARLY ALL the customers in a store filing into line just as I'm about to check out, EVERYONE clearing their throat AT ONCE, and people making nonsensical statements. I experience BLATANT acts of this stupidity literally EVERY SINGLE TIME I go out in public.

2. When involved in a conversation, the other participants will suddenly begin acting nervous, twitching and moving about, and abruptly changing the subject. Occasionally, they will all leave the room at once.

3. Even members of my extended family appear to be in on this.

[Eleanor White commenting: This is widely the case, and is very likely caused by perpetrators masquerading as police, telling lies to family members about the target.]

4. It appears that I must have a HORRIBLE reputation. When in public, I am leered at and whispered about. Often, store clerks are quite rude, or I am outright ignored. Recently, I moved to a different town. NOT ONE store clerk among many would let me have a single cardboard box! My extended family, save one or two people, refuse to speak to me, and I have been told that I am not welcome in any of their homes. No one, however, will tell me a damn thing!

[Eleanor White commenting: CLASSIC organized stalking! LIES do amazing things to friends, family, neighbours, business associates.]

5. I could write a mile-long list of the strange little items which have gone missing or have been moved.

6. My clothing frays in the crotch and the butt. I buy more underwear and socks, but never seem to own either.

7. THREE flat tires in a span of two weeks. Each time, there was no hole. Seemed as though air had been let out and cap replaced.

8. Mutilated kitten.

[Eleanor White commenting: We have evidence that Satanists are sometimes involved in these crimes. The torture and deaths of animals clearly points to that.]

9. "Peeping Tom" who wanked his you-know-what.

10. Employment weirdness, including being placed under a loud speaker and told I could not move or turn bad music down, computer continuously crashing, passwords invalid, leered at and whispered about by coworkers, cornered in a closet by management...

11. Identification lost or stolen, then my birth certificate never showed up after two months of sending them money, and someone else has the same social security number as mine which is preventing me from getting assistance to pay for pregnancy-related medical care.

2. I wake up every night at almost the same time. I mean, AWAKE. By the time I fall back asleep, It is almost time to wake up.

[Eleanor White commenting: CLASSIC organized stalking. The old medical device, the LIDA machine, can cause this.]

13. Disgustingly morbid things happened to me at a hospital. My clothing was literally ripped from my body, and I was tied up in a tiny metal room. I was supposedly injected with Haldol, and I can not account for three days of time. When I woke up, I was escorted to a disgusting restroom that had no sink. There was blood in my urine. Bright red blood. The so-called doctors and nurses had strange, metallic voices that hurt my mind. I was turned loose shortly after midnight, still drugged. My skeleton felt too big for my skin, probably the way Alice felt before entering Wonderland. I was sooooooooooooooooooooooooooooo uncomfortable. Couldn't sit down, stand up, lie down. I think it was Jesus who saved me and gave me a ride the hell out of there.

Don't know really what happened. Just that those "people" gave me horrible drugs, and that one of them looked like a member of my extended family. I AM NOT INSANE.

[Eleanor White commenting: Organized stalking targets are not insane. The organized stalking MEMBERS ARE.]

There is more. I feel so isolated. I wish I had a friend. Life has become ugly.

[Eleanor White commenting: Friends are often "turned" by LIES told by the perpetrators.]

From Len - November 2004:

I live in Northern Virginia about 45 miles Northwest of Washington, DC. I first became accutely aware of the stalking when I recognized an echo of my footsteps in the apartment above me, when I awoke in the middle of the night and went into the kitchen to get something to drink. After a couple of times, I decided to lie still when I first woke up, and then I heard some additional disturbance overhead.

Since I lived in a fairly congested area, it was difficult to recognize some of the stalking tactics, and also because I worked flex-time and took back roads. But the sleep deprivation was something that persisted for over 12 years (maybe as many as 18 - didn't attribute it to intentional for reasons I won't go into in deference to time and space) and despite moving 5 times! However, there were times when peculiar things happened when in my car, such as turning onto a divided street and several cars coming from the opposite direction would blow their horns.

Once I came to a 3-way stop, where I could either go straight or make a left turn, and four consecutive cars, opposite me made right turns without even slowing down. Then there was numerous times when I would have people enter my car and mis-adjust my rear view mirror while I was in a store, or working out at the gym.

Several years ago, I moved to a more rural area, and then the stalking accelerated. I didn't realize it at first. I believe they contrived circumstances to goad me into actions that resulted in traffic tickets, in fact they were traps. I don't know how many times I was cut off. However, I started writing down license numbers and that seemed to curb the situation.

I don't know what other people's backgrounds are, but I have worked with individuals that were members (or former members) of TIAs (3-letter accronyms - FBI\CIA\NSA). Interestingly enough, I believe, without question, that law enforcement agencies have been involved in what has been taking place in my life, and the manifest evidence is overwhelming!

[Eleanor White commenting: David Lawson, in his book Terrorist Stalking in America states his research into organized stalking has revealed that some police departments covertly support these modern-day organized stalking groups.]

I used to think I was totally alone in this, until VERY recently, when I encountered Eleanor's website, and a few others. After all, the situation is so bizarre and surreal, that it is hard to imagine that it is TRUE, let alone happening to others as well. I was never, and nor am I now, sure why this is all taking place, since much of what I've read on the internet and of what became obvious when the tactics were outright blatant, triggered memories of similar situations going back quite a few years.

It has been my observation that if there is anything that I consider valuable or have an affinity for, then there are efforts to wreck it or spoil it. Interestingly, I believe that there have been concentrated efforts to bring people into contact with me. Co-workers, and professional people such as realtors, etc who were simply plants. It seems that they want to know as much about what I'm experience as well.

Is this all a part of studies in social engineering, and mind control; what is their ultimate objective? Since I am a Christian, many of my contacts have been professing "Christians", however, I must confess that I harbored some serious reservations, and some of the things they have done, have suggested that they were merely wolves in sheep's clothing.

[Eleanor White commenting: One target has coined the phrase, "Pretend-a-Christians."]

From Sher - December 2004:

When I lived in Omaha, Nebraska, after a very long day at work, I came home, took a frozen dinner out of the freezer, heated it in the microwave and ate it. Within half an hour, I threw up the entire dinner.

I stayed home from work the next day, thinking I had the flu. That's when I discovered my freezer had been rewired in such a way that during the day the coils heated up and became RED HOT. In the afternoon, the coils cooled down and by the time I would have normally gotten home from work, all the food in the freezer was re-frozen. When I ate that frozen dinner, I was eating PURE BOTULISM.

And people have the NERVE to call me paranoid? Don't judge me until YOU have been harassed practically to death the way I have been. And no, I don't know why these people do this or why they are so hateful or why I was chosen to be one of the "lucky" ones.

From Jesus Mendoza - December 2004:

Hi. Eleanor, You can post the Police report on the net. The Chief of the City of Mission Police Departement Lio Longoria, claims he is initiating an investigation over my claims of organized stalking. Last Thursday I presented evidence to one of the investigators, two video tapes showing a dramatic increase of ionizing radiation in my home which is causing pain and suffering to my children. This increase occurred after the investigation started. The road harrassment has stopped.

From: Jesus Mendoza
To: Eleanor White
Subject: JMM Police report
Date sent: Fri, 03 Dec 2004 17:07:26 +0000

FIRST, MY LETTER TO THE CHIEF OF POLICE:

December 3, 2004.

Re: Request to Amend Report No. 04-34186.

Jesus Mendoza
2202 E. 28th St. Mission, Texas, 78574.
Tel. 956/519 7140

Lio Longoria, Chief of Police
Mission Police Department
1200 E. 8th. St. Mission, Texas 78574
956/584 5101

Dear Mr. Longoria:

I am requesting the amendment of the Police Report No. 04-34186. On November 17, of 2004, around 16:47 hours, I was driving across John Shary Elementary School on Glasscock Road, when a red truck came behind me at high speed in an attempt to ram the rear of my vehicle. I turned to the right on 25-1/2 St. and the red truck followed me in another attempt to ram the rear of my vehicle. I pulled to the right of the road and the red truck passed me turning to the right and parking on 2004 E. 25th. St. There, I took the picture of Mr. Christopher Lohden as he alighted from his truck.

I asked Mr. Lohden about the reason he had to tried to ram my car. Mr. Lohden said that he was going to call the police. After he made the call, a lady came from the house and asked Mr. Lohden what was going on. Mr. Lohden then said "I called the police, this guy

says that I tried to ram his car."

The lady said, "You did! Why are you calling the police! Don't call the police!" The lady then walked back inside the house. I asked Mr. Lohden to tell the police that I was coming back. Mr. Lohden then asked where I lived. I said "You know where I live, and you know me, this is not the first time that you engage in this kind of harassment." Mr. Lohden did not reply. I returned when the police car was already parked at the home of Mr. Lohden.

I explained to Mr. Hernandez and to Mr. Paniagua, officers of the Mission Police Department, the fact that Mr. Lohden had attempted to ram my car. Mr. Lohden did not deny my claim and instead said that I was doing thirty miles an hour on the road. Mr. Paniagua asked me to come across the street. There, I explained to Mr. Paniagua and to Mr. Hernandez the attempts to ram my car; the statements made by the lady that came out of the house; the fact that Mr. Lohden had attempted to run over my children and I when we were crossing the street; the fact that everyday I was subjected to this type of harassment; the fact that other individuals in the neighborhood have engaged in the same harassment; and the fact that this harassment was the result of racism. Please include this Request for Amendment to Police Report No.04-34186. (Copy of Police Report 04-34186 enclosed).

Should you have any questions or need clarifications please feel free to call me.

Sincerely,

Jesus Mendoza

cc: Christopher Lohden.

THEN, MY LETTER TO THE PERPETRATOR:

December 3, 2004.

Jesus Mendoza
2202 E. 28th St.
Mission, Texas
78574
956/519 7140

Mr. Christopher Lohden
2004 E. 25th. St.
Mission, Texas
78574

Dear Mr. Lohden:

Enclosed is a Request for Amendment of Police Report No. 04-34186.

Should you have objections, please file them in writing with the Mission Police Department. Please mail me a copy of your objections if any.

Sincerely,

Jesus Mendoza

cc: Mr. Lio Longoria, Chief of the Mission Police Department.

From Len - December 2004:

As I approached the light for the main entrance, I noticed that there was a truck exiting the plaza at the secondary exit. What was peculiar, is that it was pulling out very slowly, even though there were no cars in the lanes above the exit, and there was nothing coming except me, and I was not close enough to have been a consideration. As I approached the exit, the truck began pulling into the LEFT lane, even though I was the only person in that lane, and the RIGHT LANE EMPTY- absolutely no traffic. I COULD HAVE SWORN THAT THE DRIVER MUST HAVE BOTH SEEN AND HEARD ME! (I always thought that Harleys were renown for a distinctly audible sound.) But, he was pulling out in such a way as to block both lanes, and the traffic in the right lane before the exit, assured that I could no pass behind the truck.

If the setting had suggested a hazard as I approached, I would have slowed down, however, when the truck driver did not simply turn out into the right lane and proceed up hill, I was already too close to stop before hitting them. My only options were, either run into the side of the truck, or try to squeeze through the gap between the truck and the double row of opposing traffic. There was no way I could possibly have stopped. However, if the truck struck my motorcycle, I would most certainly have been thrown into oncoming traffic. To this day, I consider it a miracle that I was able to accelerate fast enough to squeeze through without being struck by the truck.

At the time, I could not imagine that anyone would have done such a thing intentionally, yet the evidence of a setup is unmistakable - they had more than sufficient opportunity to have entered the highway without jeopardizing me, both with regard to road space and time - the timing was unmistakably deliberate! But I couldn't possibly imagine why, and at the time ASSUMED against all logical evidence that somehow the driver had just been negligent rather than malicious.

What now puzzles me, is the realization that this was going on in my situation for 27 YEARS or longer! Somehow, I doubt that I'm the first person - yet one can't help wondering, why isn't the public more aware of it??

[Eleanor White commenting: The organized stalking group members are extremely careful to use setups which look like "life's normal mishaps."]

I also find myself wondering how many people have been killed in accidents that were arranged; and where many of the people who knew them had no idea what had actually taken place.

In my case it was a perfect opportunity, since a motorcycle will not likely inflict a great deal of damage to a truck or car or their passengers.

From Deb - December 2004:

Deb describes her perpetrators' Christmas stunts:

1998: Repeatedly pulling up into my driveway Christmas eve and blasting horns until dawn. Silent night, my ass.

1999: "Carolers" came to sing below my second floor apartment. They reworked The 12 Days of Christmas to recount the various Christmas errands I had run that day.

From Zeem - December 2004:

They've started breaking into my apt. They're doing little things - rearranging stuff.

I only recently noticed they sawed off one of the horizontal supports of a chair. I'm not sure what to do about this.

They've also got a trojan installed on my computer - it lets them see what I'm typing into message boxes, also lets them edit what I'm typing. I've also had clothing, labels rip off. The first one was pointed out to me via a little folded up piece of paper pointing at one of my t-shirts. Is there any way I can stop them from breaking in?

[Eleanor White commenting: No, not until the justice system stops providing cover for them.]

They have been following me around on the Internet too.

From Cassandra - December 2004:

The perps already know who you are and where. Not knowing what "lie" was told to whom, you are not certain what "issue" is being addressed/challenged/corrected.

Personally, I keep getting "outed" by concerned(?) citizens who have been told I am: a "witch", therefore, ultimate evil; a racist; a prostitute; a terrorist; a criminal; an escaped mental patient; homosexual; a child molester; a "street gang" member; etc.

None of the above are true, however, different people are told different things for different reasons. TRUTH: I am a domestic abuse SURVIVOR, who is once again homeless and living in a shelter.

End of sob story, nothing to add.

From B - December 2004:

I was a whistleblower at a State government job who leaked facts to the press and vocally opposed wasteful misuse of funds. I helped some outside groups block millions of dollars in inappropriate grants to a city I now know to have organized crime investment. The harassment is clearly job-related, and people at work were witnessed taking part in some incidents. Other perps are complete strangers. I changed jobs and moved several times, to no avail. The harassment, which has destroyed my life, has now gone on 25 years, and continues although I have retired and moved to another state. The perps can open even high-security locks like Medeco without force, can beat central alarm systems, and very likely have allies in law enforcement.

From Margo Tilton - January 2005:

[Eleanor White speaking: Margo Tilton, for years, has had especially invasive and controlling electronic attacks on her mind and body.]

Hello. I can hardly believe it but the perps are actually taking even more emotion from me. I thought they took as much as they could. And as time goes by, I haven't even felt any fatigue as I go to bed or when I wake up in the morning. Not a bit. They say, "Too

much pleasure..."

Together with my equally 100% absent sense of smell and 95% absent sense of taste, I guess you would describe this as sensory deprivation. They're even threatening to say I'll soon see the world in shades of gray.

I can't believe they would put anyone in this condition. What reason is there to live? We experience life through our five senses.

Margo

From L - January 2005:

I saw the show last night with Peter Jennings. It was really something, on more than one level. Like, it was informing, but it was selling acceptance of all this at the same time.

Here's something disturbing: though I fixed my minor problem, I could watch but not tape the program. That is because someone must have come in my house and put something like a screw driver in my VCR, and bent some of the pins to almost 70 degree angles, and bent the head that copies, I think.

From Margo - January 2005

I'm an animal lover - I have three cats. A while back, in June 2004, one of my three cats somehow got a blade of grass in his eye which of course made it very irritated and red. I took him to the vet who gave me some anti-biotics in case of infection. As far as I know, and according to the perps themselves, they've been irritating his red, swollen eye since that time. Just drilling it. They did a similar thing to me for one straight week each two times in past years.

[Eleanor speaking: "Just drilling it" by way of remote electronics which are capable of creating pain remotely.]

They recently started causing him severe eye pain whenever he looks at me so as to associate me with a source of pain. I took him to the vet yesterday and had them check it out. It's the same eye since June. They couldn't find anything wrong but gave me more anti-biotics. The perps said they would stop hurting him and maybe they'll "let" me remember to administer the medication this time.

They have been darkening my eyesight in my house at night and even during the day - it's pitch black - and they possibly hit my cats, or hope that my foot will hit them when I pass by in the dark.

They have been physically abusing my cats whenever I'm near them and hit my foot and/or ankle simultaneously, trying to fool me into believing I hit them when they're nearby. They say, "Not unless you look at them". Do you know what I mean? They can force me to see a hologram of my foot striking my animals when I know I'm not.

These are the things the perps do for kicks.

Margo

From Matt Beal, unemployed journalist - January 2005:

I live in Indiana and if anyone would like to contact me, my phone number is (317) 872-3978. Email me at:

palomine55@yahoo.com

It's the government doing this to us.

That's why it's useless trying to report it to the attorney general, police, FBI and all the usual sources. They already know about it and participate in it. A few months ago, cops started following me around everywhere I went. Then I started getting fire department vehicles and unmarked vehicles following me.

Plus, I started getting a lot of street theater. When I went out jogging in my neighborhood, I would get young women pushing babies in strollers, with other creeps observing my reaction, as though they thought I was some kind of pedophile.

[Eleanor White speaking: Pedophilia is one common lie used to bring neighbours, co-workers, community members, and in some cases even family members into the 24/7 harassment.]

Then I started getting bombarded with electronic weapons at home, in the car, in public, etc. They've kept me up all night several times. I was getting harassed at work, too, so I quit after I found another job. On my last day, I sent out an e-mail message to the editors and reporters at the newspaper where I was working, explaining that I'm not a child molester or whatever they thought I was. I told them I was the victim of illegal surveillance, slander and stalking, and that the police and FBI allow it to go on unchecked.

Then I included links to some web sites about this subject, more or less putting the ball in their court and suggesting they do a story on this phenomenon, which is going on all over the world. Well, someone forwarded the e-mail to my new employer and they withdrew the offer, so now I'm out of a job. I doubt I could have held down a job in my current state of mind anyway.

I suspect it's politically motivated because I've been outspoken in criticizing corruption in government. I wrote some articles about CIA and FBI involvement in the JFK assassination, plus I attended some conferences to get better educated on the way things really are.

Since they need guinea pigs to test their weapons on, why not target me? I'm a royal pain to have around, anyway! -- Matt Beal

Mr. Jesus Mendoza - January 24, 2005 (with permission):

Re, Complaint of Gang Aggressions

Jesus Mendoza
2202 E. 28th St.
Mission, Texas 78574
956/519 7140

Lio Longoria, Chief of Police
City of Mission Police Department
1200 E. 8th St.
Mission, Texas 78574
956/584 5101

Dear Mr. Longoria:

I am the subject of gang staking. On January 22, an unidentified driver attempted to run over my children and myself. Mr. Fernando Barocio an employee of the US Postal Service witnessed the incident and called the police. (Police Report No. 05-2261).

At several times unidentified vehicles have been attempting to ram the rear of my vehicle. The evening of January 15, a Jeep with plates (TX) 3XYC61, registered to Clinton T. Welding 2214 Village Drive, Mission, was driven by a young male. Said vehicle took off in high speed reverse from the property of Martha A Rodriguez, 2008 N. Shary Rd. attempting the crashing of my vehicle against said vehicle.

At several times a vehicle with plates No. (TX)ZGR71J, registered to Clifton Davey and Susan M. Davey, 1132 Starfield LN. West Columbia, Texas, has been seen leading the way to several vehicles that engages in gang aggressions against my children and against myself.

On January 23, a lady driving said vehicle attempted flight to avoid identification.

Your attention to this matter is highly appreciated.

Sincerely, Jesus Mendoza

Reported by Sueann Campbell - December 2005:

Got a call from a survivor who lives in a small Texas town.

Here is how she used her flyers, which are available from this page:

<http://www.stopcovertwar.com/tee.html>

"I went into a department store, picked out some clothes and went into the dressing room. I tried on the clothes, then after a few minutes, I took some the flyers out of my purse and left them in dressing room. I told the clerk: "I am going to look for something else." I went to the clothes rack and pretended to look at clothes while keeping an eye on the dressing area.

A man in a dark blue suit appeared and tried to get into the dressing room. The clerk told him he could not access the women's dressing room and would have to go to the men's area.

He bribed her \$20 dollars to access the room and came out with the flyers.

I walked to the dressing area and said:

"Those are mine, I left them in the dressing room by mistake." And took them out of his hand. He looked flustered and embarrassed. I turned and walked out of the store.

She says she dropped a flyer in a grocery store and a perp immediately picked it up.

[Eleanor speaking: I've had that happen too.]

Cheers,

Sueann

Reported by Sloan Montenegro - December 2005:

Well, well, well - It seems as if a couple of teenaged perps cracked yesterday♦ I should preface this story by telling you that my original stalker, who incidentally runs these low life gangs, has been recruiting from the local high school. Nice. At any rate, it seems that once he has recruited a couple of young would be perps, he then seeks to establish them as employees at establishments that I patronize. He especially seems interested in planting folks at the hair salon that I frequent. At any rate, the last few times that I have visited I have been bumped, harassed by perp speak, and generally been made aware of the fact that my home is bugged and that I am watched. Ho hum. So, I blew this off for a while but yesterday I think I must have sat on a burr because when the bitchy, perpy hair wash girl walked in to start her shift my mind went into overdrive. First I complained to my stylist about her, and then I requested an other hair wash girl, and proceeded to calmly go sit down in front of her in order to wait my turn in the hair wash line.

She gave me a little bitchy smile, I smiled back, and then I asked her if she believed everything that she was told. She assured me that she did not. I then told her about the organized stalking phenomenon happening nationwide and made sure to stress that the leaders LIE about the people they target. She looked shocked and said, is that happening in our town? I said, it most certainly is and xxxxx is running a group right here. He is also recruiting from the local high schools.

Both girls were speechless and one finally said, "I know that name!" So I proceeded to describe him to her, along with his lies, antics and techniques. She looked scared. And then she asked me how I knew him and I told her that I had dated him, broken up with him, and that as revenge for that he was trying to destroy my life. I also told her about his abusiveness towards women and his criminal record. I don't have a criminal record. At this point she told me that he had told her that I was a stripper, was married and living with my husband, and cheating on him. I laughed and told her that I had been an activist for 18 years and had never stripped in my life and that my husband and I were in the midst of divorce proceedings and on friendly terms. I then told her frankly that she was involving herself in some dirty business that could land her in juvenile lock-up and for such a young person it was a shame to watch her throw her life away. I also told her that if she ever did get arrested for harassment that xxxx would simply walk away from her. And that she would be alone with no support.

She and her friend went pale. Both became very kind, and the African American girl looked visibly annoyed at the Anglo girl for being involved in such stupidity. Also, she wouldn't let the Anglo girl touch my hair♦ ;-)

One more small victory. I just hope it sticks. I hate to see young folks throwing their lives away on this sxxt.

Ken: The Florida "BAKER ACT" is very open to abuse by Police Officers who don't (by law) need to provide any proof whatsoever of detaining

an individual at a mental health facility beyond their personal opinion and a brief statement in their report.

Police Officers suffer no recourse in any way if their judgment is incorrect in the detainment of someone who is not found to be in need of mental health assistance. Also, the law states that under the "Baker Act", a person who is detained is solely responsible for paying all medical bills related to that detainment, including ambulance transportation! The following is my personal account of such abuse of the "Baker Act" by a local Florida Police Officer.

On October 8th, 2007 around 5 AM, my housemate and I heard a prowler lurking in the darkness and hitting the outside wall of our home. When we turned on an outside light and opened our back door, the prowler said, "We are going to get you!" in a low deep threatening voice, and then ran off.

We have a wood fence, so it was not possible to follow him in time to identify him. This event followed a number of weeks of organized harassment by some people in our community. Please Google "Organized Stalking" (also known as "Community Stalking" or "Cause Stalking") to better understand the types of harassments we have been encountering for some time now.

Anyway, I called 911; a local cop arrived and was very rude and uncooperative while taking our statement. My housemate and I each wrote a written police statement about what happened with the prowler, and also the weeks of strange harassments we have been having. The police officer kept insisting we saw nothing, as if he was trying to make a point that we should not have reported our harassment at all. His actions seemed very threatening, and I felt that we were now being warned not to report what we saw, or else we may be in for trouble from the local police as well as our community stalkers.

Then, I started to have some chest pains due to the anxiety of a prowler making threats, as well as the rude treatment by the police officer. Out of concern, I requested for paramedics to be called. The paramedics arrived and took me to the emergency room where I was held for over 9 hours. I saw a doctor for all of 5 min in that time in the ER, which seemed very odd.

Then around 10:00 PM I was told I was being transferred to another facility (but not told where exactly). I was put in an ambulance and taken to a mental health facility and told I was being held under the Florida "BAKER ACT".

In no way was I ever violent, a danger to harm others or myself. I never asked for, or was in need of mental health treatment. I have never had a history of mental health problems.

The doctor at the facility I was taken to told me I was "Baker Acted" because the police officer who responded to the 911 call said I was acting "psychotic" and "seeing things" that no one else had. When I told the doctor that my housemate also saw the prowler event, he seemed truly shocked. This was because there was no mention of my housemate's observations and written police report of the incident in the police record.

It is clear to me at this moment that this was all just more harassment tactics, now by the police to protect someone who was harassing us. I was released from the mental health facility when no cause could be found to hold me under the "Baker Act", and after my housemate arrived, insisting to speak with my doctor about why I was being held in the first place.

I was there for over 48 hours! We later found out when trying to obtain records of the events that the Police Officer had not filed my housemate's original written police statement with the police department. How convenient! This is yet another example of how the "Baker Act" is a danger to civil liberties, and how the police seem to be involved with "Organized Stalking" groups.

Police departments need to be held accountable for their actions when they make wrongful accusations, and also responsible for the financial costs of wrongful detainment of people who are not found to truly need mental health assistance.

Military Testing: The Unseen War

When news reports tally the casualties of war, or when monuments are erected to honor soldiers, the other-than-human victims of war--the animals whose bodies are shot, burned, poisoned, and otherwise tortured in tests to create even more ways to kill people--are never recognized, nor is their suffering well known. The 1987 movie "Project X" offered only a glimpse of the kind of experiments that go on far from public view but at taxpayer expense.

Uncounted Casualties

The U.S. military inflicts the pains of war on hundreds of thousands of animals each year in experiments. The Department of Defense (DOD) and the Veterans Administration (VA) together are the federal government's second largest user of animals (after the National Institutes of Health). They account for nearly half the estimated minimum of 1.6 million dogs, cats, guinea pigs, hamsters, rabbits, primates, rats, mice, and "wild animals" used, as reported to Congress in 1983, the last year for which government figures are available.(1) Because these figures don't include experiments that were contracted out to non-governmental laboratories, or the many sheep, goats, and pigs often shot in wound experiments, the actual total of animal victims is probably much higher.

The House Armed Services Committee voiced its concern "about the use of animals in medical and other defense-related research" in its report on the National Defense Authorization Act for fiscal year 1995.(2) At committee hearings, DOD revealed that its use of animals in experiments has increased 36% in the past decade, but that it spent \$180 million on research using 553,000 animals in the last fiscal year.(3)

Top Secret

Military testing is classified "Top Secret," and it is very hard to get current information. From published research, we know that armed forces facilities all over the United States test all manner of weaponry on animals, from Soviet AK-47 rifles to biological and chemical warfare agents to nuclear blasts. Military experiments can be acutely painful, repetitive, costly, and unreliable, and they are particularly wasteful because most of the effects they study can be, or have already been, observed in humans, or the results cannot be extrapolated to human experience.

Sample Experiments

Burns and Blasts: In 1946, near the Bikini Atoll in the South Pacific, 4,000 sheep, goats, and other animals loaded onto a boat and set adrift were killed or severely burned by an atomic blast detonated above them. The military nicknamed the experiment "The Atomic Ark."(4)

At the Army's Fort Sam Houston, live rats were immersed in boiling water for 10 seconds, and a group of them were then infected on parts of their burned bodies.(5)

In 1987, at the Naval Medical Institute in Maryland, rats' backs were shaved, covered with ethanol, and then "flamed" for 10 seconds.(6)

In 1988, at Kirkland Air Force Base in New Mexico, sheep were placed in a loose net sling against a reflecting plate, and an explosive device was detonated 19 meters away. In two of the experiments, 48 sheep were blasted: the first group to test the value of a vest worn during the blast, and the second to see if chemical markers aided in the diagnosis of blast injury (they did not).(7)

Radiation: At the Armed Forces Radiobiology Research Institute in Maryland, nine rhesus monkeys were strapped in chairs and exposed to total-body irradiation. Within two hours, six of the nine were vomiting, hypersalivating, and chewing.(8) In another experiment, 17 beagles were exposed to total-body irradiation, studied for one to seven days, and then killed. The experimenter concluded that radiation affects the gallbladder.(9)

At Brooks Air Force Base in Texas, rhesus monkeys were strapped to a B52 flight simulator (the "Primate Equilibrium Platform"). After being prodded with painful electric shocks to learn to "fly" the device, the monkeys were irradiated with gamma rays to see if they could hold out "for the 10 hours it would take to bomb an imaginary Moscow." Those hit with the heaviest doses vomited violently and became extremely lethargic before being killed.(10)

Diseases: To evaluate the effect of temperature on the transmission of the Dengue 2 virus, a mosquito-transmitted disease that causes fever, muscle pain, and rash, experiments conducted by the U.S. Army at Fort Detrick, Md., involved shaving the stomachs of adult rhesus monkeys and then attaching cartons of mosquitoes to their bodies to allow the mosquitoes to feed.(11)

Experimenters at Fort Detrick have also invented a rabbit restraining device that consists of a small cage that pins the rabbits down with steel rods while mosquitoes feast on their bodies.(12)

Wound Labs: The Department of Defense has operated "wound labs" since 1957. At these sites, conscious or semiconscious animals are suspended from slings and shot with high-powered weapons to inflict battlelike injuries for military surgical practice. In 1983, in response to public pressure, Congress limited the use of dogs in these labs, but countless goats, pigs, and sheep are still being shot, and at least one laboratory continues to shoot cats. At the Army's Fort Sam Houston "Goat Lab," goats are hung upside down and shot in their hind legs. After physicians practice excising the wounds, any goat who survives is killed.(13)

Other forms of military experiments include subjecting animals to decompression sickness, weightlessness, drugs and alcohol, smoke inhalation, and pure oxygen inhalation.

Animal Intelligence

The Armed Forces conscript various animals into intelligence and combat service, sending them on "missions" that endanger their lives and well-being. The Marine Corps teaches dogs "mauling, snarling, sniffing, and other suitable skills" needed to search for bombs and drugs.(14)

Thousands of animals also fall victim to military operations and even military fashion. A series of Navy tests of underwater explosives in the Chesapeake Bay in 1987 killed more than 3,000 fish(15), and habitats for hundreds of species have been destroyed by nuclear tests in the South Pacific and the American Southwest.

And as if weapons tests didn't kill enough animals, the Air Force recently awarded a New Jersey company \$5.2 million to manufacture 53,000 leather flight jackets, in an effort to "enhance esprit" among its pilots. At 3-1/2 goat skins per jacket, the result will be that 185,500 African goats will lose their lives so that U.S. pilots can sport a World War II "look."(16)

Anti Pedophile and Child Abuse Page

April 27, 2005

WHY does this web site have an anti pedophile and child abuse page?

Because there is, apparently, pointed out by some sample articles below, extensive corruption of public officials, who provide cover for organized pedophile rings.

The same mindset is a "natural fit" for public officials who cover up organized stalking and electronic harassment by ignoring complaints, ridiculing complainants, and shunting them off to the mental health system, where diagnoses are made without the slightest investigation into organized stalking and electronic harassment, a gross violation of basic human rights. Soviet-style "psychiatric justice."

We anti organized and electronic harassment activists don't have courtroom quality proof that the officials providing cover for organized pedophilia are name-by-name identical with those providing cover for vigilantism and electronic harassment. However, evidence from investigators and survivors of ritual abuse, pedophilic abuse, and child sex slavery, including the MKULTRA survivors, gives us confidence that this linkage is strong and will be provable at some point.

Here are some notable pedophilic and child abuse crimes we are aware of to date:

- The unjustified and sometimes brutal confiscation of children on flimsy evidence of parental unfitness by Child Protective Services, and failure to investigate possible pedophile ring connections in this activity (Alex Jones, patriotradio.htm)

[One example](#) of the epidemic of pedophiles who live double lives. This is a major problem. The entire police force (12 members) of Cornwall, Ontario was fired in the 1990s as a result of allegations of covering up a kiddie porn ring. These members were never prosecuted, interference from the Ontario government being one reason. Source: Mainstream media in Ontario.

<http://www.drcarley.com>, web site by former Dr. Rebecca Carley, who lost her licence because of her local TV show on which she tried to expose pedophilia, including among medical professionals. An activist against all forms of abuse including bad vaccines.

A similar cover up in high places exists in the field of ritual abuse, meaning "religious" cults in which abuse of people, especially children, is deemed necessary.

[Organization](#) for victims of the corrupt courts where CRIMINAL judges award custody of children abused by their pedophile fathers TO THE FATHERS!

[Judges organize to fight judicial reform movements](#), in the U.S. Grass roots "pro se" (represent self) litigants are increasingly challenging the corrupt judges, such as George Greer, who stood by as Michael Schiavo TORTURED Terri Schiavo for over a decade by forced neglect, then TORTURED Terri for two weeks by denying this conscious woman who had expressed a wish to stay alive WATER. It is encouraging to know these judicial criminals are worried.

["For-Sale-Age-3"](#), an article from the British Sunday Mirror, describing a ready source of children for sale to pedophiles.

[Back to quick click menu](#)

- The criminal ignoring of child abuse claims by judges, who are, in the current legal environment, above the law.

[One example](#), which resulted in suicide of a child victim.

The criminal ignoring of Satanic Ritual Abuse, often a child abuse issue, which is covered up by wealthy and well-connected abusers. See [some sample news clips about SRA here](#).

If you believe Satanism isn't widespread, read [this article](#) about Satanism in the U.S. Army.

[Judges organize to fight judicial reform movements](#), in the U.S. Grass roots "pro se" (represent self) litigants are increasingly challenging the corrupt judges, such as George Greer, who stood by as Michael Schiavo attempted to murder Terri Schiavo TWICE. It is encouraging to know these criminals are worried.

President Bill Clinton made this statement in the year 2000:

"Every day around the world and even here in the United States, children are sold into virtual slavery or trafficked for the worst forms of sexual abuse." It is a major crime that government is not actively looking in to, stopping, and bringing charges against the perpetrators.

From this site:

<http://www.acf.hhs.gov/trafficking/about/index.html>

"Human trafficking is a form of modern-day slavery. Victims of human trafficking are young children, teenagers, men and women. Approximately 800,000 to 900,000 victims annually are trafficked across international borders world wide, and between 18,000 and 20,000 of those victims are trafficked into the U.S., according to the U.S. Department of State. Victims of human trafficking are subjected to force, fraud, or coercion, for the purpose of sexual exploitation or forced labor. After drug dealing, trafficking of humans is tied with arms dealing as the second largest criminal industry in the world, and is the fastest growing."

Source: <http://naaffoundation-org>

If you think the justice system can be depended on to protect kids, [read this article](#).

When Seeing and Hearing Isn't Believing

By William M. Arkin

The [original article](#) is at the [Washington Post website](#)

Author's E-mail: william_arkin@washingtonpost.com

Monday, Feb. 1, 1999

"Gentlemen! We have called you together to inform you that we are going to overthrow the United States government." So begins a statement being delivered by Gen. Carl W. Steiner, former Commander-in-chief, U.S. Special Operations Command.

At least the voice sounds amazingly like him.

But it is not Steiner. It is the result of voice "morphing" technology developed at the Los Alamos National Laboratory in New Mexico.

By taking just a 10-minute digital recording of Steiner's voice, scientist George Papcun is able, in near real time, to clone speech patterns and develop an accurate facsimile. Steiner was so impressed, he asked for a copy of the tape.

Steiner was hardly the first or last victim to be spoofed by Papcun's team members. To refine their method, they took various high quality recordings of generals and experimented with creating fake statements. One of the most memorable is Colin Powell stating "I am being treated well by my captors."

"They chose to have him say something he would never otherwise have said," chuckled one of Papcun's colleagues.

A Box of Chocolates is Like War

Most Americans were introduced to the tricks of the digital age in the movie Forrest Gump, when the character played by Tom Hanks appeared to shake hands with President Kennedy.

For Hollywood, it is special effects. For covert operators in the U.S. military and intelligence agencies, it is a weapon of the future.

"Once you can take any kind of information and reduce it into ones and zeros, you can do some pretty interesting things," says Daniel T. Kuehl, chairman of the Information Operations department of the National Defense University in Washington, the military's school for information warfare.

Digital morphing — voice, video, and photo — has come of age, available for use in psychological operations. PSYOPS, as the military calls it, seek to exploit human vulnerabilities in enemy governments, militaries and populations to pursue national and battlefield objectives.

To some, PSYOPS is a backwater military discipline of leaflet dropping and radio propaganda. To a growing group of information war technologists, it is the nexus of fantasy and reality. Being able to manufacture convincing audio or video, they say, might be the difference in a successful military operation or coup.

Allah on the Holodeck

Pentagon planners started to discuss digital morphing after Iraq's invasion of Kuwait in 1990. Covert operators kicked around the idea of creating a computer-faked videotape of Saddam Hussein crying or showing other such manly weaknesses, or in some sexually compromising situation. The nascent plan was for the tapes to be flooded into Iraq and the Arab world.

The tape war never proceeded, killed, participants say, by bureaucratic fights over jurisdiction, skepticism over the technology, and concerns raised by Arab coalition partners.

But the "strategic" PSYOPS scheming didn't die. What if the U.S. projected a holographic image of Allah floating over Baghdad urging the Iraqi people and Army to rise up against Saddam, a senior Air Force officer asked in 1990?

According to a military physicist given the task of looking into the hologram idea, the feasibility had been established of projecting large, three-dimensional objects that appeared to float in the air.

But doing so over the skies of Iraq? To project such a hologram over Baghdad on the order of several hundred feet, they calculated, would take a mirror more than a mile square in space, as well as huge projectors and power sources.

And besides, investigators came back, what does Allah look like?

The Gulf War hologram story might be dismissed were it not the case that washingtonpost.com has learned that a super secret program was established in 1994 to pursue the very technology for PSYOPS application. The "Holographic Projector" is described in a classified Air Force document as a system to "project information power from space ... for special operations deception missions."

War is Like a Box of Chocolates

Voice-morphing? Fake video? Holographic projection? They sound more like Mission Impossible and Star Trek gimmicks than weapons. Yet for each, there are corresponding and

growing research efforts as the technologies improve and offensive information warfare expands.

Whereas early voice morphing required cutting and pasting speech to put letters or words together to make a composite, Papcun's software developed at Los Alamos can far more accurately replicate the way one actually speaks. Eliminated are the robotic intonations.

The irony is that after Papcun finished his speech cloning research, there were no takers in the military. Luckily for him, Hollywood is interested: The promise of creating a virtual Clark Gable is mightier than the sword.

Video and photo manipulation has already raised profound questions of authenticity for the journalistic world. With audio joining the mix, it is not only journalists but also privacy advocates and the conspiracy-minded who will no doubt ponder the worrisome mischief that lurks in the not too distant future.

"We already know that seeing isn't necessarily believing," says Dan Kuehl, "now I guess hearing isn't either."

William M. Arkin, author of "The U.S. Military Online," is a leading expert on national security and the Internet. He lectures and writes on nuclear weapons, military matters and information warfare. An Army intelligence analyst from 1974-1978, Arkin currently consults for Washingtonpost.Newsweek Interactive, MSNBC and the Natural Resources Defense Council.

Mind Control Part 4

High-Tech Crimes and Electromagnetic Madness

by Arlene Tyner

Introduction

This article was completed in July 2001, months before the catastrophic attack of September 11, 2001 in New York City and Washington. It contains research that eerily suggests the possibility that the World Trade Center/Pentagon hijackers could have been hypnotically programmed to murder thousands of innocent people while taking their own lives. So says psychiatrist [Colin Ross](#), author of BLUEBIRD: Deliberate Creation of Multiple Personality by Psychiatrists. In a 9/13/01 essay Ross writes, "Psychiatric mind control could be used to create a terrorist like those who hijacked the airplanes on September 11." (<http://www.rossinst.com/terrorism.htm>). This view is buttressed by a [1952 declassified document](#) from the CIA's Bluebird program. Among a series of questions its psychiatric contractors would be researching is the following: "Could we seize a subject and in the space of an hour or two by post-H control have him crash an airplane, wreck a train, etc.?" ("Post-H" stands for post-hypnotic)

Mohamed Atta, alleged to be the ringleader of the hijackers, is described by a British woman as being in a perpetual "trance-like state," wearing an icy, hypnotic expression. "I will never forget his face. It was always set almost in a grimace like he was in a trance," said Anne Greaves, who knew him for six months at the Huffman Aviation Flight School in Florida. "I said 'hi' and he just looked straight through me as if I didn't exist." Greaves reported that Atta showed no emotion and walked toward the aircraft with the "air of somebody doing something they don't really want to do." (Birmingham Evening Mail, 9/24/01) Mohammed al-Amir, Atta's Egyptian father, adamantly refused to believe the gentle son he knew could commit such a horrific crime, adding, "My son hates bin Laden." Charging that his son was framed, al-Amir Atta insisted that a close examination of Atta's picture printed in newspapers showed that his son's face had been superimposed on another man's head. (Deutsch Presse-Agentur, 9/24/01; Philadelphia Inquirer, 9/23/01)

This article completes a four-part series on Mind Control begun in 2000. The first three parts were published in Probe magazine in the March/April, May/June and July/August 2000 issues. Part 1: Canadian and U.S. Survivors Seek Justice can be accessed online at <http://www.webcom.com/ctka/pr300-mkultra.html>. Parts 2 and 3 are in print form only, but can be purchased from the Probe website: <http://www.webcom.com/ctka/backiiss.html>

Arlene Tyner

October 2001

"I know the capacity that there is to make tyranny total in America and we must see to it that this agency [the National Security Agency] and all agencies that possess this technology operate within the law and under proper supervision, so that we never cross over that abyss. That is the abyss from which there is no return."

Senator Frank Church, 1975 [\(1\)](#)

At 56, Admiral Jeremy "Mike" Boorda had everything to live for. As Chief of Naval Operations (CNO), he was at the pinnacle of his career. Supported by a loving family and widely respected as "an officer of legendary devotion to the Navy," why would the admiral suddenly and violently take his own life?

On May 16, 1996, Boorda was found shot through the heart on a bench outside his official residence in the Washington Navy Yard. The police instantaneously diagnosed "suicide." But Boorda's recent advocacy of suicide prevention cast an eerie shadow on the official story.

"Can the sailor commit suicide and not have the leader know that he or she was in distress?" the admiral had asked in a speech at the Annapolis Naval Academy the previous month. Answering his own query, he continued, "No. We can't ignore things we must work on and if we hide them, we do everybody a disservice." [\(2\)](#)

By all indicators, Boorda was not depressed. His wife and several admirals vouched for his high spirits only hours before his body was found. To intimates, it made no sense that he would destroy himself without warning. Furthermore, as one woman on an Internet listserve so astutely observed, "People who commit suicide by shooting do not do it in the chest." [\(3\)](#)

Mike Boorda was an unlikely suicide candidate for another, more personal reason. He and his wife Bettie were the main support for their first-born son David, who is legally blind and severely handicapped by congenital malformations. The Boordas raised him to adulthood in their own home while rearing three other healthy children, two of whom are Navy officers. Known to be very attached to David, the admiral had planned early retirement to spend more time with his family. [\(4\)](#) Would a responsible and loving father suddenly opt to leave his wife to care for their disabled son alone?

Midway into research for this series, a number of alleged mind control (MC) experimentees began sharing their suspicions that Admiral Boorda had been assassinated to prevent his speaking out against nonconsensual human experimentation in military weapons research. Blanche Chavoustie referred me to a sinister CIA document from the 1950s that entertains ways of "disposing" of experimental MK-Ultra subjects and people "who cannot be trusted" to safeguard military secrets. Chemical lobotomy, drugs, and "ultrasonics or some other radiating energy" were the methods suggested as possible alternatives to an "ice pick" lobotomy or permanently locking the person away someplace. [\(5\)](#) "Now, with new improved techniques," Chavoustie says, "victims such as Admiral Boorda have been known to self-destruct on their lunch hour." (See Part 2 of this series, May/June 2000 Probe for Chavoustie's story.)

Two additional people told me Boorda could easily have been done in by one of the surefire assassination methods the Navy has finessed after 50 years of covert research and field testing. This little-known secret slipped out on July 6, 1975 with an article in the London Sunday Times, "How the U.S. Navy Brain-Trains Political Assassins." The Times quoted a speech by Navy Lt. Commander Thomas Narut to a group of 120 psychologists at a NATO conference in Oslo, Norway. Narut worked at the U.S. Regional Medical Center in Naples, Italy. He reported the Navy had been programming "hit men and assassins" who would kill on command; some subjects were drawn from the ranks of convicted murders serving time in military prisons.

The "damage control" boys soon moved in. Narut was flown to London and forevermore silenced. The Navy issued a statement in his name saying his remarks were merely "theoretical." Newspapers were told the lieutenant commander was having "personal problems." Narut's loose lips reached the U.S. only through the Chicago Sun Times (July 7, 1975).⁽⁶⁾

Corroboration for the existence of an operational MC assassination program can be found in a declassified Defense Intelligence Agency (DIA) document prepared by the U.S. Army in January 1972 (Author: J. LaMothe); Part III is titled "Mental Suggestion and Controlled Behavior." Section B elucidates how hypnosis can be used to create a multi-personality "super spy" assassin, based on the writings of psychologist and Army consultant George Estabrooks. (Part 2 of this series, May/June 2000 Probe documents the U.S. military's creation of Manchurian Candidates going back to World War II.)

A 5/26/95 article in The Herald (Glasgow), "Brainwash killers 'still in use'," contains information about a psychotronic influence system developed in the 1970s in the former Soviet Union that creates programmable "human weapons" through the use of hypnosis and high-frequency radio waves. The article warns that this system "has found its way on to the free market, where mobsters and private security firms are using it."

"Self-Initiated Execution"?

From the earliest days of the MK-Ultra program in the 1950s, the CIA has systematically searched for execution methods that could be disguised as suicide. All indications are that the macabre Doctor Deaths of the military/intelligence world have succeeded, using untraceable electro-magnetic (EM) technology to commit the "perfect crime."

In 1995 Perceptions, an independent magazine dedicated to environmental, political and health issues, published a strange and scary story titled "The Secret War Against Medford, Oregon." Author Mark Metcalf revealed a 14-year-old conversation with Dr. David Fraser, former head of the Department of Toxicology at the University of North Carolina. Now deceased, Fraser had assembled a scientific team that traveled to Oregon to investigate an alarming cluster of suicides in the City of Medford (Jackson County) in the early 1970s.

With a 1970 population of only 28,454, the city saw the number of suicides between 1970 and 1975 rise from 2 to 10; in Jackson County the number shot up from 13 to 24. Suicide rates are calculated per 100,000 population and averaged in 5-year compilations. Although the number of suicides in and around Medford do not meet the usual criteria for reliable rate calculations, turning them into rates allows comparisons. In 1975 Medford's rate of 17 per 100,000 was higher than for Oregon (15.4) and for the USA as a whole (12.4).⁽⁷⁾

According to Metcalf, the scientists soon found that Medford was being bombarded with ultra low frequency (ULF) electromagnetic waves originating from a nearby military base. The commander of the military base told the investigators that he knew about the radiation but claimed it was caused by the Russians. However, the ULF bombardment mysteriously ceased the very next day after this confrontation. After they returned to the east but before the researchers could write up their report, Metcalf wrote, "Several men displaying CIA credentials arrived on campus and said that the ULF waves beamed into Medford were a 'national security' matter. They explicitly threatened to kill each of the researchers, including Dr. Fraser himself, should anyone speak further about it. As far as I know, no one did." [\(8\)](#)

On April 8, 1994, popular rock star/writer Kurt Cobain (of Nirvana fame) was found dead in his own home. He appeared to have been the victim of a shotgun blast to the head three days before. A deadly dose of heroin (three times over) was found in his blood. His so-called suicide note did not indicate he was going to take his own life. Many fans believe the evidence does not prove suicide and that Cobain was more likely murdered. [\(9\)](#) But why?

The answer may lie in a technical document purporting to reveal secrets of National Security Agency (NSA) "psyops" (psychological operations) and systematic MC. Posted on several Web sites in 1999, it was provided by an engineer who claims he had worked as a consultant to the NSA and feared for his own safety as a whistleblower (hence the author's anonymity).

MC literature on the World Wide Web constitutes the cutting edge of serious research into radio frequency (RF) or directed-energy weapons (DEW). At the same time, one can easily find writings laden with wild, unproven charges and undocumented speculation. It is a daunting task to pluck the gems out of the confusion and purposeful disinformation, which are plentiful. [\(10\)](#) After two years of wading through bizarre personal testimonies, and filling up three file-drawers with scientific research, hundreds of periodical articles, patents, interviews, correspondence, and muckraking pieces that support the existence of powerful MC technologies, [\(11\)](#) I find this particular document compelling and worthy of serious study.

Among several examples of "NSA self-initiated execution (suicide)," it claims Cobain was a casualty of brainwashing who was "terminated" for "writing clues" about his victimization into his songs. "Once the NSA puts on the highest level of brainwashing pain, the subject expires quickly," this document alleges. "Cobain used heroin to numb and otherwise slow the effect of the brainwashing." [\(12\)](#)

Rauni Kilde, MD, former Chief Medical Officer of Finland, lectures and writes about an NSA MC system using radio implants and microchips connected to satellites that is remarkably similar to what is described in the "NSA psyops" document. "With electro-magnetic frequency (EMF) brain stimulation fully coded," she writes, "pulsating electromagnetic signals can be sent to the brain, causing the desired voice and visual effects to be experienced by the target. This is a form of electronic warfare." Kilde warns that "connecting our brain functions via microchips (or even without them, according to the latest technology) to computers via satellites...poses the gravest threat to humanity." [\(13\)](#)

The Boorda Mystery

The Boorda mystery deepens when a whole range of facts gleaned from worldwide press coverage of his shocking death is integrated with the experiences of alleged MC

experimentees. One woman told me that in March 1996 the Air Force and the Navy had finally opened investigations into her claim that she and about 500 other people were being tortured by remotely controlled, neuro-electromagnetic (NEM) or RF weapons. Bizarre stories alleging surveillance, electronic harassment and remotely controlled torture of people throughout the world are posted on many Web sites. [\(14\)](#) The amply referenced research of Cheryl Welsh, 1997 founder of Citizens Against Human Rights Abuse (CAHRA), supports many of these claims, especially "Nonconsensual Brainwave and Personality Studies by the U.S. Government," "The 1950s Secret Discovery of the Code of the Brain," and the Russian Book Translation Project. [\(15\)](#)

In an article published last year in Matrix 3000, Band 4, a German publication, Welsh writes, "Heart attacks, suicides, assassinations, blackmail, all can be done remotely leaving no trace of evidence to tie it to the perpetrators."

Blanche Chavoustie is one of a number of allegedly targeted individuals who had contact with Admiral Boorda's office shortly before he died. She points out that burial of the Navy MC investigation followed quickly upon the admiral's own interment; however the Air Force probe may still be open. [\(16\)](#)

The nagging suspicion that Boorda did not willfully self-destruct is bolstered by his renowned toughness regarding media attacks on the Navy and himself. Appointed by President Clinton in 1994 to overcome the long-running legacy of the 1991 Tailhook sex scandal, Boorda soon made enemies within the military. The "old guard" considered him a "political admiral" appointed to dismantle the notoriously racist and sexist Navy culture. They were angered at decisions that halted the career advancement of high-level male personnel and supported the promotion of Navy women and ethnic minorities. [\(17\)](#)

But Boorda very publicly asserted he would not fall into the trap of feeling sorry for himself. He was popular among rank and file sailors. Eulogized as a "sailor's sailor," he was the only enlisted seaman to rise to CNO in the nearly 200 years of Navy history. This made him an outsider, resented by the blue-blood admiralty. As the Guardian of London aptly put it, "Admiral Boorda was short (5 ft. 4 in.), Jewish, clever, gregarious, astute and knew his own mind. He was hardly the Platonic role-model for the man to command the most WASP-ish and hereditary of the U.S. armed services." [\(18\)](#)

The admiral's body was found just after 2 p.m., about one-half hour before he was to meet with two Newsweek reporters at Navy headquarters. In the official story, Boorda abruptly went home for lunch after being informed by Rear Admiral Kendell Pease to expect accusations that he lacked authorization to wear two Vietnam-era, bronze "V" pins (decorations that signify valor in battle).

Pease later told the press that Boorda had not appeared unduly upset at the prospect of such questions and responded matter-of-factly, "We'll just tell him the truth." Boorda had already removed the tiny pins from his uniform the year before when questions were first raised about them. After lying dormant for a year, the medals issue was suddenly pushed into public view as the most plausible motivation for Boorda turning a pistol on himself. One of the two typed notes found beside Boorda's home computer was addressed "to my sailors" and said, "I couldn't bear to bring dishonor to you." [\(19\)](#)

An inch-thick report by the Naval Criminal Investigative Service was inconclusive as to Boorda's motive for suicide. It cited several unnamed people who insisted the admiral was not distraught in discussing the medals query. Significantly, the autopsy report was never made public. A blacked-out version was secured by the NYT under the Freedom of Information Act (FOIA), lending credence to suspicions of a coverup. [\(20\)](#) If the autopsy unambiguously substantiates a self-inflicted gunshot to Boorda's chest using the .38 handgun given him by his son-in-law (as reported by the media), then why keep it secret?

Boorda & "Cognitive Warfare"

The Guardian reported on May 18, 1996, there was "another cruel twist to Admiral Boorda's death" regarding a newspaper. It revealed that Boorda had finally agreed to give "his first full interview" for a series called "Bosnia: The Secret War." [\(21\)](#) Few Americans know of the admiral's role as advisor to President Clinton during the controversial U.S. intervention in Bosnia. From 1991 to 1994, Boorda was Commander-in-Chief of U.S. Naval Forces in Europe and Commander-in-Chief of Allied Forces in southern Europe, based in Naples, Italy. Despite "his position," Boorda had agreed to speak to the London newspaper on unspecified "highly controversial themes."

"The last years of Boorda's career were marked by his insistence that the US take a robust line and intervene militarily in the carnage of Bosnia-Herzegovina," the Guardian said. "This opinion became the admiral's anthem, and both isolated and vindicated him within a Pentagon which was stubbornly resistant to intervention." [\(22\)](#) Could military opposition to Boorda's Guardian interview have played a role in his untimely and inexplicable death?

In October 1996 the respectable, Paris-based Intelligence Newsletter alluded to "lurid reports" that Boorda "was murdered because he was about to reveal sinister undertakings by the Navy in mind control and brain warfare." It disclosed that the admiral "was deeply involved in a study on the possibilities of cognitive warfare, a form of mind control that uses acoustical, optical and electromagnetic fields or a combination of the three to interfere with the biological processes of an enemy." [\(23\)](#) This information provides a compelling reason to see the medals controversy as a bogus motivation for suicide. Corroboration for the existence of "cognitive warfare" can be found in New World Vistas, a 16-volume, 1996 Air Force publication. The section on "biological process control" says that it is possible "to create high fidelity speech in the human body, raising the possibility of covert suggestion and psychological direction... [making it] possible to "talk" to selected adversaries in a fashion that would be most disturbing to them." [\(24\)](#)

The Intelligence Newsletter reported that Boorda headed a secret body called the Strategic Studies Group investigating technologies for producing speech and "covert suggestions" in the "enemy's head." It said further, "The same techniques, say the experts, could be used to prevent voluntary muscular movements, control emotions and actions, produce sleep and interfere with short-term and long-term memory."

Could it be mere coincidence that these same biological and psychological effects had been reported by CAHRA members to Navy and AF investigators in the months preceding Boorda's sudden demise? Many alleged experimentees also say they hear artificial voices inside their heads or receive thoughts that are not their own! Did Admiral Boorda find out

about nonconsensual human experimentation conducted by the Navy, raise ethical objections or even order them to cease, thereby rendering himself too dangerous to live?

Questionable "suicide" of Aussie Attache

If Boorda was "taken out" by means of MC technology that induces "suicide" by remote control, he may be the highest ranking official in recent years to have met this fate. But by no means is he the only such suspected case of murder most foul.

On June 13, 1999, in the Washington suburb of Arlington, Virginia, Mervyn Jenkins, the North American attache for the Australian Defence Intelligence Organization (DIO) was found hanged in the backyard of his home a week before the Jenkins family planned to return to Australia. Jenkins, an expert in covert action and electronic warfare, had been posted in Washington for a three-year assignment. He had been stressed by bureaucratic infighting between two Australian intelligence agencies over which documents could be shared with the CIA and the DIA. But would this happily married father of three sons take his own life on his 48th birthday? His diary showed detailed plans for his life in Australia 10 weeks into the future.

On April 16, 2001, the Australian Broadcasting Corporation's (ABC) popular investigative news show "Four Corners" probed Jenkins' mysterious "suicide," which had produced a storm of criticism in Australia, leading to a government investigation. Not satisfied with the results (the Blunn Report), Jenkins' wife filed a lawsuit against the government. Both his wife and mother appeared on the ABC broadcast, a transcript of which is posted online. [\(25\)](#)

Betty Daly-King believes Jenkins was murdered to prevent him returning home with knowledge that the Pentagon didn't want him to bring back to Australia. Daly-King is a Western Australia peace and human rights activist who claims she has been tortured with DEW in retaliation for 40 years of working for alternative means of resolving conflicts that lead to war. Focused on ensuring peace in the Indian Ocean region, she is responsible for peace studies professorships in two Perth universities. Daly-King cites several other cases of DEW being used to silence scientists, activists and writers, just in Western Australia alone.

According to the official story laid out by "Four Corners," Jenkins was caught in the crossfire between U.S. and Australian intelligence agencies over the issue of intelligence sharing. Daly-King believes that the conflict centered on the Indonesian repression of East Timorese who had voted for independence, with the U.S. backing the Indonesians and the Australians leaning toward the East Timorese independence fighters. Influential Australian organizations such as the Returned Servicemen's League have historically sympathized with the East Timorese because so many had risked their lives to save Australians during World War II, she explains, and people-to-people relationships have been maintained ever since. [\(26\)](#)

"The USA would do anything to appease Indonesia to keep access through their straits to get to and from Saudi's oil," she wrote to me. "They were not amused at Australia being in the forefront of restoring East Timor against perceived Indonesia and USA interests! All that lovely East Timor offshore oil, too."

A map of the Washington area posted on the ABC Web site is chilling in its implications. With large red dots, it visually depicts the Jenkins home in Arlington surrounded on three

sides by the Pentagon, the CIA, the DIA headquartered at the Bolling Air Force Base, and the British, Canadian and Australian embassies. [\(27\)](#)

Mysterious Deaths in the British Defense Industry

An epidemic of unexplained deaths in England's defense industry occurred from 1982 to 1988 (totally blacked out of the "free" U.S. press). Twenty-five British computer programmers and engineers working on electronic warfare programs died in a rash of suspicious suicides, disappearances, and bizarre accidents. They were the subject of British journalist Tony Collin's 1990 book *Open Verdict: An Account of 25 Mysterious Deaths in the Defence Industry*. Five of these scientists were talented computer programmers who worked for Marconi Underwater Systems (a major contractor for the Reagan Administration's "Star Wars" Strategic Defense Initiative or SDI), or one of its subsidiaries. Many worked for the government or military installations directly. Britain's nuclear arsenal is submarine-based. Most of the dead programmers were working on top-secret simulator programs used in underwater submarine deception warfare. "In the majority of cases, there were no eyewitnesses and the periods before their deaths could not be explained," Collins writes [\(28\)](#)

Investigations began when two young men were found in Bristol, more than 100 miles from their homes, where they had no apparent connections. In 1986 Vimal Dajibhai, 24, was found under a bridge with an unexplained puncture mark on his thigh and his pants down around the ankles. A few months later Arshad Sharif, 26, alleged hanged himself by tying one end of a rope around his his neck, the other end lashed to a tree, and accelerating his car until his neck snapped. Family members interviewed by Collins said the two men were actively planning their futures and had no motive for suicide. Shortly thereafter, PhD student Avtar Singh Gita, 26, who was working on submarine warfare under a grant from the defense industry, disappeared from Loughborough University. Singh Gita's thesis was titled "Underwater Signal Processing." He was found in Paris months later, but could not recall why or how he got there. [\(29\)](#)

Several gifted scientists and programmers employed in other branches of the defense industry died under suspicious circumstances in 1987. Peter Peapell, 46, a simulator expert in stealth and EW, was found underneath his car with the engine running. David Sands, 37, allegedly drove at high velocity into a brick wall, after filling his car with cans of gasoline. Richard Pugh, 37, was found dead in his home with a plastic bag over his head and his feet tied. Royal Air Force computer specialist Mark Wisner, 25, was also found suffocated by a plastic bag. Dr. John Brittan, 52, was found dead in his garage with the car running; he had been a computer expert at the Royal Armaments Research and Development Establishment. In 1988 the body of Russell Smith, 23, who worked for the United Kingdom Atomic Energy Authority in Harwell, was found on a cliff. Family members of these deceased individuals indicated no motive for suicide. [\(30\)](#)

Tony Collins concludes that "psychological engineering" of suicidal behavior is a possible explanation for these unexplained deaths. His conclusion is based on the experience of Australian engineer and investigative journalist Joe Vials who says he survived such macabre manipulations in 1983. Vials had become unwittingly involved in a Cold War espionage operation while working on a sensitive oil drilling operation in India. He reports he suffered both microwave radiation and post-hypnotic suggestions implanted electronically by unknown controllers, whom he suspects were working for the CIA. Doctors who treated Vials at the

London-based Medical Foundation for the Care of Torture Victims verified that he was susceptible to clandestine hypnosis and post-hypnotic suggestions. Vialls, whose story can be found in Collins' final chapter, has published a book and many articles on suspected Manchurian Candidate-type assassinations as well as exposes of the U.S. military's Omega above- and underground communication system, which he believes has the capacity for mind control operations worldwide. [\(31\)](#)

Europeans Reject Invisible Weapons

Warnings on the perils of electronic MC can be found in the European press. Scientists, intellectuals and government officials there have been banging the warning drums for several years about dangerous U.S. surveillance and NEM technologies. [\(32\)](#) A 1997 editorial in the British Medical Journal alerted the healing profession to "guard against its knowledge being used for weapon development." Written by surgeon Robin M. Coupland, the editorial warned that the new category of "non-lethal" (NL) weapons, including "devices generating infrasound or electromagnetic waves, and devices for riot control," was not covered by existing international treaties banning chemical and biological weapons. [\(33\)](#)

In 1998 a neuroscientist at the Institut Pasteur in Paris cautioned that "advances in cerebral imaging" were "capable of being used at a distance" and would "open the way for abuses such as invasion of personal liberty, control of behavior and brainwashing." Another researcher at the French Atomic Energy Commission said imaging techniques have reached the stage where "we can almost read people's thoughts." [\(34\)](#) In 1998 the Scientific and Technological Options Assessment (STOA) panel of the European Parliament "shocked European leaders" with its voluminous report subtitled "Appraisal of Technologies of Political Control." The CIA's mind control (MK-Ultra) program is fully referenced therein. [\(35\)](#)

On January 28, 1999, while Congress and the U.S. media were diddling with the impeachment of President Clinton, the European Parliament passed a resolution calling "for an international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings." [\(36\)](#) And a 1999 UN-sponsored conference on human consciousness passed an ethics resolution urging neuroscientists to ensure their discoveries are used to serve "human welfare, never warfare." What is known as the Tokyo Declaration declares, "Today, we have the intellectual, physical and financial resources to master the power of the brain itself, and to develop devices to touch the mind and even control or erase consciousness." [\(37\)](#)

Secret MC technologies have already been used by U.S. armed forces in Third World interventions without any public discussion. According to Judy Wall, editor of Resonance(newsletter of the Mensa Bioelectromagnetics Special Interest Group), the EC-130E Commando Solo aircraft, built by Lockheed at a cost of \$100 million each, conducts psychological operations through broadcasts "in the standard AM, FM, HF, TV and military communications bands." Wall discovered that Commando Solo is equipped with Silent Sound Spread Spectrum, a MC technology that can "entrain the listener's brainwaves into a preselected emotional state." [\(38\)](#) Commando Solo aircraft were used as far back as the 1983 U.S. military intervention in Grenada, and later in Panama, Haiti, Bosnia-Herzegovina, and Iraq. [\(39\)](#)

The British ITV News Bureau reported that this technology was used in Operation Desert Storm in 1991 to demoralize Iraqi soldiers and instill "a perpetual feeling of fear and hopelessness."⁽⁴⁰⁾ In "Military Use of Mind Control Weapons," Wall exposes how human brainwave patterns known as "emotion signature clusters" can be stored on a computer, then piggybacked to Silent Sound carrier frequencies to "silently trigger the occurrence of the same basic emotion in another human being." Voice commands can also be used in subliminal messages attached to music.⁽⁴¹⁾

The U.S. military's secret strategy for post-cold-war conflicts "short of war" is called "The Revolution in Military Affairs," a deceptively futuristic scenario based on an arsenal of grotesque psychotechnologies unknown to the American taxpayers who fund their development. Among the new military-speak one finds "strategic personality simulation," exactly the sort of neofascist MC that could explain the bizarre harassment stories of many hapless civilians.⁽⁴²⁾ Readers still skeptical about the existence of MC technologies are urged to check out "The Mind has No Firewall," an article published in the Army journal *Parameters* (Spring 1998).⁽⁴³⁾ Evidence of plans to incorporate mind control in future wars is as unambiguous as it is repulsive.

Constructing Thoughtforms to Order?

Former Navy engineer Eleanor White traces her victimization as an alleged involuntary NEM experimentee to the spring of 1980 when she asked the Bureau of Naval Personnel to update her service record. The harassment began later that year -- on the street, at work, and in six successive apartments, she claims. "I just thought I was the unluckiest human being on the planet, entirely unique and alone," she says, until 1996 when she found Ed Light's Mind Control Forum on the Internet.⁽⁴⁴⁾ "The near-perfect congruence of my effects with what others were experiencing was like entering a whole new life." This sameness of "effects" is reported by hundreds of people throughout the world. Many are well-educated and hold down responsible jobs; others are physically and psychologically disabled by torturous hospitalizations and years of abuse. The sheer volume of their highly literate communications convinces me that every allegation of psychological-warfare experimentation cannot be conveniently pigeon-holed as the paranoia of a disturbed person.

Eldon Byrd has been similarly persuaded. A medical engineer, Byrd is retired from the Naval Surface Weapons Center, Office of Non-Lethal Weapons. A member of the U.S. Psychotronics Association (USPA), he has published papers on the telemetry of brain waves (measuring them wirelessly from a distance),⁽⁴⁵⁾ and the psycho-activity of extremely low frequency (ELF) electromagnetic and scalar fields. After corresponding with White and other alleged experimentees for several years, he concluded they were neither hallucinating nor allergic to ELF waves. "You have convinced me that this is something going on that should be investigated," Byrd wrote White. He affirmed that "images can be projected directly into a human brain from a distance using the 'scalar' component of a weak magnetic field." But he questioned who would be so evil as to inflict this technology on unsuspecting people?⁽⁴⁶⁾

Lt. Col. Thomas E. Bearden, also a member of USPA, is a PhD scientist, nuclear engineer, and proponent of "the new physics," which may be crucial to understanding the MC technologies developed by the U.S. military-industrial complex. Bearden publishes *SPECULA*, a magazine devoted to psychotronics and bio-energetics.⁽⁴⁷⁾ His books include *The Excalibur Statement*, *Analysis of Scalar Electromagnetics*, and *Gravitobiology: A New*

Biophysics (Tesla Book Company). In a February 1991 interview conducted by Michael Hutchison, editor of Megabrain Report, Bearden revealed that "scalar electromagnetic phenomena" make it possible to construct "thoughtforms to order, and input them directly into the mind and longterm memory." This can be done through "a hidden channel to pipe in inputs" and it can be done "surreptitiously, from a distance and without the knowledge and consent of the individual affected," he said further. Bearden calls this "the ultimate mind control."[\(48\)](#)

On July 23, 2000, Byrd delivered a paper to the 26th annual conference of the USPA in Columbus, Ohio, titled "Recent Advances in Scalar Technologies." He told the audience that many people claiming they are victims of remote MC devices appeared to be highly functional, and that there must be something to their claims. He pointed to thousands of documented cases during the Cold War of the U.S. government experimenting on citizens without their knowledge or consent.

He then cited a July 2, 1997 statement by Major General Sydney Schacknow of the Army's Special Forces (Ft. Bragg, North Carolina) that our military was "working on synthetic telepathy (the ability to read people's intentions at a distance using a magnetic laser -- a maser operating at extremely low frequencies," which can "alter behavior at a distance." In private conversation, Byrd told one participant that Marines had been shown a device that projects images into the brain from a distance, and that a Superconductor Quantum Interference Detector or SQUID machine (a sophisticated EEG device) can detect the mysterious rays many people suspect are causing them pain.[\(49\)](#) Byrd's paper at the 2001 USPA meeting in Columbus, Ohio, July 20-23, is titled "Mind Control: Paranoid Delusions or Frightening Reality?"

Synthetic Telepathy

"Synthetic telepathy is a term used to describe the beaming of words, thoughts, or ideas into a person's mind by mechanical means...some type of electromagnetic transmitter...operating in the microwave frequency band," begins a May, 1995 article by Judy Wall in Resonance.[\(50\)](#) The first known U.S. experiment in which audible voices were communicated via pulsed microwaves was carried out in 1973 by Joseph C. Sharp and Mark Grove in Walter Reed Army Institute of Research in the USA. Their success was based on biophysicist Allen Frey's post-WWII experiments with "microwave hearing."[\(51\)](#)

Commenting on Sharp's "pulsed microwave audiogram" in his 1985 ground-breaking book, *The Body Electric*, Robert O. Becker, MD, points out, "Such a device has obvious applications in covert operations designed to drive a target crazy with 'voices' or deliver undetectable instructions to a programmed assassin." He also noted, "Nearly two-thirds of the \$47-billion 1984 federal research budget went for military work, and in the field of bioelectricity the proportion was even higher." In denouncing "the buying of science by the military," Becker boldly declared, "To call it a form of prostitution is an insult to the oldest profession." Becker was twice nominated for the Nobel Prize in Medicine, but his career suffered because of his condemnation of the military uses of bioelectric research.[\(52\)](#)

Two years ago the career of SUNY-Albany Professor Kathryn Kelley also suffered a setback because of her probes into the mysteries of MC. In August 1999 Kelley's provocative research on the surgical implantation of communications devices to read thoughts was suddenly shut

down. She had delivered a paper to a professional conference in Orlando, Florida, in which she described acoustic implants in human beings called RAATS (short for radio wave, auditory, assaultive, transmitting implants). Kelley wrote, "When (short-wave) operators transmit to or scan RAAT implants in victims, they can talk to the victims remotely and anonymously, and hear the victim's speech and thoughts." [\(53\)](#)

"The Bionics of Man"

In 1962 Dr. Leonid L. Vasiliev, an internationally known Russian physiologist, remarked that "the discovery of the energy underlying ESP [extrasensory perception] will be equivalent to the discovery of atomic energy." [\(54\)](#) The word "psychotronics" was actually coined by Czechoslovak researchers to legitimize parapsychology as a scientific discipline. The Czech Manifesto adopted at the 1968 Moscow Parapsychological Conference declared, "Psychotronics is, in essence, the bionics of man." [\(55\)](#)

In the 1950s Soviet researchers invented a medical device called the LIDA machine, which uses modulated ELF waves to induce a trance-like hypnosis in human beings. According to a 1993 Defense Electronics article, a Richmond, Virginia company called Psychotechnologies Corporation now holds the LIDA patent, euphemistically called "psycho-correction technology." [\(56\)](#)

The Soviets were also the first to use EEG machines to catch "the moment when telepathy lights up in the brain." However, the U.S. came in a close second. In 1959 secret ESP research on the U.S. atomic sub Nautilus made headlines in France. Journalists asked the sensational question, "Has the American military learned the secret of mind power?" [\(57\)](#) The U.S. officially denied the Nautilus experiments. But Carol Rutz remembers being taken aboard this ship when she was 10 as part of a CIA MK-Ultra psychic assassination research program. Rutz reports being trained to send psychic energy to a "certain high-placed individual" to create a deadly aneurysm! [\(58\)](#) (See Part 3 of this series, July/August 2000 Probe for secret government experimentation using children.)

To understand the progression of electronic MC technologies from the 50s through the 90s, readers will benefit from consulting two online timelines composed by Judy Wall and Cheryl Welsh, respectively; a Fact Sheet with documentation on Nonconsensual Experimentation prepared by Welsh; and a bibliography titled "Psychoactivity of Electromagnetic Fields." [\(59\)](#)

"Zero-Evidence Weapons"

"For the first time in history," Eleanor White writes, "one human being, from hiding, at a distance, can control the thoughts and actions of another, by way of undetectable hypnosis, using still-classified electronic technology. These devices have totally disabled the world's justice systems." A board member of CAHRA, White has compiled the collective research of its members into a 136-page report, "The State of Unclassified and Commercial Technology Capable of Some Electronic Mind Control Effects." [\(60\)](#) She warns that anyone with knowhow and enough money could assemble an arsenal from ordinary (but expensive) electronic equipment and be totally immune from prosecution. "Zero-evidence weapons," she says, "make revenge crimes routine and easy." In the March 2000 issue of The American Reporter, White calls for debate and controls on all manufactured MC devices. [\(61\)](#)

In the late 1980s, activists in the Greenham Common Women's Peace Camp began experiencing headaches, nausea, vertigo, depression, disorientation and short-term memory loss. They were camped outside a U.S. Air Force Base in Great Britain to protest nuclear weapons and global militarization. Strong signals of non-ionizing radiation (microwave) up to 100 times the normal background level were detected there. Women peace activists in Seneca, New York, experienced similar harassment. [\(62\)](#)

Julianne McKinney, an ex-CIA case officer, believes she has been intentionally targeted by EM weapons. The painful harassment made her arms bleed, her gums rot and her teeth crack. In the early 1990s, she conducted an Electronic Surveillance Project, an offshoot of the Association of National Security Alumni. Her 22-page booklet, *Microwave Harassment and Mind Control*, published in 1992, documents many claims of NEM harassment. [\(63\)](#)

White has coined the term "voice-to-skull" (v2s) to describe an effect reported by hundreds of people. But White herself does not hear voices. "In my case and a few others," she says, "v2s is restricted to fake alarm clocks ringing at 3 a.m, fake phone or pager ringing, and fake bird choruses when no birds are around." In-home attacks include forced awakening and sleep deprivation, "hot needles" in the flesh, sexual stimulation, body vibrations and itching, limbs jerking wildly, and muscles manipulated remotely (vocal cords forced to produce sound against her will). White says she also suffers apartment break-ins with items stolen and clothing ripped. At work, she has experienced mind-blanking attacks and inexplicable computer malfunctions. Although she acknowledges that "the actual weapons now in use are tightly classified," she discovered through years of research that "the primitive weapons leading up to the current crop are mostly unclassified and some are even commercially available." [\(64\)](#)

White's Web site, <http://www.raven1.net>, contains a storehouse of credible research on government-sponsored MC experiments and technologies. It is a magnet that draws in people from all over the world searching for answers to the weird bio-electric phenomena experienced in their own bodies, homes, and communities. Thanks to White's e-mail exchange depot, I have corresponded with many highly articulate people from all walks of life, and have interviewed some by telephone. For example, I have learned of several cases where people discovered through x-rays or MRIs that family members had been implanted with biochips during minor surgery, without their knowledge or consent. Biochips, now the size of an uncooked grain of rice, are easily implantable for beneficial uses as well as for surreptitious political control. Applied Digital Solutions is now testing and marketing its "Digital Angel" technology, a biochip that makes possible the tracking of people using Global Positioning Satellites. [\(65\)](#) British Professor Kevin Warwick and his wife are being implanted with biochips to test whether they can read each other's thoughts when separated by distance. [\(66\)](#)

DSM-IV: Diagnosis or Coverup?

CAHRA members complain about the knee-jerk reactions of U.S. physicians (especially psychiatrists) to their suffering. Some have had bouts with hospitalization where they were subjected to forced drugging and electroshock. Many fear sharing their torments with family and friends lest they be labeled "paranoid schizophrenic" because they hear voices, suspect they are under some kind of surveillance, or suffer debilitating bio-electric attacks.

Many alleged experimentees felt somewhat vindicated, however, when they read the opening words of a 1997 NYT Magazine cover story, "For decades, those who claimed to be victims of clandestine radiation experiments conducted by the United States Government were dismissed as paranoid."⁽⁶⁷⁾ The Clinton Administration exposes on radiation experimentation using thousands of unsuspecting North Americans opened the door for alleged MC experimentees to speak publicly about their claims.

The first three parts of this series have documented how past leaders of the American Psychiatric Association (APA) were secretly involved in military/CIA MC research using nonconsensual human subjects, especially women and children in their care. Is it happenstance or coverup that many reported symptoms of NEM weapons have been written into the diagnostic categories published in the APA's Diagnostic Statistical Manual IV (DSM IV)?

One DSM IV criterion of "schizotypal personality disorder" is "belief in clairvoyance, telepathy, or 'sixth sense.'" Under such a sweeping definition, the entire cabal of military/intelligence psychic experimenters (including privatized, Pentagon-funded outfits like Psi Tech) could be labeled "schizophrenic" for indulging in "remote viewing" (ESP) research for decades!⁽⁶⁸⁾ Significantly, a History Channel offering called "Psychic Espionage," aired in September 2001, never ridiculed or cast "mental illness" aspersions on any of the male scientists and CIA Stargate functionaries who were interviewed.

Rauni Kilde believes that "psychiatrists working for U.S. intelligence agencies no doubt participated in writing and revising" what has become a worldwide psychiatrists' bible. "Victims of mind control experimentation are thus routinely diagnosed, knee-jerk fashion, as mentally ill by doctors who learned the DSM "symptom" list in medical school," she says.⁽⁶⁹⁾

N. Renay Tanner suggests that people who suspect they are targeted by electronic MC seek legal remedies and medical assistance through human rights organizations rather than the medical profession. A Columbia University graduate student focused on psychiatry and human rights, Tanner is also United Nations liaison for Support Coalition International, a human rights organization devoted to eliminating abuses by the mental-health industry. Tanner believes the mental health system functions for the purpose of social control top-down and that "ideologically driven" psychiatrists who cannot admit to any evidence of fallibility will not help ameliorate the stresses and trauma of nonconsensual experimentation.

Security Agency "Cutouts"?

CAHRA leaders bristle at suggestions that their pain may be caused by some condition other than purposeful manipulation by government-funded operators. They justifiably point to the MK-Ultra program and the thousands of documented cases of nonconsensual experimentation.⁽⁷⁰⁾ Still, most people offer no independent corroboration for their claims other than pointing out symptoms in common with other alleged victims and research proving that anti-personnel, directed-energy weapons do indeed exist.

One has to be skeptical of unscientific, long-distance evaluations of individuals based solely on uncorroborated verbal reports, often communicated via the anonymity of e-mail. After all, many known physical ailments such as electrical sensitivity and fibromyalgia could produce similar symptoms in different people.⁽⁷¹⁾ Some painful effects may also be due to allergic

reactions and EM pollution. Any number of people who corroborate each other's symptoms could be suffering from what a recent New York Times magazine article called "culturally specific" mental illness.—(72) With suspicion about unethical government-financed experimentation more the rule than the exception, and widespread computer networking by people searching for answers to their problems, the stage is set for an epidemic of self-diagnosed victims. How does one separate out genuine experimentees from people whose symptoms may have physical or emotional causes not connected with MC at all?

Some claims appear have more merit than others. And a few people have named their perpetrators as connected to private security services, Air Force personnel, or huge military contractors such as Raytheon (likely involved in producing some of these weapons). For example, Pat Mougey's tormentors appear to be recruited by a security agency located on the street where she lives. She reports some harassers let her know she is under surveillance. (73) She believes they use commercially available, through-the-wall radar to tape everything that goes on in the privacy of her own home. (74) Mougey says she even saw herself through a window on the television screen in the house next door. I was skeptical about this until I saw NSA high-tech surveillance gadgetry on display in the Hollywood movie, "Enemy of the State." A private detective knowledgeable in surveillance devices confirmed that such gadgetry does exist in the real world and not just in the imaginations of Hollywood writers.

"They have a device to control every part of the body, including the throat," says Mougey. "I have been in the ER more than once because my throat was closed up and I could not breathe." I became convinced there may be truth in Mougey's claims by reading a 1987 report on the Attorney General's Conference on Less Than Lethal Weapons. It revealed that "scientific knowledge of human physiology is progressing to the point where it may soon be possible to target specific systems with specific frequencies of electromagnetic radiation...sustained, extremely low frequency (ELF) radiation [that] can produce nausea or disorientation..." (75)

But so long as human experimentation in weapons development remains subject to "national security" restrictions, it is impossible to know for sure whether specific individuals are experimentees in government or privatized operations. We do know, however, that our government spent millions on electronic MC research. One hundred thirty boxes (130 cubic feet) of classified documents on "behavioral experiments" the CIA's Office of Research and Development (ORD) were located in 1978. They were found after John Marks (author of The Search for the 'Manchurian Candidate') requested ORD files "on behavioral research, including...activities related to bio-electrics, electric or radio stimulation of the brain, electronic destruction of memory, stereotaxic surgery, psychosurgery, hypnosis, parapsychology, radiation, microwaves and ultrasonics." (76)

Rogue Scientific Groups

As I delved more into the scientific end of MC research, I became more convinced that the U.S. military/industrial complex probably has remote-control technology that can produce the torture Mougey and others so vividly describe. A 1999 article by engineer Tom Bearden, "Mind Control and EM Wave Polarization Transductions," corroborates my feeling:

"...rogue groups amongst Western clandestine mind control researchers will probably arise if they have not already done so. They will likely seek to increase their personal control and

further isolate the programs from orthodox government review and from government and legislative control. They may even divert the research into highly illegal and unethical means, because it furthers their own rogue agendas. That is how clandestine U.S. government research can sometimes go sour, unless great care is exercised by the oversight committees in the House and the Senate.

Sometimes when rogue groups do gain control and total secrecy of a given new technological area, then what appears to be "U.S. government operations" do start to encompass a criminal and unethical operations [sic], hidden usually beneath the deep veil of high classification. Also, if it's "scientific," no one is ever brought to justice, even if the "evil science actions" are uncovered and publicly revealed." [\(77\)](#)

Those who doubt the existence of classified MC technology can draw their own conclusions from several official responses to requests for information on NEM weapons research. Margo Cherney received a letter from the Air Force in 1999 in response to her request for material on a 1970s Air Force project called "Communicating via the Microwave Auditory Effect." In denying her request to declassify this material, the letter said "unauthorized disclosure of the requested information could reasonably be expected to cause damage to national security." [\(78\)](#) Eleanor White received a letter from a member of the New York Assembly in 1998 that said, "Unfortunately, information concerning what was referenced in your letter is highly classified, and I am not at liberty to divulge such information to the general public." [\(79\)](#)

In April 2000, White was able to discover a U.S. Navy contract for Ultrasonic Acoustic Heterodyning Technology with American Technology Corporation. According to the company's own publicity, hypersonic sound technology "can target selected individuals in a group or in a noisy environment and deliver audio to that person." [\(80\)](#) This technology makes possible some of the sound effects White and others experience.

For several years CAHRA founder Cheryl Welsh has been trying to organize a study of 500 alleged experimentees that would include medical and psychiatric evaluations. Many in the CAHRA network are very fearful of doctors because they have experienced terrible abuse in the medical system. Welsh has struggled to convince them to join the study as she diligently networks with EM victims in other countries and raises money to insure the scientific viability of what would become a ground breaking study. People whose symptoms have other causes need to be properly diagnosed and treated. Pretenders and disinformation purveyors among the hundreds of people alleging EM targeting need to be exposed -- either by their refusal to participate in the study or by the objective evaluations of scientific and medical investigators. [\(81\)](#)

Civilians Become "the Enemy"

Many CAHRA members report that their complaints to local police have not gotten serious attention. In some cases this could be explained by collusion between local law enforcement and federal authorities testing NL weapons and surveillance systems in the community. Crusading Alaskan environmentalist Nick Begich reports a secret agreement between the Department of Defense and the Department of Justice to transfer NL weapons to local law enforcement through the National Institute of Justice. [\(82\)](#)

Like an international Paul Revere, Begich has been circling the globe clanging alarm bells to stimulate public debate on civilian control of the military in the post-cold-war era:

"The weaving together of Department of Defense missions with civilian Department of Justice missions is unprecedented. Not since the civil war has the military machinery...been turned against United States citizens...This raises serious questions regarding use of our Department of Defense for domestic police actions, which may be a violation of constitutional law by being in conflict with the narrowly-defined federal use of the military 'for the national defense.'" [\(83\)](#)

How did civilians become "the enemy" in peacetime? In a 5/12/99 interview on ABC News, USPA member Lt. Col. John B. Alexander was asked if he saw any domestic applications for NL weapons. "Absolutely," he answered. "In the U.S. today, we have a very large disenfranchised population. The potential for civil disorder is quite high, in my estimation. This is an area in which non-lethal weapons can play a vital role in restoring order, protecting lives and property..."

Alexander directed the Non-Lethal Weapons Laboratory at Los Alamos National Laboratory in the 1980s. He is the same knowledgeable military man who wrote way back in December 1980 that "there are weapons systems that operate on the power of the mind and whose lethal capacity has already been demonstrated....The psychotronic weapon would be silent, difficult to detect, and would require only a human operator as a power source." [\(84\)](#)

Without any any public review process, a joint policy for NL weapons was adopted in 1995. Highest priority was given to developing unspecified technologies "most likely get dual use, i.e., law enforcement and military applications." [\(85\)](#) A 1994 draft of the government's NL policy authorized use of nonlethal weapons by our military in support of domestic law enforcement. It chillingly replaced the Cold War concept of an external "enemy" (requiring stringent national-security regulations) with the relatively benign term "adversary," which could apply to anyone, domestic or foreign. "Adversary is used above in its broadest sense," this document says, "including those who are not declared enemies but who are engaged in activities we wish to stop." [\(86\)](#)

The confluence of NL and high-tech electronic weaponry can be gleaned from what little is available in the media. The July 7, 1997 issue of U.S. News and World Report reported that the Air Force alone plans to spend more than \$100 million by 2003 to research the "bioeffects" of what it called "exotic" anti-personnel, NL weapons. The ghastly technologies acknowledged in this article include blinding lasers (considered, but rejected for use in Somalia), acoustic or sonic weapons modeled after the Nazi's "vortex" technology (causing nausea, "pain, spasms or even death"), RF weapons that induce epileptic seizures, "undetectable" VLF devices that cause flulike symptoms, nausea and weakness, and "tunable" microwave weapons that can "cook the enemy." [\(87\)](#)

In March 2001, the Pentagon went public with a portable people zapper euphemistically called an "Active Denial System." Developed by Ratheon Corporation and other Pentagon contractors for crowd dispersal, this so-called NL weapon "could cook a person's eyeballs" if the operator so desired. [\(88\)](#) To its credit, CBS News interspersed footage of huge anti-Vietnam War demonstrations involving hundreds of thousands of Americans in its

announcement of this weapon. Comic strip character Pogo's astute and much quoted observation, "We have seen the enemy and they is us" was never more applicable.

"It's war, Jim, but not as we know it," in the 8/3/97 issue of The Scotsman, offers the following intriguing sentence: "Progress on laser and acoustic technology has been rapid...and a number of weapons are now off the design board and are being tested in secret."

Taxpayers footing the bill for this research have the right to ask: On whom are these weapons being tested and are the subjects protected under the Nuremberg Code, international laws and presidential executive orders? ⁽⁸⁹⁾ Eleanor White appropriately points out, "No government agency will admit to being charged with ethical protection of military and other government classified human test subjects." Could criminal, free-lance experimentation be conducted by private entrepreneurs with security clearance and on-the-job knowledge of how these weapons work?

In 1999 USA Today lifted the veil on a secret administrative court that grants security clearances to employees of defense contractors. "Felons gain access to the nation's secrets" was its provocative headline. "Tens of thousands of military and contractor personnel are cleared each year," it reported. In its study of 1500 decisions by the Defense Office of Hearings and Appeals, the newspaper found clearances were routinely bestowed on drug users, kidnappers, pedophiles, murders, exhibitionists and other convicted sex offenders, chronic liars, and people with histories of violence and/or convictions for criminal fraud involving millions of dollars. ⁽⁹⁰⁾

Psyops Field Testing on Civilians?

Eleanor White believes the most bizarre harassment she experiences amounts to psychological warfare. The unknown perpetrators, she says, occupy a "shadow government" that includes some of the country's biggest defense contractors and their intelligence operatives. "They are behavior science-oriented," she explains, "in creating severe stress to test our limits." She believes the perpetrators could be retired MK-Ultra employees "who set up shop in private industry away from congressional scrutiny," their paid agents from private security outfits, or even criminal groups who have secured the technology on the military black market. "The original MK-Ultra military/intelligence experimenters were forced to share with the corporate world," she says, "and the sharing has now quite a few branches."

In 1992, the first George Bush Administration added a little-known regulation to its National Industrial Security Program Operating Manual that reads, "Cover stories may be established for unacknowledged programs in order to protect the integrity of the program from individuals who do not have a need to know. Cover stories must be believable and cannot reveal any information regarding the true nature of the contract. Cover stories for Special Access Programs must have the approval of the PSO [Program Security Officer] prior to dissemination." ⁽⁹¹⁾ This provision is quite alarming. It means that unscrupulous "experimenters," hired by private companies with Pentagon connections, have a green light to "lie by the book." They can easily cover up the abuse of innocent people without any accountability to elected civilian authorities.

"There is no punishment for rogue scientific groups," writes Bearden. "Shockingly, the U.S. government at the highest level has shown...that mass crimes against U.S. civilians, perpetrated by portions of the U.S. scientific community in direct conspiracy and in secret,

will likely be condoned. The perpetrators will not be indicted, tried, or convicted." (Emphasis in the original)

He says further that:

"...in the "Big Science community, there can be and there are rogue groups. Lots of them. There is deep cover, deep classification. And there is very probably advanced mind control research and testing, be it legal or illegal. Hopefully, most of it is legal and constrained. However, some of it is almost certain to be illegal and ill constrained." [\(92\)](#)

As news of this series disseminated throughout the MC survivor network, academics and independent MC researchers phoned or wrote to offer useful information gleaned from their own research. One such source is a doctoral student in physics whose interest in neuroscience spans the last decade. I will call him Smith as he does not want his real name used. Smith believes that covert field testing of NEM weapons is combined with classic surveillance techniques perfected during the Cold War. He directed me to a "spy/counterspy" Web site dissecting FBI methods used to create fear, passivity and immobilization. [\(93\)](#) They include constant harassment to build up stress, total discrediting of his/her experiences by driving the target "crazy," then labeling the target as a "paranoid schizophrenic." The intended outcome of this treatment is depression, withdrawal and the target's acquiescence in being controlled. Smith cites the "learned helplessness model" of Martin Seligman, as the operant conditioning used by MC experimenters whose identity is protected in "black" programs. [\(94\)](#)

Smith suggests that some alleged experimentees are being used as the "prototypes" of a new controlled life, victims of a psychological warfare operation aimed, not at a foreign "enemy," but at our own citizenry. "Operatives get to train their mind-control and harassment techniques on live prey," he continued, "without fear of adverse consequences from a bungled operation."

He points out that some alleged experimentees, particularly women, are the "ideal candidates" for this kind of operation:

"They live alone, are highly verbal (the more associative one is, the easier it would no doubt be to drive her crazy), individualistic, don't have good family relations, and have obedient relatives, often with connections to the security services. It is easy for federal operatives with top-secret security clearances to paint these people as lunatics in order to be able to torture them with America's tax dollars. Indeed, after the cold war ended, there was a vacuum for surveillance operatives who needed to be doing something useful in order to justify their vast funding. What could be more desirable from a federal operative's point of view than to torture in absolute safety and secrecy a few unfortunate "freaks" with the very latest in black-budget technology?" [\(95\)](#)

Assassination Mysteries and Mind Control

Remote viewer David Morehouse exposed the existence of the CIA's Stargate "remote viewing" program in his 1996 book *Psychic Warrior*. [\(96\)](#) He revealed that Stargate was a Special Access Program (SAP), which requires the highest level of security clearance for Sensitive Compartmentalized Information. [\(97\)](#) NEM technologies would come under the government's NL research apparatus and are probably categorized as SAPs. Morehouse was

persecuted as a whistleblower, including involuntary hospitalization and severe psychiatric abuse. The public campaign to discredit him was led by none other than John Alexander, the "father" of NL weapons. [\(98\)](#)

Interestingly, Morehouse also told attorney William Pepper that a sniper team of low-level CIA operatives in the U.S. Special Forces was responsible for the assassination of Martin Luther King, Jr. in 1968. [\(99\)](#) Earlier installments of this series have touched on how mind control might have been the secret weapon used to commit and cover up the assassinations of President John F. Kennedy, Robert Kennedy and Dr. King. A most provocative and easily accessible article that links MC with these crimes (as well as the assassination of John Lennon and the mass murders in Jonestown, Guyana) was written by Curt Rowlett. It is titled "Project MKULTRA: Did the U.S. Government Actually Create Programmed Assassins?" [\(100\)](#)

Was Admiral Boorda -- like the Kennedy brothers and Dr. King -- just the latest political "adversary" marked for extinction by undemocratic shadow institutions operating above and beyond the law?

More than 25 years ago, Senator Frank Church foresaw an abyss of no return. Today Thomas Bearden, a military man who most probably has seen the best and worst of human beings, warns that unregulated MC technology could be the undoing of our civilization:

"Human beings are still human beings. All the good and evil is still there, regardless of the group. The stage settings change, but the cast of characters and the play never change.

It's sad, but 'twas ever thus. Hidden parts of our own governments -- and other governments throughout the world -- are no different from the old medieval groups, where nobles etc. were always plotting against the king, or using the king's power for their own nefarious end. The rogue groups today are no different from all the scheming and conniving groups that destroyed the Roman Empire. Great empires fall from within, not usually from without!" [\(101\)](#) (emphasis in original)

18. Rabinowitz, Dorothy, "Playing for the airwaves," Wall Street Journal, 6/10/96, p. A16; "Leader from the front: Obituary: Admiral Jeremy Boorda," Guardian, May 18, 1996, p. 32.

19. "Details of top admiral's suicide note disclosed," LA Times, 11/25/96, p. A10. The second note, addressed to Boorda's wife, has never been released. According to Joe Trento, bureau chief of the National Security News Service, one of the notes was "typed and dated" the day before the admiral's death. He interpreted this as evidence Boorda's suicide may have been caused by other issues than the meeting with Newsweek reporters. However, a typed, predated note could also be viewed as a forgery that was part of a murder coverup. See Washington Post, 6/8/96, p. A13.

Another Arms Race With The Former Soviet Union?

What the Public Should Know About Electromagnetic Frequency Weapons

Original article published in Newspeak, 1996

See also [Soviets Organize Against Psychotronic Weapons](#)

The U.S. public has a right to know about a currently classified weapons program. There are many corroborating articles to confirm the existence of electromagnetic frequency (emf) behavior or mind control weapons in the U.S. and Russian arsenals.¹ There is also evidence that there has been a secret race between the two superpowers to gain an upper edge and control the use of this revolutionary technology.² Like the atomic bomb, the technology will change the perception of the world.

The U.S. public also has the right to determine the policy and use of this technology. They have the democratic right to express their opinion on issues that deeply affect their lives, but unfortunately mind control weapons are classified and are being developed without public input. Like nuclear war protesters who expressed their views and significantly affected arms control policy, there is a need for public debate on emf technology. This is just a brief overview of a very complicated and serious situation.

The best proof of this ongoing emf arms race would be from the U.S. government, but it is classified under the National Security Act.

The U.S. public was told about the secret development of the atomic bomb after it was dropped on Hiroshima in 1945. It is inevitable that history will repeat and the U.S. public will learn about the emf arms race when the weapons are used or leaked to the press. In all likelihood, only public protest can alter this course.

Behavior control and electromagnetic weapons have only been in the public eye recently.

Janet Reno, the U.S. Attorney General has discussed non-lethal weapons in newspapers such as the Wall Street Journal.³ The U.S. government is only revealing the tip of the iceberg. There has been a quantum leap of technology and many articles confirm that the technology is capable of computer-brain interface and control of every nerve in the human body. The mind control technology is as mind boggling as the landing of the man on the moon. The physics and functioning of the brain is known on a biomedical level and can be highly controlled. The implications of it's use as a weapon are as serious as the consequences of the use of the atomic

bomb. The motive of superpowers to develop and control the use of mind control technology becomes obvious.

Several major publications are discussing behavior control weapons.⁴

It is described as electromagnetic technology and in little detail. Research is highly classified and scientists face prison terms and penalties for disclosing classified weapons research. But as a result of the breakup of the Soviet Union, international and Russian newspapers have published several articles on mind control technology.⁵ For example, the Moscow Times describes "debilitating high frequency radio waves, hypnotic computer- scrambled sounds and mind-bending electromagnetic fields, as well as an ultrasound gun capable of killing a cat at fifty meters..."⁶

And there is evidence of the use of mind control technology on a large scale.

In Stolitsa, a major Russian newspaper; "Victor Sedletsy, a scientist from Kiev, claims that the practical testing of a 'new kind of weapons based on the impact of certain frequencies on the human body occurred back in 1965. Besides, the development of an entirely new radar system allowing one to control any place on the globe began in 1982. Such equipment could be used for creating a 'psychotronic field' for brain-control."⁷ The existence of mind control technology is documented by numerous independent sources. These are not isolated rumors.

Many articles describe scientific research on mind control.

In the Los Angeles Times, March 20, 1976 by Norman Kempster entitled "Mind Reading Machine..."; "Scientists working under agency contracts at the University of Illinois, UCLA, Stanford, Massachusetts Institute of Technology and the University of Rochester, and in laboratories at other facilities have been able to determine an individual's alertness from his own brainwaves...It may be only a matter of time before the machines will be able to read a person's brainwaves to determine just what he is thinking." Mind control technology has been described since the 1960s and it is logical to conclude that the Former Soviet Union and the U.S. would conduct research on it's military use.

Books and articles discuss the history of behavior control and mind control research by both governments.

Most U.S. citizens have read about the Soviet and Chinese brainwashing scare after the Korean war. As a result the CIA conducted LSD and behavior control experiments which were described in the 1970s in executive and congressional investigations.⁸ Russia has been a very closed society but psychic research programs are documented in unclassified literature. In response, the CIA conducted psychic research, according to a 1995 CIA report called Stargate.⁹

And there is substantial evidence of emf research for use as weapons but it is not general public knowledge.

Some readers can remember Jack Anderson's expose' on the microwave bombardment of the U.S. embassy by Russia in 1972. As a result, the CIA developed Project Pandora to see if there were psychoactive effects from the electromagnetic radiation of the embassy. The U.S. public have no knowledge of the classified findings of this study although other sources have

documented psychoactive effects from emf. There is a tremendous amount of scientific and military literature on this topic if one knows the keywords and where to look.

Many factors point to the possibility of an emf arms race and the motivations of the superpowers.

Weapon technology is advancing rapidly. Some examples are blinding lasers, pinpoint accuracy missile targeting and chemical weapons. The next weapons in the history of warfare will include the complicated emf and behavior control technologies. The mind control arms race winner has the capability to control the world. Therefore, if the opponent develops behavior control weapons, then the U.S. or Russian government would be negligent to its citizens if they did not also. The picture of why, how and who would develop the mind control weapons becomes clear, in spite of the National Security Act.

The U.S. public should be aware of the probable misuse of emf technology.

Radiation experiments on unwitting human subjects after the development of the atomic bomb were classified and only became general public knowledge in 1994, after Energy Secretary Hazel O'Leary declassified documents that verified the federal government's involvement. There is already evidence of an emf weapon testing program involving nonconsenting human subjects. Possible remedies include the revision of the National Security law so that radiation, emf or any experimentation on human subjects is conducted and monitored within the law.

The above facts and events are part of the mounting proof of a mind control arms race between the Former Soviet Union and the United States. Interested readers can explore this further on their own or they can contact the author for more information. The main point is to alert people to the consequences of a very serious issue.

Cheryl Welsh, welsh@calweb.com

Camps for Citizens: Ashcroft's Hellish Vision

Attorney general shows himself as a menace to liberty.

by Jonathan Turley

Atty. Gen. John Ashcroft's announced desire for camps for U.S. citizens he deems to be "enemy combatants" has moved him from merely being a political embarrassment to being a constitutional menace.

Ashcroft's plan, disclosed last week but little publicized, would allow him to order the indefinite incarceration of U.S. citizens and summarily strip them of their constitutional rights and access to the courts by declaring them enemy combatants.

The proposed camp plan should trigger immediate congressional hearings and reconsideration of Ashcroft's fitness for this important office. Whereas Al Qaeda is a threat to the lives of our citizens, Ashcroft has become a clear and present threat to our liberties.

The camp plan was forged at an optimistic time for Ashcroft's small inner circle, which has been carefully watching two test cases to see whether this vision could become a reality. The cases of Jose Padilla and Yaser Esam Hamdi will determine whether U.S. citizens can be held without charges and subject to the arbitrary and unchecked authority of the government.

Hamdi has been held without charge even though the facts of his case are virtually identical to those in the case of John Walker Lindh. Both Hamdi and Lindh were captured in Afghanistan as foot soldiers in Taliban units. Yet Lindh was given a lawyer and a trial, while Hamdi rots in a floating Navy brig in Norfolk, Va.

This week, the government refused to comply with a federal judge who ordered that he be given the underlying evidence justifying Hamdi's treatment. The Justice Department has insisted that the judge must simply accept its declaration and cannot interfere with the president's absolute authority in "a time of war."

In Padilla's case, Ashcroft initially claimed that the arrest stopped a plan to detonate a radioactive bomb in New York or Washington, D.C. The administration later issued an embarrassing correction that there was no evidence Padilla was on such a mission. What is clear is that Padilla is an American citizen and was arrested in the United States--two facts that should trigger the full application of constitutional rights.

Ashcroft hopes to use his self-made "enemy combatant" stamp for any citizen whom he deems to be part of a wider terrorist conspiracy.

Perhaps because of his discredited claims of preventing radiological terrorism, aides have indicated that a "high-level committee" will recommend which citizens are to be stripped of their constitutional rights and sent to Ashcroft's new camps.

Few would have imagined any attorney general seeking to reestablish such camps for citizens. Of course, Ashcroft is not considering camps on the order of the internment camps used to incarcerate Japanese American citizens in World War II. But he can be credited only with thinking smaller; we have learned from painful experience that unchecked authority, once tasted, easily becomes insatiable.

We are only now getting a full vision of Ashcroft's America. Some of his predecessors dreamed of creating a great society or a nation unfettered by racism. Ashcroft seems to dream of a country secured from itself, neatly contained and controlled by his judgment of loyalty.

For more than 200 years, security and liberty have been viewed as coexistent values. Ashcroft and his aides appear to view this relationship as lineal, where security must precede liberty.

Since the nation will never be entirely safe from terrorism, liberty has become a mere rhetorical justification for increased security.

Ashcroft is a catalyst for constitutional devolution, encouraging citizens to accept autocratic rule as their only way of avoiding massive terrorist attacks.

His greatest problem has been preserving a level of panic and fear that would induce a free people to surrender the rights so dearly won by their ancestors.

In "A Man for All Seasons," Sir Thomas More was confronted by a young lawyer, Will Roper, who sought his daughter's hand. Roper proclaimed that he would cut down every law in England to get after the devil.

More's response seems almost tailored for Ashcroft: "And when the last law was down and the devil turned round on you, where would you hide, Roper, the laws all being flat? ... This country's planted thick with laws from coast to coast ... and if you cut them down--and you are just the man to do it--do you really think you could stand upright in the winds that would blow then?"

Every generation has had Ropers and Ashcrofts who view our laws

and traditions as mere obstructions rather than protections in times of peril. But before we allow Ashcroft to denude our own constitutional landscape, we must take a stand and have the courage to say, "Enough."

Every generation has its test of principle in which people of good faith can no longer remain silent in the face of authoritarian ambition. If we cannot join together to fight the abomination of American camps, we have already lost what we are defending.

Jonathan Turley is a professor of constitutional law at George Washington University.

American Technologies Corporation

of San Diego, California

Announces patent hurdle to commercial release of their electronic ventriloquism device, originally announced as the "acoustic heterodyne", has been cleared. We e-weapons victims await the release of this device, which can be set up to provide one form of "voice-to-skull" technology.

Date sent: Thu, 20 Aug 1998 08:41:33 -0700
To: investor@atcsd.com
From: Wendy Ravenel
Subject: ATCO Press Release 8/20/98

FOR IMMEDIATE RELEASE

AMERICAN TECHNOLOGY CORPORATION ALLOWED
FIRST U.S. PATENT ON HSS(tm) TECHNOLOGY

Hires Director of Technology Transfer

(SAN DIEGO, CA -- August 20, 1998) - American Technology Corporation (OTC: ATCO), announced today that the U.S. Patent and Trademark Office (PTO) has issued a Notice of Allowance on the first of many HyperSonic(tm) Sound (HSS) and Stratified Field(tm) (SFT(tm)) technology patent filings.

"The PTO's decision to allow the claims on our first HSS patent is an important milestone in the protection of our sound reproduction technologies," said Con Brosnan, president and CEO of ATC. "We are confident we will receive many more allowances on our expanding HSS and SFT technology portfolio to provide our licensing partners broadly protected intellectual property. HSS and SFT provide superior audio solutions that we believe will enable ATC to quickly become an important player in the greater than \$75 billion consumer electronics industry."

HyperSonic Sound is an award-winning proprietary technology in sound reproduction that employs ultrasonic tones in a new process to produce sound directly in the air. HSS eliminates many forms of distortion and reduces room acoustical effects. HSS uses little space and weight and is comparatively efficient and cost competitive relative to direct radiating loudspeakers. The laser-like HSS ultrasonic beam can project audible sound to virtually any listening environment creating many new sound applications previously impossible with existing speaker technology.

SFT is a patents-pending flat panel speaker technology that offers superior performance over conventional loudspeakers

in an easily manufactured ultra-thin form factor. The light-weight SFT speaker is totally non-magnetic and contains no crossover network, voice coil or other components found in traditional loudspeakers. SFT can be produced in a variety of sizes and shapes without the costly and exacting manufacturing process demanded of traditional high-end loudspeaker systems.

ATC also announced the hiring of Terry J. Conrad as Director of Technology Transfer. Mr. Conrad previously worked for Carver Corporation where, for the last eight years, he held the positions of Director of Quality, General Manager of the Service and OEM Divisions, Director of Engineering and Vice President of Operations. Mr. Conrad responsibilities will include packaging and transferring SFT and HSS technical information to licensees and OEM manufacturers.

"With the addition of Mr. Conrad, we have completed the foundation of our technical team that enables us to quickly and efficiently transfer both SFT and HSS to licensees," said James Croft, Vice President of Engineering. "With over 20 years of industry experience, Terry is a key addition to our staff."

American Technology Corporation is a globally recognized developer and licensor of patented and patents-pending leading-edge sound reproduction technologies and electronic products. ATC's technology portfolio includes the award-winning HSS and SFT sound reproduction technologies, Global Position Satellite (GPS) Tracker(tm) technology, Jet Engine Noise Reduction technology and AM/FM/Solar Sounds(tm) radio products. For more information on the Company and its technologies and products visit www.atcsd.com.

American Technologies Corporation

of San Diego, California

FOR IMMEDIATE RELEASE

AMERICAN TECHNOLOGY CORPORATION AWARDED

FIRST MILITARY CONTRACT FOR
HSS TECHNOLOGY

Company Expects Further Contracts for

HSS Military Applications

(SAN DIEGO, CA -- August 27, 1998) - American Technology Corporation (OTC: ATCO), announced today that it has been awarded its first military contract to assess the applicability of using HyperSonic (tm) Sound (HSS) technology to detect infrasonic acoustics associated with high energy events important to the Nuclear Treaty Program Office. The Company expects that this contract and expected follow-on work will generate approximately \$400,000 in revenue over the next six months.

"This first military contract is the culmination of months of work and serves as a springboard for significant opportunities with the military not only for HSS, but for our other technologies as well," said Con Brosnan, president and CEO. "Because HSS is the first technology to give sound projectable directionality, we expect this award to be the beginning of additional military application contracts."

[Eleanor's note: "Directionality" is the clue here, this is an alternate form, less sophisticated but still feasible, of creating "voice-to-skull" effects. John Williams of Consumertronics told me in an email he also has an acoustic voice-to-skull weapon. Just wait until your neighbourhood hackers get hold of this gem.]

HyperSonic Sound is an award-winning patented technology in sound reproduction that employs ultrasonic tones in a new process to produce sound directly in the air. HSS eliminates many forms of distortion and reduces room acoustical effects. HSS can project audible sound to virtually any listening environment creating many new sound applications previously impossible with existing speaker technology.

American Technology Corporation is a globally recognized developer and licensor of patented and patents-pending leading-edge sound reproduction technologies and electronic

products. ATC's technology portfolio includes the award-winning HSS and SFT sound reproduction technologies, Global Position Satellite (GPS) Tracker technology, Jet Engine Noise Reduction technology and AM/FM/Solar Sounds radio products. Tips for Listening to Audio or Video Clips from the Web

December 14, 2003

When you want to listen to an audio or video clip from the web, the usual way is to enter such a link into your browser, or, click on a web page that has a clickable reference to that link. The browser is supposed to inspect the filename extension, such as ".mp3", ".rm", ".wma" and so forth, and select one of the audio players (pieces of software designed for that purpose) on your PC to play it.

That doesn't always work. Sometimes instead, the contents of the audio or video file are painted into the browser screen as hieroglyphics. Other times, the browser's choice of audio player just refuses to play the file.

There is an alternate way.

First, COPY the FULL LINK, starting with "http://" from your browser by highlighting it (click-hold-drag) and either doing a Control-C or Edit, Copy.

From your Start, Programs menus, you can locate the available players on your PC. Here are some common ones (which can also play VIDEO as well):

- Windows Media Player
- RealPlayer
- QuickTime
- Winamp

You can start each one, and under File, you will see an option like "Open LOCATION" (link on the web) or "Open FILE" (an audio/video file saved on your PC) or "Open URL" (a link on the web.)

When you click on the link on the web option, you can DIRECTLY PASTE (Control-V or Edit, Paste) the link into your player's location field.

If your version of the player can play the particular type of audio clip, this will be your most direct way to get an audio or video file to play. If it doesn't work, try another player if you have more than one.

If you want to get additional players on your PC, you can put the software's name into, say, google.com and find their web site. Those above have all downloaded FREE for me.

I find RealPlayer the most reliable.

I find ENDLESS failures to work and other headaches with WINAMP, which seems as if it's been written by very immature youngsters who are more interested with "cool" than "reliable". I believe I've only had it play something ONCE out of at least a hundred tries.

Different Types of Perp Audio Phenomena

February 24, 2009

Electronic harassment targets planning to carry out public information campaigns or other activities involving contact with the public, authorities, or uninformed family and friends should take the time to get a clear idea of the different types of perpetrator acoustic transmissions. This page lists the types and their characteristics:

I. AUDIO APPEARING FROM A POINT IN MID AIR

This type of audio is hearable by anyone in the area, and is tape recordable. I (Eleanor White) have had various sounds such as wolf whistles and hammering on sheet metal appear in mid air inside a closed apartment. Because the now well known "acoustic spotlight", also known as "HyperSonic Sound" aka "acoustic heterodyning" cannot penetrate walls, we know that the technology used for this type of perp audio is very advanced. When an "acoustic spotlight" beam hits a wall, the sound is dumped at that point.

This type of sound is possibly used to make odd sounds come out of electrical appliances like fans. Outdoors, this type of perp sound is used to create the loud, obviously faked "bird calls" which are reported by about a quarter of mind control targets. The advanced technology can make the sound switch on and off with the appliance switch. Tests while this is happening have shown that there is no audio being fed in by way of the 120 VAC power - the power shows as a perfect smooth sine wave on an oscilloscope. Similarly, a pickup coil through the iron core of the appliance motor will show no audio waveforms present in the core.

Because Dr. Eldon Byrd's experiment used microphones suspended in front of his test subjects' ears (and enclosed in headphone casings), his experiment tested for this type of perp audio.

II. VOICE TO SKULL

With voice to skull, aka "V2S", a SILENT signal is sent to the target's brain directly, without creating conventional sound in the surrounding air. This type of sound can be transmitted by way of the Dr. Joseph Sharp pulsed microwave method.

However, we also know that the perps can transmit voice to skull using advanced signal types which can penetrate electromagnetic shielding.

This type of perp audio may have been recorded. At this time it is not clear which of the types - mid-air or V2S was actually recorded, as it could have been either, if the silent V2s signals can be detected electronically.

III MANIPULATION OF BREATHING AND VOCAL CORDS

This type of perp audio requires extremely advanced equipment. As the title says, the breathing and vocal cords of the target are manipulated so the target says what the perps want him/her

to say.

The involuntary speech can be muffled by closing the mouth, but it takes effort to stop the sound altogether. One use for this is to force the target to wake up or stay awake, and in that situation, the target is trying to relax, so the perps usually get some kind of speech "said".

I (Eleanor White) have a short audio clip of one instance of involuntary speech available on this site at:

<http://www.raven1.net/voicinvo.htm>

One or the other of the clickable audio files there should work on your PC. If you see hieroglyphics on your browser screen, hit Stop and try the other.

METER MOD FOR USE AS HUMAN OR PLANT EEG

FEB 6, 2001

The idea is that [Tri] Field Meters belonging to members of our group are probably sensitive enough to detect the small biological EMF field changes which occur in our bodies, as well as house plants and maybe pets, provided our attacks are delivered in "bursts" as opposed to slowly. Some "burst" type attacks are:

- sudden "electronic caffeine injections"
- limb flailing
- electric shock sensations
- hot needles in the flesh sensations

It may also be, but this is only theoretical at the moment, that continuous

voice to skull could be detected in some way using an audio-sensing add on to a [Tri] Field Meter.

In this application, the meter itself would probably be connected to a pickup coil. A meter without a jack for antenna connection may need to be disassembled and an external coil with its axis parallel to an internal sensing coil may be needed.

INSTALLING A JACK IN A TRI-FIELD METER (MUST BE ANALOG, NOT DIGITAL)

!!!! DO NOT DRILL UNTIL YOU HAVE READ THIS SECTION !!!!

** Refer to "audmeter.gif" image above.

First, an EXPERIENCED TECHNICIAN should do this. Reason is, you are tapping the meter movement itself which can be wiped out by mistakenly feeding any voltage directly to the terminals.

If you can find a convenient spot for a 1/8" MONO jack (MONO IS ESSENTIAL, AND SO IS OPEN-CIRCUIT) phone jack, first be sure there is no way an accidental contact can occur between the jack elements WITH PLUG PUSHED IN and wiring attached.

The jack wiring must include a heat shrink tubing insulated 4.7 K (4,700 ohm) 1/4 watt or 1/8 watt resistor in the tip lead.

Verify with an external ohm meter that the negative terminal on the meter movement connects to ground on the meter's case, if metal. IF NOT, YOU MUST USE A SMALL, TIGHT-FITTING GROMMET AND BRING OUT A PIGTAIL WITH A 1/8" MONO IN-LINE JACK. A shielded lead is recommended, with the shielding connecting to the "ground" side of the jack.

The tip lead must connect to the terminal on the meter movement marked "+".

As a user, take care to never apply voltage to that jack or pigtail - the safety resistor will protect low voltages but can't be counted on to protect against all voltages.

=====

*** BIO-SENSING EXPERIMENT WIRING TIPS ***

The above diagram is an arrangement for using any sensitive instrument such as an EEG or [Tri] Field Meter to detect electromagnetic disturbances of your body, your house plants, or pets, during psycho-electronic attacks.

It is recommended that the SOLDERING be done by someone with experience, and that where wiring is anchored only by solder, silicone rubber support be added so the stranding is less likely to break.

NOTE: There is one excellent compromise instrument on the market, a good balance between sensitivity, cost, and features. It is the "Tri Field Natural model meter", at this link:

http://www.trifield.com/EMF_natural.com

If that link is broken, try this one:

tri-nat.htm

he arrangement diagram above, though, applies to any instrument, and those Tri-Field meters which have no external jacks would need certain inside components connected to an outside jack in order to function in this way.

>> Taped-on electrodes can be used, however, pickup coils are much easier to work with. The arrangement drawing above would also apply to electrodes.

Keep the potentiometer mounted in a pill vial, and connect the leads to a pair of silver (artificial silver is OK) coins with leads soldered to them.

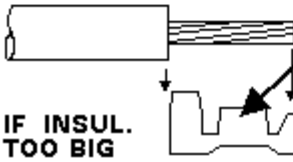

WIRE-END CONNECTING PINS AND SOCKETS, MANUFACTURED BY AMP CORPORATION, CINCH CORP. AND OTHERS. AVAILABLE IN QUANTITY FROM ELECTRONIC SUPPLY HOUSES SUCH AS NEWARK ELECTRONICS.

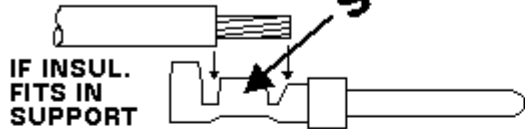

AMP (MFR) PIN, CRIMP, SNAP-IN, WITH INSUL. SUPPORT
ACCEPTABLE PART #S:
 66507-9
 1-66507-0
 745254-7
 66506-9
 1-66506-0

AMP (MFR) SOCKET, CRIMP, SNAP-IN, WITH INSUL. SUPPORT
ACCEPTABLE PART #S:
 66505-9
 1-66505-0
 745253-6
 745253-7
 66504-9
 1-66504-0

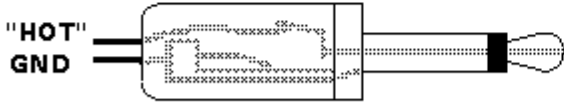

IF INSUL. TOO BIG FOR SUPPORT TABS, STRIP FULL LENGTH

IF INSUL. FITS IN SUPPORT TABS, CRIMP OVER INSULATION.

CRIMP USING EL-CHEAPO CRIMPER RADIO SHACK #276-1595 IF YOU CAN GET ONE, OTHERWISE NEEDLE NOSE PLIERS CAN CRIMP OK BECAUSE YOU ARE GOING TO SOLDER ANYWAY.

1/8" MONO EARPHONE PLUG WIRING

**** USE 1/8" DIA HEAT SHK TUBING**

HEAT SHRINK OVER SOCKET 3/4" LG

MUST EXTEND TO TIP. SQUEEZE AND OFFSET TIP HALVES BEFORE HEAT SHRINKING.

HEAT SHRINK OVER PIN 3/8" LONG

**** BE AWARE THAT A COMMON PERP TRICK IS TO PAINT PINS AND SOCKETS WITH CLEAR VARNISH TO PREVENT CONTACT. SOCKET SQUEEZE & OFFSET ABOVE HELPS IF THIS IS DONE TO YOU.**

BIOSENSING WIRING DETAILS

600 X 694 JAN 14/01

The diagram above shows a system of quick disconnect, convenient and reliable pins and sockets for your pickup coil and accessory wiring.

Again, if you are not experienced in soldering, it's best to have someone do the soldering and/or show you how. (This is especially true for the internal wiring of the "potentiometer mounted in a pill vial" shown in the first diagram. If the potentiometer is not properly wired, and the slider wire doesn't face toward the instrument, you may get no sensing or sensing with too much noise or signal strength.)

These so-called "D-submini" pins can be crimped with an el-cheapo Radio Shack crimp tool, #276-1595, however, BECAUSE YOU WILL BE SOLDERING THE PINS ANYWAY, CRIMPING WITH NEEDLE NOSE PLIERS WILL WORK FINE ALSO.

A small plastic (aluminum jaw covers) vise is very handy for making up instrumentation cables.

The image above shows how to make the in-line 10 K potentiometer used to control the signal level fed from your pickup coil to the measuring instrument. This component is EXTREMELY important. Without it, noise and signal overload problems are almost assured.

TAKE SPECIAL NOTE OF SECOND PART - THE HISTORY AND SCOPE OF BABY TRAFFICKING IN OREGON. ALSO REMEMBER THAT PEDOPHILES ARE EVERYWHERE, AND BRUTALITY BEYOND IMAGINATION HAPPENS TO VULNERABLE CHILDREN, AS DESCRIBED IN [THIS BOOK](#) AND [THIS ONE](#).
GUESS WHERE ILLEGALLY SOLD CHILDREN RATE ON THE VULNERABILITY SCALE!

State Moves to Close Fla. Adoption Agency
Tuesday January 13, 2004 4:01 AM

FORT LAUDERDALE, Fla (AP). -- The state took steps Monday to shut down a south Florida adoption agency that has been linked to an international baby trafficking ring, saying it broke dozens of state rules.

International Adoption Resource has been under scrutiny since September, when Costa Rican authorities raided a house in San Jose and found nine Guatemalan babies in a suspected illegal adoption ring.

State investigators said in a complaint made public Monday and obtained by the South Florida Sun-Sentinel that it intends to revoke the company's operating license for actions that "negatively affected many children in Central America."

The company's director lied on her resume, gave the state incomplete financial audits, and did not include in case files information such as where children came from or why their parents were giving them up, according to the state.

The adoption agency also allegedly tried to place a child with a homosexual couple, despite a state ban.

Violations by the adoption agency "posed an immediate serious danger to the public health, safety and welfare of the children and potential adoptive families," said Jack Moss, district administrator of the Department of Children & Families.

The company's attorney, Michael B. Cohen, declined to comment on the specific allegations, but said the adoption agency is contesting them.

In September, officials in Costa Rica discovered nine Guatemalan babies in a makeshift nursery, allegedly run by an illegal adoption ring. Officials linked the babies to a Costa Rican lawyer associated with the Coral Springs agency.

An attorney for the company acknowledged that the adoption agency leased the house, which was used by Guatemalan women who wanted to bypass a halt on foreign adoptions in their country. But she said the arrangement was legal under Costa Rican law.

~~~~~  
Note:

Oregon will not admit, even with a jury verdict, that this child trafficking is happening, or that children are being murdered, are missing

and abused by agents of the state .... time for full disclosure and consequences... so far only judicial collusion and cover up while no one is protecting the children from this terrorism.

Oregon is so openly known for its participation that in 1995 Good Housekeeping ran an expose called "Stolen Babies" and it stated that Oregon was "one of ten" states involved in black market child selling, even calling it "airport adoptions" it is so easy to procure a child through state agency seizures... at that time a white child was being sold for \$65,000 and a mixed race child for \$45,000.

We were told of witnesses to 250 american foster children put on a plane to Israel, who is publicly reported to have a flourishing black market in women.

There are more articles on our site and our Hall of Shame about the pedophile KAY TORAN in Oregon who was the head of the child services agency and when publicly exposed was moved to Volunteers of America. There she continues to sell compelled contracts for the state on low income families in Portland and sell children from behind the scenes.

Toran was sent to Romania in 1998 to teach them how to exploit the orphans in their impoverished state. After that children started disappearing from Romania and other countries, not arriving at American and European homes, missing, lost, unaccounted for. This became so outrageous that for a time ALL international adoptions were halted to investigate there were so many adopted children who never arrived. It is demonic that ONE child is abused and terrorized, intolerable that there is a whole system profiting from operating, criminally exploiting, vulturizing the flesh of children.

We recently saw an ad for something called "International Family Services" in Oregon, will have to look into that too. It is a GLOBAL database, and the vultures are working night and day to assess, seize, liquidate and destroy everything that is vulnerable.

<http://www.raven1.net/badcable.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

THIS ARTICLE CONTAINS SOME COMPUTER JARGON FOR THOSE READERS WHO ARE EXPERIENCED IN THE FIELD. THE FAILURE RATE NOTED IN THIS STORY IS QUITE EASY FOR NON-TECHNICAL PEOPLE TO UNDERSTAND, THOUGH. JUST COMPARE WITH SIMILAR HOUSEHOLD APPLIANCES.

It all started when an important printer stopped working, with a persistent alarm light. Turned out the ribbon had jammed so tightly that the button could not be turned without breaking the case. This was an excellent light duty printer, the Okidata 520 line 9-pin dot matrix.

[Historic Note: For three years, we had been experiencing this same type of ribbon jam on a much larger, more expensive printer (the Mannesman-Tally MT-661) where ribbons run around \$100 CDN each. We have a scrupulously honest dealer and we use only factory original new ribbons.

We have returned to time of writing perhaps 200 of these ribbons as having jammed shortly after being put in service. We have probably had close to 50 service calls to check and adjust these highly reliable machines.

Listen to this: Our dealer reports that NO OTHER users of this ribbon type have ever returned a single ribbon as having jammed.

E-weapons victims know that one of the very most common physical effects performed by the weapon holders is to increase or decrease friction dramatically. The weapon holders can pinpoint a single hinge on a door, for example, and make it screech unnaturally AND UN-REPEATABLY.

In one instance they remotely pried apart the card edge contacts on an important computer plug-in card, and did the same thing at times to a company oscilloscope, which has quite a few spring contacts on it's selector switches. There is no doubt that the weapon holders are capable of causing ribbon jams.]

OK - we changed the ribbon. The repeated attempts to send [serial] data to the printer [at the moderate speed of 9600 bauds] did not cause the printer to budge.

Changed printers once - still wouldn't print.

Installed a 100-LED breakout box to watch the control and data pins as the attempts were made. Data DID arrive at the proper time, and the control lines were all in "go" state.

Changed printer a second time - still no print.

Put a \$3,000 cable tester on the cable. This cable had been in successful, trouble free service for over 3 years. Continuity: perfect Low, medium, and high line noise, 0-3 millivolts, which is a tiny fraction of the logic threshold of + or - 3 volts, and an excellent reading. Line length about 100 feet. All undamaged category 5 (i.e. best grade) cable.

Took the original printer and connected it to the jack at the mainframe where the printer's normal cable is. The printer worked fine there, but was an inconvenient distance for the department's people to walk for invoices.

Went to work on the cable. Plugged the cable into a jack of another known-to-work printer and copied text files directly to the serial port (it's an Equinox SST system - highly dependable since it's installation 3 years ago.) Departmental printer didn't budge.

Checked setups of both the temporary printer (the original one doing emergency duty) and the departmental printer. Identical. All 3 Okidata printers fairly new and spares had recently been to repair shop for disassembly, cleaning, tweaking, and testing. All OK.

Changed RJ-45 terminators. Tested cable - still AOK. Departmental printer still would not print. (Invoicing all this time was being done on the short cable to a temporary printer stand at the computer room.)

Tried an automatic test suite on our \$3,000 tester. (Testing before this had been done using individual functions, not the automatic suite of tests.) Automatic suite attempts wouldn't run - error message about can't find a portion of the testers firmware. \*\* Next morning, automatic test suite works fine.

We have no unusual sources of electrical noise in our building. Just fluorescent lights, and with a building outside dimension of 150 feet by 175 feet, and the computer room located centrally, cable lengths typically do not exceed 100 feet, well within the capability of category 5 cable at 9600 baud.

All equipment in the building has individual battery backup units (except LaserJets), plus, we have large [expensive] surge arresters on AC sub-panels. Each battery backup unit has a filter network in it. We've installed a duplicate set of gas tube surge arresters on all incoming telephone lines and the cable FM service.

We have repeatedly scanned line voltage for excessive noise visually, using an oscilloscope and found none. We have scanned the data at the ends of our longer cables with an oscilloscope and found crisp pulses with virtually no noise.

Boss gets anxious and orders new cable to be run. New cable checks out fine with the tester. Printer starts to print but has screwed up fonts, even though settings identical and repair shop tested recently AOK.

Printer testing, by the way, is always done after a power off/power on to fully reset the unit.

Moved original printer back to department. Even though it has identical settings to the one that had screwed up fonts, it worked. Now the main frame refused to RE-print invoices that were missing or printed with bad vertical alignment.

Programmer-consultant on site. Could find no problem with files or programs, and he's a real genius with a photographic memory.

Next morning: RE-printing worked FINE! ANOTHER "self-fixing", statistically impossible problem.

Next morning: The refused-to-work cable was tested with a 6-volt battery driving a 14-volt flashlight lamp at the far end. Even with reduced voltage, the lamp lit with no problem. The lamp drew 50 milliamps over a 100 foot #24 twisted pair, which is roughly the load which would be imposed by 100 of these serial printers. There is nothing physically wrong with that cable, and never was.

On the problem day, a daily download of data from one of our banks which has run reliably for more than two years suddenly could not get done. The computer crew at the bank put analyzers on the download at their end and told us it looked like our modem (a \$5,500 ultra-high-quality gem) was prematurely dropping the connection. These attempts to download were carried on throughout the day while the invoice printer problems persisted. Around quitting time, when the departmental invoice printing started working again, we suddenly were able to do a successful data download. Another "self-fixing" problem.

On an earlier day, a critical UNIX host computer which is used to allow customers to remotely enter their orders suddenly stopped. Why? The adapter board INSIDE THE COMPUTER had popped itself out of it's slot. When I tried to re-seat it, there was NO FRICTION to hold it in. I did other things for half an hour, then came back and tried again.

THIS time, PLENTY of friction. Any reader who has worked with computers knows that card edge slot connectors if anything are EXCESSIVELY tight, as was this one after a half hour wait. Another impossible "self-fixing" problem.

While none of this actually PROVES that the e-weapon holders have exotic remote-manipulation capabilities, any technically experienced reader will have to agree that this chain of events does point powerfully in that direction.

# **MIND CONTROL WITHIN THE UNITED STATES**

**by Ms. Kai Bashir**

---

REVIEWS - What people are saying about this book:

"This is the fascinating, true story of a courageous and articulate woman's valiant attempt to expose the 'secret' government's war on not only her, but the general population as well. The Microwave Pulse/Mind warfare has great advantages in that a desired subject or population has no knowledge of the procedure being implemented. The methods used by these 'black' budget governmental agencies allow those implementing the manipulation of the mind and body to maintain complete anonymity. ... This frightening expose is sure to be an award-winning classic. A must read for all concerned and questioning Americans.

- Elizabeth Russel-Manning, Editor/Publisher "Whistle-Blowers; Mind Control and Non-Lethal Weapons"; Mass Mind Control of the American People

"The best researchers into the subject of mind control are the victims. The best books you'll find on the subject are those written by survivors and victims, and self-published - books from people like ... Brice Taylor in the early 1990's and Kai Bashir's book, which I received two days ago in galley form. I can't wait to get home and read it..."

- Walter Bowart, author of a best selling book that sold millions of copies, translated into five languages.

"Ms. Bashir, like Aldous Huxley's mynah birds in "Island", is calling to us... In this fascinating and enlightening presentation she reveals the devious and hidden controls that threaten to enslave all humanity... Through her research we learn the facts and through our identification with her we experience what it is to be trapped as prey and tortured in an invisible prison. As a person concerned with the future of humanity I would feel much more comfortable if "Mind Control Within the United States" were required reading for everyone on the planet.

- Blanche Chavoustie, who has highly recommended the book on the Wayne Morris radio show on CKLN-FM 88.1 Toronto.

## **Anomalies Resulting from MKULTRA Experiments**

**Blanche Chavoustie**

**Images Received November 16, 2000**

---

As my colleagues know well, I, Eleanor White, a 20-year victim of harassment by advanced psycho-electronic weapons, have urged both co-victims and supporters alike to take a second look at the failures of conventional shielding, and exotic effects like remote manipulation of objects, and grasp the fact that our group is being tormented by an entirely new type of physics. I call this physics simply the "classified weapons" at the moment.

This is a hard sell. People really want to believe our harassment comes in via shieldable, detectable, and provable signal types, but our experiences simply don't bear that belief out.

One of our members, Blanche Chavoustie, is unique in that she has been both an institutional kidnap-ee under the MKULTRA programs, and has had subsequent attacks by the current psycho-electronic weapons.

Apparently, these MKULTRA experiments left Blanche in a very visible state of having some of the most exotic technology of anyone in our group applied to her. The photos below give you a glimpse of what I'm talking about:

1. Blanche Chavoustie, Blenheim Palace in England, home of Winston Churchill, WITH FLASH:

2. Blanche Chavoustie, same scene as above, NO FLASH. Without the bright artificial light, an aura emanating from her front torso is visible to the camera but not to Blanche. Lt. Col. Thomas E. Bearden's book, [Excalibur Briefing](#), describes this exact same phenomenon occurring along railroad tracks in New Jersey, USA. Lt. Col. Bearden credits the effects to geological piezo-electricity, using "[hyperspace](#)" as a catalyst to produce a light not visible to the camera person but visible on the film:

The photo below shows a similar "glow" around MKULTRA survivor Kathleen Sullivan's hands, at a moment when one of her "alters" (MKULTRA-induced multiple personalities) had control:

3. Blanche Chavoustie, at Ayers Rock, Australia. These white lights are NOT lens flares, they were seen by people at the site.

Blanche reports: "I got a very serious, deep burn on my left front ribcage around the time the photo was taken and it took months to heal."

## WHITE LIGHTS VISIBLE TO PEOPLE AT SCENE

By the way, if this isn't enough, Blanche (and at least one other MKULTRA experimentee) have had magnets stick to them as if their body was magnetic.

I submit Blanche's experiences shown here as significant evidence, that those who are victims and supporters must begin opening their thinking, writing, and speaking up to the unmistakable presence of entirely new physics when describing the technology in use.

4. Close up view of "heart shaped" burn which appeared on Blanche's chest as a result of some 1990's "strange light" anomalies as sampled above.

5. This one is a real oddity. When a photo studio in New York state returned a proof copy of a school photo, a mosaic of apparent photos of Auschwitz inmates was "accidentally" enclosed with the proof. The gal below looks slightly like Blanche when she was young. Blanche's best information is that the "inmate number" actually her status within MKULTRA and other similar programs.

# Involuntary Implants

## Involuntary Government Experimentee [Blanche Chavoustie](#)

Visitor should note that these implant sites are around 40 years old, that is, they were implanted during the most active years of the MKULTRA institutional/kidnap/drug/implant phase. It appears that bone has grown partially around some of the implants.

Blanche was kidnapped and held against her will in the same upper New York state lab as the "Son of Sam" multiple murderer, David Berkowitz.

Blanche also remembers electronic and chemical implantation as part of a "break-the-maternal-bond" experiment.

---

"W" shaped wire in left ankle. Some obscuration in the posted image, but absolutely clear as a **wire** in the original x-ray. One purpose of such a wire is a *passive re-radiating microwave antenna*, used for tracking the movements of the implantee.

---

Another view of a wire implant in Blanche's left foot.

\*\* WITH THANKS TO CORRESPONDENT Tessa:

A Rare Event: Tom Bearden Talks About Weaponry  
<http://www.21stcenturyradio.com/1314-bearden.html>  
May, 16, 1997.

"I promised Zoh some years ago that I would come on her show and I would talk about weaponry and I'm fulfilling that promise today."

One of the greatest man-induced dangers we face as a planet today is the development of electromagnetic frequencies to be used as wave warfare. In April of 1997 Secretary of Defense William Cohen admitted he was concerned about threats of terrorism with weapons that can cause earthquakes and trigger volcanoes.

Over the years we have shared with our audiences many different approaches to the subject of quantum mechanics, the work of Nikola Tesla, the concerns about ELF wave warfare, mind control, and other technological nightmares predicted by the misuse of these technologies. Investigators and researchers in these areas often refuse to speak publicly about their work, and usually Lt.Colonel Tom Bearden is one of them.

When asked, Bearden typically declines to share his knowledge about our government's involvement in behavioral weaponry, lecturing instead on the many other facets in his amazing repertoire. Indeed, there are other lecturers speaking publicly about behavioral weaponry, but often they are sent by the government to assure the public this stuff doesn't go on.

But on May 16, 1997, however, Tom Bearden kept his promise, and agreed to be a guest on The Zoh Show and tell her audience what he knows about electromagnetic weaponry. Zoh recalled meeting Christopher Bird for the first time in December 1977. The co-author of the classic, *The Secret Life of Plants*, Chris Bird eventually became the best man at the wedding of Dr. Bob and Zoh (see Hieronimus & Co. Newsletter #6), and at that first meeting Chris noted Zoh's interest in learning how frequencies are capable of changing consciousness, healing and harming. Chris said, "You must speak to my good friend Tom Bearden." Tom and Zoh briefly discussed his work in weaponry, with a promise to go into more details at their next meeting. Since then, he has discontinued public speaking about his knowledge, until this date, twenty years later, on May 16, 1997 when he joined The Zoh Show to help promote the New Energy Conference of May 1997, and fulfill his twenty year old promise.

Zoh asked Tom to give his own rendition of his biography and he modestly summarized his extraordinary background like this:

"Well, in all these matters, Zoh, you've got to keep your sense of humor. I started out to be a country & western guitar picker and singer and followed that trade until I wound up in the U.S. Army. I had an Army career, I'm retired of course, then worked in aerospace for 19 years. That's basically my background. Masters Degree in Nuclear Engineering, B.S. degree in mathematics, some other courses here and there, and the equivalent of a Masters Degree in Aerospace Engineering from a special Army course. I got concerned early on

looking at electromagnetics," when he realized text book teachings were antiquated in the teachings and concept of energy. "It was all twisted up, and it is to this day, and I'm not the only one who says that. Some of the very famous foundation's physicists have pointed out that electrodynamics should be completely redone, but it's fashionable to never pay attention to that." Tom says he got concerned because it appeared to him that if the errors were corrected, "you could also model the mind," he continues. "I've always been convinced that we are human beings. We are not meat computers and we are not machines. If we lose sight of the fact of our humanity and our human beingness, the rest of it doesn't matter anyway. If we are nothing but a bunch of robots beating one another's brains out then we would be better off to be destroyed and populate the earth with real human beings.

#### SCIENCE NEEDS TO CONSIDER HUMAN-NESS

"One of the things that I wanted to see was a science that was more humane, that considered human beings as well as materialism. Fortunately, quantum mechanics destroyed materialism about sixty-something years ago but unfortunately it hasn't fallen down yet. It's dead but it's not toppled over, and unfortunately most of our scientists are still materialists," meaning they believe that the brain is where all the action is. In their belief, he says, "there's no such thing as an independent mind or independent spirit or anything."

Tom is reluctant to discuss our military's involvement in electromagnetic warfare because he doesn't want to be "gagged". "First of all, as you can probably imagine, I've leaned over backwards and stayed completely out of any room that had anything to do with anything our own government might be doing or might not be doing. The obvious reason is: everything I did had to be done from open sources -- otherwise you just end up getting classified, and gagged and shut up."

#### ELECTRONIC WEAPONS DEVELOPMENT

In general, however, Tom will say, "Most of our attention in the west has been focused on what we call Directed Energy Weapons, where we actually just bang the energy out in the normal fashion, and we try to get lots of it out there, and we try to get it out in a real dense clump and bang it with that. That's like a laser beam. Or, in microwaves, hold a bunch of it together so that it gets hit with a slug of energy. That's basically what kinds of weapons, the west at least, overtly anyway, has been working on. In the KGB laboratories, the cream of the non-linear scientists of the whole world are the Russian scientists, always have been. Those folks worked on this other stuff and they were working on it shortly after the end of World War II. In 1947 they were working on it like mad and so by 1950 they were testing prototype laboratory weapons.

Particularly by the latter 50s they actually had pretty good solid weapons systems and prototype coming along. The first large strategic weapons that they deployed, the real big monsters were deployed in early 1963. The reason for the Cuban missile crisis was: in backing Castro the Russians wanted to change the whole balance of power and stick in nuclear weapons, but they also knew they had these super weapons coming along. Krushchev had spoken of those in 1960. Part of that was printed in the New York Times. And so he went ahead and started sticking in the long range missiles

and the nuclear weapons and so forth. And they did put nuclear weapons in Cuba in spite of the knowledge of our government in those days. Later we found they really did. What [Kruschev] did was he just sort of jumped the gun, because his big stuff was not deployed yet, and when Kennedy called his bluff in 1962 he didn't have the big guns behind him and his missiles were in woeful shape. Kennedy knew that, courtesy of Colonel Penkovsky, a Soviet spy that was in our employ at that time, courtesy of the British Intelligence.

Kennedy knew that as far as missiles and the normal stuff was concerned, Kruschev was in terrible shape. So of course he got caught with his pants down, so to speak, he didn't have the big weapons to back himself up yet. BUT when he got them he negotiated and blustered around long enough to get a promise out of Kennedy not to attack Cuba so he could keep the base in Cuba. Then he vowed revenge. When those things were deployed, of course, he had lost face seriously before the whole world and particularly before the Communist party. So Kruschev's days were numbered shortly after the Cuban Missile Crisis. He was desperate to try and stay in power.

#### DRAMATIC TEST OF WEAPONRY

"...1962 was the Cuban Missile Crisis, as soon as those things got deployed a few months later, in April 1963, he did a tremendous dramatic test of the weaponry. First he killed the U.S.S. Thresher underneath the ocean off the coast of the U.S., left signatures a mile wide. The next day he placed an underwater burst of this energy, gigantic burst 100 miles north of Puerto Rico, one of the deepest parts of the oceans and we had a passing jet airliner which happened to see the surface of the ocean ball up and rise up about 1/2 a mile high in a mushroom cloud and fall back into the ocean, the symptoms of an underwater nuclear burst if you don't vent the gas bubble. We have a good pick point. My personal opinion is the Russians were up to their neck in the death of Kennedy also, as was apparently God and everybody else, too, but the thing is he did get his revenge and he did demonstrate to the Communist party that the weapons were workable and they would destroy, for example, the finest attack submarine we had of the day."

"...In general there's a "system within the system" in Russia. First of all you've got the Communist party which is really the dominant system, and it still is today. It's sort of lying dormant a little bit today, but not really. It still controls the KGB, and the KGB still has all the powers that it wants to exercise. And it always did control and have the development systems for the advanced weapons of the kind that I was talking about, where you use a different kind of electromagnetics. We pointed out that two papers, one in 1903 and one in 1904 by E.T. Whittaker, give you the way to go about constructing and using this new electromagnetics.

#### SUPER POTENTIAL THEORY

"...That last paper was used to establish what today is called Super Potential Theory and very few people work in it but it's known. The first paper was completely ignored and it gave you the ability... to create energy at a distance. It does not flow through space as normal EM [electro magnetic] Waves. It's not ELF [extremely low frequency]. It's not like your normal radio broadcasting system at all. It's really like a DC voltage that doesn't have anything going on on the surface but down underneath

it has pressure waves, and the pressure waves bang into the system on the other end and create real electromagnetic energy on that end. Putting it simply... there's no such thing as a shield for it. So obviously that kind of weaponry is head and shoulders above anything else we normally look at including firing a laser beam here at something up there, you know, and with it going through the air in the normal fashion... What happens at the other end is the energy rises directly as out of the local vacuum the actual space time the thing's embedded in."

#### WHAT IS SCALAR ENERGY?

To define scalar energy, Tom drew an analogy. "Suppose you have an ocean -- after all, we know today that space itself is a special kind of ocean. It's filled with enormous flux activity. It's not an emptiness at all, sort of like a special kind of sea or ocean. The waves that you have on the surface where the water has to rear up, be physically lifted up, and moved energetically, that compares to a normal electromagnetic wave. Those waves move pretty slow on the surface of the water. Now underneath the water if you sort of had a little flat plate area and you bang this plate very sharply with a little shock wave, you get a pressure wave that goes through the water.

This pressure is just a transmission of pressure. Water's almost incompressible or basically incompressible, so the pressure wave goes very rapidly through the water at a tremendous rate. If you bang together somewhere out in the distance a couple of these pressure waves that come in from two different points and meet upon an object, upon that object they then create all kinds of upheaval waves and all kind of stuff you'd get on the surface. The object can be in deep trouble very quickly, but when you look at it from the surface kind of view you will see waves appear on it. It didn't get there with surface waves transporting across and hitting it in a normal fashion. It came in by the pressure waves underneath slapping together and recreating the surface waves. And that's the way we're talking about. In other words you have a hidden type of wave that buries up to what we would say in space time, if you want to talk general relativity, or better yet to look at it materially the way that Whitaker did and so forth, it simply infolds inside the scalar potential, what we normally call just DC voltage."

#### THEY KILLED THREE AMBASSADORS

Working in scalar energy "can do a lot of good as well as a lot of bad," says Tom Bearden. "Let's talk about some good and bad that you can do in terms of human beings. First of all, a Russian scientist named Kosnoshev who headed up a research institute in Siberia in those days did some enormously important work.... As far as everybody else was concerned [he demonstrated] openly just normal electromagnetics -- but it wasn't. It was the special stuff. He demonstrated that any kind of cellular disease whatsoever, without limitation, can be captured and transmitted into other cells at a distance using this special kind of electromagnetics.

They did about 18,000 experiments, and research institutes can prove this. And so, of course, the KGB and so forth started weaponising that effect very highly. You know for years [they used] the so-called microwave radiation on the U.S. Embassy in Moscow where they induced all kinds of health changes. This was a limited test deliberately kept very small, although they did kill three

ambassadors."

#### ENGINEERING THE VACUUM

"...Wheeler, one of the great physicists of this country, pointed out that if you condense energy like in mass or you have a clump of energy, that affects the actual fabric of space time itself. It's like it pushes the sheet, makes a lump in it." Zoh likened it to dropping a child's ball on his bed and the sheet gets a bump in it. "It changes it," continued Tom. "It's an engine. In return the geometry gets twisted up, interacts back on the mass. Mass tells space time how to curve, space time curvature tells mass how to move. This operates at all levels and all you have to do is capture these little clumps of energy, make a pattern of them that you need, and that's called engineering the vacuum. We just call it vacuum engines.

"So you can make these little pockets of energy in the actual vacuum itself and the emptiness in front of you, little energetic dispositions. It's got forces in it once mass is put there. There are little invisible fingers that are little engines and they work on the mass. They work inside the nucleus. They work wherever you design them for."

"...There's two kinds of frequency there. There's the frequency that exists up on the surface of the ocean and then there are these jillions of frequencies that are hidden down underneath the ocean. Those are the ones that we're talking about." While Bearden and other teams of scientists world over are trying to learn how to use that available energy to heal and to change the disease state, it can also be used to kill.

#### THE ULTIMATE BIOLOGICAL WARFARE

"It's the ultimate biological warfare, of course," continues Thomas Bearden. "I'll say this flatly, and I won't answer any further questions about it; the Gulf War Syndrome was induced... It was induced with this stuff. All the rest... was contributing factors that everybody's talking about. Yeah you had a little bit of nerve gas released, yeah, you had some chemicals, yeah, you had this, but not everybody got those exposures. There are some deeper signatures if you look into it very deeply that show you exactly how it was done and the fact that it was induced. It was a test. It was a test of a very special kind of weapon I have not talked about yet. Anyway you can use it to create diseases.

#### Transforming Cells Forward Or Backward

"You can just as easily use it to cure diseases," continues Bearden. For example there were experiments in France in the early 1960s when they cured lab animals of terminal tumors and other vicious infections like the sleeping sickness using internal electromagnetics -- without knowing what they were doing. The late Christopher Bird wrote about the whole history of that project. "But nobody could explain how it worked.... What they were able to do was just back the cell up. Once the cell was infected or diseased or whatever, like in a cancer cell, they just reversed it back to a normal cell. They didn't kill the cell. That's not what you do. You just change it back and forth." Nobel Prize nominee Robert Becker also showed conclusively that extremely minute amounts of electricity can induce healing, a practice now approved

by the FDA for use in healing bone fractures in hospitals everywhere. Unfortunately millions of people continue to suffer needlessly when electromagnetic healing could cure them of numerous ailments and illnesses, but the FDA will has not approved its use elsewhere.

"The Russians looked at it you know, with an extremely large research program," says Tom. "They not only looked at it but they developed the heck out of it. So that's the problem. We just simply can't get our own scientists to move off of square one.... There's been absolutely no [development] in this country, even looking at this internal electrodynamics, even though it's been in the hard literature for almost a century."

#### THE BUREAUCRACY IN SCIENCE

"One problem is all science is patronized, that is, somebody has to pay the freight, somebody has to pay the bills.... The bureaucracy in science that controls the money flow, what money shall be spent and what it shall be spent for controls all of science. What people do not realize is science is not free at all in this country -- it is highly constricted. There are plenty of bright, young Ph.D.s that would love to work on this kind of thing, but the scientific community will not allow them because the bureaucracy will not give them any funds. And if they try to work on their own in this area they get destroyed, pure and simple.

"...The other thing is scientists like to glorify themselves, but they form a distribution just like any other group of people. The broad in the middle are people just like you and I doing a special job. They're no better, no worse. There's a small percentage of them that are angelic almost. They are really the epitome of the scientists. There is also a small group on the bottom, the end of it, the bottom 11% that are nearly devils, and they are manipulative and they try to rise and control everything, and they are interested only in the big money game, who's got the money, who controls.

Governments of the world have been made beasts of burden for large control interests anyway, not just one, but all kinds of control interests. It's a DOGGONE cat and dog fight out there. And so what you have is all these competing interests using power, influence and money, and all buying everything. And that's what controls what science works on. That's why you don't get free energy. Free energy can be done anytime anybody wants to spend a little money. It's slowly being done anyway."

Ltc. Tom Bearden knows a lot about electromagnetic theory, over-unity electrical machines and free energy devices, but only on The Zoh Show will you hear him talking about subjects he has removed from his public speaking lectures: weapons that can trigger earthquakes, cause volcanoes, disturb brain patterns and seed thoughts in the populous. For copies of Thomas E. Bearden's writings, The Excalibur Briefing, 1988 and 1990, and AIDS As Biological Warfare, send an SASE to The Tesla Book Company, P.O. Box 121873, Chula Vista, CA 91912. Tom Bearden is a frequent speaker on new energy technologies. Video and audio tapes of his presentations at the International Symposium on New Energy can be ordered from Back Country Productions at 303-772-8358.

## **BIBLIOGRAPHY ON THE PSYCHOACTIVITY OF ELECTROMAGNETIC FIELDS [1]**

Robert C. Beck and Eldon A. Byrd

---

*It is unusual to include a bibliography of this magnitude with a mere position paper; however, we feel that, with a subject as controversial as this one, it is essential to give the reader an insight into the tremendous amount of work that has gone on in the background of this relatively new field. The bibliography accompanying the article originally ran only four pages; then, with the help of Eldon Byrd of the Naval Office of Surface Weaponry, a more extensive one was compiled on this sensitive topic. This important bibliography is included in its entirety.-- Ed*

Eleanor White's comments on this posting:

This book focusses on NON-ionizing radiation, and contains detailed texts about NON-THERMAL effects. In other words, "right up our alley".

The main use of this book is to show that it is easy for electromagnetic signals to cause radio frequency hearing and other effects at LOW power levels. This in turn can be used to explain why detection is so very difficult.

I don't understand the biological jargon, however, a few of the more plain- language paragraphs STUNNINGLY verify that with careful choice of signal frequency and modulation, not only can the body's cells detect the modulation envelope of an incoming radio signal (i.e. function as a "cellular crystal set") but even AMPLIFY these carefully formed signals. (Amplification of other effects, such as proneness to disease, is also covered in the book.)

"Detection", in terms of radio signal reception, means that some portion of the reciever "rectifies", that is, turns the AC of the incoming signal into varying DC. If this conversion is not done, voice to skull wouldn't work.

The book touches also on ways in which cells communicate, and shows that electromagnetic fields of relatively weak power levels can affect intercellular communication, which is, as I understand the subject, what the brain is "all about".

Bio-amplification is apparently why radio signals of very low average power ("MICROwatts" per NASA) can still produce audio effects, and no doubt plays a part in difficulties in detection.

When two more characteristics of voice to skull are factored in:

1. The carrier signal can be "hopped" continuously within the bioeffective bandwidth, known as "spread spectrum" transmission, and,
2. The voice modulation most effective for undetectable hypnosis is evidently a voice shifted just above normal hearing, but still audible to the brain,

...you have a recipe for incredibly difficult signals to detect.

This book is a mainstream publication, very well suited to use in our publicity and persuasion campaigns, and our dealings with authorities who claim radio signals don't affect living tissue except to heat it.

...  
At that time [1953] excitatory mechanisms in nerver fibers and nerve cells were grouped under a common rubric of ionic equilibrium mechanisms. There was little interest in the possibility that functional organization of mebranes of cell bodies might involve threshold sensitivities to both oscillating EM fields and to molecular stimuli **at energy levels substantially lower** than predicted by Hodgkin-Huxley models, and **substantially below typical thresholds in nerve fibers.**

Much recent research cited below has shown that imposed **weak** low frequency fields (**and radiofrequency fields amplitude-modulated at ELF frequencies**) that are **many orders of magnitude weaker in the pericellular fluid [fluid between adjacent cells] than the membrane potential gradient [voltage across the membrane]** can modulate actions of hormone, anti-body neurotransmitter and cancer-promoter molecules at their cell surface receptor sites.

From their electrical characteristics, these sensitivities appear to involve nonequilibrium and highly cooperative processes that mediate **a major amplification** of initial

weak triggers associated with binding of these molecules at their specific cell surface receptor sites.

(Adey, 1983, 1986, 1987; Adey and Lawrence, 1984; Lawrence and Adey, 1982).

Page 122:

Cooperative Modification of Calcium Binding by RF Fields at Cell Surfaces with Amplification of Initial Signals

Initial stimuli associated with weak perpendicular EM fields and with binding of stimulating molecules at their membrane receptor sites elicit a HIGHLY COOPERATIVE modification of Ca++ binding to glycoproteins along the membrane surface.

As noted above, a longitudinal spread is consistent with the direction of extracellular current flow associated with physiological activity and imposed EM fields. This cooperative modification of surface Ca++ binding is an AMPLIFYING STAGE, with evidence from concurrent initial molecular binding events by imposed RF fields that there is a far greater increase in Ca++ efflux than is accounted for in the events of receptor-ligand binding (Bawin and Adey, 1976; Bawin et al, 1975; Liu-Liu and Adey, 1982).

Page 124:

...  
Enzymes are protein molecules that function as catalysts, initiating and enhancing chemical reactions that would not otherwise occur at tissue temperatures. This ability resides in the pattern of electrical charges on the molecular surface. In the fashion of more familiar chemical catalysts, such as the hydrocarbon oxidation systems which function only at very high temperatures in automotive exhaust systems, a catalyst emerges unchanged from these reactions and is thus able to participate indefinitely in a specific reaction.

Activation of these enzymes and the reactions in which they participate involve energies millions of times greater than in the cell surface cell surface triggering events initiated by the EM fields, emphasizing the MEMBRANE AMPLIFICATION inherent in this trans-membrane signaling sequence.

Page 131:

...  
Stimulus Amplification in Cooperative Systems

...  
It is therefore clear that OBSERVED EM field interactions with cells and tissues based on oscillating ELF tissue gradients between  $10^{-7}$  and  $10^{-1}$  volts per centimeter would involve cooperativity MANY ORDERS OF MAGNITUDE GREATER than envisaged in the examples just cited.

In part this discrepancy appears to relate to far greater sensitivities to low-frequency EM fields [EW: ELF, that is, the "entrainment" frequencies] and to RF fields with low-frequency amplitude-modulation [EW: this includes radar hearing signals] than to imposed step functions or DC gradients [EW: common with contact electrodes, not of interest in mind control at a distance] used in many electrochemical experiments and models

to test levels of cooperativity in biological systems.  
(Blank, 1972)

[EW: In plain language, both entrainment (ELF) fields and pulsating radar-like (RF) fields are a hell of a lot more influential on cells than some experimental work using DC and electrode methods.]

Page 95:

[EW: This section is not part of the demonstration that EM signals can be biologically amplified, as above. It's main interest is that a magnetophosphene "gun" was under consideration by the U.S. National Institute of Justice in 1993, along with a "fever" gun and a "convulsion" gun, both using microwave technology. As of 1999, nothing has been heard from NIJ on this development, however, page 95 here suggests that such a microwave weapon is feasible.]

### Magnetophosphenes

An effect of time-varying magnetic fields on humans was first described by d'Arsonval (1896) [EW: Anyone doubt there has been some progress since 1896?] is the induction of a flickering illumination within the visual field known as magnetophosphenes. This phenomenon occurs as an immediate response to stimulation by either pulsed or sinusoidal magnetic fields with frequencies less than 100 Hz, and the effect is completely reversible with no apparent influence on visual acuity. The maximum visual sensitivity to sinusoidal magnetic fields has been found at a frequency of 20 Hz in human subjects with normal vision.

[EW: Radio signals are a combination of electric and magnetic fields. To radiate a 20 Hz signal would require such huge antennas that it is impractical to do so. I'd recommend that if someone has the facilities and skills, I'd try some VHF (or microwave) pulsing at 20 Hz on an RF carrier at, say, the 2-meter (144-148 MHz) ham band with a duty cycle, say, of 20% pulse-ON time.]

## Artificial Eye Produces Vision

-----  
PHILADELPHIA INQUIRER

January 17, 2000

With camera wired to brain, blind man 'sees' objects.  
Artificial eye produces vision

By Malcolm Ritter  
ASSOCIATED PRESS

NEW YORK - A blind man can read large letters and navigate around big objects by using a tiny camera wired directly to his brain, the first artificial eye to provide useful vision, a researcher reports.

The 62-year-old man does not see an image. He perceives up to 100 specks of light that appear and disappear, like stars that come and go behind passing clouds, as his field of vision shifts.

But as he showed a reporter last week, that is enough to let him find a mannequin in a room, walk to a black stocking cap hanging on a white wall, and then return to the mannequin to plop the cap on its head. He also can recognize a 2-inch-tall letter from five feet away, said researcher William Dobelle.

"He can do remarkably well" with the limited visual signal, said Dobelle, who is developing the artificial vision system.

The man, who asked to be identified only as Jerry, has been blind since the age of 36. He volunteered for the study and got the brain implant in 1978; scientists have been working since then to improve the software.

Dobelle is chairman of the Dobelle Institute, a medical device company in New York. He describes the device and its performance in this month's issue of the ASAIO Journal, a publication of the American Society of Artificial Internal Organs.

Richard Normann, who studies artificial vision at the University of Utah, said he was encouraged by how much Jerry could do. He said Dobelle's report suggested that, someday, even limited signals to the brain will let blind people do relatively complicated visual tasks.

It's the first demonstration of useful artificial vision, he said, but he stressed the device was "a very limited navigational aid, and it's a far cry from the visual experience that normal people enjoy."

To use the device, Jerry wears sunglasses with a tiny pinhole camera mounted on one lens and an ultrasonic range finder on the other. Both devices communicate with a small computer carried on his hip, which highlights the edges between light and dark areas in the camera image. It then tells an adjacent computer to send appropriate signals to an array of small electrodes on the surface of Jerry's brain, through wires entering his skull behind his right ear.

The electrodes stimulate certain brain cells, making Jerry perceive the specks of light. The shifting patterns as Jerry scans across a scene tells him where light areas meet dark ones, letting him find the black cap on the white wall, for example.

The device provides a sort of tunnel vision, reading an area about the size of a card 2 inches wide and 8 inches tall, held at arm's length.

Jerry uses the device only two or three days a week at Dobelle's lab, as researchers tinker with it. One question is how best to provide depth perception, using signals from the range finder. During the demonstration, Jerry had to walk cautiously as he approached the mannequin and the wall, holding an arm out to prevent collisions.

Dobelle said an improved version of the device should go on sale overseas, in limited numbers, this year. He said yesterday that it was not yet clear when it might be available in the United States.

## **Bluebird**

**by Dr. Colin Ross**

**reviewed by Norma Cross**

<http://www.eharassment.ca>

**January 28, 2004**

The following is a review of the book "Bluebird: Deliberate Creation of Multiple Personality by Psychiatrists", written by Colin A. Ross, M.D. (ISBN: 0-9704525-1-9). Although the book covers many mind control issues, I will be limiting the subject matter of my review to the situation of the victims of electronic harassment and any information which will help us to back up the claims that we make. My own comments are enclosed in square brackets.

Dr. Ross has researched the topic of mind control extensively. Many of the statements are cited directly from MKULTRA documents which he researched. Those documents, some 18,000 pages, are publicly available.

The book was named after the CIA Project entitled BLUEBIRD, which was approved by the director of the CIA in 1950. In 1951, the project was renamed ARTICHOKE. This program involved "work on the creation of amnesia, hypnotic couriers and the Manchurian Candidate" (23). The Manchurian Candidate is a person who has multiple personalities (often created through mind control efforts), in which certain personalities are used for covert intelligence operations which are unknown to the other personalities. Hypnosis is involved in suppressing the personality(s) involved in the clandestine operations so that enemies cannot extract information from them. Often people who have been severely abused will be susceptible to being used in this way. Abuse leads to varying degrees of fragmentation of the personality. According to Ross, "the mind control experiments were conducted by a network of doctors that included leaders psychiatry and the major medical schools" (21).

In 1953, these projects became MKULTRA, the CIA's program of research in behavioural modification. In 1964, this project became MKSEARCH, which ran until 1972, at which point most of the files associated with these projects were shredded by order of the CIA director, Richard Helms.

Summary of projects:

BLUEBIRD: 1950 - 1951

ARTICHOKE: 1951 - 1955 (this project went on past the start of MKULTRA)

MKULTRA: 1953 - 1964

MKSEARCH: 1964 - 1972

Dr. Ross cites various unethical experiments on the public, such as the Tuskegee Syphilis Study, in which 399 illiterate rural poor black men with syphilis were recruited in 1932 and studied to see the effect on them of *not* treating the syphilis. Penicillin was available for 30 years, which would have cured the syphilis, but it was not administered. The study of these men lasted 25 years. They were given \$25 for their participation in the study. Ross says, "The Tuskegee Syphilis Study is relevant to mind control in several ways. It establishes that a large network of doctors and organizations are willing to participate in, fund and condone grossly unethical medical experimentation into the

1970's. ...The study proves that such experiments resulted in serious damage to study subjects and their children. ...The role of general medicine in Tuskegee is the same as psychiatry's role in mind control" (p. 14).

[What he is getting at is that *many* psychiatrists willingly participated in unethical experiments involving an unwitting public.]

From the 1940s until the 1970's, unethical radiation experiments were conducted on about 600 subjects in the United States. "Many people were injected with plutonium, x-rayed and exposed to other forms of radiation without their informed consent" (p. 16). In one experiment, "clouds of radioactive material were released into the atmosphere and tracked as they moved downwind, often through populated areas" (p. 17).

The "Boston Project", in which subjects were injected with uranium, was run jointly by Massachusetts General Hospital and the Health Physics Division of Oak Ridge National Laboratory. Dr. William Sweet was a neurosurgeon involved in this project as well as his own brain electrode experiments. In his 1995 testimony to the Advisory Committee, Dr. Sweet claimed that all the subjects gave informed consent. However, one of the subjects was injected with uranium when he arrived at the hospital unconscious and he died without regaining consciousness or being identified.

"The radiation experiments were interwoven with research on chemical and biological weapons, and infectious diseases. ...Dr. Saul Krugman of New York University and his staff deliberately injected severely retarded children at Willowbrook State School with hepatitis virus in the 1950's and 1960's ...Dr. Krugman defended the project and said that it was scientifically justified" (p.18-19).

In one MK-ULTRA institution, they injected radioactive materials into children with a consent form claiming that they were doing experiments to help "improve the nutrition of our children" (p.18). No mention of the radioactive materials was made.

[What these examples show is that the medical community not only conducted grossly unethical experiments on the public without informed consent (on children no less!), but they lied to the public and justified it to themselves as somehow benefiting mankind - i.e., evil means justifies a supposedly "good" end. It indicates the mentality that individual human beings are "expendible". (How familiar are we with those feelings?) These experiments were funded by the CIA.]

According to Ross, "some elements of the programs, such as non-lethal weapons, have continued up to the present" (21). Also, "subjects of LSD experiments included children as young as 5 years old, and brain electrodes were implanted in children as young as 11 years of age" (21). Ross states that 4 of the CIA's MK-ULTRA projects involved children - something that has not been publicly documented before. [I assume he meant that "Bluebird" was the first book to make mention of these CIA studies on children.]

In the following example, ARTICHOKE-like mind control techniques were applied to a suspected triple agent in 1964. From August 14, 1965 until October 28, 1967 (2 full years) he "was held in solitary confinement in a tiny windowless concrete cell at the CIA's training facility... He was subjected to sleep deprivation, and there was neither heat nor air conditioning in his cell. He was monitored by closed circuit television 24 hours a day" (30).

A group of MKULTRA Subprojects "involved the development and testing of mind control drugs. The goal of these Subprojects was to identify compounds, used singly or in combination, which would assist in interrogation and in the creation of amnesia" (54). Methods to create controlled amnesia involved drugs, magnetic fields, sound waves,

sleep deprivation, and solitary confinement (38). Another group of Subprojects involved research on non-chemical mind control or psychological warfare. Included were "studies of social psychology, group psychology, psychotherapy, hypnosis, sudden religious conversion, and sleep and sensory deprivation" (54). This Subgroup (psychological warfare) makes up about 25 % of the MKULTRA Subprojects. It involved mostly contractors (researchers) of unwitting status - i.e. they didn't know that the money came from the CIA.

[These examples illustrate the mind control techniques studied and used by the CIA. Many of these are all too familiar to victims of electronic harassment. Is it any wonder when we are blasted with sounds and sleep deprivation, and find ourselves increasingly socially isolated, that the CIA comes to mind? They have without a doubt set a precedent in this sort of conduct.]

In an investigation of "hypnotic induction of non-willing subjects", "non-verbal induction techniques" were used, such as "long duration of monotonous audio or visual stimulation" (59). [Perhaps the hums, tones and high frequency sounds which we hear have something to do with hypnotic induction? We are certainly non-willing subjects.]

Another CIA project, entitled Project OFTEN, "was designed to test the behavioural effects of drugs on animals and humans". The researchers looked for a "compound that could simulate a heart attack or stroke in the targeted individual" (66). [Once again, the mentality of this CIA project sets a precedent for what the victims of e-harassment often experience. Anyone suffered a simulated heart attack or stroke? I've had 3 or 4 since this all began. An EEG showed no damage to my heart muscle.]

Chapter 8, entitled Brain Electrode Implants, is particularly relevant to our situation. MKULTRA Subproject 129 was entitled "Computer Analysis of Bioelectric Response Patterns" and related to an MKULTRA project goal of "increasing [their] understanding of the human cerebral hemispheres" (86). [If I am not mistaken, that sounds like mind reading.]

MKULTRA Subproject 94 involved placing electrodes into the brains of animals in order to control their behavior. By using a remote transmitter, the doctors could control the animals' movements and use them for delivery of bombs and biological and chemical weapons. A CIA MEMORANDUM FOR THE RECORD dated 18 October 1960 describes the research:

The purpose of this Subproject is to provide for a continuation of investigations on the remote directional control of activities in selected species of animals. Miniaturized stimulating electrode implants in specific brain center areas will be utilized... The ultimate objective of this research is to provide an understanding of the mechanisms involved in directional control of animals and to provide practical systems for [whited out] application.

[In 1960 (!) there were "miniaturized stimulating electrode implants" which could be remotely (!) controlled. There is no doubt that the technology has improved significantly in 44 years.]

The overall goal of this and other subprojects (such as 124), as summed up by Ross, was "to control the mind and behavior and to cause dissociation, through a combination of drugs, sensory isolation, hypnosis, brain electrode implants, electric shock and beaming different kinds of energy at the brain", as well as "the ability to create a limited, controlled amnesia" (87). Ross states:

Brain electrode experiments were also conducted in humans, but there is no declassified documentation of the use of the human subjects in field-testing or in actual operations. (87)

[By field-testing, I assume that Dr. Ross means outside of a laboratory or hospital situation (?).]

Dr. Jose Delgado, a neurosurgeon and professor at Yale, did extensive experiments using implants. He received military funding for brain electrode research on children and adults (88). Dr. Delgado did research on "monkeys and cats and in one paper describes the cats as 'mechanical toys'. He was able to control the MOVEMENTS of his animal and HUMAN subjects by pushing buttons on a remote transmitter box" (88).

[This research took place in the 50's and 60's. If this was possible then, what is possible now? For example, the idea that something like thought reading or thought implantation is NOT possible over 40 years later is what is truly absurd, not the idea that it IS possible. It goes without question that the technology would have advanced that far *at the very least*.]

The following quote describes the extent of control possible over a human being using remote stimulation of a brain electrode. This is another of Delgado's experiments involving an 11 year old boy:

In the same patient electrical stimulation of the superior temporal convolution induced the appearance of feminine striving and confusion about his own sexual identity. These effects were specific, reliable, and statistically significant. For example, the patient... said, "I was thinking about whether I was a boy or a girl, which one I'd like to be," and "I'd like to be a girl." After one of the stimulations, the patient suddenly began to discuss his desire to get married, expressing then a wish to marry the male interviewer.

In two adult female patients stimulation of the same region was also followed by discussion of marriage and expression of a wish to marry the therapist. Temporal-lobe stimulation produced in another patient open manifestations and declarations of pleasure, accompanied by giggles and joking with the therapist. (89)

Ross states: "Dr. Delgado wrote a book entitled *Physical Control of the Mind: Toward a Psycho-Civilized Society*. In it he described his vision of evolution. Delgado believed that the control of the human brain through remote stimulation of implanted electrodes offered man another step up the evolutionary ladder. With this technology, man could directly control his own mind, mood and behavior." (89)

Brain electrode research was also conducted by doctors at Harvard using the electrodes developed by Delgado (called the 'Stimoceiver'). Dr. Sweet, mentioned earlier as being involved in the radiation experiments, was also involved in the Harvard experiments. Another doctor, Frank Ervin, later went onto the UCLA Violence Center to study ways of controlling criminals with brain electrode implants (89).

Two of the Harvard doctors, Mark and Ervin describe in their book, *Violence and the Brain*, "implanting brain electrodes in a large number of patients at Harvard hospitals" (90). One of the patients in their book is shown in photographs as "smiling, angry, or pounding the wall depending on which button is being pushed on the transmitter box sending signals to her brain electrodes" (91). [Clearly, the doctors had the ability to control human behavior with brain implants many years ago.]

Dr. Ervin was trained by Dr. Robert Heath, Chairman of the Department of Psychiatry and Neurology at Tulane University in New Orleans from 1949 to 1980 (92). Dr. Heath "received CIA and military money for hallucinogen and brain electrode implant research at Tulane University" (81). Dr. Heath studied the effects of various drugs on people who had been implanted with electrodes, as well as observed various aspects of sexuality of implanted individuals. Ross states, "Dr. Heath brought women to orgasm by electrical stimulation of electrodes he had implanted in their brains" (96). [Many e-harassment victims claim to be artificially genitally stimulated. Dr. Heath's research shows that it is *entirely possible* to stimulate a sexual response through the brain.]

[Although the following quote is not from "Bluebird" but from "Mind Controllers", by Dr. Armen Victorian, it leaves no doubt that implantation of a person with "brain electrodes" was relatively easy to do *without* a person's knowledge:

"Dr. Antoine Redmond [Director of the National Institute for Mental Health] ... has demonstrated that this method of stimulation of the brain can be applied to the human without the help of a neurosurgeon; he is doing it in his office without neurosurgical supervision. **This means that anyone with the proper apparatus can carry this out on a person covertly, with no external signs that electrodes have been used on that person covertly. I feel that if this technique got into the hands of a security agency, they would have control over a human being and be able to change his beliefs extremely quickly, leaving little evidence of what they had done.**"

- Dr. John C. Lilly, p.151 of "Mind Controllers"

Dr. Lilly conducted brain electrode experiments on animals during the 1950's. The nasal cavity and the ear were common locations for the implant of the stimulator (p. 161 of "Mind Controllers"). Once again I have to stress the point: if it was possible to implant and control people without their consent or knowledge back then, what is possible now?]

Chapter 9, entitled Non-Lethal Weapons, also contains a wealth of relevant information to our situation. Dr. Ross defines non-lethal weapons:

*Non-lethal weapons* is a broad category which includes devices for beaming various kinds of energy at human targets in order to temporarily incapacitate them, or to control or affect their behavior. Non-lethal weapons research has been conducted at universities in the United States on contract to the CIA, and has overlapped with research on hallucinogens and brain electrode implants. Funding of the experiments began in MKULTRA. (103)

Early testimony to the Senate on non-lethal weapons research by Dr. Charles Geschickter includes the following quotes:

Dr. GESCHICKTER:

The other [study]... was the use of radar to put monkeys to sleep to see if they ... could put them under with radar directed towards the monkey's brain.

Senator SCHWEIKER:        Could they?

Dr. GESCHICKTER: Did they go to sleep?

Senator SCHWEIKER: Yes.

Dr. GESCHICKTER: Yes, sir. But, Senator, it showed if you got into too deep a sleep, you injured the heat center of the brain - the way you cook meat - and there was a borderline there that made it dangerous. (103)

The above experiments were part of MKULTRA Subproject 62. Dr. Maitland Baldwin, a neurosurgeon, carried out the experiments. One of the project's status reports stated that, "certain kinds of radio frequency energy have been found to effect irreversible neurological changes in chimpanzees". The resulting publication of the research was called "Effects of radio-frequency energy on primate cerebral activity." (104)

The same doctor who carried out the above experiments also described a technique for implanting electrodes in the human brain. At the time, he had implanted electrodes in the brains of 30 people over a 5 year period. (104)

Another MKULTRA Subproject (#54) was studying "how to produce concussions from a distance using mechanical blast waves propagated through the air. Under the heading of 'POTENTIAL APPLICATIONS OF THE RESEARCH FINDINGS,' the contractor says that such a concussion 'is always followed by amnesia for the actual moment of the accident'. He also states:

The blast duration would be in the order of a tenth of a second. Masking a noise of this duration would not be difficult. It would be advantageous to establish the effectiveness of both of the above methods as a tool in brain-wash therapy". (105)

MKULTRA subproject 119 included a summary of existing information on "Techniques of activation of the human organism by remote electronic means". (105) [What, I wonder, is "activation of the human organism"?]

These early experiments provided the foundation for the non-lethal weapons research that followed. As one example of non-lethal weapons research, Ross cites a 1990's article in *U.S. News and World Report* which said that "acoustic weapons research is ongoing at Scientific Applications & Research Associates, Inc. in Huntington Beach, California, with testing at nearby Camp Pendleton Marine Corps Base."

Ross discusses a classified mind control program called "Sleeping Beauty" which was investigated by Schnabel who claims that it was a "Defense Department Study of remote microwave mind-influencing techniques". (116)

[The following sets a precedent for studying people in their own home environment. Although the electrodes were external in this one de-classified case, there is no reason that this same thing can't be done (or wasn't done) with internal electrodes.]

"A 1969 research project, also funded by the Air Force and the Public Health Service, describes using EEG telemetry equipment on a 10-year old girl. The girl slept at home with external EEG links to her head (not electrodes implanted in her brain), and the EEG signals were transmitted from the electrodes to a radio receiver, then fed into the phone line and transmitted to Dr. Adey's lab two miles away. The EEG printout was read easily by laboratory personnel." (117)

In an experiment by Dr. Jose Delgado, using monkeys, his paper "includes photographs of monkeys running frantically in their cages because their brain electrodes are being stimulated by a remote transmitter." (117)

A project in California was cancelled due to public protest. It was a "proposal to implant brain electrodes in prisoners at Vacaville State Prison. The prisoners were to be monitored by remote tracking technology post-discharge. If they entered a restricted area or exhibited sexual arousal patterns on remote EEG telemetry, a signal would be sent to their brain electrodes immobilizing them, and law enforcement personnel would be dispatched to apprehend them." (119)

[**This is incredibly significant.** It shows that **thoughts can be read** (at least to the point of sexual arousal) and **people can be controlled through implants.**]

[The following quote from Dr. Ross is useful in establishing the precedent that human experimentation DOES occur in the U.S. and Canada (and obviously elsewhere):]

Mental patients, cancer patients, prisoners and unwitting citizens were experimented on by mind control doctors at Yale, Harvard, McGill, Stanford, UCLA and other major universities.

These human guinea pigs were never told that they were subjects in military and CIA mind control experiments, and they never gave informed consent. They received no systematic follow-up to document the harm done to them. The welfare of 'human subjects' was not a relevant variable in the academic equation. (126)

Mention is made of something called "psychic driving". It was a method of behavior modification developed by Dr. Ewen Cameron (prominent Canadian Psychiatrist who was funded by the CIA and the U.S. military). Psychic driving was used as part of his brain-washing techniques, and was discussed in a paper of the same title. Cameron said, "Analogous to [psychic driving] is the breakdown of the individual under continuous interrogation." Ross goes on to discuss psychic driving:

Psychic driving was a procedure carried out in two stages; in the first stage, patients were *depatterned*, which meant that they were reduced to a vegetable state through a combination of massive amounts of electro convulsive shock, drug-induced sleep and sensory isolation and deprivation. When fully depatterned, patients were incontinent of urine and feces, unable to feed themselves, and unable to state their name, age, location, or the current date.

In the second stage, *psychic driving* was introduced. This consisted of hundreds of hours of tape loops being played to the patient through earphones, special helmets or speakers in the sensory isolation room. The tape loops repeated statements of supposed psychological significance. If such procedures were carried out under third world dictators, they would be denounced as human rights violations by American and Canadian Psychiatry, and would be called *brainwashing*. (129)

[The reason this may be of significance is not only that many victims have felt that their lives have been *systematically* broken down, but there is some discussion that the high frequency sound we hear may be attempts at hypnotic suggestion. The voices are sped up to coincide with the speed of the brain, and so are recognized by the brain but bypass the consciousness.]

Ross makes mention of an "article in *The Dallas Morning News*, Jan. 29, 1997, describing how the *Baltimore Sun* obtained a 1983 CIA manual through the Freedom of Information Act. The manual was used to teach non-coercive interrogation techniques to foreign agents... The manual taught techniques studied in BLUEBIRD, ARTICHOKE and MKULTRA;

the same brainwashing techniques were used... by the Gestapo, on Patty Hurst..., and on patients at Penetang Psychiatric Hospital... The CIA manual taught techniques for the induction of 'intense fear, deep exhaustion, solitary confinement, unbearable anxiety and other forms of psychological duress,' and was used until *at least* 1983. (153)

Ross did an excellent job of showing that many of the foundations within this mind control network were funded by Masons. In addition, many prominent researchers and doctors were Masons as well. Ross accuses the medical and academic professions of "decades of deception, implausible denial, and looking the other way." (154)

[This is an important point because much of the evidence from several sources points towards Masonic involvement in these unethical activities.]

In another Senate testimony the following statement was made by Dr. John Gittinger, lead psychologist for MKULTRA, when asked to characterize the state of the art of brainwashing at the time:

[By] 1962 and 1963, the general idea that we were able to come up with is that brainwashing was largely a process of isolating a human being, keeping him out of contact, putting him under long stress in relationship to interviewing and interrogation, and that they could produce any change that way without having to resort to esoteric means. (172)

[What all of this indicates is that brainwashing was a prominent area of study for the CIA, and no doubt continues to be.]

I will close my review of Bluebird with a significant statement made by Dr. Ross:

"There is abundant evidence in the public domain that non-lethal weapons research is ongoing and funded annually in the tens of millions of dollars, or more. **Given the fact that chemical and biological weapons, mind control drugs and radiation have been tested on unwitting civilian populations, it is possible that non-lethal weapons have also been tested on unwitting citizens.**" He goes on to say that, **"To date, organized and academic medicine have acted as if non-lethal weapons do not exist"**. (106)

In my review, I have focused on the following five areas:

- (1) Establishing a precedent for grossly unethical, non-consensual experimentation on human beings by the US government, the CIA and the military,
- (2) The *extensive* use of brain electrode implants in studying the brain using *remote stimulation* and *remote telemetry*,
- (3) The obvious evidence that 40 years ago it was possible to control a human being as well as to read a person's thoughts using implants [which could be inserted covertly],
- (4) The precedent that mind control and brainwashing was an important part of the CIA's agenda,

*(5) The establishment that non-lethal weapons research is very likely a part of ongoing non-consensual human experimentation which has not yet been "declassified".*

SUBJECT: Special Research, Bluebird

#### I. General Problem

For the past several months Bluebird - has been endeavoring to ascertain by research, study, instruction and.. some. practice what value (if any) can be derived from SI and H techniques when applied to war and specific Agency problems. These broad problems; using known SI and H Techniques, may be classified as follows:

- Can accurate information be obtained from willing or unwilling individuals.
- Can Agency-personnel (or persons or interest to this agency) be conditioned to prevent any outside power from obtaining information from them by any known means?
- Can we obtain control of the future activities (physical and mental) of any given individual, willing or unwilling by application of SI and H techniques?
- Can we prevent any outside power from gaining, control of future activities (physical- and mental) of agency personnel by any known means?

Bluebird believes that A (above ) can be answered in the affirmative using SI and H techniques. Bluebird is not fully satisfied with -results to date, but believes with continued work and study remarkable and profitable results can be obtained regularly.

However, B, C, and D (above) are at yet unanswerable although Bluebird is of the opinion that there is a worthwhile chance that all three may at some future date be answered affirmatively. This opinion is supported generally by numerous individuals having knowledge of these techniques and by much literature and intelligence in this field

Since an affirmative proof of B, C and D would be of incredible value to this agency Bluebird's general problem is to get up, conduct and carry out research (practical - not theoretical) in this direction.

Set out below is one specific proposal aimed at achieving our ends as rapidly as possible and with a maximum of security.

## II. (deleted))

Through internal agency channels, Bluebird was given the name of (deleted) individual of (deleted) extraction and not a citizen of the United States who had been given certain operational security clearance. ((Deleted)) was reported to have done considerable work in SI and H and to have an unusual and interesting general background. ((Deleted)) was also reported as being reliable, trustworthy, a known anti-Communist. In view of the above, and on the instructions of the Director of I&SS, (deleted) was brought to a safe area near headquarters and interviewed, interrogated and observed by Bluebird on 19, 20, 21 February 1951. (Deleted) personality, ability, and intelligence, sincerity and apparent security mindedness were impressive, Bluebird officers were unable to find any indications of deviousness or pro-Soviet interests during these observations. (Deleted) only apparent obvious weaknesses were his foreign background and non-United States citizenship.

According to (deleted) he was born in (deleted) in (next two pages totally blacked out)

(Deleted) discussed at various times his work and interest in the SI and H techniques. He claimed that most of his present work was along the lines of hypotherapy which involves post-H suggestion, but admitted that his experience with drugs, gases, et., in conjunction with SI and H was somewhat limited, although he was familiar with much of the literature (U.S. and foreign) in these fields. (Deleted) admitted that since he had been in the U.S. he had induced H conditions in at least several hundred individuals, male and female (in all age groups). (Deleted) demonstrated successfully some of his operating methods before the B officers on the 19th, 20th, and 21st.

For matter of record (deleted) was briefed on the security aspects of B work and cautioned against all and any discussion outside concerning these mattes. (Deleted) signed the standard secrecy agreement.

## III. GENERAL PROPOSALS

On the basis of (deleted) apparent ability, relatively simple and easy cover, background, personality and interest, it is proposed that (deleted) be either directly employed or contractually employed by I&SS for specific purpose of engaging in guided research, testing, and experimentation along SI and H lines under the general direction of the Director of I&SS and under the immediate direction of B.

## IV. SPECIFIC PROPOSALS

- It is proposed that (deleted) be brought to headquarters immediately and formally interviewed by (deleted) (interview to include basis of arrangements, cover, locations, salary, operational funds, and securing of PHS).

- It is proposed that (deleted) be given a full and detailed Polygraph examination by (deleted) on material prepared by (deleted).
- It is proposed that immediately a full field investigation be started on (deleted) to include checking of all names, places, squadrons, etc., mentioned by him (HIGH PRIORITY).
- It is proposed that immediately after (deleted) has been given full security clearance he will be thoroughly briefed, given all necessary funds and instructed to begin research and testing along lines set out in 5 (below).
- It is proposed that after a minimum of time to permit (deleted) full opportunity to satisfactorily become operation, B offices and trainees will (under suitable cover) participate in and assist with the research and testing for purposes of training and experience.

#### V. BLUEBIRD - SPECIFIC PROBLEMS

Set out below are specific problem which can only be resolved by experiment, testing and research as proposed in the paragraphs above. These are not in any sense all of the problems B is considering, but are merely typical and point up the need for practical research.

1. Can we "condition" by post-H suggestion agency employees (or persons of interest to this agency) to prevent them from giving information to any unauthorized source or for committing any act on behalf of a foreign or domestic enemy?
2. Can we in a matter of an hour, two hours, one day, etc., induce an H condition in an unwilling subject to such an extent that he will perform an act for our benefit? (Long range).
3. Can we create by post-H control an action contrary to an individual's basic moral principles?
4. Could we seize a subject and in the space of an hour or two by post-H control have him crash an airplane, wreck a train, etc.? (Short, immediate activity)
5. Can we by SI and H techniques force a subject (unwilling or otherwise) to travel long distances, commit specified acts and return to us or bring documents or materials? Can a person acting under post-H control successfully travel long distances?
6. Can we use SI and H to combat fatigue, produce extreme mental effort?
7. Can we guarantee total amnesia under any and all conditions?
8. Can we "alter" a person's Personality? How long will it hold?
9. Can we design tests to determine whether or not an enemy agent has been conditioned by SI and H or any other method?
10. Can we detect SI and H by use of SI and H (regression)?

11. Can we make a "conditioned" subject reveal by SI and H specifically how they were conditioned (drugs, torture, fatigue, hostage pressure, techniques)?
12. Can we devise a system for making unwilling subjects into willing agents and then transfer that control to untrained agency agents in the field by use of codes or identifying signs or credentials?
13. How long can we sustain a post-H suggestion-unaided-with reinforcement?
14. What would be fastest way to induce SI and H conditions - with drugs - or without any mechanical aids?
15. Can we devise a standard simple relatively fast technique for inducing SI and H conditions that can be used by untrained agents (with or without drugs)?
16. Is it possible to find a gas that can be used to gain SI control from a gas pencil, odorless, colorless: one shot, etc.?
17. What are full details on "sleep-inducing machine"?
18. How can sodium A or P or any other sleep inducing agent be best concealed in a normal or commonplace item, such as candy, cigarettes, liqueur, wines, coffee, tea, beer, gum water, aspirin tablets, common medicines, coke, tooth paste?
19. How effective can the "carotid artery technique" be made? Can it be used while subject is unconscious? Is it faster than other techniques?
20. Can we, using SI and H extract complicated formula from scientists, engineers, etc., if unwilling? Can we extract details of gun emplacements, landing fields, factories, mines?
21. Can we, while a subject is under SI and H control, show them a map and have them point out specific items, locations, etc., on the map? Can we also have them make detailed drawings, sketches, plans?

Could any of the above be done under field conditions and in a very short space of time?

## **"Non-lethal" weapons: precipitating a new arms race**

**by Robin M. Coupland, Surgeon**

**British Medical Journal, Volume 315, 12 July 1997, pg. 72**

### **Medicine must guard against its knowledge being used for weapon development**

Armies are purported to have already deployed dazzling devices, calmatives, entangling agents, adhesives ("stickums"), materials that make any surface too slippery to walk on ("slickums"), devices generating infrasound or electromagnetic waves, and devices for riot control. (1,2) Other possible devices are sprays to weaken vehicle or plane parts, electromagnetic beams to confuse computers, and bacteria to degrade fuel. The term applied to this new generation of military technology is "non-lethal" weapons; it implies that military operations can avoid death and serious injury. Should not the medical profession rejoice?

Let us first examine the technology. A "weapon" is something that is designed to cause bodily harm; technologies designed specifically to damage inanimate objects should not be considered in the same context.

"Non-lethal" implies zero fatalities, but such an objective is acknowledged to be unrealistic, giving rise to alternate phrases such as "less than lethal" or "sub-lethal". These terms carry the further implication that conventional antipersonnel weapons are "lethal".

However, rifles and fragmentation weapons kill (only) 20-25% of the casualties. (3-5) A buried antipersonnel mine containing of explosive is designed to blow off or disrupt the foot; few victims die from this injury if treatment is available. Does this make it a "non-lethal" weapon? Eye attack laser weapons and other "optical munitions" have been produced in line with the "non-lethal" concept, supported by the argument that it is better to blind enemy soldiers than to kill them. The euphemisms and political correctness that surround the moral, legal, media, and tactical aspects of warfare of the future are complex and bizarre.

Before making military surgeons redundant, we must also examine the intended effects of "non-lethal" weapons on humans. Such an examination is not reassuring. The purpose is to disable. This sounds better than inflicting disability and does not immediately beg the difficult question of how long the person will be disabled for.

Will blinding be permanent? **Will the various energy forms that target the function of the central nervous system leave the victim with permanent neurophysiological damage?** Can entangling agents asphyxiate? Will a "calmative" agent only calm? If it is established what energy output or concentration is non-lethal or temporary, you have also discovered what is lethal or permanent. Likewise, since the only difference between a drug and a poison is the dose, do military planners really believe they can control the "dose" on the battlefield? In brief, will these new weapons have a switch giving the operator a choice between lethal and non-lethal?

Rather than sutured wounds, skin grafts, or amputations, will the soldiers who have survived battlefields of the future return home with psychoses, epilepsy, and blindness inflicted by weapons designed to do exactly that? Should not these questions be considered before such weapons are deployed?

The precise effects of these new weapons are unknown, in particular to civilian doctors. How will the "wounded" of future wars be treated? In addition, "non-lethal" weapons will always be backed up by or used in conjunction with conventional weapons. This may mean that the lethality of conventional weapons will be potentiated and that doctors may have to treat people suffering from the effects of both conventional and new weapons.

**There is also a fundamental ethical dilemma for doctors. The development of this new generation of weapons incorporates knowledge from the remarkable advances made in medical science; two examples are calmatives and eye attack lasers.**

The ultimate expression of this dilemma is the potential development of race-specific weapons based on the knowledge of genetic engineering and human genome diversity. This can no longer be regarded as science fiction. The medical profession must guard against use of its knowledge for the purposes of weapon development.

Also, will the development of this kind of weapon by the "haves" be perceived only in tactical by the "have nots", so precipitating a new arms race? If so, the focus of research and development will not be confined to "non-lethal" aspects of this technology.

Governments have given serious consideration to at least one such "non-lethal" weapon system. Blinding laser weapons were prohibited at a United Nations conference in 1995. The abhorrent notion of the effects of this kind of weapon -- intentional blinding -- contributed to this decision. However, there is no specific international treaty that covers other new weapons.

Is it not the responsibility of doctors to recommend some kind of proactive control based on a comparison between the known effects of conventional weapons and the purported effects of new weapons? The public may be seduced by the term "non-lethal". There are reasons why the medical profession should not be.

## **"Brainchip": Psychiatry Looks at the Crime of Electronic Harassment**

**November 13, 2008**

This page is to show an excerpt from a comic book style publication posted on this web site:

<http://www.psychiatry24x7.com>

This booklet is titled The Secret of the Brainchip: self-help guide for people experiencing psychosis. The web site and booklet are the work of psychiatric drug maker Janssen Pharmaceutica. The booklet is intended to be used by psychiatric patients.

For readers not familiar with the crime of electronic harassment (EH), this crime has been steadily growing, largely unknown to the general public due to its covert nature, over the last couple of decades of the 1900s, and continuing to the present. An on-line booklet, written for the unaware general public, is available at this link:

<http://www.multistalkervictims.org/osatv.pdf>

Readers unaware of the crime of electronic harassment should note that covert, criminal use of electronic assault technology is almost always accompanied by stalking by groups tasked to aggravate the effects of EH. These groups engage in what is variously called criminal harassment (Canada,), organized stalking, cause stalking, group stalking, or gang stalking.

The booklet referenced above, titled Organized Stalking: A Target's View, provides current evidence that organized stalking and electronic harassment are both do-able, and are happening. Readers who are interested in the summarized evidence should visit that booklet.

**Important: While the Janssen Pharma comic book focusses on a young man who believes he has a tracking/monitoring brain implant, that approach by the mental health system is currently being applied to all people who report either organized stalking or electronic harassment.**

The question of whether brain implants are commonly used among targets of electronically-aggravated organized stalking is wide open, since the medical establishment consistently refuses to prescribe scans for people who suspect they are implanted. However, we do know that silent, through-wall-capable electronic assault weapons have been available, and not classified secret, for one to five decades. There is, strictly speaking, no need for implants, also known as "brain chips," to deliver disabling electronic attacks.

But two electronically assaulted people, who appear to have been involuntary experiment subjects, Robert Naeslund and David Larson, actually did have monitoring implants diagnosed and removed by doctors.

Implantee Robert Naeslund and implant removal (Implanted involuntarily 1967, implant removed 1978.)

[Information about David Larson's implants \(below\)](#) (Implanted involuntarily 1997, removals circa 2000. The implantation was associated with initial contract #N01-NS5-2325 and funded by the NIH/NINDS/NPP.)

Several other targets, out of thousands, claim to have medical scans showing objects which may also be implants, in various parts of their bodies. Those targets have been unable to locate a doctor who will investigate the objects. In one case, although the object was undeniably a "W" shaped wire, the doctor denied seeing the wire on the xray. That OS/EH target is a survivor of the MKULTRA-era atrocities which were "mind control" experiments. Clearly, the possibility that some targets of OS/EH do have "brain chips" should not be dismissed without a valid medical examination.

If scans show no anomalous objects, the doctor should still weigh very carefully the fact that through-wall-capable electronic harassment devices have existed, and been available to the public, for decades, since the Korean War. If the target is in a state where they are literally "starving in the street," meaning totally unable to look after their needs as a result of their mental state, psychiatric care is certainly justified.

And if psychiatric care is considered, one would hope that the care is not prescribed on the basis that the doctor believes no one would harass an individual electronically, or that organized stalking groups are not possible. Organized stalking groups are a standard feature of dictatorships, for example.

Investigation of organized stalking cases has revealed that a community-based campaign of vicious lies, including fake "police record" documents, raises the target from a "nobody" to the status of "dangerous criminal." This is what fuels these harassment programs in most cases. That a target is not a high-profile activist or whistleblower doesn't mean they are anonymous in their community.

See the on-line booklet titled [Organized Stalking: A Target's View](#), above, for excerpts from the investigator's report.

Against this background, then, the Janssen Pharma booklet claiming that belief that one has a brain implant must indicate mental illness requires this plea to all mental health workers: please read the [Organized Stalking: A Target's View](#) booklet, linked above. Surely, mental health workers don't want patients mis-diagnosed, locked up against their will, and forced to

take medications with serious side effects, if in fact they are not mentally ill but victims of crime?

And to mental health workers, please ask yourselves this: How would a mentally healthy person react to organized stalking and electronic harassment? When evaluating someone claiming OS/EH, is it possible that they are in fact exhibiting the behaviour of a mentally healthy person experiencing organized stalking and electronic harassment?

The first set of pages of the Janssen Pharma booklet Brainchip is displayed below, visit the Janssen web site link for each of 11 additional sets of pages.

FIRST EPISODE:

## THE SECRET OF THE BRAIN CHIP

A SELF-HELP GUIDE FOR PEOPLE EXPERIENCING PSYCHOSIS

Marc De Hert  
Geerdt Magiels  
Erik Thys

English version in collaboration with Dr. Kwame McKenzie

Any resemblance between the characters in this story and real people is not coincidental. The symptoms of psychoses are recognisable; the course of psychotic disorders is predictable. The characters in this story are recognisable because it is easy to recognise the symptoms of these disorders.

This book is an aid and does not replace treatment. Expert diagnosis, proper management and appropriate treatment as well as professional support are essential. If you think you can solve this kind of problem by yourself, you are making a mistake. Consult a doctor or seek help from the mental healthcare services.

With thanks to Chris Busseniers, Leen Peeters and Michel Mestrum for their critical reading of the manuscript and their constructive comments and suggestions.

We are also grateful to the psychosis treatment team of the psychiatric hospital in Ypres. Our metaphor 'The Bridge' was partly inspired by their metaphor 'The Beam'.

With thanks to John Marshall and Jeffrey Lubin for their help with the translation and editing.

We dedicate this book to Dr Paul Janssen, a pioneer in the discovery and development of drugs for the treatment of psychosis. His scientific work has always been based on a deep concern for the fate of people with a psychosis.

With support from

This book has been specifically written and illustrated for people who are experiencing a psychosis. It is also a practical guide for everyone who is closely or otherwise involved with them.

A psychosis is a serious mental disorder, one in which you become partially shut off from the world as it is perceived by other people. And one in which, at the same time, you withdraw into a private, mysterious and sometimes frightening fantasy world.

It is a disorder with strange and unpleasant symptoms, such as delusions and hallucinations. A psychosis can be severe and persist for a long time. If so, it is usually called schizophrenia.

Life does not get any easier if you are submerged in a psychosis - not for yourself, and not for your family, friends or carers. The purpose of this book is to tell you what a psychosis is and what it is not, what kinds of psychoses there are, what medical science knows and does not know about your condition and how it can be treated. It also tells you how you can best cope.

Incidentally, we know that people who know more about their psychosis stay better for a longer time. A complete cure is not always possible, but recovery usually is and so is leading life with dignity.

This is not a textbook. You don't have to read it from cover to cover or in any particular order. You can read and re-read parts of it. The poems and the cartoon strip were designed with this in mind. (The leading figure in this cartoon strip is a man, but women have just as much chance of experiencing a psychosis as men.)

We hope that this book will serve as an anchor in periods of confusion or loneliness. We intend it as a source not only of practical tips and concrete information, but also of support.

Note: The page numbering on the original images jumps from (3) to (5). There was no original (4).

7

The last frame depicts "hearing voices." Be aware, reader, that through-wall-capable, pulsed microwave voice-to-skull technology is not secret, and was demonstrated in 1973 by Dr. Joseph Sharp. The method was outlined in the March 1975 issue of the journal "American Psychologist." Implants are NOT required to transmit voice to skull.

End excerpt. Eleven more "episodes" follow.

[Full original implant removal report](#) prepared by David Larson.

Sample image of cochlear implant removed from David Larson

[Return to top of this page](#)

Recovered Device #60  
60x magnification

Recovered Device #60 (above) is compared to various device photos (shown on right) provided to NIH Program Manager/Director William Heetderks as part of contract progress reports from contractors EIC Labs and University of Michigan. For implantable wireless microstimulator devices, it is a common design element to fold or bend the platform where the ASIC chip is mounted. This 90° bend allows the shank to penetrate the tissue while allowing the chip platform to lay flat for a lower profile. recovered device number 60 (above) is shown at 60x magnification and actual size is only about 2mm in length.

Sample images of implant removed from David Larson

[Return to top of this page](#)

Fig. 7: Co-Labeling for Vimentin (red) and GFAP (green) IR one week following electrode placement in the auditory cortex. The innermost layer is made up of Vimentin IR cells with a small rim of GFAP cells making up a second layer.

The image above is from a Quarterly Progress Report submitted to William Heetderks at the NIH under contract N01-NS-0-2329 from the University of Michigan. It shows a microstimulator device implanted in-vivo into auditory cortex.

This photo is also from a University of Michigan QPR submitted to Bill Heetderks under contract. It shows a microelectrode (raw substrate prior to addition of telemetry chip) fabricated with the 90° bend at top.

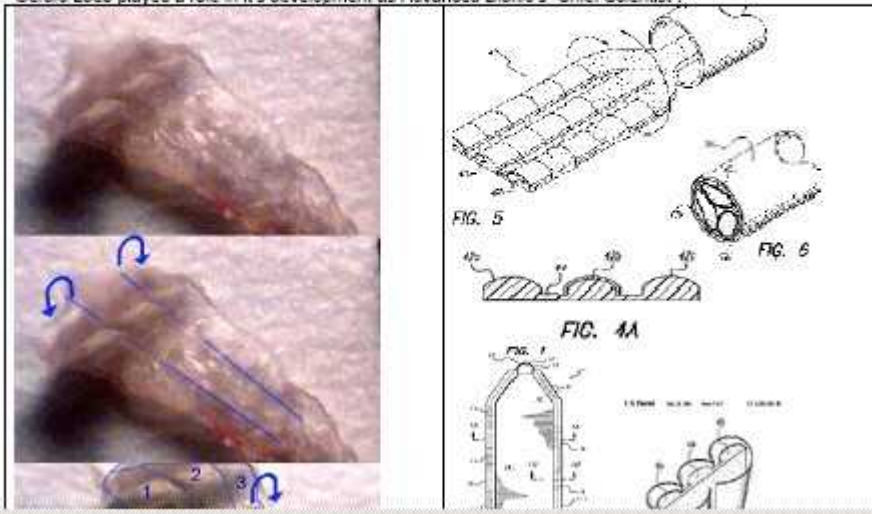

This image is from QPR#9, NIH contract #NS8-2387 and also shows a 90° bend.

3.2: Sample 110 vs. US Patent 6,205,361 "implantable expandable multicontact electrodes"  
Inventors: Mann/Advanced Bionics

This invention describes an integrated circuit on flexible substrate (so that it will conform to the shape of the scalp, or muscle etc) with attached electrodes, and is designed to be "folded" into a syringe/hypodermic needle and injected into the target location. Upon being injected, the electrode array unfolds or "expands" to an open position. Although this device lists Mann as the inventor, and Advanced Bionics as the assignee, Gerald Loeb played a role in it's development as Advanced Bionic's "Chief Scientist".

SECOND EPISODE:

*A  
tiny crack  
becomes  
a crevice.*

*A  
crevice  
becomes  
a chasm.*

*And thus  
one stands  
alone.*

JAN ARENDS

The crime of organized stalking and electronic harassment also "... starts slowly and quietly," with "... unusual things creeping up on" the target. It is the hope of all targets of the crime of OS/EH that psychiatrists will take a small bit of their time to [familiarize themselves](#) with this crime so as to avoid mis-diagnosing their patients.

A psychosis often starts slowly and quietly. Strange things happen to you. Unusual thoughts creep up on you. In the beginning, you think you are only imagining things. You try to act normal. But gradually you become more and more anxious and confused, without even noticing it. Something isn't right. But you don't know what.

## THE FIRST TIME, THE FIRST SIGNS

The first time you experience a psychosis it takes you by surprise, and everyone else for that matter - your parents, brothers or sisters and friends. It starts differently in different people, but often with a mixture of mild symptoms. When you look back the picture may seem typical, but at the moment itself, the signs and symptoms seem to be the kind of things that happen to everyone at some time or other:

You want to stay in your room rather than mix with other people.

You forget things - appointments, or where you left something.

You hear or see differently. Sounds seem to be more intense than before, objects mysteriously change shape, colour or size.

You see yourself and the world around you differently.

You become suspicious. You think that people are talking about you. Things take on a special meaning.

You have strange ideas: that you can read the thoughts of other people, or you have the impression that others know what you are thinking, or that people are plotting against you, perhaps you become extremely interested in the supernatural.

Sometimes you find it difficult to concentrate; you are easily distracted.

Sometimes you are miserable, sad or depressed for no apparent reason. Sometimes everything seems an effort; you don't have much drive or energy.

Sometimes you are touchy as well; other people can easily annoy you.

Sleeping is also a problem, especially at night, and you fall asleep during the day.

You find it difficult to accept rules, or to stick to arrangements. For this reason, you no longer want to go to school or work. You find it difficult to keep anything up.

Things interest you less and less. Anyway, why should you wash regularly or dress properly?

It is as though you have become unbearably sensitive to the rest of the world. You feel vulnerable, and so you would like to creep into your shell, withdraw into your private world, and stay there. But you are also afraid of becoming isolated. Anxiety takes hold of you because everything is so different - and you don't know why.

It is not only the first psychotic episode that announces itself with these 'prodromes', as they are called in the literature. Later episodes - and these may occur years later - display the same early warning signs. Forewarned is forearmed; on recognising, or even suspecting prodromes, there is only one sensible thing to do, and it must be done fast: contact a professional for help.

Readers should note that these symptoms of natural mental illness are very close to the early experiences of a target of organized stalking and electronic harassment (OS/EH). It appears to targets, based on decades of experience, that as in the movie "Gaslighting," the OS/EH events are specifically designed to force the target to display the symptoms listed on this page.

Again, to mental health workers, please understand that in this modern, high-technology age, natural mental illness is not the only source of these symptoms.

Also, when considering symptoms, it's important to ask the question, "How would a mentally healthy person react to organized stalking and electronic harassment?" Are the symptoms listed at the left those of a mentally healthy person experiencing OS/EH?

*GETTING UP  
It's seven, in the morning.  
It's probably raining  
because I'm staying in bed.*

*I always do that  
when it rains.*

HANS VLEK

## PRODROMES

These are early warning signs that things are going wrong. They don't all appear at the same time. Everyone has a different mixture of these simmering under the surface.

### VAGUE SIGNS THAT YOU MAY NOTICE YOURSELF

you are more suspicious or anxious  
your mood alternates between very happy and very sad  
you worry more and dwell on things  
you have difficulty sticking at things  
you have difficulty concentrating or remembering things  
sometimes you feel like eating or sleeping a lot and sometimes not at all  
you don't feel very motivated  
it's as though you think more slowly or have fewer thoughts  
you are less concerned about things than before

### CHANGES IN YOUR BEHAVIOUR THAT OTHERS CAN SEE

sleep problems  
changes in appetite  
lack of energy  
lack of interest and motivation  
more withdrawn  
easily irritated or angry  
forgetfulness or confusion

### VAGUE CHANGES - EARLY PSYCHOTIC SYMPTOMS

your sense of sight, touch and taste is altered  
you see the world differently than other people  
you think you have access to secret knowledge or information  
you trust people less and become suspicious  
you are influenced by external forces  
you think you can see through people  
you don't understand why others cannot see what you see

Readers should realize that today's organized stalkers can easily access updated versions of the old medical device, the "Lida" machine, developed by Russian scientists for use as drugless sedation. The machine sends out radio frequency pulses at rates between zero and 100 pulses per second. This is a radio version of various trance inducing devices such as a swinging watch, slowly blinking lights, or slowly pulsing tones.

By using microwave carrier frequencies, the Lida-class devices can be focussed narrowly, and penetrate non-conductive dwelling walls.

By adjusting the rate from slow, in the range of sleeping EEG frequencies, to faster, in the range of wide awake active EEG frequencies, this device can be used to silently force a target, while in bed, to come and remain wide awake. So as with "voice to skull" technology, Lida-class technology means that trouble sleeping may have an artificial cause, as in the crime of organized stalking with electronic harassment.

The earliest known appearance of the Lida machine was in Korean War prison camps. The Veterans' hospital at Loma Linda has an actual Lida machine, which was experimented with by Dr. Ross Adey and Dr. Eldon Byrd.

These frames depict "hearing voices." Be aware, reader, that through-wall-capable, pulsed microwave voice-to-skull technology is not secret, and was demonstrated in 1973 by Dr. Joseph Sharp. The method was outlined in the March 1975 issue of the journal "American Psychologist." Implants are NOT required to transmit voice to skull.

The combination of electronic harassment technologies, and very intense around the clock surveillance would tend to make any mentally healthy person wonder if they were being watched electronically. An investigator, who infiltrated some organized stalking groups, discovered that around the clock surveillance does occur in organized stalking operations. To read more about that investigation, read [this 36 page online booklet](#).

13

It's fairly common for targets to find that the electronic harassment is most intense at home. Since electronic harassment equipment would need to be set up and aimed carefully, this isn't surprising.

So to find a target of genuine organized stalking and electronic harassment seeking out places like abandoned bus shelters is actually a behaviour to be expected of a normal person experiencing OS/EH.

THIRD EPISODE:

## THE SYMPTOMS

The symptoms of a psychosis affect all areas of your life, your senses, thinking, feeling, knowing and acting.

The 'POSITIVE' symptoms are so called because they 'add' something to your experience of the world. In the ordinary sense of the word, these symptoms are generally not positive.

There are mainly two kinds of these symptoms, which sometimes do and sometimes do not occur together. *Delusions* are beliefs or thoughts about which you are convinced but that others do not understand or share. For instance, you may believe you are being spied on, that you possess supernatural powers, that you have a special mission in life, that secret messages come out of the wall sockets or the radio, that you can recognise murderers or predict earthquakes.

You may also have *hallucinations*: you see, smell, taste or hear things that others do not. Voices may start to speak to you or talk about you and even tell you to do things. Irritability and excitement are also counted among the positive symptoms.

The 'NEGATIVE' symptoms are so called because they decrease your ability to do everyday things.

You lose interest and motivation. Everything is an effort. Everything goes at a much slower pace. You have difficulty organising yourself and structuring your activities and your world. Communication and expressing your feelings to others are difficult for you. You feel 'blunted' or empty. You feel isolated. You withdraw from your friends, acquaintances and external reality. You start to neglect things (your hobbies, clothing, room or personal hygiene).

Today's mental health specialists, who would not want to mis-diagnose a patient and treat them with potentially dangerous drugs, should reflect on the fact that pulsed microwave voice to skull technology has existed, and not been secret, since Dr. Joseph Sharp's successful experiment in 1973. Sharp's method is described in the March 1975 issue of the journal American Psychologist, article title "Microwaves and Behavior" by Dr. Don Justesen.

Today, hearing voices is not necessarily indication of hallucination.

And since 2001, when David Lawson's book Terrorist Stalking in America was published, or the book Mobbing: Emotional Abuse in the American Workplace was published in 1999, today's psychiatrists should weigh carefully the possibility that a patient describing organized stalking may actually be reporting genuine criminal activity.

#### CONFUSED FEELINGS

You are sometimes happy when you should be sad. Your feelings confuse you. Sometimes you no longer care about people or things that used to be dear to you. You withdraw into yourself and retreat from the world. Two feelings frequently go together in a psychosis: you feel anxious and you feel depressed. Given the chaos of the frightening and difficult to understand changes that are going on inside you, that is not surprising.

#### DISORDERED THOUGHTS

Clear thinking becomes difficult. Your thoughts become confused. At least, that's what other people say. Even your best friends say they are unable to follow you. Sometimes you simply have too many thoughts, or sometimes you are mentally exhausted and have no thoughts at all.

You have difficulty concentrating. You have a lot of trouble performing simple tasks, and solving problems takes much more effort or becomes impossible.

#### LOSS OF SELF-AWARENESS

A very distressing but typical symptom of psychosis is that you cannot see that you have problems at all. The psychosis prevents you from seeing yourself as you ordinarily do. There are moments when you think you are behaving exactly the way you used to and that everything is normal again. From the reactions of others, however, you can see that this is not the case. They don't understand you and it is difficult for you to understand why they don't understand you. That irritates you and may lead to arguments. Their failure to understand you becomes a problem.

"Feeling anxious and feeling depressed" are indicators of psychosis, so says the "Confused Feelings" item at the left.

I suggest to mental health workers that "feeling anxious and feeling depressed" are also perfectly normal reactions of mentally healthy people when subjected to organized stalking. Because the crime of organized stalking and electronic harassment produces symptoms classic psychiatry once considered indications of mental illness, an updating of diagnostic method is needed to separate the crime from the natural mental illness.

As to "disordered thoughts," that too is a perfectly normal reaction to organized stalking, which very often includes disruption or outright electronic denial of sleep. (Current day versions of the "Lida" machine, originally a medical device for drugless sedation, can be run so as to entrain EEG activity characteristic of the wide awake state. This device is silent and can penetrate non-conductive walls.)

*I go outside again. I discover a snail on the wall of the house. A hidden microphone, unless it's a real snail...*

*I pluck the snail off the wall but I don't find a sticky, caterpillar-like creature. The snail's shell feels heavy. It obviously contains a hidden microphone. This is the proof that people are spying on me. I must report it to the police. They'll know what to do about it. In the meantime, the best thing I can do is give them false information. Although I had intended to go straight to my girlfriend's, I tell my family the opposite. "I'll stay for one more night." My family doesn't understand. I don't explain. I hide the snail in the car, switch on the ignition and turn on the car radio. The people who are spying on me now have something to listen to. I rush back to the house where I drink another cup of tea and then I say that I'll be leaving straightaway. I change my plans again. As I see it, there is a good chance that I'll be followed. I ask my sister to keep a lookout for a moment. If she doesn't see anyone I'll leave like a bat out of hell. I grab my bag and rush outside to join my sister, who – horror of horrors – has cleaned the rear window of the car. "Then they'll be able to see that they have the wrong person", she says. No time to argue with her. I set off double-quick.*

*I soon discover that I have a tail. Palpitations. I put the pedal to the metal. I must keep ahead of them. Wait a second, maybe I can warn the police. Quickly I pull off the road, stop the car and dive into a phone booth. I call the police, give them my name and address and tell them that I probably won't make it home alive because they are following me. I hang up and take a peek outside. For the moment there's no-one around. Into the car and burn rubber. Why does that car in front suddenly accelerate when I want to pass it? It's a trap! They've been waiting for me. I'd better not lead them to my home. I know what I'll do. I'll drop by some very good friends. They're at home – a family with three children. Their father happens to be a doctor. I tell him my story and show him the snail's shell. The doctor listens quietly until I finish my story and then says that it's all a lot of nonsense. "There is nothing in that snail's shell. Hit it with a hammer and see for yourself." "But then I'll destroy the evidence", I protest.*

*I am given something to drink and I rest for a while. The house is secluded and I can't see the road. Finally I decide to smash the snail with a hammer.*

*The snail's shell is empty...*

MICHEL VANDENBOSSCHE

Extract from: *My diagnosis is paranoid schizophrenia in 'Zin in Waanzin' ('Sense in Nonsense', EPO, 1996)*

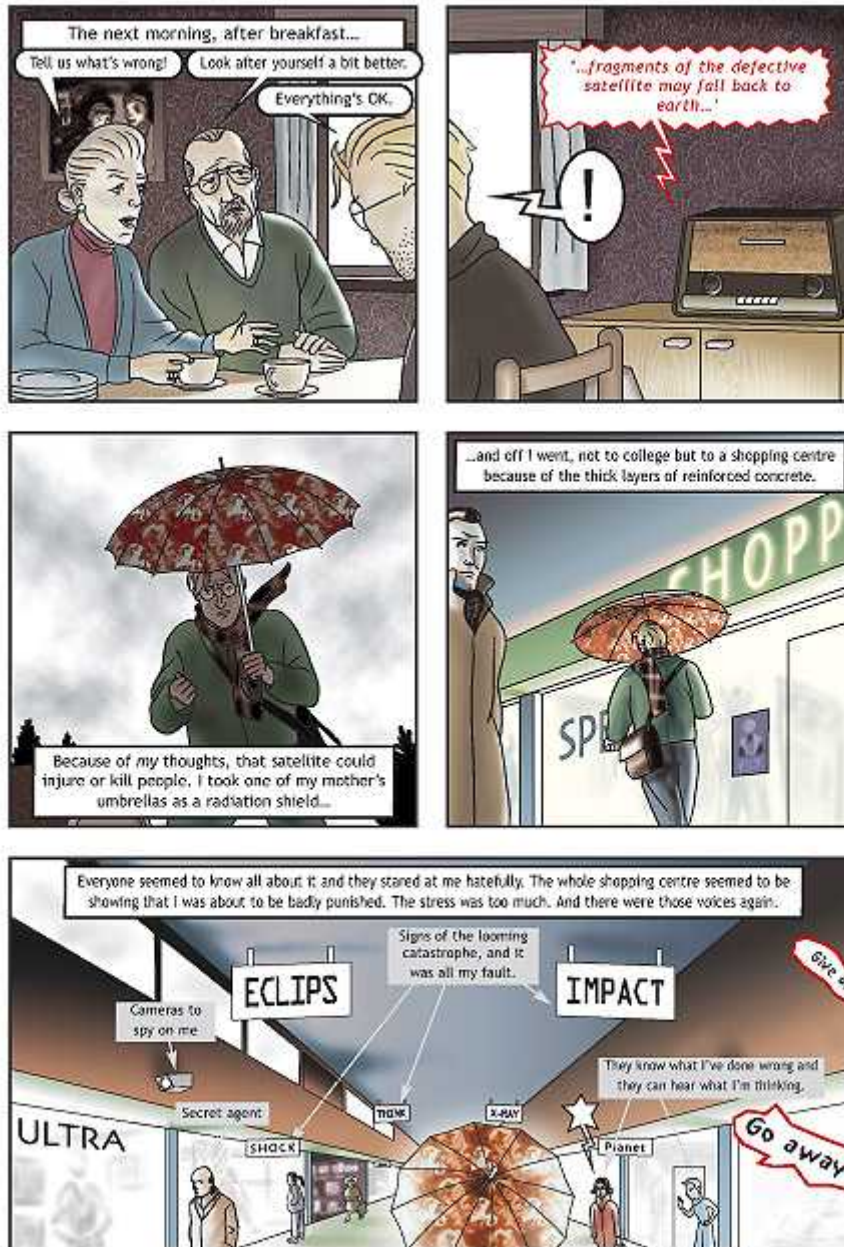

There are a very few organized stalking and electronic harassment targets who progress to the point of actual hallucinations, such as a snail housing a microphone, or having a tail. They do exist. However, they are very much in the minority.

With intense group stalking activity, some people are very likely to be driven over the edge. And no doubt, among the population of organized stalking and electronic harassment targets, one would expect the same percentage of people with mental illness as in the general population. But by and large, almost all OS/EH targets maintain a good grip on reality.

Targets are susceptible to statements and articles that "sound like what I'm experiencing" and will often repeat claims which cannot be substantiated by mainstream documents. But that very human weakness is far from "believing I have a tail." Mental health workers should use their common sense in distinguishing normal human wishful thinking from actual delusion.

Yes, targets of organized stalking and electronic harassment are so exhausted from the sleep deprivation, and in the case to the left, voice to skull transmissions, that they can easily believe satellites are responsible for their electronic assaults.

At this point in time, OS/EH targets don't have documented proof that satellites can re-create what they experience, but here again, it is normal for mentally healthy people, under OS/EH assault, to let their imagination wander. This overactive imagination experience is not at all in the same class as believing one has a tail.

Caution and not jumping to conclusions is called for when mental health workers encounter someone claiming they are being electronically harassed.

## DIAGNOSIS

*How do you find out what's the matter with you? How is the diagnosis made?*

### A PUZZLE

Everyone is unique and the symptoms of psychosis are influenced by the personality of the individual. Because of this, making a diagnosis is like trying to solve a complex puzzle. The pieces of the puzzle are the various possible combinations of symptoms, the personality of the individual, his or her age and history, the trigger factors and the duration of the symptoms. The puzzle comes together bit by bit and so the doctors may well have to adjust and refine their diagnosis as the picture becomes clearer.

The diagnosis describes the type of psychosis you are suffering from, the background from which it has come. In this way, an initial treatment plan is worked out. This plan is based, among other things, on the following factors: the symptoms you have; the length of time you have had them; how the psychosis changes your behaviour; the extent to which it stops you doing the things you used to do; whether you have physical complaints; and whether you are already on drug treatment.

### A BEGINNING

The diagnosis can be made on an outpatient basis, in other words without your being admitted to a hospital. However, in many cases the diagnosis is first made after admission to hospital. Hospitalisation is usually necessary because the symptoms are so serious that specialised help by experienced caregivers is needed. Quite often, a first psychotic episode takes the form of a real crisis.

Admission to a hospital offers advantages. For instance: an accurate diagnosis can be made; the treatment can be started easily; and both you and the members of your family can be involved in setting up the treatment plan.

### TYPES OF PSYCHOSIS

An internationally recognised system is used in psychiatry to differentiate between the various types of mental disorders, and these include psychoses. An *acute psychosis* lasts only a few days. A *schizophreniform* psychosis lasts several weeks. *Schizophrenia* is present when the psychosis persists for months on end. *Schizo-affective psychosis* is a combination of psychosis and major mood swings (severe depression or pronounced excitement).

FOURTH EPISODE:

#### NEVER TOO SOON, OFTEN TOO LATE

It often takes a very long time – and often too long – before people with a psychosis seek or find help and start treatment.

There are a number of reasons for this.

The start of a psychosis can be gradual and the symptoms and complaints can be vague. Some of these are things that most of us experience at some time or other. After all, who doesn't occasionally feel confused, irritable or anxious?

At first most of us tend to minimise our problems. "It's not as bad as all that." And we have the feeling that it will get better by itself, or at least we hope so. You may hope that you will be able to solve the problem with the help of your partner or family.

A characteristic symptom of psychosis is that you are not really able to judge how the disorder is changing your personality, and that is an obstacle to doing something about it. Another reason people are slow about seeing a psychiatrist is that there are a lot of prejudices about psychiatry, which does not exactly inspire trust. What is more, everyone is frightened of being labelled 'mad' or 'crazy'. Very few people are familiar with the mental healthcare services and that makes it difficult to know where to go for appropriate care.

All these factors mean that people with a psychosis often find the right care at a very late stage. In some cases, by then the problem has got so far out of hand that other people step in and try to force treatment on the individual.

That is regrettable.

We now know that the longer people have psychotic symptoms without treatment or care, the more difficult it becomes to treat the psychosis effectively. The longer you are ill without treatment, the further you retreat from the external world.

Furthermore, the chance of a full recovery becomes smaller the longer the psychotic episode lasts. The longer you wander around in your own private world, the more difficult it becomes to find your way back and start to relate to others.

The sooner you get professional help for this type of problem, the better.

From the page to the left, "... there are a lot of prejudices about psychiatry, which does not exactly inspire trust."

This problem might be partially overcome if psychiatrists acknowledged that the crime of organized stalking and electronic harassment is at least possible. Doctors can see a summary of the information showing, at minimum, OS/EH is at the very least possible, in the 36-page on-line booklet titled: [Organized Stalking: A Target's View.](#)

As long as doctors insist OS/EH isn't possible, then people who experience organized stalking and electronic harassment will have no reason to talk to doctors about this crime.

## HOW DOES THE DOCTOR FIND OUT WHAT'S WRONG WITH YOU?

The bottom item on the page at the left mentions "social contacts, friends ... and acquaintances."

Readers should note that both observations by targets, and the investigation of organized stalking by David Lawson revealed that the telling of vicious lies about the target is a standard part of the organized stalking/electronic harassment operations. This causes friends, associates and family members to terminate amicable relationships in many cases. In turn, this means that deteriorating relationships may have an external cause, and this should be carefully considered when a patient describes OS/EH.

*Being admitted to hospital came as a real shock to me. I was snatched out of one nightmare and finished up in another... At least, that's what it seemed like at the beginning. I understood nothing of what was happening.*

The first few days were packed full of stuff; but I only remember vaguely what happened... I was given an injection...

And every time I looked there were new faces.. asking me questions. They acted professionally, but I didn't trust them farther than I could throw them.

Whatever they said, I always gave the same answer...

Everything's OK.  
Let me out of here.

...I refused to eat and wouldn't take off my clothes because I was afraid of being poisoned.

... and I certainly didn't want to have anything to do with the bunch of zombies on the ward.

FIFTH EPISODE:

## ROADS TO RECOVERY

In the treatment of psychosis there are no easy routes to recovery, but there are still many ways to get better. None of them work in 100% of cases. What is certain, however, is that you stand a better chance of permanent recovery if you follow a number of routes at the same time. Better results in the longer term can also be expected if you seek and receive help without delay.

### MEDICATION

One of the cornerstones of treatment is medication. Drugs help bring symptoms under control. They can put you in touch again with the world as others perceive it. They suppress delusions and hallucinations and they help you take charge of your life again, but this, needless to say, is something you must do yourself.

### TALKING THERAPY

As long as you continue to be obsessed by your thoughts you will be unable to get a grip on them. That is why talking is a good way of getting a handle on your confusion: you can control words, but not thoughts. In this way, you learn to regain control of your life.

Talking helps. Someone who really listens to you can strengthen you with a new sense of self-esteem and more insight into yourself. The most important thing of all is that you should feel secure. A good relationship with your therapist, based on mutual trust, is essential.

### INDIVIDUAL, FAMILY OR GROUP THERAPY

There are dozens of different types of therapy. Some you do on a one-to-one basis with your therapist. Others are done in a group setting, with the people from the hospital, with other service users or with members of your family.

Forms of therapy involving you and your relatives can be very important. The family is the first - natural - safety net. Furthermore, your psychosis is a dramatic event for your family as well. So they too need care and support. If they can understand your illness and know how to cope with it, this will benefit both them and you.

In a group you can also improve your social skills. In the grip of a psychotic episode, it is often difficult to relate to others. They find you aggressive, unsure of yourself, painfully shy, tactless or unable to express your feelings adequately. In a group you can share the things that bother you and the things that give you pleasure.

Discuss with your doctor the type of therapy that is most suitable or that could be most effective for you, given your particular circumstances.

A number of organized stalking and electronic harassment targets have been forced on to, or voluntarily taken, anti-psychotic medication. The medication does produce unwanted side effects but does not reduce the assaults.

#### PSYCHOEDUCATION

It helps if you know what's wrong with you. It helps if your parents, your partner or your children also know. It helps if your parents know that it isn't the way they brought you up that has made you ill. It helps if you know that it is precisely because you are ill that it is hard for you to take initiatives. Learning and knowing more about what's wrong with you is called psychoeducation, and that helps you to get a grip on reality.

All these forms of help and support ultimately lead to greater structure in your life, some kind of anchoring, i.e. something reliable to hold on to when you are confused. They open the way to recovery and help free up your potential. That can bring peace of mind but also feelings of sadness. You start to realise that you have been through a major ordeal and that it has marked you. But genuine sadness is better than bizarre delusions or false hope.

*A warm and unexpected sorrow;  
awe for the most ordinary things,  
the impulse to sing in chorus,  
and then to weep at this song,  
arose in my spoiled mind.  
I felt sad and good.*

M. VASALIS

It would be very beneficial if psychoeducation included educating mental health workers about organized stalking and electronic harassment.

SIXTH EPISODE:

## WHAT IS A PSYCHOSIS?

A psychosis is a temporary disturbance of the normal functioning of the brain. Schizophrenia is a term used for psychotic states that last longer. Medical science knows quite a lot about psychoses, but by no means do we know all their ins and outs. The causes are still unknown. There may be no such thing as a single essential cause. A psychotic disorder could well be the result of a number of factors.

The **brain** plays a central role in the onset of psychoses. In patients suffering from a psychosis there are changes in the structure and functioning of the brain. Chemical changes are also seen. These abnormalities are undoubtedly related to the confused emotional state and the impaired processing of information that are so typical of a psychotic state.

Information is moved around the brain by means of chemical substances called **neurotransmitters**. (Dopamine and serotonin are two neurotransmitters that are important in psychosis.) In people with a psychosis the balance between these substances is disturbed. Medication can help restore the normal balance.

People with a psychosis are **overly sensitive** to stimuli or stressful situations arising from their immediate environment. This vulnerability is to some extent hereditary. If you have close relatives with a psychosis, you run a greater risk of having the vulnerability than people whose close relatives are free of psychosis.

The **immediate environment** also plays a role in the onset, and above all the persistence, of psychoses. High levels of stress, or situations charged with emotion may spark off a psychotic episode.

Psychoses are **quite common**. You are not alone. The risk of becoming psychotic at some point or other in one's life is estimated at 1 in 100. At a given moment 2 - 4 people in 1000 are suffering from schizophrenia. It occurs all over the world, in all cultures and in all social classes. Schizophrenia strikes at a fairly young age, somewhere between 18 and 30, and men develop it at a slightly younger age than women.

The page at the left states that psychoses are quite common, and that schizophrenia often strikes between the ages of 18 and 30.

While young people do report organized stalking and electronic harassment, commonly, organized stalking starts later, such as 40+, except for those cases which can be traced to the target being a high profile activist or whistleblower, or perhaps involved in an inheritance dispute or hostile divorce.

For the general information of mental health workers, no accurate counts of organized stalking are available, but "a few thousand" targets have checked in via the Internet. world wide. Internet communications between OS/EH targets began in the mid-1990s.

somatic therapy  
 take my medication every day.  
 I'm on this ward for young people with a  
 psychosis for six weeks now. Whatever they  
 may say, I still think I don't belong here.  
 But somehow, I'm beginning to feel at home  
 in this strange place.  
 It's quite peculiar.

In general, the days passed by like a routine...  
 Anne, here's your medication.

I hate those pills. I reckon  
 they're real poison.

Hey, John Lennon says:  
 'Give pills a chance!'

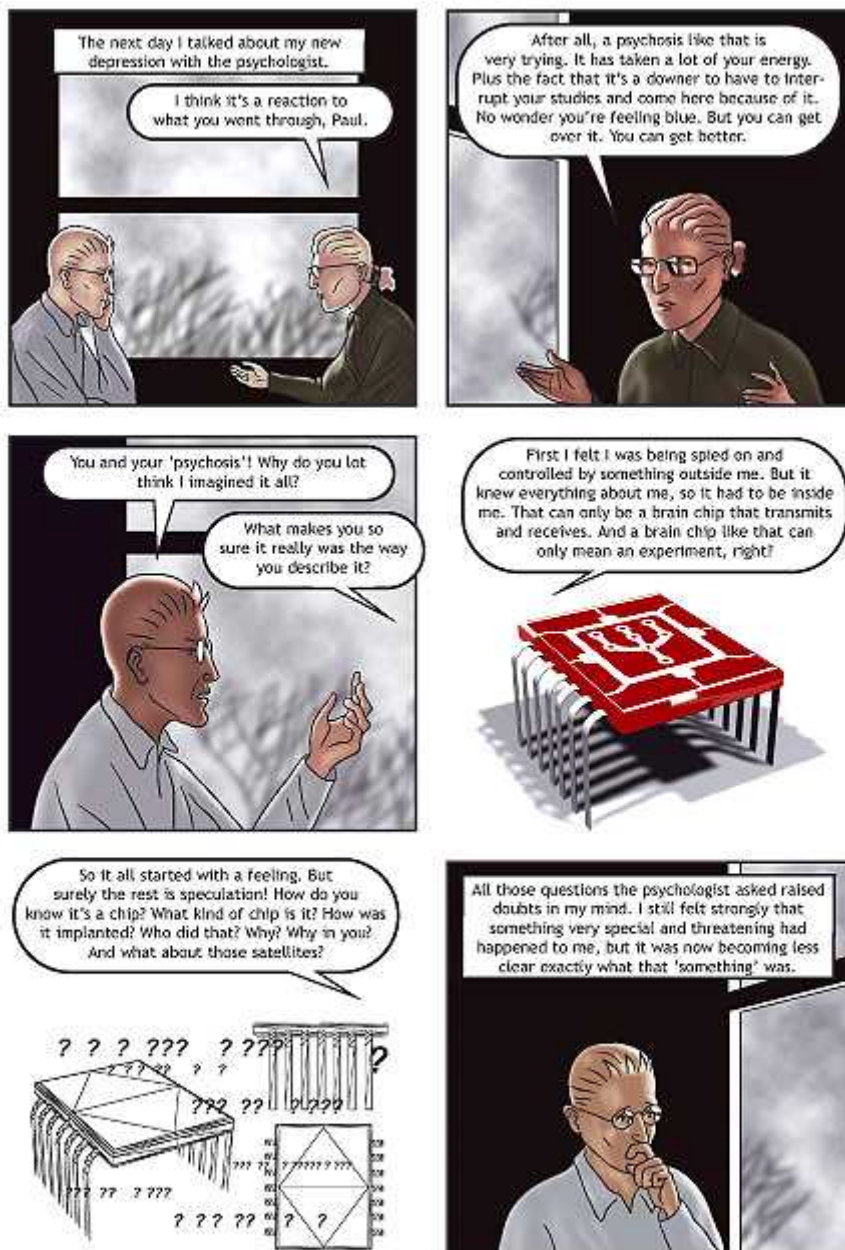

HA-HA-HA-HA!

I suddenly realised what a long time it  
 was since I had last laughed. And now  
 I'm doing it here, in the hospital...

At the same time I noticed that Mary wasn't  
 laughing at all. She showed no emotion at all and  
 seemed to be lost in thought while she  
 slowly ate her sandwich with trembling hands.

(31)

For the information of mental health workers, please see the first episode of this series. Two electronic harassment targets actually had doctors diagnose and remove involuntary bio-monitoring and control implants.

Also FYI, overwhelmingly, electronic harassment (EH) targets do not have missing time or even surgery associated with the onset of the electronic assaults. But EH has been possible for the past few decades using not-secret technologies which have legitimate purposes, and which do not require implants.

So when a mental health worker encounters someone insisting they are implanted, even if they don't have an implant, it's important to realize they may still be targeted by technologies not requiring implants.

Some of the proven, not-secret technologies are explained in the 36-page online booklet titled [Organized Stalking: A Target's View](#)

SEVENTH EPISODE:

## A METAPHOR

It sometimes helps to form your own mental image of an illness. It makes some aspects of the illness easier to understand.

### THE BRIDGE

You can think of a human being as a bridge. Just like a bridge, we all have our weak and strong points. A bridge is supported by the riverbanks and by pillars and piers, or it may be suspended from steel cables. The riverbanks are your family and friends, your work, your colleagues and your social circle and environment. The pillars, piers or cables are your personality, your strengths but also your weaknesses: your intelligence, your values and your standards, your experiences (sometimes pleasant, sometimes traumatic, some you have coped with, others you still haven't got over). The structure is your body and your brain; the vulnerability of a person to psychosis is also part of the structure of his or her bridge.

A bridge is also exposed to external forces. It is subjected to heavy loads by traffic. It is at the mercy of the elements. The road surface starts to wear, the cables rust, the base of the riverbanks and the riverbed can erode. This can undermine the pillars and make the bridge unstable.

The loads that a bridge has to bear are comparable to the problems that can weigh on you in life: the stress at work or due to your studies; the emotional storm when you fall in love or if the relationship with your partner comes to an end; criticism from colleagues or unreasonable demands from your immediate environment; accidents; setbacks; hardships; drug abuse; or financial or social problems.

Most bridges are designed to withstand severe storms and even gales, but not hurricanes. A hurricane in combination with unsuspected concrete decay or metal fatigue can cause the first cracks in the road surface. (That's how you can view the first signs of a psychosis.) If a convoy of heavy 10-tonne trucks then thunders across the bridge, it may break in two. (A psychosis is said to 'break through'.)

Keep in mind, mental health workers, that being stalked by a group and having your sleep disrupted electronically can also trigger natural mental illness. Please don't be too quick to dismiss real criminal activity as a trigger.

The bridge metaphor can also illustrate what happens after a psychosis. Medication and various forms of therapy repair the bridge and protect you from further damage. With the right support you can learn to reduce the load you place on your bridge: therapy for relationship problems, social assistance for financial problems... Medication can repair the damaged road surface and perhaps even make a new cable, from which everything can be better suspended. New pillars and piers prop up the broken part. For you that means support and help from family and friends, meaningful occupations, individual therapy, a clear structure for your daily activities...

Nevertheless, pieces of the road surface can be dislodged and swept away by the river. These are the residual symptoms and possible limitations that may persist after a psychosis. As with the ongoing vulnerability, anyone who is confronted at some time or other with a psychosis must learn to live with it. With a bit of luck, however, the bridge will remain serviceable.

## SOME OTHER METAPHORS

### THE MOUNTAIN

You can compare a life to hill walking, a difficult trip with obstacles. Properly prepared and in good condition, you will have no problem. Your physique and condition determine how heavy your rucksack can be. The steepness of the terrain determines how quickly you advance. But no matter how good you are, you may have to face storms or avalanches. And in difficult conditions it is wise to hire an experienced guide.

### THE BOAT

A person who is vulnerable to psychosis can be compared to a boat. There may be a mistake in the design or construction that causes the boat to leak or sink. You can overload a boat so that it lies too low in the water and is swamped by the first high wave that comes in. If the navigation equipment is defective, the boat may be driven off course and end up in a storm or run aground on a sandbank.

### THE HEART

The built-in vulnerability of a person who is susceptible to psychosis can also be compared to the problems of a person with a weak heart. A heart defect with which someone is born need not necessarily lead to irreparable damage, provided that the person is careful and also has a healthy lifestyle.

### DIABETES

A psychosis can also be compared to a disease like diabetes. A small abnormality in the body's sugar level can have far-reaching effects. However, if the symptoms are properly controlled, a diet is followed and there is a timely intake of extra insulin, the body can continue to function extremely well for a very long time. Many patients with schizophrenia must accept the fact that they too will have to take drugs for a long time, perhaps even for the rest of their life.

### ELECTRICITY GRID

The nervous system is like a gigantic electricity grid or telephone network. In fact it works by means of minuscule electric currents. In a psychosis something goes wrong in the network. The disorder starts with a faulty connection or worn wiring, which results in overloading of the network and ultimately a short-circuit. The sparks of the psychosis then start to fly and the system becomes damaged, temporarily or in some cases permanently.

Today I am 21 - an adult. There should be a lot to celebrate but it means nothing to me. Here I am in a hospital ward on my 21st birthday. The strange thing is that I don't even want to get out. I feel so tired, empty and exhausted. All the pleasure I got from therapy a few weeks ago is gone now. And still I would rather stay here than go back to all those people with all those questions and force myself to act like everyone else even though I know I'm sick inside. I just don't see a way out of this.

I was so miserable I often lay on my bed during the day. I avoided the therapy sessions and had disturbing dreams.

But there was one session I had to go to: an interview with my family, the psychiatrist and my nurse.

It was very painful to see my mother crying about me and my crazy problems.

After the interview I escaped into dreamland again.

Happy birthday, Paul!

Look what I've brought for you, your camera and some film!

A stylized illustration of a vintage camera. The camera is primarily black with silver-colored accents. On the top left, there's a silver-colored dial or button with the text '50 320' on it. The word 'FOCUS' is printed in bold, black, sans-serif capital letters on a silver-colored rectangular plate on the top right. The lens is large and black, with a silver-colored ring around its base. The camera has a textured, possibly leather or rubberized, finish on its body.

After all, photography was my passion, and I had wanted to make a career of it. Taking photos finally brought me outdoors, where spring was in the air...

Then the department social worker contacted Gold, the man I was afraid of...

All right then. When he's back home he can resume his studies. But he will have to repeat the last year.

EIGHTH EPISODE:

## THERAPY

The treatment of psychosis is built on four cornerstones: medication, individual counselling, rehabilitation, and support from and for the family. Depending on your circumstances, you will need slightly more or slightly less of each ingredient.

Medication makes it possible for you to lead a more balanced life. But it is like a walking stick: you can support yourself on it, but walking is something you have to do for yourself. No matter how much the antipsychotic drugs help you to live a more normal life, the actual living of that life is something you have to do yourself. The support of your family and friends is just as important as properly dosed drugs. Professional support of doctors and caregivers in some form of therapy is also crucial.

### LEARNING TO LIVE

There are various forms of therapy, and none of them has all the answers. The most important thing is to find a doctor or therapist you feel you can trust and with whom you feel relaxed. He or she will be able to help you get back your self-confidence, take on responsibilities and look after yourself.

While this may seem fairly obvious, the fact is that under the influence of a psychosis these are very difficult things to do. The process is a slow one and your progress may be in small steps. It may be possible for you to attend a day hospital or a drop in centre. That could be the first step, for example, on the road to a new job or resuming your studies. If you are still living with your parents, this could be an intermediate step to eventually living somewhere else, perhaps in some form of sheltered accommodation.

Therapy can also help you to understand what you can cope with and what you can no longer cope with. It teaches you to develop your abilities and to deal with your distress at the fact that there are things that you may no longer be able to do. Therapy helps you to understand the symptoms of your psychosis better and to give the psychosis a place in your life. Therapy can teach you how to cope with deep and sometimes violent emotions – both your own and those of your family. The ultimate goal is for you to get a better grip on what is happening to you and learn how to cope and live with your problems.

### COPING WITH EMOTIONS

Emotions sometimes run high; for example, parents, partners or brothers and sisters, out of deep concern for your well-being, may react over-emotionally. Sometimes, however, this results in over-protectiveness, which you may find suffocating. Try to talk about these things, with or without the help of your therapist or guidance counsellor. We know from research that a high level of expressed emotion in your immediate environment has a negative effect on the healing process and increases to the risk of a relapse.

#### IN SEARCH OF STABILITY

You can teach yourself to avoid worrying about things that can cause great tension, stress, emotion or confusion. Changes are a good example of this: a new house, a new boss or a new teacher, an examination, falling in love, a holiday or business trip somewhere new... these can all unsettle you.

Keeping your balance is an art that lies in simple things. First there is your general physical condition: make sure you keep fit. Get enough sleep at night and make sure you are up doing something during the day and set yourself a routine. Learn to recognise stressful situations (whether at home, school, work or in the day centre) and deal with them constructively.

Structure your life using a daily activities chart. Spend your time meaningfully. Make a pact with yourself that you will do that. Ordinary activities provide fixed beacons in your life. Take care of your friends, your partner and your family and they will take care of you. Take care of your body too. Excessive use of alcohol or tobacco disturbs the already fragile balance between your body and your mind. Do not take street drugs, because they complicate and delay the healing process. They may even trigger a new psychosis. Find ways of bringing calm into your life. Avoid situations in which there is excessive pressure or too much stress. Do things that relax you, like listening to your favourite music, reading a good book or going for a walk in the park. Get the most out of each moment and enjoy things.

Take care not to become socially isolated. Try to keep up a hobby, studies or a job (even if it's voluntary) so that you can keep in touch with people. Learn to make and stick to agreements so that you can continue to take on responsibilities – no matter how small they are.

#### KNOW WHAT IS WRONG WITH YOU

The finishing touch is provided by psychoeducation. You have the right to know exactly what is wrong with you and what can be done about it. You have the right to know what medication and what therapies are effective and how these exert their effects and also what results and side-effects you can expect.

## MEDICATION

One of the pillars in the treatment of psychosis is medication. The drugs of choice, as their name suggests, are 'antipsychotics'.

Antipsychotic drugs decrease the delusions and hallucinations, silence the voices inside your head and cause strange thoughts to disappear. As a result, you become less confused, less anxious and less restless. You can start to think more clearly again. You are better equipped to withstand the stresses that arise from your inner world and everyday life.

### SLOWLY BUT SURELY

Antipsychotic drugs are not miracle cures that produce immediate results. They act slowly. It may take several weeks before you actually start to notice the effects.

The reverse is also true. If you stop your drug treatment it will be a long time before their effects completely wear off. It may seem as though you are better without drugs, but that's just an illusion.

Antipsychotic drugs can keep a psychosis in check, but they can also prevent a relapse of the illness or a worsening of the symptoms. Therefore, you must accept that in many cases these drugs will have to be taken for a very long time, sometimes for the rest of your life.

### SIDE-EFFECTS

All drugs, even a simple aspirin, have side-effects. Antipsychotics are no exception. Typical of the older type of antipsychotic drugs (also called 'neuroleptics') are the so-called 'extrapyramidal side-effects': stiff muscles, tremor, cramps or physical restlessness, especially in the legs (as though you have to move all the time).

Newer antipsychotic drugs have far fewer of these side-effects.

Other potential side-effects of antipsychotics are drowsiness and weight gain, as well as low blood pressure, an irregular heartbeat, irregular menstruation or problems with sexual function.

The nature and severity of side-effects differ from person to person. Some people are greatly bothered by them and others very little. The higher the dose, the more likely there will be side-effects.

What you should know as a patient is that when treatment begins the doctor will search for the best medication and the best dose for you. This may not be as simple as it sounds: a dosage that is too high for one patient may be too low for another!

The page at the left mentions "silencing the voices in your head."

It should be noted that for targets of organized stalking and electronic harassment, medication does not silence the voices.

For OS/EH targets, "voices" include other artificially induced sounds such as fake telephone ringing, fake alarm clock ringing, fake pager beeping, fake knocking at the door, and fake noises coming from neighbouring rooms or areas.

#### OTHER DRUGS

A psychosis is often accompanied by other symptoms. There may be episodes of anxiety, stress and agitation and these may require a sedative drug (benzodiazepines). These drugs don't have much effect on the psychosis itself, but they do calm you down until the antipsychotic drugs begin to act.

During, and especially after, a psychotic episode you may feel depressed, so antidepressants are sometimes prescribed.

If you suffer from major mood swings (i.e. your mood goes up and down), mood stabilisers are sometimes given.

People who experience tremor or stiffness after taking antipsychotic medication are usually prescribed antiparkinsonian drugs to counteract these side-effects.

#### AWAKENINGS

Some people feel so well after they have been successfully treated that they may be tempted to bite off more than they can chew. People around them who are dying to see them completely back to normal as soon as possible may put pressure on them. However when things do not work out this may be a source of frustration, despondency, disappointment, and even depression.

Depression can actually be a consequence of recovery from a psychosis. The realisation that a world has been rediscovered, but also that a world has been lost, makes people feel sad. Sometimes the feelings of depression run so deep that they start to think of suicide. If that happens to you, contact your doctor or treatment team immediately. Remember: the depression is not the result of your medication, but is a part of the healing process.

So - strengthened by your medication - take it easy. Slow and steady wins the race. Don't go too fast, but don't go too slowly either. Try not to make too many new and exciting plans, but not too few either. Step by step you can learn to become stronger, to take initiatives, become more sociable, enter into new relationships and get back your self-confidence - and find your old self again. In all this, the support of your family and friends, therapists and caregivers is crucial.

NINTH EPISODE:

## ROADS TO RECOVERY

## THE COURSE OF THE ILLNESS

The prognosis and course of a psychosis is often unpredictable. The first episode is usually unexpected. This doesn't mean, however, that it is unannounced. Rather, the first signs are so vague that you wouldn't think of a psychosis. But looking back at it, you might well feel, 'I really should have seen that coming'.

The vague symptoms develop into the so-called prodromal phase, in which the typical early warning signs of an approaching psychotic episode become increasingly apparent. During the first breakdown, this may not be clear enough to make you seek medical help, but with later episodes you will know that this is the time to do just that.

The signs and symptoms give way to the first acute flare-up of psychosis. Help is frequently sought or found only after a considerable delay, when the symptoms have often become so severe and unmanageable that they cannot be treated at home. Because of this the episode usually results in hospitalisation.

### RECOVERY AND COURSE OF THE PSYCHOSIS

With medication, rest and therapy, things usually start to improve. In a great many cases the recovery is permanent. Nine patients out of ten recover satisfactorily if the treatment is good and given in time. Unfortunately treatment is often started too late, in which case the results are not nearly as good.

In people with a prolonged psychosis, one in three improves in due course provided that appropriate treatment is maintained. Between 10% and 15% achieve a complete recovery and are still psychosis-free ten years after the first episode. In one in three patients the illness is long-term with typical ups and downs, characterised by alternate periods of improvement and recurrence of symptoms.

Research has made it unquestionably clear that stopping drug treatment (no matter how good you feel) often leads to a relapse. Seven out of ten patients fall ill again if they stop taking their medication.

There are people, however, who do not recover or do not respond well to treatment and whose symptoms persist. The more relapses they have and the longer the acute psychotic episodes last, the worse their condition becomes. They need long-term and sustained treatment. A small group of patients are tormented by their psychotic state, which is too heavy a burden for them to bear. They are deeply depressed and find their situation so hopeless that they attempt to commit suicide.

Even with the best possible treatment, support, psychoeducation and counselling for the family and the patient, 15 out of 100 sufferers have a relapse. The reason for the relapse in these cases is most likely a combination of extreme vulnerability to stress and sources of stress that cannot be brought under control.

#### EARLY RECOGNITION

Whether things are going well or not so well for you, it is essential that you detect an approaching psychotic episode as soon as possible. To some extent the early warning signs resemble watered-down versions of the typical psychotic symptoms: loss of energy and lack of motivation, depression, anxiety, sleep disorders, problems with attention span and concentration, lack of interest, fewer and fewer social contacts and strange thoughts or assertions.

It is in your own best interest to act as quickly as possible. Don't be misled into thinking that the problem will blow over by itself or that if it does not, you will be able to live with it. Keep in mind that every day you wait will only make the long-term consequences worse. The damage to your physical and mental balance increases with each episode. The network of family and friends that support you will eventually crumble away and in any case the symptoms get worse each time. So don't be ashamed to seek help and support.

#### KEEPING WELL

Keeping well after a breakdown depends on continuing the medication you have been prescribed and making sure that any signs of relapse are spotted and treated effectively. But it also depends on looking after yourself, getting a routine sorted out, getting work or something to occupy you during the day and making sure you have people to support you. It does not matter whether your support is from your family, friends or mental health services – everyone needs someone to support them when times are hard. Your support can be informal such as by family or formal such as therapy or a support group.

The page at the left mentions "sleep disorders."

Mental health workers need to know that the old (Russian) medical device, the "Lida" machine, developed for drugless sedation, can, by increasing the radio pulse speed to match EEG activity frequency for the active, wide awake state, force a target awake. Later versions using microwave can be focussed on a target while the target is in bed, through non-conductive walls.

This technology has been available for half a century and should be considered when a patient reports electronic assault and sleep disruption.

The Loma Linda, California Veterans hospital research unit has a Lida machine which was experimented with by Dr. Ross Adey and Dr. Eldon Byrd.

TENTH EPISODE:

## FAMOUS PEOPLE WHO HAVE HAD A PSYCHOSIS

Few people with a psychosis become famous. The illness usually strikes before there is time to start a career - between the ages of 18 and 30. Nevertheless there are quite a few people who have accomplished a great deal in spite of their disorder.

### John Nash (1928)

Nash's life was the subject of the film 'A beautiful mind'. He is a mathematician. He was particularly interested in 'game theory'. In 1958 he was described as the most promising young mathematician in the world. A year later he had a first psychotic episode. In 1974 he recovered and was able to get on with his life. In 1994 he received the Nobel Prize for economics.

### William Chester Minor (1834 - 1920)

Minor was an American army surgeon. He spent 37 years in a British mental hospital as a result of a protracted psychosis. During his hospitalisation he significantly contributed to the compilation of the Oxford English Dictionary, the mother of all dictionaries, which was completed in 1928. For many years his disorder remained a secret for the editor-in-chief.

### David Helfgott (1948)

Helfgott is a talented Australian pianist. He was a child prodigy on the keyboard but his career was tragically interrupted by various psychotic episodes. He spent 10 years in and out of an institution in Perth. Swimming helped him to calm down and made socialising easier for him. He therefore made a point of going for a swim in the soothing water just before concerts. A somewhat romanticised version of his life story was told in the film 'Shine'.

#### Syd Barrett (1946)

Syd Barrett, singer and guitarist, was one of the founders of the legendary pop group Pink Floyd. He was the creative brain behind what was eventually to become a super group. Before that came about, however, he dropped out of sight owing to psychotic attacks, probably complicated by drug abuse, a wild lifestyle and the growing demands of stardom. He retired from the public eye and now leads a quiet life in rural England.

#### Vaslav Nijinski (1890 - 1950)

This Russian-born dancer achieved an almost legendary reputation for his acrobatic daring and sensitive interpretations of major ballets. He was admired for his physical strength, feather-light movements and expressive body language. At the age of twenty-nine he was forced to retire from the stage because of an acute attack of schizophrenia.

#### Antonin Artaud (1896 - 1948)

Artaud was a French artist, poet and theatre producer. He was fascinated by mysticism and the unknown depths of the human mind, with which he frequently came into contact in the course of a life-long series of psychotic attacks, for which he was repeatedly institutionalised. The madness of his thoughts inspired the surrealism expressed in his dramatic work.

**Lionel Aldridge (1941 - 1998)**

Aldridge was an American Football player who took part in two Super Bowls with his team, the Green Bay Packers. He suffered from schizophrenic psychosis and for a while he was homeless because of his disorder. He later became an active member of an association for the protection of patients' rights.

**The Unknown Patient**

You are not the only person with a psychosis. About 1 person in 100 is confronted with it at some point or other in their life. Of these, 30% succeed in picking up the thread of their life again. Another 30% manage to keep their head above water, with ups and downs. No matter how serious your disorder is, your condition is certainly not hopeless. Rapid intervention, therapy and taking medication as instructed, as well as appropriate counselling and support from those around you can open up new possibilities for a productive and meaningful life. These are the keys to success.

ELEVENTH EPISODE:

Once outside, I came to my senses. The strange thoughts and the voices gradually disappeared.

After a battle, I got the guts up to see the doctor.

I haven't taken my medication for a month. I couldn't study properly on it.

Good thing you told me. The best idea is to start again. But if you have side-effects, we can adjust the dose.

Couldn't you have said that before?

That evening I had a date with Helen and I told her what happened.

Again I felt I was being controlled by a chip in my brain. But it only lasted a minute. Strange, eh?

But now you know you're not being controlled.

Oh no, I am being controlled. Only not by a chip in my brain...

?

...there's a chip in my heart... and this chip is telling me that this is the start of something beautiful between us!

You're crazy!

End of the first episode.

This is not a happy ending because the future is uncertain. But isn't it like that for everyone?

*My heart suddenly became white-hot,  
As though I myself was being reforged.  
I endured it with fear,  
I came out of it strong and renewed.*

M. VASALIS

*Don't give up  
'cause you have friends  
don't give up  
you're not the only one  
don't give up  
no reason to be ashamed  
don't give up  
you still have us  
don't give up now  
we're proud of who you are  
don't give up  
you know it's never been easy  
don't give up  
'cause I believe there's a place  
there's a place where we belong.*

PETER GABRIEL & KATE BUSH (Extract from 'Don't give up')

Everyone is different. Something that works for one patient does not necessarily work for another.

Having a psychosis is like being confined to a room with only one door. That door is locked but you have a bunch of keys. You want to get out, so you try the first key. Would you give up if it didn't fit? Would you keep on trying the same key in the lock time after time? No, you would try all the other keys, one by one.

That is why you must search for the keys that fit you. That applies equally to medication, therapy and counselling. And the more you take control of your own destiny and actively seek out the help that suits you best, the more progress you will make.

During the long, drawn-out process of hard-won recovery, many people benefit greatly if there is some kind of anchor they can hold on to. For some, the answer lies in a hobby, work, studies or prayer. Others turn to their parents, their partner, their children or their friends. Many people draw strength from the hope that they can and will get better.

Patience is another golden rule. Recovering from a psychosis can be a slow business. Months can pass without any noticeable change. Experience, however, shows that the slow way is the best way: a gradual restoration of health is a reliable sign that recovery will be complete.

Slow and steady wins the race. There is a long stretch of time between feeling better and being able to cope with life again. Keep a firm grip on what you can do well, and grow from there, step by step, towards new abilities and skills.

The road to recovery has fewer obstacles if you can travel it in the company of others. Caring for others and having others care for you can bring meaning to your life. Relationships, even with only a handful of people, can help you to get better. Sharing the pleasant and less pleasant sides of life with others makes life all the more worthwhile.

TWELFTH EPISODE:

## MYTHS AND MISUNDERSTANDINGS

There are quite a lot of foolish ideas about psychosis. Most of this nonsense dates back to the time when we didn't know very much about the disorder.

*'Schizophrenia is the result of a 'split personality.'*

The split that confronts you during a psychosis is not within you but between you and the outside world. And while there is indeed something called 'multiple personality disorder', it has nothing to do with psychosis.

*'If you suffer from a psychosis, your children will be abnormal.'*

The vulnerability to a psychosis is to some extent hereditary. A parent who has a psychosis runs the risk that his or her children will inherit that vulnerability. However, the offspring of such a parent cannot be considered 'abnormal' and few will develop problems in later life.

*'Psychotics are dangerous.'*

The image of the 'dangerous lunatic' is a myth, a distorted invention of the cinema and other media and has nothing to do with reality. The reality is that people with a psychosis tend to withdraw into themselves. What you need to be aware of is that you may behave oddly during a psychotic episode and that may frighten someone who doesn't know you well.

*'Psychoses are the result of a bad upbringing.'*

That is another myth. A disorder like psychosis is not the result of a bad upbringing. (Incidentally, people say the same thing, just as unfairly, about autism and depression.) Your parents are not to blame. Neither their protective nor their punishing behaviour is the underlying cause of your illness. What is true, however, is that they and the other members of your family can play an important role in your recovery, by supporting and helping you.

*'Pills can't help you.'*

Anyone who claims that medication cannot help people with a psychosis to get better is guilty not only of nonsense, but dangerous nonsense. Countless scientific studies have established that medication, just like therapy and counselling, makes a huge difference to the healing process in psychosis. Medication works with therapy to get you better and to keep you well.

Er ... what about the myth that reporting organized stalking and electronic harassment indicates mental illness?

## A FEW QUESTIONS I'VE ALWAYS WANTED TO ASK

### *What is the cause of psychotic disorders?*

Medical science has not yet progressed to the point at which it can give a conclusive answer to this pressing question. What we know for sure is that psychosis is not caused by a person's upbringing. Nor did you personally bring about the problem through being lazy or stupid, for example.

It is also clear that there are differences between the brain of people who have a psychosis and the brain of healthy people. In particular, there are measurable differences in the structure and functioning of the brain. There is also an imbalance of certain chemical transmitter substances in the brain, the so-called neurotransmitters. These abnormalities may be caused by hereditary factors and disorders during the development of the embryo. It is believed that these biological differences reflect an excessive sensitivity to stress or pressure. A psychosis is therefore the net result of the degree to which you are vulnerable to stress and the amount of stress with which you are confronted. So apart from the biological basis, social factors play a role in the onset of psychosis.

Psychoses frequently surface during or as a result of stressful situations. These may be positive or negative: an examination, a death or falling in love. The exact role they play, however, is another question. For the time being, try to accept that we do not have a satisfactory answer.

### *Can I still drive a car?*

In most countries the law requires people with a serious mental disorder to report it before they start driving a motor vehicle. In order to obtain insurance, a statement to the effect that you are capable of driving a vehicle must be submitted to the insurance company. The decision to issue the statement (the issuing body varies from country to country) is based on the severity, duration and course of the disorder. The type of medication, the dosage and side-effects, if any, are also taken into account. You should discuss the matter with your doctor.

### *Could my children also have a psychosis?*

That is a very difficult question, which, again, cannot be answered conclusively. There is evidence suggesting that vulnerability to psychosis can be passed on from parent to child. The more people there are in your family with a psychotic disorder, the greater the risk of your children developing a similar disorder.

The severity of the disorder and the lack, as yet, of any means of completely curing someone of it, must be weighed carefully against the wish to have children and the risk of saddling the next generation with it. If you want children, talk it over with your partner, doctor or caregivers.

### *Will I ever get better?*

Doctors are not magicians and antipsychotic drugs are not miracle cures. Psychoses and schizophrenia still present a puzzle. We now know a lot more than we did 10 years ago and we know what medication and therapies we can use to help people like you. Many people with a psychosis succeed in leading a productive life. About 9 patients out of 10 who experience a first psychotic episode recover if they receive the appropriate treatment. The greatest risk lies in stopping your drug treatment or skipping doses. Between 70 and

80% of patients fall ill again for this reason in the first two years after recovery. If a decision is taken to end your drug treatment, this must be done slowly and under close supervision by your caregivers. In many cases a maintenance dose is prescribed, which is lower than the dose used in an acute psychosis.

Try to follow the advice and instructions of your doctor as closely as possible in every respect, including medication. Don't be afraid to discuss your problems openly with your caregivers. They are there to help you. Together with them and your family and friends you can go very far and make recovery possible.

*If I am hospitalised, how long will I have to stay in hospital?*

The majority of patients who are admitted with a diagnosis of psychosis leave the hospital fairly quickly - 68% within a month. And by 3 months the figure reaches 86%. In most cases, therefore, hospitalisation is necessary but temporary. Optimal care, rest and counselling are continuously available in hospital. It is the ideal place for starting treatment. The family can be involved in the treatment, and after-care and outpatient treatment can be worked out carefully.

The problem cannot always be handled so swiftly, however. There is a small group of people with schizophrenic psychosis who require prolonged care in a residential setting. These are people who are so disabled by their condition that they cannot function without permanent care.

*Should I tell other people about my illness?*

That is an important and difficult question. It comes up when you want to start a relationship or when you make new friends or go for a job interview. Many people with a psychosis try to hide their former psychiatric problems for fear of being rejected.

It is an undeniable fact that psychoses are poorly understood and therefore frighten many people off. This fear is expressed in the form of a negative and distant attitude. The stigma associated with mental illness in general, is very pronounced with psychoses. Try to protect yourself against such negative attitudes by learning about your illness and practising, together with your caregivers, how to react. Here too, frankness and honesty are sometimes the best policy.

Much depends on how sure you are of your ground. Discuss the problem with someone you can trust. The essential question is: have you regained enough self-confidence to deal with rejection if that's the way things play out?

*Did street drugs cause the problem?*

A psychosis is caused by a number of things. These include your own vulnerability and the stress you are under. But there is now little doubt that some street drugs may be the trigger for the first breakdown and can lead to further breakdowns if you continue to take them. If you have had a psychosis it is wise to avoid all street drugs, especially cannabis, crack and amphetamines.

## IT'S YOUR LIFE

And it's in your hands. A psychosis changes your outlook on life, the way you feel, the way you think, your perception of things. A psychosis, however, is not all pain, suffering and confusion. You are still a creature of flesh and blood; you are still a person with many positive sides and full of potential; and you too are still capable of responding to beauty and simplicity.

When you look at it like this, hearing voices is not necessarily a negative thing. Some patients manage to live with their voices. They can listen to them without being terrorised by them. As long as the voices don't prevent you from coping with people and things, they can lend colour to your life and make it more meaningful.

People who have a psychosis are often very sensitive and have an extraordinary gift for experiencing wonder and awe. That sensitivity, however, may change form and take a downside; nonetheless its positive aspects are quite beautiful. You frequently hear people with a psychosis say that they wouldn't like to be without it.

A number of people with a psychosis have unique ways of thinking that make them good at the arts. There can be a special flair for languages. Some service users are extremely expressive.

What is sometimes called the vulnerability of psychotic people is, in a way, an openness to the world in all its richness. Provided that you don't let yourself be caught out by it, but instead use your sensitivity as a guide in a confusing world, you can go quite far in life.

Because of all of this it is clear that not every psychotic symptom needs to be brought under control at any price. The important thing is that you learn how to organise your life so that it is meaningful to you. For this, help is available in the form of medication and people who are qualified to offer you support and guidance. It is in your interest to make use of them to overcome your anxiety and confusion and get back your mental stability. In this way you may succeed in making sense out of the nonsense.

<http://www.nami.org>

Web site of the National Alliance for the Mentally Ill. Provides information on NAMI resources and up-to-date information on treatments and political issues related to mental disorders.

<http://www.mentalhealth.com>

English language site with a wealth of sound information on mental illnesses and related disorders. It is a freely accessible internet encyclopaedia on mental health. Schizophrenia is one of the key subjects. Here you will find more information on causes, treatment, drugs and research.

<http://www.psychiatry24x7.com>

A informative website on mental illness for consumers and professionals with round the clock news feeds. It contains background information on different psychiatric disorders and self-assessment tools. Site sponsored by Janssen-Cilag, a company that produces medication.

<http://www.rethink.org>

Rethink is the new operating name of the National Schizophrenia Fellowship (NSF). Its aim is to help people suffering from severe mental illness, including schizophrenia, to recover to a better quality of life. The focus is the British situation but the site contains much information which is applicable elsewhere. There is also an online quiz and interactive game.

<http://www.schizophrenia.com>

Non-commercial site with information on psychosis and schizophrenia as well as a bulletin board and discussion areas.

<http://www.eppic.org.au>

EPPIC (Early Psychosis Prevention and Intervention Centre), a site on early psychosis and people who are experiencing their first episode of psychosis.

<http://www.schizophrenia.co.uk>

UK based website on schizophrenia.

<http://www.mind.org.uk>

Official site of MIND, the mental health charity, containing details of MIND's local groups and information line. There is also information on mental illness and treatment.

<http://www.eufami.org>

Site of the European federation of families of mentally ill people.

<http://www.world-schizophrenia.org>

Site of the World Fellowship for Schizophrenia and Allied Disorders.

<http://www.changingminds.co.uk>

Site of a campaign to decrease the stigma of mental illness. Includes useful information and a quiz. It may be a useful place for families and relatives to start searching for other resources.

<http://www.bbc.co.uk/health>

Site of the BBC with a special section on mental health. It gives unbiased information on treatment and also keeps you up-to-date with the latest news and developments.

<http://www.psychoasis.be>

Site of "Psychoasis", a musical project by well-known Belgian musicians and musicians experiencing psychosis. Originated by the authors of this book.

## Brain Chip Lets Victim of Stroke 'Talk' Again

**The Toronto Star, October 21, 1998**

U.S. doctor co-developed the break-through brain device.

Paralyzed man communicates through 'mouse' in his head

By Lori Wiechman  
Associated Press

ATLANTA - A Star Trek-type implant is allowing a paralyzed, mute stroke victim to use his brainpower to move a cursor across a screen and convey simple messages such as hello and goodbye.

Researchers believe it's the first device that allows direct communication between the brain and a computer.

Doctors implanted the device - about the size of the tip of a ballpoint pen - into a 53-year-old man's brain. The device amplifies his brain signals, which are then transmitted to a laptop computer through an antenna-like coil placed on his head.

Like a computer mouse, the brain signals can move a cursor across the computer screen and point at icons with messages such as "See you later. Nice talking with you." The man can also use the cursor to tell others that he's hungry or thirsty.

"It's like we're making the mouse the patient's brain," said Dr. Roy Bakay, one of two Emory University doctors who developed the technology.

Eventually, researchers hope to use the technology to teach patients to write letters, send E-mail and turn lights off and on via computer.

"It opens up a very exciting new chapter in rehabilitation for such patients," said Dr. William Friedman, associate chair of neurosurgery at the University of Florida.

The patient, identified only as J.R., suffered a brain-stem stroke and is dependent on a ventilator at an Atlanta hospital. His brain functions normally but its signals don't reach their intended destination.

Six months ago, Bakay and Dr. Phillip Kennedy implanted a tiny glass cone into the man's brain. A substance that encourages nerves to grow prompted the brain's nerves to link with electrodes inside the cone, forming what Bakay calls "a little brain" in the device.

The electrodes can transmit electrical impulses produced by the

brain to a computer.

To train J.R.'s brain, he was told to think about grabbing a glass. The cone is implanted in an area of the brain that can produce signals designed to cause movement.

Bakay and Kennedy have been testing the technology on animals for 12 years, and Kennedy has patented it.

The first human patient, a woman with from Lou Gehrig's disease, was able to control computer signals for 76 days before she died. J.R. is their second patient, and they have federal funding to continue research another patient.

For more than a decade, some paralyzed people have communicated with a computer program that translates their coded blinking into letters on a screen. J.R. can blink, but "I think he enjoys doing this," Bakay said.

## **Decoding Minds, Foiling Adversaries**

*Information warfare is no longer just about machines; it is also about how users think.*

***By Sharon Berry***

Whether a threat comes from pilot error or enemy aggression, scientists are finding that multisensor mapping and analysis of the brain lead to systems with human-machine interfaces that can correct human error, aid counterintelligence work and guard against attacks.

A technology, known as bio-fusion, combines sensors to examine biological systems to understand how information and neural structures produce thought and to display the thought in mathematical terms. By creating an advanced database containing these terms, researchers now can look at brain activity and determine if a person is lying, receiving instructions incorrectly or concentrating on certain thought types that may indicate aggression.

Mapping human brain functions is not new; however, using multiple components of the electromagnetic spectrum allows investigators to produce a different snapshot of the brain to gain additional insight.

Dr. John D. Norseen, systems scientist for embedded systems, Lockheed Martin Aeronautics Company, Marietta, Georgia, is developing the bio-fusion concept further. "If you went into a hospital and had an EEG [electroencephalogram], it is just telling you if your electrical patterns look fine, but maybe your magnetic components are not functioning properly," he explains. "What I am encouraging is multisensor analysis of the brain--looking at many areas of the spectrum to get a different picture."

After the information is placed in a database, a composite model of the brain is created. "Now, just by getting an EEG, we can begin to interpolate a better hyperspectral analysis," Norseen says. "The model provides us amplified information."

Simple interaction with subjects has been used to test the system. A researcher shows a picture to a person or asks a person to think of a number between one and nine. Information is gathered and displayed on a monitor much like on a television. It shows that the person is thinking about the number nine. The researcher then tells the person to say the same number, an action that appears in another part of the brain, the parietal region. "By looking at the collective data, we know that when this person thinks of the number nine or says the number nine, this is how it appears in the brain, providing a fingerprint, or what we call a brainprint," Norseen offers.

"We are at the point where this database has been developed enough that we can use a single electrode or something like an airport security system where there is a dome above your head to get enough information that we can know the number you're thinking," he adds. "If you go to an automatic teller machine and the sensor system is in place, you could walk away and I would be able to access your personal identification code."

Norseen shares that the defense industry is interested because this type of data is culturally independent information. Worldwide, most individuals process certain information in the same regions of the brain.

Brainprints are unique to each person. While the number nine will appear in the same brain areas of different people, it still occurs as a unique signature of how a person specifically thinks of the number. Biology has the tendency to create things that are self-similar, Norseen says. "The proteins that lay down your fingerprints are the same protein materials that lay down the neurons of the brain," he offers.

He also has been asked by military and law enforcement agencies to show how brainprints can be used to determine probable cause, which could be used for an anti-terrorism situation. "If someone is walking through the airport and he goes through the security checkpoint and we get a feeling that this person is preoccupied with certain numbers or certain thought types that may indicate hostility or aggression we could ask him questions and verify the answers. Then it gives you probable cause to say, 'Sir/Ma'am, may we step aside with you and ask you additional questions?' It allows you to find a problem set within a large group." Norseen is confident that if such a system were fully developed it would be accepted if it meant everyone would be safer at the airport gate. The data he collects may not only show probable cause but also truth verification, he adds. The brain, which uses energy, does not want to expend it needlessly, he says. If someone is telling the truth, it is kept on the outside portion of the brain in low-energy domain areas of the brain. "If someone starts to light up in more areas of the brain and at a higher energy level, it means that the person is now starting to confabulate or obfuscate." Research so far indicates a 90 to 95 percent accuracy rate.

Now that bio-fusion research has developed beyond the initial stages and the database of what, how and where thoughts occur in the brain is mature, scientists are looking at information injection, a contentious issue, Norseen admits. The concept is based on the fact that human perception consists of certain invariant electromagnetic and biochemical lock-and-key interactions with the brain that can be identified, measured and altered by mathematical operations. If researchers can re-create the inverse function of what has been observed, they gain the ability to communicate or transmit that information back--intact or rearranged--to the individual or someone else, Norseen says. "When you get down to the mathematical properties, information injection is beginning to be demonstrated."

The brain is very susceptible to accepting information that is either real and comes from its own memory mechanisms or from injection from an outside source, Norseen notes. "I am sure you have memories of when the lawn was being cut in late summer and of the smell of the chlorophyll," he says. "The chlorophyll would then evoke other memories. I could possibly ping you with a light sequence or with an ELF [extremely low field] radiation sequence that will cause you to think of other things, but they may be in the area that I am encouraging. Those are direct ways in which I can cause the inverse function of something to be fired off in the brain so that you are thinking about it. I have now caused you to think about something you would not have otherwise thought about."

By using information injection, a person could be isolated from a group and made to believe that something is happening, while others in the group are being left alone. Likewise, someone at a command post monitoring information on a screen could be affected. Some experts believe that adversaries now are designing techniques that could affect the brain and alter the human body's ability to process stimuli.

Norseen hopes his work will lead to filters and walls that would block intentional or unintentional corrupted information. "Look at the incident in Japan where a lot of young children were watching a cartoon, and it caused many of them to have cerebral seizures," he explains. "The information that came over the screen showed lights at particular timing and pulsing frequencies and in a certain combination of colors that caused the brain to go into a seizure. If you were alerted, you could slow parts of the video stream or change the timing mechanisms so the stream would not have a negative impact on the brain."

Modifying corrupt information may not always be enough. Norseen compares this type of offensive attack to cyberspace attacks in which viruses infiltrate computers. "Now there's potential for the viruses to affect the video stream," he says. "They can be corrected or defended against, but more complex protective measures would have to be installed. Instead of electronic warfare countermeasures and software virus countermeasures, we're getting into information countermeasures."

Norseen believes his work with bio-fusion and the human-machine interface is revolutionary and that a new set of questions must be asked when looking at the state of information warfare. "We're so concerned with information corrupting our machines that we're spending millions of dollars for our protection against people writing Trojan horses. What about the human side of the human-machine interface? What's happening to the operator?" he asks.

Some experts believe that the information operator is a weak spot in the nation's military assets. Additionally, some developers in the field see Russia, China and several Middle Eastern countries as more advanced than the United States in this area.

"The United States is not behind other countries [in this field]," Norseen argues. "Government leaders are very aware of the information threat to the soldier, but they are concerned about being careful to work on the defensive side. However, other countries may be more interested in the offensive/exploitative side. When we talk about our ability to have information dominance, we know that our machines can be better and faster, but sometimes we underplay what could happen to the operator. We are aware that the enemy is going to go after the mind of the operator to bring down the system, not by corrupting the machine but by corrupting the individual soldier or decision maker."

One of the challenges of addressing the human side of the human-machine interface is creating quantitative means to measure the impact of information on the human brain and neurophysiology. "We're looking at incidents such as Columbine or teenagers playing games like Doom," he says. "How are they being influenced negatively? There have been no quantitative measures like what I've been developing. When we can show that, we can identify more ways to protect the human side of the human-machine envelope."

Bio-ethics specialists are reviewing bio-fusion and its applications, specifically neural emulation software. Rather than involving a human, the software captures human mental activity and can be tested against psychological attacks. Software corrections and builds then would be put in place to protect users. "Our ethics people are excited about this because this is a way to protect people without subjecting them to experimentation," he says.

Synthetic reality is another approach to protection. "If I pick up a phone right now, is it a person I talked to or a recording of the person's voice? Or was it synthetically generated?" Norseen asks. Scientists can look at components of a personality in a software application, select certain components of the personality and create a synthetic person. "We can look at 150 things that Joe Smith, a special forces agent, does. He smiles 20 percent of the time. He has a tick in his eye. We can extract those features and create mini-morphs of him--we create identical Joes on the computer. I want to communicate with Joe about secret information, but I want

other parts of my system to communicate with avatars of Joe. If someone tried to find our communication, they would have to sift through a lot of other communications that looked an awful lot like Joe. I would bury Joe in the noise of himself."

Scientists have found that human errors also could possibly be corrected using external means. A recent discovery determined that error correction coding parameters of the brain involve the globus pallidus, a powerful error correction mechanism. When people consider a decision, they visualize it and talk to themselves and send it to the kinesthetic nerve to say, "Do you feel good about this?" Then it comes back through the globus pallidus for one more visual look, and people decide to do it or not do it--a go/no go decision. "If we proceed and do something that is in error, our globus pallidus comes into play," Norseen notes. "It is connected to the kinesthetic nerve, which is ineffable. It can't talk to the 'talk' areas of the brain, but it can send signals that go back through the stomach, and that's why you get that sick feeling in your stomach. Something's wrong here."

For example, a pilot in the cockpit and the aircraft's system both may hear an instruction, "Come right 90 degrees." The human hears the instruction, but the brain may actually have heard 80 degrees. "Even though the pilot may confirm 90 degrees, the system can see that the person actually misunderstood," Norseen notes. "The machine can say, 'I'm monitoring you and even though you said you're coming 90 degrees, your brainprint analysis indicates that you only understood 80 degrees. I request you come an additional 10 degrees so we're in compliance with the overall command of the system.' If we can show the globus pallidus 'go/no go' display of error correction, we can create a checklist that says, 'Am I in accordance with the globus pallidus?'" Today, more than 70 percent of all accidents are caused not by the machine but by humans using information incorrectly, Norseen says.

Many of Norseen's ideas are still in early development. "As the areas of the brain that reflect behavioral components of the human are identified and understood, and as the software components are laid down, I can begin to conduct tests on the synthetic human without using a real human," he says. "I can find out more things about the human now in a year than it took me in the past 10 years ¼ where I can actually launch a truth verification system or a knowledge warfare protection system. To do what? Enhance, strengthen and protect the human side of the human-machine interface in any domain, any weapon system," he concludes.

# Highlights of CBS 60 Minutes Featuring Brain Fingerprinting

**Mike Wallace**

**December 10, 2000**

[Microsoft Word Format](#)

MIKE WALLACE: Tonight, an improbable story about a revolutionary new technology called Brain Fingerprinting that has caught the interest of both the CIA and the FBI. It is the creation of Dr. Larry Farwell, a scientist from Iowa, who says that by analyzing the brain waves of a criminal suspect, he can tell whether or not that individual has committed a crime. Dr. Farwell believes Brain Fingerprinting could one day be as effective as DNA in helping police investigate crimes, and in helping free those who have been wrongly convicted.

DR. FARWELL: The fundamental difference between an innocent person and a guilty person is that a guilty person has committed the crime, so the record is stored in his brain. Now we have a way to measure that scientifically.

MIKE WALLACE: For more than a decade, Dr. Farwell has been developing his Brain Fingerprinting technology, since getting his PhD in Biological Psychology from the University of Illinois. Brain Fingerprinting. What is it, Dr. Farwell?

DR. FARWELL: Brain Fingerprinting is a scientific technique for determining whether certain information is stored in the brain or not by measuring brain waves, electrical brain activity.

MIKE WALLACE: Farwell says that when the human brain recognizes important information, it triggers a specific electrical signal called a MERMER that can be measured and analyzed.

DR. FARWELL: When you recognize something, there's certain information processing that takes place in the brain at the moment of recognition. And that's the information that we pick up.

MIKE WALLACE: And since our brains keep a detailed record of everything significant that we do, Dr. Farwell believes police could use his technology to determine whether a suspect has some hidden knowledge about a crime.

MIKE WALLACE: Here is how it works: A suspect, like this man about whom

you'll hear a good deal more later, sits in front of a computer wearing a headband equipped with special sensors. Words and pictures flash briefly on the screen. Some of those words and pictures are relevant to the crime, say for example, the name or the photograph of the victim, or a photo of the murder weapon.

DR. FARWELL: If he committed the crime, then his brain says, "Ah ha! I recognize that." We get a brain wave response indicating recognition, we get a MERMER, and that way we can tell that this is the person who committed the crime.

MIKE WALLACE: What if the fellow was a witness to a crime and he saw all of these things happen, but he was not the criminal?

DR. FARWELL: Well, then we would not be able to apply this technology. It is the same as if, for example, someone might be present at a crime scene and leave his fingerprints there, but because he was there for some other purpose.

MIKE WALLACE: Dr. Farwell's research has been funded by the CIA, which has given him more than a million dollars, and the FBI is also interested in Brain Fingerprinting and has allowed Dr. Farwell to test his technology at the Bureau's training academy in Quantico, Virginia.

DR. FARWELL: The goal was to see if we could determine who was an FBI agent and who was not by measuring their brain responses. So in that case, we flashed words or pictures that were relevant to the FBI, that would be known only to FBI agents, and we were able to tell with 100% accuracy who was an FBI agent and who was not.

MIKE WALLACE: Results like those are also generating interest in brain fingerprinting on Capitol Hill. Republican Senator Charles Grassley of Iowa has asked the General Accounting Office to study Farwell's technology to see if it should be federally funded.

SENATOR CHARLES GRASSLEY: It seems to me that if we are interested in making sure that the innocent go free, and that the guilty are punished, any technological instrument that can help us make a determination of guilt or innocence, we ought to know about it.

MIKE WALLACE: Well, there are people who say, you know, this is junk science and why fund it.

SENATOR CHARLES GRASSLEY: You could have raised the same questions about fingerprinting 50, 60, 100 years ago. Within the last 20 years you could have raised the same issue about DNA. But the scientific process takes care of all this, as far as I am concerned.

MIKE WALLACE: But taking care of the legal process is another matter, for brain fingerprinting has never been tested in court. So Dr. Farwell is using a 23 year old murder case in Iowa to try to prove to a judge that his technology works.

MIKE WALLACE: On a June morning back in 1977, retired Police Captain John Schweer was found shot to death on the railroad tracks in Council Bluffs, Iowa. Schweer had been working as a night watchman guarding several car dealerships in the area. After a four month search, 16 year old Terry Harrington was arrested and eventually convicted of the murder.

MIKE WALLACE: Today, 23 years later, Harrington is still in the state penitentiary in Ft. Madison, Iowa, serving a life sentence without the possibility of parole.

TERRY HARRINGTON: They took my life from me when I was 17 years old, you know, allowed this to be done to me. You know, after 23 years I'm still here for something that I did not do.

MIKE WALLACE: Since the day of his arrest, Harrington has maintained his innocence. When they arrested you for murder...

HARRINGTON: I was devastated, because I know I did not commit the crime, I knew that I had nothing to do with the crime, and it was just one of the worst feelings that you can possibly imagine. You know, I was enrolled in college when I was arrested in September. You know, and to have all of that taken. Excuse me for a minute. (tears)

MIKE WALLACE: I can imagine.

HARRINGTON: You know, just to have all of that taken away from me.

MIKE WALLACE: Harrington has filed several appeals in his case. All have been rejected. So this year when he heard about Brain Fingerprinting, he decided to file a new appeal and contacted Dr. Farwell.

DR. FARWELL: One of the first things he said to me was, "I didn't commit the crime. I've always maintained my innocence, and I'll do anything to prove it."

MIKE WALLACE: In order to Brain Fingerprint Terry Harrington, Dr. Farwell had to learn all he could about the murder. The state's case against Harrington rested primarily on the testimony of this man,

Kevin Hughes, who said he had gone with Harrington to Council Bluffs the night of the murder in order to steal a car.

HARRINGTON: Blatant lie. I was not in Council Bluffs that night. He knew I was not in Council Bluffs that night.

MIKE WALLACE: But he testified that he saw you go into the car lot in order to steal a car, and that he heard a shot, and then he saw you running from the crime scene with a gun.

HARRINGTON: Yes.

MIKE WALLACE: Why would Kevin Hughes lie?

HARRINGTON: That is the question I wanted to know. I still want to know. I was not in Council Bluffs. I had a concrete alibi.

MIKE WALLACE: On the night of the murder, Terry Harrington says that he was here in north Omaha, some 20 miles away from the crime scene. At the time, this was an amusement park and Harrington and a few friends were here attending an outdoor concert that ended after midnight. Several witnesses, among them Harrington's high school football coach, testified under oath that that night they saw Harrington at the concert. And when the concert

ended, Harrington says he and his friends got something to eat, drove around awhile, and then they went home.

MIKE WALLACE: To determine where Harrington actually was on the night of the murder 23 years ago, Farwell tested him on specific details about his alibi and about the crime.

DR. FARWELL: Kevin Hughes testified at the trial, and Harrington heard this, that he saw Harrington and another perpetrator running out from behind a building. Now I asked Harrington, "Do you know what was behind that building?" He said, "No." I said, "So you don't know what's behind there?" He said, "No, I have no idea what's behind there."

MIKE WALLACE: Behind that building was a field which was overgrown with grass and weeds that were about waist-high. After the shooting, police say that Harrington ran across that field to get to his car.

DR. FARWELL: At 3:00 in the morning, getting away from a crime scene, if you were being impeded by waist-high weeds and grass is something you would notice.

MIKE WALLACE: So on Harrington's test the phrase "weeds and grass" flashed repeatedly on the screen, as did phrases describing other details of the crime which, if Harrington recognized them, says Dr. Farwell, would prove that he killed John Schweer.

DR. FARWELL: The brain never lies. If that information is stored in the brain, when that comes up in the screen, he'll recognize it, whether he's an honest person or not, whether he wants to or not.

MIKE WALLACE: What were the actual results of Harrington's Brain Fingerprinting test?

DR. FARWELL: The result was that we can determine with a 99.99% confidence that the information relevant to the crime was not stored in Harrington's brain, and with that same level of confidence, that the information regarding his alibi WAS stored in his brain.

MIKE WALLACE: Do you believe that Terry Harrington is innocent?

DR. FARWELL: My professional opinion is that Harrington did not commit that crime.

MIKE WALLACE: To find out what other scientists think of Dr. Farwell's technology we talked to Dr. William Iacono at the University of Minnesota. Dr. Iacono is a Professor of Psychology and Neuroscience, and he's considered a leading expert in the field of psychophysiology.

Of course, a lot of folks are skeptical that just flashing a word, or a couple of words, or pictures, are going to determine a person's innocence or guilt.

DR. WILLIAM IACONO: It's natural to be skeptical, but the fact is that the basic procedure that Dr. Farwell is using is supported by literally hundreds of studies that show that our brain produces a response like this, and he's done research in this area. I've done research in this area, that shows that people do, in fact, recognize this kind of information.

MIKE WALLACE: So what you're saying is that Brain Fingerprinting actually works?

DR. IACONO: There's a solid scientific basis for it. Yes.

MIKE WALLACE: But while Dr. Iacono says Farwell's tests on Harrington are compelling, he will not say they prove Harrington is innocent. That decision, he says, is up to a jury.

DR. IACONO: And if the jury says "I think the person who committed this crime should have known this information," then I think the jury should decide that he did not commit this crime.

MIKE WALLACE: But before a jury decides anything, Harrington's lawyers must convince Iowa District Court Judge Tim O'Grady that Harrington deserves a new trial. And to do that, they are relying on what they say is new evidence in his case, including Harrington's Brain Fingerprinting test results...

MR. CLEARY: ...I think as the science and the technology develops, I think that with the concern that's been expressed by the public for unjust convictions, people that are actually innocent, I think that in those situations, the courts may be more willing to look at developments in technology such as this to try to assist them.

MIKE WALLACE: So it'll be used more for exoneration than for nailing a suspect?

MR. CLEARY: I think that's probably going to be where its usefulness is going to be most successful.

MIKE WALLACE: So what impact does Cleary think Brain Fingerprinting might have on Harrington's appeal?

MR. CLEARY: I think that it would be something that would show some support for Terry's defense and his alibi.

MIKE WALLACE: What do you expect is going to happen with Harrington?

DR. FARWELL: If there's any justice in the state of Iowa, now that we have proven that he is innocent and we have also removed...

MIKE WALLACE: Wait. You've proven, according to YOUR science, that he's innocent.

DR. FARWELL: What we have proven scientifically is that the record in Harrington's brain does not match the crime, and does match the alibi. Now the only reasonable interpretation for that scientific fact, in my professional opinion, is that Harrington was not at the scene of the crime on the night of the murder. So if there is any justice in the state of Iowa, Harrington will be exonerated.

MIKE WALLACE: Later this month, Judge O'Grady is expected to issue his decision as to whether Terry Harrington should be granted a new trial. Until then, we won't know if Brain Fingerprinting might take its place next to DNA and traditional fingerprinting in solving crimes and in freeing those who have been wrongly convicted.

Mike Wallace.

Remote control brain sensor

Brain activity as the eyes are opened and closed.

Scientists have developed a sensor that can record brainwaves without the need for electrodes to be inserted into the brain or even placed on the scalp.

They believe the new sensor will lead to major advances in the collection and display of electrical information from the brain - and could even be used to control machines in a more effective way than is currently possible.

Conventional electroencephalograms (EEGs) are collected either by inserting needle electrodes directly into the brain or by fixing electrodes to the scalp.

This process often leads to trauma, so that it may be necessary to remove some of the patient's hair.

In addition, the process of attaching conventional electrodes may lead to skin abrasion and irritation.

Now a team from the Centre for Physical Electronics at the University of Sussex has developed a far more user-friendly technique.

From a distance

Instead of measuring electric current flow through a fixed-on electrode, the new method takes advantage of the latest developments in sensor technology to measure electric fields from the brain without actually having to make direct contact with the head.

Lead researcher Professor Terry Clark said current imaging techniques were very good at providing information about fixed anatomical structures in the body.

But it had proved more difficult to find ways to monitor the body's ever-changing electrical currents - the information that was needed to gain a real insight into the electrical workings of the body.

It is a new age as far as sensing the electrical dynamics of the body is concerned

Professor Terry Clark

We deal with patients who have Alzheimer's disease and schizophrenia who often have delusions about electrodes in their head

Professor Tonmoy Sharma

He said the new system provided a way to do this effectively, and because it was non-invasive it was completely safe, and more accurate because it did not interfere with the electrical fields generated by the body.

Professor Clark said: "It is a new age as far as sensing the electrical dynamics of the body is concerned, like seeing in colour for the first time.

Many possibilities

"The possibilities for the future are boundless.

"The advantages offered by these sensors compared with the currently used contact electrodes may act to stimulate new developments in multichannel EEG monitoring and in real-time electrical imaging of the brain.

"By picking up brain signals non-invasively, we could find ourselves controlling machinery with our thoughts alone: a marriage of mind and machine."

The same group of scientists has already made remote-sensing ECG units which can detect heartbeats with no connections at all.

Professor Tonmoy Sharma, a neuropsychologist at the Clinical Neuroscience Research Centre at Dartford, Kent, said a device to measure electrical activity in the brain without the need for electrodes would potentially be very useful.

"We deal with patients who have Alzheimer's disease and schizophrenia who often have delusions about electrodes in their head, and who refuse treatment.

"A non-invasive method would allow us to monitor the effects of drugs on the brain over time, and to tailor treatments more effectively."

# **Nonconsensual Brainwave and Personality Studies by the U.S. Government**

I am a survivor of ongoing mind control experimentation by the U.S. government since 1989. I would like to prevent victims from experiencing much of the pain that I went through by telling my testimony within the framework of background information and history on government weapon testing programs, especially radiation experimentation. I would state the same testimony under oath in a Congressional hearing or in a court case. I first learned of microwave harassment and mind control experimentation from Julianne McKinney, director of the now inactive Electronic Surveillance Project. This is an overview and does not include the unsavory details as the point is to recognize the general pattern of experimentation. It will greatly help your understanding of this paper if the preceding [\*Research Possibilities\*](#) list of reputable newspaper and magazine articles on behavior control weapons is read first.

I would challenge the reader to recognize the "plutonium vitamin pill" of mind control technology before the U.S. government admits to its use. This paper is attempting to describe something that the reader is not familiar with. This is critical to keep in mind so that this paper will communicate on the basis of accepted reality.

## **BACKGROUND INFORMATION AND HISTORY OF GOVERNMENT EXPERIMENTATION**

The Congressional Record states that the U.S. government had been involved in mind control experimentation from the 1950s up to the early 1970s.<sup>1</sup> These illegal behavior control experiments are similar to the documented illegal radiation experiments. The U.S. government currently denies that there is ongoing classified behavior control experimentation. This is debatable and in my opinion will some day be as undeniable as the radiation experiments are today.

There were at least 23,000 radiation victims of institutionalized unethical experimentation.<sup>2</sup> There are similarities between radiation and mind control experimentation because the government bureaucracy is the same, the groups of victims are the same and it involves weapon testing. But unlike the atomic bomb, the U.S. public is not aware of the highly classified behavior control weapons. This fact contributes to the difficulty that victims have in exposing the experimentation.

The purpose of U.S. government research with electromagnetic frequencies and computer-brain interface technology is to develop mind control weapons that meet or surpass the enemy's mind control weapon program, in particular Russia. The U.S. military's interest in controlling behavior and in using this on its enemies in future warfare is well documented.<sup>3</sup> The lethal doses and parameters of radiation were explored and now the limits of computer-brain interface and emf technology are explored in the same unethical way. And by using unwitting victims, experiments are conducted without limits of human subject experimentation committees.

There are strong indications that electromagnetic frequency (emf) behavior control weapons and electronic warfare has been a classified area of research since at least the 1960s<sup>4</sup>, that there are highly classified international agreements to control its use, that it is being tested on unwitting human subjects and that there is an active government program to cover up the whole situation. Recently, there have been several articles published on nonlethal weapons, emf weapons, and mind control in the U.S.<sup>5</sup>

And in the last five years there have been several articles in mainstream publications about the Russian mind control technology and emf.<sup>6</sup> And several reliable sources confirm that the cover up involves government policy such as the CIA refusing to release this information to the Radiation Advisory Committee. Glenn Krawczyk wrote in *Nexus*, Vol. 2, No. 22, Oct-Nov 1994, that the CIA used a trick of terminology to disguise the development of microwave weapons in the 1977 Congressional hearings on CIA behavior control programs and has done the same thing with the Radiation Advisory Committee in 1994.

Another example: two top scientists in emf research have discussed government harassment. Dr. Puharich, well-known for emf and previous government work, described that his house was burned down and he was shot at for discussing emf technology and its development.<sup>7</sup> Dr. Becker, the author of *Body Electric* on emf, also lost government funding and discussed other examples of harassment by the U.S. government.<sup>8</sup>

"The Soft-Kill Fallacy" by Steve Aftergood and Barbara Hatch Rosenberg in *The Bulletin of Atomic Scientist*, Sept/Oct 1994 p. 45 stated that discussions under the Certain Conventional Weapons Convention on electromagnetic weapons, including weapons that interfere with mental processes and modify behavior and emotional response, may lead to protocols to control their use. The fact that behavior control weapons are in the public eye officially could mean that the government wants to use these weapons and may not be able to control their use enough to keep the emf weapons a secret.

## **WHAT MIND CONTROL EXPERIMENTATION IS**

It is probable that classified computer-brain interface research has had a highly advanced technological leap similar to the pattern of the development of the atomic bomb weapon program. Many documented articles support this claim.<sup>9</sup> It has been fifty years since the development of the atomic bomb and there have been major advancements in science, satellite technology, computers and information. In my case, mind control experimentation is the use of military electromagnetic frequency technology on human subjects in order to develop

baseline studies of the brain, including brainwave studies and the study of personalities. As in radiation experiments, the lethal doses and the limits of the technology are explored and the experiments are inhumane. Mind control experiments are conducted as a result of development of behavior control weapons and are, like the radiation experiments, examples of science at it worst. Weapon testing programs are designed to disable and kill the enemy and therefore the experiments are also designed to destroy.

There are over 500 documented cases of victims in the U.S., 1 million alleged victims in Russia and cases in Germany, England, Canada, Finland, and South America.<sup>10</sup> A few of the main similarities between victims are as follows. Women, prisoners and mental patients are a few of the powerless groups targeted in U.S. government experimentation. Most of the victims describe long term experimentation, some over 30 years. All ages, socioeconomic and political groups are represented in mind control experiments.

This is a wide area of research and there are probably many umbrella projects to test many different parameters of behavior control weapons. Government experimentation with behavior control technology is based on psychological principles of war. For example, multiple personalities are thought to be caused by traumatic experiences. To determine how to control and destroy people, the experiments are designed to reliably create multiple personalities, (as in Project Monarch)<sup>11</sup>. Victim's testimony matches this fact.

The U.S. government is using mental illness as a cover-up of mind control experimentation. Many of the experiments are designed to mimic mental illness. For example, the mental illness diagnosis manual for psychiatrists states that the mentally ill patient put unusual meaning or interpretations into normal objects. The experimenters can engineer visual and audio patterns and change the amount and timing of any environment in a specific way to make the victim see what a mentally ill person would see. In my case, I have videotaped evidence of this effect. A report by a university statistics professor confirmed an extremely high amount of red and white cars on two separate occasions when compared with normal car color populations.<sup>12</sup>

With no meaningful evaluation, mental illness is the given explanation for the million plus victims. The concurrent development of technology, the U.S. government's history of involvement in mind control experiments and their motive to research this area can also strongly support the fact that these are victims of government experimentation. Further investigation of this situation is necessary rather than dismissing it as mental illness.

## **RADIATION AND MIND CONTROL VICTIMS:**

### **THE SAME DILEMMA**

I and most survivors have not able to obtain help. This is typical in government cover up situations. And because of the nature of the technology itself, any efforts to stop the experimentation can be sabotaged with the mind control technology itself. I have gone to the police, lawyers, private investigators, newspapers, magazines, organizations such as the ACLU, government agencies such as the U.S. Attorney General, Congressman Glenn,

Kennedy, Feinstein, Sharp and more. The answers vary from "you are crazy"; "you have to know the source of the experiment and have monitoring equipment evidence"; "we don't handle cases such as this, it is out of our area of expertise"; to no reply, or "we are aware of the situation but it will take years and over \$100,000 to pursue in court," and many other ways of saying no.

Victims also cannot get around the unavailability of necessary government documents classified under the National Security Act. There is documented evidence that the superpowers have developed mind control weapons and that the use of these weapons are classified and controlled by the National Security Act. In the meantime, the government system is failing the mind control victim in the same way that it failed the radiation victim. I use what tools that I have, such as research of open literature and networking, a painfully slow process.

At this point, none of the victims, singly or as a group have the funds to stop the experimentation. I do not have the funds to rent or buy signal analyzers to document signals that the government would surely cover up or jam. Some victims have documented some unusual signals, but it is such a small piece of evidence and is not directly tied to the government source. The evidence has been ignored or discounted. I am currently organizing a group of victims to be monitored by experts. Another group is also organizing.

Victims work with their meager resources against a formidable foe. There is only one successful court case of mind control experimentation against the government and it was settled out of court. There was small compensation to a few of the victims.<sup>13</sup> Until I can document in other more scientific ways, I am documenting with videotapes and comparing them with normal tapes or accepted statistics. Then it is evident that certain patterns in the environment are unusual in timing and amount and statistically relevant and this is another small piece of the mind control picture.

Experts are necessary to verify information for court cases and Congressional hearings. Videotape evidence and other mind control experimentation evidence does not directly tie the U.S. government to my allegation and therefore is not accepted by courts, congressional hearings, or UN complaints. There are many other basic and also complicated reasons for the government system and its failure to help victims in any significant way. The system obviously needs to be changed.

By combining relevant facts with the testimony of victims, the conclusion about mind control experimentation is becoming clearer. I am networking with close to 75 victims. Based on my experience, several victim's testimony, and literature on mind control topics, it is logical to deduce that I am one of many hundreds of victims. Fortunately, documentation of behavior control weapons is increasing and the documentation matches previous and current testimonies of victims. But, so far it is too little, too late. This is the harsh reality of the situation.

This is a lengthy description, but certain issues must be emphasized in order to survive normal skepticism that occurs when documented facts are missing. Why for example, did radiation experiments occur after the Nuremburg trials and why is mind control experimentation occurring in 1995? Reasons include; that evil such as the Auschwitz experiments did not end with the Nuremburg trials; that the National Security Act increased the odds that radiation

experiments could occur; and in 1995, there is no meaningful deterrent for the actions of radiation and mind control "scientists".

## REMEDIES AND SOLUTIONS

Government experimentation is illegal and is an abuse of U.S. constitutional rights. One solution would be funding that would match the U.S. government's resources. Or it will take someone such as Hazel O'Leary of the Department of Energy who called for an investigation of radiation experimentation<sup>14</sup>, to start an investigation of the mind control experiments.

Another possibility may be an accident in which the technology is exposed. Or time will pass, such as ten to twenty years, after which the technology will become public knowledge. Then there will be enough victims who come forward and protest. It would be an indication of man's humanity if the mind control scenario could be changed.

For further information and networking, I can be reached at [welsh@calweb.com](mailto:welsh@calweb.com). Comments are appreciated.

**By Capt Paul E. Tyler,MC,USAF**

### **POTENTIAL MILITARY APPLICATIONS OF EMR**

The exploitation of this technology for military uses is still in its infancy and only recently has been recognized by the United States as a feasible option. A 1982 Air Force review of biotechnology had this to say: Currently available data allow the projection that specially generated radio frequency radiation (RFR) fields may pose powerful and revolutionary antipersonnel military threats. Electroshock therapy indicates the ability of induced electric current to completely interrupt mental functioning for short periods of time, to obtain cognition for longer periods and to restructure emotional response over prolonged intervals. Experience with electroshock therapy, RFR experiments and the increasing understanding of the brain as an electrically mediated organ suggested the serious probability that impressed electromagnetic fields can be disruptive to purposeful behavior and may be capable of directing and or interrogating such behavior. Further, the passage of approximately 100 milliamperes through the myocardium can lead to cardiac standstill and death, again pointing to a speed-of-light weapons effect. A rapidly scanning RFR system could provide an effective stun or kill capability over a large area. System effectiveness will be a function of wave form, field intensity, pulse widths, repetition frequency, and carrier frequency. The system can be developed using tissue and whole animal experimental studies, coupled with mechanisms and waveform effects research. Using relatively low-level RFR, it may be possible to sensitize large military groups to extremely dispersed amounts of biological or chemical agents to which the unirradiated population would be immune.(1)

Excerpt: "About ten years ago in 1976, no I'm sorry early 1977 I made the basic measurements which showed the elf nature of elf coming from Russia and that it was psychoactive, that was my finding and I deduced the chemicals that were released by the frequencies that were being used and I passed that information onto every intelligence agency we have in this country from the president on down and England and Canada and all I got was four years of harassment. My house was burned down, I was shot at, they tried to kill me, they tried to eliminate me, etc., etc., and finally they agreed I was right and in 1981, the U.S. government went into full scale elf warfare and set up all their big transmitters down under in Australia and Africa so on and so on and now their in business and everything's classified and you can't say a god damned thing about it, a tough situation. And you can't get any real information out of any government agency. And I know all of them that do the work. I know the people who head the projects etc. When they're in trouble, they usually come ask me. And they classify what I tell them. Insanity."

## **The Burzynski Breakthrough**

**by Thomas Elias**  
**ISBN: 0938530666**

On the January 25-26 Coast to Coast AM show, Barbara Simpson host, the guest was author/journalist Thomas Elias, author of "The Burzynski Breakthrough". This book tells the story of Houston TX Dr. Stanislaw Burzynski's battle with the courts and the FDA to get his cancer cure drug, 65% success rate with some cancers, into the public domain to save lives.

Every step of the way, the doctor has been harassed and hauled into court, but now after more than a decade of fighting and \$1.5 million, half donated by his PATIENTS, to cover legal expenses, at least he is free to conduct extensive life saving clinical trials out of his Houston office, and saving many lives.

He has treated 'thousands' so far. The idea is, the patient gets training by his staff at Houston, then goes home and continues the drug under the supervision of a local doctor.

For 13 years the government has known about his success and kept it under wraps, presumably (what I inferred from the show's dialogue) because it wasn't one of the "favourite big drug companies" that developed it. The book's author termed this as "bordering on crime".

His drug is a 'natural substance' and is not toxic to the body. Even for the 35% who eventually died from cancer, this drug (sorry I didn't catch the name in time to remember it and write it down) report that the quality of life was optimum right up to the point of death. NONE of the side effects of chemotherapy.

The book, which can be viewed at this Amazon link:

<http://www.amazon.com/exec/obidos/ASIN/0938530666/ctoc/104-4769852-1942322>

... gives exact success statistics for 72 different types of cancer.

I can tell you from hearing the show on:

<http://www.coasttocoastam.com>

...that brain tumors have yielded excellent success, while malignant melanoma has not.

\* The book can be had most quickly by ordering from the publisher as opposed to Amazon:

# NIH Physician's Statement About Mind Control

April 11, 2002

---

The originals of these letters were made available from, and are posted on:

[Mind Justice Home Page](#)

[CORROBORATING STATEMENT by Dr. Eldon Byrd](#)

---

In the mid to late eighties, while I was a practicing physician, I was working almost exclusively in the field of psycho-neuro-immuno-endocrinology, especially as concerned the new malady, called Chronic Fatigue Immune Dysfunction Syndrome. I had become good friends, Health and Wellness Advisor, and personal physician to US Senator Claiborne Pell of Rhode Island. I had also become very close friends with his Special Legislative Assistant.

It was in the 1987-88 timeframe that I was introduced to an individual of authority in the US Government who talked about a strange new phenomenon. This individual wanted me to meet a special investigative reporter who had been devoting all his time to investigating this new phenomenon. He thought that with my background in the neural sciences and some of the esoteric things I had been aware of in the realm of the physics of consciousness that I might be of assistance both to victims of this phenomenon and to the investigators of it.

He told me that there was significant evidence that the phenomenon was real and viewed by those involved in trying to understand it as very dangerous. He warned me from the outset that many of the scientists who had been close to understanding the technology behind the phenomenon wound up dying from apparent heart attacks. He said that in the opinion of many who had seriously investigated this phenomenon, that it appeared to be as dangerous a threat to humanity as anything ever in history, because it was not yet traceable to a specific source, and that it was so malevolent, that it had the potential to lead humanity to its own destruction.

I was also told that it was not uncommon for those investigating the phenomenon to become victims of it themselves, and that he considered that I should know the risks before volunteering to help. Because of my relationship to the Senator and my commitment to assist in matters affecting the health and welfare of the nation, I felt it was my duty to participate to the best of my ability.

I agreed to meet with the investigative reporter. He came to my office and gave me the first briefing on the phenomenon. I wish to preface my account with the fact that through the succeeding three or four years, I became convinced of the reality of the phenomenon, and in fact did come under attack, although in a manner not typical. What he described was as follows.

The majority of those who were victims of this "technology" would report that they had somehow received an implant of a speaker inside their head. Almost incessantly they would hear noise, as in background noise in a busy room with activity of people and machinery. They would also hear voices addressing them specifically. Often they would be harangued incessantly with exhortations to commit vile acts, such as inappropriate sexual behaviors from homosexual assaults to heterosexual rape and pedophilic acts. They would also experience the emotional accompaniment of these exhortations as urges that were hard to control. Often the urges and thoughts and voices caused the victim to experience tremendous fear and rage. Some of the victims experienced the "loss of time," in which they would be conscious, but somehow missed what happened to them for extended periods, ranging from minutes to hours at a time. They could not account for themselves during these periods.

Some of the victims made the association that these "attacks" coincided with watching television or from working at their computers. A number of victims learned that if they lost themselves in a crowd, they could frequently interrupt the "transmissions." This would lead them often to wander into crowded places in order to get some peace.

Inevitably these people would seek medical attention. The majority of these people had no prior history of psychiatric illness. Their experience of the voices had a sudden onset, and they could pinpoint the time or date the first awareness of these events occurred. Although many would be told that they had a psychiatric illness causing them auditory hallucinations, a number of eminent psychiatrists who studied some of these victims felt that the ones truly victimized by this "technology" did not fall into any psychiatric diagnosis, and that they were not experiencing auditory hallucinations. Quite a number of victims were successful well-adjusted people prior to the onset of the symptoms. Characteristically, all of the content of the voices, which was so perverse, had no reference to past character development in these people.

This reporter, who we will call M, told me that quite by chance, when one physician had prescribed a phenothiazine called Haldol without telling the patient what it was, the voices stopped almost immediately. However, when the patient found out the name of the medicine, the voices resumed. They tried this on a number of other patients, and found the same thing happened. It was as if there was something physiologically relevant to the action of the "transmission" that interfered with it, but if the monitoring agent behind the technology found out what the interfering drug was, it somehow could abort the efficacy.

One has to say, as a skeptic, that an initial placebo effect was eliminated once the patient discovered that the medicine was used for psychiatric patients with hallucinations or psychosis. Yet, one has to wonder why, when Haldol is very effective in eliminating hallucinations with or without the patient's knowledge, why there seemed to be this reproducible escape of efficacy, once the name of the medicine was introduced to consciousness of the victim.

Another attribute of the attackers according to M was their ability to learn of the victim's past medical history. One of the manifestations of the attack often was the reproduction of acute symptomatology that clinically resembled perfectly attacks of genuine disease conditions, such as acute abdominal pain associated with appendicitis, or chest pain associated with myocardial ischemia, of abdominal pain associated with pelvic inflammatory disease. When these people would seek medical attention for these symptoms, however, there would be absolutely no evidence clinically that anything truly pathologic was happening. Again, this

would contribute to the judgment of the health provider that the victim was a "crock," meaning that it was all some form of psychosomatic neurosis.

M declared that his investigation of this phenomenon had taken him around the world. He had interviewed individuals in Soviet agencies, Israeli intelligence, our own CIA, NSA, and Naval Intelligence organizations. He found that many agencies in other countries had become aware of this and other similar phenomena, and although they acknowledged working on technology that could influence thought and feeling of human beings, made the distinction between their efforts and this phenomenon.

M stated that he was not able to get those assurances from the people he interviewed at NSA. I remember a specific instance in which M had gained possession of a copy of a transmission recorded from a victim's television set that was submitted to NSA for analysis. Prior to its submission, other scientists had verified that a very unusual signal had been received by some very special device they employed to monitor this victim's TV set. I was not told the nature of the signal nor was I told anything about the recording device. What he told me however, was that upon submitting it to the NSA, they were never able to get the recording back, nor were they able to ascertain from the NSA official what their findings revealed about the transmission. M was making the association that the victimization process itself could be propagated from person to person. He stated that he felt that even through telephone lines, one victim talking to another person could result in the person to whom the victim was talking become a victim themselves. He also reported that regarding his investigation, it seemed that as he got closer to answers, that the people he would speak to would irrationally shut him off, even after being initially engaged, interested and even participating in the investigation. He believed that the controlling entity or entities could sense when to interfere and actually cause people to block their own perceptions and awareness. M actually came to believe that the scope of interference could actually lead people to do things that were destructive to themselves, like cause their own automobile accidents.

He believed that Senator Pell had himself become an unaware victim of the manipulation of this force. He made this conclusion because of times at which Pell would be seriously engaged with M, it was as if a switch had been pulled and suddenly Pell would disengage, seeming to forget what the conversation was about or that he had any interest in what M was presenting at all. Yet later Pell would again invite M back for further discussion, only to have the discussion interrupted again in the same way. M was convinced it was not simply a distraction caused by being too busy or preoccupied with other things. M also took note of the fact that some of the others he had met along the way with insight into this phenomenon had simply suddenly forgotten its importance. And when reminded by M, they would deny even ever knowing about it. M felt this was a defensive maneuver by the agent or agents behind the "technology."

My wife and I began to notice peculiar things in our own life immediately after M would place a phone call to me. For reasons unknown to us we would start to argue with each other and have very bad feelings toward one another. It became such a pattern that my wife pointed it out to me. I had never told her anything about M or the content of our discussions.

There was an episode that occurred in 1991 on December 17. Things seemed to be very intense with M. One night after a particularly intense discussion with M on the phone, my wife began to experience symptoms of lower abdominal pain. She became extremely weak and felt horribly sick. She recalled that the symptoms were exactly what she had experienced

after sustaining an iatrogenically caused episode of pelvic inflammatory disease, after a tubal insufflation blew a smoldering streptococcal infection in her endometrium into her peritoneal cavity. She had undergone an evaluation for infertility after coming off the BC pill and not getting pregnant after a year of trying. This acute P.I.D. almost killed her and we were told that the residual scarring could mean she would never get pregnant. Notwithstanding the scarring we were fortunate to have three sons after a physician tried her on the fertility pill, Clomid. However, the fact that she had scarring in her peritoneal cavity from that infection was thoroughly documented.

That night the symptoms got worse and worse. I took her to the hospital for evaluation by her OB GYN. He agreed that she had signs of peritoneal inflammation on physical exam, but her blood work was normal. He said we should go home and see what happened. If it didn't improve we were to return in the morning and he would do a laparoscopic examination under anesthesia. As I was leaving the hospital after dropping off her miniscule urine sample, while my wife waited in the car, I had a very unusual experience. It was of a personal nature, but suffice to say that after it, my wife felt better after almost losing consciousness.

We decided that because it was already arranged for her to have the laparoscopy the next morning that we should go ahead with it. We did. We were amazed to hear the results. He doctor said she had the pelvis of a 14-year-old girl. There was no scarring, no evidence of current or prior pelvic inflammatory disease. To this day we do not know what happened to what had been thoroughly documented before. All we know is she never again has had the kind of sharp pains she would get at intervals from the "tearing of adhesions," which always was the explanation for those pains.

Shortly thereafter, I lost touch with M. About a year later I tried to reach him to see how he was doing. I was shocked to find that he was no longer working on this project, but was on to something else. When I said why would you abandon the work you were so fanatically committed to for the sake of humanity, his response was as if he had no idea to what I was referring.

Since then, neither my wife nor myself has had any further personal experience with anything resembling what took place during those years of frequent contact with M. I did see a number of patients who were afflicted with the voices and urges. I never was able to help any one of them.

It has been suggested that this horrible technology is something covertly being used by our government. Although I cannot rule it in or out, I sincerely believe that something real is going on that is not a part of normal physiology to affect these people. Not everyone who hears voices is a victim of this, just as not everyone who is a victim of this hears voices. My experience suggests to me that there is something definitely impacting certain people, perhaps at random, from the outside in.

In conclusion, further scientific investigation like the experiment of Dr. Byrd's for CAHRA to record the voices in victim's heads are needed in order to try to understand the mechanisms that are producing them. I also feel that being able to determine the type of signal itself would add valuable clues to the mechanism of transmission. For example, certain psychoactive properties have been attributed to ELF Electromagnetic signals and microwaves that are modulated with ELF signals. The presence of such signal means that there is a source that is directing them at victims.

It should become possible to test the victim's home and office environments for sources transmitting the signals such as telephones, televisions, and computers. Of course, the signals may be transmitted directly by other technological means, also. If present, the source would be guilty of illegal interference with the victims' civil rights and of experimenting on them without their permission.

Brain imaging techniques are available, such as MRI and PET scans. The MRI is useful for examining brain structure, whereas the PET scan is designed to examine the metabolic activity in the brain. Unless a victim has been subjected to signals that affect the physical structure of the brain, the MRI is of limited value; however the PET scan could determine the difference between internally generated symptoms and externally generated signals. Another useful technique is the multi-channel EEG beam scan that will indicate alterations in the electrical activity of the brain as a function of stimulus.

[CORROBORATING STATEMENT by Dr. Eldon Byrd](#)

**Dr. Eldon Byrd**  
**2002 Letter of Corroboration of**  
**NIH Md. Statement About Mind Control**

---

[Mind Justice Home Page](#)

---

April 27, 2002

To Whom It May Concern The attached Statement On Mind Control, dated April 11th, 2002 was sent directly to me by the author. Given the controversy surrounding mind control, Cheryl Welsh of CAHRA has asked me to substantiate the medical doctor's Statement. The physician does not want to sign his Statement, because he does not want to become involved with victims for whom he has no help to offer.

I am aware of the physicians research work when he was associated with the National Institutes of Health, and I consider it to be of the highest standard. I am also familiar with his Patents and his work in the identification of virus' in small samples of fluids. In my opinion, the statements he has made in his Statement can be taken as true, reflecting facts and events which occurred.

The author is also personally known to me and has related some of the information contained in the document to me on prior occasions. There was no information given to the author prior to his producing the initial document other than to ask if he would write up some of his experiences with mind control. The last two paragraphs were added by the author after he became aware of the experiment I did for CAHRA. He was asked to comment on the experiment without additional input from anyone. I can corroborate the following points contained in the Statement:

I knew Senator Claiborne Pell, his Legislative Assistant referred to in the document, and the investigative reporter also mentioned. I was aware that they were involved in mind control investigations and that they had data that indicated the existence of technology that could be used to effect some sort of mind control. Specifically, I was aware of the photograph of a signal that appeared on an individual's TV screen. I had several meetings with that individual and examined the photograph mentioned in the Statement.

Also, I asked the Legislative Assistant to comment on the physician's Statement. He stated to me: "...what he has written details the events as I recall them, and as we discussed at the time they were going on." He does not want to be identified for the same reason the MD does not want to be identified.

NOTE: The Mind Justice organization, headed by Cheryl Welsh, was at one time "CAHRA" (Citizens Against Human Rights Abuse)

Mind Justice would like to express deep gratitude to Eldon Byrd for his efforts to conduct and report on this experiment. Dr. Byrd had to deal with a 'token budget' and donated numerous hours that added up to days, then weeks of gratis work. He made an open-minded commitment to learn about mind control by attending conferences and meeting with several victims, plus reading extensive background information and documentation. He was forever patient and sympathetic to the numerous pleas from victims for help and relief, never one to judge, concerned that yes, definitely something was going on, deserving of long overdue scientific study.

Dr. Byrd is risking his career by going public with his work; what other scientists are willing to tackle mind control, a subject fraught with national security issues and attempts to keep the subject black. And now, Dr. Byrd has felt that he has done all that he can for victims and MUST go on with his life! PLEASE consider the tremendous effort Dr. Byrd has made and keep in mind his wish to earn real money for his valuable time.

Here is Dr. Byrd's year's worth of groundbreaking study, truly a gift of compassion and sacrifice. Thank you Dr. Byrd!

---

## **REPORT FOR C.A.H.R.A.: A SCIENTIFIC EXPERIMENT TO REPLICATE THE RECORDING OF VOICES THAT TARGETED INDIVIDUALS HEAR**

### **Acknowledgments**

Thanks to Cheryl Welsh and CAHRA for sponsoring the experiment, Henry Dakin for providing spaces for conducting the experiments, Fred Sicher and Dr. Jon Klimo (Professor at Antioch University) for providing the equipment used and their expertise in helping establish protocols and helping conduct the experiment, Eleanor White for the Figures, and to the subjects who traveled great distances and shared their time to be tested in the first serious attempt to bring science into an area containing mostly anecdotal evidence

### **Background**

C.A.H.R.A. (Citizens Against Human Rights Abuse) commissioned me to conduct an experiment in San Francisco, California on February 9, 10, and 11, 2002. The purpose of the experiment was to gather data similar to existing data that indicated it is possible to record voices heard by some victims of mind control. Although it was considered a long shot, because only one victim had been successful in recording the voices, it was deemed worthwhile in case other victims' voices were produced in a similar manner.

The successful recordings were made by Fred Sicher. It took many sessions before the voices became intelligible. They appeared to be mostly children being sexually abused. The recordings were made near, but not on the head. The raw data was amplified by use of a graphic equalizer that reduced the noise, enhancing the intelligibility of the voices.

Although the experiment was not specifically designed to test for the method that might be used to induce voices the subjects reported hearing in or near their heads, it is worthwhile to note that 'microwave hearing' has been reported in the scientific literature.

Dr. Robert O. Becker, in his book, *The Body Electric, Electromagnetism and the Foundation of Life*, 1985, William Morrow Pub. p. 319, states:

"In the early 1960s Frey found that when microwaves of 300 to 3,000 Megahertz were pulsed at specific rates, humans (even deaf people) could "Hear" them. The beam caused a booming, hissing, clicking, or buzzing, depending on the exact frequency and pulse rate, and the sound seemed to come from just behind the head. At first Frey was ridiculed for this announcement, just like many radar technicians who'd been told they were crazy for fearing certain radar beams. Later work has shown that the microwaves are sensed somewhere in the temporal region just above and slightly in front of the ears. The phenomenon apparently results from pressure waves set up in brain tissue, some of which activate the sound receptors of the inner ear via bone conduction, while others directly stimulate nerve cells in the auditory pathways. Experiments on rats have shown that a strong signal can generate a sound pressure of 120 decibels, or approximately the level near a jet engine at takeoff. Obviously such a beam could cause humans severe pain and prevent all voice communication. That the same effect can be used more subtly was demonstrated in 1973 by Dr. Joseph C. Sharp of the Walter Reed Army Institute of Research. Sharp, serving as a test subject himself, heard and understood spoken words delivered to him in an echo-free isolation chamber via a pulsed-microwave audiogram (an analog of the words' sound vibrations) beamed into his brain. Such a device has obvious applications in covert operations designed to drive a target crazy with "voices" or deliver undetectable instructions to a programmed assassin."

Dr. Becker, in a telephone conversation in March 2002, mentioned that he has been contacted by many victims of Mind Control over the past several years. He was adamant that the only way to find out what may be going on with them is to conduct scientific experiments, such as this one.

### An Audio Spotlight Creates a Personal Wall of Sound

By JENNIFER 8. LEE

A person hears a voice in her ear, turns around and sees nobody there. No one else has heard it. Or she hears footsteps in a room, the product of an invisible presence. Is her mind playing tricks on her? Or is it a jokester, F. Joseph Pompei? A 28-year-old graduate student who is part scientist and part showman, Mr. Pompei has invented a device that projects a discrete beam of sound in much the same way a spotlight projects a beam of light.

The audio spotlight, as Mr. Pompei has dubbed it, emits a column of sound enveloped by silence, the way the glow of a spotlight is enveloped by darkness. Someone standing inside the beam emitted from his flat black disk hears the sound loud and clear. Outside the beam one hears silence or, if there are surfaces nearby, faint murmurs from the reflected sound waves. The beams can also bounce off walls to create an impression of the source of the sound. Companies are already dreaming up commercial applications for the beam. Supermarkets and retail stores may beam product enticements at customers. Vending machines may soon talk as people pass by. Dance clubs could divide up a single room into different music zones. Daimler Chrysler is looking into installing sound beams in a truck so that passengers can listen to their own music. The military could use it to confuse enemy troops. American Technology Corporation, a San Diego-based company that makes a similar product, has already sent out evaluations to military contractors, consumer electronic manufacturers and entertainment companies. It has signed a deal with the shipbuilder Bath Iron Works to install the sound beams on the deck of a new Aegis-class Navy destroyer as a optional substitute for radio operators' headsets. As for consumers, Terry Conrad, president of ATC, estimates they will start being hit by sound beams within two years.

Now sound can be personal without any apparatus shielding our ears. Mr. Pompei gets letters and e-mail messages from around the world from people convinced that his audio spotlight is being used on them as a mind control device. People have written Mr. Pompei asking for devices to shield them from the audio spotlight's insidious mind control uses. The sound, reportedly, seems like it is in the person's head.

(See [www.holosonics.com](http://www.holosonics.com))

There is ample evidence from the literature that the military and other organizations and researchers have developed and demonstrated technologies to induce voices in peoples heads. The existence of such technologies provides a rationale for conducting scientific experiments such as this one.

## Hypothesis

The hypothesis that CAHRA wanted to test was that the voices are produced by technological means, and are not the result of mental illness on the part of the victims. The experiment was not designed to test for mental illness. The resources available did not include the ability to detect radio carrier waves that may have been used to target the victims. This experiment was restricted to only the recording of acoustic auditory sound waves near the victims' head.

## Recording Environment and Equipment

Initially, a Faraday Cage was to be available; however, at the last minute it was not, so four spaces were used in an office building in San Francisco. One space was a sound proofed room, another was an open area, the third was an empty office suite, and the fourth was a quiet space (no air conditioning ducts) in a storage area.

Equipment available included the Blue Mouse microphone, two small lapel microphones that were fitted into the Stanton high quality earphones, two microphone preamps, a high quality digital audio tape recorder, an analog tape recorder, the commercially available Tri-field Meter, and a boom box for analog playback. Several trials in the sound proofed room yielded no results, so that space was abandoned.

## Equipment Specifications

### Microphones

Blue Mouse Microphone ([www.bluemic.com](http://www.bluemic.com))

- type: pressure gradient cardioid with 6 micron mylar film diaphragm sputtered with gold
- frequency response: 20-20KHz +/-1db
- S/N: 87db
- sensitivity at 1KHz into 1Kohm: 21mv/Pa
- dynamic range: 96db
- maximum SPL for THD of 0.5%: 134db
- enhancement: parabolic reflector with the BM mounted at the focal point.

### Lapel Microphones

- Unknown specifications

### Microphone Pre-amps

Event Electronics model EMP-1 ([www.eventl.com](http://www.eventl.com))

- type: balanced differential with common mode rejection filter
- frequency response: 20-20KHz +/-0.1db (-3db at 122 KHz)
- EIN: -129dBV
- settings: include low pass filter in/out, phase reversal switch, and gain control from 0 to 60db

### DAT Recorder

TASCAM DA-45HR

- type: 24 bit
- frequency response: 20-20KHz +/-0.5db
- S/N: 112db
- dynamic range: 113db
- THD at 1KHz: <0.002%
- channel separation: >95db at 1KHz
- tape: Sony R-120

Stanton Earphones, boom box, and analog tape recorder

- Unknown specifications

## CASE HISTORIES

### Subject A

Subject A is a 35 year old male from Philadelphia, PA. He has a college degree in Graphic Design and works for a publishing company. Subject states that he first started noticing pains in the back of his neck and in the region of his heart in April 1993 while a student in London, England. After returning to the US, voice transmissions began about August 1993. Subject

reports that in addition to the audio, he experiences various forms of torture. Subject reports traveling between the US and China and Russia. The voices follow him no matter where he goes.

#### Subject B

Subject B is a 46 year old male from a military family. Subject graduated high school and attended college, but did not matriculate. Subject spent 18 years in construction, and is a motorcycle mechanic. He was co-owner of a Doberman breeding and training business. Subject began hearing voices about 1993.

#### Subject C

Subject C is a female and mother of two, residing in the Midwest. Subject began hearing voices as 'whispers', saying things like, "She hears us." The voices seemed to be coming from just behind and above her head.

#### Subject D

Subject D is a female, approximately 40 years old with a college degree in Law. Subject reported she started hearing voices in 1988.

#### Subject E

Subject E is a communications expert with a solid background in work with various agencies. He started hearing voices about three years ago. Subject has been located in CA since before the onset of the voices.

#### Protocols

Equipment configurations for various recording setups are shown below as figures 1 through 3. Also Photos 1 through 5 shows the equipment as set up to record data in the vacant office suite use for most of the runs. Photo 1 shows the Blue Mouse microphone mounted at the focal point of a parabolic reflector. Photo 2 shows the headphones with ear microphones in place. Photo 3 shows the pre-amps, DAT, and boom box. Photo 4 shows an over-all view of the equipment setup. Photo 5 shows the equipment setup with one of the subjects in the approximate position used to record most of the data.

The tape counter on the DAT was used to determine the length of each run and to provide fiducial marks necessary to return to the beginning of each run to listen to the results.

Location of each set of runs is as noted in the section "The Trials". The equipment operator, myself, and a PhD psychologist were the only persons allowed in the rooms when recordings were being made, except for some recordings made in the open area late at night, when one other person was allowed to watch. The purpose of the psychologist was to be a witness and to offer expert suggestions. Also, he was familiar with the equipment and had been present when the original recordings of the voices in the equipment operator's head were made. The equipment was jointly owned by the operator and the psychologist.

Each subject presented a different modality for their experiences with the voices, so an absolutely rigid set of protocols covering all the subjects in the exact same way was not possible; however, the recording techniques varied only within the established equipment configurations as shown in the figures, and the placement of the Blue Mouse Microphone.

## THE TRIALS

All runs for Subject A were made in the vacant office suite.

The first two runs for Subject B were made in the office suite, the next four in the quiet space, and the balance were made in the open area. These were conducted late at night and only those involved in the experiment were in the building.

All runs for Subject C were conducted in the office suite.

The first two runs for Subject D were conducted in the office suite. The final six runs were conducted in the quiet space.

The first four runs for Subject E were conducted in the quiet space. The final five runs were conducted in the office suite.

## EXPERIMENTAL SET UP

There was a lapel microphone in each ear of the Stanton headset. There were only two channels available on the DAT recorder, even though each microphone pre-amplifier had two inputs and two outputs possible. Thus, either both ear microphones or one ear microphone and the Blue Mouse or the Blue Mouse in binaural mode could be recorded simultaneously. See figures 1,2, and 3 for the various configurations. The earphones were selected because of their sensitivity, wide bandwidth, and the large earpieces that completely covered the ears with a large rubber ring. The cables for the ear microphones were secured to the rubber rings with electrical tape, while the microphones themselves dangled into the ear cavity of the headset, about midway.

The pre-amp had a phase reversal switch and a 24Hz roll-off filter switch. Unless otherwise noted in the section on the Sessions and Runs, the roll-off filter was not employed, and the phase of the input signal was not changed.

The DAT recorder had the capability of tape marking in order to return to a particular spot; however, it was noted that the marking was approximate, so the marker numbers are not included here, even though they will be used to return to specific areas of the tapes for further analyses. The DAT had both balanced (XLR) and unbalanced (1/4") inputs. XLR connectors were used exclusively, even though the output from the lapel microphones employed a 1/4" to XLR adapter. The DAT recorder could record in 16 or 24 bit format. 16 bit was used throughout the sessions, because 24 bit recording mode reduced the recording time per tape by one half, and there were other considerations having to do with the recorder having been set up (switches, buttons, etc.) to successfully record the voices in a previous subject's head.

A good quality 'boom box' was used to listen to the recordings as they were made. Actually, a less expensive tape player was better in some respects, because it limited the frequency bandwidth of the sounds, eliminating some of the very low and very high ambient noises.

However, the reason for using the higher quality unit was that it had a 5 band equalizer built into it. Many cheap portable players also have some equalization. An alternative, even better arrangement would be to use the multi-band equalizers found in most component stereo systems. This allows for the filtering of various noises on the recording and thus, bringing out the voices more clearly.

Note that the Blue Mouse (Figures 1,2,and 3) fed into the DAT recorder and was COMBINED with the ear microphone pick-up via a feedback loop (BM to DAT, DAT output to headphones, ear microphones to DAT, combination to headphones).

The Blue Mouse was mounted at the focal point of a parabolic reflector in order to enhance its collection of subtle sounds.

One configuration that was not used was to place a microphone directly touching the subject's skull. It is possible that the induction of voices into heads will resonate the skull and this can be picked up when there is no audio in the room or in the subject's ears that would be picked up by the scheme employed in this experiment.

Note: all microphones have a preamp between them and the DAT and/or analog player/recorder. The analog playback was used to listen to each recording after it was put onto the DAT. It was necessary to unplug the analog player before each DAT recording run, because audio feedback would be produced due to the feedback arrangement between the microphones and the earphones.

Equipment with a subject seated approximately the distance from the microphone we used to make the recordings

## SYNOPSIS OF SESSIONS AND RUNS

All subjects were placed in a sound-proofed room and asked if the voices were louder, the same, or muffled. All reported that the voices were the same, muffled, or had vanished; therefore all runs were conducted in one or more of the three non-sound proofed spaces provided to us.

All subjects reported that the voices were active during their session. A sound check (control run) was conducted prior to the commencement of the sessions. Unless otherwise noted, the Blue Mouse (BM) was positioned approximately 3 feet from the front of the subject's head. The only enhancement of the tapes possible with the equipment we had was to play the DAT recordings through the Boom Box with its equalizer set to reduce ambient noise, and boost the gain. The new analog tape recorded on the Boom Box was louder with less noise than the original. This was how Fred Sicher processed his tapes.

### Subject A:

After every communication from the voices, the subject would say 'stop'. The DAT was run back to the beginning of the run and played to determine content. Subject reported that the voices were louder than they had ever been. Subject reported no unusual sounds other than the normal ambient sounds in the room, except for an occasional, but infrequent, 'popping' noise. Subject reported that sometimes the voices would take control of his vocal chords and vibrate them to approximate the words he was hearing. (Note: other victims have claimed the same thing. This may be a rather common occurrence for many of them). Therefore, careful visual monitoring of subject's throat and mouth was conducted during every run. During some runs, the subject's thyroid glands seemed to be moving; however, subject's Adam's Apple never moved and his mouth was always closed. It is impossible to enunciate words with the mouth closed. Subject reported that the voices were sometimes in his head and sometimes external. In general, he said, there was no difference in quality between indoors and outdoors. Subject stated that he had had MRI's and EEG's-all were normal. Twenty one runs were conducted

during Subject A's session. Subject reported that there were more than one 'individual' contacting him. Details are appended.

Subject B:

Twelve runs were conducted on Subject B. The details are appended. Subject reported that the voices tended to be external to his head, mostly above and in binaural. Subject said that on other occasions, the voices would sometimes tell him to commit suicide, or that they were his guardian angels, or that they were aliens.

Subject C:

Subject C reported that the voices are sometimes in the air and could be heard by others. She said that this was confirmed by the fact that people would respond to them, although sometimes people would think that she had uttered the words and would respond to her.

One difficulty in recording this subject was that she had difficulty breathing and the BM picked up the sounds which tended to mask any subtle sounds that might have been present. The 11 runs conducted with Subject C are appended in detail.

Subject D:

This subject reported that the voices communicated to her mostly in whispers at the beginning of the runs (but the voices got louder later on), and that occasionally they emit sounds rather than words. The details of the 8 runs conducted with this subject are appended.

Subject E:

In addition to hearing voices, Subject E also reported seeing 3D holographic images. He viewed the contacts as a mixture of "pain and pleasure." The 9 runs conducted on Subject E are detailed in the Appendix.

## **APPENDIX-DETAILS OF RUNS**

Subject A:

Runs were of varying length, but seldom ran more than one minute. The report from the subject about what the voices were telling him is in quotation marks. Word-like sounds appeared on the DAT, unless otherwise noted.

Run 1: "Don't say anything to [deleted]".

Run 2: "Ok, now we will talk about Carol Sterling's murder."

Run 3: "We'll talk about racism in the program."

Run 4: "fuck you."

Run 5: The BM was turned off, and both lapel microphones only, were used (in the earphones). "Why aren't you taping this, stupid ass?" (There was no audible sound on the DAT).

Run 6: Set-up the same as 5. "Ok, let's talk about the murder we committed." (Nothing on the DAT).

Run 7: Set-up the same as 5 and 6. "Fuck you, fuck you, it's not working now."

Run 8: BM only, no ear microphones enabled. "Fred Sicher is an idiot and he is stupid."

Run 9: BM only. "This is for freedom, this is for U.S. National security."

Run 10: BM + one ear microphone. "Ah hah!, some of these people suck. We are from Maryland." (there was no throat sound in the room; however, sounds appeared on the DAT).

Run 11: BM + one ear microphone. "Fred, you're an idiot."

Run 12: BM only, in binaural mode. "Turn the microphone off, it's not working."

Run 13: BM only, in binaural mode, and phase reversed on the preamp. Nothing.

Run 14: BM pointed away from subject. Nothing.

Run 15: Recorded with subject out of the room. Nothing.

Run 16: BM pointed toward the ceiling. Nothing. Subject in room.

Run 17: BM about one inch from subject's right ear. Nothing.

Run 18: BM about one inch from subject's left ear. "Aren't you?" This recorded on the DAT as a sound that could be interpreted as 'aren't you'.

Run 19: BM about 4 inches from the back of subject's head. "This is the U.S. DOD, we get orders from the Pentagon." Faint words appeared on the DAT.

Run 20: BM pointed toward the window. Subject dormant. Nothing but ambient sounds on the DAT.

Run 21: BM + ear microphone. BM about one foot from subject's head. Nothing.

Subject B:

Run 1: (we told the subject this was a sound check; however, we were in a record mode, hoping to 'trick' the voices into being louder). BM + one ear microphone. Nothing.

Run 2: "They are torturing him." Nothing on the DAT.

Run 3: ear microphone + BM. Nothing

Run 4: This run and runs 4 through 6 were conducted in an interior quiet room, but not sound-proofed. The BM, in binaural mode, was placed near the back of subject's head. There was no ambient noise on the DAT. Very faint sounds, like almost inaudible whispers seemed to be on the DAT.

Run 5: Right ear microphone only. Nothing.

Run 6: BM only in binaural mode. Nothing significant.

Run 7: BM + one ear microphone. Subject reported tinnitus. Maybe some sound on the DAT, but extremely low level.

Run 8: Right ear microphone only. Subject still reporting tinnitus. Nothing on the DAT.

Run 9: BM with phase reversed on the pre-amp. This run lasted about two minutes. Nothing.

Run 10: BM, same as 8. This run lasted about 3 minutes. Nothing.

Run 11: BM in binaural mode. Subject and researchers engaged in chit-chat and suddenly turned on the recorder and let it run about 4 minutes. Nothing on the DAT.

Run 12: BM in binaural mode. Subject and researchers engaged in chit-chat and at some point the recorder was turned on for about 3 minutes. Nothing unusual on the DAT.

Subject C:

This subject had difficulty breathing, making recording difficult. However, she wore hearing aids in both ears, affording us the opportunity to record with and without them in place.

Run 1: this was to check the sound level with the hearing aids in place. The subject's heavy breathing was the only evident sound on the DAT. The BM + ear microphone was used.

Run 2: ear microphone only, with hearing aids in place. Nothing apparent on the DAT.

Run 3: ear microphone only, without hearing aids in place. Something like a whisper was recorded on the DAT.

Run 4: ear microphone only, without hearing aids in place. Very faint sounds on the DAT.

Run 5: ear microphone only, without hearing aids in place. Some dolphin-like sounds (squeaks, whistles) were on the DAT. It was not known if these were wheezes from the subject or not.

Run 6: BM + ear microphone. Without hearing aids. A very strange sound appeared on the DAT, but its source and content was unknown.

Run 7: BM + ear microphone. Without hearing aids. A tinnitus-like tone appeared on the DAT.

Run 8: set up like 7. Without hearing aids. Nothing

Run 9: BM + ear microphone with phase reversed on the pre-amp. With hearing aids in place. Nothing.

Run 10: BM only. Without hearing aids. Nothing.

Run 11: BM only. Without hearing aids. Phase reversed. Nothing.

Subject D:

Subject reported that her voices communicated in whispers, but that the words were clear to her. This was unusual, because they normally are loud. What subject reports she heard is in quotations.

Run 1: ear microphone + BM. A 'chirp' appeared on the DAT that was not heard in the room.

Run 2: BM + earphone, with low pass filter enabled on pre-amp (rolloff beginning at 24 Hz), because an unusual amount of low frequency building noise was being recorded. "How come it's hard to hear?" Nothing was apparent on the DAT, perhaps due to the large amount of rumble that the filter failed to reduce.

Run 3: ear microphone only. Nothing. This run and all remaining runs were conducted in the quiet space.

Run 4: BM only. Nothing.

Run 5: BM only. "They aren't doing it the same way."

Run 6: BM + ear microphone. BM aimed at back of subject's head. Something was recorded on the DAT that sounded like a faint radio in the background.

Run 7: Same set up as 6. Nothing.

Run 8: ear microphones only. Nothing except a chirp that sounded like 'tsk'. Subject said she recognized the sound and would like it enhanced and a tape given to her of the sound. Researcher agreed.

Subject E:

The first 4 runs were made in the quiet room. The balance were made in the original space where most of the recordings took place. Voices reported by the subject are in quotations.

Run 1: ear microphones only. Phase reversed. "Do you want to go home?" Nothing audible appeared on the DAT.

Run 2: ear microphones only. Subject reported that when he reads, the voices are usually louder. Subject read text during the run. "Why don't we stop.....?" Nothing definitive on the DAT.

Run 3: ear microphone + BM. Nothing.

Run 4: same set up as 3, but with BM aimed at the back of subject's head. Subject reported hearing something, but could not make it out. Nothing on the DAT.

Run 5: BM + ear microphone. Subject turned a magnetic field counteractor on. There was lots of ambient noise during this run. Near the end, a strange sound appeared on the DAT that was not apparent in the room during the run.

Run 6: BM only. Counteractor on. A voice appeared on the DAT that was not audible in the room; however, it was very faint and could not be interpreted.

Run 7: BM only, with counteractor off. Significant noise from another room overwhelmed the subtle information that may have been present during this run.

Run 8: BM only, with counteractor off. Nothing.

Run 9: BM + ear microphone. Low frequency hum that had been present for most of the runs was gone. "I don't care." Anything on the DAT was at such a low level as to be inconclusive.

## **CONCLUSIONS**

The hope was that in one day and with five subjects who hear voices in their heads, we would get a similar recording to one whose voices are clear enough to make out. However, that recording took several months to obtain.

This experiment, although unsuccessful in obtaining a similar recording, did accomplish several things, including the exercise of the equipment in additional modes, the use of multiple subjects with various presentations of harassment, and data that is not conclusive (concerning the testing of the hypothesis) but that is valuable. The collected data has anomalous content; but not enough to warrant firm evidence that a technology was being used. The scope of this experiment was limited by funds and other considerations; however, it will be used as a basis for further work (see Recommendations). Further enhancement of the recordings may yield meaningful results; however, this has not been accomplished.

Although the data obtained by this experiment does not conclusively prove the hypothesis, it does not rule out a technical basis for the claim that the subjects are being subjected to some sort of mind control technology. We were faced with the dilemma of having heard anomalous sounds in the room that did not appear on the tape with sufficient intensity for us to definitely identify them as voices, even though the subjects could understand what the voices were saying. All we could do was use a graphic equalizer to decrease the amount of repetitive ambient background noise (fans, etc.) and amplify the results. We did not have access to expensive racks of equipment as used by the FBI and other government agencies that can pick a faint signal out of noise and make sense of it.

## **RECOMMENDATIONS**

Based on the results obtained in this experiment, further research and testing is warranted.

Variations on this experiment (such as including equipment to monitor high frequency and extremely low frequency carrier signals) can be thought of by anyone reading this. Data has been sent for comment to an MD at the Detroit Imaging Institute. An improved version of this

experiment, including direct skull recordings, will be proposed as a CAHRA Proposal, in process. It will include the further enhancement of the existing data in an attempt to provide a basis for further recording.

#### ALTERNATIVES FOR THOSE WISHING TO TRY SIMILAR EXPERIMENTS

For those wishing to replicate the experiment, the lapel microphones can be purchased for about \$20 each at Radio Shack, and any high quality set of headphones can be used PROVIDED they completely cover the entire ear with a rubber ring (in order to seal out extraneous ambient noise and seal in anything the ear microphones may be picking up from the subject's ears).

The pre-amp cost about \$250; however, good quality preamps can be obtained for about \$100 designed for use in high-powered car stereos. This may be unhandy, because they are mostly powered by the car battery. Any high-gain, low distortion pre-amp can be used, and should cost around \$125 for 115v wall current power and no frills.

All DAT recorders are expensive, and can be found many places from vendors on the Internet. Perhaps Circuit City carries them, also. The one used in this experiment cost \$2500; however, a decent one (maybe used) may cost \$1000 or less. For someone familiar with computers, it should be possible to (with the appropriate software) use it to make digital recordings directly on CD ROMs. Otherwise, even a good analog recorder could be used to gather data. The beauty of a DAT recorder is the complete absence of noise. This enables the recording to be amplified after it is made without increasing analog tape hiss.

The Blue Mouse costs about \$2000; however, a reasonably good, but much less sensitive directional microphone can be obtained for about \$100 and up.

The frame work to hold the Blue Mouse was hand made and not difficult to do; however, the exact placement of the reflector is critical and should be done by professionals. Cost: about \$50 for the dish, and \$50 for set up. A few dollars for the materials to make a stand. See photograph for details.

The total cost to assemble a less sensitive set of recording equipment, but one that may be suitable for capturing sounds would be about \$475 plus a DAT recorder (which probably could be rented for about \$25/day or less). A good quality analog recorder and a multi-band equalizer could be used instead of the DAT recorder; however, the quality of the recordings will be diminished.

#### BIO OF PRINCIPAL INVESTIGATOR

Eldon Byrd is a Medical Engineer with an MS from The George Washington University. He was a POLARIS submarine expert for industry, and held various positions in the US Government, including Strategic Systems Analyst, Operations Research Analyst, Cryogenic Engineer, Head of the Department of Defense Environmental Projects Office, Project Manager for the Navy's Metal Matrix Composites Program, and Project Manager of the Marine Corps Non-Lethal Electromagnetic Weapons Project. His contractors for this project included Drs. Ross Adey, Michael Persinger, and Robert Beck.

He is considered to be an expert in the biological effects of extremely low frequency magnetic fields.

He was the technical consultant for the book "Maze", by Larry Collins, and was directly involved in the evaluation of Igor Smirnov's "Psychodiagnosis and Psychocorrection" technique while Smirnov was in the US.

Original signed, Eldon A. Byrd August 25, 2002

CAHRA'S POSITION ON THE TECHNOLOGY CAUSING VICTIM'S SYMPTOMS

Note: CAHRA has changed its name to Mind Justice

Cheryl Welsh, Director  
June 20, 2002

Very sophisticated, classified electronic warfare and psychological operations intelligence weapons technology can target every nerve of the body with scientific precision. So called "mind control" weapons have been compared to the atomic bomb in their effect on the human nervous system, especially the brain. See the Mind Justice website for numerous citations:

<http://mindjustice-org>

Any countermeasures or attempts to document the effects by targeted victims would have the best chance of success by professionals with military electronic signals intelligence. Please note that UFOs, psychic phenomena and mental illness are the major cover stories used in the illegal testing and use of these weapons. Therefore CAHRA has no position on psychic phenomena, UFO theories or mental illness because they detract from the goals of CAHRA and are impossible to prove scientifically.

## Speech to Cambridge MA City Council

by Roy Bercaw

From: "Roy Bercaw"  
To: roybercaw@hotmail.com  
Subject: speech to Cambridge City Council  
Date sent: Mon, 14 Dec 1998 22:32:34 EST

Though their rules allow ten minutes to each citizen, on Monday, Dec. 14, 1998 when I spoke Cambridge Mayor Duehay limited each of us to four minutes. I had prepared 7 minutes so even though I omitted some I was unable to finish what I prepared.

Most of those who spoke were interested in a parcel of land being used for a public garden. I wondered what I was doing there.

There were some audible gasps as I spoke in response to what I said. Here is what I said.

\* \* \* \* \*

My concerns are experimentation on human subjects without informed consent, and the denial of access to law enforcement authorities to get relief from this illegal activity. The right to access is a part of the First Amendment. Some people believe that the first duty of government is to protect its people. If it fails at this, it fails at everything.

Experimental drugs and high tech devices are being tested on human subjects. The devices are prohibited under the Massachusetts General Laws Chapter 140 Section 131-J.

50 years after the fact, MIT's President announced \$100 million compensation for disabled students of the Fernald School in Waltham who were used for illegal radiation experiments from 1944 to 1974. He said, "The researchers believe they did no wrong." Neither did the Nazi doctors who experimented on concentration camp prisoners. (Omitted: Seven of the Nazi doctors were hanged.) After 65 years of human experimentation abuses in this country, (Omitted: it is clear that) money damages are no deterrent.

Pulsed microwaves and electromagnetic radiation devices to influence human behavior were developed for military purposes. Called non lethal, and less than lethal, they are banned under international law. But they are used on domestic populations and studied at Harvard and MIT.

According to a draft statement, in January, 1999 the European Parliament will issue a declaration urging governments to regulate and control these electronic devices developed by the Russians and the US government. (Omitted: Without a demonstration the International Committee of the Red Cross banned blinding laser weapons. This standard must be applied to microwaves and electromagnetic radiation.)

The July, 1998 issue of the "Bulletin of Atomic Scientists" reports complaints similar to mine. Behaviorist psychiatrists believe that use of pulsed microwaves is the "cutting edge" of therapy. I am told that students at Harvard's School of Government and Lesley College are being

trained in the use of these devices for experimentation.

No one knows the effects of microwaves on humans, but research shows that substantial exposure to pulsed ionized microwaves on the brains of rodents, creates lesions consistent with Parkinson's and Alzheimer's diseases, and cancer.

I never volunteered for any medical experiment. I am not under the care of any psychiatrist nor any psychologist; nor is there or has there ever been any court order to allow this experimentation or treatment without consent. Enrolling people in psychological programs without consent is a lucrative business. If you think that consent is not important, consider the issue of assisted suicide which is now performed on television.

I am denied access to government agencies to get relief from this problem. That is an issue for the Human Rights Commission. Section 2.76.120 subsection A of the Municipal Code of Cambridge states, "It is an unlawful practice for the City ... or any of its agencies, departments, subdivisions or employees, to discriminate against any person in the provision of services, facilities ... or other opportunities because of the ... disability ... of such persons." On Dec. 2, 1998 the Acting Director of the HRC Ms. Vale Delund told me they do not accept complaints against the city.

The "Boston Globe" series on human experimentation (November 15-18, 1998) focused on abuses in Cincinnati, Los Angeles, New York and Baltimore. But a great deal of experimentation is conducted in this area at MIT, Harvard, Mass General and McLean's Hospitals. According to a National Science Foundation report as of November 4, 1998, Harvard University receives more than \$230,000,000 to conduct research for the NSF alone.

Each week in the "Boston Phoenix" there are numerous solicitations for studies, also called experiments on humans. There are ads on the T, on radio stations and signs on bulletin boards. They offer to pay volunteers up to \$300 for risks which are seldom fully explained. The New York Post reported in April, 1998 about experiments on the poor population of New York City.

On Dec. 2, 1998 I filed a bill with the Massachusetts House of Representatives called the "Protection of Human Subjects in Experimentation Act." The academic community, the pharmaceutical industry and the medical profession desire to keep the laws relaxed as they are.

There are no penalties for non compliance with federal laws on human experimentation. Neither the Code of Federal Regulations nor the United States Code carry any penalties. They require informed consent, but if consent is not obtained there is no penalty. There are no related laws in the Commonwealth besides assault and constitutional violations.

New York, California, and Virginia have state laws on human experimentation. California codes carry penalties. That state also regulates behavior conditioning and experimentation on prisoners. Massachusetts does neither.

One might conclude that the technology used on civilians is not available in this state; that the gene pool in this area was cleansed of evil researchers, misguided doctors, dishonest leaders, mendacious academics and lawyers. Do you believe that?

I seek relief from the City Council due to the negative responses from city, state and federal officials. (Omitted: One of US Senator Kerry's aides tried to have me committed to a hospital. At US Senator Edward Kennedy's office they looked at me as if I had three heads. Supporters of US Rep. Joseph Kennedy not only ignored my complaints but joined in the harassment and the campaign to discredit me.)

(Omitted: Congressional protocol requires seeking relief from one's representative. The US House subcommittee which studies human experimentation laws refused to respond to my complaints without being

asked to do so by Rep. Kennedy. They demand "credible evidence.")

(Omitted: I spoke with aides of Congressman-elect Capuana outlining the years of abuse asking that they contact US Rep. Christopher Shays. Shays can order an investigation by the General Accounting Office for abuse, fraud, and waste of taxpayer funds for illegal experimentation.)

(Omitted: After I wrote to Richard Cole, the [Massachusetts] assistant attorney general for civil rights, a man chased me from the state McCormack office building. He said he was a state police officer but was unable to produce identification. What is ironic is that Mr. Cole is one of a group of attorneys who argued a Massachusetts case before the US Supreme Court making treatment without consent illegal, even for patients in a hospital.)

My letter to the City Council dated Dec. 10th details my inability to obtain relief from the Human Rights Commission, which has my complaints about city and state agencies. I called to and wrote to the US Attorney in Boston, Mr. Donald K. Stern. A paralegal, Ms. Mary Ann Casoli called me admitting that she knew nothing about [at this point I was cut off. The Mayor told me, "Mr. Bercaw, your time is up." He also mispronounced my name as Bersaw, and called me Ray when he introduced me. So the rest of this was not said] she knew nothing about human experimentation. I told her there are books about it. She said to me, "I don't have time to read books."

Slander is broadcast to cover up this activity. I was told that government files were erased and altered. Being disabled, and being shunned due to a disability is one thing. But the creators of the disability broadcast slander playing on pervasive prejudice.

The HRC has the authority under section 2.76.140 subsection B 2 of the municipal code to file any complaints "that relate to acts of discrimination" received, "with other government agencies" which are "under the jurisdiction of such agencies."

Section 2.76.150 subsection I 1 of the municipal code states that with a finding of an unlawful practice the HRC shall initiate a criminal complaint in a court of proper jurisdiction. The perpetrators enjoy protection from the very authorities who should be stopping the abuses. Pervasive discrimination against persons with disabilities allows this to continue. The issue of elitism applies here. Are academic researchers above the law?

Thank you for your time.

[I can appear again next week to finish up what I started. Permission to post with credit to any appropriate lists granted.]

Roy Bercaw

Announcer:

Behind closed doors, human guinea pigs in shocking mind control experiments conducted by our government and the CIA.

Female victim:

I had no identity, I had no memory, I'd never existed in the world before.

Announcer:

The horrors of "the sleep room" -- next on "The Fifth Estate."

...Interlude...

Announcer:

Tonight!

Female victim:

The man whom I had thought cared about what happened to me, didn't give a damn. I was a fly. Just a fly.

Announcer:

Revisiting Canada's infamous "sleep room."

Female victim:

I was -- had to be toilet trained; I was a vegetable.

Announcer:

In the 1960s Dr. Ewen Cameron conducted CIA funded experiments on troubled Canadian patients he was meant to help.

Male victim:

It wasn't treatment for anything. It was out and out guinea pigs for brainwashing experiments.

Announcer:

A Fifth Estate investigation revealed how one Canadian government secretly supported these horrific experiments, and then another blocked the victims' fight for justice.

Male voice:

The Mulrooney government, in effect, stabbed its citizens in the back at every turn.

Announcer:

Linden MacIntyre [spelling?] with the real life victims of "the sleep room," and behind the scenes of a new CBC movie about this nightmare chapter in our history.

...Interlude...

Linden MacIntyre:

Welcome to the Fifth Estate. When Canadians first learned that CIA brainwashing experiments had been carried out on Canadians in Canada, with the knowledge of our government, it was a tremendous shock. As the Fifth Estate was first to report in 1984, the work that Dr. Ewen Cameron oversaw at his Montreal clinic was shocking. Now, the story of Cameron's experiments, and the victims' struggle for justice, have been made into a riveting movie, to be broadcast on CBC Television this Sunday and Monday nights. For the victims of the "sleep room," the horror has never really ended.

Even if you don't know the history of the Allen Memorial Institute in Montreal, it looks like a natural setting for a movie -- a horror movie, maybe.

...women's scream...

But then the truth of what happened to hundreds of psychiatric patients there a long time ago is a horror story.

Male voice:

O.K. So we're on route, guys. Peaceably on.

Linden MacIntyre:

And now, it has become a movie -- a dramatized account of a bleak chapter in the history of Canadian psychiatry, produced by a former Fifth Estate documentary maker, Bernard Zuckerman.

The central character in the movie is a world-renowned psychiatrist at the Allen in the early 60s. His name was Dr. Ewen Cameron.

Male voice:

It's the classic story of good turning to evil in its most simplistic terms. Dr. Cameron started off as someone who is probably one of the most enlightened psychiatrists in the country, but then something happened, and whatever happened, suddenly here is this enlightened doctor, this noble doctor, who begins doing more and more and more bizarre experiments on his patients to the point where he is destroying the minds of hundreds of people.

Male speaker [giving a speech - could be Franklin Roosevelt]:

These are the days, and ours are the occasions.

Linden MacIntyre:

Inspired by the exuberant post-war optimism and technology, Cameron thought he'd achieved a major scientific breakthrough -- how to repair a damaged human mind. The media rejoiced -- even coined a phrase which would become a tragically silly oxymoron: "beneficial brainwashing."

Linda McDonald was a young mother with five children under the age of five, when she started feeling low. Her family doctor knew just the man to make her better.

Linda McDonald:

I was tired, I was depressed, my back was hurting -- and so he said, to the children's father, why don't you go to Montreal and visit this Dr. Ewen Cameron, this famous man, who has all of these accolades, and have an assessment.

So we went. My medical file even says that I took my guitar with me; and that was the end of my life.

Within three weeks Dr. Cameron decided to call me an acute schizophrenic, and shipped me up to the "sleep room."

Linden MacIntyre:

How long did they put you to sleep for?

Linda McDonald:

I was in a coma for 86 days.

Linden MacIntyre:

Eighty-six days of unbroken sleep.

Linda McDonald:

Yeah. Total comatose state.

Linden MacIntyre:

The theory was simple: erase a disturbed mind and start all over again.

One of Dr. Cameron's colleagues at the time was Dr. Peter Roper.

Dr. Peter Roper:

The aim, I think, really, was to wipe out the patterns of thought and behavior which were detrimental to the patient which were sick, and replace them with healthy patterns of thought and behavior. I think this may have been -- uh -- stimulated by the effects of the -- uh -- American troops of the war in Korea, how they seem to have been brainwashed.

Linden MacIntyre:

The movie called "The Sleep Room" dramatizes one technique for brainwashing: extreme sessions of electroshock therapy, massive jolts of electricity three or four times a day for weeks. According to her hospital records, Linda McDonald had one-hundred of these treatments.

She entered hospital for what we can now guess was post-partem depression. Her records show the results of shock and radical drug therapy.

May 15th shows some confusion; June 3rd: "Knows her name, but that's about all." June 11th: "Doesn't know her name."

Linda McDonald:

I was -- had to be toilet trained. I was a vegetable. I had no identity, I had no memory; I had never existed in the world before. Like a baby. Just like a baby that has to be toilet trained.

Linden MacIntyre:

She eventually went home, her depression gone, and her entire previous life gone with it.

Linda McDonald:

This is -- this is one of the twins, in 62 before I went to the Allen, and this is the same one I think. I just look at the pictures and I know that is who they are, but I don't remember them as my children at all. I mean, I know that they came from my body -- um -- but, there's no -- that's all. I don't know, and that's because I was told that. So, these are my children.

Linden MacIntyre:

Robert Loguey [spelling?] was little more than a child himself when he was referred to Dr. Cameron. He was 18, he had a sore leg. His doctor thought it was all in his head, and sent him to the Allen. Like Linda McDonald, he went through a nightmare of shock therapy and drugs, including LSD.

Robert Loguey:

Well, I was given LSD about every second day and -- uh -- injected, and -- uh -- sometimes it was mixed with sodium amethal and other drugs.

Film-maker:

One on one, take two.

Linden MacIntyre:

Most of the drugs were experimental but seemed suitable for brainwashing or, as Cameron preferred to call it, de-patterning.

Then, during the long sleep, the patient would be forced to listen to subliminal messages that were supposed to print new, sometimes bizarre, thoughts on his blank mind.

Robert Loguey:

I was aware of the speaker under my pillow; I was aware of the words.

Linden MacIntyre:

Which were?

Robert Loguey:

"You killed your mother."

Linden MacIntyre:

"You killed your mother."

Robert Loguey:

Yeah.

Linden MacIntyre:

Who was alive and well.

Robert Loguey:

Who was alive and well. And, uh...

Linden MacIntyre:

Over and over again this voice is talking....

Robert Loguey:

Uh, well, like I say, it takes about two seconds to say that message, and this was going on for 23 days, and -- uh -- when I went home, after being there, when I went home my mother was there, and why was she there, and -- it didn't make any sense.

Linden MacIntyre:

So what was going on here? Dr. Ewen Cameron was at one point head of the World Psychiatric Association, and is still admired by some of his former colleagues. Dr. Peter Roper:

What is the possibility that we had a good, well-motivated man whose ego and ambition took charge of his professionalism and led him into some fairly dark places?

Dr. Peter Roper:

Well, I would put that chance as pretty slight. I think it's more likely that -- um -- if he'd been around to defend himself when this story came out, we'd have a perfectly different picture of it.

Linden MacIntyre:

What would he say? Put yourself in his shoes; what would he say?

Dr. Peter Roper:

Uh -- I think he'd say -- uh -- "look, I treated these patients to the best of my ability; I -- uh -- I didn't get all of them well, but most of them I got better than they were.

Movie excerpt, actor:

A travesty. I agree.

Linden MacIntyre:

But in the movie, Dr. Cameron will not come off so well.

Movie excerpt, actor:

They're your patients. Most of these people were discharged as cured.

Linden MacIntyre:

It accurately shows that many of his patients, inaccurately diagnosed as schizophrenics, were permanently damaged by his methods.

Movie excerpt: woman screaming.

Linden MacIntyre:

Eventually even Cameron had doubts about his experiments. He left the Allen in 1964, died of a heart attack three years later. By then, the hospital had quietly abandoned the experiments.

Movie excerpt, actor, angered:

So, these people had nothing. You can't just walk away from this, Cameron! It'll come back and it'll ruin you! You can't walk away!

Linden MacIntyre:

Nobody knows for sure exactly how many people doctor Cameron and his colleagues exposed to the program of chemical and electro-shock treatments they called de-patterning and psychic driving, a process which some experts have since called barbaric.

But many years would pass before there would be any public or official acknowledgment of what those damaged patients had been through. It would take a dramatic disclosure in the late 70s. But the Allen memorial had been part of a cold war program of brainwashing experiments, paid for in part by the CIA. Hidden among its most sensitive files were CIA records documenting a project called MKULTRA.

Between 1957 and 1961 a CIA front funneled about 62,000 dollars US for brainwashing research by Dr. Ewen Cameron.

The American media got the story first, but The Fifth Estate exposed the magnitude of the human tragedy.

Fifth Estate Announcer (historical):

Experimental drugs, including LSD, were administered to human guinea pigs. The patients were never told that their treatment was part of a CIA experiment.

Linden MacIntyre:

One of those patients was Velma Orlikow of Winnipeg. She'd been at the Allen in the late 50s for treatment of depression. She happened to be married to a member of parliament, David Orlikow of the NDP. She'd considered Dr. Cameron a near-saint. Now she was being told she'd been betrayed by him.

Velma Orlikow:

It was an awful feeling to realize, when I found this out, that the man whom I had thought cared about what happened to me didn't give a damn. I was a fly. Just a fly.

Linden MacIntyre:

First she felt hurt. Then she got angry, and decided to sue one of the most powerful institutions in the world, the CIA.

David Orlikow:

As a matter of fact, when she said she wanted to sue the CIA I said, "you're crazy, how a couple -- how can an ape[?] from Winnipeg sue the CIA?"

Linden MacIntyre:

But she did, along with eight other former patients -- a massive lawsuit that would consume many years and become an obsession for a distinguished American civil-liberties lawyer named Joseph Rauh].

Joseph Rauh:

Cameron, all he did was what the CIA was in effect asking him to do, and what he said he was going to do, and he did it.

Linden MacIntyre:

Rauh and a young assistant name James Turner knew they were up against a formidable opponent in the CIA, but they thought the odds would be evened a bit by help from a natural ally. They were in for a disappointment.

James Turner:

Well, we expected to have a very potent ally in the form of the Canadian government and, unfortunately, instead of helping their own citizens, because the Canadian government was worried about its possible liability, the Mulrooney government in effect stabbed its citizens in the back at every turn of the litigation.

Linden MacIntyre:

Ottawa actually helped suppress a key piece of information: evidence that CIA officials at the US embassy had actually apologized to the Canadian government when the CIA experiments were first revealed. Jim Turner is still flabbergasted.

James Turner:

You gotta understand how important these apologies and expressions of regret were. This is an admission. This is legally admissible in court because it is one of the parties of the litigation saying, "I did something wrong and I'm sorry I did it." That is prima facie evidence of negligence and of wrong-doing that goes a long, long way to bringing the case to a timely conclusion instead of the protracted ten years of litigation that we had.

Movie excerpt:

And action!

Mr. Mulrooney!

Linden MacIntyre:

The movie underscores the impact of Ottawa's refusal to give the lawyers details of the CIA apology. The lawyers eventually upped the ante. On The Fifth Estate.

Fifth Estate director (historical):

And action.

Announcer:

Tonight on The Fifth Estate, startling revelations about the activities of the CIA in Canada.

Linden MacIntyre:

With a publicity wave gathering momentum, and the strength of the victims' case becoming more apparent, the CIA caved in the day before the trial was to begin. They settled out-of-court for 750,000 dollars. At the time it was the

largest settlement the CIA had ever awarded, and it provides a dramatic finale for the movie.

Movie preview, actress:

Because we made them pay. They couldn't beat us! We won. Write that down, mister!

Linden MacIntyre:

Producer Bernard Zuckerman says, besides the financial terms, this was a major moral victory.

Bernard Zuckerman:

Here you've got nine "little" Canadian victims taking on probably the most powerful institution in America, the CIA, and, these "little" Canadians, they win -- they get the CIA to settle and give them money and, in effect, an apology saying, "what we did is wrong."

Linden MacIntyre:

The movie ends with a CIA settlement, but the story didn't end there. Troubling questions would persist, especially about the government of Canada.

So why was Ottawa so ambiguous when it came to helping some Canadian citizens get compensation from Washington for what they endured in a program that was inspired mostly by American Cold War fears?

Well, the answer was simple. The government of Canada was even more deeply involved in the Allen Memorial experiments than the Americans. Dr. Cameron's experiments were funded to the tune of half-a-million dollars by the Federal Department of Health and Welfare during the 50s, and the funding didn't stop then. They kicked in over 51,000 dollars after the CIA project ended in 1961, which was when a young, stressed-out mother named Linda McDonald became part of the Allen Memorial story.

When she discovered that her own government had been funding brainwashing experiments on her, she made a dramatic decision.

[To Linda McDonald] You decided to take on the government of Canada.

Linda McDonald:

Oh, sure. Well, hey, considering what I'd already been through, that was a snap! [Laughs.] You know, what else -- went on?

Linden MacIntyre:

It must have become obvious to you fairly quickly that you were ramming your head into a brick wall.

Linda McDonald:

Yes, yes. I'm stubborn too; it got to the point where every time, whether it was John Crosby or Reina Tishen [spelling?] or then the Honorable Ken Campbell, it got to be -- uh -- "you guys, we're gonna, we're gonna stay alive," and I said that to Brian Mulrooney too, "If you think I'm going away, you've got another thing coming. I'm not going to go away!" [Laughs.] I finally discovered...

Linden MacIntyre:

Linda McDonald would hound the federal government for four years before finally, in 1992, Ottawa grudgingly agreed to compensate her and some of Dr. Cameron's other victims 100,000 dollars each. In exchange, for signing away the right to sue the government or the hospital.

But it was an ambiguous victory. Ottawa refused to acknowledge any wrongdoing at the Allen, a conclusion backed up by a legal review of what happened there. The report, by a prominent progressive conservative lawyer, relied partly on expert advice from Dr. Frederick Grunberg [spelling?], one of Quebec's leading psychiatrists, who made two controversial assertions: the patients hadn't suffered irreparable harm, and that they had consented to the treatment.

Dr. Frederick Grunberg:

Well, when I went to -- uh -- the patient were admitted at -- uh -- the Allen Memorial Institute where patients were went in voluntarily. So, the sort of consent they gave is -- uh -- was sort of general consent to the hospital. So the consent that was given for surgery or any other procedure.

Linda McDonald:

Consent had nothing to do with it. Dr. Cameron did not describe the treatment; he did not clarify; he did not give any way shape or form, any kind of a hint what was going to happen. That's not consent, and, I don't even know whether he talked to me because I'll never remember anyway.

Linden MacIntyre:

Dr. Grunberg shares a widely-held view in his profession about the legacy of Dr. Ewen Cameron.

Dr. Frederick Grunberg:

I think he was a misguided man -- he worked on a sort of a very poor theoretical -- uh -- basis, and I think he was important -- uh -- considering, but I am convinced, still convinced, that -- uh -- he really wanted a therapeutic way

through the -- he had this motivation that he was going to break this -- uh -- terrible -- uh -- condition.

Linden MacIntyre:

You seem to be saying, "the things that Cameron did were awful, but he meant well, so we'll forgive him, and the victims, or patients, will have to live with it."

Dr. Frederick Grunberg:

It's not a question of forgiving -- the thing is, we put what he was doing in the perspective of his time, and a lot of awful things were going on.

Linden MacIntyre:

A lot of people are saying, considering the accepted practice and the science available at the time, this was an appropriate thing to do to you. What...

Robert Loguey[?]:

It wasn't treatment -- uh -- if that's what you're suggesting, it wasn't treatment for anything; not a toenail, or anything. It was out and out guinea pigs for brainwashing experiments. That's what it was.

Linden MacIntyre:

It's been more than 33 years since the Allen put an end to the practices initiated by its most notorious doctor. It has recovered its world-class reputation as a leader in the treatment of mental illness.

Dr. Peter Roper was dismissed from the Allen two years after Dr. Cameron left. One of the reasons: he insisted on following Dr. Cameron's technique.

Review how you strenuously -- to continue the de-patterning of your patients.

Dr. Peter Roper:

Well, I felt that I had a duty to my patients to give them the best possible treatment, and if there were some who were not responding to any other form of treatment the only thing left was de-patterning for them, then I felt that should be done.

Linden MacIntyre:

You sound -- you sound almost nostalgic for the 50s and 60s.

Dr. Peter Roper:

Oh no, it's not nostalgia; it's the question, I think, that bothers a lot of doctors that it's rather sad if they're prevented from having that treatment because of adherence to political or other reasons which have nothing to do with good medical practice.

Linden MacIntyre:

For Linda McDonald, good medical practice in 1963 turned an emotional crisis into a horror that would haunt a lifetime.

[Sound of a gathering.]

Female voice:

Here we are.

Linda McDonald:

It feels strange.

Linden MacIntyre:

This spring she returned to the Ottawa high school where she graduated in 1957.

Anne Highland:

Hi, Linda. I'm Anne Argue[?] Highland. How are you?

Linda McDonald:

Oh! Well, hi.

Anne Highland:

I was in the liars club; I don't know if you remember.

Linda McDonald:

I don't remember at all!

Anne Highland:

Oh, well that's normal.

Linda McDonald:

And all of these people -- we knew all of these people.

Linden MacIntyre:

She has no memory of this place, or those times, or even of who she was back then.

Linda McDonald:

Oh, here I am. Look at me! You did call me Lindy?

[Back to interview.]

I am who I am today. My family tells me that I am very much like the Linda that they knew when I was growing up: gregarious, always talking, laughing, singing, happy, positive person. I have no memory of that person; all I'm grateful for is that Cameron might have been able to wipe a memory but he couldn't wipe a spirit.

Announcer:

The Fifth Estate will return in a moment...

[End of Cameron segment.]

Eleanor,

Following one the urls below - <http://www.whatreallyhappened.com>  
I found this article on Military Biological Warfare Experiments on the mentally retarded in Texas. The actual url for this is <http://www.info.ars.com/joejoe.html>

Military Biological Warfare Experiment Kills Mental Patients

by Ed Hohmann

Joe Johnson, a former employee at the Austin State School in Austin, Texas, has revealed that military personnel based at the adjacent Camp Mabry have been apparently conducting biological warfare experiments on mentally retarded patients. Some of these experiments have resulted in death.

Mr. Johnson reported that on the night of January 5, 2001, five patients at the school died. Military personnel arrived and froze the bodies using liquid nitrogen. The bodies were then loaded into large white vans to take them to the morgue. However, instead of going to the morgue, Mr. Johnson observed that the vans drove across the street onto the adjacent military base, Camp Mabry.

Joe Johnson is the co-host of the Austin cable television show What's on Your Mind? He is a young black man with a reputation as a solid, reliable citizen, helping young people in his community to say off drugs and keep out of gangs.

On December 24, 2000, Mr. Johnson began working at the Austin State School. He discovered that military doctors and nurses at the school were conducting biological warfare experiments on patients there. According to Mr. Johnson, some of the biological warfare experiments are conducted in the infirmary. Guards are assigned to each patient in the infirmary in order to provide one-on-one supervision. Mr. Johnson also discovered that there are underground tunnels connecting the school to Camp Mabry. When he began asking questions about what was going on, efforts were initiated to get him fired.

On Wednesday evening, March 14, 2001, Mr. Johnson called in from his home to the Infowars television show, hosted by [Alex Jones](#). Alex has known Joe Johnson for several years and knows Joe to be a levelheaded person who would not make up wild stories. After hearing what Joe had to say about the biological warfare experiments, Alex closed his television show by telling Joe to get out of the house for his own safety and come down to the television station, where hopefully the following show would put him on the air so that he could tell his full story on camera.

While Alex raced from the television station to his radio studio to begin his evening Genesis Communication Network syndicated talk show, Joe Johnson scrambled about his house getting his things together.

ther. However, within ten minutes of his call to Infowars, there was a knock on his door. Two black Austin police officers were standing on his doorstep, saying that they were responding to a 911 call. Joe had, of course, made no such call. Then, Joe noticed that the "officers" were wearing no badges and no id tags. When he asked them where their badges were, they quickly returned to their patrol cars, numbers C9 and 269, and sped away.

Joe Johnson then went to the television studio, but was not able to appear on camera. He did, however, call in to the Alex Jones radio show to tell his story in greater detail to a nationwide audience. After the interview, Joe Johnson went into hiding, and has not been heard from since.

On The Alex Jones Show, Mr. Johnson revealed that five patients had died on January 5th. The medical personnel attending the patients were all wearing protective clothing. The military doctors wore range protective suits, the military nurses wore yellow ones, and the remainder of the staff wore disposable gear made of paper and plastic. The bodies were taken down in an elevator to the tunnel level, to an area with tanks of liquid nitrogen. The bodies were frozen and placed in plastic containers before being brought back up in the elevator. They were then loaded into the waiting white vans and driven next door to Camp Mabry.

Their families were told that the patients had died because CPR had not been performed on them. The families were not, however, told that the reason no one had performed CPR was because the patients were foaming at the mouth.

Two days later, Mr. Johnson and other employees received telephone calls telling them not to come to work because of laboratory testing being done at the school. Later, when he looked at his time card for that day, Mr. Johnson noticed that it said, "Military leave with pay". As Mr. Johnson is not in the military, he found this to be very odd.

Camp Mabry sits well inside the Austin city limits just west of downtown. It is the base from which the notorious military checkpoints in the Austin area are conducted. Foreign troops are also stationed there. Recently, Camp Mabry conducted a "biological warfare training exercise". Camp officials made a great deal of noise in the local media about inviting the public to come and observe the exercises. However, those members of the public who took the offer seriously enough to come to Camp Mabry on the day of the exercise found that there was very little for them to observe. They were treated rudely and were excluded from the area where the training actually took place. Now, Joe Johnson's revelations may cast a new light on this entire event.

Joe Johnson's entire interview on the Alex Jones Show can be found on: <http://www.m2ktalk.com/infowars.htm/>

## **Camera Tips for Documenting Perp Activity**

**December 19, 2004**

When perpetrators physically damage your property in some way that is clearly not natural, such as sawing through a piece of furniture, that is a terrific opportunity to photograph and post the evidence.

The problem is that most cameras don't have closeup capability, at least the lower priced cameras. There is a way around that. You can tape an eyeglass lens directly over the camera's lens. Ideally, the eyeglass will be something like 2x (2.00 power) or more.

When you do that, your viewfinder will give too wide a view, but that's OK - just be sure the damage, such as the sawed end of a furniture leg, right at the center of the photo.

If you don't have glasses handy, some relatively inexpensive reading glasses are available at pharmacies. Choose 2.00 to 2.50 power. You can remove the lens from the frame to make it more convenient to tape over the camera's lens.

FLASH is BAD for getting clear closeups. You'll usually get bright white, totally washing out all detail.

The best light for closeups is near a window, or outdoors, on a bright day but NOT IN THE SUNLIGHT - same problem as with flash - you'll usually get everything too bright. Household electric lamps are OK - just don't get them really close or you can wash out the details of the damage.

Position the cut/torn or otherwise damaged object so shadows make the damage more obvious. If holes are involved, put something of contrasting colour behind the holes to make them stand out.

When you are holding the camera, remember without flash, a camera needs to be held steadier than usual. If you have a tripod, use it, but if not, move some piece of furniture near the item to be photographed so you can steady your arms and camera on it.

Take SEVERAL photos at different distances. A digital camera will give you an on-screen preview but even there, a couple of different distances will ensure you get at least one good photo. With a 2x or more powerful lens taped over your camera's lens, you should be able to get somewhere from 16" close and hopefully down to 10" or so.

When you post the photo on a web site, or send it to someone for posting, please be sure to supply the date and some sort of identification, even if you want to keep your identity anonymous. A date on a photo and even a false name are far better than nothing. Also, supply a sentence or two about what happened before you discovered the damage. Such as: "I came home from work and found this ... " etc.

If you digitize (scan) a photo to be posted, please learn how to do these three things to the photo before sending it (check your scanner's help screens, especially the Index for instructions):

- CROP off the excess unused space - a scanner normally produces an 8.5" x 11" image which is HUGE (Save the photo.)
- Reduce the BITS PER PIXEL, also called number of colours. Many scanners scan at 24 bits per pixel, when all that's needed are 8 bits per pixel (256 colours) (Save the photo.)
- IF the size of the image is wider than a screen, which is usually 800 pixels wide, RESIZE (sometimes called resample) the image so that the image fits within one browser screen. I normally choose 750 pixels as my maximum width for perp damage photos. (Save the photo.)

Just scanning and sending a digitized photo can mean you are sending a one MEGabyte file, which is way too big to be sent by email to people who have dial up service, and that is most targets, because high speed service is expensive.

## Carole Sterling

---

On November 6, 1997, Carole Sterling, a mind control victim, committed suicide. She lived in Washington, D.C. and was tortured so brutally she was led to kill herself to escape the torture. She went to a UFO conference years ago and it was there she noticed she became a victim.

The components of the CIA and DoD told her by transmitting to her wirelessly they were going to have her jump out of her window while she was asleep. To have her sleepwalk. She wrote the Colorado Star Beacon a list of torture. Among them was that she was being burned while cooking by sudden motor movements and tortured in her genitals.

A general description of her ordeal was published in the opinion section of the journal. Her surviving sister did not believe her but she somehow ordered an autopsy of Carole's body. We do not know the results.

Carole was an innocent woman from Morocco living in the U.S. She was a law abiding citizen who hurt no one. She was someone's sister, someone's daughter, someone's friend. She was someone who was loved by a lot of people in the United States and in Morocco.

The components of the CIA and DoD maliciously transmitted a signal that was gruesome, along the lines of Philadelphia torturer Gary Heidnik. They took her from her family and they miss her everyday. The people who did this crime to Carole had choices. On the night of November 6, 1997 they chose to take the life of an innocent, kind, sweet woman who wronged no one in the world. They tortured her, kidnapped her and killed her. She would call friends and say, "I can not take it anymore. The pain is too much I am just going to kill myself". Friends would tell her to "hang in there".

"The FBI will arrest these people just hang in there".

Please take a moment on November 6th to think a few thoughts for Carole. Let's all hang in there for Carole so she and her family can have justice served.

## **Pulling Carpets Out of Place While Out**

**April 29, 2008**

One way organized stalkers try to get organized stalking targets to discredit themselves is to complain to non-targets, especially officials and doctors, about things that such non-targets will be fully convinced are "impossible." Things that no criminal has ever done, and that no criminal would even want to do.

Moving the target's furniture out of place is one such thing.

In the photo below, the target consistently finds her entryway carpet runner pulled away from its mate. This happens every single time the target leaves her apartment. This is the perfect crime because until the public becomes aware of organized stalking, this "small" crime will never be acknowledged by law enforcement as a crime.

In the experience of this target in another city, her carpet protector pad under her office chair was pulled aside every time she went out. If the protector pad wasn't pulled back, a heavy job as the table had to be lifted off, the next time it would be pulled further, eventually halfway across the room. In that case, the protector pad actually had to be fastened to the concrete floor underneath to stop this harassment activity.

In the photo below, the carpet pulled aside had been perfectly aligned with the mate and the two had actually been touching before the target left her apartment:

**A Cat's Eye Marvel**

by Leander Kahney

In a dramatic demonstration of mind reading, neuroscientists have created videos of what a cat sees by using electrodes implanted in the animal's brain.

Garrett Stanley of [Harvard](#), and Fei Li and Yang Dan of the [University of California, Berkeley](#), were able to reconstruct in startling detail scenes flashed before a cat's eyes.

The reconstructed scenes clearly demonstrate the scientist's ability to decode the language of the cat's visual system.

The researchers attached electrodes to 177 cells in an anesthetized cat's thalamus, a region of the brain falling about half-way in the visual processing pathway.

Having recorded patterns of firing as various scenes were flashed before the cat's eyes, the team was able to reconstruct very closely [what the animal saw](#), which varied from people's faces to scenes of a dark forest.

The research was applauded by other neuroscientists.

"The demonstration that you can reconstruct a movie from the multiple cells in the thalamus is an important step in our understanding of how signals are represented in the activity of populations of cells," said Fred Rieke, an assistant professor of physiology and biophysics at the [University of Washington](#).

Stanley, an assistant professor of biomedical engineering, said the research provides clues about how prosthetics may one day be wired into the mammalian nervous system. By understanding the language of the brain, scientists will be able to create devices that talk to it, he said.

"Trying to understand how the brain codes information leads to the possibility of replacing parts of the nervous system with an artificial device," he said.

Stanley predicted that in the next couple of decades, as more and more of

the neural code is decoded, brain interfaces may start to appear.

But he cautioned it may take a lot longer. He noted that the team also recorded the activity of cells higher up in the cat's visual pathway -- in the visual cortex -- but the results were not as startling because of the greater complexity of the cells.

"So little is understood about thoughts, perceptions, dreams, it's impossible to predict how much progress we'll make in understanding them," he said.

However, Ken Miller, as associate professor at the [University of California, San Francisco](#), said researchers around the world are using similar techniques to decode higher brain functions.

"These methods could be applied to further up the visual pathway," he said. "It will become more difficult ... but it's a promising direction."

The experiments were reported in the September issue of the [Journal of Neuroscience](#).

**\*\* THREE STARS \*\***

This book is an INCREDIBLE resource for victims of organized citizen group stalking and harassment. There is a problem. The author's CONCLUSIONS do not match my own observations, nor the observations of the several hundred targets I've been in touch with over the past decade. That is why this new book has only been rated at three out of five stars, while Lawson's original book, without much of a mismatch between his conclusions and our observations, was rated at four stars out of five.

But the author accomplished what multiple stalking victims only DREAM about - he penetrated street level citizen groups and rode with them as they carried out harassment assignments. This book is likely to be very helpful for targets who are forced to deal with skeptical family, friends, co-workers, and local authorities. It is definitely a breakthrough in the cause of exposing and stopping these citizen groups who operate freely, while law enforcement only gives their lowest ranking street level members a slap on the wrist now and then (while police deny such crimes happen to targets who complain.)

If a multiple stalking target can comfortably afford the book, I'd give it a definite "buy" recommendation. It will certainly open at least some of the minds of people we multiple stalking victims are forced to deal with.

An excellent web site for members of the public who are not yet aware of organized citizen stalking is this one titled Citizens Against Technological and Community-based Harassment

(CATCH):

<http://www.catchcanada.org>

---

REVIEW: Eleanor White talking:

**\*\*** This book "Cause Stalking" [2007] contains much of the original material from "Terrorist Stalking in America" [2001] but also contains quite a bit of new material as well. Those who own "Terrorist Stalking in America" to assist with anti-organized stalking for activism purposes would do well to have the updated information in "Cause Stalking."

Some of the telling statements about organized stalkers from the first book don't appear in the second, so do check out [that review](#) also, when considering activism material.

Private investigator David Lawson has done something really unique, and which breaks new ground, in the endless quest for truth, justice, and freedom in writing his two books "Terrorist Stalking in America" and now "Cause Stalking." He has infiltrated the international organization of "citizen watch" extremists who harass people for their entire lives, based on lies fed to the harassers by their leaders. His work is a hugely important Step One in exposing and stopping these deluded criminals.

But David Lawson, for reasons unknown to me, has included material in both his books which serves to distract the reader from the real issue that many innocent citizens in many countries are experiencing daily, and have been experiencing for years and even decades. In order for you, the reader, to be able to separate the crime of organized stalking of innocent citizens from foreign terrorist activity and domestic hate groups, you need to think about something carefully as you read the book.

You need to remind yourself that the actual OBSERVATIONS of an investigator are an entirely separate thing from any CONCLUSIONS the investigator may draw. Lawson's observations of these groups are priceless, as they show the public what is happening to us targets independently of our testimony. Use his observations to the maximum in your anti-organized stalking activism.

David Lawson repeatedly states at quite a few places in his book that the perpetrators are either anti-government groups, hate groups, or, foreign terrorists. I see those assertions as Lawson's "conclusions," because his actual observed behaviour of the perpetrators he "rode with" certainly doesn't appear to have any relationship to either anti-government group, hate group or foreign terrorist activity. As I read the book anyway, and from my own observations being on the receiving end of organized citizen stalking group activity.

This is a distressing puzzle for me, as Lawson's observations by themselves are FIVE stars out of five, hands down.

What I and my targeted colleagues see are ordinary citizens of all ages, deliberately doing things chosen to make us as uncomfortable as possible, around the clock, year in and year out. If these people are "anti-government", why aren't they out picketing against government? Or why aren't we seeing people of Middle Eastern origin harassing us? Or hate groups? I don't see people harassing me making racist remarks.

Now there may be some hate groups, or foreign terrorists doing SOME of the harassment, in SOME locations. I'm not denying that possibility, rather, I'm saying over two decades of harassment experienced first hand, and over a decade of networking with other targets, don't jibe with David Lawson's conclusions.

David Lawson mentions the U.S. Patriot Movement by name as an example of "anti-government cult-like groups." Well, I know quite a few people in the U.S. Patriot Movement, and so do my colleagues, and while there may well be a few who do actually participate in organized stalking, the main part of the movement is all about returning the United States to original rule under the Constitution, not about harassing people. In fact, I know 18 Patriot broadcasters who are targeted by organized stalkers.

I don't consider legitimate opposition to government misdeeds as being "anti-government." I consider that true patriotism.

A few of the broadcasters and callers, far from the majority, do claim that ambitions for world control exist in the "Zionist" movement, the seat of which is nominally within the Israeli power structure. The broadcasters are careful to separate these alleged political ambitions from the Jewish faith and culture, and as a result, I don't see this as "hate speech." Perhaps this is what David Lawson considers as making the Patriot Movement a "hate group."

Personally, I feel that the political activity of ANY country is fair game for comment, including negative comment, without making such commentary "hate."

Some of the broadcasters and callers state on air that the Bible declares homosexuality is sinful. To my mind, that is not "hate" either.

Neither the Patriot show hosts nor the callers I've heard advocate harassing either Jews or homosexuals. Consequently, by my definition, they are NOT fomenting hate. Real hate groups DO foment hate and do harassment acts and worse.

The term "hate group" as I use it refers to groups which "hate" and sometimes harass a class of people, not individuals who have widely varied backgrounds and each having a customized list of lies told about them.

And many of the organized stalking targets I know have no visible identification with either Jewish lineage or homosexuality. I haven't heard the targets who are either Jewish or homosexual report they hear references to those personal characteristics as they are harassed.

So my own conclusion is that we are not targeted by what are commonly called hate groups, and furthermore, I don't see evidence that Lawson's observations point to hate groups either.

Perhaps David Lawson has found hate groups doing organized stalking - I can only speak for the cases I've become aware of over my 11 years communicating with organized stalking targets, and being one myself.

It's also important, and I hope David Lawson reads this, to note that people can be vehemently opposed to CORRUPTION in government, without being "anti-government." Government corruption is why organized stalking continues without relief for targets - not because government exists, but because today's governments are corrupt.

Here, from Appendix A of Cause Stalking, is one example of what David Lawson lists as possible organized stalking group sources that I haven't seen corroborating evidence for:

- groups watched by "FBI counterterrorism"
- groups which can "obtain and use WMD (weapons of mass destruction) materiel and technology for mass casualty attacks"
- "Al-Quaeda" (EW: Assuming there is such a group)
- "militant Islamic groups"
- "Algerian extremists; Al-Gama'at al-Islamiyya; Asbat al-Ansar; ..." and about half a dozen similar group names
- "Timothy McVeigh and bombings by Eric Robert Rudolph"
- "right wing domestic terrorism groups"
- "left wing terrorism groups"
- "anarchist movement"

In Appendix A, David Lawson states:

"Fortunately, the USA PATRIOT Act enables the FBI and its intelligence community partners to address all aspects of the threats posed by terrorist organizations ..."

My question to David Lawson about that statement is "What do those terrorist organizations have to do with out-of-control 'citizen watch' people harassing targets?"

To targets of organized stalking, I recommend making sure you stress to anyone you refer to this new book, that Lawson's observations are representative of what happens to us, but the assertions that anti-government groups and foreign terrorists do the stalking do not apply to domestic organized stalking as experienced by us.

"Watcher" perpetrators on station in a quiet Toronto, Ontario neighbourhood

[Click here](#) to see the 5-minute video from which the "watcher" image above was taken.

[Back to Top of Table of Contents](#)

Author David Lawson did interview perpetrators, ("perps"), targetted people ("targets"), and the POLICE. Here is what the author heard from the police he interviewed:

[pg 79] "I also spoke with a few police officers from across the country. They confirmed the existence of stalking groups across the country. In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss. They also said that there are free speech and grass roots issues involved. In fact, the police themselves are targets of these groups. In small towns, the number of members in these groups can easily exceed the number of police officers. In general, the police will NOT talk about stalking groups. One officer did say there is a storm brewing as groups become larger and more numerous."

Author Lawson explains here how he got involved and began to interact with the 'cause stalking' perpetrators:

"One day, several years ago, I was sitting in my house, and checking out the activity on my scanner. I heard a woman say that she was following a certain vehicle. She gave the location, the make and model of the car and the license plate number. A few days later, I heard the same woman on the same frequency (84) request backup at a certain location. A few days after that I again heard her broadcasting the position and details about another vehicle she was following. I listened to other people talking on that frequency and they

didn't give any indication that they were with any government agency but they were talking about ARRESTING PEOPLE."

"On another occasion, on the same business band frequency, I heard someone complain that an African American man was crossing the street. "All we could get him for is jaywalking" responded the leader. "Leave him for the police."

[Back to Top of Table of Contents](#)

"People in the group would discuss where they would go for supper, after their shift was over, so I [the author] went too. I listened to a group of people openly discussing various activities as if they were the police.

"Real police officers were also sitting in the restaurant, listening to them. I later learned that their presence was not a coincidence.

"One man who had supper with the group drove a van marked with the call letters of a local AM radio station. I started listening to it. Most of the guests were people who said they had new revelations about Waco or Ruby Ridge, or had some inside story about government corruption. It is called hate radio. I also heard advertisements for the meetings of a local political group and I attended some.

"At the first meeting I attended, one young man flashed a phony police badge at me. No one paid any attention. Some of those in attendance were the people I had seen in the local restaurant. This was my introduction to the creepy world of anti-government extremists."

David Lawson goes on to explain that he has observed extremist groups for several years while living in New York State, Florida, and Canada.

\* Again, Eleanor White talking: As someone who listens daily to the Patriot broadcasts, I do NOT hear "anti-government" talk. I hear a great deal of talk about actual government crimes and corruption, in which laws and the U.S. Constitution are being increasingly ignored. That talk is anti-corruption, not anti the existence of a legitimate Constitutional government. David Lawson has increased the number of allegations of "anti-government" activity against the Patriots in this book.

I urge anti-organized stalking activists to be VERY careful to separate David Lawson's personal conclusions from his observations of organized stalking perpetrator activity.

[Back to Top of Table of Contents](#)

David Lawson monitored the stalking groups' public communications, attended meetings, rode with them.

The author defines the basic reason for being for these citizen stalking groups as CAUSE STALKING. Cause stalking means the group is assembled, under a leader with a "shadowy past", for some specific cause.

"Cause stalking has been used by extremist groups since the early 1990s. The basic system is alleged to have been developed by the Ku Klux Klan and refined through years of use.

Some details about the typical cause stalking recruit:

"Recruits tend to be blue collar workers who are at the bottom end of the job scale. They are janitors in apartments, hotels, etc., who have keys to get in any locked doors. They are security guards, who can let fellow members into places where they would not normally be allowed to go. They are city workers, who can, in many cities, follow a target around all day in their vehicles or have a noisy project underway near his [target's] residence. They are taxi drivers, who are a network that is always on the road. They are cable, telephone and electric company employees who can interfere with a target's service and spend time on patrol with the group, while they are on the job."

Those are the author's words. Here are a few quotes from the perpetrators themselves, from the original book:

[From Terrorist Stalking in America] "We are like the police except we are ABOVE the police."

[From Terrorist Stalking in America] "We are a citizen's group that helps the police. We are trying to alert people in the area about this person [the target] before he gets to do what he did in the last place he lived." [Eleanor White talking: All the cause stalking targets I know well did not commit ANY offenses. The stalkers are filled with LIES by their leaders.]

[From Terrorist Stalking in America] "When I get the call, I go to whatever the address is. It doesn't matter what they [targets] do, they can never get away from us."

[From Terrorist Stalking in America] "Who are we? We drive the ambulances that take you to the emergency room. When your house is burning, we put out the fire. We are security guards. We protect you at night. YOU ONLY HAVE ELECTRICITY, PHONE AND CABLE SERVICE BECAUSE OF US. We are janitors. We have the keys. We fix your cars. YOU DON'T WANT TO MESS WITH US."

[Back to Top of Table of Contents](#)

In "Cause Stalking", David Lawson provides some details about the motivations of stalking group members not in the first book:

- 25% follow the nominal "cause" they were recruited under
- 25% actually participate in the harassment
- 75% harass occasionally or not at all
- 10% join out of fear of being harassed themselves

That 10% joining out of fear of harassment is quite interesting, as one of the most difficult barriers to educating the general public about organized stalking is why anyone would volunteer to harass others. Joining out of fear is very Mafia-like.

Lawson describes recruits to these groups as "... those who feel powerless, inferior and angry." Common sense is that naturally, such people would be easy to recruit for street and adjacent to the target's home harassment, but I would comment that lots of professionals put us (targets) down at every opportunity, declaring us mentally ill for even suggesting organized stalking is possible. These professionals don't "feel powerless, inferior, and angry."

And I doubt the many utility and city employees who participate feel "powerless, inferior, and angry" either. So while David Lawson has done a great job, some aspects of organized stalking have escaped him.

One interesting comment Lawson makes is that "Firemen across the country, and even some police officers, support these groups."

That's interesting to me because I have heard a number of reports that vehicular harassment has involved an above average number of vehicles that bear stickers of firefighters, or, a few targets have traced perpetrator identities to firemen. One target discovered that a number of vehicular harassment cars, identified by licence number, were parked in a police station parking lot.

My personal take on why firemen and police would back these groups is that many have a heightened sense of community service. If they can be persuaded that the target has a criminal record, the worst case being that of a pedophile, it would be natural for firefighters and police to "help keep the target in line".

I'd like to comment on the following statement made by David Lawson about his impressions resulting from, apparently, joining and monitoring targeted individuals' forums on the Internet:

"On the Internet, groups professing to protest government stalking, claim that high tech weapons are used against them. It isn't the government and groups do not have access to any technology that can't be bought on the Internet. Their tactics aren't high tech, they are low tech. Targets will encounter people carrying speakers and what appear to be electronic devices. They are just a show."

A few years ago, I was briefly in email contact with David Lawson, and he made the same assertion to me by email. This clearly shows that in spite of his excellent detective work, he missed a corps of electronic anti-personnel weapon operators who, apparently, are kept away from the community level stalking groups. This is probably why David Lawson hasn't learned about these "e-weapons."

In our group, which in my 11 years on line extends to a couple of thousand targets world wide, almost everyone who experiences organized stalking also experiences electronic anti-personnel harassment sooner or later. Through the efforts of our researchers, we have rock solid documentation on FIVE silent, zero trace evidence, through wall capable devices which

are NOT secret military weapons. These technologies can be had by anyone with an upper middle class income. All five of them.

I did offer to provide the documentation, and explain the operation of these five weapons to David Lawson, but he declined, regrettably. He could do the world a great deal of good if he would turn his investigative skills toward the task of exposing the second echelon of the stalkers, those with the electronic weapons.

As to the government doing the stalking: I regret that so many of our web sites and email forums are full of claims that "the government" is carrying out the harassment. The fact is as of today, we cannot identify either the people at the top of the organized stalking chain of command, nor the people at the top of the electronic weapons chain of command. Hence, we cannot say whether government employees are doing the harassment or not. I sincerely wish we could hire David Lawson to find out, however, destruction of the ability to earn a good living is one result of the organized stalking crimes, and many of us are out of work, working at minimum wage, and some are homeless. We are not able to hire a private investigator.

It is beyond the scope of this review to go into detail, reader, but if you will research MKULTRA and COINTELPRO on the web, you will find that the (U.S.) government has committed crimes of the same general type as both organized stalking and electronic weapon harassment since World War II, so an accusation against government should not be ruled out.

And the seamless use of the mental health system to keep our complaints stifled is a substantial crime in itself. But bottom line, we cannot prove government is "doing it" at the time this review was written.

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

Lawson explains the attitude of the typical stalking group member towards the "cause" this way:

"Most active group members have only a general idea of the ideology of the group but they don't particularly care."

These groups come into being and are run by leaders. Here is what the author says about them in this book, a bit different and more clearly, when compared with the [original book](#):

"Group leaders do have political goals and the belief that the end justifies the means."

Lawson describes leaders as considering their members "disposable."

Lawson states that some leaders work for corporations and politicians (original book didn't mention politicians.)

Lawson states that leaders identify targets but don't directly supervise the harassment group members.

Lawson describes leaders as having an "air of mystery", "having worked for the CIA, NSA, or some other intelligence agency that doesn't reveal information about their employees." Lawson states that this "background" is likely mythology.

How about financing these groups?

Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report. Here is an example of what I mean by "large expenses":

"Groups are WELL FINANCED. They can afford to RENT PROPERTY WHEREVER THE TARGET LIVES. If he drives across the country, he will be followed by supporters of similar groups in that area. If he travels by plane, group members will meet him wherever he lands in the U.S. They may even accompany him on a plane if they know his travel plan, and there is a good chance that they do."

The phrase in the quote "in the U.S." was added to the new book. I'm not sure if David Lawson knows this is fully operational world wide.

[Back to Top of Table of Contents](#)

Here is what the author learned about their financing:

[From Terrorist Stalking in America] "The operations of many extremist groups are actually financed by CORPORATIONS which use them to stalk their enemies or potential enemies. The groups are used as the PRIVATE ARMIES of those corporations. Some countries kill dissidents and in others they are jailed. In the United States, someone who is threatening to corporations or industries, like a whistleblower or activist, is likely to become the target of an extremist group."

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them. We in the organized stalking target community agree.

There are two distinct reasons why we are harassed:

- The initial reason we are placed on the stalking groups' "list"
- The reason the stalkers keep it up (always involves lies)

Those two reasons should always be kept separate in your mind, reader. David Lawson's focus is mainly on the reason the stalkers continue to harass targets.

David Lawson's chapter on Selection of Targets may well be true, but it certainly doesn't describe the thousands of people who don't fit his list of targeted categories, yet are viciously

harassed and lied about. Here are some of the categories of targets Lawson records in the new book:

- Abortion clinic workers
- People guilty of mistreatment of animals
- County clerks and local politicians
- Police officers
- Judges
- IRS and Treasury agents
- Civil rights activists
- Government or corporate whistleblowers

We DO have whistleblowers among our number, but the number is very small relative to ordinary citizens who suddenly become targeted for no reason, or reasons such as reporting a crime, exposing a pedophile, or sometimes simply being a target of co-worker jealousy. For the group of organized stalking targets I know, Lawson's list above is rather skewed away from our experiences. Police officers and judges are much more likely to participate in the harassment by trying to shove us into the mental health system.

One thing David Lawson makes clear in describing the targets is that "The ultimate goal of the groups is to destroy the targets." Those of us who have been stalked by organized citizen groups which are fed lies is that these groups do destroy targets with great efficiency.

Next, let's look at some of the typical OPERATIONS these groups carry out. Here, I have retained a number of quotes from the original book because I feel they state the situation as well or better than the new book:

- The first step, after a target has been selected, is to establish a personality profile "... which will involve an assessment of IQ, personality type, and history."
- "A target may also notice being photographed."
- [From Terrorist Stalking in America] "The primary characteristic of cause stalking is that it is done by LARGE GROUPS OF PEOPLE. A target will always be followed, but he is unlikely to see the same stalkers very often." ...

[From Terrorist Stalking in America] "Many of these groups include hundreds of people."

[Back to Top of Table of Contents](#)

- "Some authors refer to cause stalking as terrorist stalking. Groups do not just stalk individuals. They employ organized programs of harassment which include BREAK-INS, PROPERTY DAMAGE, ASSAULT AND OCCASIONALLY, EVEN DEATH. The CHILDREN of a target are a favorite."
- [From Terrorist Stalking in America] "Firemen across the country, and even some police departments have a long history of supporting extremist groups. Fire trucks can sometimes be seen riding in extremist convoys, with their flashing lights turned on and their sirens screaming. They will also race to greet a convoy which is entering their town. The participation of firemen, city workers and utility company workers helps give group members an illusion of legitimacy and power."
- [From Terrorist Stalking in America] "City employees can be used to harass a target in many ways including tearing up the road in front of a target's home. Employees of pest control businesses who have access to the keys for apartments and those who work for alarm and locksmith companies are also of interest."

[Back to Top of Table of Contents](#)

- [From Terrorist Stalking in America] "Groups also attack targets of convenience. These people are selected because they are convenient targets, and not for any other reason. These include loners who tend to be more vulnerable to their harassment tactics than those with family and friends around them. Targets of convenience are used for practice."
- [From Terrorist Stalking in America] "In order to establish bases of operation, they will ENLIST THE ASSISTANCE OF NEIGHBORS. In many areas, they can do this by intimidation. Those who do not co-operate can be targetted, which includes harassment of their families and damage to their homes and vehicles."

"If they are dealing with individuals who do not know them, they can also appeal to their sense of patriotism and they can offer drugs, friendship, home repair, free taxi rides and what ever else they have to. In some cases they may even be able to get a key to the residence from a 'patriotic' landlord."

[Back to Top of Table of Contents](#)

- [From Terrorist Stalking in America] "Surveillance is conducted 24 hours a day, 7 days a week. When a target leaves his residence they will alert the group, either by cell phone or by business band radio. Other members, who are patrolling the perimeter to watch for police and other vehicles driving in the area, will race to the location to begin pursuit. In small towns, where business band radio is widely used, these activities are a local sport among a small group. Anyone with a scanner can join in. Some targets have reported hearing an announcement on their scanners AS SOON AS THEY TURN THEIR LIGHTS ON IN THE MORNING."
- [From Terrorist Stalking in America] "In a typical apartment setting, they will attempt to lease, sublet, or otherwise have access to apartments above, below, and on both sides of the target. They will also "guard" the vehicles of a target in the parking lot."

[From Terrorist Stalking in America] If [the target] flushes a toilet, he may hear a car horn honk, the sound of a power tool or hammering, for example. There will also be a large number of people coming and going, and accompanying rowdiness and noise."

[Back to Top of Table of Contents](#)

- [From Terrorist Stalking in America] "A common ruse used by these groups is that they are a 'citizens group' which assists the police and they are 'just keeping track of' a certain individual, for whatever reason. The illusion is reinforced by the case files they carry which are complete with photos of the target and look like those used by police."
- "During a search [of the target's home or apartment] members who are on patrol anyway establish a perimeter around the residence to watch for police vehicles. In an apartment setting, entry will likely be gained through a member of the janitorial staff, pest control or alarm technician, since they have a right to enter. They may even be able to approach a landlord and gain his co-operation, after convincing him of their 'higher purpose'. He may also co-operate out of fear." Eleanor White comment: These "searches" are quite frequent, like weekly, and include sabotage of personal items, breakage of furniture but not total destruction, ripping of armpits and crotches of clothing, and theft of consumable supplies. Not enough damage in any one visit to get police attention.
- [From Terrorist Stalking in America] "Others do not recognize that they are being harassed by an organized group. They just think that there are a lot of rude people in the world." Eleanor White comment: Because stalking group operations are intentionally designed to look like "life's normal breaks" (but occur daily instead of occasionally,) not only do outside observers not recognize organized stalking very often, but most targets require months to years to realize it's not just "bad luck."

[Back to Top of Table of Contents](#)

- "Interception of mail is standard practice." ... "Typically, targets notice that their mail is arriving late or they do not receive certain pieces of mail. They [targets] may overhear people at a nearby table in a restaurant talking about certain mail, and realize it is theirs, or someone may drive by [the target] waving their mail at them."
- "Interception of phone calls is also standard practice. This is done by telephone company employees who support the [stalking] group for ideological reasons or because they obtain some benefit." Eleanor White comment: I'd add to that one of the most likely reasons, because the phone technicians are told lies about targets.
- "An objective is to isolate the target from his family and friends. He can tell them about all the strange things happening around him, but they will not understand and perhaps will think he is crazy. Sometimes other members of the family will receive the same treatment."
- "When a target is driving, standard practice is to surround his vehicle and attempt to control his speed. He will not be followed in close proximity by the same vehicles for a long distance. They do frequent trade-offs. Vehicles line up behind the target to take their turn."

"In many parts of the country it is common to see groups of six to 30 or more vehicles driving around in convoys with their high beams on during the day. This is one of the ways a convoy can be identified."

- "Standard practice is to watch the target's vehicles and this subjects them to damage including slashed tires, scratched paint, stolen license plates, etc. Typically they would not cut the brake lines on vehicles or commit other similar acts of sabotage, but they WOULD drain the oil or antifreeze over a period of TIME. [Eleanor White: AMEN!]"

[Back to Top of Table of Contents](#)

- [From Terrorist Stalking in America] "A target will be followed on foot wherever he goes. Anyone can go to the same public places he goes, and they will attempt to get into any other restricted places he goes, including hospitals, places of employment, etc. It has been said that it is possible to go nearly anywhere if you have a clipboard in your hand and it is almost true. They also like to wear name badges on a lanyard, and some carry phony police badges."
- [From Terrorist Stalking in America] "Common harassment tactics used by those on foot include PEN CLICKING, in which they repeatedly click a ball point pen, key rattling, and rattling change in their pockets while standing behind the target. Many tactics are tried and the result is observed. Those which evoke a response from the target are repeated. When a target sits anywhere in public, group members will attempt to sit behind him in order to create noise, by whatever means, including tapping their feet on the target's chair. The objective is to harass the target constantly."

[Back to Top of Table of Contents](#)

- [From Terrorist Stalking in America] "Groups attempt to interfere with any business and personal relationships which the target has. Typically, this interference involves character assassination from some anonymous individual and is not usually taken seriously by those who know the target. It can be effective with people who don't know the target."
- "At work, the target will also experience character assassination. If he works in any position where he has to deal with the public, there will be a steady stream of customers who complain about him. If he is a real estate agent, he will have a steady stream of prospects who OCCUPY HIS TIME but never make an offer."

Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be.

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the citizen groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete, and has life-destroying consequences!

- "A common tactic use by groups is noise campaigns. Group members will drive by the target's residence or work place, honking their horns, squealing tires, and making whatever other noise they can."

"They will also make noise from whatever NEARBY PROPERTIES they have access to. Typically, they will make noise WHEN THE TARGET GOES OUTSIDE. [Eleanor White talking: OR, when the target opens a window, and I mean timed to the millisecond! Open, close, perfect sync!] Group members will also frequently knock on his door for whatever peculiar reasons they can dream up."

[Back to Top of Table of Contents](#)

- "In an apartment setting, targets can expect to hear tapping on the walls in the middle of the night, hammering etc. from the upper and/or lower apartments, and possibly the apartments on both sides. They will continue to 'work' on these activities for as long as they can get away with them."
- [From Terrorist Stalking in America] "... It is not uncommon, in an apartment setting, for a target to hear someone moving from room to room as he does, from the upper or lower apartment. [Eleanor White talking: This requires commercial through wall radar or more advanced technology in many cases.]
- "Often they occupy a nearby apartment, part time, when the owner is not there and he receives some benefit. A target may notice someone leaving a nearby apartment when he leaves his, and arrive when he arrives. [Eleanor White talking: All the time, in my experience.] In addition, he will often be accompanied in elevators by a steady stream of different individuals who go to the apartments being used by the group."

[Back to Top of Table of Contents](#)

Now that is a HUGE "laundry list" of operations carried out against the targets of these criminal cause stalking groups. But reader, both of David Lawson's books are pretty well ALL MEAT, and there is MUCH, MUCH more within their covers. If the general public is made aware of this book, these brutal crimes, which have resulted in suicides, just might have a chance of being exposed and stopped.

In fact, given the almost seamless cover provided by public officials who consistently say that organized stalking doesn't happen, and those who complain of it are mentally ill, it may well be that ONLY by educating the general public can these crimes be reversed and stopped.

Covering up organized stalking is itself a criminal act, and a violation of all the job descriptions and oaths these public officials have accepted and made. They are NOT doing their jobs!

What about the future, then? Let me close this review with a chilling quote from David Lawson's first book, Terrorist Stalking in America, reporting what the author learned from some of the leaders:

"The leaders ... are starting to balk at exposing their members to arrest for activities which amount to little gain for the movement. THEY SAY THAT ANYONE WHO IS A TARGET SHOULD BE KILLED, and not just harassed for years."

YOU, Joe and Jane Citizen, have the power to stop this by doing nothing more than asking your public officials how they plan to deal with this growing crime. Will you help us?

Eleanor White

# **STILL BELIEVE HUMAN IMPLANTATION FOR BOTH TELEMETRY AND CONTROL ("STIMULATION") IS SOMEONE'S OVERACTIVE IMAGINATION?**

Original link: <http://www.engin.umich.edu/facility/cnct/orgind.html>

Scroll down below this main CNCT page for additional details transcribed by one of our CAHRA members.

---

## **Center for Neural Communication Technology Organization**

The NIH NCRR requires that its Centers have several basic components: internal research projects, collaborative research projects, and service to external investigators in the form of distribution and training. The organization of the Center for Neural Communication Technology (CNCT) will be described here with links to more details on individual projects.

The underlying goal for all of the work conducted by the CNCT is to make multichannel recording and stimulation devices available to researchers which will enable them to more efficiently communicate with the brain. Micromachined electrodes offer the potential to extend small ensemble studies to tissue volume studies consisting of dozens if not hundreds of cells.

---

### **Internal Research Projects**

There are three internal research projects under the Center which are designed to enhance the capability of the base technology:

- Project 1, [Extensions of Micromachined Microelectrode Technology](#) : Extend the basic structure of the device to include fluid carrying channels for delivery of fluids to tissue volume, and/or to lesion at recording/stimulation site locations.
  - Project 2, Biological Neural Networks: Develop techniques for data acquisition from and analysis of neural circuits in the volume surrounding arrays of recording devices. The direction which has been proposed for this project over the next grant period will be to study the relationships between the physical characteristics of the devices and the architecture of the neural tissue to rationalize the process of design and experimentally explore and model the deterioration of chronic implants over time to improve their behavior. A recent poster presentation on data collected from the cochlear nucleus can be seen [here](#).
  - Project 3, [Morphological Visualization and Assessment](#) : Explore the envelope of tissue surrounding stimulation, recording and/or chemical delivery probes for histological evidence of deterioration of probe performance which has been observed electrophysiologically in vivo.
- 

## Collaborative Research Projects

In addition to internal projects, there are multiple collaborative research projects with investigators outside the Center. Collaborators contribute significantly toward improving and expanding the use of the technology in areas including optimization of device designs, evaluation of chronic connectors, interconnects and cranial chambers, improvement of implantation methods, development of protocols for chronic electrode site maintenance, testing of advanced devices, and exploration of new application areas.

Here are links to webpages of some of our collaborators (more to come.....):

- [Gyorgy Buzsaki, M.D., Ph.D.](#), Rutgers University, Neural network activity in the hippocampal formation
  - [Steven Highstein, M.D. Ph.D.](#), Washington University, Effects of microgravity upon the labyrinth
  - [David Martin, Ph.D.](#), University of Michigan, Microstructure and processing of bioactive protein polymers
  - [John Middlebrooks, Ph.D.](#), University of Michigan, Cortical representation of auditory space
- 

## Service

Service to investigators outside of the CNCT is provided in the forms of distribution of probes, and training in their use.

- [Distribution](#) has been a key component of the CNCT since its inception. In fact, it provided the main motivation for applying for the first NIH NCRR grant in 1994. To receive probes, we require that investigators fill out an [application](#). Details of the variety of devices which we offer to the research public are outlined in a [catalog](#). Standard devices are provided packaged appropriate for acute use. Prior to receiving additional batches of probes, we require the submission of a [feedback form](#) so that we may track progress and use the data to better understand and improve the technology.

- The CNCT offers several [training opportunities](#) to provide education and experience in the design, handling and application of multichannel probes.
- 

## TRANSCRIPTION OF FURTHER CNCT SITE DETAILED TEXT:

-----  
With support from the NIH/NCRR, the Center for Neural Communication Technology (CNCT) is able to offer a variety of probes to neuroscientists. The fabrication process for these probes gives great freedom in their design for recording and stimulation in the central nervous system. Their small size and fine features permit multichannel interaction with the tissue on a scale that approaches the size of the cells of interest.

While the probes are not the perfect tool for every application, they do offer several advantages over conventional electrodes. These include batch fabrication which leads to very reproducible geometrical and electrical characteristics, the ability to include multiple sites on a single substrate at accurate dimensional relationships to one another, the capacity to integrate a multichannel interconnect for chronic applications, the potential for inclusion of on-chip electronics for signal conditioning and/or stimulus generation, and the ability to produce virtually any two-dimensional shape. The extensive design freedom offered by the technology has resulted in a variety of different probes which should satisfy the needs of investigators in many different disciplines. If you would like to receive probes from the CNCT, please fill out an application form .

The distribution of passive probes to investigators both internal and external to the University of Michigan began in late 1988. One of our goals has been to obtain information on how the probes perform in a variety of applications, and to use this information to further optimize their design. The probes are currently available free-of-charge through support from the NIH National Center for Research Resources. The only method of "payment" which is currently required from users is feedback on probe performance to aid in the continuing effort to better understand and improve the technology.

### Acute Probes

Since acute probes are generally available in greater numbers, are simple to package, and are easy to handle, they are a good entry point to using the technology. A schematic of an acute probe and its basic features is shown in Figure 1. The different acute designs offered in the catalog (available for download in pdf format, or email [jfh@umich.edu](mailto:jfh@umich.edu) for a hardcopy) vary in the number of shanks, the length and width of the shanks, and in the spacing and surface area of the conductive sites.

Acute probes are mounted and electrically connected to PC boards using ultrasonic bonding as shown in Figure 2. Exposed connections are stabilized and insulated with epoxy. The pins on the PC board mate directly to standard integrated circuit DIP sockets permitting easy handling and connection. Such a socket is mounted on the front end of our custom-designed preamplifier (see below) and connected to high-input impedance amplifiers. The preamplifier is designed to be mounted on a microdrive directly above the animal preparation. In this way, the

entire electrode package can be lowered to the preparation with minimal handling and precise electrode insertion can be achieved. This acute packaging scheme has proven to work well for most preparations and is provided as a standard item. We will, however, provide custom acute packaging for users who provide their own connectors.

Once packaged, the probe site impedances are tested at 1kHz in saline. The investigator is provided with the impedance characteristics for each probe, and a site map which relates the sites on the probe to the pins on the PC board. Maps are also available for download. Probes are typically provided in groups of 6-10.

#### Chronic Probes

Many investigators are interested in performing chronic experiments. We currently offer chronic probes only to CNCT collaborators and to investigators who have gained experience with acute probes and who are willing to work with us to understand and improve chronic recordability. Recording sites on chronic probes tend to increase in impedance and degrade in recording quality over time. Internal Research Project 2 is aimed at understanding this degradation, and developing ways to prevent or remedy it. We hope to bring chronic probes into the general distribution effort in the near future.

For a floating electrode configuration, chronic assemblies utilize a probe with an integrated flexible silicon ribbon cable as the interconnect (Figure 3). In this configuration, the probe shank is inserted into tissue and the flexible cable forms the interconnect to the percutaneous connector. Probes have also been packaged for investigators in non-floating chronic configurations. In this case, a non-cabled probe is attached directly to the percutaneous connector.

#### Custom Design

Some investigators wish to obtain devices which are designed specifically for their application. In fact, many of the devices in our catalog are based on designs that were submitted by investigators external to the CNCT. Custom design is a service which is offered by the Center to investigators who, through experience with existing designs, have determined that a special design is required for their study. New design runs occur approximately once a year with up to 20 designs per run.

#### Site Impedance: Testing and Reduction

The probes in the CNCT catalog have sites of two surface areas: 177 and 1250 sq micrometer. Typically, the smaller sites are used for recording and the larger for stimulation. All sites are made of sputtered iridium. Typical impedance ranges are 2 to 3 megohms for recording sites and several hundred kohms for stimulation sites. When you receive packaged probes from the CNCT, you will also receive a data sheet with 1kHz site impedances. The measurements are made in phosphate buffered saline using an HP 4194A Gain/Phase analyzer. If users wish to bond their own probes or modify the sites in any way, an AC impedance tester is recommended. In choosing or building a system, it is important that current passed through the probe site is very low. There are several suitable systems commercially available including one by Frederick Haer (#40-60-2) which uses 10nA measurement current). Iridium sites can be modified electrochemically to increase their current passage capabilities, or to decrease their impedance. This is done through formation of an oxide on the surface by cycling a voltage across

the iridium/electrolyte interface. The process is known as activation . The resulting iridium oxide has a high charge capacity, is resistant to dissolution and corrosion during stimulation, and has a lower impedance than pure iridium.

Activation is required for those users who will be passing appreciable current through the sites to prevent deterioration of the metal. The charge injection limit of activated iridium is several hundred times that of unactivated iridium. Activation also has merits when applied to recording electrodes; for those users who wish to reduce and impedance, small sites can be reduced by several orders of magnitude. This may be especially important when minimizing crosstalk is critical such as for CSD analysis and when a long probe shank is required.

#### Amplifiers

Use of an appropriate headstage amplifier is critical to maximize signal quality from the small, high impedance sites on the probe. Important characteristics for such a headstage include high input impedance and close proximity to the probe to minimize signal loss and crosstalk, and low bias current to prevent damage to the sites. At the University of Michigan Kresge Hearing Research Institute, probes are used with custom built high impedance buffer amplifiers (Figure 4). The design uses the Texas Instruments TLC2274CD quad op amp in a DC coupled, non-inverting, unity gain configuration. The design incorporates SOIC packages and surface-mounted passive devices on a double-sided printed circuit board to minimize the size of the final package. The probe can be connected to the board with a standard DIP socket.

A 10kohm resistor in each input circuit protects the op amp from damage by static discharge. A 100ohm resistor in each output circuit prevents oscillation when driving long cables. To prevent oscillations, increase slew rates, and lower output noise, 4.7 mfd tantalum capacitors, in parallel with 0.1 mfd ceramic capacitors, are connected as close as possible between each of the TLC2274 power supply pins, and the power supply common. The headstage can be powered from an AC/DC power supply, or from batteries. The power supply voltage range can be +/- 2.2 VDC to +/- 8 VDC at 1.5mA per channel. The power supply common can be connected to earth, or isolated. If isolated, an isolation stage must be provided in a secondary amplifier.

An aluminum case protects the circuit and provides electrical shielding. The case is mounted on a non-conductive rod to isolate it from the micromanipulator. The headstage case and connecting cable shield should be connected to earth for best shielding from 60 Hz pickup. If the headstage power supply is to be isolated, the case should be electrically isolated from the experimental animal.

While the CNCT currently does not offer these headstages, questions about their design and construction, or about choosing an appropriate commercial headstage, can be directed to the technical support email group (cnctsupport@umich.edu).

# Brain-Updating Machinery May Explain False Memories

This New York Times article, I hope, will spur all concerned members of the anti-involuntary experimentation and justice for MKULTRAs groups to renew their vigorous, militant, public attempts to get public attention focussed on these atrocities while we still can!

MKULTRA, psycho-electronic, and all child sex abuse perpetrators (all perps, actually) will just LOVE the existence of this technology to shoot down charges against them in court.

Eleanor White

Brain-Updating Machinery May Explain False Memories  
September 19, 2000  
By SANDRA BLAKESLEE

---

Scientists may have found a biological reason to explain why two people who witness the same event will, years later, often have different memories of what happened.

It seems that every time an old memory is pulled into consciousness, the brain takes it apart, updates it and then makes new proteins in the process of putting the memory back into long-term storage. The fact that new proteins are made means that the memory has been transformed permanently to reflect each person's life experiences 97 not the memory itself.

The finding is based on research involving a specific kind of fear memory in animals, but many experts predict that it may also hold true for other kinds of memories in humans. They also say that the discovery could lead to ways of altering or erasing people's memories.

The research, carried out at the Center for Neural Science at New York University, was described in the Aug. 17 issue of the journal Nature. This is the first good neurobiological explanation of the way memories are updated, said Dr. Daniel Schacter, a Harvard psychology professor and a memory expert. "It's a mistake to think

that once you record a memory, it is forever fixed," he said.

Dr. Elizabeth Loftus, a psychologist who studies memory at the University of Washington in Seattle, said: "This is very interesting research. We're on the brink of being able to figure out how you might accomplish something like memory engineering."

It may be possible to erase traumatic memories in people who are plagued by them, she said, and to better understand how false memories are implanted into people's minds when they are given suggestions that they want to believe.

[Eleanor White: It may also be possible to erase memories people want to KEEP, and which enable them to maintain resistance to oppressive government using memory erasure technology!]

It has been known for at least 100 years that newly formed memories are initially unstable, said Dr. Yadin Dudai, a neurobiologist at the Weizmann Institute of Science in Rehovot, Israel. A bump on the head, an electric shock or certain drugs can disrupt the process that gradually turns short-term memories into long-term memories through the production of new connections and protein synthesis in memory circuits.

In the 1960's, researchers showed that certain drugs could interfere with the recall of memories, he said, but the research did not get very far because the drugs affected the entire brain and could not be traced to cellular mechanisms in memory networks.

Dr. Karim Nader and Dr. Glenn Shafe, research assistant professors at N.Y.U., carried out the new experiments on memory recall in ways that reveal those cellular mechanisms with much greater precision. In a process called fear conditioning, they simultaneously played a tone and delivered an electric shock to the feet of caged rats. Later, when the rats heard just the tone, they froze; they had learned to be afraid.

Researchers know exactly how and where this fear memory is hardwired in the rat's amygdala, a part of the brain that processes emotions.

If the rat's amygdala is injected with a drug that blocks protein synthesis shortly after fear conditioning, it does not acquire long-term memory of the fear, Dr. Shafe said.

But if the drug is injected six or more hours later, the memory is not blocked; the brain has made new proteins to consolidate and store the memory.

For six hours or so the memory is what scientists term "labile" 97 open or sensitive to some kind of manipulation. After this period, the memory is firmly in place.

"I was bored with these experiments," Dr. Nader said. "I began thinking, what happens to a memory when you remember it? It would be so cool if it became labile again." He proposed a new experiment: animals would be trained to associate the tone with the electric shock. The researchers would wait a day or more for the fear memory to consolidate. Then they would present the animal with the tone (to retrieve the memory) and a drug that blocks protein synthesis.

"I said the drug would have no effect" on past learning, Dr. Shafe said. If anything, the animal's fear memory should be stronger because the drug could deter the animal from learning that a tone was not necessarily associated with a shock and that would reinforce the original fear memory. The two scientists bet a cocktail on the outcome. A few weeks later, Dr. Nader won a cosmopolitan.

"My jaw just hit the floor when I saw the result," he said. Instead of freezing at the tone, the rats scarcely reacted. It means memories become labile and open to revision every time they are recalled, Dr. Nader said. And new proteins have to be made before the memories are put back into storage.

Both researchers emphasized that this finding was only a first step in exploring the biology of how the brain consolidates and manipulates memories. It is not known if much older and more established memories are open to editing or if this mechanism is restricted to fear memories alone.

Why evolution would choose a strategy that permits memories to be highly malleable is an interesting question. Memories need to be reliable to guide behavior, but they also need to be open to new information.

In the long run, these findings may be used clinically to erase traumatic memories, Dr. Loftus said. A patient would recall the troubling event and be given a drug or other agent to disrupt the memory from being reconsolidated.

The research also sheds light on false memories, she said. If a recalled memory is open to revision, incorrect as well as correct information can be woven into the fabric of a memory. Once that happens, a person has no way of knowing what is true or not true. Yet people put faith in their memories to guide their decisions, she said.

## Russian/U.S. International Coalition Formed

### МОСКОВСКИЙ КОМИТЕТ ЭКОЛОГИИ ЖИЛИЩА

124579. Москва,  
Зеленоград, 1006-363

tel. 531-64-11, 534-40-28

Исх. № 101/2-02  
от 04.10.2002 г.

President of C.A.H.R.A.  
Cheryl Welsh

Dear , Cheryl!

I and Liya received Your letter. Thank you. We want to send very soon next materials:  
- copies of some articles, which we ask us to send;  
- until two stories of victims, then we will send else.

And thank You for translation of message to World Community, but in this translation, please do next exchanges : instead of name of Vice-Chairman Petukhova A.Y. and her telephone 376-4987 on blank it is necessary to write name Terekhova L.I. and her telephone 534-4028, because Petukhova A.Y. now works separately from us.

Besides, we ask to You to send us on Email: [moskomekologia@narod.ru](mailto:moskomekologia@narod.ru) English translations of our texts (Message to World Community and in future stories of victims and so on).

Because, our web-site: [www.moskomekologia.narod.ru](http://www.moskomekologia.narod.ru) and

Email: [moskomekologia.narod.ru](mailto:moskomekologia.narod.ru) was blocked some monthes (someone exchanged our password), we open second web-site: [terekhova-agap.narod.ru](http://terekhova-agap.narod.ru) (in basically for analysis of problem of control of mind) and now we can send (and receive) Email on third addresses : [moskomekologia@narod.ru](mailto:moskomekologia@narod.ru) , [terekhova-agap@yandex.ru](mailto:terekhova-agap@yandex.ru) and [terekhova-agap@narod.ru](mailto:terekhova-agap@narod.ru). We would like, that translation of the second message to UN, leaders of countries and parliaments, which is placed on web-site: [www.terekhova-agap.narod.ru](http://www.terekhova-agap.narod.ru), was translated and would be sent on E-mail: [terekhova-agap@narod.ru](mailto:terekhova-agap@narod.ru), if it is possibility, because it is very important.

*Supplement: on 4/*

Chairman *[Signature]* Chirkova E. S. /

Vice-Chairman *[Signature]* Terekhova L.I. /

Preparation: Terekhova L.I.  
Phone: 534-40-28

Emilia Cherkova and Leah Terekhova of the Russian public organization "Moscow Committee for the Ecology of Dwellings": against psycho-physical (psychotronic) violence against the population have accepted the positions of Cahra Advisory Board members. At a general meeting of the Moscow Committee for the Ecology of Dwellings, Cheryl Welsh was included in their Executive Committee, which she accepted in March 2002.

Emilia has sent several articles and books on the topic of mind control in Russia. Also refer to Russian Translation Project on Cahra website for further russian book and article translations concerning psychotronic weapons. Special thanks to Ramon Ruelas for donating several months to translating several articles and chapters, see below. He has translated a very large amount of Russian journal and newspaper articles, Russian books on government and science issues and the correspondence of Russian human rights groups. Ramon has completed very professional quality translations. His translations reflect his extensive educational background at the graduate level. I have found him to be an absolute pleasure to work with. In addition, he has contributed hundreds of hours to Cahra on a volunteer basis.

Like the U.S. victims, Emilia claims that relatives died after they had been threatened by phone to stop pressing the issue. They claim this is a dangerous business. She carries documents with her as her apartment is broken into and searched. She said that Atryum Borovik, who published the Top Secret (Sovershenno Sektretno) newspaper which was full of expose's on various officials and criminals and died in a mysterious helicopter crash had express support for what they were doing when they met him to discuss. Contact information for the Moscow Committee is:

Emile Sergeevne Chirkovoi, (She only speaks Russian)

Korpus 1006, Kvartira 363

Moscow Zelenograd, Russia 103575

Fax: 534-1714

Tel: 534-4028

<http://www.moskomekologia.narod.ru>

email: [moskomekologia@narod.ru](mailto:moskomekologia@narod.ru) (checked weekly)

Note: This human rights group appreciates donations and are in need of a computer.

## **“The Use of Psychotronic Weapons Against the Russian Population: What everyone should know”**

A Russian book by a woman who works with Emilia Cherkova and her russian group. L.I. Terehova, 1999 Moscow. Translation of excerpts of pages 1-10 by Ramon Ruelas, copyright. The description of psychotronic attack in Russia is strikingly similar to US versions of mind control targeting.

---

### **Table of Contents**

- Address to the United Nations Organization, to all the countries of the world, the OBSE, to the President of the Russian Federation, the board of the Council of the Federation, to the government, Duma, to legal rights defense organizations, the press, politicians, scientists, the Russian society and all who feel responsible for the fate of the country and its people
- Table 1. Definition of psychotronic weapons (as an epigraph)
- Information about the mass application of psychotronic devices in the capacity of psychotronic (psycho-physical ) weapons -within dwellings and outside of their dwellings -against the peaceful people of the Russian Federation
- Throughout the Russian Federation
- Throughout distinct towns of the Russian Federation
- Wide-scale (unlawful and involving the use of psychotronic weapons) biomedical-psybernetic, scientific and military experiments on controlling man and research on the limits of his mental (up to the point of insanity) and physical (to the point of death) survivability in artificially created, extreme situations
- Basic characteristics, methods of program of experimentation in its aim
- Common characteristics of experiments
- Research [on the population<?>]
- Checks on ideas, images
- Transmission and recording in the brain of extraneous information
- Manipulation by means of the memory (erasures, checks, blockages, etc.)
- Controlling the stimuli in the brain
- Control experiment, bio-adaptive control: artificial creation of experimental situations
- In various aspects: stress systems and punishment; related<?> tests in specialtechnospheres
- Stages of zombification (substitution of conscious with eternal controls)
- Table 2. Multi-goals for the uses of the results of experiments and developments of psy-weapons
- Financing
- Types of psychotronics, psychotronic and other psy-effects
- Table 3. Comparative data according to type of wave and frequency

- Opinions of experimentors in publications confirming the conducting of experiments involving the application of psychotronic devices on man, society and also about intolerance to them
- Table 4. Categories of people most often subjected to the applications of psychotronic weapons and the locations of their application
- Mass psycho-physical crippling of the citizens of Russia in the course of zombification through the use of psy-weapons
- Physical damages, types of results and sensations at the moment of influence
- Psycho-physical damages, dependence on intensity and duration of effects: Stage I, Stage II, Stage III
- Damages in the physical area (including the programming of premature deaths)
- Table 5. Second definition of psychotronic (psycho-physical) weapons
- Characteristics of psychotronic weapons of various types
- Psycho-physical security
- Table 6. The newest types of weapons of mass destruction (OMP) ( in use, under development, hypothetical)
- Table 7. Medical, technological and legal actual defenselessness of the citizens of the Russian Federation from psychotronic weapons (PTOs) with the existence of strong international and national legislative protection
- Medical defenselessness of the citizens of the R.F. from Psychotronic Weapons
- Technical defenselessness of the citizens of the R.F. from Psychotronic Weapons
- Popular methods of defense from psychotronic weapons -and complexes with these devices (medical and technical) -to which the citizens of the Russian Federation have had to resort due to the absence of protection from the direction of government authorities
- Legal defense and the actual defenselessness of the citizens of the R.F. from PTOs
- Basic unlawful operations against citizens of the R.F. involving violence with use of PTOs
- Laws which defend the rights and freedoms, life and health of the citizens of the R.F. (without directives which duplicate international rights laws)
- Departmental semi-legal <?> bills, directives, which violate the Constitution and the laws of the Russian Federation or the insufficient concretion of laws leading to the cessation of violence involving the uses of PTOs
- Characteristics of the structure carrying out the genocide of the Russian people
- Table 8. Signs of the establishment in the Russian Federation of a shadow dictatorship of psycho-fascism similar to the fascist dictatorship of Nazi Germany
- Table 9. Suggestion in the modern world of New Science and Technology Control through the law of nature for improvement in all spheres of life and for the establishment of Peace throughout the entire world
- A comparison of the results of the application of this New Science and Technological Control (which lay the foundation for natural T.M. and T.M. which give automatism unmistakable control with simultaneous improvement of the know-how and potential of psycho-physical health, the quality of individual lives and that of the whole nation ) with the results of the application of psychotronic methods of control and control of the individual and society (tested and used secretly, violently ). This comparison helps in understanding why the creators of psy-terrorism, secretly and overtly, with all their abilities (in this number mimicked under T.M.) are being taken into applications for rehabilitation from psy-influences.
- Practitioners of T.M.
- Table 10. Reasons for economic-political crisis and genocide of the people of Russia

- Simultaneous claims to power of four structures
- Legitimate governmental power
- Shadowy terrorist organizations (psycho-fascist dictatorship)
- Shadow world over-governmental extremist organizations (world government)
- Organized crime
- Goals, Interactions
- Table 11. Concrete characteristic signs of terror and control by a shadow psycho-fascist structure at the individual and governmental levels
- Table 12. The artificial creation of a crisis and the conducting of genocide against the people of Russia by psychotronic structures
- Characteristic signs of destabilization from the interference by shadowy psy-structures in the administration of the Russian Federation in all spheres
- Methods of genocide against the people of Russia
- Table 13. Strategy for the global control of resources, the realization of world domination, which would give unlimited wealth
- Spheres of control
- Structure for the realization of control
- Measures for providing control, informational provisions
- Table 14. Conclusions
- Measures for the suppression of activities of shadowy psychotronic terrorist structures, that would establish the necessary conditions for exiting from the crisis and for the cessation of the genocide of the people of Russia
- Conclusion
- Literature

### **Information about Mass Applications of Psychotronic Devices in the Capacity of Psychotronic (psycho-physical) Weapons within Residential dwelling places and Outsides of their Dwelling places against the Peaceful People of Russia**

**Definition of psychotronic weapons** (as an epigraph): "Applications in military and for antisocial purposes are possibilities also for knowledge of psychotronics, its means, methods, systems, 'generators', and there is the path for the transformation of the humanitarian, essential attributes of life and society in the weapons. These are also psychotronic weapons. This is not only dangerous, this is deadly!"

Academician V.P. Kaznacheev in the Afterward of the book by Vinokurov and Gurtovii *Psychotronic War*, Moscow, "Misterija", 1993.

### **In the Russian Federation.**

- 95 cities of the Russian Federation: complaints at the Moscow Committee for Ecological Dwellings (MKEZh)
- More than 2000 complaints at the Moscow Information Center for the Rights of Man
- Thousands of letters to delegate Ju. L. Vlasov.
- Numerous complaints in mean of mass communication and information about the presence of powerful psychotronic radio-stations in the cases of declarations of [ChP] in the territory of the Russian Federation
- Numerous complaints to governmental and public organizations
- Numerous complaints to rights-defense organizations [...]

## **In Separate Cities of the Russian Federation.**

- Moscow --500 complaints with MKEZh, among them, approximately 100 from Zelenograd.
- In many living residences in Moscow --SVCh installations for [the] control [of people]
- St. Petersburg -a catastrophic situation with the life-providing biosphere due to the intentional destruction of the population PTO (according to the measuring apparatus of Prof. G.A. Sergeev) Death Town according to research conducted by the Bulgarian psychologist, psychiatrist and bio-energetics academician Todor Dichev.
- [In] small resort towns in the Sochi region -the concentration of the functioning of a radio-transmitter at frequencies of greatest transmission [distance wise] -[for] the psychotronic treatment of the population of the Russian Federation: 1.4-1.7 MHz., while these [frequencies] are forbidden for civilian applications [...]

Wide-scale (illegal and with the application of psychotronic weapons) biomedico-cybernetic scientific and military experimentation on controlling man and research on the limits of his mental (to the point of insanity) and physical (to the point of death) survivability in artificially created, extreme situations.

## **Basic Characteristics, Methods, Program of experimentation in its goals.**

### **Common Characteristics of Experiments.**

- on a person without his consent
- from a distance
- with tracking and with the control of a freely moving person
- with the application of electro-magnetic (EM) irradiation and other fields, acoustic oscillations, etc.
- with one or several IBM (computers)
- according to a [specific] program
- with the statistical [?] (probability) modeling of the person, requiring mass statistical large-scale experiments [....]

### **Testing of the population.**

all the population is chosen: family, relatives, immediate surrounding society genetic engineering with the application of psychotronic, psychotropic means and stress influences, leading to changes in the gene-pool for the individual and the population: degradation, depopulation:

- introduction into the DNA of a program, NK, laser, UZ and others influences
- mutation with the help of torsion generators (...)
- people are born with horns, tails, without hands, feet, with [excessively] large brain hemispheres

Consideration of ideas, forms.

- at a close range and at distant ranges

- according to preliminary, definite individual coding for the individual brain of the person-"pattern" (potential of the brain of the person, of corresponding syllables, words, forms, sensations, feelings that are representative of the given individual)

### **Transmission and recording in the brain of external information.**

Speech, sounds (effects of "radio-sound") -perception of modulation of speech, SVCh or UZ [narrow-wave] oscillations directly to the brain and not by way of the tympanic membrane

- pictures
- colors [...]

### **Manipulation with the memory.**

- Erasure
- Blockage
- Recording of information needed by the experimenter
- training -"prompting" (after erasure)
- comparison,
- reproduction of picture a from a prior testing as though bifurcated [?]
- a shifting of the effective frequency up to 100 Hz. or a lowering to 5 Hz., with memory loss

### **Control of Stimulation in the brain.**

- by states of consciousness (up to the loss of these)
- in sleep
- emotions
- intellectual capabilities
- attention
- speech
- activeness
- muscle tone
- stimulation of one and the same zone with stimulations of:
  - 30 -40 mV- activation of attention, memory, movement;
  - 60-70 mV- "emotiono-genic" effects

### **Experimental Control, bio-adaptive control.**

#### **I. Artificially created extreme situations in various aspects.**

- in living quarters
- family
- social settings
- treatment institutions
- [food] products, water
- stores, markets
- seeking employment
- surrounding environment

- control of animals
- transportation
- energy-heat and water-supply
- communications
- informational: TV, Radio, SMI [?], library
- savings-banks
- law-enforcement agencies
- governmental and public agencies, organizations

## **II. Stress systems and methods of harassment.**

- slander
- gestures, hand movements, expressions, tests, practical "jokes"
- taking off what is needed for the eyes (vision) [?]
- psychological pressure through family, neighbors or surrounding people, vehicle drivers
- discrediting: along 5 directions (often with the involvement of the police)
  - irresponsibility
  - spy
  - drug dealer
  - vagrant
  - accomplice in a crime (in an alleged crime)
- torture, assault
- blackmail, threats
- attempts on their lives with PTOs
- death to someone close or in immediate surrounding life
- murder

## **III. Surrounding testing of special techno-spheres.**

- inclusion of the person under testing into the [schematics] of an IBM computer
- reverse communication ties [scheme]: person-machine
- tracers, radio-probes, hidden installations in the surroundings and secret introductions of substances subcutaneously, intramuscularly, or directly into the stomach

## **Stages of Zombification (Substitution of consciousness with external control).**

- programming, modeling of a cybernetic double
- conducting of programs according to non-differentiation of a proper and artificial "I"- "Not-I"
- extreme influencing, stress, harassment, irradiation, special-preparations [substances], chemicals
- taking to the limits of mental and physical capacities (survivability)
- loss of will, memory
- shutting off of his own consciousness
- replacement of consciousness with the control from his cybernetic twin

## **Multi-purpose uses of the results of experiments and developments of Psy-weapons.**

## **Medical, Biological, Genetic, immunological, etc.**

- studying of the workings of the brain and body organs of man
- reserves
- adaptation
- survivability
- Stability and variability of the gene-pool [...]

## **Cybernetic, Engineering, Mathematics, etc.**

- creation of technological "robots" resembling man
- creation of artificial intelligence for the control of man, zombification, etc.

## **Minister of Defense (composition of the army, arsenals of PTOs, enterprises)**

- creation, modernization, testing of psychotronic weapons, of new weapons of mass destruction of living forces

## **Secret Service and MVD (subdivisions, arsenals of PTOs).**

creation, modernization and testing of psychotronic weapons for:

- control, management, zombification of individuals and society;
- punitive action against socially-active elements
- inquiries at investigatory "isolators"
- control of a created total system (including children and animals) for tracking, creation of stressful, experimental situations, for testing and experimentation, and for the fulfillment of any task (with the possible influencing of up to 70% of the population of the Russian Federation) participation in the creation of a global, above-the-law, over-governmental system for controlling mankind, with the transformation of Russia into a laboratory for the foreign testing of psychotronic weapons on citizens

## **Mafia, Criminal Structures.**

- informational piracy and as a [windfall]? [**or for power -may be a "typo"**]
- pressure on banks and thriving companies
- psychotronic racketeering
- terror, torture, murder

## **Networks of Destructive Cults, Sects.**

for guaranteeing the meekness and submissiveness of members networks are actively used for experimenting, testing of psychotronic weapons, psycho-techniques; several cults and sects are created by the Secret Service for this purpose, and also to terrorize victims [.....]

## **Financing.**

- Governmental, among them coming from power structures, as "military organizations from various countries have been and continue being interested in the concentration of

new psychotronic devices, their classification, in the financing of special ...scientific production...applications... organizations.." (academician V.P. Kaznacheev);

- from small ventures (MPs): scientific, production and applications, health promoting, commercial, of created powers from [governmental] departments, in this case on the basis:
  - of contracts with foreign Secret Services for conducting experiments, testing on the citizens of the Russian Federation without their consent
  - technical directives of mafia-criminal structure
- within the framework of international cooperation with foreign medical and scientific organizations for experimenting on citizens of the Russian Federation

"...the greatest danger consists... in all the large springing-up of bio-energetic-informatics research in "applications" organizations..." (academician V.P. Kaznacheev) [.....]

## **Types of Psychotronic, psychotropic and other Psy-Influences.**

### **Bioelectronic (Psychotronic, Techno-tronic) -Distant.**

#### **Electromagnetic (EM) and other fields.**

- radio-waves
- laser-irradiation
- infra-red irradiation
- ultra-violet irradiation UF
- x-ray irradiation
- gravitational fields
- torsional fields (hypothetical)
- leptonic and other fields

#### **Acoustic Waves.**

- infra-sonic (IZ) from 0 Hz. to 15-20 KHz.
- ultra-sonic(UZ) from 15-20 KHz. to  $10^{*9}$  Hz. (ranges for IZ and UZ)

see more similar information in -Table 3

Formation of fields:

- electro-magnetic charge
- gravitational-mass
- torsional (surrounding spin fields) -spin, with any rotating body
- micro-leptonic energy (in free aspect) -[over-abundance of stable particles]?

### **Bio-telemetric System for locating, tracking, controlling a freely moving person.**

[this goes with the illustration on page 7.. ] Distance up to 15 m., up to 5 km., up to 50 km., hundreds of km. and more BG Satellite, airplane, train, automobile, home [across the street], adjoining apartment or

## **Biogenerator:**

Intro via TV antenna, radio, telephone, energy-heat, water-supply and gas-networks (network method)

## **Operator is secretly brought in, or in a secret installation nearby**

**BG:** Biogenerator (could be tomography)

**A:** Antenna (irradiation and reception)

**D:** operator for the gathering of information, transmission and control

**ZU:** reminding system on a magnetic strip, holographic

**BIP:** bio-informational [...]

**KC:** channel connections (IK, radio, telephone, telegraph)

**E:** screen display

**O:** operator

**SP:** light pen with which the operator indicates on the screen, the point of influence

## **Bio-energetics (Extrasensory), Psycho-technical (Distant).**

- control and alteration of psycho-physiological parameters
- bio-energetic blows/strokes
- neuro-linguistic (audio-tronic programming)
- hypnosis with the use of computer
- psycho-correction
- coding

## **Bio-Chemical.**

## **Pharmacological (Psychotropic).**

- Introduction of psychotropic or strength-influencing substances: \*
  - in [food] products
  - in medicines, manufactured products
- preparation of vegetables with [fertilizers]? or sprays
- special preparations in separate areas

## **Purposes of introduction:**

- secret introduction into people of special substances that allow for the ionization of blood substances and blood vessels for further effectiveness, comparison of information from him (of thoughts, of sensations, of states) after irradiation
- the attainment of changes in the emotional sphere and changes in behavior

\* [from Grech Tropov [\*\*\* ] (that is, the alteration of states of consciousness with the introduction of medicines and narcotic substances)

## **Chemical.**

treatment special-compositions:

- fields
- ceilings
- walls
- clothes
- plates
- linens
- shoes
- blown-in special powders through building coverings [?]

## **Gaseous and Aerosols.**

neuroleptic gases and aerosol peptides of various kinds are used:

- on the streets
- in buildings
- sprayed on clothing

## **Bacteriological, Genetic (in the DNA) -among these Ethnic & Immunizations.**

- introduction of infections (possible distance-shot or injection)
- introduction of immunizational anti-bodies (special substances)
- into immunizational donor) for greater sensitivity to aerosol peptides:
  - --through food
  - --injection
  - --shot from a special-weapon via a previously inflicted trauma to the head or the spinal column

**Opinions of researchers in scientific publications, confirming the conducting of experiments and the applications of psychotronic devices on man, the population, society, and also on their intolerance to these.**

## **Opinions about the conducting of experiments.**

"We are getting closer to the possibility of controlling and directing the regulation of the psycho-somatic dependence of the system of the human body..."..."with the help of electromagnetic fields at a distance, the regulation of specific processes.."

(academician V.P. Kaznacheev, L.P. Mikhailova in the book *Bio-informational Functions of Natural Electro-magnetic Fields*, Novosibirsk, 1985, pp 47, 169)

"In solving the problem of artificial intelligence.., the basic attention is devoted to obtaining results, and on the method of [accepting] particular limitationslimitations not being superimposed.." ?? [best guess]

(*Encyclopedia of Cybernetics P. Artificial Intelligence*, p 412)

"As if definition is the natural order of things, "nature" brings into action the least favorable for controlling aspects, up to the termination of all of its resources.."

(*Encyclopedia of Cybernetics* 1975, p. Igry page 343)

"The donor of distant effects must survive strongly, and then he can hand over different forms, states, feelings, behaviors, effects of separate consciousnesses."

With a child are significantly registered signs of stress within the womb of the mother."

"It's necessary to research the population, for individual members of the given population to start the research."

The selection of characteristics, the management of the specifics of such distant and immediate influences are unlimited"

[With the] "Apportionment of several groups of various reactions to EMP ... including heavy, acute and chronic organic pathological processes, the speeding up of the aging process, sclerosis, oncogenesis..." "...deadly cases do occur.. "

(academician V.P. Kaznacheev, L.P. Mikhailova in the book *Bio-informational Functions of Natural Electro-magnetic Fields*, Novosibirsk, 1985, pp 47, 169)

"..when indirect contact with the brain determines free choice contingent on the inspection of the person."

(academician N.L. Bekhtereva, in the book *Healthy and Diseased Brain of Man*, Moscow, 1988, p 6)

"...non-contact distant influences of several operators on several people.." with the undertaking of the task of increasing the aspirations of the system of a "man-machine" and others -in this case the cybernetic task of the structure and aspirations for the brain of man..."

(in the book *Engineering Physiology and Modeling Systems of /Body*, Novosibirsk, 1987, pg. 146 [...] V.N. Novosel'tseva, *Encyclopedia of Cybernetics*1975, page 412, .. Artificial Intelligence pp 296, 343, Reflexive Control of Game of Survival.. ??

"Influences on an object is automatically achieved at the place where the illumination pen of the operator is directed on the display screen.."

(Collection: *Automatization: Medical-Biological Research on Basic IBM*" from AMN -USSR, Novosibirsk, 1976, page 5, M.B. Shtark, V.N. Burakovskii)

At the present time, the object of cybernetic research appears to be the brain of man, the societal population .. [rest illegible]

### **Opinions about the non-toleration of the conducting of experiments.**

"It is possible to control the reserves of the brain, though with this the irreversible loss of the very structure of the brain is also possible.."

(academician N.P. Bekhtereva, in the book *Healthy and Diseased Brain of Man*, Moscow, 1988, p 142)

"Not even one influence on man can be realized if it is outside the interests of this person. No potential is of use for "large science" or any "other large" and does not serve as the basis for influencing, does not "correct" the interests of the researched person"...

(same.. page 9)

"With the research of the brain goes the eternal Hippocratic second commandment - Do not harm! Do not damage that which makes a man a man: his speech, his thoughts, his high mental functions, this goes for his creations, as well as for his most modest manifestations.."

(same.. page 130)

"Who allowed accepting man into experiments? By what article of law? Into an experiment which concludes with the exhaustion of all of life's resources? In illnesses? With the minimization of life --when the body is taken from life at any price? Abroad, experiments are also conducted -- which end in death, and which give descriptions of their agreement with similar cybernetic experiments."

(excerpt from a letter from a Novosibirsk biologist G.A. in the Moscow Committee for Ecological Dwellings, 1989)

### **Categories of the population most often subjected to the applications of psychotronic weapons and the locations of their applications.**

- older people
- unmarried (for the release of living space pensioners, in particular those who worked in closed business
- invalids who are aggravated and selected by illnesses to which the person is inclined, for naturalness
- pregnant women; newborn, children, members of the population undergoing testing and also for experimenting in gene engineering
- Practicing technicians who are intellectually and physically improving the various effects of consciousness (in particular for the study of their causal -investigatory connections in experiments in genetic engineering) with which are picked effects that imitate the given technician, but negative manifestations, allowing in an experiment

the getting carried away on account of the technician (and the experimentors are always ready to use this for pressuring and for discrediting the technicians)

- Socially-active, rights-defenders
- delegates, members of parties, movements
- public officials
- administration-persecuted -in this case in the army, police, (on the order of the command, administrative system)
- those repressed from the '30-'40s and members of their families
- intelligentsia (often these become victims of psychotronic terror, since "the social development of the person presents a more complicated object to control" with "IBM training processes at BUZ [university]" Novosibirsk, '89.

participants in a total system of tracking and the creation of experimental situations for psychological pressure from which they are made to be zombies-bio-robots, informers, preachers, "extrasensors", racketeers, murderers, to who are delivered and who are carrying portable miniature psychotronic generators for the irradiation of citizens

- members of destructive cults, sects
- heads of banks and thriving companies
- any person from the presidential household (special-apparatuses were discovered for the irradiation of KOM 4-120 next to the office of B.N. Yeltsin, then formerly (in 1991)in the post of representative of VS RSFSR, the treatment of R.I. Khasbulatova (January 1998), subjected to the above-the-law and over-governmental character of a created total system for control and management)

### **Place of irradiation, influencing**

- living quarters
- treatment institutions
- schools
- transportation (metro, buses, trains)
- churches
- train stations, movie theaters
- resorts, places of rest (vacation spots)

Besides these, with individual program of zombification;

- on a trip and during movement to a different city or town in Russia
- in military companies abroad [?]

### **Mass psycho-physical crippling of the citizens of Russia along the path towards zombification with the applications of psy-weapons.**

#### **Physical damage, visible results achieved at the moment of influence.**

- burns, pricks, cuts, wounds (ray weapons, laser)
- bleeding into the brain (laser ray with energy pulses of 40 joules) and on the skin energy in pulses: 3 - 100 joules)
- Blindness in the eyes, loping of eyelashes (laser ray)
- loss of memory (influence of frequency of up to 100Hz. and a reduction to 5 Hz.)

- destruction of the vestibular [inner ear] apparatus, spatial orientation
- symptoms of [\*\*\*] [with a large exposure and strength, paralysis (UBCh) in the area of the beginning of the spinal column
- irregular sleeping, heart-beating
- numbness of the hands; at night, cramping of the legs
- sharp decrease in hemoglobin, micro-burns to the skin, ionization of the blood and body fluids, an increase in the deterioration rate of clothing material, photographic material [illuminating], (thermal-electronic emissions from lamps in the room with the feeding units of electrical networks and fittings of the wall, [...]
- vibrations (separate organs can vibrate: the heart, kidneys, etc.), [...] (from
- vibrational technologies)
- pressure, coolness of the skin
- feelings of non-specific fear and panic (from the weapons) [...] tremors, tapping, destruction of fragile objects from the waves, from the impulses and from other manifestations of technological poltergeist

## **Psycho-physical damage depending on intensity and duration of effects. Damage in the physical sphere (up to programmed premature death).**

### **Stage I.**

- changes in the blood (early signs)
- overheating substances especially and increase in crystallization, leading to cataracts (early sign)
- ill reactions along the path of the bio-energetic potential from the effects [...]
- prickly sensations, tremors to the muscles of the feet
- aggravation of chronic illnesses
- internal bleeding (nose, stomach, gynecological)
- auditory tones of various frequencies
- sharp pain in the internal ear
- dull pains in the area behind the ears
- internal trembling, vibrations
- head pain in the temple and a warmth in that area, pain in the eye-sockets
- likelihood of miscarriage, an increase of 80% for chances of premature births, anomalous
- development of the fetus, often with defective brains

### **Stage II.**

- "radio-sound" effect (before this is long-conducted the resonance-loosening of spinal and brain fluids at the frequency of 2-10 Hz. for maintaining the fluids of the skull and brain in stimulation
- steady reactions to all aspects of coding
- lowering of energy (observed with irradiation at the frequency carrying frequencies of ~780 Hz. and amplitude modulation ~71 Hz.)
- aggravation of dermatosis
- eye pains (cataracts, asymmetry in lenses of the eyes, puffiness [?] of the retinas )
- aggravation of the course of chronic illnesses
- destruction of the functions of the kidneys, liver, organs of digestion, circulatory system, bleeding in gingivae, gums, periodontal and others

- gauntness
- "sand" in the eyes, burning sensation, loss of hair, brittleness of nails
- compression pain in the heart fits of coughing
- changes of the color of the face (bronze shading of the skin)
- asymmetrical puffiness of the face
- disfiguration of the face, the intentional emaciation of separate muscles, cartilage
- syndromes of destruction to the external nerves of the thighs
- impotence

### **Stage III.**

- destruction of the brain, irreversible changes to the structure of the brain (academician V.P. Vekhtereva)
- irreversible processes in the muscle material, in the bones of the skull, and in the structures of neurons "...minimalization of life" --external reaction to EMP appears as an illness, up to heavy, sharp, chronic, organic pathological processes (academician V.P. Kaznacheev)
- "...the entire speeding up of the aging process, sclerosis, oncogenesis (academician V.P. Kaznacheev)
- destruction of bio-chemical processes in the cells with dystrophic changes in the organs (academician V.P. Kaznacheev)
- destruction of the cell membranes, chemical connections in the cells -leading to leukemia, cancer of the brain and prostate gland, breast cancer, (even with weak EMP, but of long duration "...the genetic apparatus is altered..." (academician V.P. Kaznacheev)
- the reflex activities are destroyed
- the functioning of the hormonal system is destroyed
- [...] Parkinson's disease (trembling of the hands) and Alzheimer's disease (from changes in the production of the hormone melanin ([...] gland) that causes degenerative changes in substances at the molecular level disfunctions of the sino-atrial node of the heart (even with a low frequency)
- infarction, cerebral thrombosis, osteo-\*\*\* ], periodontal, sugar diabetes
- allergies
- epilepsy (especially caused by the multiple-rapid stimulation by a weak, low frequency waves)
- hypertension, hypotension
- programmed or instantaneous (with the subjection to extreme effects -up to the border of deadly conditions) premature death --it is well known by the experimentors that cases of death do occur (academician V.P. Kaznacheev)
- a decrease and dying off of the population, humanity, mankind

### **Damage in the mental sphere (up to the point of insanity).**

#### **Stage I.**

- manifestations of depression
- lowering in the interest in perceived information
- shortness of temper (irritability)

#### **Stage II.**

- steady depression
- lowering of abilities for analytical thinking, some worsening of the memory
- symptoms of chronic fatigue
- superficial nature of sleep
- higher incidents of conflicts

### Stage III.

- confusion in the accounting of events in real life
- loss of ability for analytical thinking
- lowering and a loss of memory
- feelings of the lack of sleep
- indifference to personal external appearance [...]
- lowering of self-control from the deficit of the hormone serotonin due to SVCh irradiation
- suicide (as the experimentors "practice" provocation techniques)
- "...invisible weak fields ...their ignoring that they are carrying with them a deadly danger"... "...people simply start going crazy and nobody understands why..." (academician V.P. Kaznacheev)

"Consequences of effects of micro-leptonic generators are described by the leading developer in this area [from the] V. Lab. of Micro-leptonic Technologies D. Okhatrym: in 1982 there began extremely unpleasant things with the health our co-workers. At first, there arose their feeling unwell, then the loss of logic, then after this, the loss of spatial orientation. Finally, a breakdown of diseased [affected] organs. The coming out of this condition -and this includes myself -was achieved with great difficulty."

(in the book by Ju. Vorob'evskii" *Knock at the Golden Gate*, Moscow, 1999.

Second definition of psychotronic (psycho-physical) weapons.

**Psychotronic Weapons (PF- weapons) this is the totality of all possible methods and means (techno-genic, suggestive, pharmacological, paranormal, complexes, and others) of hidden, forced influences on the psyche of a person for the purpose of modifying his consciousness, behavior and health for what is desired in the way of influencing aspects of control..."**

(V.F. Prokof'iev, *Secret Weapons of an Informational War*, Moscow, "SINTEG", 1999, pg 27.) [...]

### Characteristics of Psychotronic Weapons of Various types.

No./No. p/p / Designation of Characteristics / Characteristic

**1. By Physical essence, \*Psychotropic** (pharmacological preparations) **principle and mechanism** causing various reactions: fear, anger, maliciousness, of effects alarm, depression, lethargy, stupor, illusions, hallucinations experimental psychosis, (from psycho-simulation), changes in thinking, crackpot ideas, attempts at suicide, epileptic fits, making of inadequate decisions without realizing this (this is especially dangerous if the person is in a position of responsibility).

Defense of psychotronic weapons includes: control of the water, [food] products, medicinal preparations, objects of hygiene, aerosol preparations, etc.

*\*suggestiveness in normal states of consciousness:* among these audio and video suggestions, 25th Cadre and others. The realization of hidden (differing from traditional informational psychological influencing with the application of such means as persuasion and others) -by way of forcing "needed" information -in the background of the flow of any other communication. To suggestive types of PF-weapons in normal states of consciousness (that is, when logical reasoning is preserved) is related the method of neuro-linguistic programming which is preceded by a long set of "keys" into the subconscious of the person. The suggestive method is realized according to the scheme: "person-machine-person."

*\*suggestibility in altered states of consciousness (ISS),* in which the needed formula is introduced for behavior functions on the command (password) of the suggestor who is controlling suggestion (implanting). For the introduction in ISS is employed the the devices of hypnosis: "hetero" (from the suggestor), auto-hypnosis (self-hypnosis) and psycho-training ("hetero" and auto-training)

*\*Extrasensory* entering into bio-informational contact with [\*\*\*] influences his action and health or removes the needed information The mystical-esoteric test is not related to PF-weapons, it is simply manifested in the actual entering into ISS, which can be used in harming the person, being used in self-development.

*\*Technogenic* -(technological, psychotronic, bio-electronical -in particular radio-frequencies, laser, pulsar, infrasonic etc.) Influence is along the lines: "machine-person." Many types of technologies are used: SVCh, generators, computers, tomography, lasers, infra and ultra-sonic apparatus, accelerators of electrons, protons, and neutrons atom and hydrogen, concentrated in sharply-directed bundles of small packets --pulse-weapons, generators, special-purpose, etc. Also computer devices for the creation of virtual realities (V.R.)

*\*Combinations (complexes) in particular:* joint applications: --technotronic (psychotronic) with psychotropic and chemical special-substances for promoting the effects from psychotronic influencing-- there are psychotronic devices with the newest discoveries: quantum teleportation, cloning, laser, carrying effects from one material to the other, etc. Similar combinations can be taken to terrible consequences, the nature of which are unpredictable --narcotics and sounds, a wide spectrum of effects: narcotics in particular the combination of the narcotic "ecstasy" and rhythmical music --audio and video-suggestion, with which it is possible to modulate the given apparatus and the relation to the person, displayed on TV, or to this or other information (light noise from audio accompaniment not noticed and taken as completely natural background with tele-reception). Besides this are used [\*\*\*], generators, artificial speech, [IBM programming?] [**rest not legible**]

## **2. For the purpose of \*Mass: On groups of people, regions, directing influences population, army, country, countries**

*\*High-point* [high elevation[?], local operation:

- On individual persons, animals, birds, insects, and other living organisms, plants
- on genetic the apparatus of cells, molecules, DNA, RNA, chromosomes, mitochondria

- on liquid-crystallization in the cell environment, intercellular fluids, fluids and organisms in the surrounding environment (water, fluids, liquid foodstuffs)
- on the brain (centers that regulate states of consciousness and functions of the "unconscious")
- on biological and physical fields, on surrounding living organisms and plants

### **3. By Mass Influence \*Mass \*Individual, local**

### **4. By Intended affect \*Modification of the psyche and its former manifestation and of the influences consciousness \*altering of behavior \*suppression of the will and demonstration of a social group[?],**

for controlling at the subconscious level, for the fulfillment of any command from separate individuals or group \*for the forcing of decisions \*for destroying the physiology and altering the health of a person \*substitution or loss of historical and spritual values of a nation raising the levels of crime, removal of moral ethical bans "Especially dangerous manifestations of these influences are among the highest controlling structures of the governmental services. Military service and other categories of responsible persons, since they can, with their own actions, put the country in the hands of the criminal world, of adventurers, or in the hands of likely enemies." page 130

## **Cheryl Welsh's Listing of Mind Control Effects**

The listing of effects below is excerpted from Cheryl Welsh's [Russian Book Project](#), which is a comprehensive presentation of Russian literature on mind control. Cheryl is the Director of Mind Justice, based in Davis, California, and her web site is at:

<http://mindjustice-org>

In addition to the effects list below, please also visit Cheryl's [symptoms vs. documentation](#) list on her site.

Cheryl's concise listing of the effects experienced by current-day psycho electronic involuntary experimentees follows:

Here is a comparison to U.S. victims. Cahra has heard from victims all over the world. Here is a description of the cluster of symptoms common to most victims. 24 hours 7 days a week, for years on end, victims are subjected to all kinds of harassment and torture. Most agree that the technology can remotely target and control every nerve of the body. Heart rate can speed up and slow down, bowel movements can be regulated, illnesses can turn on and off in an instant. Victims report microwave hearing or voices in the head and sleep deprivation. Thoughts can be read, and played back to the victim, instantaneously. People around the victim can repeat verbatim, the victim's immediate thoughts. Dreams are manipulated, behaviors controlled, emotions literally played with and all types of pain can be started and stopped in all parts of the body. Remote sexual manipulation and abuse with pedophilia, homosexual and degrading themes are reported regularly. Microwave burns are frequently reported, along with all types of bizarre and harassing manipulation of electrical equipment, phone, car, TV and computers. Black bag intelligence tactics of tire slashings, break ins and mail tampering are reported. Hologram are projected. According to victims, it is vicious, amoral, sadistic and cruel. Most victims describe the experience as very debilitating and liken it to mental rape, prison or total destruction of the quality of one's life. Most are labeled mentally ill and live with financial ruin. loss of health, social life and career. All say the technology is very sophisticated and effective as a weapon. Some victims say they would use it on their torturers and feel vindication. It is like a slow death.

## **California State University - Sacramento Professor Endorses E-Weapons Victim's Plea for Investigation of Microwave/Mind Control Weapons**

[Return to Site Index](#)

[See Also Cheryl's UN expert status listing](#)

To Whom It May Concern:

May 11, 1998

I write in support of the efforts of Cheryl Welsh and others to obtain a DEFINITIVE HEARING concerning non-consensual human testing of electromagnetic technologies. The effect of beamed energy on the human body is deserving of the highest levels of understanding and accountability. Regarding electromagnetic weapons, Professor Steven Metz of the U.S. Army War College has said: "We need an open debate on them now." (Singapore Straights Times, July 18, 1997.)

Cheryl Welsh will receive her second B.A. from California State University - Sacramento later this month. While conducting independent research, Ms. Welsh has compiled an extensive bibliography and a useful list of expert witnesses.

She has also collected data on the victims of non-consensual testing. Ms. Welsh has formed a nonprofit research organization on this question, and she has appeared on CNN and the Learning Channel to address this issue. Cheryl Welsh may be reached at 915 Zaragoza Street, Davis CA 95616.

The materials assembled by Ms. Welsh provide a solid basis for undertaking a more thorough examination of this issue. Given the classified nature of weapons development, it is imperative that ample scrutiny accompany this type of experimentation in order that human rights and public health are not endangered. Government personnel, and individuals working under government contracts, must be held to the highest standard of accountability. A public investigation of non-consensual electromagnetic testing is long overdue.

/s/ John. C. Syer  
Professor of Government  
CSU - Sacramento  
6000 "J" Street  
Sacramento CA 95819

## Speaking out against abuse, torture

**Truro educators will address UN to  
help raise awareness of problem**

By Mary Ellen MacIntyre / Truro Bureau

*Mary Ellen MacIntyre / Truro  
Bureau*

Jeanne Sarson and Linda MacDonald look over some of the artwork, poetry and memorabilia sent to them by survivors of childhood ritual abuse and torture. They will make a presentation on their research before the United Nations Commission on the Status of Women in March.

Truro - On a desk in Jeanne Sarson's basement there is an 8x10 black and white photograph of a little girl.

It's vintage 1950s. The flaxen-haired child of about eight poses with her hands on a table in front of her. The little hands are slightly dirty, and her fair hair is pulled back with a bow on the side.

A quick look and it might be dismissed as an old school photograph. But a close examination of the expression on the child's sweet face reveals what the photograph is really all about.

The little girl is struggling to hold back tears. There is anger and hurt in the way her mouth is pulled, and there is cold fear in her eyes.

Her dress has been deliberately pulled down over one shoulder to expose part of her childish chest. Her scrawny shoulders are hunched as if to keep up her dress.

It is pornography, and the little girl is as real as the woman she grew into - the woman who sent the photograph to Ms. Sarson.

Jeanne Sarson looks toward the picture. "Her pornographer was her own father," she says matter-of-factly.

Ms. Sarson and her colleague, Linda MacDonald, say a lot of horrific things in a matter-of-fact manner.

"There are simply truths that have to be understood," Ms. Sarson says.

"I accept there are people who have been ritually abused and tortured, just as I accept there are evil people who do these things."

The Truro women, both nurses and educators who have worked for nine years with people who were subjected to ritual abuse or torture, want to raise awareness about a phenomenon whose existence many people doubt.

They have formed a group called Persons Against Ritual Abuse-Torture and Other Non-political Tortures.

"If we don't tell the stories; if we don't pass on the information, how will we ever stop it, how will we ever help these survivors heal?" asks Ms. MacDonald.

The women will be travelling to New York in March to help raise awareness. They will speak before the Commission on the Status of Women at the United Nations.

"We need to get this recognized - we need it to be acknowledged before the UN because then people will come to understand ritual abuse and torture is a part of life for many women and children in this world," Ms. MacDonald says.

They will take with them a number of poems, stories, photographs and artwork sent to them by victims of ritual abuse and torture.

Their collection of anecdotal evidence is beginning to grow, especially since last year, when they launched their website ([www.ritualabusetorture.org](http://www.ritualabusetorture.org)).

"We have people writing to us from all over the world to tell their stories, some of them for the very first time revealing what happened to them as children," Ms. Sarson says.

"Some tried already to tell their stories, sometimes even to social workers, and they weren't believed. Can you imagine what it takes to get up the nerve to tell and then no one believes you?"

Ms. MacDonald reads a poem sent to her by a teenager who endured a living hell with relatives who did unspeakable things to her as a girl of 10.

She reads of a small child waking in her room, hands and feet bound, recalling the horrors of the night before. She tells of her day spent climbing trees and playing hide-and-seek, trying to forget what would come with nighttime.

Ms. MacDonald finishes reading. Asked how she can bear to read of such merciless savagery being loosed on such vulnerable victims, she responds

with a sad smile.

"The ultimate goal of the ritual abuser is to destroy the spirit - it's a powerful tool which gives them power over the child, but our ultimate goal is to break the cycle, to prevent and to help people recognize the signs," she says.

Adds Ms. Sarson: "It has to be talked about, it has to be named and spoken of openly - teachers have to be aware and on the lookout.

"There are not often words in the English language to describe the horrors some children endure. How could we ever walk away from these stories?"

## Patents With Covert Human Manipulation Potential

The following list of patents relate to inventions and concepts which can be applied to weapons with the potential to manipulate human beings, which has also been referred to as "weapons of political control."

On January 28, 1999, The European Parliament adopted a resolution A4-0005/99, calling for "an international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings; ..."

While every weapon ever produced can be said to "enable manipulation of human beings," the patents listed here are directly concerned with weapons capable of COVERT (unknown to the target) or DENIABLE (known to the target but either impossible or nearly impossible to prove) manipulation ability.

---

[U.S. 3,773,049](#): Rabichev et al.

Apparatus for the Treatment of Neuropsychic and Somatic Diseases with Heat, Light, Sound and VHF Electromagnetic Radiation

Originally designed for drugless sedation. Can covertly affect the ability to remain alert, or with a pulse rate setting increase, the ability to sleep. The VHF signal can penetrate non-conducting walls. Tested by Dr. Ross Adey at the Loma Linda, California Veterans Hospital, using the "Lida" device.

[U.S. 3,951,134](#): Malech

Apparatus and method for remotely monitoring and altering brain waves

This patent describes the transmission of radio signals at the head of a subject, and picking up of the signal as altered by the brain's electrical activity, for remote reading of the brain's activity. Also covers use of transmitting a radio signal back to the brain "to effect a desired change in electrical activity therein."

[U.S. 4,858,612](#): Stocklin

"A method and apparatus for simulation of hearing in mammals by introduction of a plurality of microwaves into the region of the auditory cortex..."

Describes a means of direct transmission of a microwave signal which can carry audible sound to the brain of a mammal, hence, a person. Microwave is capable of penetrating a non-conducting wall, thus this technology could be used as a covert or nearly impossible to prove weapon to manipulate human beings.

[U.S. 6,587,729](#): O'Loughlin

Apparatus for audibly communicating speech using the radio frequency hearing effect

"A modulation process with a fully suppressed carrier and input preprocessor filtering to produce an encoded output; for amplitude modulation (AM) and audio speech preprocessor filtering, intelligible subjective sound is produced when the encoded signal is demodulated using the RF Hearing Effect. Suitable forms of carrier suppressed modulation include single

sideband (SSB) and carrier suppressed amplitude modulation (CSAM), with both sidebands present."

Another means of direct transmission of audible sound into the hearing sense of a person, carried on a radio signal.

[U.S. 4,877,027](#): Brunkan

Hearing system

"Sound is induced in the head of a person by radiating the head with microwaves in the range of 100 megahertz to 10,000 megahertz that are modulated with a particular waveform."

Another patent, like the Stocklin patent above, describing a method of modulating a microwave signal to carry audible sound directly into the brain of a person.

[U.S. 5,159,703](#): Lowery

Silent subliminal presentation system

"A silent communications system in which nonaural carriers, in the very low or very high audio frequency range or in the adjacent ultrasonic frequency spectrum, are amplitude or frequency modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use of loudspeakers, earphones or piezoelectric transducers."

This technology is popularly called "silent sound", and has found use in self help recordings and store anti-shoplifting applications. The "nonaural" feature makes it a covert influence technology.

[U.S. 5,356,368](#): Monroe

Method of and apparatus for inducing desired states of consciousness

"Improved methods and apparatus for entraining human brain patterns, employing frequency following response (FFR) techniques, facilitate attainment of desired states of consciousness. In one embodiment, a plurality of electroencephalogram (EEG) waveforms, characteristic of a given state of consciousness, are combined to yield an EEG waveform to which subjects may be susceptible more readily."

This is a potentially covert technology, an enhancement of the simpler Rabichev et al. (Lida device) patent 3,773,049 above.

[U.S. 6,011,991](#): Mardirossian

Communication system and method including brain wave analysis and/or use of brain activity

"A system and method for enabling human beings to communicate by way of their monitored brain activity ... then the computer at the remote location determines that the individual was attempting to communicate the word, phrase, or thought corresponding to the matched stored normalized signal."

This patent is talking about the beginnings of thought reading, hence, a significant step in covert manipulation of human beings. Recent work in fMRI scanning is also making progress in thought decoding.

[U.S. 6,017,302](#): Loos

#### Subliminal acoustic manipulation of nervous systems

"In human subjects, sensory resonances can be excited by subliminal atmospheric acoustic pulses that are tuned to the resonance frequency. The 1/2 Hz sensory resonance affects the autonomic nervous system and may cause relaxation, drowsiness, or sexual excitement, depending on the precise acoustic frequency near 1/2 Hz used. The effects of the 2.5 Hz resonance include slowing of certain cortical processes, sleepiness, and disorientation."

1/2 Hz and 2.5 Hz sound is extremely low, well below human hearing. Thus, as with the "silent sound" patent 5,159,703 above, this technology has covert manipulation potential.

NOTE: Patents relating to publicized military weapons, such as "area denial", microwave skin heating, high powered lasers, "LRAD", the high power beam-like acoustic projector have not been included here because although such systems are of concern, they cannot produce COVERT manipulation.

## **INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS**

---

### **BOOK II**

---

### **FINAL REPORT**

### **III. FINDINGS**

The Committee makes seven major findings. Each finding is accompanied by subfindings and by an elaboration which draws upon the evidentiary record set forth in our historical narrative (Part II herein) and in the thirteen detailed reports which will be published as supplements to this volume. We have sought to analyze in our findings characteristics shared by intelligence programs, practices which involved abuses, and general problems in the system which led to those abuses.

The findings treat the following themes that run through the facts revealed by our investigation of domestic intelligence activity: (A) Violating and Ignoring the Law; (B) Overbreadth of Domestic Intelligence Activity; (C) Excessive Use of Intrusive Techniques; (D) Using Covert Action to Disrupt and Discredit Domestic Groups; (E) Political Abuse of Intelligence Information; (F) Inadequate Controls on Dissemination and Retention; (G) Deficiencies in Control and Accountability.

Viewed separately, each finding demonstrates a serious problem in the conduct and control of domestic intelligence operations. Taken together, they make a compelling case for the necessity of change. Our recommendations (in Part IV) flow from this analysis and propose changes which the Committee believes to be appropriate in light of the record.

## **INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS**

### **BOOK II**

#### **FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS**

APRIL 26 (legislative day, April 14), 1976

#### **A. VIOLATING AND IGNORING THE LAW**

##### **MAJOR FINDING**

The Committee finds that the domestic activities of the intelligence community at times violated specific statutory prohibitions and infringed the constitutional rights of American citizens. 1 The legal questions involved in intelligence programs were often not considered. On other occasions, they were intentionally disregarded in the belief that because the programs served the "national security" the law did not apply. While intelligence officers on occasion failed to disclose to their superiors programs which were illegal or of questionable legality, the Committee finds that the most serious breaches of duty were those of senior officials, who were responsible for controlling intelligence activities and generally failed to assure compliance with the law.

##### *Subfindings*

(a) In its attempt to implement instructions to protect the security of the United States, the intelligence community engaged in some activities which violated statutory law and the constitutional rights of American citizens.

(b) Legal issues were often overlooked by many of the intelligence officers who directed these operations. Some held a pragmatic view of intelligence activities that did not regularly attach sufficient significance to questions of legality. The question raised was usually not whether a particular program was legal or ethical, but whether it worked.

(c) On some occasions when agency officials did assume, or were told, that a program was illegal, they still permitted it to continue. They justified their conduct in some cases on the ground that the failure of "the enemy" to play by the rules granted them the right to do likewise, and in other cases on the ground that the "national security" permitted programs that would otherwise be illegal.

(d) Internal recognition of the illegality or the questionable legality of many of these activities frequently led to a tightening of security rather than to their termination. Partly to avoid exposure and a public "flap," knowledge of these programs was tightly held within the agencies, special filing procedures were used, and "cover stories" were devised.

(e) On occasion, intelligence agencies failed to disclose candidly their programs and practices to their own General Counsels, and to Attorneys General, Presidents, and Congress.

(f) The internal inspection mechanisms of the CIA and the FBI did not keep -- and, in the case of the FBI, were not designed to keep -- the activities of those agencies within legal bounds. Their primary concern was efficiency, not legality or propriety.

(g) When senior administration officials with a duty to control domestic intelligence activities knew, or had a basis for suspecting, that questionable activities had occurred, they often responded with silence or approval. In certain cases, they were presented with a partial description of a program but did not ask for details, thereby abdicating their responsibility. In other cases, they were fully aware of the nature of the practice and implicitly or explicitly approved it.

#### *Elaboration of findings*

The elaboration which follows details the general finding of the Committee that inattention to -- and disregard of -- legal issues was an all too common occurrence in the intelligence community. While this section focuses on the actions and attitudes of intelligence officials and certain high policy officials, the Committee recognizes that a pattern of lawless activity does not result from the deeds of a single stratum of the government or of a few individuals alone. The implementation and continuation of illegal and questionable programs would not have been possible without the cooperation or tacit approval of people at all levels within and above the intelligence community, through many successive administrations.

The agents in the field, for their part, rarely questioned the orders they received. Their often uncertain knowledge of the law, coupled with the natural desire to please one's superiors and with simple bureaucratic momentum, clearly contributed to their willingness to participate in illegal and questionable programs. The absence of any prosecutions for law violations by intelligence agents inevitably affected their attitudes as well. Under pressure from above to accomplish their assigned tasks, and without the realistic threat of prosecution to remind them of their legal obligations, it is understandable that these agents frequently acted without concern for issues of law and at times assumed that normal legal restraints and prohibitions did not apply to their activities.

Significantly, those officials at the highest levels of government, who had a duty to control the activities of the intelligence community, sometimes set in motion the very forces that permitted lawlessness to occur -- even if every act committed by intelligence agencies was not known to them. By demanding results without carefully limiting the means by which the results were achieved; by over-emphasizing the threats to national security without ensuring sensitivity to the rights of American citizens; and by propounding concepts such as the right of the "sovereign" to break the law, ultimate responsibility for the consequent climate of permissiveness should be placed at their door. 2

#### *Subfinding (a)*

In its attempt to implement instructions to protect the security of the United States, the intelligence community engaged in some activities which violated statutory law and the constitutional rights of American citizens.

From 1940 to 1973, the CIA and the FBI engaged in twelve covert mail opening programs in violation of Sections 1701-1703 of Title 18 of the United States Code which prohibit the obstruction, interception, or opening of mail. Both of these agencies also engaged in warrantless "surreptitious entries" -- break-ins -- against American citizens within the United States in apparent violation of state laws prohibiting trespass and burglary. Section 605 of the Federal Communications Act of 1934 was violated by NSA's program for obtaining millions of telegrams of Americans unrelated to foreign targets and by the Army Security Agency's interception of domestic radio communications.

All of these activities, as well as the FBI's use of electronic surveillance without a substantial national security predicate, also infringed the rights of countless Americans under the Fourth Amendment protection "against unreasonable searches and seizures."

The abusive techniques used by the FBI in COINTELPRO from 1956 to 1971 included violations of both federal and state statutes prohibiting mail fraud, wire fraud, incitement to violence, sending obscene material through the mail, and extortion. More fundamentally, the harassment of innocent citizens engaged in lawful forms of political expression did serious injury to the First Amendment guarantee of freedom of speech and the right of the people to assemble peaceably and to petition the government for a redress of grievances. The Bureau's maintenance of the Security Index, which targeted thousands of American citizens for detention in the event of national emergency, clearly overstepped the permissible bounds established by Congress in the Emergency Detention Act of 1950 and represented, in contravention of the Act, a potential general suspension of the privilege of the writ of habeas corpus secured by Article 1, Section 9, of the Constitution.

A distressing number of the programs and techniques developed by the intelligence community involved transgressions against human decency that were no less serious than any technical violations of law. Some of the most fundamental values of this society were threatened by activities such as the smear campaign against Dr. Martin Luther King, Jr., the testing of dangerous drugs on unsuspecting American citizens, the dissemination of information about the sex lives, drinking habits, and marital problems of electronic surveillance targets, and the COINTELPRO attempts to turn dissident organizations against one another and to destroy marriages.

#### *Subfinding (b)*

Legal issues were often overlooked by many of the intelligence officers who directed these operations. Some held a pragmatic view of intelligence activities that did not regularly attach sufficient significance to questions of legality. The question raised was usually not whether a particular program was legal or ethical, but whether it worked.

Legal issues were clearly not a primary consideration -- if they were a consideration at all -- in many of the programs and techniques of the intelligence community. When the former head of the FBI's Racial Intelligence Section was asked whether

anybody in the FBI at any time during the 15-year course of COINTELPRO discussed its constitutionality or legal authority for example, he replied: "No, we never gave it a thought." 3 This attitude is echoed by other Bureau officials in connection with other programs. The former Section Chief of one of the FBI's Counterintelligence sections, and the former Assistant Director of the Bureau's Domestic Intelligence Division both testified that legal considerations were simply not raised in policy decisions concerning the FBI's mail opening programs. 4 Similarly, when the FBI was presented with the opportunity to assume responsibility for the CIA's New York mail opening operation, legal factors played no role in the Bureau's refusal; rather, the opportunity was declined simply because of the attendant expense, manpower requirements, and security problems. 5

One of the most abusive of all FBI programs was its attempt to discredit Dr. Martin Luther King, Jr. Yet former FBI Assistant Director William C. Sullivan testified that he "never heard anyone raise the question of legality or constitutionality, never." 6

Former Director of Central Intelligence Richard Helms testified publicly that he never seriously questioned the legal status of the twenty-year CIA New York mail opening project because he assumed his predecessor, Allen Dulles, had "made his legal peace with [it]." 17

"... [F]rom time to time," he said, "the Agency got useful information out of it," 8 so he permitted it to continue throughout his seven-year tenure as Director.

The Huston Plan that was prepared for President Richard Nixon in June 1970 constituted a virtual charter for the use of intrusive and illegal techniques against American dissidents as well as foreign agents. Its principal author has testified, however, that during the drafting sessions with representatives of the FBI, CIA, NSA, and Defense Intelligence Agency, no one ever objected to any of the recommendations on the grounds that they involved illegal acts, nor was the legality or constitutionality of any of the recommendations ever discussed. 9

William C. Sullivan, who participated in the drafting of the Huston Plan and served on the United States Intelligence Board and as FBI Assistant Director for Intelligence for 10 years, stated that in his entire experience in the intelligence community he never heard legal issues raised at all:

We never gave any thought to this realm of reasoning, because we were just naturally pragmatists. The one thing we were concerned about was this: Will this course of action work, will it get us what we want, will we reach the objective that we desire to reach? As far as legality is concerned, morals, or ethics, [it] was never raised by myself or anybody else ... I think this suggests really in government that we are amoral. In government -- I am not speaking for everybody -- the general atmosphere is one of amorality. 10

#### *Subfinding (c)*

On some occasions when agency officials did assume, or were told, that a program was illegal, they still permitted it to continue. They justified their conduct in some cases on the ground that the failure of "the enemy" to play by the rules granted them the right to do likewise, and in other cases on the ground that the "national security" permitted programs that would otherwise be illegal.

Even when agency officials recognized certain programs or techniques to be illegal, they sometimes advocated their implementation or permitted them to continue nonetheless.

This point is illustrated by a passage in a 1954 memorandum from an FBI Assistant Director to J. Edgar Hoover, which recommended that an electronic listening device be planted in the hotel room of a suspected Communist sympathizer: "Although such an installation will not be legal, it is believed that the intelligence information to be obtained will make such an installation necessary and desirable." 11 Hoover approved the installation. 12

More than a decade later, a memorandum was sent to Director Hoover which described the current FBI policy and procedures for "black bag jobs" (warrantless break-ins for purposes other than microphone installation). This memorandum read in part:

Such a technique involves trespass and is clearly illegal; therefore, it would be impossible to obtain any legal sanction for it. Despite this, "black bag" jobs have been used because they represent an invaluable technique in combatting subversive activities . . . aimed directly at undermining and destroying our nation. 13

In other words, breaking the law was seen as useful in combating those who threatened the legal fabric of society. Although Hoover terminated the general use of "black bag jobs" in July 1966, they were employed on a large scale before that time and have been used in isolated instances since then.

Another example of disregard for the law is found in a 1969 memorandum from William C. Sullivan to Director Hoover. In June of that year, Sullivan was requested by the Director, apparently at the urging of White House officials to travel to France for the purpose of electronically monitoring the conversations of journalist Joseph Kraft. 14 With the cooperation of local authorities, Sullivan was able to have a microphone installed in Kraft's hotel room, and informed Hoover of his success. "Parenthetically," he wrote in his letter to the Director, "I might add that such a cover is regarded as illegal." 15

The attitude that legal standards and issues of privacy can be overridden by other factors is further reflected in a memorandum written by Richard Helms in connection with the testing of dangerous drugs on unsuspecting American citizens in 1963. Mr. Helms wrote the Deputy Director of Central Intelligence:

While I share your uneasiness and distaste for any program which tends to intrude on an individual's private and legal prerogatives, I believe it is necessary that the Agency maintain a central role in this activity, keep current on enemy capabilities in the manipulation of human behavior, and maintain an offensive capability. I, therefore, recommend your approval for continuation of this testimony program . . . 15a

The history of the CIA's New York mail opening program is replete with examples of conscious contravention of the law. The original proposal for large-scale mail opening in 1955, for instance, explicitly recognized that "[t]here is no overt, authorized or legal censorship or monitoring of first class mails which enter, depart or transit the United States at the present time." 16 A 1962 memorandum on the project noted that its exposure could "give rise to grave charges of criminal misuse of the mails by Government agencies" and that "existing Federal statutes preclude the concoction of any legal excuse for the violation . . . 17 And again in 1963, a CIA officer wrote: "There is no legal basis for monitoring postal communications in the United States except during time of war or national emergency . . ." 18

Both the former Chief of the Counterintelligence Staff and the former Director of Security -- who were in charge of the New York project -- testified that they believed it to be illegal. 19 One Inspector General who reviewed the project in 1969 also flatly stated: "[O]f course, we knew that this was illegal. [E]verybody knew that it was [illegal] ..." 20

In spite of the general recognition of its illegality, the New York mail opening project continued for a total of 20 years and was not terminated until 1973, when the Watergate-created political climate had increased the risks of exposure. 21

With the full knowledge of J. Edgar Hoover, moreover, the FBI continued to receive the fruits of this project for three years after the FBI Director informed the President of the United States that "the FBI is opposed to implementing any covert mail coverage because it is clearly illegal ..." 22 The Bureau's own mail opening programs had been terminated in 1966, but it continued intentionally and knowingly to benefit from the illegal acts of the CIA until 1973.

The Huston Plan is another disturbing reminder of the fact that intelligence programs and techniques may be advocated and authorized with the knowledge that they are illegal. At least two of the options that were presented to President Nixon were described as unlawful on the face of the Report. Of "covert mail coverage" (mail opening) it was written that "[t]his coverage, not having the sanction of law, runs the risk of any illicit act magnified by the involvement of a Government agency." 23 The Report also noted that surreptitious entry "involves illegal entry and trespass." 24 Thus, the intelligence community presented the nation's highest executive official with the option of approving courses of action described as illegal. The fact that President Nixon did authorize them, even if only for five days, is more disquieting still. 25

When President Nixon eventually revoked his approval of the Huston Plan, the intelligence community nevertheless proceeded to initiate some programs suggested in the Plan. Intelligence agencies also continued to employ techniques recommended in the Plan, such as mail opening which had been used previously without presidential approval. 26

The recent history of Army intelligence provides an additional example of continuing an activity described as illegal. Beginning in 1967, the Army Security Agency monitored the radio communications of amateur radio operators in this country to determine if dissident elements planned disruptive activity at particular demonstrations and events. Because Army officials questioned whether such monitoring was legal under Section 605 of the Federal Communications Act of 1934, they requested a legal opinion from the Federal Communications Commission. At a meeting held in August 1968, the FCC advised the Army that such monitoring was illegal under the Act. FCC representatives also stated that the matter had been raised with Attorney General Ramsey Clark and that he had disapproved the program. 27 The FCC agreed, however, to submit a written reply to the Army, stating only that it could not "Provide a positive answer to the Army's proposal." 28

Despite having been told that their monitoring activity was illegal, and that the Attorney General himself disapproved it, the Army Security Agency continued to monitor the radio communications of American citizens for another two years. 29

Several factors may explain the intelligence community's frequent disregard of legal issues.

Some intelligence officials expressed the view that the legal and ethical restraints that applied to the rest of society simply did not apply to intelligence activities. This concept is reflected in a 1959 memorandum on the Army's covert drug testing program: "In intelligence, the stakes involved and the interest of national security may permit a more tolerant interpretation of moral-ethical values . . ." 30

As William C. Sullivan also pointed out, many intelligence officers had been imbued with a "war psychology." "Legality was not questioned," he said. "it was not an issue." 31 In war, one simply did what was "expected to do as a soldier." 32 "It was my assumption," said one FBI official connected with the Bureau's mail opening programs, "that what we were doing was justified by what we had to do." 33 Since the "enemy" did not play by the rules, moreover, intelligence officials often believed they could not afford to do so either. 34

One FBI intelligence officer appeared to attribute the disregard of the law in the Bureau's COINTELPRO operations to simple restlessness on the part of "action-oriented" FBI agents. George C. Moore, the Racial Intelligence Section Chief, testified that:

... the FBI's counterintelligence program came up because if you have anything in the FBI, you have an action oriented group of people who see something happening and want to do something to take its place. 36

Others in the intelligence community have contended that questionable and illegal acts were justified by a law higher than the United States Code or the Constitution. An FBI Counterintelligence Section Chief, for example, stated the following reason for believing in the necessity of techniques such as mail opening:

The greater good, the national security, this is correct. This is what I believed in. Why I thought these programs were good, it was that the national security required this, this is correct. 37

Similarly, when intelligence officials secured the cooperation of telegraph company executives for Project SHAMROCK, in which NSA received millions of copies of international telegraph messages without the sender's knowledge, they assured the executives that they would not be subjected to criminal liability because the project was "in the highest interests of the nation." 38

Perhaps the most novel reason for advocating illegal action was proffered by Tom Charles Huston. Huston explained that he believed the real threat to internal security was potential repression by right-wing forces within the United States. He argued that the "New Left" was capable of producing a climate of fear that would bring forth every repressive demagogue in the country. Huston believed that the intelligence professionals, if given the chance, could protect the people from the latent forces of repression by monitoring the New Left, including by illegal means. 39 Illegal action directed against the New Left, in other words, should be used by the Government to forestall potential repression by the Right.

In attempting to explain why illegal activities were advocated and defended, the impact of the attitudes and actions of government officials in supervisory positions -- Presidents, Cabinet officers, and Congressmen -- should not be discounted. Their occasional endorsement of such activities, as well as the atmosphere of permissiveness created by their emphasis on national security and their demands for results, clearly contributed to the notion that strict adherence to the law was unimportant. So, too, did the concept, propounded by some senior officials, that a "sovereign" president may authorize violations of the law.

Whatever the reasons, however, it is clear that a number of intelligence officers acted in knowing contravention of the law.

#### *Subfinding (d)*

Internal recognition of the illegality or questionable legality of many of these activities frequently led to a tightening of security rather than to their termination. Partly to avoid exposure and a public "flap," knowledge of these programs was tightly held within the agencies, special filing procedures were used, and "cover stories" were devised.

When intelligence agencies realized that certain programs and techniques were of questionable legality, they frequently took special security precautions to avoid public exposure, criticism, and embarrassment. The CIA's study of student unrest throughout the world in the late 1960s, for example, included a section on student dissent in the United States, an area that was clearly outside the Agency's statutory charter. DCI's Richard Helms urged the President's national security advisor, Henry Kissinger, to treat it with extreme sensitivity in light of the acknowledged jurisdictional violation:

"Herewith is a survey of student dissidence world-wide as requested by the President. In an effort to round out our discussion of this subject, we have included a section on American students. This is an area not within the charter of this Agency, so I need not emphasize how extremely sensitive this makes the paper. Should anyone learn of its existence, it would prove most embarrassing for all concerned." 40

Concern for the FBI's public image prompted security measures which Protected numerous questionable activities. For example, in approving or denying COINTELPRO proposals, many of which were clearly illegal, a main consideration was preventing "embarrassment to the Bureau. 41 A characteristic caution to FBI agents appears in the letter which initiated the COINTELPRO against "Black Nationalists":

You are also cautioned that the nature of this new endeavor is such that under no circumstances should the existence of the program be made known outside the Bureau and appropriate within-office security should be afforded to sensitive operations and techniques considered under the program.

Examples of attention to such security are that anonymous letters had to be written on commercially purchased stationery; newsmen had to be so completely trustworthy that they were guaranteed not to reveal the Bureau's interest; and inquiries of law enforcement officials had to be made under the pretext of a criminal investigation. A similar preoccupation with security measures for improper activities affected both the NSA and the Army Security Agency.

NSA's guidelines for its watch list activity provided that NSA's name should not be on any of the disseminated watch list material involving Americans. The aim was to "restrict the knowledge that such information is being collected and processed" by NSA. 43

The Army Security Agency's radio monitoring activity, which continued even after the Army was told that the FCC and the Attorney General regarded it as illegal, also had to be conducted in secrecy if a public outcry was to be avoided. When Army officials decided to permit radio monitoring in connection with the military's Civil Disturbance Collection Plan, their instruction provided that all ASA personnel had to be "disguised" either in civilian clothes or as members of regular military Units. 44

The perceived illegality -- and consequent "flap potential" -- of the CIA's New York mail opening project led Agency officials to formulate a drastic strategy to follow in the event of public exposure. A review of the project by the Inspector General's

Office in the early 1960s concluded that it would be desirable to fabricate a "cover story." A formal recommendation was therefore made that "[a]n emergency plan and cover story be prepared for the possibility that the operation might be blown."<sup>45</sup> In response to this recommendation, the Deputy Chief of the Counterintelligence Staff agreed that "a 'flap' will put us 'out of business' immediately and may give rise to grave charges of criminal misuse of the mails by government agencies," but he argued:

Since no good purpose can be served by an official admission of the violation, and existing Federal statutes preclude the concoction of any legal excuse for the violation, it must be recognized that no cover story is available to any Government Agency. Therefore, it is important that all Federal law enforcement and US Intelligence Agencies vigorously deny any association, direct or indirect, with any such activity as charged.... Unless the charge is supported by the presentation of interior items from the Project, it should be relatively easy to "hush up" the entire affair, or to explain that it consists of legal mail cover activities conducted by the Post Office at the request of authorized Federal agencies. Under the most unfavorable circumstances ... it might be necessary after the matter has cooled off during an extended period of investigation, to find a scapegoat to blame for unauthorized tampering with the mails. Such cases by their very nature do not have much appeal to the imagination of the public, and this would be an effective way to resolve the initial charge of censorship of the mails.<sup>46</sup>

This strategy of complete denial and transferring blame to a scapegoat was approved by the Director of Security in February 1962.<sup>47</sup>

Another extreme example of a security measure that was adopted because of the threat that illegal activity might be exposed was the outright destruction of files.

The FBI developed a special filing system -- or, more accurately, a destruction system -- for memoranda written about illegal techniques, such as break-ins, 48 and highly questionable operations, such as the microphone surveillance of Joseph Kraft.<sup>49</sup> Under this system -- which was referred to as the "DO NOT FILE" procedure -- authorizing documents and other memoranda were filed in special safes at headquarters and field offices until the next annual inspection by the Inspection Division, at which time they were to be systematically destroyed.<sup>50</sup>

#### *Subfinding (e)*

On occasion, intelligence agencies failed to disclose candidly programs and practices to their own General Counsels, and to Attorney Generals, Presidents, and Congress.

##### *(i) Concealment from Executive Branch Officials*

Intelligence officers frequently concealed or misrepresented illegal activities to their own General Counsel and superiors within and outside the agencies in order to protect these activities from exposure.

For example, during the entire 20-year history of the CIA's mail opening project, the Agency's General Counsel was never informed of its existence. According to one Agency official, this knowledge was purposefully kept from him. Former Inspector General Gordon Stewart testified:

Well, I am sure that it was held back from [the General Counsel] on purpose. An operation of this sort in the CIA is run -- if it is closely held, it is run by those people immediately concerned, and to the extent that it is really possible, according to the practices that we had in the fifties and sixties, those persons not immediately concerned were supposed to be ignorant of it.<sup>51</sup>

The evidence also indicates that two Directors of Central Intelligence under whom the New York mail operations continued -- John McCone and Admiral Raborn-- were never informed of its existence.<sup>52</sup> In 1954, Postmaster General Arthur Summerfield was informed that the CIA operated a mail cover project in New York, but he was not told that the Agency opened or intended to open any mail.<sup>53</sup> In 1965, the CIA briefly considered informing Postmaster General John A. Gronouski about the project when its existence was felt to be jeopardized by a congressional subcommittee that was investigating the use of mail covers and other investigative techniques by federal agencies. According to an internal memorandum, however, the idea was quickly rejected "in view of various statements by Gronouski before this subcommittee."<sup>54</sup> Since Gronouski had agreed with the subcommittee that tighter administrative controls on mail covers were necessary and generally supported the principle of the sanctity of the mail, it is reasonable to infer that CIA officials assumed he would not be sympathetic to the technique of mail opening.<sup>55</sup>

The only claim that any President may have known about the project was made by Richard Helms, who testified that "there was a possibility" that he "mentioned" it to President Lyndon Johnson in 1967 or 1968.<sup>56</sup> No documentary evidence is available that either supports or refutes this statement. During the preparation of the Huston Plan, neither CIA nor FBI representatives informed Tom Charles Huston, President Nixon's representative, that the mail opening project existed. The final interagency report on the Huston Plan signed by Richard Helms and J. Edgar Hoover, was sent to the President with the statement, contrary to fact, that all mail opening programs by federal agencies had been discontinued.<sup>57</sup>

In connection with another CIA mail opening Project, middle-level Agency officials apparently did not even tell their own superiors within the CIA that they intended to open mail, as opposed to merely inspecting envelope exteriors. The ranking officials testified that they approved the project believing it to be a mail cover program only.<sup>58</sup> No Cabinet officials or President knew of this project and the approval of the Deputy Chief Postal Inspector (for what he also believed to be a mail cover operation) was secured through conscious deception.<sup>59</sup>

A pattern of concealment was repeated by the FBI in their mail opening programs. There is no claim by the Bureau that any Postmaster General, Attorney General, or President was ever advised of the true nature and scope of its mail projects. One FBI official testified that it was an unofficial Bureau policy not to inform postal officials with whom they dealt of the actual intention of FBI agents in receiving the mail, and there is no indication that this policy was ever violated. 60 At one point in 1965, Assistant Director Alan Belmont and Inspector Donald Moore apparently informed Attorney General Nicholas deB. Katzenbach that FBI agents received custody of the mail in connection with espionage cases on some occasions. 61 But Moore testified that the Attorney General was not told that mail was actually opened. When asked if he felt any need to hold back from Katzenbach the fact of mail openings as opposed to the fact that Bureau agents received direct access to the mail, Moore replied:

It is perhaps difficult to answer. Perhaps I could liken it to ... a defector in place in the KGB. You don't want to tell anybody his name, the location, the title, or anything like that. Not that you don't trust them completely, but the fact is that any time one additional person becomes aware of it, there is a potential for the information to ... go further. 62

Another Bureau agent speculated that the Attorney General was not told because, mail opening "was not legal, as far as I knew." 63

Similarly, there is no indication that the FBI ever informed any Attorney General about its use of "black bag jobs" (illegal break-ins for purposes other than microphone installations) ; the full scope of its activities in COINTELPRO ; or its submission of names for inclusion on either the CIA's "Watch List" for mail opening or, before 1973, on the NSA's "Watch List" for electronic monitoring of international communications. 64

After J. Edgar Hoover disregarded Attorney General Biddle's 1943 order to terminate the Custodial Detention List by merely changing its name to the Security Index moreover, Bureau headquarters instructed the field officers that the new list should be kept "strictly confidential" and that it should never be mentioned in FBI reports or "discussed with agencies or individuals outside the Bureau" except for military intelligence agencies. For several years thereafter, the Attorney General and the Justice Department were not informed of the FBI's decision. 65

An incident which occurred in 1967 in connection with the Bureau's COINTELPRO operations is particularly illustrative of the lengths to which intelligence agencies would go to protect illegal programs from scrutiny by executive branch officers outside the intelligence community. As one phase of its disruption of the United Klans of America, the Bureau sent a letter to Klan officers purportedly prepared by the highly secret "National Intelligence Committee" (NIC) of the Klan. 66 The fake letter purported to fire the North Carolina Grand Dragon for personal misconduct and misfeasance in office, and to suspend Imperial Wizard Robert Shelton for his failure to remove the Grand Dragon. Shelton complained to the FBI and the Post Office about this apparent violation of the mail fraud statutes -- without realizing that the Bureau had in fact sent the letter. 67 The Bureau, after solemnly assuring Shelton that his complaint was not within the FBI's jurisdiction, approached the Chief Postal Inspector's office in Washington to determine what action the Post Office planned to take regarding Shelton's allegation. The FBI was advised that the matter had been referred to the Justice Department's Criminal Division. 68 At no time did the Bureau inform either the Post Office or the Justice Department that FBI agents had authored the letter. When no investigation was deemed to be warranted by the Criminal Division, FBI Headquarters directed the Bureau's Charlotte, North Carolina office to prepare a second phony NIC letter to send to Klan officials. 69 This letter was not mailed, however, because, the Charlotte office proposed and implemented a different idea -- the formation of an FBI-controlled alternative Klan organization, which eventually attracted 250 members. 70

The Huston Plan itself was prepared without the knowledge of the Attorney General. Neither the Attorney General nor anyone in his office was invited to the drafting sessions at Langley or consulted during the proceedings. Huston testified that it never occurred to him to confer with the Attorney General before making the recommendations in the Report, in part because the plan was seen as an intelligence matter to be handled by the intelligence agency directors. 71

Similarly, the CIA's General Counsel was not included or consulted in the formulation of the Huston Plan. As James Angleton testified, "the custom and usage was not to deal with the General Counsel, as a rule, until there were some troubles. He was not a part of the process of project approval." 73

#### *(ii) Concealment from Congress*

At times, knowledge of illegal programs and techniques has been concealed from Congress as well as executive branch officials. On two occasions, for example, officials of the Army Security Agency ordered its units -- in apparent violation of that Agency's jurisdiction -- to conduct general searches of the radio spectrum without regard to the source or subject matter of the transmissions. ASA did not report these incidents to ranking Army officials, even when specifically asked to do so as part of the Army's preparation for the hearings of the Senate Subcommittee on Constitutional Rights in 1971. 74

Events surrounding the 1965 and 1966 investigation by Senator Edward Long of Missouri into federal agencies' use of mail covers and other investigative techniques clearly showed the desire on the part of CIA and FBI officials to protect their programs from congressional review. 75 Fearing that the New York mail opening program might be discovered by this subcommittee, the CIA considered suspending the operation until the investigation had been completed. An internal CIA memorandum dated April 23, 1965, reads in part:

Mr. Karamessines [Assistant Deputy Director for Plans] felt that the dangers inherent in Long's subcommittee activities to the security of the Project's operations in New York should be thoroughly studied in order that a determination can be made as to whether these operations should be partially or fully suspended until the subcommittee's investigations are completed. 76

When it was learned that Chief Postal Inspector Henry Montague had been contacted about the Long investigation and believed that it would "soon cool off", however, it was decided to continue the operation without suspension. 77

The FBI was also concerned that the subcommittee might expose its mail opening programs. Bureau memoranda indicate that the FBI intended to "warn the Long Committee away from those areas which would be injurious to the national defense." 78 J. Edgar Hoover personally contacted the Chairman of the Senate Judiciary Committee, and urged him "to see Long not later than Wednesday morning to caution him that [the Chief Counsel] must not go into the kind of question he made of Chief Inspector Montague of the Post Office Department" 80 -- questioning that had threatened to reveal the FBI's mail project the Previous week. 81

When the Long subcommittee began to investigate electronic surveillance practices several months later, Bureau officials convinced Senator Edward Long that there was no need to pursue such an investigation since, they said, the FBI's operations were tightly controlled and properly implemented. 82 According to Bureau documents, FBI agents wrote a press release for the Senator from Missouri, with his approval, that stated his subcommittee had

conducted exhaustive research into the activities, procedures, and techniques of this agency [and] based upon careful study ... we are fully satisfied that the FBI has not participated in highhanded or uncontrolled usage of wiretaps, microphones, or other electronic equipment. 83

Not only was this release written by the FBI itself, it was misleading. The "exhaustive research" apparently consisted of a ninety-minute briefing by FBI officials describing their electronic surveillance practices; neither the Senator nor the public learned of the instances of improper electronic surveillances that had been conducted by the FBI. 84 When Senator Edward Long later asked certain FBI officials to testify about the Bureau's electronic surveillance policy before the Subcommittee, they refused, arguing: "... to put an FBI witness on the stand would be an attempt to open a Pandora's box, insofar as our enemies in the press were concerned ...." 85

After the press release had been delivered to Senator Long and the refusal to testify had been accepted, one FBI official wrote to the Associate Director that while some problems still existed, "we have neutralized the threat of being embarrassed by the Long Subcommittee ...." 86

#### *Subfinding (f)*

The internal inspection mechanisms of the CIA and the FBI did not keep -- and, in the case of the FBI, were not designed to keep -- the activities of those agencies within legal bounds. Their primary concern was efficiency, not legality or propriety.

The internal inspection mechanisms of the CIA and the FBI were ineffective in ensuring that the activities of these agencies were kept within legal bounds. This failure was sometimes due to structural deficiencies which kept knowledge of questionable programs tightly compartmented and shielded from those who could evaluate their legality.

As noted above, for example, the CIA's General Counsel was not informed about either the New York mail opening project or CIA's participation in the Huston Plan deliberations. The role of the CIA's General Counsel was essentially a passive one; he did not initiate inquiries but responded to requests from other Agency components. As James Angleton stated, the General Counsel was not a part of the normal project approval process and generally was not consulted until "something was going wrong." 87

When the General Counsel was consulted, he often exerted a positive influence on the conduct of CIA activities. For example, the CIA stopped monitoring telephone calls to and from Latin America after the General Counsel issued an opinion describing the telephone intercepts as illegal. 88 But internal CIA regulations have never required employees who know of illegal, improper, or questionable activities to report them to the General Counsel; rather, employees with such knowledge are instructed to inform either the Director of Central Intelligence or, the Inspector General. The Director and the Inspector General may refer the matter to the General Counsel but until recently they were not obligated to do so. 88a As Richard Helms stated, "Sometimes we did [consult the General Counsel]; sometimes we did not. I think the record on that is rather spotty, quite frankly." 89

Indeed, the record suggests that those programs that were most questionable -- such as the New York mail opening project and Project CHAOS -- were [not] referred to the General Counsel because they were considered extremely sensitive. 90 Even when questionable activities were called to the attention of the General Counsel, moreover, the internal Agency regulations did not guarantee him unrestricted access all relevant information. Thus, the General Counsel was not in a position to conduct a complete evaluation of the propriety of particular programs.

Part of the failure of internal inspection to terminate improper programs and practices may be attributed to the fact that the primary focus of the CIA's Office of the Inspector General and the FBI's Inspection Division has been on efficiency and effectiveness rather than on propriety.

The CIA's Inspector General is charged with the responsibility, among other matters, of investigating activities which might be construed as "illegal, improper, and outside the CIA's legislative charter." 91 In at least one case, the Inspector General did force the suspension of a suspect activity: the surreptitious administration of LSD to unwitting, non-volunteer, human subjects which was suspended in 1963. 92 An earlier Inspector General's review of the larger, more general program for the testing of behavioral control agents, however, had labeled that program "unethical and illegal" and it nonetheless continued for another seven years. 93 In general, as the Rockefeller Commission pointed out, "the focus of the Inspector General component reviews was on operational effectiveness. Examination of the legality or propriety of CIA activities was not normally a primary concern." 94 Two separate reviews of the New York mail opening projects by the Inspector General's office, for example, considered issues of administration and security at length but did not even mention legal considerations. 95

Internal inspection at the FBI has traditionally not encompassed legal or ethical questions at all. According to W. Mark Felt, the Assistant FBI Director in charge of the Inspection Division from 1964 to 1971, his job was to ensure that Bureau programs were being operated efficiently, not constitutionally: "There was no instruction to me," he stated, "nor do I believe there is any instruction in the Inspector's manuals, that inspectors should be on the alert to see that constitutional values are being protected." 96 He could not recall any program which was terminated because it might have been violating someone's civil rights. 97

A number of questionable FBI programs were apparently never inspected. Felt could recall no inspection, for instance, of either the FBI mail opening programs or the Bureau's participation in the CIA's New York mail opening project. 98 Even when improper programs were inspected, the Inspection Division did not attempt to exercise oversight in the sense of looking for wrongdoing. Its responsibility was simply to ensure that FBI policy, as defined by J. Edgar Hoover was effectively implemented and not to question the propriety of the policy. 99 Thus, Felt testified that if, in the course of an inspection of a field office, he discovered a microphone surveillance on Martin Luther King, Jr., the only questions he would ask were whether it had been approved by the Director and whether the procedures had been properly followed. 100

When Felt was asked whether the Inspection Division conducted any investigation into the propriety of COINTELPRO, the following exchange ensued:

Mr. FELT. Not into the propriety.

Q. So in the case of COINTELPRO, as in the case of NSA interceptions, your job as Inspector was to determine whether the program was being pursued effectively as opposed to whether it was proper?

Mr. FELT. Right, with this exception, that in any of these situations, Counterintelligence Program or whatever, it very frequently happened that the inspectors, in reviewing the files, would direct that a certain investigation be discontinued, that it was not productive, or that there was some reason that it be discontinued.

But I don't recall any cases being discontinued in the Counterintelligence program. 101

As a result of this role definition, the Inspection Division became an active participant in some of the most questionable FBI programs. For example, it was responsible for reviewing on an annual basis all memoranda relating to illegal break-ins prior to their destruction under the "DO NOT FILE" procedure.

Improper programs and techniques in the FBI were protected not only by the Inspection Division's perception of its function, but also by the maxim that FBI agents should never "embarrass the Bureau." This standard, which served as a shield to outside scrutiny, was explicitly reflected in the FBI Manual:

Any investigation necessary to develop complete essential facts regarding any allegation against Bureau employees must be instituted promptly, and every logical lead which will establish the true facts should be completely run out *unless such action would embarrass the Bureau* ... in which event the Bureau will weigh the facts, along with the recommendations of the division head. [Emphasis added.] 102

Such an instruction, coupled with the Inspection Division's inattention to the law, could only inhibit or prevent the termination and exposure of illegal practices.

#### *Subfinding (g)*

When senior administration officials with a duty to control domestic intelligence activities knew, or had a basis for suspecting, that questionable activities had occurred, they often responded with silence or approval. In certain cases, they were presented with a partial description of a program but did not ask for details, thereby abdicating their responsibility. In other cases, they were fully aware of the nature of the practice and implicitly or explicitly approved it.

On several occasions, senior administration officials with a duty to control domestic intelligence activities were supplied with partial details about questionable or illegal programs but they did not ask for additional information and the programs continued.

Sometimes the failure to probe further stemmed from the administration official's assumption that an intelligence agency would not engage in lawless conduct. Former Chief Postal Inspector Henry Montague, for example, was aware that the FBI received custody of the mail in connection with several of its mail opening programs -- indeed, he had approved such custody in one case -- but he testified that he believed these were mail cover operations only. 103 Montague stated that he did not ask FBI officials if the Bureau opened mail because he

never thought that would be necessary .... I trusted them the same as I would another [Postal] Inspector. I would never feel that I would have to tell a Postal person that you cannot open mail. By the same token, I would not consider it necessary to emphasize it to any great degree with the FBI. 104

A former FBI official has also testified, as noted above, that he informed Attorney General Katzenbach about selected aspects of the FBI mail opening programs. This official did not tell Katzenbach that mail was actually opened, but he testified that he "pointed out [to the Attorney General] that we do receive mail from the Post Office in certain sensitive areas." 105 While

Katzenbach stated that he never knew mail was opened or that the FBI gained access to mail on a regular basis in large-scale operations, 106 the former Attorney General acknowledged that he did learn that "in some cases the outside of mail might have been examined or even photographed by persons other than Post Office employees". 107 However, neither at this time nor at any other time did the Justice Department make any inquiry to determine the full scope of the FBI mail operations.

Similarly, former Attorneys General Nicholas Katzenbach and Ramsey Clark testified that they were familiar with the FBI's efforts to disrupt the Ku Klux Klan through regular investigative techniques but said they were unaware of the offensive tactics that occurred in COINTELPRO. Katzenbach said he did not believe it necessary to explore possible irregularities since "[i]t never occurred to me that the Bureau would engage in the sort of sustained improper activity which it apparently did." 108

Both Robert Kennedy and Nicholas Katzenbach were also aware of some aspects of the FBI's investigation of Dr. Martin Luther King, Jr., yet neither ascertained the full details of the Bureau's campaign to discredit the civil rights leader. Kennedy intensified the original "communist influence" investigation in October 1963 by authorizing wiretaps on King's home and office telephones. 109 Kennedy requested that an evaluation of the results be submitted to him in thirty days in order to determine whether or not to maintain the taps, but the evaluation was never delivered to him and he did not insist on it. 110 Since he never ordered the termination of the wiretap, the Bureau could, and did, install additional wiretaps on King by invoking the original authorization. 111 According to Bureau memoranda apparently initialled by Attorney General Katzenbach, Katzenbach received after the fact notification in 1965 that three bugs had been planted in Dr. King's hotel rooms. 112 A transmittal memorandum written by Katzenbach also indicates that he may have instructed the FBI to be "very cautious" in conducting these surveillances. 113 There is no indication, however, that he requested further details about any of them or prohibited the FBI from future use of this technique against Dr. King.

While there is no evidence that the full extent of the FBI's campaign to discredit Dr. King was authorized by or known to anyone outside of the Bureau, there is evidence that officials responsible for supervising the FBI received indications that some such efforts were being undertaken. For example, former Attorney General Katzenbach and former Assistant Attorney General Burke Marshall both testified that in late 1964 they learned that the Bureau had offered tape recordings of Dr. King to certain newsmen in Washington, D.C. They further stated that they informed President Johnson of the FBI's offers. 114 The Committee has discovered no evidence, however, that the President or Justice Department officials made any further effort to halt the discrediting campaign at this time or at any other time; indeed, the Bureau's campaign continued for several years after this incident.

On some occasions, administration officials did not request further details about intelligence programs because they simply did not want to know. Former Postmaster General J. Edward Day testified that when Allen Dulles and Richard Helms spoke to him about a CIA project in 1961, he interrupted them before they could tell him the purpose of their visit (which Helms said was to say mail was being opened). Day stated:

... Mr. Dulles, after some preliminary visiting and so on, said that he wanted to tell me something very secret, and I said, "Do I have to know about it?" And he said, "No."

I said, "My experience is that where there is something that is very secret, it is likely to leak out, and anybody that knew about it is likely to be suspected of having been part of leaking it out, so I would rather not know anything about it."

What additional things were said in connection with him building up to that, I don't know. But I am sure ... that I was not told anything about opening mail." 115

By his own account, therefore, Mr. Day did not learn the true nature of this project because he "would rather not know anything about it." Although rarely expressed in such unequivocal terms, this attitude appears to have been all too common among senior government officials.

Even when administration officials were fully apprised of the illegal or questionable nature of certain programs and techniques, they sometimes permitted them to continue. An example of acquiescence is presented in the case of William Cotter, a former Chief Postal Inspector who knew that the CIA opened mail in connection with its New York project but took no direct action to terminate the project for a period of four years. 116 Cotter had learned of this project in his capacity as a CIA official in the mid-1950's and he knew that it was continuing when he was sworn in as Chief Postal Inspector in April 1969. 117 Because the primary responsibility of his position was to insure the sanctity of the mails, he was understandably "very, very uncomfortable with [knowledge of the New York] project," 118 but he felt constrained by the letter and spirit of the secrecy oath which he had signed when he left the CIA in 1969 "attesting to the fact that I would not divulge secret information that came into my possession during the time that I was with the CIA." 119 Cotter stated: "After coming from eighteen years in the CIA, I was hypersensitive, perhaps, to the protection of what I believed to be a most sensitive project . . ." 120 For several years, he placed the dictate of the secrecy oath above that of the law he was charged with enforcing.

Former White House adviser John Ehrlichman also stated that he learned of a program of intercepting mail between the United States and Communist countries "because I had seen reports that cited those kinds of sources in connection with this, the bombings, the dissident activities." 121 Yet he cannot recall any White House inquiry that was made into such a program nor can he recall raising the matter with the President. 122

When President Nixon learned of the illegal techniques that were recommended in the Huston Plan, he initially endorsed, rather than disavowed them. The former President stated that "[t]o the extent that I reviewed the Special Report of Interagency Committee on Intelligence, I would have been informed that certain recommendations or decisions set forth in that report were, or might be construed to be, illegal." 123 He nonetheless approved them, in part because they represented an efficient method of intelligence collection. As President Nixon explained, "[M]y approval was based largely on the fact that the

procedures were consistent with those employed by prior administrations and had been found to be effective by the intelligence agencies." 124

Mr. Nixon also apparently relied on the theory that a "sovereign" President can authorize the violation of criminal laws in the name of "national security" when the President, in his sole discretion, deems it appropriate. He recently stated:

It is quite obvious that there are certain inherently governmental actions which if undertaken by the sovereign in protection of the interest of the nation's security are lawful but which if undertaken by private persons are not. . . .

... [I]t is naive to attempt to categorize activities a President might authorize as "legal" or "illegal" without reference to the circumstances under which he concludes that the activity is necessary. . . .

In short, there have been -- and will be in the future -- circumstances in which Presidents may lawfully authorize actions in the interests of the security of this country, which if undertaken by other persons, or even by the President under different circumstances, would be illegal. 125

As the former President described this doctrine, it could apply not only to actions taken openly, which are subject to later challenge by Congress and the courts, but also to actions such as those recommended in the Huston Plan, which are covertly endorsed and implemented. The dangers inherent in this theory are clear, for it permits a President to create exceptions to normal legal restraints and prohibitions, without review by a neutral authority and without objective standards to guide him. 126 The Huston Plan itself serves as a reminder of these dangers.

Significantly, President Nixon's revocation of approval for the Huston Plan was based on the possibility of "media criticism" if the use of these techniques was revealed. The former President stated:

Mr. Mitchell informed me that it was Director Hoover's opinion that initiating a program which would permit several government intelligence agencies to utilize the investigative techniques outlined in the Committee's report would significantly increase the possibility of their public disclosure. Mr. Mitchell explained to me that Mr. Hoover believed that although each of the intelligence gathering methods outlined in the Committee's recommendations had been utilized by one or more previous Administrations, their sensitivity would likely generate media criticism if they were employed. Mr. Mitchell further informed me that it was his opinion that the risk of disclosure of the possible illegal actions, such as unauthorized entry into foreign embassies to install a microphone transmitter, was greater than the possible benefit to be derived. Based upon this conversation with Attorney General Mitchell, I decided to revoke the approval originally extended to the Committee's recommendations. 127

In more than one instance, administration officials outside the intelligence community have specifically requested intelligence agencies to undertake questionable actions. NSA's program of monitoring telephonic communications between New York City and a city in South America, for example, was undertaken at the specific request of the Bureau of Narcotics and Dangerous Drugs, a law enforcement agency.

BNDD officials had been concerned about drug deals that were apparently arranged in calls from public telephones in New York to South America, but they felt that they could not legally wiretap these telephone booths. 128 In order to avoid tapping a limited number of phones in New York, BNDD submitted the names of 450 American citizens for inclusion in NSA's Watch List, and requested NSA to monitor a communications link between New York and South America which necessitated the interception of thousands of international telephone calls. 129

The legal limitations on domestic wiretapping apparently did not concern certain officials in the White House or Attorneys General who requested the FBI to do their bidding. In some instances, they specifically requested the FBI to institute wiretaps on American citizens with no substantial national security predicate for doing so. 130

On occasion, Attorneys General have also encouraged the FBI to circumvent the will of both Congress and the Supreme Court. As noted above, after Congress passed the Emergency Detention Act of 1950 to regulate the FBI program for listing people to be detained in case of war or other emergency, Justice Department officials concluded that its procedural safeguards and substantive standards were "unworkable". Attorney General J. Howard McGrath instructed the FBI to disregard the statute and "proceed with the [Security Index] program as previously outlined." 131 Two subsequent Attorneys General -- James McGranery and Herbert Brownell endorsed the decision to ignore the Emergency Detention Act. 132

In 1954, the Supreme Court denounced the use of microphone surveillances by local police in criminal cases; 133 the fact that a microphone had been installed in a defendant's bedroom particularly outraged the court. Within weeks of this decision, however, Attorney General Herbert Brownell reversed the existing Justice Department policy prohibiting trespassory microphone installations by the FBI, and gave the Bureau sweeping new authority to engage in bugging for intelligence purposes -- even when it meant planting microphones in bedrooms. 134 Brownell wrote J. Edgar Hoover:

Obviously, the installation of a microphone in a bedroom or in some comparably intimate location should be avoided whenever possible. It may appear, however, that important intelligence or evidence relating to matters connected with the national security can only be obtained by the installation of a microphone in such a location. . . .

... I recognize that for the FBI to fulfill its important intelligence function, considerations of internal security and the national safety are paramount and, therefore, may compel the unrestricted use of this technique in the national interest. 135

Brownell did not even require the Bureau to seek the Attorney General's prior approval for microphone installations in particular cases. 136 In the face of the Irvine decision, therefore, he gave the FBI authority to bug whomever it wished wherever it wished in cases that the Bureau -- and not the Attorney General -- determined were "in the national interest."

In short, disregard of the law by intelligence officers was seldom corrected, and sometimes encouraged or facilitated, by officials outside the agencies. Whether by inaction or direct participation, these administration officials contributed to the perception that legal restraints did not apply to intelligence activities.

26 For a description of the techniques which continued or were subsequently instituted, see pp. 115-116.

A memorandum from John Dean to John Mitchell suggests that, after President Nixon's revocation of approval for the Huston Plan, the White House itself supported the continued pursuit of some of the objectives of the Huston Plan, through an interagency unit known as the Intelligence Evaluation Committee. (Memorandum from John Dean to the Attorney General, 9/18/70.) In this memorandum, Dean suggested the creation of such a unit for "both operational and evaluation purposes." He wrote in part:

"[T]he unit can serve to make appropriate recommendations for the type of intelligence that should be immediately pursued by the various agencies. In regard to this . . . point, I believe we agreed that it would be inappropriate to have any blanket removal of restrictions; rather, the most appropriate procedure would be to decide on the type of intelligence we need, based on an assessment of the recommendations of this unit, and then to proceed to remove the restraints as necessary to obtain such intelligence." (Dean memorandum, 9/18/70.)

27 Memorandum for the record by Army Assistant Chief of Staff for Intelligence, 8/16/68, Staff summary of Sol Lindenbaum (former Executive Assistant to the Attorney General) interview, 5/8/75.

28 Memorandum for the record by Army Assistant Chief of Staff for Intelligence. 8/16/68.

29 The Army's general domestic surveillance program provides an example of evasion of a departmental order which had been issued out of concern with legal issues. The practice of collecting vast amounts of information on American citizens was terminated in 1971, when new Department of Defense restrictions came into effect calling for the destruction of all files on "unaffiliated" persons, and organizations. Rather than destroying the files, however, several Army intelligence units simply turned their intelligence files on dissident individuals and groups over to local police authorities; and one Air Force counterintelligence unit in San Diego began to create new files the next year. (Hearings before Subcommittee on Constitutional Rights, Committee on the Judiciary, U.S. Senate. 92nd Congress, 1st session, 1971, p. 1297; "Ex-FBI Aid Accused in Police Spy Hearings" Chicago Tribune, 6/21/75, p. 3.)

30 USAINTC Staff Study: Material Testing Program EA 1729. 10/15/59.

31 Sullivan attributes much of this attitude to the molding influence of World War II upon young intelligence agents who later rose to positions of influence in the intelligence community. (Sullivan, 11/1/75, pp. 94-95.) Disregard of the "niceties of law," he stated, continued after the war had ended:

"Along came the Cold War. We pursued the same course in the Korean War, and the Cold War continued, then the Vietnam War. We never freed ourselves from that psychology that we were indoctrinated with, right after Pearl Harbor, you see. I think this accounts for the fact that nobody seemed to be concerned about raising the question is this lawful, is this legal, is this ethical? It was just like a soldier in the battlefield. When he shot down an enemy he did not ask himself is this legal or lawful, is it ethical? It is what he was expected to do as a soldier."

"We did what we were expected to do. It became part of our thinking, a part of our personality." (Sullivan. 11/1/75. pp. 95,96.)

Unfortunately, it made too little difference whether the "enemy" was a foreign spy, a civil rights leader, or a Vietnam protester.

32 Sullivan, 11/1/75, P. 96.

33 Branigan. 10/9/75, p. 41.

34 Staff summary of William C. Sullivan interview, 6/10/75.

35 omitted in original.

36 Moore deposition, 11/3/75, p. 79.

37 Branagan deposition, 1/9/75, p. 41. Richard Helms referred to another kind of "greater good" when asked to speculate about the possible motivation of a CIA scientist who did not heed President Nixon's directive to destroy all biological and chemical toxins. Noting that the scientist might have "had thoughts about immunization ... or treatment of disease where [the toxin he had developed might be useful," Helms said that the retention of this biological agent could be explained as "yielding to that human impulse of the greater good." (Richard Helm- testimony, 9/15/75, p. 96.)

38 Robert Andrews testimony 9/23/75, p. 34; See NSA Report: "SHAMROCK." By cooperating with the Government in SHAMROCK, executives of three companies chose to ignore the advice of their respective legal counsels who had recommended against participation because they considered the program to be in violation of the law and FCC regulations. (Memorandum for the record, Armed Forces Security Agency, Subject: SHAMROCK Operation, 8/25/50.)

39 Tom Charles Huston deposition, 5/22/75, p. 43; Staff Summary of Toni Charles Huston interview, 5/22/75.

40 Letter from Richard Helms to Henry Kissinger, 2/18/69.

41 See COINTELPRO Report: See. V, "Outside the Bureau" memorandum; from FBI Headquarters to all SAC's, 8/25/67.

42 omitted in original.

43 Buffham, 9/12/75, p. 20; MINARET Charter, 7/1/69.

At other times, however, NSA's special security measures were applied to Protect documents which concerned far more than NSA. Thus, at Richard Helms suggestion, Huston Plan working papers and documents were all stamped with legends designed to protect NSA's lawful communications activity, although only a small portion of the documents actually concerned NSA. (Unaddressed memorandum, Subject: "Interagency Committee on Intelligence, Working Subcommittee, Minutes of the First Meeting," 6/10/70.)

44 Department of Army Message to Subordinate Commands, 3/31/68.

45 CIA memorandum, Subject: Inspector General's Survey of the Office of Security, Annex II, undated.

46 Memorandum from Deputy Chief, CI Staff, to Director Office of Security, 2/1/62.

47 Memorandum from Sheffield Edwards, Director of Security, to Deputy Director for Support, 2/21/62.

48 Memorandum from W. C. Sullivan to C. D. DeLoach, 7/19/66. The same document that describes the application of the "DO NOT FILE" procedure to "black bag jobs" also notes that before a break-in could be approved within the FBI, the Special Agent in Charge of the field office had to assure headquarters that it could be accomplished without "embarrassment to the Bureau." (Sullivan memorandum, 7/19/66.)

An isolated instance of file destruction apparently occurred in the Los Angeles office of the Internal Revenue Service in December 1974, at a time when Congressional investigation of the intelligence agencies was imminent. This office had collected large amounts of essentially political information regarding black militants and political activists. In violation of internal document destruction procedures the files were destroyed prior to their proposed review by IRS authorities. See IRS Report; Sec. IV. "The Information Gathering and Retrieval System"; Staff Summary of interview with Chief, IRS Division, Los Angeles, 8/1/75.

49 For example, letters from W. C. Sullivan to J. Edgar Hoover, 6/30/69, 7/2/69, 7 3/69, 7/7/69. These letters were sent to Hoover from Paris, where Sullivan coordinated the Kraft surveillance. All of them bear the notation "DO NOT FILE."

50 Memorandum from W. C. Sullivan to C. D. DeLoach, 7/19/66.

51 Gordon Stewart, 9/30/75, p. 29.

52 McCone, 10/9/75, pp. 3-4; Angleton, 9/17/75, p. 20; Osborn, 10/21/75; Hearings, Vol. 4, p. 38.

53 Memorandum from Richard Helms to Director of Security, 5/17/74; Helms, 10/22/75, Hearings, Vol. 4, p. 84. By the CIA's own account, moreover, at most only three Cabinet-level officials may have been told about the mail opening aspects of this project. Each of these three -- Postmasters General J. Edward Day and Winton M. Blount, and Attorney General John Mitchell -- dispute the Agency's claim. (Day, 10/22/75, Hearings, Vol. 4, p. 45; Blount, 10/22/75, Hearings, Vol. 4, p. 47; Mitchell, 10/2/75, pp. 13-14.)

54 Blind memorandum from "CIA Officer," 4/23/65.

55 Ibid. Mr. Gronouski testified as follows about the CIA's successful attempt to keep knowledge of the New York project from him:

"When this news [about CIA mail opening] broke [in 1975], I thought it was incredible that a person in a top position of responsibility in Government in an agency should have something of this sort that is very illegal going on within his own agency and did not know about it. It is not that I did not try to know about these things. I think it is incumbent upon anybody at the top office to try to know everything that goes on in his organization." (Gronouski, 10/22/75, Hearings, Vol. 4 p. 44.)

56 Helms, 10/23/75, pp. 28,30-31.

57 Special Report, p. 29. Richard Helms testified as follows about this inaccurate statement:

"... the only explanation I have for it was that this applied entirely to the FBI and had nothing to do with the CIA, that we never advertised to this Committee or told this Committee that this mail operation was going on, and there was no intention of attesting to a lie..."

"And if I signed this thing, then maybe I didn't read it carefully enough."

"There was no intention to mislead or lie to the President." (Helms, 10/22/75, Hearings Vol. 4, p. 95).

58 Howard Osborn, 8/28/75, pp. 58, 59; Thomas Karamessines, 10/8/75, p. 12; Richard Helms, 9/10/75, p. 127.

59 For example, Chief, Security Support Division memorandum, 12/24/74; Memorandum from C/TSD/CCG/CRB to the file, 3/26/60; memorandum from C/TSD/CCG/CRB to the file, 9/15/69.

60 Donald E. Moore, 10/1/75, p. 79.

61 Moore, 10/1/75, p. 31; Katzenbach, 12/3/75, Hearings, vol. 6, pp. 204, 205.

62 Moore 10/1/75, p. 48. See Mail Report: see. IV, "Nature and Value of the Product Received."

63 FBI agent testimony, 10/10/75, p. 30.

64 See NSA Report: See. II, "Summary of NSA Watch List Activity."

65 Memorandum from J. Edgar Hoover to FBI Field Offices, 8/14/43.

66 Memorandum from Atlanta Field Office to FBI Headquarters, 6/7/67.

67 Memorandum from Birmingham Field Office to FBI Headquarters, 6/14/67.

68 Postal officials told Bureau liaison that since Shelton's allegations "appear to involve an internal struggle for control of Ku Klux Klan activities in North Carolina and since the evidence of mail fraud was somewhat tenuous in nature, the Post Office did not contemplate any investigation." (Memorandum from Special Agent to D. J. Brennan, 7/11/67.) Had the FBI informed the Post Office that Bureau agents had written the letter, it would have been apparent that Shelton's allegations were not based on an "internal struggle" within the KKK.

69 Memorandum from FBI Headquarters to Charlotte Field Office, 8/21/67.

70 Memorandum from Charlotte Field Office to FBI Headquarters 8/22/67.

71 Huston, 9/23/75, Hearings, Val. 2, p. 24.

When J. Edgar Hoover informed Attorney General John Mitchell about the Report on July 27, 1970, Mitchell objected to its proposals and influenced the President to withdraw his original approval.

According to John Mitchell, he believed that the proposals "were inimical to the best interests of the country and certainly should not be something that the President of the United States should be approving." (John Mitchell testimony, 10/24/75, Hearings, Vol. 4, p. 23.)

73 James Angleton, 9/24/75, Hearings, Vol. 2, p. 77.

74 See Military Surveillance Report: Sec. 1, "Improper Surveillance of Private Citizens by the Military"; Inspector General Report, Department of the Army, 1/3/72.

75 The Johnson Administration itself attempted to restrict the Long Subcommittee's investigation into national security matters, although there is no indication that this attempt was motivated by a desire to protect illegal activities. (E.g., Memorandum from A. H. Belmont to Mr. Tolson, 2/27/65; memorandum from J. Edgar Hoover to Messrs. Tolson, Belmont, Gale, Rosen, Sullivan, and DeLoach, 3/2/65.)

76 Blind memorandum from "CIA Officer," 4/23/65.

77 Ibid.

78 Memorandum from A. H. Belmont to Mr. Tolson, 2/27/65.

79 Memorandum from J. Edgar Hoover to Messrs. Tolson, Belmont, Gale, Rosen, Sullivan, and DeLoach, 3/1/65.

80 Memorandum from J. Edgar Hoover to Messrs. Tolson, Belmont, Gale, Rosen, Sullivan, and DeLoach 3/1/65.

81 Mail Report Part IV, Sec. VII, "Concern with Exposure." At the time of his testimony before the Long Subcommittee, Chief Postal Inspector Montague knew of ongoing FBI projects in which Bureau agents received custody of the mail, but he was apparently unaware that these projects involved mail openings.

82 For example, Memorandum from C. D. DeLoach to Mr. Tolson, 1/10/66.

83 Memorandum from M. A. Jones to Mr. Wick, Attachment, 1/11/66.

84 See pp. 62--65, 105, 205-206 for a description of some of these improper surveillances.

85 Memorandum from C. D. DeLoach to Mr. Tolson, 1/21/66.

86 DeLoach memorandum, 1/21/66. This incident also illustrates that Congress has at times permitted itself to be "neutralized." The general reluctance of Congress to discharge its responsibilities toward intelligence agencies is discussed at pp. 277-281.

87 James Angleton; 9/17/75. p. 48

88 Memorandum from Lawrence Houston to Acting Chief, Division D, 1/29/73.

89 Proposed regulations drafted in response to Executive Order 11905 (March 1976) require the Inspector General to refer "all legal matters" to the Office of General Counsel. (Draft Reg. HR 1-3.)

89 Helms deposition, 9/10/75, P. 59.

90 Gordon Stewart deposition, 4/30/75, p. 29; Rockefeller Commission Report, p. 146; Report on the Offices of the General Counsel and Inspector General: The General Counsel's Responsibilities, 9/30/75, p. 29.

91 Regulation HR 7-1a (6).

92 Memorandum for the Record by J. S. Earman, Inspector General, 11/29/63; Memorandum from Helms to DCI, 11/9/64.

94 Rockefeller Commission Report, 6/6/75, p. 89.

Memorandum from L. K. White, Deputy Director for Support, to Acting Inspector General, Attachment, 3/9/62; blind memorandum, undated (1969). The Inspector General under whose auspices the second review was conducted stated "[0]f course we knew that this was illegal," but he believed that it was "unnecessary" to raise the matter of its illegality with Director Helms "since everybody knew that it was [illegal] and it didn't seem ... that I would be telling Mr. Helms anything that he didn't know." (Gordon Stewart, 9/30/75, p. 32.)

96 W. Mark Felt testimony, 2/3/75, p. 65. 97 Felt, 2/3/75, p. 57.

98 Felt, 2/3/75, pp. 54, 55.

99 Felt, 2/3/75, pp. 59-60.

100 Felt, 2/3/75, p. 60.

101 Felt, 2/3/75, pp. 56, 57.

102 When asked about this Manual provision, Attorney General Edward Levi stated:

"I do believe ... some further explanation is in order. First, the Bureau informs me that the provision has not been interpreted to mean that an investigation should not take place and that any interpretation that an investigation would not be instituted because of the possibility of embarrassment to the Bureau was never intended and, in fact, has never been the policy of this Bureau.' I am told that 'what was intended to be conveyed was that in such eventuality FBI Headquarters desired to be advised of the matter before investigation is instituted so that Headquarters would be on notice and could direct the inquiry, if necessary.'"

"Second, the manual provision dates back to March 30, 1955."

"Third, I am informed by the Bureau that 'immediate steps are being taken to remove that phraseology from our Manual of Rules and Regulations.'"

(Letter from Attorney General Levi to Senator Richard Schweiker, 11/10/75.)

103 Henry Montague testimony, 10/2/75, pp. 55, 71.

104 Henry Montague, 10/2/75, pp. 15-16.

105 Donald Moore, 10/1/75, p. 31.

106 Nicholas Katzenbach, 10/11/75, p. 35.

107 Katzenbach statement, 12/3/75, Hearings, Vol. 6, p. 205.

108 Katzenbach testimony, 12/3/75, Hearings, Vol. 6, p. 207; Ramsey Clark, 12/3/75; Hearings, Vol. 6 p. 235; Katzenbach's and Clark's knowledge of disruptive operations is discussed at greater length in Finding G: "Deficiencies in Control and Accountability" p. 265.

109 Memorandum from J. Edgar Hoover to the Attorney General, 10/7/63; memorandum from J. Edgar Hoover to the Attorney General, 16/18/63.

110 Memorandum from C. A. Evans to Mr. Belmont 10/21/63.

In May 1961, Robert Kennedy also became aware of the CIA's use of organized crime figures in connection with "clandestine efforts" against the Cuban government. (Memorandum from J. Edgar Hoover to the Attorney General, 5/22/61.) But he did not instruct the CIA to terminate its involvement with underworld figures either at that time or in May 1962, when he learned at a briefing by CIA officials that an assassination attempt had occurred. According to the CIA's General Counsel, who participated in the 1962 briefing, Kennedy only said if we were going to get involved with Mafia personnel again he wanted to be informed first." (Lawrence Houston deposition, 6/2/75, p. 14.)

The CIA's use of underworld figures clearly posed problems for the FBI's ongoing investigation of organized crime in the United States, which had in large part been initiated by Attorney General Kennedy himself. (Senate Select Committee, "Alleged Assassination Plots Involving Foreign Leaders," pp. 125-129.)

111 The FBI instituted additional wiretaps on King on four separate occasions between 1964 and 1965. Since Justice Department policy before March 1965 imposed no limit on the duration of wiretaps and they were approved by the Attorney General, the Bureau claimed that the King taps were justified as a continuation of the tap originally authorized by Kennedy in October 1963. (For example, memorandum from FBI Headquarters to Atlanta Field Office, 4/19/65; Martin Luther King Report: Sec. IC, "Wiretap Surveillance of Dr. King and the SCLC."

112 Katzenbach's initials appear on memoranda addressed to the Attorney General advising him of these bugs, but he cannot recall seeing or initialing them. (Memoranda from J. Edgar Hoover to the Attorney General, 5/17/65, 10/19/65, 12/1/65; Katzenbach, 12/1/75. Hearings, Vol. 6, p. 211, p. 46.) He stated, however, that if he had read these documents, he would have "done something about it." (Katzenbach, Hearings, Vol. 6, p. 230.)

113 A transmittal slip, which the FBI claims had been attached to the 12/1/65 memorandum, notes that "these are particularly delicate surveillances" and that "we should be very cautious in terms of the non-FBI people who may from time to time necessarily be involved in some aspect of installation." (Memorandum from Nicholas Katzenbach to J. Edgar Hoover, 12/10/65.) This message is signed by Katzenbach, but he testified that he is unsure it related to the King surveillances. (Katzenbach, 12/3/75, Hearings, Vol. 6, p. 229.)

114 Katzenbach, 12/3/75, Hearings, Vol. 6, p. 210; Burke Marshall testimony, 3/3/76, pp. 3943.

115 J. Edward Day testimony, 10/22/75, Hearings, Vol. 4, p. 45.

116 In 1973, however, Mr. Cotter was instrumental in effecting the termination of the CIA's New York project. (Cotter, 8/7/75, p. 45.)

## **INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS**

### **BOOK II**

#### **FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS**

APRIL 26 (legislative day, April 14), 1976

#### **B. THE OVERBREADTH OF DOMESTIC INTELLIGENCE ACTIVITY**

##### **MAJOR FINDING**

The Committee finds that domestic intelligence activity has been overbroad in that (1) many Americans and domestic groups have been subjected to investigation who were not suspected of criminal activity and (2) the intelligence agencies have regularly collected information about personal and political activities irrelevant to any legitimate governmental interest.

##### **Subfindings**

(a) Large numbers of law-abiding Americans and lawful domestic groups have been subjected to extensive intelligence investigation and surveillance.

(b) The absence of precise standards for intelligence, investigations of Americans contributed to overbreadth. Congress did not enact statutes precisely delineating the authority of the intelligence agencies or defining the purpose and scope of domestic intelligence activity. The executive branch abandoned the standard set by Attorney General Stone -- that the government's concern was not with political opinions but with "such conduct as is forbidden by the laws of the United States." Intelligence agencies' superiors issued over-inclusive directives to investigate "subversion" (a term that was never defined in presidential directives) and "potential" rather than actual or likely criminal conduct, as well as to collect general intelligence on lawful political and social dissent.

(c) The intelligence agencies themselves used imprecise and overinclusive criteria in their conduct of intelligence investigations. Intelligence investigations extended beyond "subversive" or violent targets to additional groups and individuals subject to minimal "subversive influence" or having little or no "potential" for violence.

(d) Intelligence agencies pursued a "vacuum cleaner" approach to intelligence collection -- drawing in all available information about groups and individuals, including their lawful political activity and details of their personal lives.

(e) Intelligence investigations in many cases continued for excessively long periods of time, resulting in sustained governmental monitoring of political activity in the absence of any indication of criminal conduct or "subversion."

### *Elaboration of Findings*

The central problem posed by domestic intelligence activity has been its departure from the standards of the law. This departure from law has meant not only the violation of constitutional prohibitions and explicit statutes, but also the adoption of criteria unrelated to the law as the basis for extensive investigations of Americans.

In 1917-1924, the federal government, often assisted by the private vigilante American Protective League, conducted sweeping investigations of dissenters, war protesters, labor organizers, and alleged "anarchists" and "revolutionaries." These investigations led to mass-arrests of thousands of persons in the 1920 "Palmer raids." Reacting to these and other abuses of investigative power, Attorney General Harlan Fiske Stone in 1924 confined the Bureau of Investigation in the Justice Department to the investigation of federal crimes. Attorney General Stone articulated a clear and workable standard:

The Bureau of Investigation is not concerned with political or other opinions of individuals. It is concerned only with their conduct and then only such conduct as is forbidden by the laws of the United States. 1

Nevertheless, his restriction lasted for little more than a decade.

In the mid-1930s the FBI resumed domestic intelligence functions, carrying out President Roosevelt's vague order to investigate "subversive activities." The President and the Attorney General authorized FBI and military intelligence investigations of conduct explicitly recognized as "not within the specific provisions of prevailing statutes." As a result, ideas and associations, rather than suspicion of criminal offenses, once again became the focus of federal investigations.

The scope of domestic intelligence investigations consistently widened in the decades after the 1930s, reaching its greatest extent in the late 1960s and early 1970s.

Domestic intelligence investigations were permitted under criteria which more nearly resembled political or social labels than standards for governmental action. Rather than Attorney General Stone's standard of investigating "only such conduct as is forbidden by the laws of the United States," domestic intelligence used such labels as the following to target intelligence investigations:

--"rightist" or "extremist" groups in the "anticommunist field

--persons with "anarchistic or revolutionary beliefs" or who were "espousing the line of revolutionary movements"

--"general racial matters"

--"hate organizations"

--"rabblers" or "rabblers"

--"key activists"

--"black nationalists"

--"white supremacists"

--"agitators"

--"key black extremists"

These broad and imprecise labels reflect the ill-defined mission of domestic intelligence, which resulted from recurring demands for progressively wider investigations of Americans. Without the firm guidance provided by law, intelligence activities intruded into areas of American life which are protected from governmental inquiry by the constitutional guarantees of personal privacy and free speech and assembly.

### *Subfinding (a)*

Large numbers of law-abiding Americans and lawful domestic groups have been subjected to extensive intelligence investigation and surveillance.

Some domestic intelligence activity has focused on specific illegal conduct or on instances where there was tangible evidence that illegal conduct was likely to occur. But domestic intelligence has gone far beyond such matters in collecting massive amounts of data on Americans. For example:

FBI Domestic Intelligence. -- The FBI has compiled at its headquarters over 480,000 files on its "subversion" investigations and over 33,000 files on its "extremism" investigations. 2 During the twenty years from 1955 to 1975, the FBI conducted 740,000 investigations of "subversive matters" and 190,000 investigations of "extremist matters." 3

The targets for FBI intelligence collection have included:

--the Women's Liberation Movement

--the conservative Christian Front and Christian Mobilizers of Father Coughlin;

--the conservative American Christian Action Council of Rev. Carl McIntyre;

--a wide variety of university, church and political groups opposed to the Vietnam war;

--those in the non-violent civil rights movement, such as Martin Luther King's Southern Christian Leadership Council, the National Association for the Advancement of Colored People (NAACP), and the Council on Racial Equality (CORE).

Army Surveillance of Civilians. -- The Army's nationwide intelligence surveillance program created files on some 100,000 Americans and an equally large number of domestic organizations, encompassing virtually every group seeking peaceful change in the United States including:

--the John Birch Society;

--Young Americans for Freedom;

--the National Organization of Women;

--the NAACP;

--the Urban League;

--the Anti-Defamation League of B'nai B'rith; and Business Executives to End the War in Vietnam. 4

CIA's CHAOS Program. -- The CIA's extensive CHAOS program -- which compiled intelligence on domestic groups and individuals protesting the Vietnam war and racial conditions -- amassed some 10,000 intelligence files on American citizens and groups and indexed 300,000 names of Americans in CIA computer records. 5

IRS Selective Tax Investigations of Dissenters. -- Between 1969 and 1973, the Internal Revenue Service, through a secret "Special Service Staff" (SSS), targeted more than 10,000 individuals and groups for tax examinations because of their political activity. 6 The FBI and the Internal Security Division of the Justice Department gave SSS lists of taxpayers deemed to be "activists" or "ideological organizations;" the FBI, in providing SSS with a list of over 2,000 groups and individuals classified as "Right Wing," "New Left," and "Old Left," expressed its hope that SSS tax examinations would "deal a blow to dissident elements." 7 A smaller though more intensive selective enforcement program, the "Ideological Organization Project," was established in November 1961 in response to White House criticism of "right-wing extremist" groups. 8 On the basis of such political criteria, 18 organizations were selected for special audit although there was no evidence of tax violation. 9 In 1964, the IRS proosed to expand its program to make "10,000 examinations of tax exempt organizations of all types including the extremist groups." 10 Although this program never fully materialized, the "Ideological Organizations Project" can be viewed as a precursor to SSS.

CIA and FBI Mail Opening. -- The 12 mail opening programs conducted by the CIA and FBI between 1940 and 1973 resulted in the illegal opening of hundreds of thousands of first-class letters. In the 1960s and early 1970s, the international correspondence of large numbers of Americans who challenged the condition of racial minorities or who opposed the war in Vietnam was specifically targeted for mail opening by both the CIA and FBI.

The overbreadth of the longest CIA mail opening program -- the 20 year (1953-1973) program in New York City -- is shown by the fact that of the more than 28 million letters screened by the CIA, the exteriors of 2.7 million were photographed and 214,820 letters were opened. 11 This is further shown by the fact that American groups and individuals placed on the Watch List for the project included:

--The Federation of American Scientists;

--authors such as John Steinbeck and Edward Albee;

--numerous American peace groups such as the American Friends Service Committee and Women's Strike for Peace; and

--businesses, such as Praeger Publishers. 12

By one CIA estimate, random selection accounted for 75 percent of the 200,000 letters opened, including letters to or from American political figures, such as Richard Nixon, while a presidential candidate in 1968, and Senators Frank Church and Edward Kennedy. 13

IV NSA's Watch List and SHAMROCK Programs. -- The National Security Agency's SHAMROCK program, by which copies of millions of telegrams sent to, from, or through the United States were obtained between 1947 and 1973, involved the use of a Watch List 1967-1973. The watch list included groups and individuals selected by the FBI for its domestic intelligence investigations and by the CIA for its Operation CHAOS program. In addition, the SHAMROCK Program resulted in NSA's obtaining not only telegrams to and from certain foreign targets, but countless telegrams between Americans in the United States and American or foreign parties abroad. 14

In short, virtually every element of our society has been subjected to excessive government-ordered intelligence inquiries. Opposition to government policy or the expression of controversial views was frequently considered sufficient for collecting data on Americans.

The committee finds that this extreme breadth of intelligence activity is inconsistent with the principles of our Constitution which protect the rights of speech, political activity, and privacy against unjustified governmental intrusion.

*Subfinding (b)*

The absence of precise standards for intelligence investigations of Americans contributed to overbreadth. Congress did not enact statutes precisely delineating the authority of the intelligence agencies or defining the purpose and scope of domestic intelligence activity. The Executive branch abandoned the standard set by Attorney General Stone -- that the government's concern was not with political opinions but with "such conduct as is forbidden by the laws of the United States." Intelligence agencies' superiors issued overinclusive directives to investigate "subversion" (a term that was never defined in presidential directives) and "potential" rather than actual or likely criminal conduct, as well as to collect general intelligence on lawful political and social dissent.

Congress has never set out a specific statutory charter for FBI domestic intelligence activity delineating the standards for opening intelligence investigations or defining the purpose and scope of domestic intelligence activity. 15

Nor have the charters for foreign intelligence agencies -- the Central Intelligence Agency and the National Security Agency -- articulated adequate standards to insure that those agencies did not become involved in domestic intelligence activity. While the 1947 National Security Act provided that the CIA shall have no "police, subpoena, law enforcement powers or internal security functions," 16 the Act was silent concerning whether the CIA was authorized to target Americans abroad or to gather intelligence in the United States on Americans or foreign nationals in connection with its foreign intelligence responsibilities. By classified presidential directive, the CIA was authorized to conduct counterintelligence operations abroad and to maintain central counterintelligence files for the intelligence community." Counterintelligence activity was defined in the directive to include protection of the nation against "subversion," a term which, as in the directives authorizing FBI domestic intelligence activity, was not defined.

In the absence of specific standards for CIA activity and given the susceptibility of the term "subversion" to broad interpretation, the CIA conducted Operation CHAOS -- a large scale intelligence program involving the gathering of data on thousands of Americans and domestic groups to determine if they had "subversive connections" and illegally opened the mail of hundreds of thousands of Americans.

Moreover, the Act does not define the scope of the authority granted to CIA's Director to protect intelligence "sources and methods." 18 This authority has been broadly interpreted to permit surveillance of present and former CIA employees in the United States as well as domestic groups thought to be a threat to CIA installations in the United States.

No statute at all deals with the National Security Agency. That Agency -- one of the largest of the intelligence agencies -- was created by Executive Order in 1952. Although NSA's mission is to obtain foreign intelligence from "foreign" communications, this has been interpreted to permit NSA to intercept communications where one terminal -- the sender or receiver -- was in the United States. Consequently when an American has used telephone or telegraph facilities between this country and overseas, his message has been subject to interception by NSA. NSA obtained copies of millions of private telegrams sent from, to or through the United States in its SHAMROCK program and complied with requests to target the international communications of specific Americans through the use of a watch list.

In addition to the failure of Congress to enact precise statutory standards, members of Congress have put pressure on the intelligence agencies for the collection of domestic intelligence without adequate regard to constitutional interests. 19 Moreover, Congress has passed statutes, such as the Smith Act, which, although not directly authorizing domestic intelligence collection, had the effect of contributing to the excessive collection of intelligence about Americans.

Three functional policies, established by the Executive branch and acquiesced in by Congress, were the basis for the overbreadth of intelligence investigations directed at Americans. These policies centered on (1) so-called "subversion investigations" of attempts by hostile foreign governments and their agents in this country to influence the course of American life; (2) the investigation of persons and groups thought to have a "potential" for violating the law or committing violence; and (3) the collection of general intelligence on political and social movements in the interest of predicting and controlling civil disturbances.

Each of these policies grew out of a legitimate concern. Nazi Germany, Japan and the Soviet Union mounted intelligence efforts in this country before World War II; and Soviet operations continued after the war. In the 1960s and early 1970s, racist groups used force to deprive Americans of their civil rights, some American dissidents engaged in violence as a form of

political protest, and there were large-scale protest demonstrations and major civil disorders in cities stemming from minority frustrations.

The Committee recognizes that the government had a responsibility to act in the face of the very real dangers presented by these developments. But appropriate restraints, controls, and prohibitions on intelligence collection were not devised; distinctions between legitimate targets of investigations and innocent citizens were forgotten; and the Government's actions were never examined for their effects on the constitutional rights of Americans, either when programs originated or as they continued over the years.

The policies of investigating Americans thought to have a "potential" for violence and the collection of general intelligence on political and social movements inevitably resulted in the surveillance of American citizens and domestic groups engaged in lawful political activity. "Subversive" was never defined in the presidential directives from Presidents Roosevelt to Kennedy authorizing FBI domestic intelligence activity. Consequently, "subversive" investigations did not focus solely on the activities of hostile foreign governments in this country. Rather, they targeted Americans who dissented from administration positions or whose political positions were thought to resemble those of "subversive" groups. An example of the ultimate result of accepting the concept of "subversive" investigations is the Johnson White House instruction to the FBI to monitor public hearings on Vietnam policy and compare the extent to which Senators' views "followed the Communist Party line." 20

Similarly, investigations of those thought to have the "potential" for violating laws or committing violence and the collection of general intelligence to prepare for civil disturbances resulted in the surveillance of Americans where there was not reasonable suspicion to believe crime or violence were likely to occur. Broad categories of American society -- conservatives, liberals, blacks, women, young people and churches -- were targeted for intelligence collection.

Domestic intelligence expanded to cover widespread political protest movements in the late 1960s and early 1970s. For example, in September 1967, Attorney General Ramsey Clark called for a "new area of investigation and intelligence reporting" by the FBI regarding the possibility of "an organized pattern of violence" by groups in the "urban ghetto." He instructed FBI Director Hoover:

... we must make certain that every attempt is being made to get all information bearing upon these problems; to take every step possible to determine whether the rioting is preplanned or organized.... As apart of the broad investigation which must be conducted ... sources or informants in black nationalist organizations, SNCC and other less publicized groups should be developed and expanded to determine the size and purpose of these groups and their relationship to other groups. 21

Such instructions did not limit investigation to facts pointing to particular criminal or violent activity but called for intensive intelligence surveillance of a broad category of black groups (and their connections with other groups) to determine their "size and purpose."

Similarly, the Army's broad domestic surveillance program reflected administration pressure on the Army for information on groups and individuals involved in domestic dissent. 22 As a former Assistant Secretary of Defense testified, the Army's sweeping collection plan "reflected the all-encompassing and uninhibited demand for information directed at the Department of the Army." 23

Presidents Johnson and Nixon subjected the CIA to intensive pressure to find foreign influence on the domestic peace movements, resulting in the establishment of Operation CHAOS. 24 When the Nixon Administration called for an intensification of CIA's effort, the CIA was instructed to broaden its targeting criteria and strengthen its collection efforts. CIA was told that "foreign Communist support" should be "liberally construed." 25 The White House stated further that "it appears our present intelligence collection capabilities in this area may be inadequate" and implied that any gaps in CIA's collection program resulting from "inadequate resources or a low priority of attention" should be corrected. 26

In short, having abandoned Attorney General Stone's standard that restricted Government investigations to "conduct and then only such conduct as is forbidden by the laws of the United States," the Government's far-reaching domestic intelligence policies inevitably, produced investigations and surveillance of large numbers of lawabiding Americans.

#### *Subfinding (c)*

The intelligence agencies themselves used imprecise and over-inclusive criteria in their conduct of intelligence investigations. Intelligence investigations extended beyond "subversive" or violent targets to additional groups and individuals subject to minimal "subversive influence" or having little or no "potential" for violence.

Having been given vague directions by their superiors and subjected to substantial pressure to report on a broad range of matters, the intelligence agencies themselves often established overinclusive targeting criteria. The criteria followed in the major domestic intelligence programs conducted in the 1960s and 1970s illustrate the breadth of intelligence targeting:

"General Racial Matters". -- The FBI gathered intelligence about proposed "civil demonstrations" and related activities of "officials, committees, legislatures, organizations, etc." in the "racial field."

FBI Field Offices were directed to report the "general programs" of all "civil rights organizations" and "readily available personal background data" on leaders and individuals "in the civil rights movement," as well as any "subversive association" that might be recorded in Field Office files. 28 In addition, the FBI reported "the objectives sought by the minority Community." 29

These broad criteria were also reflected in the FBI's targeting of "white militant groups" in the reporting of racial matters. Those who were "known to sponsor demonstrations against integration and against the busing of Negro students to white schools" were to be investigated. 30

"New Left" Intelligence. -- In conducting a "comprehensive study of the whole New Left movement" (rather than investigating particular violations of law), the FBI defined its intelligence target as a "loosely-bound, free-wheeling, college-oriented movement." 31 Organizations to be investigated were those who fit criteria phrased as the "more extreme and militant anti-Vietnam war and antidraft organizations." 32

The use of such imprecise criteria resulted in investigations of such matters as (1) two university instructors who helped support a student newspaper whose editorial policy was described by the FBI as "left-of-center, antiestablishment, and opposed to the University Administration"; 33 (2) a dissident stockholder's group planning to protest a large corporation's war production at the annual stockholder's meeting; 34 and (3) "Free Universities" attached to college campuses, whether or not there were facts indicating any actual or potential violation of law. 35

"Rabble Rouser" Index. -- Beginning in August 1967, the FBI conducted intensive intelligence investigations of individuals identified as "rabble rousers." The program was begun after a member of the National Advisory Commission on Civil Disorders asked the FBI at a meeting of the Commission "to identify the number of militant Negroes and Whites." 36 This vague reference was subsequently used by the FBI as the basis for instructions implementing a broad new program: persons were to be investigated and placed on the "rabble rouser" index who were "racial agitators who have demonstrated a potential for fomenting racial discord." 37

Ultimately, a "rabble rouser" was defined as:

A person who tries to arouse people to violent action by appealing to their emotions, prejudices, et cetera; a demagogue. 38

Thus, rather than collecting information on those who had or were likely to commit criminal or violent acts, a major intelligence program was launched to identify "demagogues."

Army Domestic Surveillance of "Dissidents." -- Extremely broad criteria were used in the Army's nationwide surveillance program conducted in the late 1960s. Such general terms as "the civil rights movement" and the "anti-Vietnam/anti-draft movements" were used to indicate targets for investigation. In collecting information on these "Movements" and on the "cause of civil disturbances," Army intelligence was to investigate "instigators," "group participants" and "subversive elements" -- all undefined.

Under later revisions, the Army collection plan extended even beyond "subversion" and "dissident groups" to "prominent persons" who were "friendly" with the "leaders of the disturbance" or "sympathetic with their plans." 40

These imprecise criteria led to the creation of intelligence files on nearly 100,000 Americans, including Dr. Martin Luther King, Major General Edwin Walker, Julian Bond, Joan Baez, Dr. Benjamin Spock, Rev. William Sloane Coffin, Congressman Abner Mikva, Senator Adlai Stevenson III, 41 as well as clergymen, teachers, journalists, editors, attorneys, industrialists, a laborer, a construction worker, railroad engineers, a postal clerk, a taxi driver, a chiropractor, a doctor, a chemist, an economist, a historian, a playwright, an accountant, an entertainer, professors, a radio announcer, athletes, business executives and authors -- all of whom became subjects of Army files simply because of their participation in political protests or their association with those who were engaged in such political activity. 42

The IRS Computerized Intelligence Index. -- In 1973, IRS established a central computer index -- the "Intelligence Gathering and Retrieval System" -- for general intelligence data, much of it unrelated to tax law enforcement. More than 465,000 Americans were indexed in the IRS computer system, including J. Edgar Hoover and the IRS Commissioner, as well as thousands of others also not suspected of tax violation. Names in newspaper articles and other published sources were indexed wholesale into the IRS computer. Under the system, intelligence gathering preceded any specific allegation of a violation, and possible "future value" was the sole criterion for inclusion of information into the Intelligence Gathering and Retrieval System.

CIA's Operation CHAOS. -- In seeking to fulfill White House requests for evidence of foreign influence on domestic dissent, the CIA gave broad instructions to its overseas stations. These directives called for reporting on the "Radical Left" which included, according to the CIA, "radical students, antiwar activists, draft resisters and deserters, black nationalists, anarchists, and assorted 'New Leftists'." 43 CIA built its huge CHAOS data base on the assumption that to know whether there was significant foreign involvement in a domestic group "one has to know whether each and every one of these persons has any connection to foreigners." 44 CIA instructed its stations that even "casual contacts based merely on mutual interest" between Americans opposed to the Vietnam war and "foreign elements" were deemed to "casual contacts based merely on mutual interest" between Americans opposed to the Vietnam war and "foreign elements" were deemed to constitute "subversive connections." 45 Similarly, CIA's request to NSA for materials on persons targeted by the NSA Watch List called for all information regardless of how innocuous it may seem." 46

The Committee's investigation has shown that the absence of precise statutory standards and the use of overbroad criteria for domestic intelligence activity resulted in the extension of intelligence investigations beyond their original "subversive" or violent targets. Intelligence investigations extended to those thought to be subject to "subversive influence." Moreover, those thought to have a "potential" for violence were also targeted and, in some cases, investigations extended even to those engaged in wholly non-violent lawful political expression.

FBI "COMINFIL" Investigations. -- Under the FBI's COMINFIL ("communist infiltration") program, large numbers of groups and individuals engaged in lawful political activity have been subjected to informant coverage and intelligence scrutiny.

Although COMINFIL investigations were supposed to focus on the Communist Party's alleged efforts to penetrate domestic groups, in practice the target often became the domestic groups themselves.

FBI COMINFIL investigations reached into domestic groups in virtually every area of American political life. The FBI conducted COMINFIL investigations in such areas as "religion," "education," "veterans' matters," "women's matters," "Negro question," and "cultural activities." 47 The "entire spectrum of the social and labor movement" was covered. 48

The overbreadth that results from the practice of investigating groups for indications of communist influence, or infiltration is illustrated by the following FBI COMINFIL intelligence investigations:

NAACP. -- An intensive 25 year long surveillance of the NAACP was conducted, ostensibly to determine whether there was Communist infiltration of the NAACP. This surveillance, however, produced detailed intelligence reports on NAACP activities wholly unrelated to any alleged communist "attempts" to infiltrate the NAACP, and despite the fact that no evidence was ever found to contradict the FBI's initial finding that the NAACP was opposed to communism. 48a

Northern Virginia Citizens Concerned About the ABM. -- In 1969, the FBI conducted an intelligence investigation and used informants to report on a meeting held in a public high school auditorium at which the merits of the Anti-Ballistic Missile System were debated by, among others, Department of Defense officials. The investigation was apparently opened because a communist newspaper had commented on the fact that the meeting was to be held. 49

National Conference on Amnesty for Vietnam Veterans. -- In 1974, FBI informants reported on a national conference sponsored by church and civil liberties groups to support amnesty for Vietnam veterans. The investigation was based on a two-step "infiltration" theory. Other informants had reported that the Vietnam Veterans Against the War (which was itself the subject of an intelligence investigation because it was thought to be subject to communist or foreign influence) might try to "control" the conference. 50 Although the conference was thus twice removed from the original target, it was nevertheless subjected to informant surveillance.

FBI intelligence investigations to find whether groups are subject to communist or "subversive" influence result in the collection of information on groups and individuals engaged in wholly legitimate activity. Reports on the NAACP were not limited to alleged communist infiltration. Similarly, the investigation of the National Amnesty Conference produced reports describing the topics discussed at the conference and the organization of a steering committee which would include families of men killed in Vietnam and congressional staff aides. 51 The reports on the meeting concerning the ABM system covered the past and present residence of the person who applied to rent the high school auditorium, and plans for a future meeting, including the names of prominent political figures who planned to attend. 52

The trigger for COMINFIL-type investigations -- that subversive attempts "to infiltrate groups were a substantial threat -- was greatly exaggerated. According to the testimony of FBI officials, the mention in a communist newspaper of the citizens' meeting to debate the ABM was sufficient to produce intelligence coverage of that meeting. 53 A large public teach-in on Vietnam, including representatives of Catholic, Episcopal, Methodist and Unitarian churches, as well as a number of spokesmen for antiwar groups, was investigated because a Communist Party official had "urged" party members to attend and one speaker representing the W. E. B. DuBois Club was identified as a communist. 54 The FBI surveillance of the teach-in resulted in a 41-page intelligence report based on coverage by 13 informants and sources. 55 And the FBI's investigation of *all* Free Universities near colleges and universities was undertaken because "several" allegedly had been formed by the Communist Party "and other subversive groups." 56

Similarly, the FBI's broad COMINFIL investigations of the civil rights movement in the South were based on the FBI's conclusion that the Communist Party had "attempted" to take advantage of racial unrest and had "endeavored" to pressure U.S. Government officials "through the press, labor unions and student groups. 57 [Emphasis supplied.] No mention was made of the general failure of these attempts."

The Committee finds that COMINFIL investigations have been based on an exaggerated notion of the threat posed by "subversives" and foreign influence on American political expression. There has been unjustified belief that Americans need informants and government surveillance to protect them from "subversive" influence in their unions, churches, schools, parties and political efforts.

Investigations of Wholly Non-Violent Political Expression. -- Domestic intelligence investigations have extended from those who commit or are likely to commit violent acts to those thought to have a "potential" for violence, and then to those engaged in purely peaceful political expression. This characteristic was graphically described by the White House official who coordinated the intelligence agencies' recommendations for "expanded" (and illegal) coverage in 1970. He testified that intelligence investigations risked moving

from the kid with a bomb to the kid with a picket sign, and from the kid with the picket sign to the kid with the bumper sticker of the opposing candidate. And you just keep going down the line. 53

Without precise standards to restrict their scope, intelligence investigations did move beyond those who committed or were likely to commit criminal or violent acts. For example:

--Dr. Martin Luther King, Jr., was targeted for the FBI's COINTELPRO operations against "Black Nationalist Hate Groups" on the theory, without factual justification, that Dr. King might "abandon" his adherence to nonviolence. 59

--The intensive FBI investigation of the Women's Liberation Movement was similarly predicated on the theory that the activities of women in that Movement might lead to demonstrations and violence. 60

--The FBI investigations of Black Student Unions proceeded from the concern of the FBI and its superiors over violence in the cities. Yet, the FBI opened intelligence investigations on "every Black Student Union and similar group regardless of their past or present involvement in disorders." 61 [Emphasis added.]

--The nationwide Army Intelligence surveillance of civilians was conducted in connection with civil disorders. However, the Army collection plan focused not merely on those likely to commit violence but was "so comprehensive . . . that any category of information related even remotely to people or organizations active in a community in which the potential for violence was present would fall within their scope." 62

The Committee finds that such intelligence surveillance of groups and individuals has greatly exceeded the legitimate interest of the government in law enforcement and the prevention of violence. Where unsupported determinations as to "potential" behavior are the basis for surveillance of groups and individuals, no one is safe from the inquisitive eye of the intelligence agency.

#### Subfindings (d)

Intelligence agencies pursued a "vacuum cleaner" approach to intelligence collection -- drawing in all available information about groups and individuals, including their lawful political activity and details of their personal lives.

Intelligence agencies collect an excessive amount of information by pursuing a "vacuum cleaner" approach that draws in all available information, including lawful political activity, personal matters, and trivia. Even where the theory of the investigation is that the subject is likely to be engaged in criminal or violent activity, the overbroad approach to intelligence collection intrudes into personal matters unrelated to such criminal or violent activity.

FBI officials conceded to the Committee that in conducting broad intelligence investigations to determine the "real purpose" of an organization, they sometimes gathered "too much information." 63

The FBI's intelligence investigation of the "New Left," for example, was directed towards a "comprehensive study of the whole movement" and produced intensive monitoring of such subjects as "support of movement by religious groups or individuals," "demonstrations aimed at social reform," "indications of support by mass media," "all activity in the labor field," and "efforts to influence public opinion, the electorate and Government bodies." 64

Similar overbreadth characterized the FBI's collection of intelligence on "white militant groups." In 1968 FBI field offices were instructed not to gather information solely on actual or potential violations of law or violence, but to use informants to determine the "aims and purposes of the organization, its leaders, approximate membership" and other "background data" relating to the group's "militancy." In 1971 the criteria for investigating individuals were widened. Special Agents in Charge of FBI field offices were instructed to investigate not only persons with "a potential for violence," but also anyone else "who in judgment of SAC should be subject of investigation due to extremist activities." 66

Even in searching for indications of potential violence in black urban areas or in collecting information about violence prone Ku Klux Klan chapters, there was marked overbreadth. In black urban areas, for example, FBI agents were instructed to have their informants obtain the names of "Afro-American type bookstores" and their "owners, operators and clientele." 67 The activities of civil rights and black groups as well as details of the personal lives of Klan members, were reported on by an FBI intelligence informant in the Ku Klux Klan. 67a Under this approach, the average citizen who merely attends a meeting, signs a petition, is placed on a mailing list, or visits a book store, is subject to being recorded in intelligence files.

A striking example of informant reporting on all they touch was provided by an FBI informant in an antiwar group with only 55 regular members and some 250 persons who gave occasional support. The informant estimated she reported nearly 1,000 names to the FBI in an 18-month period -- 60-70 percent of whom were members of other groups (such as the United Church of Christ and the American Civil Liberties Union) which were engaging in peaceful, lawful political activity together with the antiwar group or who were on the group's mailing list. 68 Similarly in the intelligence investigation of the Women's Liberation Movement, informants reported the identities of individual women attending meetings (as well as reporting such matters as the fact that women at meetings had stated "how they felt oppressed, sexually or otherwise."). 69

Such collection of "intelligence" unrelated to specific criminal or violent activity constitutes a serious misuse of governmental power. In reaching into the private lives of individuals and monitoring their lawful political activity -- matters irrelevant to any proper governmental interest -- domestic intelligence collection has been unreasonably broad.

#### Subfinding (e)

Intelligence investigations in many cases continued for excessively long periods of time, resulting in sustained governmental monitoring of political activity in the absence of any indication of criminal conduct or "subversion."

One of the most disturbing aspects of domestic intelligence investigations found by the Committee was their excessive length. Intelligence investigations often continued, despite the absence of facts indicating an individual or group is violating or is likely to violate the law, resulting in long-term government monitoring of lawful political activity. The following are examples:

(i) The FBI Intelligence Investigation of the NAACP (1941-1966). -- The investigation of the NAACP began in 1941 and continued for at least 25 years. Initiated according to one FBI report as an investigation of protests by 15 black mess attendants about racial discrimination in the Navy, 70 the investigation expanded to encompass NAACP chapters in cities across the nation. Although the ostensible purpose of this investigation was to determine if there was "Communist infiltration" of the

NAACP, the investigation constituted a long-term monitoring of the NAACP's wholly lawful political activity by FBI informants. Thus:

--The FBI New York Field Office submitted a 137-page report to FBI headquarters describing the national office of the NAACP, its national convention, its growth and membership, its officers and directors, and its stand against Communism. 71

--An FBI informant in Seattle obtained a list of NAACP branch officers and reported on a meeting where signatures were gathered on a "petition directed to President Eisenhower" and plans for two members to go to Washington, D.C., for a "Prayer Pilgrimage." 72

--In 1966, the New York Field Office reported the names of all NAACP national officers and board members, and summarized their political associations as far back as the 1940s. 73

--As late as 1966, the FBI was obtaining NAACP chapter membership figures by "pretext telephone call ... utilizing the pretext of being interested in joining that branch of the NAACP." 74

--Based on the reports of FBI informants, the FBI submitted a detailed report of a 1956 NAACP-sponsored Leadership Conference on Civil Rights and described plans for a Conference delegation to visit Senators Paul Douglas, Herbert Lehman, Wayne Morse, Hubert Humphrey, and John Bricker. 75 Later reports covered what transpired at several of these meetings with Senators. 76 Most significantly, all these reports were sent to the White House. 77

(ii) The FBI Intelligence Investigation of the Socialist Workers Party (1940 to date). -- The FBI has investigated the Socialist Workers Party (SWP) from 1940 to the present day on the basis of that Party's revolutionary rhetoric and alleged international links. Nevertheless, FBI officials testified that the SWP has not been responsible for any violent acts nor has it urged actions constituting an indictable incitement to violence. 77a

FBI informants have been reporting the political positions taken by the SWP with respect to such issues as the "Vietnam War," "racial matters," "U.S. involvement in Angola," "food prices," and any SWP efforts to support a non-SWP candidate for political office. 78

Moreover, to enable the FBI to develop "background information" on SWP leaders, informants have been reporting certain personal aspects of their lives, such as marital status. 79 The informants also have been reporting on SWP cooperation with other groups who are not the subject of separate intelligence investigations. 80

(iii) The Effort to Prove Negatives. -- Intelligence investigations and programs have also continued for excessively long periods in efforts to prove negatives. CIA's Operation CHAOS began in 1967. From that year until the program's termination in 1974, 81 the CIA repeatedly reached formal conclusions that there was negligible foreign influence on domestic protest activity. In 1967, the CIA concluded that Communist front groups did not control student organizations and that there were no significant links with foreign radicals; 82 in 1968, the CIA concluded that U.S. student protest was essentially homegrown and not stimulated by an international conspiracy; 83 and in 1971 the CIA found "there is no evidence that foreign governments, organizations, or intelligence services now control U.S. New Left Movements ... the U.S. New Left is basically self-sufficient and moves under its own impetus." 84

The result of these repeated findings was not the termination of CHAOS's surveillance of Americans, but its redoubling. Presidents Johnson and Nixon pressured the CIA to intensify its intelligence effort, to find evidence of foreign direction of the U.S. peace movement. As Director Helms testified:

When a President keeps asking if there is any information, "how are you getting along with your examination," "have you picked up any more information on this subject," it isn't a direct order to do something, but it seems to me it behooves the Director of Central Intelligence to find some way to improve his performance, or improve his Agency's performance. 85

In an effort to prove its negative finding to a skeptical White House -- and to test its validity each succeeding year -- CIA expanded its program, increasing its coverage of Americans overseas and building an ever larger "data base" on domestic political activity. Intelligence was exchanged with the FBI, NSA, and other agencies and eventually CIA agents who had infiltrated domestic organizations for other purposes supplied general information on the groups' activities. 86 Thus, the intelligence mission became one of continued surveillance to prove a negative, with no thought to terminating the program in the face of the negative findings.

As in the CHAOS operation, FBI intelligence investigations have often continued even in the absence of any evidence of "subversive" activities merely because the subjects of the investigation have not demonstrated their innocence to the FBI's satisfaction. The long term investigations of the NAACP and the Socialist Workers Party described above are typical examples.

A striking illustration of FBI practice is provided by the intelligence investigation of an advisor of Dr. Martin Luther King, Jr. The advisor was investigated on the theory that he might be a communist "sympathizer." The Bureau's New York office concluded he was not. 87 Using a theory of "guilty until proven innocent," FBI headquarters directed that the investigation continue:

The Bureau does not agree with the expressed belief of the New York office that [ ] 88 is not sympathetic to the Party cause. While there may not be any evidence that [ ] is a Communist neither is there any substantial evidence that he is anti-Communist. 89

Where citizens must demonstrate not simply that they have no connection with an intelligence target, but must exhibit "substantial evidence" that they are in opposition to the target, intelligence investigations are indeed open ended.

## INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS

### BOOK II

#### FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS

APRIL 26 (legislative day, April 14), 1976

#### C. EXCESSIVE USE OF INTRUSIVE TECHNIQUES

##### MAJOR FINDING

The intelligence community has employed surreptitious collection techniques -- mail opening, surreptitious entries, informants, and "traditional" and highly sophisticated forms of electronic surveillance -- to achieve its overly broad intelligence targeting and collection objectives. Although there are circumstances where these techniques, if properly controlled, are legal and appropriate, the Committee finds that their very nature makes them a threat to the personal privacy and Constitutionally protected activities of both the targets and of persons who communicate with or associate with the targets. The dangers inherent in the use of these techniques have been compounded by the lack of adequate standards limiting their use and by the absence of review by neutral authorities outside the intelligence agencies. As a consequence, these techniques have collected enormous amounts of personal and political information serving no legitimate governmental interest.

##### *Subfindings*

(a) Given the highly intrusive nature of these techniques, the legal standards and procedures regulating their use have been insufficient. There have been no statutory controls on the use of informants; there have been gaps and exceptions in the law of electronic surveillance; and the legal prohibitions against warrantless mail opening and surreptitious entries have been ignored.

(b) In addition to providing the means by which the Government can collect too much information about too many people, certain techniques have their own peculiar dangers:

(i) Informants have provoked and participated in violence and other illegal activities in order to maintain their cover, and they have obtained membership lists and other private documents.

(ii) Scientific and technological advances have rendered traditional controls on electronic surveillance obsolete and have made it more difficult to limit intrusions. Because of the nature of wiretaps, microphones and other sophisticated electronic techniques, it has not always been possible to restrict the monitoring of communications to the persons being investigated.

(c) The imprecision and manipulation of labels such as "national security," "domestic security," "subversive activities," and "foreign intelligence" have led to unjustified use of these techniques.

### *Elaboration of Findings*

The preceding section described how the absence of rigorous standards for opening, controlling, and terminating investigations subjected many diverse elements of this society to scrutiny by intelligence agencies, without their being suspected of violating any law. Once an investigation was opened, almost any item of information about a target's personal behavior or political views was considered worth collecting.

Extremely intrusive techniques -- such as those listed above -- have often been used to accomplish those overly broad targeting and collection objectives.

The paid and directed informant has been the most extensively used technique in FBI domestic intelligence investigations. Informants were used in 83% of the domestic intelligence investigations analyzed in a recent study by the General Accounting Office. 1a As of June 30, 1975, the FBI was using a total of 1,500 domestic intelligence informants. 2 In 1972 there were over 7,000 informants in the ghetto informant program alone. In fiscal year 1976, the Bureau has budgeted more than \$7.4 million for its domestic intelligence informant program, more than twice the amount allocated for its organized crime informant program. 3

Wiretaps and microphones have also been a significant means of gathering intelligence. Until 1972, the FBI directed these electronic techniques against scores of American citizens and domestic organizations during investigations of such matters as domestic "subversive" activities and leaks of classified information. The Bureau continues to use these techniques against foreign targets in the United States.

The most extensive use of electronic surveillance has been by the National Security Agency. NSA has electronically monitored (without wiretapping in the traditional sense) international communication links since its inception in 1952; because of its sophisticated technology, it is capable of intercepting and recording an enormous number of communications between the United States and foreign countries. 4

All mail opening programs have now been terminated, but a total of twelve such operations were conducted by the CIA and the FBI in ten American cities between 1940 and 1973. 5 Four of these were operated by the CIA, whose most massive project involved the opening of more than 215,000 letters between the United States and the Soviet Union over a twenty-year period. The FBI conducted eight mail opening programs, three of which included opening mail sent between two points in the United States. The longest FBI mail opening program lasted, with one period of suspension, for approximately twenty-six years.

The FBI has also conducted hundreds of warrantless surreptitious entries -- break-ins -- during the past twenty-five years. Often these entries were conducted to install electronic listening devices, at other times they involved physical searches for information. The widespread use of warrantless surreptitious entries against both foreign and domestic targets was terminated by the Bureau in 1966 but the FBI has occasionally made such entries against foreign targets in more recent years.

All of these techniques have been turned against American citizens as well as against certain foreign targets. On the theory that the executive's responsibility in the area of "national security" and "foreign intelligence" justified their use without the need of judicial supervision, the intelligence community believed it was free to direct these techniques against individuals and organizations whom it believed threatened the country's security. The standards governing the use of these techniques have been imprecise and susceptible to expansive interpretation and in the absence of any judicial check on the application of these vague standards to particular cases, it was relatively easy for intelligence agencies and their superiors to extend them to many cases where they were clearly inappropriate. Lax internal controls on the use of some of these techniques compounded the problem.

These intrusive techniques by their very nature invaded the private communications and activities both of the individuals they were directed against and of the persons, with whom the targets communicated or associated. Consequently, they provided the means by which all types of information -- including personal and political information totally unrelated to any legitimate governmental objective -- were collected and in some cases disseminated to the highest levels of the government.

#### *Subfinding (a)*

Given the highly intrusive nature of these techniques, the legal standards and procedures regulating their use have been insufficient. There have been no statutory controls on the use of informants; there have been gaps and exceptions in the law of electronic surveillance; and the legal prohibitions against warrantless mail opening and surreptitious entries have been ignored.

##### *1. The Absence of Statutory Restraints on the Use of Information*

There are no statutes or published regulations governing the use of informants. Consequently, the FBI is free to use informants, guided only by its own internal directives which can be changed at any time by FBI officials without approval from outside the Bureau. 7

Apart from court decisions precluding the use of informants to entrap persons into criminal activity, there are few judicial opinions dealing with informants and most of those concern criminal rather than intelligence informants. 8 The United States Supreme Court has never ruled on whether the use of intelligence informants in the contexts revealed by the Committee's investigation offend First Amendment rights of freedom of expression and association. 9

In the absence of regulation through statute, published regulation, or court, decision, the FBI has used informants to report on virtually every aspect of a targeted group or individual's activity, including lawful political expression, political meetings, the identities of group members and their associates, the "thoughts and feelings, intentions and ambitions," of members, 10 and

personal matters irrelevant to any legitimate governmental interest. Informants have also been used by the FBI to obtain the confidential records and documents of a group. 11

Informants could be used in any intelligence investigation. FBI directives have not limited informant reporting to actual or likely violence or other violations of law. 12 Nor has any determination been made concerning whether the substantial intrusion represented by informant coverage is justified by the government's interest in obtaining information, or whether less intrusive means would adequately serve the government's interest. There has also been no requirement that the decisions of FBI officials to use informants be reviewed by anyone outside the FBI. In short, intelligence informant coverage has not been subject to the standards which govern the use of other intrusive techniques such as electronic surveillance, even though informants can produce a far broader range of information.

## *2. Gaps and Exceptions in the Law of Electronic Surveillance*

Congress and the Supreme Court have both addressed the legal issues raised by electronic surveillance, but the law has been riddled with gaps and exceptions. The Executive branch has been able to apply vague standards for the use of this technique to particular cases as it has seen fit, and, in the case of NSA monitoring, the standards and procedures for the use of electronic surveillance were not applied at all.

When the Supreme Court first considered wiretapping, it held that the warrantless use of this technique was constitutional because the Fourth Amendment's warrant requirement applied only to physical trespass and did not extend to the seizure of conversation. This decision, the 1928 case of *Olmstead v. United States*, involved a criminal prosecution, and left federal agencies free to engage in the unrestricted use of wiretaps in both criminal and intelligence investigations. 13

Six years later, Congress enacted the Federal Communications Act of 1934, which made it a crime for "any person," without authorization, to intercept and divulge or publish the contents of wire and radio communications. The Supreme Court subsequently construed this section to apply to federal agents as well as to ordinary citizens, and held that evidence obtained directly or indirectly from the interception of wire and radio communications was not admissible in court. 14 But Congress acquiesced in the Justice Department's position that these cases prohibited only the divulgence of contents of wire communications outside the executive branch, 15 and Government wiretapping for intelligence purposes other than prosecution continued.

On the ground that neither the 1934 Act nor the Supreme Court decisions on wiretapping were meant to apply to "grave matters involving the defense of the nation," President Franklin Roosevelt authorized Attorney General Jackson in 1940 to approve wiretaps on "persons suspected of subversive activities against the Government of the United States, including suspected spies." 16 In the absence of any guidance from Congress or the Court for another quarter century, the executive branch first broadened this standard in 1946 to permit wiretapping in "cases vitally affecting the domestic security or where human life is in jeopardy," 17 and then modified it in 1965 to allow wiretapping in "investigations related to the national security." 18 Internal Justice Department policy required the prior approval of the Attorney General before the FBI could institute wiretaps in particular cases, 19 but until the mid-1960's there was no requirement of periodic reapproval by the Attorney General. 20 In the absence of any instruction to terminate, them, some wiretaps remained in effect for years. 21

In 1967, the Supreme Court reversed its holding in the *Olmstead* case and decided that the Fourth Amendment's warrant requirement did apply to electronic surveillances. 22 It expressly declined, however, to extend this holding to cases involving the "national security." 22a Congress followed suit the next year in the Omnibus Crime Control Act of 1968, which established a warrant procedure for electronic surveillance in criminal cases but included a provision that neither it nor the Federal Communications Act of 1934 "shall limit the constitutional power of the President." 23 Although Congress did not purport to define the President's power, the Act referred to five broad categories which thereafter served as the Justice Department's criteria for warrantless electronic surveillance. The first three categories related to foreign intelligence and counterintelligence matters:

- (1) to protect the Nation against actual or potential attack or other hostile acts of a foreign power;
- (2) to obtain foreign intelligence information deemed essential to the security of the United States; and
- (3) to protect the national security information against foreign intelligence activities.

The last two categories dealt with domestic intelligence interests:

- (4) to protect the United States against overthrow of the government by force or other unlawful means,  
or
- (5) against any other clear and present danger to the structure or existence of the government.

In 1972, the Supreme Court held in *United States v. United States District Court*, 23a that the President did not have the constitutional power to authorize warrantless electronic surveillances to protect the nation from domestic threats. 24 The Court pointedly refrained, however, from any "judgment on the scope of the Presidents' surveillance power with respect to the activities of foreign powers, within or without this country." 25 Only "the domestic aspects of national security" came within the ambit of the Court's decision. 26

To conform with the holding in this case, the Justice Department thereafter limited warrantless wiretapping to cases involving a "significant connection with a foreign power, its agents or agencies." 27

At no time, however, were the Justice Department's standards and procedures ever applied to NSA's electronic monitoring system and its "watch listing" of American citizens. 28 From the early 1960's until 1973, NSA compiled a list of individuals and organizations, including 1200 American citizens and domestic groups, whose communications were segregated from the mass of communications intercepted by the Agency, transcribed, and frequently disseminated to other agencies for intelligence purposes. 29

The Americans on this list, many of whom were active in the antiwar and civil rights movements, were placed there by the FBI, CIA, Secret Service, Defense Department, and NSA itself without prior judicial warrant or even the prior approval of the Attorney General. In 1970, NSA began to monitor telephone communications links between the United States and South America at the request of the Bureau of Narcotics and Dangerous Drugs (BNDD) to obtain information about international drug trafficking. BNDD subsequently submitted the names of 450 American citizens for inclusion on the Watch List, again without warrant or the approval of the Attorney General. 30

The legal standards and procedures regulating the use of microphone surveillance have traditionally been even more lax than those regulating the use of wiretapping. The first major Supreme Court decision on microphone surveillance was *Goldman v. United States*, 316 U.S. 129 (1942), which held that such surveillance in a criminal case was constitutional when the installation did not involve a trespass. Citing this case, Attorney General McGrath prohibited the trespassory use of this technique by the FBI in 1952. 31 But two years later -- a few weeks after the Supreme Court denounced the use of a microphone installation in a criminal defendant's bedroom 32 -- Attorney General Brownell gave the FBI sweeping authority to engage in bugging for intelligence purposes. ". . . (C)onsiderations of internal security and the national safety are paramount," he wrote, "and, therefore, may compel the unrestricted use of this technique in the national interest." 33

Since Brownell did not require the prior approval of the Attorney General for bugging specific targets, he largely undercut the policy that had developed for wiretapping. The FBI in many cases could obtain equivalent coverage by utilizing bugs rather than taps and would not be burdened with the necessity of a formal request to the Attorney General.

The vague "national interest" standards established by Brownell, and the policy of not requiring the Attorney General's prior approval for microphone installations, continued until 1965, when the Justice Department began to apply the same criteria and procedures to both microphone and telephone surveillance.

### *3. Ignoring the Prohibitions Against Warrantless Mail Opening and Surreptitious Entries*

Warrantless mail opening and surreptitious entries, unlike the use of informants and electronic surveillance, have been clearly prohibited by both statutory and constitutional law. In violation of these prohibitions, the FBI and the CIA decided on their own when and how these techniques should be used. 35

Sections 1701 through 1703 of Title 18 of the United States Code forbid persons other than employees of the Postal Service "dead letter" office from tampering with or opening mail that is not addressed to them. Violations of these statutes may result in fines of up to \$2000 and imprisonment for not more than five years. The Supreme Court has also held that both First Amendment and Fourth Amendment restrictions apply to mail opening.

The Fourth Amendment concerns were articulated as early as 1878, when the Court wrote:

The constitutional guaranty of the right of the people to be secure in their papers against unreasonable searches and seizures extends to their papers, thus closed against inspection, wherever they may be. Whilst in the mail, they can only be opened and examined under like warrant . . . as is required when papers are subjected to search 'in one's own household'. 36

This principle was reaffirmed as recently as 1970 in *United States v. Van Leeuwen*, 396 U.S. 249 (1970). The infringement of citizens' First Amendment rights resulting from warrantless mail opening was first recognized by Justice Holmes in 1921. "The use of the mails," he wrote in a dissent now embraced by prevailing legal opinion, "is almost as much a part of free speech as the right to use our tongues." 37 This principle, too, has been affirmed in recent years. 38

Breaking and entering is a common law felony as well as a violation of state and federal statutes. When committed by Government agents, it has long been recognized as "the chief evil against which the wording of the Fourth Amendment is directed." 39

In the one judicial decision concerning the legality of warrantless "national security" break-ins for physical search purposes, United States District Court Judge Gerhard Gesell held such entries unconstitutional. This case, *United States v. Ehrlichman*, 40 involved an entry into the office of a Los Angeles psychiatrist, Dr. Lewis Fielding, to obtain the medical records of his client Daniel Ellsberg, who was then under federal indictment for revealing classified documents. The entry was approved by two Presidential assistants, John Ehrlichman and Charles Colson, who argued that it had been justified "in the national interest." Ruling on the defendants' discovery motions, Judge Gesell found that because no search warrant was obtained:

The search of Dr. Fielding's office was clearly illegal under the unambiguous mandate of the Fourth Amendment. . . [T]he Government must comply with the strict constitutional and statutory limitations on trespassory searches and arrests even when known foreign agents are involved. . . . To hold otherwise, except under the most exigent circumstances, would be to abandon the Fourth Amendment to the whim of the Executive in total disregard of the Amendment's history and purpose. 41

In the appeal of this decision, the Justice Department has taken the position that a physical search may be authorized by the Attorney General without a warrant for "foreign intelligence" proposes. 42 The warrantless mail opening programs and

*Subfinding (b)*

(i) Informants have provoked and participated in violence and other illegal activities in order to maintain their cover, and they have obtained membership lists and other private documents.

#### *a. The Intrusive Nature of the Intelligence Informant Technique*

FBI informant coverage of the Women's Liberation Movement resulted in intensive reporting on the identities and opinions of women who attended WLM meetings. For example, the FBI's New York Field Office summarized one informant's report in a memorandum to FBI Headquarters:

According to this informant, these women are mostly concerned with liberating women from this "oppressive society." They are mostly against marriage, children, and other states of oppression caused by men. Few of them, according to the informant, have had political backgrounds. 48

Informant indicates members of Women's Liberation campus group who are now enrolled as students at University of Missouri, Kansas City, are \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_. 49 Informant noted that \_\_\_\_\_ and \_\_\_\_\_ 50 not currently students on the UMKC campus are reportedly roommates at \_\_\_\_\_. 51

... to go to meetings, write up reports ... on what happened, who was there ... to try to totally identify the background of every person there, what their relationships were, who they were living with, who they were sleeping with, to try to get some sense of the local structure and the local relationships among the people in the organization. 52

Even where intelligence informants are used to infiltrate groups where some members are suspected of violent activity, the nature of the intelligence mission results in governmental intrusion into matters irrelevant to that inquiry. The FBI Special Agents who directed an intelligence informant in the Ku Klux Klan testified that the informant

... furnished us information on the meetings and the thoughts and feelings, intentions and ambitions, as best he knew them, of other members of the Klan, both the rank and file and the leadership. 54

Intelligence informants also report on other groups -- not the subject of intelligence investigations -- which merely associate with, or are even opposed to, the targeted group. For example, an FBI informant in the VVAW had the following exchange with a member of the Committee:

Senator HART (Mich.). ... did you report also on groups and individuals outside the [VVAW], such as other peace groups or individuals who were opposed to the war whom you came in contact with because they were cooperating with the [VVAW] in connection with protest demonstrations and petitions?

Ms. Cook. ... I ended up reporting on groups like the United Church of Christ, American Civil Liberties Union, the National Lawyers Guild, liberal church organizations [which] quite often went into coalition with the VVAW. 55

This informant reported the identities of an estimated 1,000 individuals to the FBI, although the local chapter to which she was assigned had only 55 regular members. 56 Similarly, an FBI informant in the Ku Klux Klan reported on the activities of civil rights and black groups that he observed in the course of his work in the Klan. 57

In short, the intelligence informant technique is not a precise instrument. By its nature, it extends far beyond the sphere of proper governmental interest and risks governmental monitoring of the private lives and the constitutionally-protected activity of Americans. Nor is the intelligence informant technique used infrequently. As reflected in the statistics described above, FBI intelligence investigations are in large part conducted through the use of informants; and FBI agents are instructed to "develop reliable informants at all levels and in all segments" of groups under investigation. 58

#### *b. Other Dangers in the Intelligence Informant Technique*

In the absence of clear guidelines for informant conduct, FBI paid and directed intelligence informants have participated in violence and other illegal activities and have taken membership lists and other private documents.

##### *1. Participation in Violence and Other Illegal Activity*

The Committee's investigation has revealed that there is often a fundamental dilemma in the use of intelligence informants in violent organizations. The Committee recognizes that intelligence informants in such groups have sometimes played essential roles in the enforcement of the criminal law. At the same time, however, the Committee has found that the intelligence informant technique carries with it the substantial danger that informants will participate in, or provoke, violence or illegal activity. Intelligence informants are frequently infiltrated into groups for long-term reporting rather than to collect evidence for use in prosecutions. Consequently, intelligence informants must participate in the activity of the group they penetrate to preserve their cover for extended periods. Where the group is involved in violence or illegal activity, there is a substantial risk that the informant must also become involved in this activity. As an FBI Special Agent who handled an intelligence informant in the Ku Klux Klan testified: "[you] couldn't be an angel and be a good informant." 59

FBI officials testified that it is Bureau practice to instruct informants that they are not to engage in violence or unlawful activity and, if they do so, they may be prosecuted. FBI Deputy Associate Director Adams testified:

... we have informants who have gotten involved in the violation of the law, and we have immediately converted their status from an informant to the subject, and have prosecuted, I would say, offhand ... around 20 informants. 60

The Committee finds, however, that the existing guidelines dealing with informant conduct do not adequately ensure that intelligence informants stay within the law in carrying out their assignments. The FBI Manual of Instructions contain no provisions governing informant conduct. While FBI employee conduct regulations prohibit an FBI agent from directing informants to engage in violent or other illegal activity, informants themselves are not governed by these regulations since the FBI does not consider them as FBI employees.

In the absence of clear and precise written provisions directly applicable to informants, FBI intelligence informants have engaged in violent and other illegal activity. For example, an FBI intelligence informant who penetrated the Ku Klux Klan and reported on its activities for over five years testified that on a number of occasions he and other Klansmen had "beaten people severely, had boarded buses and kicked people off; had went in restaurants and beaten them with blackjacks, chains, pistols." 61 This informant described how he had taken part in Klan attacks on Freedom Riders at the Birmingham, Alabama, bus depot, where "baseball bats, clubs, chains and pistols" were used in beatings. 62

Although the FBI Special Agents who directed this informant instructed him that he was not to engage in violence, it was recognized that there was a substantial risk that he would become a participant in violent activity.

As one of the Agents testified:

... it is kind of difficult to tell him that we would like you to be there on deck, observing, be able to give us information and still keep yourself detached and uninvolved and clean, and that was the problem that we constantly had. 63

In another example, an FBI intelligence informant penetrated "right wing" groups operating in California under the names "The Minutemen" and "The Secret Army Organization." The informant reported on the activities of these "right wing" paramilitary groups for a period of five years but was also involved in acts of violence or destruction. In addition, the informant actually rose to a position of leadership in the SAO and became an innovator of various harassment actions. For example, he admittedly participated in firebombing of an automobile and was present, conducting a "surveillance" of a professor at San Diego State University, when his associate and subordinate in the SAO took out a gun and fired into the home of the professor, wounding a young woman. 64

An FBI intelligence informant in a group of antiwar protesters planning to break into a draft board claimed to have provided technical instruction and materials that were essential to the illegal breaktestified to the committee:

Everything they learned about breaking into a building or climbing a wall or cutting glass or destroying lockers, I taught them. I got sample equipment, the type of windows that we would go through, I picked up off the job and taught them how to cut the glass, how to drill holes in the glass so you cannot bear it and stuff like that, and the FBI supplied me with the equipment needed. The stuff I did not have, the [the FBI] got off their own agents. 65

The Committee finds that where informants are paid and directed by a government agency, the government has a responsibility to impose clear restrictions on their conduct. Unwritten practice or general provisions aimed at persons other than the informants themselves are not sufficient. In the investigation of violence or illegal activity, it is essential that the government not be implicated in such activity.

## *2. Membership Lists and Other Private Documents Obtained by the Government Through Intelligence Informants*

The Committee finds that there are inadequate guidelines to regulate the conduct of intelligence informants with respect to private and confidential documents, such as membership lists, mailing lists and papers relating to legal matters. The Fourth Amendment provides that citizens shall be "secure in their ... papers and effects, against unreasonable searches and seizures" and requires probable cause to believe there has been a violation of law before a search warrant may issue. Moreover the Supreme Court, in *NAACP v. Alabama*, 66 held that the First Amendment's protections of speech, assembly and group association did not permit a state to compel the production of the membership list of a group engaged in lawful activity. The Court distinguished the case where a state was able to demonstrate a "controlling justification" for such lists by showing a group's activities involved "acts of unlawful intimidation and violence." 66a

There are no provisions in the FBI Manual which preclude the FBI from obtaining private and confidential documents through intelligence informants. The Manual does prohibit informant reporting of "any information pertaining to defense plans or strategy," but the FBI interprets this as applying only to privileged communications between an attorney and client in connection with a specific court proceeding. 67

The Committee's investigation has shown that, the FBI, through its intelligence informants and sources, has sought to obtain membership lists and other confidential documents of groups and individuals. 68 For example, one FBI Special Agent testified:

I remember one evening . . . [an informant] called my home and said I will meet you in a half an hour ... I have a complete list of everybody that I have just taken out of the files, but i have to have it back within such a length of time.

Well, naturally I left home and met him and had the list duplicated forthwith, and back in his possession and back in the files with nobody suspecting." 69

Similarly, the FBI Special Agent who handled an intelligence informant in an antiwar group testified that he obtained confidential papers of the group which related to legal defense matters:

"She brought back several things . . . various position papers taken by various legal defense groups, general statements of . . . the VVAW, legal thoughts on various trials, the Gainesville (Florida) 8 . . . the Camden (New Jersey) 9 . . . various documents from all of these groups." 70

This informant also testified that she took the confidential mailing list of the group she had penetrated and gave it to the FBI. 71

She also gave the FBI a legal manual prepared by the group's attorneys to guide lawyers in defending the group's members should they be arrested in connection with antiwar demonstrations or other political activity. 72 Since this document was prepared as a general legal reference manual rather than in connection with a specific trial the FBI considered it outside the attorney-client privilege and not barred by the FBI Manual provision with respect to legal defense and strategy matters.

For the government to obtain membership lists and other private documents pertaining to lawful and protected activities covertly through intelligence informants risks infringing rights guaranteed by the Constitution. The Committee finds that there is a need for new guidelines for informant conduct with-respect to the private papers of groups and individuals.

## *c. Electronic Surveillance*

In the absence of judicial warrant, both the "traditional" forms of electronic surveillance practiced by the FBI wiretapping and bugging -- and the highly sophisticated form of electronic monitoring practiced by NSA have been used to collect too much information about too many people.

### *1. Wiretapping and Bugging*

Wiretaps and bugs are considered by FBI officials to be one of the most valuable techniques for the collection of information relevant to the Bureau's legitimate foreign counterintelligence mandate. W. Raymond Wannall, the former Assistant Director in charge of the FBI's Intelligence Division, stated that electronic surveillance assisted Bureau officials in making "decisions" as to operations against foreigners engaged in espionage. "It gives us leads as to persons ... hostile intelligence services are trying to subvert or utilize in the United States, so certainly it is a valuable technique." 73

Despite its stated value in foreign counterintelligence cases, however, the dangers inherent in its use imply a clear need for rigorous controls. By their nature, wiretaps and bugs are incapable of a surgical precision that would permit intelligence agencies to overhear only the target's conversations. Since wiretaps are placed on particular telephones, anyone who uses a tapped phone -- including members of the target's family -- can be overheard. So, too, can everyone with whom the target (or anyone else using the target's telephone) communicates. 74 Microphones planted in the target's room or office inevitably intercept all conversations in a particular area: anyone confessing in the room or office, not just the target, is overheard.

The intrusiveness of these techniques has a second aspect as well. It is extremely difficult, if not impossible, to limit the interception to conversations that are relevant to the purposes for which the surveillance is placed. Virtually all conversations are overheard, no matter how trivial, personal, or political they might be. When the electronic surveillance target is a political figure who is likely to discuss political affairs, or a lawyer, who confers with his clients, the possibilities for abuse are obviously heightened.

The dangers of indiscriminate interception are perhaps most acute in the case of microphones planted in locations such as bedrooms. When Attorney General Herbert Brownell gave the FBI sweeping authority to engage in microphone surveillances for intelligence purposes in 1954, he expressly permitted the Bureau to plant microphones in such locations if, in the sole discretion of the FBI, the facts warranted the installation. 75 Acting under this general authority, for example, the Bureau installed no fewer than twelve bugs in hotel rooms occupied by Dr. Martin Luther King, Jr. 76

The King surveillances which occurred between January 1964 and October 1965, were ostensibly approved within the FBI for internal security reasons, but they produced vast amounts of personal information that were totally unrelated to any legitimate governmental interest; indeed, a single hotel room bug alone yielded twenty reels of tape that subsequently provided the basis for the dissemination of personal information about Dr. King throughout the Federal establishment. 76a Significantly, FBI internal memoranda with respect to some of the installations make clear that they were planted in Dr. King's hotel rooms for the express purpose of obtaining personal information about him. 77

Extremely personal information about the target, his family, and his friends, is easily obtained from wiretaps as well as microphones. This fact is clearly illustrated by the warrantless electronic surveillance of an American citizen who was suspected of leaking classified data to the press. A wiretap on this individual produced no evidence that he had in fact leaked any stories or documents, but among the items of information that the FBI did obtain from the tap (and delivered in utmost secrecy to the White House) were the following: that "meat was ordered [by the target's family] from a grocer;" that the target's daughter had a toothache; that the target needed grass clippings for a compost heap he was building; and that during a telephone conversation between the target's wife and a friend the "matters discussed were milk bills, hair, soap operas, and church." 78

The so-called "seventeen" wiretaps on journalists and government employees, which collectively lasted from May 1969 to February 1971, also illustrate the intrusiveness of electronic surveillance. According to former President Nixon, these taps produced "just gobs of material: gossip and bull." 79 FBI summaries of information obtained from the wiretaps and disseminated to the White House suggest that the former President's private evaluation of them was correct. This wiretapping program did not reveal the source of any leaks of classified data, which was its ostensible purpose, but it did generate a wealth of information about the personal lives of the targets -- their social contacts, their vacation plans, their employment satisfactions and dissatisfaction, their marital problems, their drinking habits, and even their sex lives. 80

Among those who were incidentally overheard on one of these wiretaps was a currently sitting Associate Justice of the Supreme Court of the United States, who made plans to review a manuscript written by one of the targets. 81 Vast amounts of political information were also obtained from these wiretaps. 82

The "seventeen" wiretaps also exemplify the particularly acute problems of wiretapping when the targeted individuals are involved in the domestic political process. These wiretaps produced vast amounts of purely political information, 82 much of which was obtained from the home telephones of two consultants to Senator Edmund Muskie and other Democratic politicians.

The incidental collection of political information from electronic surveillance is also shown by a series of telephone and microphone surveillances conducted during the Kennedy administration. In an investigation of the possibly unlawful attempts of representatives of a foreign country to influence congressional deliberations about sugar quota legislation in the early 1960s, Attorney General Robert Kennedy authorized a total of twelve warrantless wiretaps on foreign and domestic targets. Among the wiretaps of American citizens were two on American lobbyists, three on executive branch officials, and two on a staff member of a House of Representatives' Committee. 83 A bug was also planted in the hotel room of a United States Congressman, the Chairman of the House Agriculture Committee, Harold D. Cooley. 84

Although this investigation was apparently initiated because of the Government's concern about future relations with the foreign country involved and the possibility of bribery, 85 it is clear that the Kennedy administration was politically interested in the outcome of the sugar quota legislation as well. 86 Given the nature of the techniques used and of the targets they were directed against, it is not surprising that a great deal of potentially useful political information was generated from these "Sugar Lobby" surveillances. 87

The highly intrusive nature of electronic surveillance also raises special problems when the targets are lawyers and journalists. Over the past two decades there have been a number of wiretaps placed on the office telephones of lawyers. 88 In the Sugar Lobby investigation, for example, Robert Kennedy authorized wiretaps on ten telephone lines of a single law firm. 90 All of these lines were apparently used by the one lawyer who was a target and presumably by other attorneys in the firm as well. Such wiretaps represent a serious threat to the attorney-client privilege, because once they are instituted they are capable of detecting all conversations between a lawyer and his clients, even those relating to pending criminal cases.

Since 1960, at least six American journalists and newsmen have also been the targets of warrantless wiretaps or bugs. 91 These surveillances were all rationalized as necessary to discover the source of leaks of classified information, but, since wiretaps and bugs are indiscriminate in the types of information collected, some of these taps revealed the attitudes of various newsmen toward certain politicians and supplied advance notice of forthcoming newspaper and magazine articles dealing with administration policies. The collection of information such as this, and the precedent set by wiretapping of newsmen, generally, inevitably tends to undermine the constitutional guarantee of a free and independent press.

## *2. NSA Monitoring*

The National Security Agency (NSA) has the capability to monitor almost any electronic communication which travels through the air. This means that NSA is capable of intercepting a telephone call or even a telegram, if such call or telegram is transmitted at least partially through the air. Radio transmissions, a fortiori, are also within NSA's reach.

Since most communications today -- to an increasing extent even domestic communications -- are, at some point, transmitted through the air, NSA's potential to violate the privacy of American citizens is unmatched by any other intelligence agency. Furthermore, since the interception of electronic signals entails neither the installation of electronic surveillance devices nor the cooperation of private communications companies, the possibility that such interceptions will be undetected is enhanced.

NSA has never turned its monitoring apparatus upon entirely domestic communications, but from the early 1960s until 1973, it did intercept the international communications of American citizens, without a warrant, at the request of other federal agencies.

Under current practice, NSA does not target any American citizen or firm for the purpose of intercepting their foreign communications. As a result of monitoring international links of communication, however, it does acquire an enormous number of communications to, from, or about American citizens and firms. 93

As a practical matter, most of the communications of American citizens or firms acquired by NSA as incidental to its foreign intelligence gathering process are destroyed upon recognition as a communication to or from an American citizen. But other such communications, which bear upon NSA's foreign intelligence requirements, are processed, and information obtained from them are used in NSA's reports to other intelligence agencies. Current practice precludes NSA from identifying American citizens and firms by name in such reports. Nonetheless, the practice does result in NSA's disseminating information derived from the international communications of American citizens and firms to the intelligence agencies and policymakers in the federal government.

In his dissent in *Olmstead v. United States*, 94 which held that the Fourth Amendment warrant requirement did not apply to the seizure of conversations by means of wiretapping, Justice Louis D. Brandeis expressed grave concern that new technologies might outstrip the ability of the Constitution to protect American citizens. He wrote:

Subtler and more far-reaching means of invading privacy have become available to the government ... (and) the progress of science in furnishing the Government with means of espionage is not likely to stop with wiretapping. Ways may some day be developed by which the Government, without removing papers from secret drawers, can reproduce them in court, and by which it will be enabled to expose to a jury the most intimate occurrences of the home .... Can it be that the Constitution affords no protection against such invasions of individual security?

The question posed by Justice Brandeis applies with obvious force to the technological developments that allow NSA to monitor an enormous number of communications each year. His fears were firmly based, for in fact no warrant was ever obtained for the inclusion of 1200 American citizens on NSA's "Watch List" between the early 1960s and 1973, and none is obtained today for the dissemination within the intelligence community of information derived from the international communications of American citizens and firms. In the face of this new technology, it is well to remember the answer Justice Brandeis gave to his own question. Quoting from *Boyd v. United States*, 116 U.S. 616, he wrote:

It is not the breaking of his doors, and the rummaging of his drawers that constitutes the essence of the offense; but it is the invasion of his indefeasible right of personal security, personal liberty, and private property ... 94a

## *D. Mail Opening*

By ignoring the legal prohibitions against warrantless mail opening, the CIA and the FBI were able to obtain access to the written communications of hundreds of thousands of individuals, a large proportion of whom were American citizens. The intercepted letters were presumably sealed with the expectation that they would only be opened by the party to whom they were addressed, but intelligence agents in ten cities throughout the United States surreptitiously opened the seal and photographed the entire contents for inclusion in their intelligence files.

Mail opening is an imprecise technique. In addition to relying on a "Watch List" of names, the CIA opened vast numbers of letters on an entirely random basis; as one agent who opened mail in the CIA's New York project testified, "You never knew what you would hit." 95 Given the imprecision of the technique and the large quantity of correspondence that was opened, it is perhaps not surprising that during the twenty year course of the Agency's New York project, the mail that was randomly opened included that of at least three United States Senators and a Congressman, one Presidential Candidate, and numerous educational, business, and civil rights leaders. 96

Several of the FBI programs utilized as selection criteria certain "indicators" on the outside of envelopes that suggested that the communication might be to or from a foreign espionage agent. These "indicators" were more refined than the "shotgun approach" 97 which characterized the CIA's New York project, and they did lead to the identification of three foreign spies. 98 But even by the Bureau's own accounting, it is clear that the mail of hundreds of innocent American citizens was opened and read for every successful counterintelligence lead that was obtained by means of "indicators." 99

Large volumes of mail were also intercepted and opened in other FBI mail programs that were based not on indicators but on far less precise criteria. Two programs that involved the opening of mail to and from an Asian country, for example, used "letters to or from a university, scientific, or technical facility" as one selection criterion. 100 According to FBI memoranda, an average of 50 to 100 letters per day was opened and photographed during the ten years in which one of these two programs operated. 101

#### *E. Surreptitious Entries*

Surreptitious entries, conducted in violation of the law, have also permitted intelligence agencies to gather a wide range of information about American citizens and domestic organization as well as foreign targets. 102 By definition this technique involves a physical entry into the private premises of individuals and groups. Once intelligence agents are inside, no "papers or effects" are secure. As the Huston Plan recommendations stated in 1970, "It amounts to burglary." 103

The most private documents are rendered vulnerable by the use of surreptitious entries. According to a 1966 internal FBI memorandum, which discusses the use of this technique against domestic organizations:

[The FBI has] on numerous occasions been able to obtain material held highly secret, and closely guarded by subversive groups and organizations which consisted of membership lists and mailing lists of these organizations. 104

A specific example cited in this memorandum also reveals the types of information that this technique can collect and the uses to which the information thus collected may be put:

Through a "black bag" job, we obtained the records in the possession of three high-ranking officials of a Klan organization. These records gave us the complete membership and financial information concerning the Klan's operation which we have been using most effectively to disrupt the organization and, in fact, to bring about its near disintegration. 105

Unlike techniques such as electronic surveillance, government entries into private premises were familiar to the Founding Fathers. "Indeed," Judge Gesell wrote in the Ehrlichman case, "the American Revolution was sparked in part by the complaints of the colonists against the issuance of writs of assistance, pursuant to which the King's revenue officers conducted unrestricted, indiscriminate searches of persons and homes to uncover contraband." 106 Recognition of the intrusiveness of government break-ins was one of the primary reasons for the subsequent adoption of the Fourth Amendment in 1791, 107 and this technique is certainly no less intrusive today.

#### *Subfinding (c)*

The imprecision and manipulation of labels such as "national security," "domestic security," "subversive activities" and "foreign intelligence" have led to unjustified use of these techniques.

Using labels such as "national security" and "foreign intelligence", intelligence agencies have directed these highly intrusive techniques against individuals and organizations who were suspected of no criminal activity and who posed no genuine threat to the national security. In the absence of precise standards and effective outside control, the selection of American citizens as targets has at times been predicated on grounds no more substantial than their lawful protests or their non-conformist philosophies. Almost any connection with any perceived danger to the country has sufficed.

The application of the "national security" rationale to cases lacking a substantial national security basis has been most apparent in the area of warrantless electronic surveillance. Indeed, the unjustified use of wiretaps and bugs under this and related labels has a long history. Among the wiretaps approved by Attorney General Francis Biddle under the standard of "persons suspected of subversive activities," for example, was one on the Los Angeles Chamber of Commerce in 1941. 108 This was approved in spite of his comment to J. Edgar Hoover that the target organization had "no record of espionage at this time." 109 In 1945, Attorney General Tom Clark authorized a wiretap on a former aide to President Roosevelt. 110 According to a memorandum by J. Edgar Hoover, Clark stated that President Truman wanted "a very thorough investigation" of the activities of the former

official so that "steps might be taken, if possible, to see that [his] activities did not interfere with the proper administration of government." 111 The memorandum makes no reference to "subversive activities" or any other national security considerations.

The "Sugar Lobby" and Martin Luther King, Jr., wiretaps in the early 1960s both show the elasticity of the "domestic security" standard which supplemented President Roosevelt's "subversive activities" formulation. Among those wiretapped in the Sugar Lobby investigation, as noted above, was a Congressional staff aide. Yet the documentary record of this investigation reveals no evidence indicating that the target herself represented any threat to the "domestic security." Similarly, while the FBI may properly have been concerned with the activities of certain advisors to Dr. King, the direct wiretapping of Dr. King shows that the "domestic security" standard could be stretched to unjustified lengths.

The microphone surveillances of Congressman Cooley and Dr. King under the "national interest" standard established by Attorney General Brownell in 1954 also reveal the relative ease with which electronic bugging devices could be used against American citizens who posed no genuine "national security" threat. Neither of these targets advocated or engaged in any conduct that was damaging to the security of the United States.

In April, 1964, Attorney General Robert Kennedy approved "technical coverage (electronic surveillance)" of a black nationalist leader after the FBI advised Kennedy that he was "forming a new group" which would be "more aggressive" and would "participate in racial demonstrations and civil rights activities." The only indication of possible danger noted in the FBI's request for the wiretaps, however, was that this leader had "recommended the possession of firearms by members for their self-protection." 112

One year later, Attorney General Nicholas Katzenbach approved a wiretap on the offices of the Student Non-Violent Coordinating Committee on the basis of potential communist infiltration into that organization. The request which was sent to the Attorney General noted that "confidential informants" described SNCC as "the principal target for Communist Party infiltration among the various civil rights organizations" and stated that some of its leaders had "made public appearances with leaders of communist-front organizations" and had "subversive backgrounds." 113 The FBI presented no substantial evidence however, that SNCC was in fact infiltrated by communists -- only that the organization was apparently a target for such infiltration in the future.

After the Justice Department adopted new criteria for the institution of warrantless electronic surveillance in 1968, the unjustified use of wiretaps continued. In November 1969, Attorney General John Mitchell approved a series of three wiretaps on organizations involved in planning the antiwar "March on Washington." The FBI's request for coverage of the first group made no claim that its members engaged or were likely to engage in violent activity; the request was simply based on the statement that the anticipated size of the demonstration was cause for "concern should violence of any type break out." 114

The only additional justification given for the wiretap on one of the other groups, the Vietnam Moratorium Committee, was that it "has recently endorsed fully the activities of the [first group] concerning the upcoming antiwar demonstrations." 115

In 1970, approval for a wiretap on a "New Left oriented campus group" was granted by Attorney General Mitchell on the basis of an FBI request which included, among other factors deemed relevant to the necessity for the wiretap, evidence that the group was attempting "to develop strong ties with the cafeteria, maintenance and other workers on campus" and wanted to "go into industry and factories and ... take the radical politics they learned on the campus and spread them among factory workers." 116

This approval was renewed three months later despite the fact that the request for renewal made no mention of violent or illegal activity by the group. The value of the wiretap was shown, according to the FBI, by such results as obtaining "the identities of over 600 persons either in touch with the national headquarters or associated with" it during the preceding three months. 117 Six months after the original authorization the number of persons so identified had increased to 1,428; and approval was granted for a third three-month period." 118

The "seventeen wiretaps" also show how the term "national security" as a justification for wiretapping can obscure improper use of this technique. Shortly after these wiretaps were revealed publicly, President Nixon stated they had been justified by the need to prevent leaks of classified information harmful to the national security. 119

Wiretaps for this purpose had, in fact, been authorized under the Kennedy and Johnson administrations. President Nixon learned of these and other prior taps and, at a news conference, sought to justify the taps he had authorized by referring to past precedent. He stated that in the:

period of 1961 to '63 there were wiretaps on news organizations, on news people, on civil rights leaders and on other people. And I think they were perfectly justified and I'm sure that President Kennedy and his brother, Robert Kennedy, would never have authorized them, unless he thought they were in the national interest. (Presidential News Conference, 8/22/73.)

Thus, questionable electronic surveillances by earlier administrations were put forward as a defense for improper surveillances exposed in 1973. In fact, however, two of these wiretaps were placed on domestic affairs advisers at the White House who had no foreign affairs responsibilities and apparently no access to classified foreign policy materials. 121 A third target was a White House speech writer who had been overheard on an existing tap agreeing to provide a reporter with background information on a Presidential speech concerning domestic revenue sharing and welfare reform. 122 The reinstatement of another wiretap in this series was requested by H. R. Haldeman simply because "they may have a bad apple and have to get him out of the basket." 123 The last four requests in this series that were sent to the Attorney General (including the requests for a tap on the "bad apple") did not mention any national security justification at all. As former Deputy Attorney General William Ruckelshaus has testified:

I think some of the individuals who were tapped, at least to the extent I have reviewed the record, had very little, if any, relationship to any claim of national security . . . I think that as the program proceeded and it became clear to those who could sign off on taps how easy it was to institute a wiretap under the present procedure that these kinds of considerations [i.e., genuine national security justifications] were considerably relaxed as the program went on. 124

None of the "seventeen" wiretaps was ever reauthorized by the Attorney General, although 10 of them remained in operation for periods longer than 90 days and although President Nixon himself stated privately that "[t]he tapping was a very, very unproductive thing ... it's never been useful to any operation I've conducted . . ." 125

In short, warrantless electronic surveillance has been defended on the ground that it was essential for the national security, but the history of the use of this technique clearly shows that the imprecision and manipulation of this and similar labels, coupled with the absence of any outside scrutiny, has led to its improper use against American citizens who posed no criminal or national security threat to the country. 126

Similarly, the terms "foreign intelligence" and "counterespionage" were used by the CIA and the FBI to justify their cooperation in the CIA's New York mail opening project, but this project was also used to target entirely innocent American citizens.

As noted above, the CIA compiled a "Watch List" of names of persons and organizations whose mail was to be opened if it passed through the New York facility. In the early days of the project, the names on this list -- which then numbered fewer than twenty -- might reasonably have been expected to lead to genuine foreign intelligence or counterintelligence information. But as the project developed, the Watch List grew and its focus changed. By the late 1960s there were approximately 600 names on the list, many of them American citizens and organizations who were engaged in purely lawful and constitutionally protected forms of protest against governmental policies. Among the domestic organizations on the Watch List, which was supplemented by submissions from the FBI, were: Clergy and Laymen Concerned about Vietnam, the National Mobilization Committee to End the War in Vietnam, Ramparts, the Student Non-Violent Coordinating Committee, the Center for the Study of Public Policy, and the American Friends Service Committee. 127

The FBI levied more general requirements on the CIA's project as well. The focus of the original categories of correspondence in which the FBI expressed an interest was clearly foreign counterespionage, but subsequent requirements became progressively more domestic in their focus and progressively broader in their scope. The requirements that were levied by the FBI in 1972, one year before the termination of the project, included the following:

". . . [p]ersons on the Watch List; known communists, New Left activists, extremists, and other subversives . . .

Communist party and front organizations ... extremist and New Left organizations.

Protest and peace organizations, such as People's Coalition for Peace and Justice, National Peace Action Committee, and Women's Strike for Peace.

Communists, Trotskyites and members of other Marxist-Leninist, subversive and extremist groups, such as the Black Nationalists and Liberation groups ... Students for a Democratic Society ... and other New Left groups.

Traffic to and from Puerto Rico and the Virgin Islands showing anti-U.S. or subversive sympathies." 128

This final set of requirements evidently reflected the domestic turmoil of the late 1960s and early 1970s. The mail opening program that began as a means of collecting foreign intelligence information and discovering Soviet intelligence efforts in the United States had expanded to encompass detection of the activities of domestic dissidents of all types.

In the absence of effective outside control, highly intrusive techniques have been used to gather vast amounts of information about the entirely lawful activities -- and privately held beliefs -- of large numbers of American citizens. The very intrusiveness of these techniques demands the utmost circumspection in their use. But with vague or non-existent standards to guide them, and with labels such as "national security" and "foreign intelligence" to shield them, executive branch officials have been all too willing to unleash these techniques against American citizens with little or no legitimate justification.

#### Footnotes:

1 The techniques noted here do not constitute an exhaustive list of the surreptitious means by which intelligence agencies have collected information. The FBI, for example, has obtained a great deal of financial information about American citizens from tax returns filed with the Internal Revenue Service. (See IRS Report: Sec. I, "IRS Disclosures to FBI and CIA.") This section, however, is limited to problems raised by electronic surveillance, mail opening, surreptitious entries informants and electronic surveillances.

2 FBI memorandum to the Select Committee, 11/28/75.

3 Memorandum, FBI Overall Intelligence Program FY 1977 Compared to FY 1976 undated. The cost of the intelligence informant program comprises payments to informants for services and expense as well as the costs of FBI personnel, support and overhead.

4 See NSA Report: Sec. I, "Introduction and Summary."

5 See Mail Opening Reports: Sec. I, "Summary and Principal Conclusions."

6 Title 28 of the United States Code provides only that appropriations for the Department of Justice are available for payment of informants. 28 U.S.C. § 524.

7 The Attorney General has announced that he will issue guidelines on the use of informants in the near future, and our recommendations provide standards for informant control and prohibitions on informant activity. (See pp. 328.) In addition, the Attorney General's recently promulgated guidelines on "Domestic Security Investigations" limit the use of informants at the early stages of such inquiries and provide for review by the Justice Department of the initiation of "full investigations" in which new informants may be recruited.

8 In a criminal case involving charges of jury bribery, *United States v. Hoffa*, 385 U.S. 293 (1966), the Supreme Court ruled that an informant's testimony concerning conversations of a defendant could not be considered the product of a warrantless search in violation of the Fourth Amendment on the ground the defendant had consented to the presence of the informant. In another criminal case, *Lewis v. United States*, 385 U.S. 206 (1966), the Court stated that "in the detection of many types of crimes, the Government is entitled to use decoys and to conceal the identity of its agents."

9 In a more recent case, the California Supreme Court held that secret surveillance of classes and group meetings at a university through the use of undercover agents was "likely to pose a substantial restraint upon the exercise of First Amendment rights." *White v. Davis*, 533 Pac. Rep. 2d, 223 (1975) Citing a number of U.S. Supreme Court opinions, the California Supreme Court stated in its unanimous decision:

"In view of this significant potential chilling effect, the challenged surveillance activities can only be sustained if [the Government] can demonstrate a 'compelling' state interest which justifies the resultant deterrence of First Amendment rights and which cannot be served by alternative means less intrusive on fundamental rights." 533 Pac. Rep. 2d, at 232

11 Cook, 12/2/75, Hearings, Vol. 6, p. 111.

12 The FBI Manual of Instructions proscribes only reporting of privileged communications between an attorney and client, legal "defense plans or strategy," "employer-employee relationships" (where an informant is connected with a labor union), and "legitimate institution or campus activities" at schools. (FBI Manual Section 107.)

13 *Olmstead v. United States*, 277 U.S. 438 (1928).

14 *Nardone v. United States*, 302 U.S. 397 (1937) ; 308 U.S. 338 (1939).

15 For example, letter from Attorney General Jackson to Rep. Hatton Summers, 3/19/41; See Electronic Surveillance Report: Sec. II.

16 Memorandum from President Roosevelt to the Attorney General 5/21/40.

17 Letter from Attorney General Tom C. Clark to President Truman, 7/17/46.

18 Directive from President Johnson to Heads of Agencies, 6/30/65.

19 President Roosevelt's 1940 order directed the Attorney General to approve wiretaps "after investigation of the need in each case." (Memorandum from President Roosevelt to Attorney General Jackson, 5/21/40.) However, Attorney General Francis Biddle recalled that Attorney General Jackson "turned it over 'to Edgar Hoover without himself passing on each case" in 1940 and 1941, Biddle's practice beginning in 1941 conformed to the President's order. (Francis Biddle, In Brief Authority (Garden City: Doubleday, 1962), p. 167.)

Since 1965, explicit written authorization has been required. (Directive of President Johnson 6/30/65.) This requirement however, has often been disregarded. In violation of this requirement, for example, no written authorizations were obtained from the Attorney General -- or from any one else -- for a series of four wiretaps implemented in 1971 and 1972 on Yeoman Charles Radford, two of his friends, and his father-in-law. See Electronics Surveillance Report; Sec. VI. The first and third of these taps were implemented at the oral instruction of Attorney General John Mitchell. (Memorandum from T. J. Smith E. S. Miller 2/26/73.) The remaining taps were implemented at the oral request of David Young, an assistant to John Ehrlichman at the White House, who merely informed the Bureau that the requests originated with Ehrlichman and had the Attorney General's concurrence. (Memorandum from T. J. Smith to E. S. Miller, 6/14/73.

20 Attorney General Nicholas Katzenbach instituted this requirement in March 1965. (Memorandum from J. Edgar Hoover to the Attorney General, 3/3/65.)

21 The FBI maintained one wiretap on an official of the Nation of Islam that had originally been authorized by Attorney General Brownell in 1957 for seven years until 1964 without any subsequent re-authorization. (Memorandum from J. Edgar Hoover to the Attorney General, 12/31/65, initialed "Approved: HB, 1/2/57.")

As Nicholas Katzenbach testified: "The custom was not to put a time limit on a tap, or any wiretap authorization. Indeed, I think the Bureau would have felt free in 1965 to put a tap on a phone authorized by Attorney General Jackson before World War II." (Nicholas Katzenbach testimony, 11/12/75, p. 87.)

22 *Katz v. United States*, 389 U.S. 347 (1967).

22a The Court wrote: "Whether safeguards other than prior authorization by a magistrate would satisfy the Fourth Amendment in a situation involving the national security is a question not presented by this case." 389 U.S. at 358 n. 23

23 18 U.S.C. 2511 (3).

23a 407 U.S. 297 (1972)

24 At the same time, the Court recognized that "domestic security surveillance" may involve different policy and practical considerations apart from the surveillance of 'ordinary crime,' 407 U.S. at 321, and thus did not hold that "the same type of standards and procedures prescribed by Title III [of the 1968 Act] are necessarily applicable to this case." (407 U.S. at 321.) The Court noted:

"Given the potential distinctions between Title III criminal surveillances and those involving the domestic security, Congress may wish to consider protective standards for the latter which differ from those already prescribed for specified crime in Title III. Different standards may be compatible with the Fourth Amendment." (407 U.S. at 321.)

25 407 U.S. at 307.

26 407 U.S. at 320. *United States v. United States District Court* remains the only Supreme Court case dealing with the issue of warrantless electronic surveillance for intelligence purposes. Three federal circuit courts have considered this issue since 1972, however. The Third Circuit and the Fifth Circuit both held that the President may constitutionally authorize warrantless electronic surveillance for foreign counterespionage and foreign intelligence purposes. [*United States v. Butenko*, 494 F.2d 593 (3d Cir. 1974), cert. denied sub nom. *Ivanov v. United States*, 419 U.S. 881 (1974) ; and *United States v. Brown*, 484 F.2d 418 (5th Cir., 1973), cert. denied 415 U.S. 960 (1974).] The District of Columbia Circuit held unconstitutional the warrantless electronic surveillance of the Jewish Defense League, a domestic organization whose activities allegedly affected U.S. Soviet relations but which was neither the agent of nor in collaboration with a foreign power. [*Zweibon v. Mitchell*, 516 F.2d 594 (D.C. Cir., 1975) (en banc).]

27 Testimony of Deputy Assistant Attorney General Kevin Maroney, Hearings before the Senate Subcommittee on Administrative Practice and Procedures, 6/29/72, p. 10. This language paralleled that of the Court in *United States v. United States District Court*, 407 U.S. at 309 it. 8.

28 Although Attorney General John Mitchell and Justice Department officials on the Intelligence Evaluation Committee apparently learned that NSA was making a contribution to domestic intelligence in 1971, there is no indication that the FBI told them of its submission of names of Americans for inclusion on a NSA "watch list." When Assistant Attorney General Henry Petersen learned of these practices in 1973, Attorney General Elliott Richardson ordered that they be terminated. (See Report on NSA: Sec. I, "Introduction and Summary.")

29 See NSA Report: Sec. I, "Introduction and Summary."

30 Memorandum from Iredell to Gayler, 4/10/70; See NSA Report: Sec. I. Introduction and Summary. BNDD originally requested NSA to monitor the South American link because it did not believe it had authority to wiretap a few public telephones in New York City from which drug deals were apparently being arranged. (Iredell testimony, 9/18/75, p. 99.)

31 Memorandum from the Attorney General to Mr. Hoover, 2/26/52.

32 *Irvine v. California*, 347 U.S. 128 (1954).

33 Memorandum from the Attorney General to the Director, FBI, 5/20/54.

34 omitted in original.

35 While such techniques might have been authorized by Attorneys General under expansive "internal security" or "national interest" theories similar to Brownell's authorization for installing microphones by trespass, the issue was never presented to them for decision before 1967, when Attorney General Ramsey Clark turned down a surreptitious entry request. There is no

indication that the legal questions were considered in any depth in 1970 or 1971 at the time of the "Huston Plan" and its aftermath. See Huston Plan Report: See. III, Who, What, When and Where.

36 Ex Parte Jackson, 96, U.S. 727, 733 (1878).

37 Milwaukee Pub. Co. v. Burleson, 255 U.S. 407, 437 (1921) (dissent).

38 See Lamont v. Postmaster General, 381 U.S. 301 (1965) ; Prokunier v. Martinez, 416 U.S. 396 (1975).

39 United States v. United States District Court, 407 US 297, 313 (1972).

40 376 F. Supp. 29, (D.D.C. 1974).

41 376 F. Supp. at 33.

42 Letter from Acting Assistant Attorney General John C. Keeny to Hugh E. Kline. Clerk of the U.S. Court of Appeals for the District of Columbia, 5/9/75.

43 The Supreme Court's decision in United States v. United States District Court. 407 U.S. 297 (1972), clearly established the principle that such warrantless invasions of the privacy of Americans are unconstitutional.

44 In one case, an FBI informant involved in an intelligence investigation of the Detroit Black Panther Party furnished advance information regarding a planned ambush of Detroit police officers which enabled the Detroit Police Department to take necessary action to prevent injury or death to the officers and resulted in the arrest of eight persons and the seizure of a cache of weapons. The informant also furnished information resulting in the location and confiscation by Bureau agents of approximately fifty sticks of dynamite available to the Black Panther Party which likely resulted in the saving of lives and the prevention of property damage. (Joseph Deegan testimony, 2/13/76, p. 54)

45 Rowe, 12/2/75, Hearings, Vol. 6, p, 115.

46 Katzenbach testified that the case "could not have been solved without acquiring informants who were highly placed members of the Klan." (Katzenbach, 12/3/75, Hearings, Vol. 6, p. 215.)

47 Date and address deleted at FBI request so as not to reveal informant's identity.

48 Memorandum from New York Field Office to FBI Headquarters, re: Women's Liberation Movement, 5/28/69, p. 2.

Sullivan to J. Edgar Hoover 7/2/69.

92 omitted in original.

93 NSA has long asserted that it had the authority to do this so long as one of the parties to such communication was located in a foreign country.

94 277 U.S. 438, 473-474 (1928).

94a 277 U.S. at 474-475.

95 CIA Officer" testimony, 9/30/75, p. 15.

96 Staff summary of "Master index." review, 9/5/75.

97 James Angelton testimony, 9/17/75, p. 28.

98 Wannall, 10/21/75, p. 5.

99 In one of the programs based on "indicators" a participating agent testified that he opened 30 to 00 letters each day. (FBI agent statement, 9/10/75, p. 23.) In a second such program, a total of 1,011 letters were opened in one of the six cities in which it operated; statistics on the number of letters opened in the other live cities cannot be reconstructed. (W. Raymond Wannall testimony, 10/21/75, P. 5.) In a third such project, 2,350 letters were opened in one city and statistics for the other two cities in which it operated are unavailable. (Memorandum from W. A. Branigan to W. C. Sullivan, 8/31/61; Memorandum from Mr. Branigan to Mr. Sullivan, 12/21/61; memorandum from New York Field Office to FBI Headquarters, 3/5/62.)

100 Letter from the FBI to the Senate Select Committee, 10/29/75. Six other criteria were used in these programs. See Mail Opening Report, Sec. IV.

101 Memorandum from S. B. Donohoe to A. H. Belmont, 2/23/61; Memorandum from San Francisco Field Office to FBI Headquarters, 3/11/60. Statistics relating to the number of letters opened in the other program which used this criterion cannot be reconstructed.

102 According to the FBI, "there were at least 239 surreptitious entries (for purposes other than microphone installation) conducted against at least fifteen domestic subversive targets from 1942 to April 1968.... In addition, at least three domestic subversive targets were the subject of numerous entries from October 1952 to June 1966." (FBI memorandum to the Senate Select Committee, 10/13/76.) One target, the Socialist Workers Party, was the subject of possibly as many as 92 break-ins by the FBI, between 1960 and 1966 alone. The home of at least one SWP member was also apparently broken into. (Sixth Supplementary Response to Requests for Production of Documents of Defendant, Director of the FBI, Socialist Workers Party v. Attorney General, 73 Civ. 3160, (SDNY), 3/24/76.) An entry against one "white hate group" was also reported by the FBI. (Memorandum from FBI Headquarters to the Senate Select Committee, 10/13/75.)

103 Memorandum from Tom Huston to H. R. Haldeman, 7/70, p. 3.

104 Memorandum from W. C. Sullivan to C. D. DeLoach, 7/19/66.

105 Ibid.

106 United States v. Ehrlichman, 376 F. Supp. 29,32 (D.D.C. 1974).

107 See e.g., Olmstead v. United States, 277 U.S. 438, (1928).

108 Memorandum from Francis Biddle to Mr. Hoover, 11/19/41.

109 Ibid.

110 Unaddressed Memorandum from J. Edgar Hoover, 11/15/45, found in Director Hoover's "Official and Confidential" files.

111 Ibid.

112 Memorandum from J. Edgar Hoover to the Attorney General, 4/1/64.

113 Memorandum from J. Edgar Hoover to the Attorney General, 6/15/65.

114 Memorandum from J. Edgar Hoover to the Attorney General, 11/5/69.

115 Memorandum from J. Edgar Hoover to Attorney General Mitchell, 11/7/69.

116 Memorandum from J. Edgar Hoover to the Attorney General, 3/16/70. The strongest evidence that this group's conduct was inimical to the national security was reported as follows:

"The [group] is dominated and controlled by the pro-Chinese Marxist Leninist (excised) ....

"In carrying out the Marxist-Leninist ideology of the (excised) members have repeatedly sought to become involved in labor disputes on the side of labor, join picket lines and engage in disruptive and sometimes violent tactics against industry recruiters on college campuses....

"This faction is currently very active in many of the major demonstrations and student violence on college campuses (Memorandum from J. Edgar Hoover to the Attorney General, 3/16/70. The excised words have been deleted by the FBI.)

117 Memorandum from J. Edgar Hoover to the Attorney General, 6/16/70. The only other results noted by Hoover related to the fact that the wiretap had "obtained information concerning the activities of the national headquarters of [the group and] plans for [the group's] support and participation in demonstrations supporting antiwar groups and the (excised)." It was also noted that the wiretap "revealed ... contacts with Canadian student elements".

118 Memorandum from J. Edgar Hoover to the Attorney General, 9/16/70. The only other results noted by Hoover again related to obtaining information about the "plans and activities" of the group. Specifically mentioned were the "plans for the National Interim Committee (ruling body of [excised]) meeting which took place in New York and Chicago", and the plans "for demonstrations at San Francisco, Detroit, Salt Lake City, Minneapolis, and Chicago." There was no indication that these demonstrations were expected to be violent. (The excised words have been deleted by the FBI).

119 Public statement of President Nixon, 5/22/73.

120 omitted in original.

121 Memorandum from J. Edgar Hoover to the Attorney General 7/23/69; memorandum from J. Edgar Hoover to the Attorney General 12/14/70.

122 Memorandum from W. C. Sullivan to C. D. DeLoach, 8/1/69.

123 Memorandum from J. Edgar Hoover to Messrs. Tolson, Sullivan and D. C. Brennan, 10/15/70.

124 Ruckelshaus testimony before the Senate Subcommittee on Administrative Practice and Procedure, 5/9/74, pp. 311-12.

125 Transcript of the Presidential Tapes, 2/28/73 (House Judiciary Committee Statement of Information Book VII, Part W, p. 1754.)

126 The term "national security" was also used by John Ehrlichman and Charles Colson to justify their roles in the break in of Dr. Fielding's office in 1971. A March 21, 1973 tape recording of a meeting between President Nixon, John Dean, and H. R. Haldeman suggests, however, that the national security "justification" may have been developed long after the event for the purpose of obscuring its impropriety. When the President asked what could be done if the break-in was revealed publicly, John Dean suggested, "You might put it on a national security grounds basis." Later in the conversation. President Nixon stated "With the bombing thing coming out and everything coming out, the whole thing was national security," and Dean said, "I think we could get by on that." (Transcript of Presidential tapes, 3/21/73.)

127 Staff summary of Watch List review, 9/5/75.

## INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS

### BOOK II

#### FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS

APRIL 26 (legislative day, April 14), 1976

#### D. USING COVERT ACTION TO DISRUPT AND DISCREDIT DOMESTIC GROUPS

##### MAJOR FINDING

The Committee finds that covert action programs have been used to disrupt the lawful political activities of individual Americans and groups and to discredit them, using dangerous and degrading tactics which are abhorrent in a free and decent society.

##### *Subfindings*

(a) Although the claimed purposes of these action programs were to protect the national security and to prevent violence, many of the victims were concededly nonviolent, were not controlled by a foreign power, and posed no threat to the national security.

(b) The acts taken interfered with the First Amendment rights of citizens. They were explicitly intended to deter citizens from joining groups, "neutralize" those who were already members, and prevent or inhibit the expression of ideas.

(c) The tactics used against Americans often risked and sometimes caused serious emotional, economic, or physical damage. Actions were taken which were designed to break up marriages, terminate funding or employment, and encourage gang warfare between violent rival groups. Due process of law forbids the use of such covert tactics, whether the victims are innocent law-abiding citizens or members of groups suspected of involvement in violence.

(d) The sustained use of such tactics by the FBI in an attempt to destroy Dr. Martin Luther King, Jr., violated the law and fundamental human decency.

##### *Elaboration of the Findings*

For fifteen years from 1956 until 1971, the FBI carried out a series of covert action programs directed against American citizens. 1 These "counterintelligence programs" (shortened to the acronym COINTELPRO) resulted in part from frustration with Supreme Court rulings limiting the Government's power to proceed overtly against dissident groups. 2

They ended formally in 1971 with the threat of public exposure. 3 Some of the findings discussed herein are related to the findings on lawlessness, overbreadth, and intrusive techniques previously set forth. Some of the most offensive actions in the FBI's COINTELPRO programs (anonymous letters intended to break up marriages, or efforts to deprive people of their jobs, for example) were based upon the covert use of information obtained through overly-broad investigations and intrusive techniques. 4 Similarly, as noted above, COINTELPRO involved specific violations of law, and the law and the Constitution were "not [given] a thought" under the FBI's policies. 5

But COINTELPRO was more than simply violating the law or the Constitution. In COINTELPRO the Bureau secretly 6 took the law into its own hands, going beyond the collection of intelligence and beyond its law enforcement function to act outside the legal process altogether and to covertly disrupt, discredit and harass groups and individuals. A law enforcement agency must not secretly usurp the functions of judge and jury, even when the investigation reveals criminal activity. But in COINTELPRO, the Bureau imposed summary punishment, not only on the allegedly violent, but also on the nonviolent advocates of change. Such action is the hallmark of the vigilante and has no place in a democratic society.

Under COINTELPRO, certain techniques the Bureau had used against hostile foreign agents were adopted for use against perceived domestic threats to the established political and social order. 7

Some of the targets of COINTELPRO were law-abiding citizens merely advocating change in our society. Other targets were members of groups that had been involved in violence, such as the Ku Klux Klan or the Black Panther Party. Some victims did nothing more than associate with targets. 8

The Committee does not condone acts of violence, but the response of Government to allegations of illegal conduct must comply with the due process of law demanded by the Constitution. Lawlessness by citizens does not justify lawlessness by Government.

The tactics which were employed by the Bureau are therefore unacceptable, even against the alleged criminal. The imprecision of the targeting compounded the abuse. Once the Government decided to take the law into its own hands, those unacceptable tactics came almost inevitably to be used not only against the "kid with the bomb" but also against the "kid with the bumper sticker."

#### *Subfinding (a)*

Although the claimed purposes of these action programs were to protect the "national security" and to prevent violence, many of the victims were concededly nonviolent, were not controlled by a foreign power, and posed no threat to the "national security."

The Bureau conducted five "counterintelligence programs" aimed against domestic groups: the "Communist Party, USA" program (1956-71); the "Socialist Workers Party" program (1961-69); the "White Hate" program (1964-1971); the "Black Nationalist-Hate Group" program (1967-71); and the "New Left" program (1968-71).

While the declared purposes of these programs were to protect the "national security" or prevent violence, Bureau witnesses admit that many of the targets were nonviolent and most had no connections with a foreign power. Indeed, nonviolent organizations and individuals were targeted because the Bureau believed they represented a "potential" for violence -- and nonviolent citizens who were against the war in Vietnam were targeted because they gave "aid and comfort" to violent demonstrators by lending respectability to their cause. 11

The imprecision of the targeting is demonstrated by the inability of the Bureau to define the subjects of the programs. The Black Nationalist program, according to its supervisor, included "a great number of organizations that you might not today characterize as black nationalist but which were in fact primarily black." 12 Thus, the nonviolent Southern Christian Leadership Conference was labeled as a Black Nationalist-"Hate Group."

Furthermore, the actual targets were chosen from a far broader group than the titles of the programs would imply. The CPUSA program targeted not only Communist Party members but also sponsors of the National Committee to Abolish the House Un-American Activities Committee 14 and civil rights leaders allegedly under Communist influence or not deemed to be "anti-Communist". 15 The Socialist Workers Party program included non-SWP sponsors of antiwar demonstrations which were cosponsored by the SWP or the Young Socialist Alliance, its youth group. 16 The Black Nationalist program targeted a range of organizations from the Panthers to SNCC to the peaceful Southern Christian Leadership Conference, and included every Black Student Union and many other black student groups. 17 New Left targets ranged from the SDS 18 to the InterUniversity Committee for Debate on Foreign Policy, 19 from Antioch College ("vanguard of the New Left") 20 to the New Mexico Free University and other "alternate" schools, 21 and from underground newspapers 22 to students protesting university censorship of a student publication by carrying signs with four-letter words on them. 23

#### *Subfinding (b)*

The acts taken interfered with the First Amendment rights of citizens. They were explicitly intended to deter citizens from joining groups, "neutralize" those who were already members, and prevent or inhibit the expression of ideas.

In achieving its purported goals Of protecting the national security and preventing violence, the Bureau attempted to deter membership in the target groups. As the supervisor of the "Black Nationalist" COINTELPRO stated, "Obviously, you are going to prevent violence or a greater amount of violence if you have smaller groups. 4 The chief of the COINTELPRO unit agreed: "We also made an effort . . . to deter recruitment where we could. This was done with the view that if we could curb the organization, we could curb the action or the violence within the organization." 25 As noted above, many of the

organizations "curbed" were not violent, and covert attacks on group membership contravened the First Amendment's guarantee of freedom to associate.

Nor was this the only First Amendment right violated by the Bureau. In addition to attempting to prevent people from joining or continuing to be members in target organizations, the Bureau tried to "deter or counteract" what it called "propaganda" 26 -- the expression of ideas which it considered dangerous. Thus, the originating document for the "Black Nationalist" COINTELPRO noted that "consideration should be given to techniques to preclude" leaders of the target organizations "from spreading their philosophy publicly or through various mass communication media." 27

Instructions to "preclude" free speech were not limited to "black nationalists;" they occurred in every program. In the New Left program, for instance, approximately thirty-nine percent of all actions attempted to keep targets from speaking, teaching, writing, or publishing. 28

The cases included attempts (sometimes successful) to prompt the firing of university and high school teachers; 29 to prevent targets from speaking on campus; 30 to stop chapters of target groups from being formed; 31 to prevent the distribution of books, newspapers, or periodicals; 32 to disrupt or cancel news conferences; 33 to interfere with peaceful demonstrations, including the SCLC's Poor People's Campaign and Washington Spring Project and most of the large anti-war marches; 34 and to deny facilities for meetings or conferences. 35

As the above cases demonstrate, the FBI was not just "chilling" free speech, but squarely attacking it.

The tactics used against Americans often risked and sometimes caused serious emotional, economic, or physical damage. Actions were taken which were designed to break up marriages, terminate funding or employment, and encourage gang warfare between violent rival groups. Due process of law forbids the use of such covert tactics whether the victims are innocent law-abiding citizens or members of groups suspected of involvement in violence. The former head of the Domestic Intelligence Division described counterintelligence as a "rough, tough, dirty, and dangerous" business. 36 His description was accurate.

One technique used in COINTELPRO involved sending anonymous letters to spouses intended, in the words of one proposal, to "produce ill-feeling and possibly a lasting distrust" between husband and wife, so that "concern over what to do about it" would distract the target from "time spent in the plots and plans" of the organization. 37 The image of an agent of the United States Government scrawling a poison-pen letter to someone's wife in language usually reserved for bathroom walls is not a happy one. Nevertheless, anonymous letters were sent to, among others, a Klansman's wife, informing her that her husband had "taken the flesh of another unto himself," the other person being a woman named Ruby, with her "lust filled eyes and smart aleck figure;" 38 and to a "Black Nationalist's" wife saying that her husband "been maken it here" with other women in his organization "and than he gives us this jive bout their better in bed then you." 39 A husband who was concerned about his wife's activities in a biracial group received a letter which started, "Look man I guess your old lady doesn't get enough at home or she wouldn't be shucking and jiving with our Black Men" in the group. 40 The Field Office reported as a "tangible result" of this letter that the target and her husband separated. 41

The Bureau also contacted employers and funding organizations in order to cause the firing of the targets or the termination of their support. 42 For example, priests who allowed their churches to be used for the Black Panther breakfast programs were targeted, and anonymous letters were sent to their bishops; 43 a television commentator who expressed admiration for a Black Nationalist leader and criticized heavy defense spending was transferred after the Bureau contacted his employer; 44 and an employee of the Urban League was fired after the FBI approached a "confidential source" in a foundation which funded the League. 45

The Bureau also encouraged "gang warfare" between violent groups. An FBI memorandum dated November 25, 1968 to certain Field Offices conducting investigations of the Black Panther Party ordered recipient offices to submit "imaginative and hard-hitting counterintelligence measures aimed at crippling the BPP." Proposals were to be received every two weeks. Particular attention was to be given to capitalizing upon differences between the Panthers and US, Inc. (an other "Black Nationalist" group), which had reached such proportions that "it is taking on the aura of gang warfare with attendant threats of murder and reprisals." 45a On May 26, 1970, after U.S. organization members had killed four BPP members and members of each organization had been shot and beaten by members of the other, the Field Office reported:

Information received from local sources indicate[s] that, in general, the membership of the Los Angeles BPP is physically afraid of US members and take premeditated precautions to avoid confrontations.

In view of their anxieties, it is not presently felt that the Los Angeles BPP can be prompted into what could result in an internecine struggle between the two organizations. . . .

The Los Angeles Division is aware of the mutually hostile feelings harbored between the organizations and the first opportunity to capitalize on the situation will be maximized. It is intended that US Inc. will be appropriately and discreetly advised of the time and location of BPP activities *in order that the two organizations might be brought together and thus grant nature the opportunity to take her due course.* 46 [Emphasis added.]

A second Field Office noted:

Shootings, beatings and a high degree of unrest continues to prevail in the ghetto area of Southeast San Diego. Although no specific counterintelligence action can be credited with contributing to this overall situation, it is felt that a substantial amount of the unrest is directly attributable to this program. 47

In another case, an anonymous letter was sent to the leader of the Blackstone Rangers (a group, according to the Field Offices' proposal, "to whom violent-type activity, shooting, and the like are second nature") advising him that "the brothers that run the Panthers blame you for blocking their thing and there's supposed to be a hit out for you." The letter was intended to "intensify the degree of animosity between the two groups" and cause "retaliatory action which could disrupt the BPP or lead to reprisals against its leadership." 48

Another technique which risked serious harm to the target was falsely labeling a target an informant. This technique was used in all five domestic COINTELPROs. When a member of a nonviolent group was successfully mislabeled as an informant, the result was alienation from the group. 49 When the target belonged to a group known to have killed suspected informants, the risk was substantially more serious. On several occasions, the Bureau used this technique against members of the Black Panther Party; it was used at least twice after FBI documents expressed concern over the possible consequences because two members of the BPP had been murdered as suspected informants. 50

The Bureau recognized that some techniques used in COINTELPRO were more likely than others to cause serious physical, emotional, or economic damage to the targets. 51 Any proposed use of such techniques -- for example, encouraging enmity between violent rival groups, falsely labeling group members as informants, and mailing anonymous letters to targets' spouses accusing the target of infidelity -- was scrutinized carefully by headquarters supervisory personnel, in an attempt to balance the "greater good" to be achieved by the proposal against the known or risked harm to the target. If the "good" was sufficient, the proposal was approved. For instance, in discussing anonymous letters to spouses, the agent who supervised the New Left COINTELPRO stated:

[Before recommending approval] I would want to know what you want to get out of this, who are these people. If it's somebody, and say they did split up, what would accrue from it as far as disrupting the New Left is concerned? Say they broke up, what then. . . .

[The question would be] is it worth it? 52

Similarly, with regard to causing false suspicions that an individual was an informant, the chief of the Racial Intelligence Section stated:

You have to be able to make decisions and I am sure that labeling somebody as an informant, that you'd want to make certain that it served a good purpose before you did it and not do it haphazardly.... It is a serious thing ... As far as I am aware, in the black extremist area, by using that technique, no one was killed. I am sure of that. 52a

This official was asked whether the fact that no one was killed was the result of "luck or planning." He answered: "Oh, it just happened that way, I am sure." 52b

It is intolerable in a free society that an agency of the Government should adopt such tactics, whether or not the targets are involved in criminal activity. The "greater good" of the country is in fact served by adherence to the rule of law mandated by the Constitution.

#### *Subfinding (d)*

The sustained use of such tactics by the FBI in an attempt to destroy Dr. Martin Luther King, Jr., violated the law and fundamental human decency.

The Committee devoted substantial attention to the FBI's covert action campaign against Dr. Martin Luther King because it demonstrates just how far the Government could go in a secret war against one citizen. In focusing upon Dr. King, however, it should not be forgotten that the Bureau carried out disruptive activities against hundreds of lesser known American citizens. It should also be borne in mind that positive action on the part of high Government officials outside the FBI might have prevented what occurred in this case. 53

The FBI's claimed justification for targeting Dr. King -- alleged Communist influence on him and the civil rights movement -- is examined elsewhere in this report. 54

The FBI's campaign against Dr. Martin Luther King, Jr. began in December 1963, four months after the famous civil rights March on Washington, 55 when a nine-hour meeting was convened at FBI Headquarters to discuss various "avenues of approach aimed at neutralizing King as an effective Negro leader." 56 Following the meeting, agents in the field were instructed to "continue to gather information concerning King's personal activities ... in order that we may consider using this information at an opportune time in a counterintelligence move to discredit him." 57

About two weeks after that conference, FBI agents planted a microphone in Dr. King's bedroom at the Willard Hotel in Washington, D.C. 58 During the next two years, the FBI installed at least fourteen more "bugs" in Dr. King's hotel rooms across the country. 59 Physical and photographic surveillances accompanied some of the microphone, coverage. 60

The FBI also scrutinized Dr. King's tax returns, monitored his financial affairs, and even tried to determine whether he had a secret foreign bank account. 61

In late 1964, a "sterilized" tape was prepared in a manner that would prevent attribution to the FBI and was "anonymously" mailed to Dr. King just before he received the Nobel Peace Prize. 62 Enclosed in the package with the tape was an unsigned

letter which warned Dr. King, "your end is approaching . . . you are finished." The letter intimated that the tape might be publicly released, and closed with the following message:

King, there is only one thing left for you to do. You know what it is. You have just 34 days in which to do (this exact number has been selected for a specific reason, it has definite practical significance). You are done. There is but one way out for you . . . 63

Dr. King's associates have said he interpreted the message as an effort to induce him to commit suicide. 64

At about the same time that it mailed the "sanitized" tape, the FBI was also apparently offering tapes and transcripts to newsmen. 65 Later when civil rights leaders Roy Wilkins and James Farmer went to Washington to persuade Bureau officials to halt the FBI's discrediting efforts, 66 they were told that "if King want[s] war we [are] prepared to give it to him." 67

Shortly thereafter, Dr. King went to Europe to receive the Nobel Peace Prize. The Bureau tried to undermine ambassadorial receptions in several of the countries he visited '68 and when he returned to the United States, took steps to diminish support for a banquet and a special "day" being planned in his honor. 69

The Bureau's actions against Dr. King included attempts to prevent him from meeting with world leaders, receiving honors or favorable publicity, and gaining financial support. When the Bureau learned of a possible meeting between Dr. King and the Pope in August 1964, the FBI asked Cardinal Spellman to try to arrange a cancellation of the audience. 70 Discovering that two schools (Springfield College and Marquette University) were going to honor Dr. King with special degrees in the spring of 1964, Bureau agents tried to convince officials at the schools to rescind their plans. 71 And when the Bureau learned in October 1966 that the Ford Foundation might grant three million dollars to Dr. King's Southern Christian Leadership Conference, they asked a former FBI agent who was a high official at the Ford Motor Company to try to block the award. 72

A magazine was asked not to publish favorable articles about him. 73 Religious leaders and institutions were contacted to undermine their support of him. 74 Press conference questions were prepared and distributed to "friendly" journalists. 75 And plans were even discussed for sabotaging his political campaign in the event he decided to run for national office. 76 An SCLC employee was "anonymously" informed that the SCLC was trying to get rid of her "so that the Bureau [would be] in a position to capitalize on [her] bitterness." 78 Bureau officials contacted members of Congress, 79 and special "off the record" testimony was prepared for the Director's use before the House Appropriations Committee. 80

The "neutralization" program continued until Dr. King's death. As late as March 1968, FBI agents were being instructed to neutralize Dr. King because he might become a "messiah" who could "unify, and electrify, the militant black nationalist movement" if he were to "abandon his supposed 'obedience' to 'white liberal doctrines' (nonviolence) and embrace black nationalism." 81 Steps were taken to subvert the "Poor People's Campaign" which Dr. King was planning to lead in the spring of 1968. 82 Even after Dr. King's death, agents in the field were proposing methods for harassing his widow 83 and Bureau officials were trying to prevent his birthday from becoming a national holiday. 84

The actions taken against Dr. King are indefensible. They represent a sad episode in the dark history of covert actions directed against law abiding citizens by a law enforcement agency.

#### Footnotes:

1 Before 1956 the FBI engaged in activities to disrupt and discredit Communists and (before World War II) Fascists, but not as part of a formal program. The Bureau is the only agency which carried on a sustained effort to "neutralize" domestic groups, although other agencies made sporadic attempts to disrupt dissident groups. (See Military Surveillance Report; IRS Report.)

2 The Bureau personnel involved in COINTELPRO link the first formal counterintelligence program, against the Communist Party, USA, to the Supreme Court reversal of the Smith Act convictions, which "made it impossible to prosecute Communist Party members at the time". (COINTELPRO unit chief, 10/16/75, p. 14.) It should be noted, however, that the Court's reversal occurred In 1957, the year after the program was instituted. This belief in the deficiencies of the law was a major factor in the four subsequent programs as well: "The other COINTELPRO programs were opened as the threat arose in areas of extremism and subversion and there were not adequate statutes to proceed against the organization or to prevent their activities." (COINTELPRO Unit Chief, 10/16/75, p. 15.)

3 For further information on the termination of each of the programs, see The Accountability and Control Findings, p. 265 and the detailed reports on the Black Panther Party and COINTELPRO.

Although the programs have been formally terminated, Bureau witnesses agree that there is a "grey area" between "counter-intelligence" and investigative activities which are inherently disruptive. These investigative activities, continue. (See COINTELPRO Report: "Command and Control -- The Problems of Oversight.")

4 Information gained from electronic surveillance, informant coverage, burglaries, and confidential financial records was used in COINTELPRO. p. 275.)

5 Moore, 11/3/75, p. 83.

6 Field offices were instructed that no one outside the Bureau was to know that COINTELPRO existed, although certain persons in the executive branch and in Congress were told about -- and did not object to -- efforts to disrupt the CPUSA and the Klan. However, no one was told about the other COINTELPRO programs, or about the more dangerous and degrading techniques employed. (See p. 275.)

7 As the Chief of the Racial Intelligence Section put it:

"You can trace [the origins of COINTELPRO] up and back to foreign intelligence, particularly penetration of the group by the individual informant. Before you can engage in counterintelligence you must have intelligence. . . . If you have good intelligence and know what it's going to do, you can seed distrust, sow misinformation. The same technique is used, misinformation, disruption, is used in the domestic groups, although in the domestic groups you are dealing in '67 and '68 with many, many more across the country ... than you had ever dealt with as far as your foreign groups." (Moore, 11/3/75, pp. 32-33.)

Former Assistant Director William C. Sullivan also testified that the "rough, tough, dirty business" of foreign counterintelligence was "brought home against any organization against which we were targeted. We did not differentiate." (Sullivan, 11/1/75, pp. 97-98.)

8 For example, parents and spouse, of targets received letters containing accusations of immoral conduct by the target. (Memorandum from St. Louis Field Office to FBI Headquarters, 1/30/70; memorandum from FBI Headquarters to Minneapolis Field Office, 11/4/68.)

9 Huston, 9/23/75, Hearings, Vol. 2, p. 45.

10 Moore, 11/8/75, p. 37.

11 New Left supervisor, 10/28/75, p. 69.

12 Black Nationalist Supervisor, 10/17/75, p. 12.

13 omitted in original.

14 For example, the entire Unitarian Society of Cleveland was targeted because the minister and some members circulated a petition calling for the abolition of HUAC, and because the Church gave office space to the "Citizens for Constitutional Rights". (Memorandum from FBI Headquarters to Cleveland Field Office, 11/6/64.)

15 See Finding on "Overbreadth" p. 181.

16 For instance, the Bureau targeted two non-member students who participated in an anti-war "hunger strike" at Oberlin, which was "guided and directed" by the Young Socialists Alliance. The students' parents received anonymous letters, purportedly from a friend of their sons. One letter expressed concern that a group of "left wing students" were "cynically using" the boy, which would lead to "injury" to his health and "damage to his academic standing". The other letter also stated that it was motivated by concern for "damage" to the student's "health and personal future" and "the belief that you may not be aware of John's current involvement in left-wing activities." (Memorandum from FBI headquarters to Cleveland Field Office, 11/29/68.)

17 One proposal sought to expose Black Student Union Chapters as "breeding grounds for racial militancy" by an anonymous mailing to "all institutions where there are BSU chapters or incipient chapters". (Memorandum from Portland Field Office to FBI Headquarters, 6/3/68.)

18 For example Memorandum from FBI Headquarters to San Antonio Field Office, 10/31/68.

19 An anonymous letter was sent to "influential" Michigan political figures, the mass media, University of Michigan administrators, and the Board of Regents, in an attempt to "discredit and neutralize" the "communist activities" of the IUCDFP. The letter decried the "undue publicity" given anti-war protest activities which "undoubtedly give 'aid and comfort' to the enemy" and encourage the Vietcong and the North Vietnamese in "refusing to come to the bargaining table". The letter continued, "I wonder if the strategy is to bleed the United States white by prolonging the war in Vietnam and pave the way for a takeover by Russia?" (Memorandum from Detroit Field Office to FBI Headquarters, 10/11/66; Memorandum from FBI Headquarters, to Detroit Field Office 10/26/66.)

20 Memorandum from FBI Headquarters to Cincinnati Field Office, 6/18/68.

21 The New Mexico Free University was targeted because it taught such courses as "confrontation politics" and "draft counselling". (Memorandum from FBI Headquarters to Albuquerque Field Office, 3/19/69.) In another case, an "alternate" school for students "aged five and beyond", which was co-sponsored by the ACLU, was targeted because "from the staff being assembled, it appears that the school will be a New Left venture and of a radical revolutionary nature". The Bureau contacted a confidential source in the bank financing the school so that he could "take steps to discourage its developments". (Memorandum from FBI Headquarters to San Antonio Field Office, 7/23/69.)

22 See e.g., Memorandum from FBI Headquarters to Pittsburgh Field Office, 11/14/69.

23 Memorandum from FBI Headquarters to Minneapolis Field Office, 11/4/68.

24 Black Nationalist supervisor, 10/17/75, p. 24.

25 COINTELPRO unit chief, 10/12/75, p. 54.

26 COINTELPRO unit chief, 10/12/75, P. 54.

27 Memorandum from FBI Headquarters to all SAC's, 8/25/67.

28 The FBI was not the only intelligence agency to attempt to prevent the propagation of ideas with which it disagreed, but it was the only one to do so in any organized way. The IRS responded to Congressional and Administration pressure by targeting political organizations and dissidents for audit. The CIA Improperly obtained the tax returns of Ramparts magazine after it learned that the magazine intended to publish an article revealing Agency support of the National Student Association. The CIA saw the article as "an attack on CIA in particular and the Administration in general." (CIA memorandum re: "IRS Briefing on Ramparts," 2/2/67.)

29 For instance, a high school English teacher was targeted for inviting two poets to attend a class at his school. The poets were noted for their efforts in the draft resistance movement. The Bureau sent anonymous letters to two local newspapers, the Board of Education, and the school board. (Memorandum from FBI Headquarters to Pittsburgh Field Office, 6/19/69.)

30 In one case, the Bureau attempted to stop a "Communist" speaker from appearing on campus. The sponsoring organization went to court and won an order permitting the lecture to proceed as scheduled; the Bureau then investigated the judge who issued the order. (Memorandum from Detroit Field Office to FBI Headquarters. 10/26/60; Memorandum from FBI Headquarters to Detroit Field Office, 10/27/60, 10/28/, 10/31/60; Memorandum from F. J. Baumgardner to A. H. Belmont, 10/26/60.)

31 The Bureau tried on several occasions to prevent the formation of campus chapters of SDS and the Young Socialist Alliance. (See, e.g., Memorandum from San Antonio Field Office to FBI Headquarters, 5/1/69; Memorandum from FBI Headquarters to San Antonio Field Office, 5/1/69.)

32 For example, an anonymous letter to a state legislator protested the distribution on campus of an underground newspaper's "depravity". (Memorandum from Newark Field Office to FBI Headquarters, 5/23/69; Memorandum from FBI Headquarters to Newark Field Office, 6/4/69) and the Bureau anonymously contacted the landlady of premises rented by two "New Left" newspapers in an attempt to have them evicted. (Memorandum from Los Angeles Field Office to FBI Headquarters, 9/9/68; Memorandum from FBI Headquarters to Los Angeles Field Office, 9/23/68.)

33 For example, a confidential source in a radio station was contacted in two successful attempts to cancel news conferences. (Memorandum from FBI Headquarters to Cleveland Field Office, 10/1/65; Memorandum from FBI Headquarters to Cleveland Field Office 10/4/65; Memorandum from Boston Field Office to FBI Headquarters, 2/5/64; Memorandum from F. J. Baumgardner to William C. Sullivan, 6/25/64.)

34 For instance, the Bureau used the standard counterespionage technique of "disinformation" against demonstrators. In one case, the Chicago Field Office duplicated blank forms soliciting housing for demonstrators coming to Chicago for the Democratic National Convention, filled them out with fictitious names and addresses and sent them to the organizers. Demonstrators reportedly made "long and useless journeys to locate these addresses." (Memorandum from Chicago Field Office to FBI Headquarters. 9/9/68.) The same program was carried out by the Washington Field Office when housing forms were distributed for demonstrators coming to the 1969 Presidential inaugural ceremonies. (Memorandum from FBI Headquarters to Washington Field Office. 1/10/69.) Army Intelligence agents occasionally took similar, but wholly unauthorized action, see Military Surveillance Report: Section III: "Domestic Radio Monitoring by ASA: 1967-1970."

35 Memorandum from FBI Headquarters to San Diego field office, 9/11/69.

36 Sullivan, 11/1/75, pp. 97-98.

37 Memorandum from St. Louis Field Office to FBI Headquarters, 2/14/69.

38 Memorandum from Richmond Field Office to FBI Headquarters, 8/26/66.

39 The wife who received this letter was described in the Field Office proposal as "faithful . . . an intelligent respectable young mother who is active in the AME Methodist Church." (Memorandum from St. Louis Field Office to FBI Headquarters, 2/14/69.)

40 Memorandum from St. Louis Field Office to FBI Headquarters, 1/30/70.

41 Memorandum from St. Louis Field Office to FBI Headquarters, 6/19/70.

42 When the targets were teachers, the intent was to prevent the propagation of ideas. In the case of other employer contacts, the purpose was to stop a source of funds.

43 Memorandum from New Haven Field Office to FBI Headquarters, 11/12/69; Memorandum from FBI Headquarters to San Diego Field Office, 9/9/69.

44 memorandum from FBI Headquarters to Cincinnati Field Office, 3/28/69.

45 Memorandum from FBI Headquarters to Pittsburgh Field Office, 3/3/69.

45a Memorandum from FBI Headquarters to Baltimore Field Office, 11/25/68.

46 Memorandum from Los Angeles Field Office to FBI headquarters, 5/26/70, pp. 1-2.

47 Memorandum from San Diego Field Office to FBI headquarters, 9/15/69.

48 Memorandum from Chicago Field Office to FBI headquarters, 1/12/69; Memorandum from FBI Headquarters to Chicago Field Office, 1/30/69.

49 See, e.g., Memorandum from San Diego Field Office to FBI Headquarters, 4/30/69.

50 One proposal to label a BPP member a "pig informer" was rejected because the Panthers had recently murdered two suspected informers. The victims had not been targets of a Bureau effort to label them informants. (Memorandum from FBI Headquarters to Cincinnati Field Office, 2/18/71.) Nevertheless, two similar proposals were implemented a month later, (Memorandum from FBI Headquarters to Washington Field Office, 3/19/71; Memorandum from FBI Headquarters to Charlotte Field Office, 3/31/71.)

51 At least four assaults -- two of them on women -- were reported as "results" of Bureau actions, (See COINTELPRO Report, Section IV: Wartimes Technique Brought Home.)

52 New Left supervisor 10/28/75, pp. 72, 74.

52a Moore, 11/3/75, p. 62.

52b Moore, 11/3/75, p. 64.

53 See pp. 275-277 and 205-206 of this Report for a detailed discussion of which officials were aware or should have been aware of what the Bureau was doing to Dr. King and how their action or inaction might have contributed to what went on.

53 See Martin Luther King Report, Section III, "Concern in the FBI and the Kennedy Administration Over Allegations of Communist Influence in the Civil Rights Movement Increases, and the FBI Intensifies the Investigation: October 1962-October 1963." See generally, Finding on Overbreadth, p. 175.

55 The August 1963 march on Washington was the occasion of Dr. King's "I Have a Dream" speech, on the steps of the Lincoln Memorial. (See memorandum from William C. Sullivan to Alan Belmont, 8/30/63, characterizing the speech as "demagogic".)

56 Memorandum from William C. Sullivan to Alan Belmont, 12/24/63. Although FBI officials were making derogatory references to Dr. King and passing personal information about Dr. King to their superiors. (Memorandum from Hoover to Deputy Attorney General Katzenbach, 8/13/63.) Prior to December 1963, the Committee had discovered no document reflecting a strategy to deliberately discredit him prior to the memorandum relating to the December 1963 meeting.

57 Memorandum from William C. Sullivan to Alan Belmont, 12/24/63.

58 The microphone was installed on January 5, 1964 (Memorandum from William C. Sullivan to Alan Belmont, 1/6/64.), just days after Dr. King's picture appeared on the cover of Time magazine as "Man of the Year." (Time Magazine, January 3, 1964.) Reading of the Time magazine award, the Director had written, "They had to dig deep in the garbage to come up with this one." (Note on UP release, 12/29/63.)

59 FBI memoranda make clear that microphones were one of the techniques being used in the effort to obtain information about Dr. King's private life. (Memorandum from F. J. Baumgardner to William C. Sullivan 1/28/64.) The microphones were installed at the following places: Washington: Willard Hotel (Jan. 1964); Milwaukee: Shroeder Hotel (Jan. 1964); Honolulu: Hilton Hawaiian Village (Feb. 1964); Detroit: Statler Hotel (March 1964); Sacramento: Senator Motel (Apr. 1964); New York City: Park Sheraton Hotel (Jan. 1965), Americana Hotel (Jan. and Nov. 1965), Sheraton Atlantic Hotel (May 1965), Astor Hotel (Oct. 1965), New York Hilton Hotel (Oct. 1965).

60 FBI summary memorandum, 10/3/75; memorandum from F. J. Baumgardner to William C. Sullivan, 3/26/64; memorandum from William C. Sullivan to Alan Belmont, 2/22/64; and unsigned memorandum, 2/28/64.

61 Memorandum from F. J. Baumgardner to William C. Sullivan, 3/27/64; memorandum from New York Field Office to FBI Headquarters, 6/2/64; memorandum from F. J. Baumgardner to William Sullivan, 7/14/65.

62 Sullivan 11/1/75, pp. 104-105, staff summary of a special agent interview, 7/25/75. Three days before the tape was mailed, Director Hoover had publicly branded Dr. King "the most notorious liar in the country" and Dr. King had responded with a criticism of the Bureau. (Memorandum from Cartha DeLoach to John Mohr, 11/18/64; telegram from Martin Luther King to J. Edgar Hoover 11/19/64.)

63 This paragraph appears in a document in the form of a letter which the FBI has supplied to the Committee and which the Bureau maintains was discovered in the files of former Assistant Director Sullivan. (FBI memorandum to the Select Committee, 9/18/75.) Sullivan stated that he did not recall the letter and suggested that it may have been "planted" in his files by his former colleagues. (Sullivan 11/1/75, p. 104.) Congressman Andrew Young has informed the Committee that an identical paragraph was contained in the letter which was actually received by Dr. King with the tape, and that the letter the committee had, supplied by the Bureau, appears to be an "early draft." (Young, 2/19/76, P. 36.)

Sullivan said that the purpose of sending the tape was "to blackmail King into silence . . . to stop him from criticising Hoover; . . . to diminish his stature. In other words, if it caused a break between Coretta and Martin Luther King, that would diminish his stature. It would weaken him as a leader." (Sullivan, 11/1/75, 11/26/75, p. 152.)

64 Young, 2/19/76, p. 37, Time magazine had reported earlier in the year that Dr. King had attempted suicide twice as a child. [Time magazine, Jan. 4, 1964.]

65 Several newsmen have informed the Committee that they were offered this kind of material or that they were aware that such material was available. Some have refused to identify the individuals who made the offers and others have said they could not recall their identities. Former FBI officials have denied that tapes or transcripts were offered to the press (e.g., DeLoach testimony, 11/26/75, p. 152) and the Bureau maintains that their files contain no documents reflecting that this occurred.

66 Staff interviews of Roy Wilkins, 11/23/75, and James Farmer, 11/13/75.

67 Memorandum from Cartha DeLoach to John Mohr, 11/27/64; staff interview of James Farmer, 11/13/75. Three days after Wilkins' meeting with DeLoach, Dr. King asked to see the Director, telling the press "the time has come to bring this controversy to an end." (UPI release, 12/1/64) Dr. King and Hoover met the following day; the meeting was described as "amicable." (Memoranda from Cartha DeLoach to John Mohr, 12/1/64 and 12/2/64.) Despite the "amicable" meeting, the Bureau's campaign against Dr. King continued.

68 Memorandum from F. J. Baumgardner to William C. Sullivan, 11/30/64; memorandum from Legat to FBI Headquarters, 12/10/64. Steps were also taken to thwart a meeting which Dr. King was planning to have with a foreign leader during this same trip (Memorandum from F. J. Baumgardner to William C. Sullivan, 11/10/64; memorandum, from FBI Headquarters to Legat, 11/10/64), and to influence a pending USIA decision to send Dr. King on a ten-day lecture trip in Africa after receiving the Nobel Prize. (Memorandum from F. J. Baumgardner to William C. Sullivan, 11/12/64.)

69 The Bureau was in touch with Atlanta Constitution publisher Ralph McGill, and tried to obtain the assistance of the Constitution's editor, Eugene Patterson, to undermine the banquet. (Memorandum from William C. Sullivan to Alan Belmont, 12/21/64; staff summary of Eugene Patterson interview, 4/30/75.) A governor's assistance was sought in the effort to "water down" the "King day." (Memorandum from F. J. Baumgardner to William C. Sullivan, 3/2/65.)

70 The Bureau had decided it would be "astounding" for Dr. King to have an audience with the Pope and that plans for any such meeting should be "nipped in the bud." (Memorandum from F. J. Baumgardner to William C. Sullivan, 8/31/64.) When the Bureau failed to block the meeting and the press reported that the audience was about to occur, the Director noted that this was "astounding." (FBI Director's notation on UPI release, 9/18/64.) FBI officials took immediate steps to determine "if there could possibly have been a slip-up" (Memorandum from F. J. Baumgardner to William C. Sullivan, 9/17/64.)

71 The Bureau had decided that it would be "shocking indeed that the possibility exists that King may receive an Honorary Degree from the same Institution (Marquette) which honored the Director with such a Degree in 1950." With respect to Springfield College, where the Director had also been offered an honorary degree, the Bureau's decision about whom to contact included the observation that "it would not appear to be prudent to attempt to deal with" the President of the college because he "is very close to Sargent Shriver." (Memorandum from F. J. Baumgardner to William C. Sullivan, 3/4/64; and 4/2/64; memorandum from Cartha DeLoach to John Mohr, 4/8/64.)

72 Memorandum from Cartha DeLoach to Clyde Tolson, 10/25/66 and 10/26/66. At about the same time, the Bureau leaked a story to the press about Dr. King's intention to seek financial assistance from Teamsters Union President James R. Hoffa because "[d]isclosure would be mutually embarrassing to both men and probably cause King's quest for badly needed funds to fail in this instance" (Memorandum from F. J. Baumgardner to William C. Sullivan, 10/28/66.)

The Bureau also tried to block the National Science Foundation (NSF) from dealing with the SCLC. "It is incredible that an outfit such as the SCLC should be utilized for the purpose of recruiting Negroes to take part in the NSF program, particularly where funds of the U.S. Government are involved." (Memorandum from F. J. Baumgardner to William C. Sullivan, 12/17/64.)

73 Memorandum from Special Agent to Cartha DeLoach, 11/3/64.

74 "It is shocking indeed that King continues to be honored by religious groups." (Memorandum from F. J. Baumgardner to William C. Sullivan, 2/1/65.) Contacts were made with representatives of the National Council of Churches of Christ, the Baptist World Alliance, the American Church in Paris, and Catholic Church, (Memoranda from William C. Sullivan to Alan Belmont, 6/12/64, 12/15/64 and 2/16/64; memorandum from F. J. Baumgardner to William C. Sullivan, 2/18/66;

memorandum from Chicago Meld Office to FBI Headquarters, 2/24/66, and memorandum from Legat, Paris, to FBI Headquarters, 4/14/66 and 5/9/66.) The Director did disapprove a suggestion that religious leaders be permitted "to listen to sources we have" (FBI Director's note on memorandum from Jones to Thomas Bishop, 12/8/64.)

75 Memorandum from Charles Brennan to William C. Sullivan, 3/8/67. The Bureau also disseminated to "friendly media sources" a newspaper article which was critical of Dr. King's position on the Vietnam war. The stated purposes were to "publicize King as a traitor to his country and his race," and to "reduce his income," (memorandum from George C. Moore to William C. Sullivan, 10/18/67.) "Background information" was also given to at least one wire service (memorandum from Sizoo to William C. Sullivan, 5/24/65).

76 Memorandum from FBI Headquarters to New York Field Office 5/18/67. There had been rumors about a "peace ticket" headed by Dr. King and Benjamin Spock.

77 Memorandum from FBI Headquarters to New York Field Office, 4/13/64; memorandum from New York Field Office to FBI Headquarters, 4/2/64.

78 Memorandum from Cartha DeLoach to John Mohr, 8/14/65; memorandum from F. J. Baumgardner to William C. Sullivan, 1/10/67.

'Memorandum from F. J. Baumgardner to William C. Sullivan, 1/22/64; memorandum from Nicholas Callahan to John Mohr, 1/31/64. On one occasion the testimony leaked to other members of Congress, prompting the Director to note, "Someone on Rooney's Committee certainly betrayed the secrecy of the 'off the record' testimony I gave re: King." (Director's note on memorandum from Cartha DeLoach to John Mohr, 3/16/64.)

81 Memorandum from FBI Headquarters to all SACs, 3/4/68.

82 Memorandum from George C. Moore to William C. Sullivan, 3/26/68.

83 Memorandum from Atlanta Field Office to FBI Headquarters, 3/18/69.

84 Memoranda: From George C. Moore to William C. Sullivan, 1/17/69; and from Jones to Thomas Bishop, 3/18/69. Steps were even taken to prevent the issuance of "commemorative medals." (Memorandum from Jones to Thomas Bishop, 5/22/68.)

## INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS

### BOOK II

#### FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS

APRIL 26 (legislative day, April 14), 1976

#### E. POLITICAL ABUSE OF INTELLIGENCE INFORMATION

##### MAJOR FINDING

The Committee finds that information has been collected and disseminated in order to serve the purely political interests of an intelligence agency or the administration, and to influence social policy and political action.

##### *Subfindings*

(a) White House officials have requested and obtained politically useful information from the FBI, including information on the activities of political opponents or critics.

(b) In some cases, political or personal information was not specifically requested, but was nevertheless collected and disseminated to administration officials as part of investigations they had requested. Neither the FBI nor the recipients differentiated in these cases between national security or law enforcement information and purely political intelligence.

(c) The FBI has also volunteered information to Presidents and their staffs, without having been asked for it, sometimes apparently to curry favor with the current administration. Similarly, the FBI has assembled intelligence on its critics and on political figures it believed might influence public attitudes or Congressional support.

(d) The FBI has also used intelligence as a vehicle for covert efforts to influence social policy and political action.

##### *Elaboration of Findings*

The FBI's ability to gather information without effective restraints gave it enormous power. That power was inevitably attractive to politicians, who could use information on opponents and critics for their own advantage, and was also an asset to the Bureau, which depended on politicians for support. In the political arena, as in other facets of American life touched by the intelligence community, the existence of unchecked power led to its abuse.

By providing politically useful information to the White House and congressional supporters, sometimes on demand and sometimes gratuitously, the Bureau buttressed its own position in the political structure. At the same time, the widespread -- and accurate -- belief in Congress and the administration that the Bureau had available to it, derogatory information on politicians and critics created what the late Majority Leader of the House of Representatives, Hale Boggs, called a "fear" of the Bureau:

Freedom of speech, freedom of thought, freedom of action for men in public life can be compromised quite as effectively by the fear of surveillance as by the fact of surveillance. <sup>1</sup>

Information gathered and disseminated to the White House ranged from purely political intelligence, such as lobbying efforts on bills ail administration opposed and the strategy of a delegate challenge at a national political convention, to "tidbits" about the activities of politicians and public figures which the Bureau believed "of interest" to the recipients.

Such participation in political machinations by an intelligence agency is totally improper. Responsibility for what amounted to a betrayal of the public trust in the integrity of the FBI must be shared between the officials who requested such information and those who provided it.

The Bureau's collection and dissemination of politically useful information was not colored by partisan considerations; rather its effect was to entrench the Bureau's own position in the political structure, regardless of which party was in power at the time. However, the Bureau also used its powers to serve ideological purposes, attempting covertly to influence social policy and and political action.

In its efforts to "protect society," the FBI engaged in activities which necessarily affected the processes by which American citizens make decisions. In doing so, it distorted and exaggerated facts, made use of the mass media, and attacked the leadership of groups which it considered threats to the social order.

Law enforcement officers are, of course, entitled to state their opinions about what choices the people should make on contemporary social and political issues. The First Amendment guarantees their right to enter the marketplace of ideas and persuade their fellow citizens of the correctness of those opinions by making speeches, writing books, and, within certain statutory limits, supporting political candidates. The problem lies not in the open expression of views, but in the covert use of power or position of trust to influence others. This abuse is aggravated by the agency's control over information on which the public and its elected representatives rely to make decisions.

The essence of democracy is the belief that the people must be free to make decisions about matters of public policy. The FBI's actions interfered with the democratic process, because attitudes within the Bureau toward social change led to the belief that such intervention formed a part of its obligation to protect society. When a governmental agency clandestinely tries to impose its views of what is right upon the American people, then the democratic process is undermined.

#### *Subfinding (a)*

White House officials have requested and obtained politically useful information from the FBI, including personal life information on the activities of political opponents or critics.

Presidents and White House aides have asked the FBI to provide political or personal information on opponents and critics, including "name checks" of Bureau files. <sup>2</sup> They have also asked the Bureau to conduct electronic surveillance or more limited investigations of such persons. The FBI appears to have complied unquestioningly with these requests, despite occasional internal doubts about their propriety. <sup>3</sup>

Precedents for certain political abuses go back to the very outset of the domestic intelligence program. In 1940 the FBI complied with President Roosevelt's request to file the names of people sending critical telegrams to the White House. <sup>4</sup> There is evidence of improper electronic surveillance for the White House in the 1940s. <sup>5</sup> And an aide to President Eisenhower asked the FBI to conduct a questionable name check. <sup>6</sup> In 1962, the FBI complied unquestioningly with a request from Attorney General Kennedy to interview a steel executive and several reporters who had written stories about a statement by the executive. <sup>7</sup> As part of an investigation of foreign lobbying efforts on sugar quota legislation in 1961 and 1962, Attorney General Kennedy requested wiretaps on a Congressional aide, three executive officials, and two American lobbyists, including a Washington law firm. <sup>8</sup>

Nevertheless, the political misuse of the FBI under the Johnson and Nixon administrations appears to have been more extensive than in previous years.

Under the Johnson administration, the FBI was used to gather and report political intelligence on the, administration's partisan opponents in the last days of the 1964 and 1968 Presidential election campaigns. In the closing days of the 1964 campaign, Presidential aide Bill Moyers asked the Bureau to conduct "name checks" on all persons employed in Senator Goldwater's Senate office, and information on two staff members was reported to the White House. <sup>9</sup> Similarly, in the last two weeks of the 1968 campaign, the Johnson White House requested an investigation (including indirect electronic surveillance and direct physical surveillance) of Mrs. Anna Chennault, a prominent Republican leader, and her relationships with certain South Vietnamese officials. <sup>10</sup> This investigation also included an FBI check of Vice Presidential candidate Spiro Agnew's long distance telephone call records, apparently at the personal request of President Johnson. <sup>11</sup>

Another investigation for the Johnson White House involved executive branch officials who took part in the criminal investigation of former Johnson Senate aide Bobby Baker. When Baker's trial began in 1967, it was revealed that one of the government witnesses had been "wired" to record his conversations with Baker. Presidential aide Marvin Watson told the FBI

that Johnson was quite "exercised," and the Bureau was ordered to conduct a discreet "run down" on the former head of the Justice Department's Criminal Division and four Treasury Department officials who had been responsible for "wiring" the witness. The Bureau was specifically insisted to include any associations between those persons and Robert Kennedy. 12

Several Johnson White House requests were directed at critics of the war in Vietnam, at newsmen, and at other opponents. According a Bureau memorandum, White House aide Marvin Watson attempted to disguise his, and the President's interest in such requests asking the FBI to channel its replies through a lower level White House staff member. 13

In 1966, Watson asked the FBI to monitor the televised hearings of the Senate Foreign Relations Committee on Vietnam policy and prepare a memorandum comparing statements of the President's Senate critics with "the Communist Party line." 14 Similarly, in 1967 when seven Senators made statements criticizing the bombing of North Vietnam, Watson requested (and the Bureau delivered) a "blind memorandum" setting forth information from FBI files on each of the Senators. Among the data supplied were the following items:

Senator Clark was quoted in the press as stating that the three major threats to America are the military-industrial complex, the Federal Bureau of Investigation, and the Central Intelligence Agency.

Senator McGovern spoke at a rally sponsored by the Chicago, Committee for a Sane Nuclear Policy, a pacifist group. Senator McGovern stated that the "United States was making too much of the communist take-over of Cuba."

[Another Senator now deceased] has, on many occasions, publicly criticized United States policy toward Vietnam. He frequently speaks before groups throughout the United States on this subject. He has been reported as intentionally entering into controversial areas so that his services as a speaker for which he receives a fee, will be in demand. 15

The Johnson administration also requested information on contacts between members of Congress and certain foreign officials known to oppose the United States presence in Vietnam. According to FBI records, President Johnson believed these foreign officials had generated "much of the protest concerning his Vietnam policy, particularly the hearings in the Senate." 16

White House requests were not limited to critical Congressmen. Ordinary citizens who sent telegrams protesting the Vietnam war to the White House were also the subject of Watson requests for FBI name check reports. 17 Presidential aide Jake Jacobsen asked for name checks on persons whose names appeared in the Congressional Record as signers of a letter to Senator Wayne Morse expressing support for his criticism of U.S. Vietnam policy. 18 On at least one occasion, a request was channeled through Attorney General Ramsey Clark, who supplied Watson (at the latter's request) with a summary of information on the National Committee for a Sane Nuclear Policy. 19

Other individuals who were the subject of such name check requests under the Johnson Administration included NBC Commentator David Brinkley, 20 Associated Press reporter Peter Arnett, 21 columnist Joseph Kraft, 22 Life magazine Washington bureau chief Richard Stolley, 23 Chicago Daily News Washington bureau chief Peter Lisagor, 24 and Ben W. Gilbert of the Washington Post. 25 The Johnson White House also requested (and received) name check reports on the authors of books critical of the Warren Commission report; some of these reports included derogatory information about the personal lives of the individuals. 26

The Nixon administration continued the practice of using the FBI to produce political information. In 1969 John Ehrlichman, counsel to President Nixon, asked the FBI to conduct a "name check" on Joseph Duffy, chairman of Americans for Democratic Action. Data in Bureau files covered Duffy's "handling arrangements" for an antiwar teach-in in 1965, his position as State Coordinator of the group "Negotiation Now" in 1967, and his activity as chairman of Connecticut Citizens for McCarthy in 1968. 26a

Presidential aide H. R. Haldeman requested a name check on CBS reporter Daniel Schorr. In this instance, the FBI mistakenly considered the request to be for a full background investigation and began to conduct interviews. These interviews made the inquiry public. Subsequently, White House officials stated (falsely) that Schorr was under consideration for an executive appointment. 27 In another case, a Bureau memorandum states that Vice President Agnew asked the FBI for information about Rev. Ralph David Abernathy, then head of the Southern Christian Leadership Conference, for use in "destroying Abernathy's credibility." 28 (Agnew has denied that he made such a request, but agrees that he received the information.) 29

Several White House requests involved the initiation of electronic surveillance. Apparently on the instructions of President Nixon's aide John Ehrlichman and Director Hoover, FBI Assistant Director William C. Sullivan arranged for the microphone surveillance of the hotel, room of columnist Joseph Kraft while he was visiting a foreign country. 30 Kraft was also the target of physical surveillance by the FBI. 31 There is no record of any specific "national security" rationale for the surveillance.

Similarly, although the "17" wiretaps were authorized ostensibly to investigate national security "leaks," there is no record in three of the cases of any national security claim having been advanced in their support. Two of the targets were domestic affairs advisers at the White House, with no foreign affairs duties and no access to foreign policy materials. 32 A third was a White House speechwriter who had been overheard on an existing tap agreeing to provide a reporter with background on a presidential speech concerning, not foreign policy, but revenue sharing and welfare reform. 33

*Subfinding (b)*

In some cases, political or personal information was not specifically requested, but was nevertheless collected and disseminated to administration officials as part of investigations they had requested. Neither the FBI nor the recipients differentiated in these cases between national security or law enforcement information and purely political intelligence.

In some instances, the initial request for or dissemination of information was premised upon law enforcement or national security purposes. However, pursuant to such a request, information was furnished which obviously could serve only partisan or personal interests. As one Bureau official summarized its attitude, the FBI "did not decide what was political or what represented potential strife and violence. We are an investigative agency and we passed on all data." 34

Examples from the Eisenhower, Kennedy, Johnson, and Nixon administrations illustrate this failure to distinguish between political and nonpolitical intelligence. They include, the FBI's reports to the White House in 1956 on NAACP lobbying activities, the intelligence about the legislative process produced by the "sugar lobby" wiretaps in 1961-1962, the purely political data disseminated to the White House on the credentials challenge in the 1964 Democratic Convention, and dissemination of both political and personal information from the "leak" wiretaps in 1969-1972.

*(i) The NAACP*

In early 1956 Director Hoover sent the White House a memorandum describing the "potential for violence" in the current "racial situation". 35 Later reports to the White House, however, went far beyond intelligence about possible violence; they included extensive inside information about NAACP lobbying efforts, such as the following:

A report on "meetings held in Chicago" in connection with a planned Leadership Conference on Civil Rights to be held in Washington under the sponsorship of the NAACP. 36

An extensive report on the Leadership Conference, based on the Bureau's "reliable sources" and describing plans of Conference delegations to visit Senators Paul Douglas, Herbert Lehman, Wayne Morse, Hubert Humphrey, and John Bricker. The report also summarized a speech by Roy Wilkins, other conference proceedings, and the report of "an informant" that the United Auto Workers was a "predominant organization" at the conference. 37

Another report on the conference included an account of what transpired at meetings between conference delegations and Senators Paul Douglas and Everett Dirksen. 38

A report including the information that two New Jersey congressmen would sign a petition to the Attorney General. 39

A presidential aide suggested that Hoover brief the Cabinet on "developments in the South." 40 Director Hoover's Cabinet briefing also included political intelligence. He covered not only the NAACP conference, but also the speeches and political activities of Southern Senators and Governors and the formation of the Federation for Constitutional Government with Southern Congressmen and Governors on its advisory board. 41

*(ii) The Sugar Lobby*

The electronic surveillance of persons involved in a foreign country's lobbying activities on sugar quota legislation in 1961-1962, authorized by Attorney General Robert Kennedy for the White House, also produced substantial political intelligence unrelated to the activities of foreign officials. 42 Such information came from wiretaps both on foreign officials and on American citizens, as well as from the microphone surveillance of the chairman of the House Agriculture Committee when he met with foreign officials in a New York hotel room. 43 The following are examples of the purely political (and personal) by-product:

A particular lobbyist "mentioned he is working on the Senate and has the Republicans all lined up." 44

The same lobbyist said that "he had seen two additional representatives on the House Agriculture Committee, one of whom was 'dead set against us' and who may reconsider, and the other was neutral and 'may vote for us.'" 45

The Agriculture Committee chairman believed "he had accomplished nothing" and that "he had been fighting over the Rules Committee and this had interfered with his attempt to organize." 46

The "friend" of a foreign official "was under strong pressure from the present administration, and since the 'friend' is a Democrat, it would be very difficult for him to present a strong front to a Democratic Administration." 17

A lobbyist stated that Secretary of State Rusk "had received a friendly reception by the Committee and there appeared to be no problem with regard to the sugar bill." 48

A foreign official was reported to be in contact with two Congressmen's secretaries "for reasons other than business." The official asked one of the secretaries to tell the other that he "would not be able to call her that evening" and that one of his associates "was planning to take [the two secretaries and another Congressional aide] to Bermuda." 49

The FBI's own evaluation of these wiretaps indicates that they "undoubtedly ... contributed heavily to the Administration's success" in passing the legislation it desired. 50

*(iii) The 1964 Democratic Convention*

Political reports were disseminated by the FBI to the White House from the 1964 Democratic convention in Atlantic City. These reports, from the FBI's "special squad" at the convention, apparently resulted from a civil disorders intelligence investigation which got out of hand because no one was willing to shut off the partisan by-product. 51 They centered on the Mississippi Freedom Democratic Party's credentials challenge. Examples of the political intelligence which flowed from FBI surveillance at the 1964 convention include the following: 52

Dr. Martin Luther King and an associate "were drafting a telegram to President Johnson . . . to register a mild protest. According to King, the President pledged complete neutrality regarding the selecting of the proper Mississippi delegation to be seated at the convention. King feels that the Credentials Committee will turn down the Mississippi Freedom Party and that they are doing this because the President exerted pressure on the committee along this line." 53

Another associate of Dr. King contacted a member of the MFDP who "said she thought King should see Governor Endicott Peabody of Massachusetts, Mayor Robert Wagner of New York City, Governor Edmund G. (Pat) Brown of California, Mayor Richard Daley of Chicago, and Governor John W. King of New Hampshire." The purpose was "to urge them to call the White House directly and put pressure on the White House in behalf of the MFDP." 54

"MFDP leaders have asked Reverend King to call Governor Egan of Alaska and Governor Burns of Hawaii in an attempt to enlist their support. According to the MFDP spokesman, the Negro Mississippi Party needs these two states plus California and New York for the roll call tonight." 55

An SCLC staff member told a representative of the MFDP: "Off the record, of course, you know we will accept the Green compromise proposed." This referred to "the proposal of Congresswoman Edith Green of Oregon." 56

In a discussion between Dr. King and another civil rights leader, the question of "a Vice- Presidential nominee came up and King asked what [the other leader] thought of Hugh [sic] Humphrey, and [the other leader] said Hugh Humphrey is not going to get it, that Johnson needs a Catholic ... and therefore the Vice-President will be Muskie of Maine." 57

An unsigned White House memorandum disclosing Dr. King's strategy in connection with a meeting to be, attended by President Johnson suggests that there was political use of these FBI reports. 58

*(iv) The "17" Wiretaps.*

The Nixon White House learned a substantial amount of purely political intelligence from wiretaps to investigate "leaks" of classified information placed on three newsmen and fourteen executive officials during 1969-1971. 59 The following illustrate the range of data supplied:

One of the targets "recently stated that he was to spend an hour with Senator Kennedy's Vietnam man, as Senator Kennedy is giving a speech on the 15th." 60

Another target said that Senator Fulbright postponed congressional hearings on Vietnam because he did not believe they would be popular at that time. 61

A well-known television news correspondent "was very distressed over having been 'singled out' by the Vice President." 62

A friend of one of the targets said the Washington Star planned to do an article critical of Henry Kissinger. 63

One of the targets helped former Ambassador Sargent Shriver write a press release criticizing a recent speech by President Nixon in which the President "attacked" certain Congressmen. 64

One of the targets told a friend it "is clear the Administration will win on the ABM by a two-vote margin. He said 'They've got [a Senator] and they've got [another Senator].'" 65

A friend of one of the targets wanted to see if a Senator would "buy a new amendment" and stated that "they" were "going to meet with" another Senator. 66

A friend of one of the targets described a Senator as "marginal" on the Cooper-Church Amendment and stated that another Senator might be persuaded to support it. 67

One of the targets said Senator Mondale was in a "dilemma" over the "trade bill." 68

A friend of one of the targets said he had spoken to former President Johnson and "Johnson would not back Senator Muskie for the Presidency as he intended to stay out of politics." 69

There is at least one clear example of the political use of such information. After the FBI Director informed the White House that former Secretary of Defense Clark Clifford planned to write a magazine article criticizing President Nixon's Vietnam policy, 70 White House aide Jeb Stuart Magruder advised John Ehrlichman and H. R. Haldeman that "we are in a position to counteract this article in any number of ways." 71 It is also significant that, after May 1970, the FBI Director's letters summarizing the results of the wiretaps were no longer sent to Henry Kissinger, the President's national security advisor, but to the President's political advisor, H. R. Haldeman. 72

These four illustrations from administrations of both political parties indicate clearly that direct channels of communication between top FBI officials and the White House, combined with the failure to screen out extraneous information, and coupled with overly broad investigations in the first instance, have been sources of flagrant political abuse of the intelligence process. 73

#### *Subfinding (c)*

The FBI has also volunteered information to Presidents and their staffs, without having been asked for it, sometimes apparently to curry favor with the current administration. Similarly, the FBI has assembled information on its critics and on political figures it believed might influence public attitudes or Congressional support.

There have been numerous instances over the past three decades where the FBI volunteered to its superiors purely political or personal information believed by the FBI Director to be "of interest" to them. 74

The following are examples of the information in Director Hoover's letters under the Truman, Eisenhower, Kennedy, and Johnson administrations. 75

To Major General Harry Vaughn, Military Aide to President Truman, a report on the activities of a former Roosevelt aide who was trying to influence the Truman administration's appointments. 76

To Matthew J. Connelly, Secretary to President Truman, a report from a "very confidential source" about a meeting of newspaper representatives in Chicago to plan publication of stories exposing organized crime and corrupt politicians. 77

To Dillon Anderson, Special Assistant to President Eisenhower, the advance text of a speech to be delivered by a prominent labor leader. 78

To Robert Cutler, Special Assistant to President Eisenhower, a report of a "confidential source" on plans of Mrs. Eleanor Roosevelt to hold a reception for the head of a civil rights group. 19

To Attorney General Robert Kennedy, information from a Bureau "source" regarding plans of a group to publish allegations about the President's personal life. 80

To Attorney General Kennedy, a summary of material in FBI files on a prominent entertainer which the FBI Director thought "may be of interest". 81

To Marvin Watson, Special Assistant to President Johnson, a summary of data in Bureau files on the author of a play satirizing the President. 82

As these illustrations indicate, the FBI Director provided such data to administrations of both political parties without apparent partisan favoritism. 83

Additionally, during the Nixon Administration, the FBI's INLET (Intelligence Letter) Program for sending regular short summaries of FBI intelligence to the White House was used on one occasion to provide information on the purely personal relationship between an entertainer and the subject of an FBI domestic intelligence investigation. 84 SACs were instructed under the INLET program to submit to Bureau headquarters items with an "unusual twist" or regarding "prominent" persons.

One reason for the Bureau's volunteering information to the White House was to please the Administration and thus presumably to build high-level political support for the FBI. Thus, a 1975 Bureau report on the Atlantic City episode states:

One [agent said], "I would like to state that at no time did I ever consider (it) to be a political operation but it was obvious that DeLoach wanted to impress Jenkins and Moyers with the Bureau's ability to develop information which would be of interest to them." Furthermore, in response to a question as to whether the Bureau's services were being utilized for political reasons, [another] answered, "No. I do recall, however, that on one occasion I was present when DeLoach held a lengthy telephone conversation with Walter Jenkins. They appeared to be discussing the President's 'image.' At the end of the conversation DeLoach told us something to the effect, 'that may have sounded a little political to you but this doesn't do the Bureau any harm.'" 86

In addition to providing information useful to superiors, the Bureau assembled information on its own critics and on political figures it believed might influence public attitudes or congressional support. FBI Director Hoover had massive amounts of information at his fingertips. As indicated above, he could have the Bureau's files checked on anyone of interest to him. He personally received political information and "personal tidbits" from the special agents in charge of FBI field offices. 87 This information, both from the files and Hoover's personal sources, was available to discredit critics.

The following are examples of how the Bureau disseminated information to discredit its opponents:

In 1949 the FBI provided Attorney General J. Howard McGrath and Presidential aide Harry Vaughn inside information on plans of the Lawyers Guild to denounce Bureau surveillance so they would have an opportunity to prepare a rebuttal well in advance of the expected criticism. 88

In 1960, when the Knoxville Area Human Relations Council in Tennessee charged that the FBI was practicing racial discrimination, the Bureau conducted name checks on members of the Council's board of directors and sent the results to Attorney General William Rogers, including derogatory personal allegations and political affiliations from as far back as the late thirties and early forties. 89

When a reporter wrote stories critical of the Bureau, he was not only refused any further interviews, but an FBI official in charge of press relations also spread derogatory personal information about him to other newsmen. 90

The Bureau also maintained a "not to contact list" of "those individuals known to be hostile to the Bureau." Director Hoover specifically ordered that "each name" on the list "should be the subject of memo." 91

This request for "a memo" on each critic meant that, before someone was placed on the list, the Director received, in effect, a "name check" report summarizing "what we had in our files" on the individual. 92

In addition to assembling information on critics, name checks were run as a matter of regular Bureau policy on all "newly elected Governors and Congressmen." The Crime Records Division instructed the field offices to submit "summary memoranda" on such officials, covering both "public source information" and "any other information that they had in their files." 93 These "summary memoranda" were provided to Director Hoover and maintained in the Crime Records Division for use in "congressional liaison" -- which the Division head said included "selling" hostile Congressmen on "liking the FBI." 94

It has been widely believed among Members of Congress that the Bureau had information on each of them. 95 The impact of that belief led Congressman Boggs to state:

Our apathy in this Congress, our silence in this House, our very fear of speaking out in other forums has watered the roots and hastened the growth of a vine of tyranny which is ensnaring that Constitution and Bill of Rights which we are each sworn to uphold.

Our society can survive many challenges and many threats.

It cannot survive a planned and programmed fear of its own government bureaus and agencies. 96

#### *Subfinding (d)*

The FBI has also used intelligence as a vehicle for covert efforts to influence social policy and political action.

The FBI's interference with the democratic process was not the result of any overt decision to reshape society in conformance with Bureau-approved norms. Rather, the Bureau's actions were the natural consequence of attitudes within the Bureau toward social change, combined with a strong sense of duty to protect society -- even from its own "wrong" choices.

The FBI saw itself as the guardian of the public order, and believed that it had a responsibility to counter threats to that order, using any means available. 97 At the same time, the Bureau's assessment of what constituted a "threat" was influenced by its attitude toward the forces of change. In effect, the Bureau chose sides in the major social movements of the last fifteen years, and then attacked the other side with the unchecked power at its disposal.

The clearest proof of the Bureau's attitude toward change is its own rhetoric. The language used in internal documents which were not intended to be disseminated outside the Bureau is that of the highly charged polemic revealing clear biases.

For example, in one of its annual internal reports on COINTELPRO, the Bureau took pride in having given "the lie" to what it called "the Communist canard" that "the Negro is downtrodden and has no opportunities in America." This was accomplished by placing a story in a newspaper in which a "wealthy Negro industrialist" stated that "the Negro will have to earn respectability and a responsible position in the community before he is accepted as an equal." It is significant that this view was expressed at about the same time as the civil rights movement's March on Washington, which was intended to focus public attention on the denial of opportunities to black Americans, and which rejected the view that inalienable rights have to be "earned." 98

The rhetoric used in dealing with the Vietnam War and those in opposition to it is even more revealing. The war in Vietnam produced sharply divided opinions in the country; again, the Bureau knew which side it was on. For instance, fifty copies of an

article entitled "Rabbi in Vietnam Says Withdrawal Not The Answer" were anonymously mailed by the FBI to members of the Vietnam Day Committee to "convince" the recipients "of the correctness of the U.S. foreign policy in Vietnam." 99

The Bureau also ordered copies of a film called "While Brave Men Die" which depicted "communists, left-wing and pacifist activities associated with the so-called 'peace movement' or student agitational demonstrations in opposition to the United States position in Vietnam." The film was to be used for training Bureau personnel in connection with "increased responsibilities relating to communist inspired student agitational activities." 100

In the same vein, a directive to the Chicago field office shortly after the 1968 Democratic Convention instructed it to "obtain all possible evidence" that would "disprove" charges that the Chicago police used undue force in dealing with antiwar demonstrations at the Convention:

Once again, the liberal press and the bleeding hearts and the forces on the left are taking advantage of the situation in Chicago surrounding the Democratic National Convention to attack the police and organized law enforcement agencies.... We should be mindful of this situation and develop all possible evidence to expose this activity and to refute these false allegations. 101

The Bureau also attempted to enforce its view of sexual morality. For example, two students became COINTELPRO targets when they defended the use of a four-letter word, even though the demonstration in which they participated "does not appear to be inspired by the New Left," because it "shows obvious disregard for decency and established morality." 102 An anonymous letter purportedly from an irate parent and an article entitled "Free Love Comes to Austin" were mailed to a state senator and the chairman of the University of Texas Board of Regents to aid in "forcing the University to take action against those administrators who are permitting an atmosphere to build up on campus that will be a fertile field for the New Left." 103 And a field office was outraged at the distribution on campus of a newspaper called SCREW, which was described as "containing a type of filth that could only originate in a depraved mind. It is representative of the type of mentality that is following the New Left theory of immorality on certain college campuses." 104

As these examples demonstrate, the FBI believed it had a duty to maintain the existing social and political order. Whether or not one agrees with the Bureau's views, it is profoundly disturbing that an agency of the government secretly attempted to impose its views on the American people.

#### *(i) Use of the Media*

The FBI attempted to influence public opinion by supplying information or articles to "confidential sources" in the news media. The FBI's Crime Records Division 105 was responsible for covert liaison with the media to advance two main domestic intelligence objectives: 106

(1) providing derogatory information to the media intended to generally discredit the activities or ideas of targeted groups or individuals; and (2) disseminating unfavorable articles, news releases, and background information in order to disrupt particular activities.

Typically, a local FBI agent would provide information to a "friendly news source" on the condition "that the Bureau's interest in these matters is to be kept in the strictest confidence." 107 Thomas E. Bishop, former Director of the Crime Records Division, testified that he kept a list of the Bureau's "press friends" in his desk. 108 Bishop and one of his predecessors indicated that the FBI sometimes refused to cooperate with reporters critical of the Bureau or its Director. 109

Bishop stated that as a "general rule," the Bureau disseminated only "public record information" to its media contacts, but this category was viewed by the Bureau to include any information which could conceivably be obtained by close scrutiny of even the most obscure publications. 110

Within these parameters, background information supplied to reporters "in most cases [could] include everything" in the Bureau files on a targeted individual; the selection of information for publication would be left to the reporter's judgment. 111

There are numerous examples of authorization for the preparation and dissemination of unfavorable information to discredit generally the activities and ideas of a target; 112

-- FBI headquarters solicited information from field offices "on a continuing basis" for "prompt ... dissemination to the news media ... to discredit the New Left movement and its adherents." Headquarters requested, among other things, that:

specific data should be furnished depicting the scurrilous and depraved nature of many of the characters, activities, habits and living conditions representative of New Left adherents.

Field Offices were to be exhorted that "Every avenue of possible embarrassment must be vigorously and enthusiastically explored." 113

-FBI headquarters authorized a Field Office to furnish a media contact with "background information and any arrest record" on a man affiliated with "a radical New Left element" who had been "active in showing films on the Black Panthers and police in action at various universities during student rioting." The media contact had requested material from the Bureau which "would have a detrimental effect on [the target's] activities." 114

-- Photographs depicting a radical group's apartment as "a shambles with lewd, obscene and revolutionary slogans displayed on the walls" were furnished to a free-lance writer. The directive from headquarters said: "As this publicity will be derogatory in nature and might serve to neutralize the group, it is being approved." 115

-- The Boston Field Office was authorized to furnish "derogatory information about the Nation of Islam (NOI) to established source [name excised]":

Your suggestions concerning material to furnish [name] are good. Emphasize to him that the NOI predilection for violence, preaching of race hatred, and hypocrisy, should be exposed. Material furnished [name] should be either public source or known to enough people as to protect your sources. Insure the Bureau's interest in this matter is completely protected by [name]. 116

One Bureau-inspired documentary on the NOI reached an audience of 200,000. 117 Although the public was to be convinced that the NOI was "violent", the Bureau knew this was not in fact true of the organization as a whole. 118

-- The Section which supervised the COINTELPRO against the Communist Party intended to discredit a couple "identified with the Community Party movement" by preparing a news release on the drug arrest of their son, which was to be furnished to "news media contacts and sources on Capitol Hill." A Bureau official observed that the son's "arrest and the Party connections of himself and his parents presents an excellent opportunity for exploitation." The news release noted that "the Russian-born mother is currently under a deportation order" and had a former marriage to the son of a prominent Communist Party member. The release added: "the Red Chinese have long used narcotics to help weaken the youth of target countries." 119

-- When the wife of a Communist Party leader purchased a new car, the FBI prepared a news item for distribution to "a cooperative news media source" mocking the leader's "prosperity" "as a disruptive tactic." The item commented sarcastically that "comrades of the self-proclaimed leader of the American working class should not allow this example of [the leader's] prosperity to discourage their continued contributions to Party coffers." 120

-- After a public meeting in New York City, where "the handling of the [JFK assassination] investigation was criticized," the FBI prepared a news item for placement "with a cooperative news media source" to discredit the meeting on the grounds that "a reliable [FBI] source" had reported a "convicted perjurer and identified espionage agent as present in the audience." 121

-- As part of the New Left COINTELPRO, the FBI sent a letter under a fictitious name to Life magazine to "call attention to the unsavory character" of the editor of an underground magazine, who was characterized as "one of the moving forces behind the Youth International Party, commonly known as the Yippies." To counteract a recent Life "article favorable" to the Yippie editor, the FBI's fictitious letter said that "the cuckoo editor of an unimportant smutty little rag" should be "left in the sewers." 122

Much of the Bureau's use of the media to influence public opinion was directed at disrupting specific activities or plans of targeted groups or individuals:

-- In March 1968, FBI Headquarters granted authority for furnishing to a "cooperative national news media source" an article "designed to curtail success of Martin Luther King's fund raising" for the poor people's march on Washington, D.C. by asserting that "an embarrassment of riches has befallen King . . . and King doesn't need the money." 123 To further this objective, Headquarters authorized the Miami Office "to furnish data concerning money wasted by the Poor People's Campaign" to a friendly news reporter on the usual condition that "the Bureau must not be revealed as the source." 124

The Section Chief in charge of the Black Nationalist COINTELPRO also recommended that "photographs of demonstrators" at the march should be furnished; he attached six photographs of Poor People's Campaign participants at a Cleveland rally, accompanied by the note: "These show the militant, aggressive appearance of the participants and might be of interest to a cooperative news source." 125

--As part of the New Left COINTELPRO, authority was granted to the Atlanta Field Office to furnish a newspaper editor who had "written numerous editorials praising the Bureau" with "information to supplement that already known to him from public sources concerning subversive influences in the Atlanta peace movement. His use of this material in well-timed articles would be used to thwart the [upcoming] demonstrations." 126

-- An FBI Special Agent in Chicago contacted a reporter for a major newspaper to arrange for the publication of an article which was expected to "greatly encourage factional antagonisms during the SDS Convention" by publicizing the attempt of "an underground communist organization" to take over SDS. This contact resulted in an article headlined "Red Unit Seeks SDS Rule." 127

-- FBI Director Hoover approved a Field Office plan "to get cooperative news media to cover closed meetings of Students for a Democratic Society (SDS) and other New Left groups" with the aim of "disrupting them." 128

-- Several months after COINTELPRO operations were supposed to have terminated, the FBI attempted to discredit attorney Leonard Boudin at the time of his defense of Daniel Ellsberg in the Pentagon Papers case. The FBI "called to the attention" of the Washington bureau chief of a major news service information on Boudin's alleged "sympathy" and "legal services" for "communist causes." The reporter placed a detailed news release on the wires which cited Boudin's "identification with Leftist causes" and included references to the arrest of Boudin's daughter, his legal representation of the Cuban government and "Communist sympathizer" Paul Robeson, and the statement that "his name also has been connected with a number of other

alleged communist front groups." In a handwritten note, J. Edgar Hoover directed that copies of the news release be sent to "Haldeman, A. G., and Deputy." 129

The Bureau sometimes used its media contacts to prevent or postpone the publication of articles it considered favorable to its targets or unfavorable to the FBI. For example, to influence articles which related to the FBI, the Bureau took advantage of a close relationship with a high official of a major national magazine, described in an FBI memorandum as "our good friend." Through this relationship, the FBI "squelched" an "unfavorable article against the Bureau" written by a free-lance writer about an FBI investigation; "postponed publication" of an article on another FBI case; "forestalled publication" of an article by Dr. Martin Luther King, Jr.; and received information about proposed editing of King's articles. 130

The Bureau also attempted to influence public opinion by using news media sources to discredit dissident groups by linking them to the Communist Party:

-- A confidential source who published a "self-described conservative weekly newspaper" was anonymously mailed information on a church's sponsorship of efforts to abolish the House Committee on Un-American activities. This prompted an article entitled "Locals to Aid Red Line," naming the minister, among others, as a local sponsor of what it termed a "Communist dominated plot" to abolish HUAC. 131

-- The Bureau targeted a professor who had been the president of a local peace center, a "coalition of anti-Vietnam and anti-draft groups." In 1968, he resigned temporarily to become state chairman of Eugene McCarthy's presidential campaign organization. Information on the professor's wife, who had apparently associated with Communist Party members in the early 1950's, was furnished to a newspaper editor to "expose those people at this time when they are receiving considerable publicity in order" to "disrupt the members" of the peace organization. 132

-- Other instances included an attempt to link a school boycott with the Communists by alerting newsmen to the boycott leader's plans to attend a literary reception at the Soviet mission; 133 furnishing information to the media on the participation of the Communist Party presidential candidate in the United Farm Workers' picket line; 134 "confidentially" informing established sources in three northern California newspapers that the San Francisco County Communist Party Committee had stated that civil rights groups were to "begin working" on the area's large newspapers "in an effort to secure greater employment of Negroes;" 135 and furnishing information to the media on Socialist Workers Party participation in the Spring Mobilization Committee to End the War in Vietnam to "discredit" the antiwar group. 136

#### *(ii) Attacks on Leaders*

Through covert propaganda, the FBI not only attempted to influence public opinion on matters of social policy, but also directly intervened in the people's choice of leadership both through the electoral process and in other, less formal arenas.

For instance, the Bureau made plans to disrupt a possible "Peace Party" ticket in the 1968 elections. One field office noted that "effectively tabbing as communists or as communist-backed the more hysterical opponents of the President on the Vietnam question in the midst of the presidential campaign would be a real boon to Mr. Johnson." 137

In the FBI's COINTELPRO programs, political candidates were targeted for disruption. The document which originated the Socialist Workers Party COINTELPRO noted that the SWP "has, over the past several years, been openly espousing its line on a local and national basis through running candidates for public office." The Bureau decided to "alert the public to the fact that the SWP is not just another socialist group but follows the revolutionary principles of Marx, Lenin, and Engels as interpreted by Leon Trotsky." Several SWP candidates were targeted, usually by leaking derogatory information about the candidate to the press. 138

Other COINTELPRO programs also included attempts to disrupt campaigns. For example, a Midwest lawyer running for City Council was targeted because he and his firm had represented "subversives". The Bureau sent an anonymous letter to several community leaders which decried his "communist background" and labelled him a "Charlatan." 139 Under a fictitious name, the Bureau sent a letter to a television on which the candidate was to appear, enclosing a series of questions about his clients and his activities which it believed should be asked. 140 The candidate was defeated. He later ran (successfully, as it happened) for a judgeship. The Bureau attempted to disrupt this subsequent, successful campaign for a judgeship by using an anticommunist group to distribute fliers and write letters opposing his candidacy. 141

In another instance, the FBI attempted to have a Democratic Party fundraising affair raided by the state Alcoholic Beverage Control Commission. The fund raiser was targeted because of two of the candidates who would be present. One, a state assemblyman running for reelection, was active in the Vietnam Day Committee; the other, the Democratic candidate for Congress, had been a sponsor of the National Committee to Abolish the House Committee on Un-American Activities and had led demonstrations opposing the manufacture of napalm bombs. 142

Although the disruption of election campaigns is the clearest example, the FBI's interference, with the political process was much broader. For example, all of the COINTELPRO programs were aimed at the leadership of dissident groups. 143

In one case, the Bureau's plans to discredit a civil rights leader included an attempt to replace him with a candidate chosen by the Bureau. During 1964, the FBI began a massive program to discredit Dr. Martin Luther King, Jr. and to "neutralize" his effectiveness as the leader of the civil rights movement. 144 On January 8, 1964, Assistant Director William C. Sullivan proposed that the FBI select a new "national Negro leader" as Dr. King's successor after the Bureau had taken Dr. King "off his pedestal":

When this is done, and it can and will be done . . . the Negroes will be left without a national leader of sufficiently compelling personality to steer them in the right direction. This is what could happen, but need not happen if the right kind of Negro leader could at this time be gradually developed so as to overshadow Dr. King and be in the position to assume the role of leadership of the Negro people, when King has been completely discredited.

I want to make it clear at once that I don't propose that the FBI in any way became involved openly as the sponsor of a Negro leader to overshadow Martin Luther King.... But I do propose that I be given permission to explore further this entire matter....

If this thing can be set up properly without the Bureau in any way becoming directly involved, I think it would not only be a great help to the FBI but would be a fine thing for the country at large. While I am not specifying at this moment, there are various ways in which the FBI could give this entire matter the proper direction and development. There are highly placed contacts of the FBI who might be very helpful to further such a step . . . . 145

The Bureau's efforts to discredit Dr. King are discussed more fully elsewhere. 146 It is, however, important to note here that some of the Bureau's efforts coincided with Dr. King's activities and statements concerning major social and political issues.

### *(iii) Exaggerating The Threat*

The Bureau also used its control over the information-gathering process to shape the views of government officials and the public on the threats it perceived to the social order. For example, the FBI exaggerated the strength of the Communist Party and its influence over the civil rights and anti-Vietnam war movements.

Opponents of civil rights legislation in the early 1960s had charged that such legislation was "a part of the world Communist conspiracy to divide and conquer our country from within." The truth or falsity of these charges was a matter of concern to the administration, Congress, and the public. Since the Bureau was assigned to compile intelligence on Communist activity, its estimate was sought and, presumably, relied upon. Accordingly, in 1963, the Domestic Intelligence Division submitted a memorandum to Director Hoover detailing the CPUSA's "efforts" to exploit black Americans, which it concluded were an "obvious failure." 147

Director Hoover was not pleased with this conclusion. He sent a sharp message back to the Division which, according to the Assistant Director in charge, made it "evident that we had to change our ways or we would all be out on the street." 148 Another memorandum was "therefore written to give the Director "what Hoover wanted to hear." 149

The memorandum stated, "The Director is correct;" it called Dr. Martin Luther King, Jr. "the most dangerous Negro of the future in this Nation from the standpoint of communism, the Negro, and national security;" and it concluded that it was "unrealistic" to "limit ourselves" to "legalistic proofs or definitely conclusive evidence" that the Communist Party wields "substantial influence over Negroes which one day could become decisive." 150

Although the Division still had not said the influence was decisive, by 1964 the Director testified before the House Appropriations Subcommittee that the "Communist influence" in the "Negro movement" was "vitaly important." "I Only someone with access to the underlying information would note that the facts could be interpreted quite differently. 151a

A similar exaggeration occurred in some of the Bureau's statements on communist influence on the anti-Vietnam war demonstrations.

In April 1965 President Johnson met with Director Hoover to discuss Johnson's "concern over the anti-Vietnam situation." According to Hoover, Johnson said he had "no doubt" that Communists were "behind the disturbances." 152 Hoover agreed, stating that upcoming demonstrations in eighty-five cities were being planned by the Students for a Democratic Society and that SDS was "largely infiltrated by communists and [it] has been woven into the civil rights situation which we know has large communist influence." 153

Immediately after the meeting, however, Hoover told his associates that the Bureau might not be able to "technically state" that SDS was "an actual communist organization." The FBI merely knew that there were "communists in it." Hoover instructed, however, "What I want to get to the President is the background with emphasis upon the communist influence therein so that he will know exactly what the picture is." The Director added that he wanted "a good, strong memorandum" pinpointing that the demonstrations had been "largely participated in by communists even though they may not have initiated them;" the Bureau could "at least" say that they had "joined and forced the issue." According to the Director, President Johnson was "quite concerned" and wanted "prompt and quick action." 154

Once again, the Bureau wrote a report which made Communist "efforts" sound like Communist success. The eight page memorandum detailed all of the Communist Party's attempts to "encourage" domestic dissent by "a crescendo of criticism aimed at negating every effort of the United States to prevent Vietnam from being engulfed by communist aggressors." Twice in the eight pages, for a total of two and a half sentences, it was pointed out that most demonstrators were not Party members and their decisions were not initiated or controlled by the communists. Each of these brief statements moreover, was followed by a qualification: (1) "however, the Communist Party, USA ... has vigorously supported these groups and exerted influence;" (2) "While the March [on Washington] was not Communist initiated ... Communist Party members from throughout the nation participated." [Emphasis added.] 155

The rest of the memorandum is an illustration of what former Assistant Director Sullivan called "interpretive" memo writing in which Communist efforts and desires are emphasized without an evaluation of whether they had been or were likely to be successful.

The exaggeration of Communist participation, both by the FBI and White House staff members relying on FBI reports, 156 could only have had the effect of reinforcing President Johnson's original tendency to discount dissent against the Vietnam War as "Communist inspired" -- a belief shared by his successor. 157 It is impossible to measure the full effect of this distorted perception at the very highest policymaking level.

#### Footnotes:

1 Remarks by Rep. Hale Boggs, 4/22/71, Congressional Record, Vol. 117, Part 9, P. 11565.

2 A "name check" is not an investigation, but a search of existing FBI files through the use of the Bureau's comprehensive general name index. Requests for FBI "name checks" were peculiarly damaging because no new investigation was done to verify allegations stored away for years in Bureau files. A former FBI official responsible for compliance with such requests said that the Bureau "answered ... by furnishing the White House every piece of information in our files on the individuals requested." Deposition of Thomas E. Bishop, former Assistant Director, Crime Records Division, 12/2/75, p. 144.)

3 Former FBI executive Cartha DeLoach, who was FBI liaison with the White House during part of the Johnson administration, has stated, "I simply followed Mr. Hoover's instructions in complying with White House requests and I never asked any questions of the White House as to what they did with the material afterwards." (DeLoach deposition, 11/25/75, p. 28.) On at least one occasion, when a White House aide indicated that President Johnson did not want any record made by the FBI of a request for a "run-down" on the links between Robert Kennedy and officials involved in the Bobby Baker investigation, the Bureau disregarded the order. DeLoach stated that he "ignored the specific instructions" in this instance because he "felt that any instructions we received from the White House should be a matter of record." (DeLoach deposition, 11/25/75, P. 89.)

Former Assistant Director Bishop stated, "Who am I to ask the President of the United States what statutory basis he has if he wants to know what Information is in the files of the FBI?" It was a "proper dissemination" because it was "not a dissemination outside the executive branch" and because there was "no law, no policy of the Department of Justice. . . . no statute of the United States that says that was not permissible." But even if there had been a statute laying down standards, Bishop said "it wouldn't have made a bit of difference . . . when the Attorney General or the President asks for it."

Bishop recalled from his "own knowledge" instances where President Kennedy, Johnson, and Nixon had "called over and asked Mr. Hoover for a memo on certain people." (Bishop deposition, 12/2/75, pp. 153-154.)

4 Memoranda from Stephen Early, Secretary to the President, to Hoover, 5/21/40 and 6/17/40.

5 FBI memorandum to Senate Select Committee, 3/26/76; See pp. 36-37.

6 Memorandum from J. Edgar Hoover to Thomas E. Stephens, Secretary to the President, 4/13/54.

7 Courtney Evans deposition, 12/1/75, p. 39.

8 See pp. 64-65. The tap authorized by Attorney General Kennedy on another high executive official was not related to political considerations, nor apparently was the tap authorized by Attorney General Katzenbach in 1965 on the editor of an anti-communist newsletter who had published a book alleging impropriety by Robert Kennedy a year earlier.

9 Memorandum from Hoover to Moyers, 10/27/64, cited in FBI summary memorandum, 1/31/75.

10 Bureau files indicate that the apparent "reason" for the "White House interest" was to determine "whether the South Vietnamese had secretly been in touch with supporters of Presidential candidate Nixon, possibly through Mrs. Chennault, as President Johnson was apparently suspicious that the South Vietnamese were trying to sabotage his peace negotiations in the hope that Nixon would win the election and then take a harder line towards North Vietnam." (FBI memorandum, subject: Mrs. Anna Chennault. 2/1/75.) The FBI has claimed that its investigation of Mrs. Chennault was "consistent with FBI responsibilities to determine if her activities were in violation of certain provisions of the Foreign Agents Registration Act and of the Neutrality Act."

Direct electronic surveillance of Mrs. Chennault was rejected, according to a contemporaneous FBI memorandum, because FBI executive Cartha DeLoach pointed out that "it was widely known that she was involved in Republican political circles and, if it became known that the FBI was surveilling her this would put us in a most untenable and embarrassing position." (Memorandum from DeLoach to Tolson, 10/30/68.)

Electronic surveillance was, however, directed at the South Vietnamese officials and was approved by Attorney General Ramsey Clark. Clark has testified that he did not know of the physical surveillance aspect of the FBI's investigation, but that he did authorize the electronic surveillance of the South Vietnamese officials. (Clark testimony, 12/3/75, Hearings, Vol. 6, p. 252.)

11 FBI executive Cartha DeLoach has stated that a White House aide made the initial request for the check of telephone company records late one night. According to DeLoach, the request was "to find out who, either Mr. Agnew or Mr. Nixon, when they had been in Albuquerque (New Mexico) several days prior to that, had called from Albuquerque while they were there." When DeLoach refused to contact the telephone company "late in the evening," President Johnson "came on the phone and proceeded to remind me that he was Commander in Chief and he should get what he wanted, and he wanted me to do it immediately." DeLoach then talked with Director Hoover, who told him to "stand your ground." The next day, however, Hoover ordered that the records be checked, but the only calls identified were "made by Mr. Agnew's staff." These were reported to the White House. (DeLoach Deposition. 11/25/75, pp. 74-75.) Agnew's arrival and departure times in and out of Albuquerque were also "verified at the request of the White House." (FBI summary memorandum, subject: Mrs. Anna Chennault, 2/1/75).

12 FBI Director Hoover brought the matter to the attention of the White House in a letter describing why the FBI had refused to "wire" the witness (there was not adequate "security") and how the Criminal Division had then used the Bureau of Narcotics to do so. (Memorandum from Hoover to Watson, 1/12/67.) This was the instance where FBI executive Cartha DeLoach made a record, after Watson told him that "the President does not want any record made." (Memorandum from DeLoach to Tolson, 1/17/67; see also FBI summary memorandum, 2/3/75.)

13 According to this memorandum, Watson told Cartha DeLoach in 1967 that "he and the President" wanted all "communications addressed to him by the Director" to be addressed instead to a lower level White House staff member. Watson told DeLoach that the "reason for this change" was that the staff member "did not have the direct connection with the President that he had and, consequently, people who saw such communications would not suspicion (sic) that Watson or the President had requested such information, nor were interested in such information." (memorandum from DeLoach to Tolson, 3/17/67.)

14 FBI summary memorandum, subject: Coverage of Television Presentation, Senate Foreign Relations Committee, 1/31/75. Former FBI executive Cartha DeLoach has stated, regarding this incident. "We felt that it was beyond the jurisdiction of the FBI, but obviously Mr. Hoover felt that this was a request by the President and he desired it to be done." (DeLoach deposition, 11/25/75, P. 58.)

15 Blind FBI memorandum, 2/10/67.

16 President Johnson's request also went beyond "legislators," and included contacts by any "prominent U.S. citizens." (FBI summary memorandum, subject: Information Concerning Contacts Between [Certain Foreign officials] and Members or Staff of the United States Congress Furnished to the White House at the Request of the President, 2/3/75.) The FBI's reports indicated that its information came "through coverage" of the foreign officials and that the Bureau, in this case, had "conducted no investigation of members of Congress." (FBI summary memorandum, 2/3/75.) FBI "coverage" apparently included electronic surveillance.

President Nixon also requested information on contacts between foreign officials and Congressmen, but his request does not appear to have related to Presidential critics. Rather, the Nixon request grew out of concern about "an increase in [foreign] interest on Capitol Hill" which had been expressed to President Nixon by at least one Senator; and the FBI's report "included two examples of [foreign] intelligence initiatives directed against Capitol Hill without identifying the [foreigners] or American involved." (FBI summary memorandum, 2/3/75.)

24 Memorandum from Hoover to Watson, 2/24/66.

25 Memorandum from Hoover to Watson, 4/6/66.

26 Memorandum from Hoover to Watson, 11/8/66; DeLoach, 12/3/75, Hearings, Vol. 6, pp. 180-182.

26a Letter from J. Edgar Hoover to John D. Ehrlichman, 10/6/69; letter from Clarence M. Kelly to Joseph Duffy, 7/14/75, enclosing FBI records transmitted under Freedom of Information Act.

27 House Judiciary Committee Hearings, Book VII, White House Surveillance Activities (1974), p. 1111.

28 According to Director Hoover's memorandum of the conversation, Agnew asked Hoover for "some assistance" in obtaining information about Rev. Abernathy. Hoover recorded: "The Vice President said he thought he was going to have to start destroying Abernathy's credibility, so anything I can give him would be appreciated. I told him I would be glad to." (Memorandum from Hoover to Tolson, et al, 5/18/70.) Subsequently, the FBI Director sent Agnew a report on Rev. Abernathy containing not only the by-product of Bureau investigations, but also derogatory public record information. (Letter from Hoover to Agnew, 5/19/70.)

29 Staff summary of Spiro Agnew interview, 10/15/75.

30 Memoranda from Sullivan to Hoover, 6/30/69 and 7/2/69.

31 Memorandum from Sullivan to DeLoach, 11/5/69. The Kraft surveillance is also discussed in Part II, pp. 121-122.

32 Coverage in these two cases was requested by neither Henry Kissinger nor Alexander Haig (as most of the "17" were), but by other White House officials. Attorney General Mitchell approved the first at the request of "higher authority." (Memorandum from Hoover to Mitchell, 7/23/69.) The second was specifically requested by H. R. Haldeman. (Memorandum from Hoover to Mitchell, 12/14/70.)

33 This tap was also apparently requested by White House officials other than Kissinger or Haig. (Memorandum from Sullivan to DeLoach, 8/1/69.) The "17" wiretaps are also discussed at p. 122.

34 DeLoach, 12/3/75, Hearing-, Vol. 6. p. 180.

35 Memorandum from Hoover to Dillon Anderson, Special Assistant to the President. 1/3/56. This report was also provided to the Attorney General, the Secretary of Defense, and military intelligence.

36 Memorandum from Hoover to Anderson, 3/2/56.

37 Memorandum from Hoover to Anderson. 3/5/56.

38 Memorandum from Hoover to Anderson, 3/6/56.

39 Memorandum from Hoover to Anderson, 3/7/56. A National Security Council staff member responsible for Internal security matters summarized these reports as providing information "regarding attempts being made by the National Association for the Advancement of Colored People to send instructed delegations to high-ranking Government officials 'to tactfully draw out their positions concerning civil rights.'" (Memorandum from J. Patrick Coyne to Anderson, 3/6/56.)

40 After consulting the Attorney General, this aide advised the Secretary to the Cabinet that the FBI had "reported developments in recent weeks in several southern States, indicating a marked deterioration in relationships between the races, and in some instances fomented by communist or communist-front organizations." (Memorandum from Anderson to Maxwell Rabb, 1/16/56.) The Secretary to the Cabinet, who had "experience in handling minority matters" for the White House, agreed that "each Cabinet Member should be equipped with the plain facts." (Memorandum from Rabb to Anderson, 1/17/56.) A National Security Council staff member who handled internal security matters reported shortly thereafter that the FBI Director was "prepared to brief the Cabinet along the general lines" of his written communications to the White House. (Memorandum from J. Patrick Coyne to Anderson, 2/1/56.)

41 Memorandum from Director, FBI, to the Executive Assistant to the Attorney General, 3/9/56, enclosing FBI memorandum described as the "basic statement" used by the Director "in the Cabinet Briefing this morning on Racial Tension and Civil Rights." For a further discussion of the exaggeration of Communist influence on the NAACP in this briefing, see pp. 250-257, note 151a.

42 The electronic surveillances were generally related to foreign affairs concerns. See pp. 64 - 65.

43 The Americans include three Agriculture Department officials, the secretary to the Chairman of the House Agriculture Committee, and two registered lobbying agents for foreign interests. For Attorney General Kennedy's relationship to the microphone surveillance of the Congressman, see p. 61, note 233. One of the wiretaps directed at a registered lobbying agent was placed on the office telephone of a Washington law firm. (See p. 201)

44 FBI memorandum, 6/15/62.

45 FBI memorandum, 6/15/62.

46 Memorandum from Hoover to Attorney General Kennedy, 2/18/61. This information came from the Bureau's "coverage" (by microphone surveillance) of the Congressman's hotel room meeting.

47 FBI memorandum, 2/15/62.

48 Memorandum from J. Edgar Hoover to Robert Kennedy, 3/13/61.

49 Memorandum from J. Edgar Hoover to Robert Kennedy, 3/13/61.

50 Memorandum from W. R. Wannall to W. C. Sullivan, 12/22/66. According to a Bureau memorandum of a meeting between Attorney General Kennedy and FBI Assistant Director Courtney Evans, Kennedy stated in April 1961 that "now the law has passed he did not feel there was justification for continuing this extensive investigation." (Memorandum from Evans to Parsons, 4/15/61.)

51 There is no clear evidence as to what President Johnson had in mind when, as a contemporaneous FBI memorandum indicates, he directed "the assignment of the special squad to Atlantic City." (DeLoach to Mohr 8/29/64) Cartha DeLoach has testified that Presidential aide Walter Jenkins made the original request to him, but that he said it should be discussed with Director Hoover and that "Mr. Jenkins or the President, to the best of my recollection, later called Mr. Hoover and asked that this be done." DeLoach claimed that the purpose was to gather "intelligence concerning matters of strife, violence, etc." which might arise out of the credentials challenge. (DeLoach, 12/3/75. hearings, Vol. 6, p. 175.)

52 The operations of the FBI in Atlantic City are described in greater detail in Section II, pp. 117-119.

53 Memorandum from DeLoach to Jenkins. 8/24/64.

54 Memorandum from DeLoach to Jenkins, 8/25/64.

55 Memorandum from DeLoach to Jenkins, 8/25/64.

56 Memorandum from DeLoach to Jenkins, 8/25/64.

57 Memorandum from DeLoach to Jenkins, 8/25/64.

58 Blind memorandum from LBJ Library bearing handwritten date 8/26/64 and the typewritten date 8/19/64, Hearings, Vol. 6, Exhibit 68-2, p. 713.

59 In at least two instances. the wiretaps continued on targets after they left the Executive Branch and became advisers to Senator Edmund Muskie, then the leading Democratic prospect for the Presidency. See Part II, p. 122.

60 Memorandum from Hoover to Nixon, Kissinger, and Mitchell, 10/9/69.

61 Memorandum from Hoover to Nixon and Kissinger, 12/3/69.

62 Memorandum from Hoover to Nixon and Kissinger, 2/26/70.

63 Memorandum from Hoover to H. R. Haldeman, 6/2/70.

64 Memorandum from Hoover to Haldeman. 9/4/70.

65 Memorandum from Hoover to Nixon and Kissinger, 7/18/69.

66 Memorandum from Hoover to Haldeman, 5/18/70.

67 Memorandum from Hoover to Haldeman, 6/23/70.

68 Memorandum from Hoover to Haldeman, 11/24/70.

69 Memorandum from Hoover to Haldeman, 12/22/70.

70 Memorandum from Hoover to Nixon, Kissinger, and Mitchell, 12/29/69.

71 Memorandum from Magruder to Haldeman and Ehrlichman, 1/15/70. Ehrlichman advised Haldeman, "This is the kind of early warning we need more of your game planners are now in an excellent position to map anticipatory action." (Memorandum from "E" (Ehrlichman) to "H" (Haldeman), undated.) Haldeman responded, "I agree with John's point. Let's get going." (Memorandum from "H" to "M" (Magruder), undated.)

72 Report of the House Judiciary Committee, 8/20/74, p. 147.

73 It should be noted, however, that in at least one case the Bureau did distinguish between political and non-political information. In 1968, when an aide to Vice President Humphrey asked that a "special squad" be sent to the Democratic National Convention in Chicago, Director Hoover not only declined, but he also specifically instructed the SAC in Chicago not "to get into anything political" but to confine his reports to "extreme action or violence." (Memorandum from Hoover to Tolson., et al, 8/15/68.) There were no comparable instructions at Atlantic City.

74 Former Attorney General Francis Biddle recalled in his autobiography how J. Edgar Hoover shared with him some of the "intimate details" of what his fellow Cabinet members did and said, "their likes and dislikes, their weaknesses and their associations." Biddle confessed that he enjoyed hearing these derogatory and sometimes "embarrassing" tidbits and that Hoover "knew how to flatter his superior." (Francis Biddle, *In Brief Authority* [Garden City: Doubleday, 1962], pp. 258-259.)

A former FBI official has described one aspect of the Bureau's practice:

"Mr. Hoover would say what do we have in our files on this guy? Just what do we have? Not blind memorandum, not public source information, everything we've got. And we would maybe write a 25 page memo. When he got it and saw what's in it, he'd say we'd better send that to the White House and the Attorney General so they can have in one place everything that the FBI has now on this guy. . . . (Bishop deposition, 12/2/75, pp. 141-142.)"

75 None of these letters indicate that they were in response to requests, as is the case with other similar letters examined by the Committee. All were volunteered as matters which Director Hoover considered to be "of interest" to the recipients.

76 Memorandum from Hoover to Vaughn, 2/15/47.

77 Memorandum from Hoover to Connelly, 1/27/50.

78 Memorandum from Hoover to Anderson, 4/21/55.

79 Memorandum from Hoover to Cutler, 2/13/58.

80 Memorandum from Hoover to Robert Kennedy, 11/20/63.

81 Memorandum from Hoover to Robert Kennedy, 2/10/61.

82 Memorandum from Hoover to Watson, 1/9/67.

83 For additional examples, See Section II, pp. 51-53.

84 Staff memorandum: Review of INLET letters, 11/18/75.

85 Memorandum from FBI Headquarters to all SAC's, 11/26/69.

86 Memorandum from Bassett to Callahan, 1/29/75.

87 Former FBI official Mark Felt has stated that the SAC's could have sent personal letters to Hoover containing such "personal tidbits" "to curry favor with him," and on one occasion he did so himself with respect to a "scandalous" incident. (W. Mark Felt testimony, 2/3/76, p. 91.)

The following excerpt from one SAC's letter is an example of political information fed to the Director: "I have heard several comments and items which I wanted to bring to your attention. As I imagine is true in all States at this time, the political situation in [this state] is getting to be very interesting. As you know, Senator [deleted] is coming up for re-election as is Representative [deleted]. For a long time it appeared that [the Senator] would have no opposition amount to anything in his campaign for re-election. The speculation and word around the State right now is that probably [the Representative] will file for the U.S. Senate seat now held by [the Senator]. I have also been informed that [the Senator's] forces have offered [the Representative] \$50,000 if he will stay out of the Senate race and run for re-election as Congressman." (Letter from SAC to Hoover, 5/20/64.)

88 Letter from Attorney General McGrath to President Truman, 12/7/49; letter from Hoover to Vaughn, 1/14/50.

89 Memorandum from Hoover to Rogers, 5/25/60.

90 Bishop deposition, 12/2/75, p. 211. Bishop stated that he acted on his own, rather than at the direction of higher Bureau executives. However, Director Hoover did have a memorandum prepared on the reporter summarizing everything in the Bureau's files about him, which he referred to when he met with the reporter's superiors. (Bishop deposition, 12/2/75, p. 215.)

91 Memorandum from Executives Conference to Hoover, 1/4/50. Early examples included historian Henry Steele Commager, "personnel of CBS," and former Interior Secretary Harold Ickes. (Memorandum from Mohr to Tolson, 12/21/49.) By the time it was abolished in 1972, the list included 332 names, including mystery writer Rex Stout, whose novel "The Doorbell Rang" had "presented a highly distorted and most unfavorable picture of the Bureau." (Memorandum from M. A. Jones to Bishop, 7/11/72.)

92 Bishop deposition, 12/2/75, p. 207.

93 The field office was also expected to send to headquarters any additional allegations about the Congressman or Governor which might come to its attention in future investigations, even if the Congressman or Governor was not himself the "subject" of the investigation. (Bishop deposition, 12/2/75, pp. 194-200.)

94 Bishop deposition, 12/2/75, pp. 206-7.

95 The FBI is not the only agency believed to have files on Congressmen. According to Rep. Andrew Young, "in the freshman orientation" of new House members, "one of the things you are told is that there are seven agencies that keep files on private lives of Congressmen." (Rep. Andrew Young testimony, 2/19/76, P. 48.)

96 Remarks by Rep. Hale Boggs, House of Representatives, 4/22/71, Congressional Record, Vol. 117, Part 9, p. 11562.

97 The means used are discussed in the finding on "Covert Action to Disrupt and Discredit Domestic Groups", as well as the Detailed Reports on COINTELPRO, Dr. Martin Luther King, Jr., and the Black Panther Party.

98 Memorandum from FBI Headquarters to New York Field Office, et al., 8/13/63.

99 Memorandum from FBI Headquarters to San Francisco Field Office, 11/11/65

100 Memorandum from FBI Headquarters to New York Field Office et al., 3/9/66.

101 Memorandum from FBI headquarters to Chicago Field Office 8/28/68.

102 Memorandum from FBI Headquarters to Minneapolis Field Office, 11/4/68.

103 Memorandum from San Antonio Field Office to FBI Headquarters, 8/12/68; memorandum from FBI Headquarters to San Antonio Field Office, 8/27/68.

104 The field office also disapproved of the "hippy types" distributing the newspaper, with their "unkempt clothes", "wild beards", and "other examples of their nonconformity". Accordingly, an anonymous letter was sent to a state legislator protesting the distribution of such "depravity" at a state university, noting that "this is becoming a way of campus life. Poison the minds of the young, destroy their moral being, and in less than one generation this country will be ripe for its downfall." (Memorandum from New York Field Office to FBI Headquarters, 5/23/69; memorandum from FBI Headquarters to Newark Field Office, 1/69.

105 The Crime Records Division also had responsibility for disseminating information to cultivate a favorable public image for the FBI -- a practice common to many government agencies. This objective was pursued in various ways. One section of the Crime Records Division was assigned to assemble "material that was needed for a public relations program." This section "developed information for television shows, for writers, for authors, for newspapermen, people who wanted in-depth information concerning the FBI." The section also "handled scripts" for public service radio programs produced by FBI Field Offices; reviewed scripts for television and radio shows dealing with the FBI; and handled the "public relations and publicity aspect" of the "ten most wanted fugitives program." The Bureau attempted to assert control over media presentations of information about its activities. For example, Director Hoover's approval was necessary before the Crime Records Division would cooperate with an author intending to write a book about the FBI (Bishop testimony, 12/2/75, pp. 6-8, 18.)

106 Memoranda recommending use of the media for COINTELPRO purposes sometimes bore the designation "Mass Media Program," which appeared merely to signify the function of the Crime Records Division as a "conduit" for disseminating information at the request of the Domestic Intelligence Division. (Bishop testimony, 12/2/75, pp. 63, 68, 88.) The dissemination of derogatory information to the media was usually reviewed through the Bureau's chain of command and received final approval from Director Hoover. (Bishop testimony, 12/2/75, p. 89.)

107 For example, Memorandum from FBI Headquarters to Atlanta Field Office, 10/22/68.

108 Bishop, 12/2/75, p. 33.

109 Cartha DeLoach, who handled media contacts for several years, testified that this technique was not actually used as much as the Director desired:

If any unfair comment appeared in any segment of the press concerning Mr. Hoover or the FBI ... Mr. Hoover ... would say do not contact this particular newspaper or do not contact this person or do not cooperate with this person.... If I had complied strictly to the letter of the law to Mr. Hoover's instructions, I think I would be fair in saying that we wouldn't be cooperating with hardly a single newspaper in the United States.... The men down through the years had to overlook some of those instructions and deal fairly with all segments of the press. (DeLoach testimony, 11/25/75, pp. 213-214.)

110 Bishop stated that the Crime Records Division was "scrupulous" in providing information which could be cited to a "page and paragraph" in a public source. (Bishop, 12/2/75, pp. 24, 177-178.)

111 Bishop, 12/2/75, pp. 135-136.

112 T. E. Bishop stated that from the FBI documents available to the Committee, it was impossible to determine whether an article was actually printed after a news release or a draft article had been supplied to a media source. (Bishop, 12/2/75, p. 86.)

113 Memorandum from C. D. Brennan to W. C. Sullivan, 5/22/68.

114 Memorandum to Director from SAC Miami, 3/10/70. Bishop testified that he "would hope" that in response to the directive to disseminate the target's "arrest record" the Division would have disseminated only conviction records. Bishop said that under the Attorney General's guidelines then in effect only conviction records or arrests which were a matter of public record in a particular jurisdiction were to be disseminated. Bishop stated that his policy was not to disseminate an arrest record "especially if that arrest record resulted in an acquittal or if the charge was never completed ... because that is not, to my mind, anything derogatory against a guy, until he actually gets convicted." (Bishop testimony, 12/2/75, pp. 163-167, 173.)

115 Memorandum from FBI Headquarters to Boston Field Office, 1/13/68.

116 Memorandum from FBI Headquarters to Boston Field Office, 2/27/68.

117 Memorandum from Tampa Field Office to FBI Headquarters, 2/7/69.

118 Deposition of Black Nationalist COINTELPRO supervisor, 10/17/75, p. 21; Deposition of George C. Moore, Chief of the Racial Intelligence Section, 11/3/75, p. 36.

119 Memorandum from F. J. Baumgardner to W. C. Sullivan, 6/3/63.

120 Memorandum from F. J. Baumgardner to W. C. Sullivan, 8/9/65.

121 Memorandum from F. J. Baumgardner to W. C. Sullivan, 2/24/64.

122 Memorandum from New York Field Office to FBI Headquarters, 10/16/68.

123 Memorandum from G. C. Moore to W. C. Sullivan, 10/26/68.

124 Memorandum from FBI Headquarters to Miami Field Office, 7/9/68.

125 Memorandum from G. C. Moore to W. C. Sullivan, 5/17/76.

126 Memorandum from FBI Headquarters to Atlanta Field Office, 10/22/68.

127 Memorandum from Chicago Field Office to FBI Headquarters, 6/18/69.

128 Memorandum from FBI Headquarters to Indianapolis Field Office, 6/17/68.

129 FBI Memorandum from Bishop to Mohr, 7/6/71; Bishop testimony, 12/2/75, pp. 148-151.

Two years earlier the Crime Records Division prepared a sixteen-page memorandum containing information on "Leonard B. Boudin, Attorney for Dr. Benjamin Spock," written at the time of Spock's indictment for conspiring to violate the Selective Service Act. (FBI Memorandum from M. A. Jones to T. E. Bishop, 2/26/68) The memorandum described "alleged associations and activities of Boudin" related to organizations or individuals considered "subversive" by the FBI, (Bishop, 12/2/75, pp. 134-135) and included: names of many of Boudin's clients; citations to magazines and journals in which Boudin had published articles; references to petitions he had signed; and notes on rallies and academic conferences at which he had spoken. The memorandum indicated that "the White House and Attorney General have been advised" of the information on Boudin's background. Notations on the cover sheet of the memorandum by high Bureau officials indicate that approval was granted for "furnishing the attached information to one of our friendly news contacts" but the information was not used until after the "results of appeal in Spock's case." Bishop did not recall distributing the Boudin memorandum. (Bishop, 12/2/75, pp. 125-126)

The head of the Crime Records Division speculated that the memorandum was prepared at the request of a reporter because he did not remember a request from Hoover or from the Domestic Intelligence Division, which was the normal route for assignments to the Crime Records Division. Division Chief Bishop testified that he probably instructed the Division "to get up any public source information that we have concerning Boudin that shows his connection with the Communist Party or related groups of that nature." (Bishop, 12/2/75, pp. 131-133)

130 Memorandum from W. H. Stapleton to C. D. DeLoach, 11/5/64.

131 Memorandum from Cleveland Field Office to FBI Headquarters, 10/28/64; memorandum from FBI Headquarters to Cleveland Field Office, 11/6/64.

132 Memorandum from FBI Headquarters to Phoenix Field Office, 6/11/68.

133 Memorandum from FBI Headquarters to New York Field Office, 2/4/64.

134 The target was not intended to be the United Farm Workers, but a local college professor expected to participate in the picket line. The Bureau had unsuccessfully directed "considerable efforts to prevent hiring" the professor. Apparently, the Bureau did not consider the impact of this technique on the United Farm Workers' efforts. (Memorandum from San Francisco Field Office to FBI Headquarters, 9/12/68; memorandum from FBI Headquarters to San Francisco Field Office, 9/13/68.)

135 Memorandum from San Francisco Field Office to FBI Headquarters, 4/16/64.

136 Memorandum from San Francisco Field Office to FBI Headquarters, 3/10/67; memorandum from FBI Headquarters to San Francisco Field Office, 3/14/67.

138 Memorandum from Chicago Field Office to FBI Headquarters, 6/1/67. Memorandum from FBI Headquarters to all SAC's, 10/12/61.

139 Memorandum from Detroit Field Office to FBI Headquarters, 9/1/65; memorandum from FBI Headquarters to Detroit Field Office, 9/22/61,

140 Memorandum from Detroit Field Office to FBI Headquarters, 9/28/65; memorandum from FBI Headquarters to Detroit Field Office, 10/1/65.

141 Memorandum from Detroit Field Office, to FBI Headquarters, 1/19/67.

142 Memorandum from FBI Headquarters to San Antonio Field Office, 11/14/66. The attempt was unsuccessful; a prior raid on a fire department's fund raiser had angered the local District Attorney, and the ABC decided not to raid the Democrats because of "political ramifications."

143 The originating document for the "Black Nationalist" COINTELPRO ordered field offices to "expose, disrupt, misdirect, discredit, or otherwise neutralize" the "leadership" and "spokesmen" of the target groups. The "New Left" originating memo called for efforts to "neutralize" the New Left and the "Key Activists," defined as "those individuals who are the moving forces behind the New Left;" the letter to field offices made it clear that the targets were the "leadership" of the "New Left" -- a term which was never defined. (Memorandum from FBI Headquarters to all SAC's, 8/25/67.)

144 Memorandum from Brennan to Sullivan, 5/9/68; memorandum from FBI Headquarters to all SAC's, 5/10/68.

145 Memorandum from Sullivan to Belmont, 1/8/64. Although this proposal was approved by Director Hoover, there is no evidence that any steps were taken to implement the plan.

146 See Martin Luther King, Jr. Report: Sec. V, The FBI's Efforts to Discredit Dr. Martin Luther King: 1964, Sec. VII, The FBI Program Against Dr. King: 1965-1968.

147 Memorandum from Baumgardner to Sullivan, 8/23/63, p. 1.

148 Sullivan deposition, 11/1/75, p. 20.

149 Sullivan deposition, 11/1/75, p. 29.

150 Memorandum from Sullivan to, Director, FBI, 8/30/63. Sullivan described this process of "interpretive" memo writing to lead a reader to believe the Communists were influential without actually stating they were in control of a movement: "You have to spend years in the Bureau really to get the feel of this.... You came down here to 'efforts', these 'colossal efforts'. That was a key word of ours when we are getting around the facts.... You will not find anywhere in the memorandum whether the efforts were successful or unsuccessful.... Here is another one of our words that we used to cover up the facts, 'efforts to exploit', that word 'exploit'. Nowhere will you find in some of these memos the results of the exploitation. [Like] 'planning to do all possible', you can search in vain for a statement to the effect that their plans were successful or unsuccessful, partly successful or partly unsuccessful." (Sullivan, 11/1/75, pp. 15-16.)

151 Hearings before the House Appropriations Subcommittee, 88th Cong., 2d Sess. (1964), p. 309. Director Hoover's statement was widely publicized. (E.g., "Hoover Says Reds Exploit Negroes," New York Times, 4/22/64, p. 30) it caused serious concern among civil rights leaders who feared that it would hurt the prospects for passage of the 1964 civil rights bill.

151a Director Hoover had included similar exaggerated statements about Communist influence in a briefing to the Eisenhower Cabinet in 1956. Hoover had stated, regarding an NAACP-sponsored conference:

"The Communist Party plans to use this conference to embarrass the Administration by causing a rift between the Administration and Dixiecrats who have supported it, by forcing the Administration to take a stand on civil rights legislation

with the present Congress. The Party hopes through a rift to affect the 1956 elections." [Emphasis added.] (Memorandum from Director, FBI, to the Executive Assistant to the Attorney General, 3/9/56, and enclosure.)

Director Hoover did not include in his prepared briefing statement the information reported to the White House separately earlier that there was "no indication" the NAACP had "allowed the Communist Party to infiltrate the conference." (Hoover to Dillon Anderson, Special Assistant to the President, 3/5/56.) According to one historical account, Hoover's Cabinet briefing "reinforced the President's inclination to passivity" on civil rights legislation. (J. W. Anderson, Eisenhower, Brownell, and the Congress: The Tangled Origins of the Civil Rights Bill of 1956-57 [University of Alabama Press, 1964], p. 34.)

152 Memorandum from Hoover to subordinate FBI officials, 4/28/65.

153 Hoover memorandum, 4/28/65.

154 Hoover memorandum, 4/28/65.

155 Letter from Hoover to McGeorge Bundy, Special Assistant to the President (National Security), 4/28/65, enclosing FBI memorandum, Subject: Communist Activities Relative to United States Policy on Vietnam.

156 See, e.g., a memorandum from Marvin (Watson) to the President, 5/16/67, quoting from a Bureau report that: "the Communist Party and other organizations are continuing their efforts to force the United States to change its present policy toward Vietnam."

157 The report prepared by the intelligence agencies as the basis for the 1970 "Huston Plan" included the following similar emphasis on the potential threat (and downplaying of the actual lack of success) :

"Leaders of student protest groups" who traveled abroad were "considered to have potential for recruitment and participation in foreign-directed intelligence activity."

"Antiwar activists" who had "frequently traveled abroad" were considered "as having potential for engaging in foreign directed intelligence collection."

The CIA was "of the view that the Soviet and bloc intelligence services are committed at the political level to exploit all domestic dissidents wherever possible."

Although there was "no hard evidence" of substantial foreign control of "the black extremist movement," there was "a marked potential" and the groups were "highly susceptible to exploitation by hostile foreign intelligence services." "Communist intelligence services are capable of using their personnel, facilities, and agent personnel to work in the black extremist field."

While there were "no substantial indications that the communist intelligence services have actively fomented domestic unrest," their "capability" could not "be minimized."

"The dissidence and violence in the United States today present adversary intelligence services with opportunities unparalleled for forty years." [Emphasis added.] (Special Report, Interagency Committee on Intelligence (Ad Hoc), June 1970; substantial portions of this report appear in Hearings, Vol. 2, pp. 141-188.)

# INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS

## BOOK II

### FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS

APRIL 26 (legislative day, April 14), 1976

#### F. INADEQUATE CONTROLS ON DISSEMINATION AND RETENTION

##### MAJOR FINDING

The Committee finds that the product of intelligence investigations has been disseminated without adequate controls. Reports on lawful political activity and law-abiding citizens have been disseminated to agencies having no proper reason to receive them. Information that should have been discarded, purged, or sealed, including the product of illegal techniques and overbroad investigations, has been retained and is available for future use.

##### *Subfindings*

- (a) Agencies have volunteered massive amounts of irrelevant information to other officials and agencies and have responded unquestioningly in some instances to requests for data without assuring that the information would be used for a lawful purpose.
- (b) Excessive dissemination has sometimes contributed to the inefficiency of the intelligence process itself.
- (c) Under the federal employee security program, unnecessary information about the political beliefs and associations of prospective government employees has been disseminated.
- (d) The FBI, which has been the "clearinghouse" for all domestic intelligence data, maintains in readily accessible files sensitive and derogatory personal information not relevant to any investigation, as well as information which was improperly or illegally obtained.

##### *Elaboration of Findings*

The adverse effects on privacy of the Overbreadth of domestic intelligence collection and of the use of Intrusive Techniques have been magnified many times over by the dissemination practices of the collecting agencies. Information which should not have been gathered in the first place has gone beyond the initial agency to numerous other agencies and officials, thus

compounding the original intrusion. The amount disseminated within the Executive branch has often been so voluminous as to make it difficult to separate useful data from worthless detail.

The Committee's finding on Political Abuse describes dissemination of intelligence for the political advantage of high officials or the self-interest of an agency. The problems of excessive dissemination, however, include more than political use. Dissemination has not been confined to what is appropriate for law enforcement or other proper government purposes. Rather, any information which could have been conceived to be useful was passed on, and doubts were generally resolved in favor of dissemination. Until recently, none of the standards for the exchange of data among agencies has taken privacy interests into account. The same failure to consider privacy interests has characterized the retention of data by the original collecting agency.

*Subfinding (a)*

Agencies have volunteered massive amounts of irrelevant information to other officials and agencies and have responded unquestioningly in some instances to requests for data without assuring that the information would be used for a lawful purpose.

The following examples illustrate the extent of dissemination:

-- FBI reports on dissident Americans flowed to the CIA at a rate as high as 1,000 a month. CIA officials regarded any names in these reports as a standing requirement from the FBI for information about those persons. 1

-- In 1967 the Internal Security Division of the Justice Department was receiving 150 reports and memoranda a day from the FBI on "organizations and individuals engaged in agitational activity of one kind or another." 2

-- Attorney General Ramsey Clark could not "keep up with" the volume of FBI memoranda coming into him and to the Assistant Attorneys General on the 700,000 FBI investigations per year. 3

-- The Justice Department's IDIU sent its computer list of 10,000 to 12,000 American dissidents to the CIA's Operation CHAOS (which apparently found it useless) and to the Special Service Staff of the Internal Revenue Service which did use it as part of its program of tax investigations). 4

-- In fiscal year 1974 alone, the FBI, the Civil Service Commission, and military intelligence received over 367,000 requests for "national agency checks," or name checks of their files, on prospective federal government employees. 5

The information disseminated to other agencies has often been considered useless by the recipients. FBI officials have said they received "very little in the way of good product" from the National Security Agency's interception of the international communications of Americans. 6 FBI officials also considered most of the material on "the domestic scene" sent to them from the CIA mail opening project to be irrelevant "junk." 6a The Secret Service destroyed over ninety percent of the information disseminated to it by the FBI without ever putting it in its own intelligence files. 7 Defense Department directives require the destruction of a great deal of information it receives from the FBI about civilians considered "threatening" to the military, including reports on civilian "subversion." 8

Sometimes dissemination has become almost -air end in itself. The FBI would often anticipate what it considered to be the needs of other "appropriate agencies." 9 The Bureau has disseminated data to military intelligence agencies, regardless of whether or not there was likely to be serious violence requiring the dispatch of troops; the Bureau also disseminated information when there was no connection between the subject of the report and any military personnel or facility. 10 Consequently, the computerized and non-computerized domestic intelligence data banks compiled by the Continental Army Command cited the FBI as "data source" for about 80 percent of the information where a source was identified. 11

FBI dissemination to the military has shown how information can get into the hands of agencies which have no proper reason to receive it. 12

The FBI disseminated a large volume of information on domestic political activities to the CIA, thus providing a substantial part of the data for the CHAOS program. 13 Much of this information was also furnished to the State Department." The FBI sometimes disseminated reports to the CIA and the State Department if the subject matter involved public discussion of national security policy and possible "subversive" influence. 15

The FBI was also the largest source of political targets for tax investigations by the Special Service Staff of the Internal Revenue Service. While still in its formative days, SSS was placed on the FBI's distribution list in response to a request from an Assistant IRS Commissioner for information regarding:

various organizations of predominantly dissident or extremist nature and/or people prominently identified with those organizations. 16

The FBI, perceiving that SSS would "deal a blow to dissident elements," 17 decided to supply reports relating to this broad category of individuals and organizations.

The FBI did not select the reports it forwarded on the basis of the presence of a probable tax violation, but on the basis of the political and ideological criteria IRS had supplied-, yet the furnishing of the report resulted in establishment of an SSS file and,

subject to resource limitations, to a review of possible tax liability. 18 Among the other lists of "extremists," "subversives" and dissidents SSS received was a list of 2,300 organizations the FBI categorized as "Old Left," "New Left," and "Right Wing." 19

One reason for the Bureau's widespread dissemination of intelligence throughout the Executive branch was recalled by a former FBI official. In the late 1940s a sensitive espionage case involved a high government official. At that time the FBI held such information "very tightly," as it had during World War II. However, one item of information that "became rather significant" had allegedly "not been disseminated to the White House or the Secretary of State."

Mr. Hoover was criticized for that, and frankly, he never forgot it. From then on, you might say, the policy was disseminate, disseminate, disseminate. 20

This testimony illustrates the dilemma of an agency which was blamed for inadequate dissemination, but never criticized for too much dissemination. In practice, this dilemma was resolved by passing on any information "which in any way even remotely suggested that there was a responsibility for another agency." 21

The following are examples of excessive dissemination, drawn from a random sample of materials in FBI headquarters files:

-- In 1969 the FBI disseminated to Army and Air Force intelligence, Secret Service, and the IDIU a report on a Black Student Union; the report which discussed "a tea" sponsored by the group to develop faculty-student "dialogue" as a junior college and the plans of the college to establish a course on "The History of the American Negro." There was no indication of violence whatsoever. Dissemination to the military intelligence agencies and Secret Service took place both at the field level and at headquarters in Washington, D.C. The information came from college officials. 22

-- In 1970 the FBI disseminated to military intelligence and the Secret Service (both locally and at Headquarters), as well as to the Justice Department (IDIU, Internal Security Division, and Civil Rights Division) a report received from a local police intelligence unit on the picketing of a local Industries of the Blind plant by "blind black workers" who were on strike. The sixteen-page report included a copy of a handbill distributed at a United Church of Christ announcing a meeting at the church to support the strike, as well as copies of "leaflets that had been distributed by the blind workers." The only hint of violence in this report was the opinion of a local police intelligence officer that "young black militants," who supported the strike by urging blacks to boycott white-owned stores in the community, might cause "confrontations that might result in violence." 23

-- The FBI disseminated a report on Dr. Carl McIntyre's American Christian Action Council to the Secret Service in 1972. The cover memorandum to Secret Service indicated that the group fell within the category of the FBI-Secret Service agreement described as "potentially dangerous because of background, emotional instability or activity in groups engaged in activities inimical to U.S." The report itself reflected no "activities inimical to" the country, but only plans to hold peaceful demonstrations. The report also discussed policies and activities of the group unrelated to demonstrations, including plans to enter lawsuits in "school busing" cases, opposition to "Nixon's China trip" and support for a constitutional amendment for "public school prayer." This data came from a Bureau informant. 24

-- In 1966 the FBI disseminated to the Army, Navy, and Air Force intelligence divisions, to the Secret Service (locally and at Headquarters), to the Justice Department and to the State Department a ten-page report on a "Free University." The report described in detail the courses offered, including such subjects as "Modern Film," "Workshop on Art and Values," "Contemporary Music," "Poetry Now," and "Autobiography and the Image of Self." Over thirty "associates" were listed by name, although only one was identified as having "subversive connections" (and his course had been "dropped because not enough students had registered.") Others were identified as "involved in Vietnam protest activities" or as being known to officials of a nearby established university as "problem people." The information came from several FBI informants and a confidential source. 25

-- In 1966 the FBI disseminated to "appropriate federal and local authorities," including military intelligence, Secret Service, the Department of State and Justice, and a campus security officers (who was a former FBI agent) a report on a group formed for "discussion on Vietnam." The "controlling influence" on the organization was said to be "the local Friends Meeting." Only one person characterized as "subversive" was active in the group. The report was devoted to describing a "speak out" demonstration attended by approximately 300 persons on a university campus. The gathering was entirely peaceful and included "speakers who supported U.S. policies in Viet Nam." The data came from two Bureau informants. 26

-- In 1969 the FBI disseminated reports to the White House, the CIA, the State Department, the three military intelligence agencies, Secret Service, the IDIU, the Attorney General, the Deputy Attorney General, and the Internal Security and Civil Rights Divisions on a meeting sponsored by a coalition of citizens concerned about the Anti Ballistic Missile. The only indication of "subversive" influence was that one woman married to a Communist was assisting in publicity work for the meeting. The reports described (from reliable FBI sources) the speakers, pro and con, including prominent scientists, academics, and a Defense Department spokesman. 27

-- In 1974 the FBI disseminated to the State Department, the Defense Intelligence Agency, the Secret Service, the Internal Security Division, and the Civil Disturbance Unit (formerly IDIU), extensive reports on a national conference on amnesty for war resisters. One of the participants had "recently organized [a] nonviolent protest demonstration" during a visit by President Ford, two others were identified as draft evaders, and the Vietnam Veterans Against the War were active at the conference. But the report went much further to describe -- based on information from FBI informants -- the activities of religious, civil liberties, and student groups, as well as "families of men killed in Vietnam" and congressional staff aides. 28

-- In 1974 the FBI disseminated a report on a peaceful vigil in the vicinity of the Soviet Embassy in support of the rights of Soviet Jews, not just to the Secret Service and the Justice Department's Civil Disturbance Unit, but also to the CIA and the State Department. 29

-- In 1972 the FBI disseminated a report to the CIA, Army and Navy intelligence, and an un-named "U.S. Government agency which conducts security-type investigations" in West Germany (apparently a military intelligence agency). The latter agency had asked the Bureau for information about an antiwar reservist group and a project to furnish "legal advice to GI's and veterans." The report described not only the reservists group, but also "a group dedicated to giving free legal aid to servicemen" and "an antiwar political group" which endorsed "political candidates for office who have a solid peace position and a favorable chance of being elected." The three groups "planned to share offices." This data came from a Bureau informant. 30

The FBI does have an obligation to disseminate to local law enforcement agencies information about crimes within their jurisdiction. Nevertheless, there has been improper dissemination to local police under at least two Bureau programs. Such dissemination occurred under COINTELPRO, as part of the FBI's effort to discredit individuals or disrupt groups. 31 Others were in response to local police requests for "public source" information relating to "subversive matters." 32 Experienced police officials confirmed that the term "subversive" is so broad that it inevitably leads to dissemination about political beliefs. 33

Other executive agencies have also engaged in excessive dissemination. The Justice Department's Inter-Division Information Unit (IDIU) sent its computerized data to the CIA, in order that the CIA could check its records on foreign travel of American dissidents. 34 The IDIU sent the same material to the Internal Revenue Service's Special Service Staff, which used the information as part of its program for initiating tax audits. 35 The Internal Revenue Service itself disseminated tax returns or related tax information to the CIA, the FBI, and the Justice Department's Internal Security Division (which also made requests on behalf of the FBI), without ascertaining whether there was a proper basis for the request or the purpose for which the information would be used. 36

#### *Subfinding (b)*

Excessive dissemination has sometimes contributed to the inefficiency of the intelligence process itself.

The dissemination of large amounts of relatively useless or totally irrelevant information has reduced the efficiency of the intelligence process. It has made it difficult for decision-makers to weigh the importance of reports. 37 Agencies such as the FBI have collected intelligence, not because of its own needs or desires, or because it had been requested to do so, but because the data was assumed to be of value to someone else. Units established to screen and evaluate intelligence have encouraged, rather than reduced, further dissemination.

In some instances the FBI has disseminated information to local police in a manner that was counterproductive to effective law enforcement. One former police chief has described how the Bureau, under "pressure" from the White House to prepare for a specific demonstration, "passed on information in such a way that it was totally useless" because it was not "evaluated" and thus exaggerated the dangers. 38 The need for prior evaluation of the significance of raw intelligence has not been fully recognized in the Bureau's policy for dissemination of data on protest demonstrations. 39

The impediments to accurate intelligence collection have been augmented by the dissemination practices of some local law enforcement agencies. An example is the report on the Chicago Police Department's Security Section, which has been described as having passed "inherently inaccurate and distortive data" to federal intelligence agencies. 40 The General Accounting Office has confirmed that this is a general problem. 41 While the Committee has not examined local law enforcement intelligence, the dissemination practices of such agencies require as much careful control as federal agencies. 42

The assumption that some other agency might need information has not only produced excessive dissemination, but has also served as a specific rationale for collection of intelligence that was not otherwise within an agency's jurisdiction. The best example is the FBI's collection of intelligence on "general racial matters" for the military. 43

One of the ironies in the recent history of domestic intelligence was that the Justice Department's IDIU, which was set up to collate and evaluate the massive amounts of data flowing to the Justice Department from the FBI, contributed to even more extensive collection and dissemination. 44 The IDIU encouraged numerous federal agencies (including many without regular investigative functions) to disseminate information to it about "organizations and individuals" who might "instigate" or "prevent" civil disorders. 45

#### *Subfinding (c)*

Under the federal employee security program, unnecessary information about the political beliefs and associations of prospective government employees has been disseminated.

For nearly thirty years the federal employee security program has required a "national agency check" of the files of several government agencies, including the FBI, the Civil Service Commission, and military intelligence, on prospective employees. 46 Although there was often no information to report, federal agencies received "name check" reports on all candidates for employment. This appears to have been the single largest source of regular dissemination of data in intelligence files.

These name check reports have provided information from intelligence files not only about possible criminal activity or personal weaknesses of the individual, but also about lawful political activity and association. Until recently the Executive Order on employee security required reports on any "association" with a person or group supporting "subversive" views. These reports have been required for every federal employee, regardless of whether he or she holds a sensitive position or has access to classified information. 47

It has been the policy of the FBI, and presumably other agencies as well, to disseminate via name check reports any information in its files -- no matter how old or how unreliable -- which might relate to the standards of the Executive Order. 48 The current criteria have been substantially narrowed: the basic standards for reporting are group membership and potential criminal conduct. 49 However, the Justice Department has advised the FBI that "it is not possible to set definite parameters" for organizations and that the Bureau should include those with a "potential" for meeting the criteria. 50 The FBI does not determine whether or not the information it furnishes is decisive under these standards. Departmental instructions state:

It is not the Bureau's responsibility to determine whether the information is or is not of importance to the particular agency in the carrying out of its current activities and responsibilities, and whether or not any action is taken by the department or agency is not, of course, a principal concern of the Bureau. 51

The FBI itself has expressed misgivings about the breadth of its responsibilities under the employee security program. It has continued to seek "clarification" from the Justice Department, and it has pointed out that there have been no "adverse actions" taken against current or prospective Federal employees under the loyalty and security provisions of the Executive Order "for several years." This has been due to the fact "that difficulties of proof imposed by the courts in loyalty and security cases have proved almost insurmountable." 52

The employee security program has served an essential function in full background investigation and name checks for those having access to classified information. But its extension to vaguely-defined "subversives" in nonsensitive positions has gone beyond the Government's proper need for information on the suitability of persons for employment. 53

#### *Subfinding (d)*

The FBI, which has been the "clearinghouse" for all domestic intelligence data, maintains in readily accessible files sensitive and derogatory personal information not relevant to any investigation, as well as information which was improperly or illegally obtained.

In recent years, the Secret Service, military intelligence, and other agencies have instituted significant programs for the destruction or purging of useless information. 54 However, the FBI has retained its vast general files, accumulated over the years under its duty to serve as a "clearinghouse" for domestic intelligence data. 55 There are over 6,500,000 files at FBI headquarters; and the data is retrievable through a general index consisting of over 58,000,000 index cards. Each Bureau Field Office has substantial additional information in its files. Domestic intelligence information included in the general index is described by the FBI as:

associates and relatives of the subject; members of organizations under investigation or deter-mined to be possible subversive individuals contributing funds to subversive-type activity; subversive or seditious publications; writers of articles in subversive or seditious publications - bookstores specializing in subversive-type publications and related types of information. 56

The Committee has found that there are massive amounts of irrelevant and trivial information in these files. 57 The FBI has kept such data in its filing system on the theory that they might be useful someday in the future to solve crimes, for employee background checks, to evaluate the reliability of the source, or to "answer questions or challenges" about the Bureau's conduct. 58

The FBI has recently issued instructions to its Field Offices to take greater care in recording domestic intelligence information in its files. They are to exercise "judgment" as to whether or not the activity is "pertinent" to the Bureau's "legitimate investigative interest." 11 Nevertheless, current policies still allow the indexing of the names of persons who are not the subject of investigation but just attend meetings of a group under investigation. 60

Finally, there is Information in FBI files which was collected by illegal or improper means. It ranges from the fruits of warrantless electronic surveillance, mail openings, and surreptitious entries, to the results of sweeping intelligence investigations which collected data about the lawful political activities and personal lives of Americans. Where such intelligence remain in the name-indexed files, it can be retrieved and disseminated along with other information, thus continuing indefinitely the potential for compounding the initial intrusion into constitutionally protected areas.

8 DOD Directive 5200.27, 3/1/71.

9 For example, in 1966 before the FBI had received any specific instructions from the Attorney General to gather civil disturbance intelligence, Bureau Headquarters advised all Field Offices that "national, state, and local" government officials "rely on us" for information "so they can take appropriate action to avert disastrous outbreaks." Thus, FBI offices were told to "intensify and expand" their "coverage" of demonstrations opposing "United States foreign policy in Vietnam" or "Protests involving racial issues," in order to insure that "advance signs" of violence could be "disseminated to appropriate authorities." (SAC Letter 66-27, 5/2/66)

10 These policies were part of the formal obligation of the FBI under the 1949 Delimitation Agreement with military intelligence. The Agreement itself required the FBI to keep military intelligence agencies advised of the activities of "civilian groups" classed as "subversive." (Delimitation Agreement, 2/23/49.) And a Supplementary Agreement said, "Where there is doubt as to whether or not one of the other agencies is interested in information collected, it should be transmitted to the other agency." (Supplemental Agreement No. 1 to the Delimitation Agreement, 6/2/49.)

11 "Military Surveillance of Civilian Politics," Report of the Senate Subcommittee on Constitutional Rights (1973), p. 72.

12 The Agreements between the FBI and military intelligence have not been revised to take account of the restrictions on Army surveillance imposed by the Department of Defense in 1971. See DOD Directive 5200.27, 3/1/71.

13 Richard Ober, 10/28/75, pp. 67,68.

14 The FBI Manual stated that information concerning "proposed travel abroad" by domestic "subversives" was to be furnished to the CIA and the State Department, and Bureau Field Offices were told to recommend the "extent of foreign investigation" required. (FBI Manual of Instructions, Section 87, p. 33a, revised 4/15/63.)

29 Memorandum from Washington Field Office to FBI Headquarters, 6/28/74.

30 Memorandum from Legal Attache, Bonn, to FBI Headquarters, 1/11/72; memorandum from Boston Field Office to FBI Headquarters, 5/4/72.

31 See COINTELPRO report: Sec. IV, for examples of FBI dissemination to local police of data on trivial offenses for the purpose of disruption.

32 The FBI responds to such requests with "a blind memorandum" upon the condition that the Bureau's "identity as source of the information must be kept strictly confidential." Bureau regulations do not link this procedure to any specific criminal law enforcement function. (FBI Manual of Rules and Regulations, Part II, Section 5, p. 7.)

33 Testimony of James F. Ahern (former New Haven police chief), Robert diGrazia (Boston chief of police), and Patrick V. Murphy (former New York police commissioner and President of the Police Foundation), 1/20/76, p. 44. These experienced law enforcement officials stated that local police do not need information from the FBI about "political beliefs."

34 See CHAOS Report: Section III.

35 See IRS Report: Section, "SSS."

36 See IRS Report: Section, "Dissemination."

37 On at least one occasion, Justice Department officials expressed concern that they had received a report from the FBI on an incident and then a second report from Army intelligence which appeared to confirm the Bureau's information, but the Army's report turned out to have been based on the FBI's information. This led to a Justice Department request that the Army "screen" its intelligence and send "only key items." (Memorandum for the Record General Counsel Robert E. Jordan to Under Secretary of the Army David McGiffert, 1/10/68.)

38 Ahern, 1/20/76, p. 4.

39 The FBI had adhered across-the-board to the position that its reports do not contain "conclusions," and Bureau rules have permitted the dissemination of data from "sources known to be unreliable" so long as "good judgment" is used. It has been up to the recipient agencies "to intelligently evaluate the information" on the basis of "descriptive information" about the Bureau's sources. (FBI Manual of Rules and Regulations, Part II, Section 5) Thus the FBI has not adequately distinguished between situations where evaluation is or is not necessary. More than just "descriptive information" about FBI sources is needed to help recipients of data on possible violent protest demonstration understand the likelihood of actual disorders.

40 See Part 11, p. 78.

41 The GAO has ranked the types of sources of information relied upon by the FBI in beginning domestic intelligence investigations according to whether the data initially supplied were "hard," "medium," or "soft." According to the GAO, police and other state and local agencies were found to have provided the lowest proportion of "hard" information and the highest proportion of "soft" information. (GAO Report, p. 106).

42 Two major cities have made efforts recently to establish standards for police intelligence activities. (Los Angeles Police Department, Public Disorder Intelligence Division: Standards and Procedures, 4/10/75; New York City Police Department. Procedures: Public Security Activities of the Intelligence Division, House Internal Security Committee, Hearings, Domestic Intelligence Operations for Internal Security Purposes, 1974.)

43 The FBI Manual cited the needs of the military as a basis for its intelligence gathering on "general racial matters." The Manual stated that the Bureau did not itself have "investigative jurisdiction over such general racial matters," but that its "intelligence function" included advising "appropriate Government agencies" of information about "proposed or actual activities of individuals, officials, committees, legislatures, organizations, etc., in the racial field." The Manual based "Federal jurisdiction" on the military's responsibility:

"Insofar as Federal jurisdiction in general racial matters is concerned, U.S. Army regulations place responsibility upon the Army to keep advised of any developments of a civil disturbance nature which may require the rendering of assistance to civil authorities or the intervention of federal troops. OSI (Air Force) and ONI (Navy) have a collateral responsibility under Army in such matters and copies of pertinent documents disseminated to Army concerning such matters should be furnished to OSI and ONI." (1960 FBI Manual Section 122, pp. 5-6)

44 For example, in addition to containing the names of known activists, the IDIU printouts supplied to IRS's SSS also contained the names of many prominent citizens whom the Justice Department thought could be of assistance in quelling a civil disturbance in a particular locality should one occur. SSS personnel were unaware that the IDIU printout contained the names of these persons and established files indiscriminately on them.

45 Attorney General Clark to Maroney, et al, 11/9/67.

46 Executive Order 10450, Section 3 (a). For a discussion of the origins and application of this order, pp. 42-44.

47 Executive Order 10450, Section 8 (a) (5).

48 Memorandum from FBI to Senate Select Committee, 3/3/76.

49 The current criteria are: "Knowing membership with the specific intent of furthering the aims of, or adherence to and active participation in, any foreign or domestic organization, association movement, group, or combination of persons (hereinafter referred to as organizations) which unlawfully advocates or practices the commission of acts of force or violence to prevent others from exercising their rights under the Constitution or laws of the United States or of any State, or which seeks to

overthrow the Government of the United States or any State or subdivision thereof by unlawful means." (Executive Order 11785, Section 3, June 4, 1974.) This order also abolished the "Attorney General's list."

50 memorandum from Assistant Attorney General Glen E. Pommerening to FBI Director Clarence Kelley, 11/1/74.

51 Letter from Attorney General Tom Clark to J. Edgar Hoover, 12/5/47. The FBI advises that it considers this directive still to be in effect. (Memorandum from FBI to Select Committee, 3/3/76.)

52 Letter from Kelley to Pommerening, 12/11/74. The FBI has advised that federal employees are now evaluated according to "suitability" rather than "loyalty and security" criteria. (Memorandum from FBI to Select Committee, 3/3/76.)

53 According to a 1974 Bureau memorandum and a confirming Justice Department memorandum, the purpose is to provide "information concerning possible subversive infiltration into the Executive Branch of Government." (Kelley to Pommerening, 8/14/74; Pommerening to Kelley, 8/26/74.) As indicated in the Committee's finding on overbreadth, the concept "subversion" is so vague and flexible as to invite excesses.

54 Secret Service practices are described in Review of Secret Service Protective Measures, Hearings before the Senate Committee on Appropriations, 94th Cong., 1st Sess. (1975), p. 16. Destruction of Army intelligence files is discussed in Report on Military Surveillance.

55 For a discussion of the origins of this function, see p. 23.

56 Memorandum from FBI to Senate Select Committee, 5/22/75.

57 Current FBI policies modify past practice with respect to the indexing of unsolicited allegations, including those of "a personal nature," not requiring "investigative action." The Bureau no longer includes in its name index the name of the person about whom the information is volunteered where the Bureau has "no legitimate investigative interest." In the case of an unsolicited letter, for example, the name of the sender only is included in the index. The letter itself is also retained so the FBI "can retrieve" it via the index reference to the sender "should an occasion arise in the future when we need to refer back to it." (Memorandum from FBI Headquarters to all SACs, 11/10/75.)

58 Memorandum from FBI to Select Committee, 7/21/75. This memorandum states that the Bureau has adopted, under regulations of the National Archives, a program for destroying files which "no longer have contemporary value." The FBI has not included within this program most of the investigative and intelligence information in its files dating back as far as 1939.

59 Memorandum from FBI Headquarters to all SACs, 1/27/76. The Field Offices were given the following specific guidance:

"For example, the statement of a local leader of the Ku Klux Klan in which he advocates regular attendance at church would be merely an exercise of his right to free speech and, hence, maintenance of such a record would be prohibited. On the other hand, should this same individual stand up before a gathering and advocate the use of violence in furthering the organization's objectives, this obviously would be pertinent to our investigation."

Bureau headquarters recognized that these were "extreme" examples and that "Problems" were created in "those instances which are in the middle and which are not so clear." Thus, FBI agents were encouraged to consult Headquarters "to resolve any question concerning a specific problem."

60 One Field Office has described regular Bureau procedures as follows:

"[Our] informants, after attending meetings of these organizations [under investigation], usually submit reports in which they describe briefly the activities and discussions which took place as well as listing those members and non members in attendance at such meetings. Copies of these informant reports are disseminated to various individuals' files *and the names of those in attendance where no individuals file exists, are indexed* to the organization's file." (Memorandum from SAC to FBI Headquarters, 12/1/75). [Emphasis added.]

FBI headquarters did not indicate that this practice was outside the "scope" of authorized "law enforcement activity." It is considered "pertinent" to the investigation "to maintain records concerning membership, public utterings, and/or other activities" of an organization under investigation. (Memorandum from FBI Headquarters to all SACs, 1/27/76.)

# INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS

## BOOK II

### FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS

APRIL 26 (legislative day, April 14), 1976

#### G. DEFICIENCIES IN CONTROL AND ACCOUNTABILITY

##### MAJOR FINDING

The Committee finds that those responsible for overseeing, supervising, and controlling domestic activities of the intelligence community, although often unaware of details of the excesses described in this report, made those excesses possible by delegating broad authority without establishing adequate guidelines and procedural checks; by failing to monitor and coordinate sufficiently the activities of the agencies under their charge; by failing to inquire further after receiving indications that improper activities may have been occurring; by exhibiting a reluctance to know about secret details of programs; and sometimes by requesting intelligence agencies to engage in questionable practices. On numerous occasions, intelligence agencies have, by concealment, misrepresentation, or partial disclosure, hidden improper activities from those to whom they owed a duty of disclosure. But such deceit and the improper practices which it concealed would not have been possible to such a degree if senior officials of the Executive Branch and Congress had clearly allocated responsibility and imposed requirements for reporting and obtaining prior approval for activities, and had insisted on adherence to those requirements.

##### *Subfindings*

(a) Presidents have given intelligence agencies firm orders to collect information concerning "subversive activities" of American citizens, but have failed until recently to define the limits of domestic intelligence, to provide safeguards for the rights of American citizens, or to coordinate and control the ever-expanding intelligence efforts by an increasing number of agencies.

(b) Attorneys General have permitted and even encouraged the FBI to engage in domestic intelligence activities and to use a wide range of intrusive investigative techniques -- such as wiretaps, microphones, and informants -- but have failed until recently to supervise or establish limits on these activities or techniques by issuing adequate safeguards, guidelines, or procedures for review.

(c) Presidents, White House officials, and Attorneys General have requested and received domestic political intelligence, thereby contributing to and profiting from the abuses of domestic intelligence and setting a bad example for their subordinates.

(d) Presidents, Attorneys General, and other Cabinet officers have neglected until recently to make inquiries in the face of clear indications that intelligence agencies were engaging in improper domestic activities.

(e) Congress, which has the authority to place restraints on domestic intelligence activities through legislation, appropriations, and oversight committees, has not effectively asserted its responsibilities until recently. It has failed to define the scope of domestic intelligence activities or intelligence collection techniques, to uncover excesses, or to propose legislative solutions. Some of its members have failed to object to improper activities of which they were aware and have prodded agencies into questionable activities.

(f) Intelligence agencies have often undertaken programs without authorization with insufficient authorization, or in disregard of express orders.

(g) The weakness of the system of accountability and control can be seen in the fact that many illegal or abusive domestic intelligence operations were terminated only after they had been exposed or threatened with exposure by Congress or the news media.

#### *Elaboration of Findings*

The Committee has found excesses committed by intelligence agencies -- lawless and improper behavior, intervention in the democratic process, overbroad intelligence targeting and collection, and the use of covert techniques to discredit and "neutralize" persons and groups defined as enemies by the agencies. But responsibility for those acts does not fall solely on the intelligence agencies which committed them. Systematic excesses would not have occurred if lines of authority had been clearly defined; if procedures for reporting and review had been established; and if those responsible for supervising the intelligence community had properly discharged their duties.

The pressure of events and the widespread confidence in the FBI help to explain the deficiencies in command and authorization discovered by the Committee. Most of the activities examined in this report occurred during periods of foreign or domestic crisis. There was substantial support from the public and all branches of government for some of the central objectives of domestic intelligence policy, including the search for "Fifth Columnists" before World War II; the desire to identify communist "influence" in the Cold War atmosphere of the 1950s; the demand for action against Klan violence in the early 1960s; and the reaction to violent racial disturbances and anti-Vietnam war activities in the late 1960s and early 1970s. It was in this heated environment that President and Attorneys General ordered the FBI to investigate "subversive activities". Further, the Bureau's reputation for effectiveness and professionalism, and Director Hoover's ability to cultivate political support and to inspire apprehension, played a significant role in shaping the relationship between the FBI and the rest of the Government.

With only a few exceptions, the domestic intelligence activities reviewed by the Committee were properly authorized within the intelligence agencies. The FBI epitomizes a smoothly functioning military structure: activities of agents are closely supervised; programs are authorized only after they have traveled a well-defined bureaucratic circuit; and virtually all activities -- ranging from high-level policy considerations to the minutia of daily reports from field agencies -- are reduced to writing. These characteristics are commendable. All efficient law enforcement and intelligence-gathering machine, acting consistently with law, can greatly benefit the nation. However, when used for wrongful purposes, this efficiency can pose a grave danger.

It appears that many specific abuses were not known by the Attorney General, the President, or other Cabinet-level officials directly responsible for supervising domestic intelligence activities. But whether or not particular activities were authorized by a President or Attorney General, those individuals must -- as the chief executive and the principal law enforcement officer of the United States Government -- bear ultimate responsibility for the activities of executive agencies under their command. The President and his Cabinet officers have a duty to determine the nature of activities engaged in by executive agencies and to prevent undesired activities from taking place. This duty is particularly compelling when responsible officials have reason to believe that undesirable activity is occurring, as has often been the case in the context of domestic intelligence.

The Committee's inquiry has revealed a pattern of reckless disregard of activities that threatened our Constitutional system. Intelligence agencies were ordered to investigate "subversive activities," and were then usually left to determine for themselves which activities were "subversive" and how those activities should be investigated. Intelligence agencies were told they could use investigative techniques -- wiretaps, microphones, informants -- that permitted them to pry into the most valued areas of privacy and were then given in many cases the unregulated authority to determine when to use those techniques and how long to continue them. Intelligence agencies were encouraged to gather "pure intelligence," which was put to political use by public officials outside of those agencies. This was possibly because Congress had failed to pass laws limiting the areas into which intelligence agencies could legally inquire and the information they could disseminate.

Improper acts were often intentionally concealed from the Government officials responsible for supervising the intelligence agencies, or undertaken without express authority. Such behavior is inexcusable. But equally inexcusable is the absence of executive and congressional oversight that engendered an atmosphere in which the heads of those agencies believed they could conceal activities from their superiors. Attorney General Levi's recent guidelines and the recommendations of this Committee are intended to provide the necessary guidance.

Whether or not the responsible Government officials knew about improper intelligence activities, and even if the agency heads failed in their duty of full disclosure, it still follows that Presidents and the appropriate Cabinet officials should have known about those activities. This is a demanding standard, but one that must be imposed. The future of democracy rests upon such accountability.

#### *Subfinding (a)*

Presidents have given intelligence agencies firm orders to collect information concerning "subversive activities" of American citizens, but have failed until recently to define the limits of domestic intelligence, to provide safeguards for the rights of American citizens, or to coordinate and control the ever-expanding intelligence efforts by an increasing number of agencies.

As emphasized throughout this report, domestic intelligence activities have been undertaken pursuant to mandates from the Executive branch, generally issued during times of war or domestic crisis. The directives of Presidents Roosevelt, Truman, and Eisenhower to investigate "subversive activities," or other equally ill-defined targets, were echoed in various orders from Attorneys General, who themselves encouraged the FBI to undertake domestic intelligence activities with vague but vigorous commands.

Neither Presidents nor their chief legal officers, the Attorneys General, have defined the "subversive activities" which may be investigated or provided guidelines to the agencies in determining which individuals or groups were engaging in those activities. No reporting procedures were established to enable Cabinet-level officials or their designees to review the types of targets of domestic investigations and to exercise independent judgment concerning whether such investigations were warranted. No mechanisms were established for monitoring the conduct of domestic investigations or for determining if and when they should be terminated. If Presidents had articulated standards in these areas, or had designated someone to do the job for them, it is possible that many of the abuses described in this report would not have occurred.

Considering the proliferation of agencies engaging in domestic intelligence and the overlapping jurisdictional lines, it is surprising that no President has successfully designated one individual or body to coordinate and supervise the domestic intelligence activities of the various agencies. The half-hearted steps that were taken in that direction appear either to have been abandoned or to have resulted in the concentration of even more power in individual agency heads. For example, in 1949 President Truman attempted to establish a control mechanism -- the Interdepartmental Intelligence Conference -- to centralize authority for supervising domestic intelligence activities of the FBI and military intelligence agencies in a committee chaired by the Director of the FBI. The Committee reported to the National Security Council, and an NSC staff member was assigned responsibility for internal security. 1 The practical effect of the IIC was apparently to increase the power of the FBI Director and to remove control further from the Cabinet level. In 1962, the functions of the IIC were transferred to the Justice Department, and the Attorney General was put in nominal charge of domestic intelligence. 2 While in theory supervision resided in the Internal Security Division of the Justice Department, that Division deferred in large part to the FBI and provided little oversight. 3 The top two executives of the Internal Security Division were former FBI officials. They appeared sympathetic to the Bureau, and like the Bureau, emphasized threats of Communist "influence" without mentioning actual results. 4

Another opportunity to coordinate intelligence collection was missed in 1967, when Attorney General Ramsey Clark established the Interdivisional Intelligence Unit (IDIU) to draw on virtually the entire Federal Government's intelligence collecting capability for information concerning groups and individuals "who may play a role, whether purposefully or not, either in instigating or spreading civil disorders, or in preventing or checking them." 5 In the rush to obtain intelligence, no efforts were made to formulate standards or guidelines for controlling how the intelligence would be collected. In the absence of such guidelines and under pressure for results, the agencies undertook some of the most overly broad programs encountered by the Committee. For example, the FBI's "ghetto" informant program was a direct response to the Attorney General's broad requests for intelligence.

The need for centralized control of domestic intelligence was again given serious consideration during the vigorous demonstrations against the war in Vietnam in 1970. The intelligence community's program for dealing with internal dissent -- the Huston Plan -- envisioned not only relaxing controls on surveillance techniques, but also coordinating intelligence collection efforts. According to Tom Charles Huston's testimony, the President viewed the suggestion of a coordinating body as the most important contribution of the plan. 8 Although the President quickly revoked his approval for the Huston Plan, the idea of a central domestic intelligence body had taken root. Two months later, with the encouragement of Attorney General John Mitchell, the Intelligence Evaluation Committee was established in the Justice Department. That Committee, like its precursor, the IDIU, compiled and evaluated raw intelligence; it did not exercise supervision. 9

The growing sophistication of intelligence collection techniques underscores the present need for central control and coordination of domestic intelligence activities. Although the Executive Branch has recognized that need in the past, it has not, until recently, faced up to its responsibilities. President Gerald Ford's joint effort with members of Congress to place further restrictions on wiretaps is a welcome step in the right direction. Congress must act expeditiously in this area.

#### *Subfinding (b)*

Attorneys General have permitted and even encouraged the FBI to engage in domestic intelligence activities and to use a wide range of intrusive investigative techniques -- such as wiretaps, microphones, and informants -- but have failed until recently to supervise or establish limits on these activities or techniques by issuing adequate safeguards, guidelines, or procedures for review.

The Attorney General is the chief law enforcement officer of the United States and the Cabinet-level officer formally in charge of the FBI. 10 The Justice Department, until recently, has failed to issue directives to the FBI articulating the grounds for opening domestic intelligence investigations or the standards to be followed in carrying out those investigations. The Justice Department has neglected to establish machinery for monitoring and supervising the conduct of FBI investigations, for requiring approval of major investigative decisions, and for determining when an investigation should be terminated. Indeed, in 1972 the Attorney General said he did not even know whether the FBI itself had formulated guidelines and standards for domestic intelligence activities, was not aware of the FBI's manual of instructions, and had never reviewed the FBI's internal guidelines. 11

The Justice Department has frequently levied specific demands on the FBI for domestic intelligence, but has not accompanied these demands with restrictions or guidelines. Examples include the Justice Department's Civil Rights Division's requests for reports on demonstrations in the early 1960's (including coverage of a speech by Governor elect George Wallace 11a and

coverage of a civil rights demonstration on the 100th anniversary of the Emancipation Proclamation 12 ): Attorney General Kennedy's efforts to expand FBI infiltration of the Ku Klux Klan in 1964; 13 Attorney General Clark's sweeping instructions to collect intelligence about civil disorders in 1967; 14 and the Internal Security Division's request for more extensive investigations of campus demonstrations in 1969. 15 While a limited investigation into some of these areas may have been warranted, the improper acts committed in the course of those investigations were possible because no restraints had been imposed.

The Justice Department also cooperated with the FBI in defying the Emergency Detention Act of 1950 by approving the Bureau's Security Index criteria for the investigation of "potentially dangerous" persons. 16 Even after Congress repealed the Detention Act, the Justice Department allowed the Bureau to continue listing "potentially dangerous" persons on a new Administrative Index. The Department stopped reviewing the names on the FBI's index, and apparently endorsed the FBI's view that the list could, contrary to law, be used for detention purposes in an "emergency."

The FBI's autonomy has been a prominent and long-accepted feature of the Federal bureaucratic terrain. As early as the 1940s the FBI could oppose Justice Department inquiries into its internal affairs by raising the specter of "leaks." 17 The Department acquiesced in the Bureau's claim that it was entitled to withhold its raw files, conceal the identities of informants, and, in a number of cases, refuse to give the Justice Department evidence supporting broad allegations and characterizations. Former Attorney General Katzenbach has pointed out that there were both positive and negative sides to the Bureau's autonomy:

Keeping the Bureau free from political interference was a powerful argument against efforts by politically appointed officials, whatever their motivations, to gain a greater measure of control over operations of the Bureau.... [Director Hoover also] found great value in his formal position as subordinate to the Attorney General and the fact that the FBI was a part of the Department of Justice.... In effect, he was uniquely successful in having it both ways; he was protected from public criticism by having a theoretical superior who took responsibility for his work, and was protected from his superior by his public reputation. 18

As a consequence of its autonomy, the Bureau could plan and implement many of the abusive operations described in this report. Former Attorneys General have told the Committee that they would never have permitted the more unsavory aspects of the New Left or Racial COINTELPROs if they had been aware of the Bureau's plans. To the extent that Attorneys General were ignorant of the Bureau's activities, it was the consequence not only of the FBI Director's independent political position, but also of the failure of the Attorneys General to establish procedures for finding out what the Bureau was doing and for permitting an atmosphere to evolve in which Bureau officials believed that they had no duty to report their activities to the Justice Department, and that they could conceal those activities with little risk of exposure. 20

Attorneys General have not only neglected to establish procedures for reviewing FBI programs and activities, but they have at the same time granted the FBI authority to employ highly intrusive investigative techniques with inadequate guidelines and review procedures, and in some instances with no external restraints whatsoever. Before 1965, wiretaps required the approval of the Attorney General in advance, but once the Attorney General had authorized wiretap coverage of a subject, the Bureau could continue the surveillance for as long as it judged necessary.

This permissive policy was current in October 1963 when Attorney General Robert Kennedy authorized the FBI to wiretap the phones of Dr. Martin Luther King, Jr. "at his current address or at any future address to which he may move" and to wiretap the New York and Atlanta SCLC offices. 21 Reading the Attorney General's wiretap authorization broadly, the FBI construed Dr. King's "residence" so as to permit wiretaps on three, of his hotel rooms and the homes of friends with whom he stayed temporarily. 22 The FBI was still relying on Attorney General Kennedy's initial authorization when it sought reauthorization for the King wiretaps in April 1965 in response to new procedures formulated by Attorney General Katzenbach. Although Attorney General Kennedy's authorizing memorandum in October 1963 said that the FBI should provide him with an evaluation of the wiretaps after 60 days, he failed to complain when the FBI neglected to send him the evaluation. Apparently the Attorney General never mentioned the wiretaps to the FBI again, even though he received FBI reports from the wiretaps until he resigned in September, 1964. 23

The Justice Department's policy toward the use of microphones has been even more permissive than for wiretaps. Until 1965, the FBI was free to carry out microphone surveillance in national security cases without first seeking the approval of the Attorney General or notifying him afterward. The total absence of supervision enabled the FBI to hide microphones in Dr. Martin Luther King's hotel rooms for nearly two years for the express purpose of not only determining whether he was being influenced by allegedly communist advisers, but to "attempt" to obtain information about the private "activities of Dr. King and his associates" so that Dr. King could be "completely discredited." 21 Attorney General Kennedy was apparently never told about the microphone surveillances of Dr. King, although he did receive reports containing unattributed information from that surveillance from which he might have concluded that microphones were the source. 25

The Justice Department imposed external control over microphones for the first time in March 1965, when Attorney General Katzenbach applied the same procedures to wiretaps and microphones, requiring not only prior authorization but also formal periodic review. 26 But irregularities were tolerated even with this standard. For example, the FBI has provided the Committee three memoranda from Director Hoover, initialed by Attorney General Katzenbach, as evidence that it informed the Justice Department of its microphone surveillance of Dr. King after the March 1965 policy change. These documents, however, show that Katzenbach was informed about the microphones only after they had already been installed. 27 Such after-the-fact approval was permitted under Katzenbach's procedures. 27a There is no indication that Katzenbach inquired further after receiving the notice. 28

The Justice Department condoned, and often encouraged, the FBI's use of informants -- the investigative technique with the highest potential for abuse. However, the Justice Department imposed no restrictions on informant activity or reporting, and established no procedures for reviewing the Bureau's decision to use informants in a particular case.

In 1954 the Justice Department entered into an agreement with the CIA in which the CIA was permitted to withhold the names of employees whom it had determined were "almost certainly guilty of violations of criminal statutes" when the CIA could "devise no charge" under which they could be prosecuted that would not "require revelation of highly classified information." 29 This practice was terminated by the Justice Department in January, 1975. 29a

Despite the failure of Attorneys General to exercise the supervision that is necessary in the area of domestic intelligence, several Attorneys General have taken steps in the right direction. Of note were Attorney General Nicholas Katzenbach's review procedures for electronic surveillance in 1965; Ramsey Clark's refusal to approve electronic surveillance of domestic intelligence targets and his rejection of repeated requests by the FBI for such surveillance; Acting Deputy Attorney General William Ruckelshaus' inquiries into the Bureau's domestic intelligence program; Deputy Attorney General Laurence Silberman's inquiry into political abuses of the FBI in early 1975; and Attorney General Saxbe's decision to make the Justice Department's COINTELPRO report public.

During the past year, Attorney General Edward H. Levi has exercised welcome leadership by formulating guidelines for FBI investigations; developing legislative proposals requiring a judicial warrant for national security wiretaps and microphones; establishing the Office of Professional Responsibility to inquire into departmental misconduct; initiating investigations of alleged wrongdoing by the FBI; and cooperating with this Committee's requests for documents on FBI intelligence operations. 30 The Justice Department's concern in recent years is a hopeful sign, but long overdue.

#### *Subfinding (c)*

Presidents, White House officials, and Attorneys General have requested and received domestic political intelligence, thereby contributing to and profiting from the abuses of domestic intelligence and setting a bad example for their subordinates.

The separate finding on "political abuse" sets forth instances in which the FBI was used by White House officials to gather politically useful information, including data on administration opponents and critics. This misuse of the Bureau's powers by its political superiors necessarily contributed to the atmosphere in which abuses flourished.

If the Bureau's superiors were willing to accept the fruits of excessive intelligence gathering, to authorize electronic surveillance, for political purposes, and to receive reports on critics which included intimate details of their personal lives, they could not credibly hold the Bureau to a high ethical standard. If political expediency characterized the decisions of those expected to set limits on the Bureau's conduct, it is not surprising that the FBI considered the principle of expediency endorsed.

#### *Subfinding (d)*

Presidents, Attorneys General, and other cabinet officers have neglected, until recently, to make inquiries in the face of clear indications that intelligence agencies were engaging in improper domestic activities.

Executive branch officials contributed to an atmosphere in which excesses were possible by ignoring clear indications of excesses and failing to take corrective measures when directly confronted with improper behavior. The Committee's findings on "Violating and Ignoring the Law" illustrate that several questionable or illegal programs continued after higher officials had learned partial details and failed to ask for additional information, either out of the naive assumption that intelligence agencies would not engage in lawless conduct, or because they preferred not to be informed. 31

Some of the most disturbing examples of insufficient action in the face of clear danger signals were uncovered in the Committee's investigation of the FBI's program to "neutralize" Dr. Martin Luther King, Jr. as the leader of the civil rights movement. The Bureau informed the Committee that its files contain no evidence that any officials outside of the FBI "were specifically aware of any efforts, steps, or plans or proposals to 'discredit' or 'neutralize' King." 32 The relevant executive branch officials have told the Committee that they were, unaware of a general Bureau program to discredit King. Former Attorney General Katzenbach, however, told the Committee:

Nobody in the Department of Justice connected with Civil Rights could possibly have been unaware of Mr. Hoover's feelings [against Dr. King]. Nobody could have been unaware of the potential for disaster which those feelings embodied. But, given the realities of the situation, I do not believe one could have anticipated the extremes to which it was apparently carried. 34

The evidence before the Committee confirms that the "potential for disaster" was indeed clear at the time. There is no question that officials in the White House and Justice Department, including President Johnson and Attorney General Katzenbach, knew that the Bureau was taking steps to discredit Dr. King, although they did not know the full extent of the Bureau's efforts.

-- In January 1964 the FBI gave Presidential Assistant Walter Jenkins an FBI report unfavorable to Dr. King. According to a contemporaneous FBI memorandum, Jenkins said that he "was of the opinion that the FBI could perform a good service to the country if this matter could somehow be confidentially given to members of the press." Jenkins, in a staff interview, denied having made such a suggestion. 35

-- In February 1964 a reporter informed the Justice Department that the FBI had offered to "leak" information unfavorable to Dr. King to the press. The Justice Department's Press Chief, Edwin Guthman, asked Cartha DeLoach, the FBI's liaison with the press, about this allegation and DeLoach denied any involvement. The Justice Department took no further action. 36

-- Bill Moyers, an Assistant to President Johnson, testified that he learned sometime in early 1964 that an FBI agent twice offered to play a tape recording for Walter Jenkins that would have been personally embarrassing to Dr. King and that Jenkins

refused to listen to the tape on both occasions. 36a Moyers testified that he never asked the FBI why it had the tape or was offering to play it in the White House. 37 When asked if he had ever questioned the propriety of the FBI's disseminating information of a personal nature about Dr. King within the Government, he replied, "I never questioned it, no." When he was asked if he could recall anyone in the White House ever questioning the propriety of the FBI disseminating this type of material, Moyers testified. "I think . . . there were comments that tended to ridicule the FBI's doing this, but no." 38

-- Burke Marshall, Assistant Attorney General in charge of the Civil Rights Division, testified that sometime in 1964 a reporter told him that the Bureau had offered information unfavorable to Dr. King. Marshall testified that he repeated this allegation to a Bureau official and asked for a report. The Bureau official subsequently informed him "The Director wants you to know that you're a . . . damned liar." 39

-- In November 1964 the Washington Bureau Chief of a national news publication told Attorney General Katzenbach and Assistant Attorney General Marshall that one of his reporters had been approached by the FBI and offered the opportunity to hear some "interesting" tape recordings involving Dr. King. Katzenbach testified that, he had been "shocked," and that he and Marshall had informed President Johnson, who "took the matter very seriously" and promised to contact Director Hoover. 40 Neither Marshall nor Katzenbach knew if the President contacted Hoover. 41 Katzenbach testified that, during this same period, he learned of at least one other reporter who had been offered tape recordings by the Bureau, and that he personally confronted DeLoach, who was reported to have made the offers. 42 DeLoach told Katzenbach that he had never made such offers. 43 The only record of this episode in FBI files is a memorandum by DeLoach stating that Moyers had informed him that the newsman was "telling all over town" that the FBI was making allegations concerning Dr. King, and that Moyers had "stated that the President felt that [the newsman] lacked integrity...." 44 Moyers could not recall this episode, but told the Committee that it would be fair to conclude that the President had been upset by the fact that the newsman revealed the Bureau's conduct rather than by the Bureau's conduct itself. 45

The response of top White House and Justice Department officials to strong indications of wrongdoing by the FBI was clearly inadequate. The Attorney General went no further than complaining to the President and asking a Bureau official if the charges were true. President Johnson apparently not only failed to order the Bureau to stop, but indeed warned it not to deal with certain reporters because they had complained about the Bureau's improper conduct.

In 1968 Attorney General Ramsey Clark asked Director Hoover if he had "any information as to how" facts about Attorney General Kennedy's authorization of the wiretap on Dr. King had leaked to columnists Drew Pearson and Jack Anderson. Clark requested the FBI Director to "undertake whatever investigation you deem feasible to determine how this happened. 45a Director Hoover's reply, drafted in the office of Cartha DeLoach, expressed "dismay" at the leak and offered no indication of the likely source. 45b

In fact, DeLoach had prepared a memorandum ten days earlier stating that a middle-level Justice Department official with knowledge of the King wiretap met with him and admitted having "discussed this matter with Drew Pearson." According to this memorandum, DeLoach attempted to persuade the official not to allow the story to be printed because "certain Negro groups would still blame the FBI, whether we were ordered to take such action or not." 45c Thus, DeLoach and Hoover deliberately misled Attorney General Clark by withholding their knowledge of the source of the "leak."

#### *Subfinding (e)*

Congress, which has the authority to place restraints on domestic intelligence activities through legislation, appropriations, and oversight committees, has not effectively asserted its responsibilities until recently. It has failed to define the scope of domestic intelligence activities or intelligence collection techniques, to uncover excesses, or to propose legislative solutions. Some of its members have failed to object to improper activities of which they were aware and have prodded agencies into questionable activities.

Congress, unlike the Executive branch, does not have the function of supervising the day-to-day activities of agencies engaged in domestic intelligence. Congress does, however, have the ability through legislation to affect almost every aspect of domestic intelligence activity: to erect the framework for coordinating domestic intelligence activities; to define and limit the types of activities in which executive agencies may engage; to establish the standards for conducting investigations; and to promulgate guidelines for controlling the use of wiretaps, microphones, and informants. Congress could also exercise a great influence over domestic intelligence through its power over the appropriations for intelligence agencies' budgets and through the investigative powers of its committees.

Congress has failed to establish precise standards governing domestic intelligence. No congressional statutes deal with the authority of executive agencies to conduct domestic intelligence operations, or instruct the executive in how to structure and supervise those operations. No statutes address when or under what conditions investigations may be conducted. Congress did not attempt to formulate standards for wiretaps or microphones until 1968, and even then avoided the issue of domestic intelligence wiretaps by allowing an exception for an undefined claim of inherent executive power to conduct domestic security surveillance, which was subsequently held unconstitutional. 45d No legislative standards have been enacted to govern the use of informants.

Congress has helped shape the environment in which improper intelligence activities were possible. The FBI claims that sweeping provisions in several vague criminal statutes and regulatory measures enacted by Congress provide a basis for much of its domestic intelligence activity. 45e Congress also added its voice to the strong consensus in favor of governmental action against Communism in the 1950's and domestic dissidents in the 1960's and 1970's.

Congress' failure to define intelligence functions has invited action by the executive. If the top officials of the executive branch are responsible for failing to control the intelligence agencies, that failure is in part due to a lack of guidance from Congress.

During most of the 40-year period covered in this report, congressional committees did not effectively monitor domestic intelligence activities. For example, in 1966, a Senate Judiciary subcommittee undertook an investigation of electronic surveillance and other intrusive techniques by Federal agencies. According to an FBI memorandum, its chairman told a delegation from the FBI that he would make "a commitment that he would in no way embarrass the FBI," and acceded in the FBI's request that the subcommittee refrain from calling FBI witnesses. 46

Another example of the deficiencies in congressional oversight is seen in the House Appropriations Committee's regular approval of the FBI's requests for appropriations without raising objections to the activities described in the Director's testimony and off-the-record briefings. There is no question that members of a House Appropriations subcommittee were aware not only that the Bureau was engaged in broad domestic intelligence investigations, but that it was also employing disruptive tactics against domestic targets.

In 1958, Director Hoover informed the subcommittee that the Bureau had an "intensive program" to "disorganize and disrupt" the Communist Party, that the program had existed "for years" and that Bureau informants were used "as a disruptive tactic." 47 The next year, the Director informed the subcommittee that informants in 12 field offices

have been carefully briefed to engage in controversial discussions with the Communist Party so as to promote dissension, factionalism and defections from the communist cause. This technique has been extremely successful from a disruptive standpoint.

Under another phase of this program, we have carefully selected 28 items of anticommunist propaganda and have anonymously mailed it to selected communists, carefully concealing the identity of the FBI as its source. More than 2,800 copies of literature have been placed in the hands of active communists. 48

Hoover described more aggressive "psychological warfare" techniques in 1962:

During the past year we have caused disruption at large Party meetings, rallies and press conferences through various techniques such as causing the last-minute cancellation of the rental of the hall, packing the audience with anticommunists, arranging adverse publicity in the press and making available embarrassing questions for friendly reporters to ask the Communist Party functionaries.

The Appropriations subcommittee was also told during this briefing that the FBI's operations included exposing and discrediting "communists who are secretly operating in legitimate organizations and employments, such as the Young Men's Christian Association, Boy Scouts, civic groups, and the like." 49

In 1966 Director Hoover informed the Appropriations subcommittee that the disruptive program had been extended to the Ku Klux Klan. 50

The present Associate Director of the FBI, Nicholas Callahan, who accompanied Director Hoover during several of his appearances before the Appropriations subcommittee, said that members of the subcommittee made "no critical comment" about "the Bureau's efforts to neutralize groups and associations." 51

Subcommittee Chairman John Rooney's statements in a televised interview in 1971 regarding FBI briefings about Dr. Martin Luther King are indicative of the subcommittee's attitude toward the Bureau:

Representative ROONEY. Now you talk about the F.B.I. leaking something about Martin Luther King. I happen to know all about Martin Luther King, but I have never told anybody.

Interviewer. How do you know everything about Martin Luther King?

Representative ROONEY. From the Federal Bureau of Investigation.

Interviewer. They've told you -- gave you information based on taps or other sources about Martin Luther King.

Representative ROONEY. They did.

Interviewer. Is that proper?

Representative ROONEY. Why not? 52

Former Assistant Attorney General Fred Vinson recalled that in 1967 the Justice Department averaged "fifty letters a week from Congress" demanding that "people like [Stokely] Carmichael be jailed." Vinson said that on one occasion when he was explaining First Amendment limits at a congressional hearing, a Congressman "got so provoked he raised his hand and said, 'to hell with the First Amendment.'" Vinson testified that these incidents fairly characterized "the atmosphere of the time." 53

The congressional performance has improved, however, in recent years. Subcommittees of the Senate Judiciary Committee have initiated inquiries into Army surveillance of domestic targets and into electronic surveillance by the FBI. House Judiciary

Committee subcommittees commissioned a study of the FBI by the General Accounting Office and have inquired into FBI misconduct and surveillance activities. Concurrent with this Committee's investigations, the House Select Committee on Intelligence considered FBI domestic intelligence activities.

Our Constitution envisions Congress as a check on the Executive branch, and gives Congress certain powers for discharging that function. Until recently, Congress has not effectively fulfilled its constitutional role in the area of domestic intelligence. Although the appropriate congressional committees did not always know what intelligence agencies were, doing, they could have asked. The Appropriations subcommittee was aware that the FBI was engaging in activities far beyond the mere collection of intelligence, yet it did not inquire into the details of those programs. 54 If Congress had addressed the issues of domestic intelligence and passed regulatory legislation, and if it had probed into the activities of intelligence agencies and required them to account for their deeds, many of the excesses in this Report might not have occurred.

#### *Subfinding (f)*

Intelligence agencies have often undertaken programs without authorization, with insufficient authorization, or in defiance of express orders.

The excesses detailed in this report were due in part to the failure of Congress and the Executive branch to erect a sound framework for domestic intelligence, and in part to the dereliction of responsibility by executive branch officials who were in charge of individual agencies. Yet substantial responsibility lies with officials of the intelligence agencies themselves. They had no justification for initiating major activities without first seeking the express approval of their superiors. The pattern of concealment and partial and misleading disclosures must never again be allowed to occur.

The Committee's investigations have revealed numerous instances in which intelligence agencies have assumed programs or activities were authorized under circumstances where it could not reasonably be inferred that higher officials intended to confer authorization. Sometimes far-reaching domestic programs were initiated without the knowledge or approval of the appropriate official outside of the agencies. Sometimes it was claimed that higher officials had been "notified" of a program after they had been informed only about some aspects of the program, or after the program had been described with vague references and euphemisms, such as "neutralize," that carried different meanings for agency personnel than for uninitiated outsiders. Sometimes notice consisted of references to programs buried in the details of lengthy memoranda; and "authorization" was inferred from the fact that higher officials failed to order the agency to discontinue the program that had been obscurely mentioned.

The Bureau has made no claim of outside authorization for its COINTELPROs against the Socialist Workers Party, Black Nationalists, or New Left adherents. After 1960, its fragile claim for authorization of the COINTELPROs against the Communist Party USA and White Hate Groups was drawn from a series of hints and partial, obscured disclosures to the Attorneys General and the White House.

The first evidence of notification to higher government officials of the FBI's COINTELPRO against the Communist Party USA consists of letters from Director Hoover to President Eisenhower and Attorney General William Rogers in May 1958 informing them that "in August of 1956, this Bureau initiated a program designed to promote disruption within the ranks of the Communist Party (CP) USA." 55 There is no record of any reply to these letters.

Later that same year, Director Hoover told President Eisenhower and his Cabinet:

To counteract a resurgence of Communist Party influence in the United States, we have a ... program designed to intensify any confusion and dissatisfaction among its members.

During the past few years, this program has been most effective. Selected informants were briefed and trained to raise controversial issues within the Party.... The Internal Revenue Service was furnished names and addresses of Party functionaries who had been active in the underground apparatus ... ; Anticomunist literature and simulated Party documents were mailed anonymously to carefully chosen members . . . . 56

The FBI's only claim to having notified the Kennedy Administration about COINTELPRO rests upon a letter written shortly before the inauguration in January 1961 from Director Hoover to Attorney General-designate Robert Kennedy, Deputy Attorney General-designate Byron R. White, and Secretary of State-designate Dean Rusk. One paragraph in the five-page letter stated that the Bureau had a "carefully planned program of counterattack against the CPUSA which keeps it off balance," and which was "carried on from both inside and outside the party organization." The Bureau claimed to have been "successful in preventing communists from seizing control of legitimate, mass organizations" and to have "discredited others who were secretly operating inside such organizations." 67 Specific techniques were not mentioned, and no additional notice was provided to the Kennedy Administration. Indeed, when the Kennedy White House formally requested of Hoover a report on "Internal Security Programs," the Director described only the FBI's "investigative program," and made no reference to disruptive activities. 58

The only claimed notice of the COINTELPRO against the Ku Klux Klan was given after the program had begun and consisted of a partial description buried within a discussion of other subjects. In September 1965, copies of a two page letter were sent to President Johnson and Attorney General Katzenbach, describing the Bureau's success in solving a number of cases involving racial violence in the South. That report contained a paragraph stating that the Bureau was "seizing every opportunity to disrupt the activities of Klan organizations," and briefly described the exposure of a Klan member's "kickback" scheme involving insurance company premiums. 59 More questionable tactics, such as sending a letter to a Klansman's wife to destroy their marriage, were not mentioned. The Bureau viewed Katzenbach's reply to its letter -- which praises the investigative successes which are the focus of the FBI's letter -- as constituting authorization for the White Hate COINTELPRO. 60

The claimed notification to Attorney General Ramsey Clark of the White Hate COINTELPRO consisted of a ten-page memorandum captioned "Ku Klux Klan Investigations -- FBI Accomplishments" with a buried reference to Bureau informants "removing" Klan officers and "provoking scandal" within the Klan organization 61. Clark told the Committee that he did not recall reading those phrases or interpreting them as notice that the Bureau was engaging in disruptive tactics. 62 Cartha DeLoach, Assistant to the Director during this period, testified that he "distinctly" recalled briefing Attorney General Clark "generally ... concerning COINTELPRO." 63 Clark denied having been briefed. 64

The letters and briefings described above, which constitute the Bureau's entire claim to notice and authorization for the CPUSA and White Hate COINTELPROs, failed to mention techniques which risked physical, emotional, or economic harm to their targets. In no case was an Attorney General clearly told the nature and extent of the programs and asked for his approval. In no case was approval expressly given.

Former Attorney General Katzenbach cogently described another misleading form of "authorization" relied on by the Bureau and other intelligence agencies:

As far as Mr. Hoover was concerned, it was sufficient for the Bureau if at any time any Attorney General had authorized [a particular] activity in any circumstances. In fact, it was often sufficient if any Attorney General had written something which could be construed to authorize it or had been informed in some one of hundreds of memoranda of some facts from which he could conceivably have inferred the possibility of such an activity. Perhaps to a permanent head of a large bureaucracy this seems a reasonable way of proceeding. However, there is simply no way an incoming Cabinet officer can or should be charged with endorsing every decision of his predecessor . . . . 65

For example, the CPUSA COINTELPRO was substantially described to the Eisenhower Administration, obliquely to the Kennedy Administration designees, but continued -- apparently solely on the strength of those assumed authorizations -- through the Johnson Administration and into the Nixon Administration. The idea that authority might continue from one administration to the next and that there is no duty to reaffirm authority inhibits responsible decision making. Circumstances may change and judgments may differ. New officials should be given -- and should insist upon -- the opportunity to review significant programs.

The CIA's mail opening project illustrates an instance in which an intelligence agency apparently received authorization for a limited program and then expanded that program into significant new areas without seeking further authorization. In May 1954, DCI Allen Dulles and Richard Helms, then Chief of Operations in the CIA's Directorate of Plans, briefed Postmaster General Arthur Summerfield about the CIA's New York mail project, which at that time involved only the examination of envelope exteriors. CIA memoranda indicate that Summerfield's approval was obtained for photographing envelope exteriors, but no mention was made of the possibility of mail opening. 66

The focus of the CIA's project shifted to mail opening sometime during the ensuing year, but the CIA did not return to inform Summerfield and made no attempt to secure his approval for this illegal operation.

Intelligence officers have sometimes withheld information from their superiors and concealed programs to prevent discovery by their superiors. The Bureau apparently ignored the Attorney General's order to stop classifying persons as "dangerous" in 1943; unilaterally decided not to provide the Justice Department with information about communist espionage on at least two occasions "for security reasons;" and withheld similar information from the Presidential Commission investigating the government's security program in 1947. 67 More recently, CIA and NSA concealed from President Richard Nixon their respective mail opening and communications interception programs.

These incidents are not unique. The FBI also concealed its Reserve Index of prominent persons who were not included on the Security Index reviewed by the Justice Department; its other targeting programs against "Rabble Rousers," "Agitators," "Key Activists," and "Key Extremists;" and its use of intrusive mail opening and surreptitious entry techniques. Indeed, the FBI institutionalized its capability to conceal activities from the Justice Department by establishing a regular "Do Not File" procedure, which assured internal control while frustrating external accountability.

#### *Subfinding (g)*

The weakness of the system of accountability and control can be seen in the fact that many illegal or abusive domestic intelligence operations were terminated only after they had been exposed or threatened with exposure by Congress or the news media.

The lack of vigorous oversight and internal controls on domestic intelligence activity frequently left the termination of improper programs to the ad hoc process of public exposure or threat of exposure by Congress, the press, or private citizens. Less frequently, domestic intelligence projects were terminated solely because of an agency's internal review of impropriety.

The Committee is aware that public exposure can jeopardize legitimate, productive, and costly intelligence programs. We do not condone the extralegal activities which led to the exposure of some questionable operations.

Nevertheless two points emerge from an examination of the termination of numerous domestic intelligence activities: (1) major illegal or improper operations thrived in an atmosphere of secrecy and inadequate executive control; and (2) public airing proved to be the most effective means of terminating or reforming those operations.

Some intelligence officers and Executive branch administrators sought the termination of questionable programs as soon as they became aware of the nature of the operation -- the Committee praises their actions. However, too often we have seen that

the secrecy that protected illegal or improper activities and the insular nature of the agencies involved prevented intelligence officers from questioning their actions or realizing that they were wrong.

There are several noteworthy examples of illegal or abusive domestic intelligence activities which were terminated only after the threat of public exposure:

-- The FBI's widesweeping COINTELPRO operations were terminated on April 27, 1971, in response to disclosures about the program in the press. 73

-- IRS payments to confidential informants were suspended in March 1975 as a result of journalistic investigation of Operation Leprechaun. 74

-- The Army's termination of several major domestic intelligence operations, which were clearly overbroad or illegal, came only after the programs were disclosed in the press or were scheduled as the subject of congressional inquiry. 75

-- On one occasion, FBI Director Hoover insisted that electronic surveillance be discontinued prior to his appearance before the House Appropriations Committee so that he could report a relatively small number of wiretaps in place. 76 Contrary to frequent allegations, however, no general pattern of temporary suspensions or terminations during the Director's appearances before the House Appropriations Committee is revealed by Bureau records.

-- Following the report of a Presidential committee which had been established in response to news reports in 1967, the CIA terminated its covert relationship with a large number of domestically based organizations, such as academic institutions, student groups, private foundations, and media projects aimed at an international audience. 78

Other examples of curtailment of domestic intelligence activity in response to the prospect of public exposure include: President Nixon's revocation of approval for the Huston Plan out of concern for the risk of disclosure of the possible illegal actions proposed and the fact that "their sensitivity would likely generate media criticism if they were employed;" 79 J. Edgar Hoover's cessation of the bugging of Dr. Martin Luther King, Jr.'s hotel rooms after the initiation of a Senate investigation chaired by Edward V. Long of Missouri; 80 and the CIA's consideration of suspending mail-opening until the Long inquiry abated and eventual termination of the program "in the Watergate climate." 81 More recently, several questionable domestic intelligence practices have been terminated at least in part as a result of Congressional investigation. 82

There are several prominent instances of terminations which resulted from an internal review process:

-- In August 1973, shortly after taking office, Internal Revenue Service Commissioner Donald Alexander abolished the Special Service Staff upon learning that it was engaged in political intelligence activities which he considered "antithetical to proper tax administration." 83

-- An internal legal review in 1973 prompted the termination of the joint effort by NSA and CIA to monitor United States - South American communications by individuals named on a drug traffic "watch list." 84

-- On May 9, 1973, newly appointed CIA Director James Schlesinger requested from CIA personnel an inventory of all "questionable activities" which the Agency had undertaken. The 694 pages of memoranda received in response to this request -- which became known at the CIA as "The Family Jewels" -- prompted the termination or limitation of a number of programs which were in violation of the the Agency's mandate, notably the CHAOS project involving intelligence-gathering against American citizens. 85

-- In the early 1960s, the CIA's MKULTRA testing program, which involved surreptitiously administering drugs to unwitting persons, was "frozen" after the Inspector General questioned the morality and lack of administrative control of the program. 85a

-- Several mail-opening operations were terminated because they lacked sufficient intelligence value, which was often measured in relation to the "flap potential" -- or risk of disclosure -- of an operation. However, both the CIA and the FBI continued other mail-opening operations after these terminations. 86

The Committee's examination of the circumstances surrounding terminations of a wide range of improper or illegal domestic intelligence activities clearly points to the need for more effective oversight from outside the agencies. In too many cases, the impetus for the termination of programs of obviously questionable propriety came from the press or the Congress rather than from intelligence agency administrators or their superiors in the Executive Branch. Although there were several laudable instances of termination as a responsible outgrowth of an agency's internal review process, the Committee's record indicates that this process alone is insufficient -- intelligence agencies cannot be left to police themselves.

#### Footnotes:

1 National Security Council memorandum 17/5,6/15/49.

2 National Security Action memorandum 161, 6/9/62.

3 For example, the FBI continued an investigation of one group in 1964 after the internal Security Division told the Bureau there was "insufficient evidence" of any legal violations. (Memorandum from Yeagley to Hoover, 3/3/64.) Two years later, an FBI intelligence official suggested that it would be "in the Bureau's best interest to put the Department on record again." The Department approved the FBI's request for permission to continue the investigation even though there had been "no significant changes as to the character and tactics of the organization." The FBI did not request further instructions in this investigation until 1973. (Memorandum from Baumgardner to Sullivan, 7/15/66; memorandum from Yeagley to Hoover, 7/28/66.)

4 For example, the annual report of Assistant Attorney General J. Walter Yeagley for Fiscal Year 1959 emphasized Communist attempts to wield influence, without pointing out the lack of tangible results:

"Despite the 'thaw,' real or apparent, in the Cold War, and despite [its] losses, the [Communist] Party has continued as an organized force, constantly *seeking to repair* its losses and *to regain* its former position of influence. In a number of fields its activities are directed ostensibly toward laudable objectives, such as the elimination of discrimination by reason of race, low cost housing for the economically underprivileged, and so on. These activities are pursued in large part *as a way of extending* the forces and currents in American life, and *with the hope of being able to 'move in'* on such movements when the time seems propitious." [Emphasis added.] (Annual Report of the Attorney General for Fiscal Year 1959, pp. 247-248.)

The same executives headed the Internal Security Division from 1959 until 1970, through the administrations of five Attorneys General and four Presidents. In 1971 a new Assistant Attorney General for the Internal Security Division, Robert Mardian, actively encouraged FBI surveillance and collaborated with FBI executive William C. Sullivan in transferring the records of the "17" wiretaps from the Bureau to the Nixon White House.

20 The Justice Department's investigation of the FBI's COINTELPRO illustrates the reluctance of the Justice Department to interfere in or even inquire about Internal Bureau matters. Although the existence of COINTELPRO was made public in 1971, the Justice Department did not initiate an investigation until 1974. The Department's Committee, headed by Assistant Attorney General Henry Petersen, which conducted the investigation, agreed to use only summaries of documents prepared by the Bureau instead of examining the Bureau documents themselves.

Those summaries were often extremely misleading. For example, one summary stated:

"it was recommended that an anonymous letter be mailed to the leader of the Blackstone Rangers, a black extremist organization in Chicago. The letter would hopefully drive a wedge between the Blackstone Rangers and the Black Panthers Party. The anonymous letter would indicate that the Black Panther Party in Chicago blamed the leader of the Blackstone Rangers for blocking their programs."

The document from which this summary was derived, however, stated that the Blackstone Rangers were prone to "violent type activity, shooting, and the like." The anonymous letter was to state that "the Panthers blame you for blocking their thing and there's supposed to be a hit out for you." The memorandum concluded that the letter "may intensify the degree of animosity

between the two groups" and "lead to reprisals against its leadership." (Memorandum from Chicago Field Office to FBI Headquarters, 1/18/69.)

21 Memorandum from J. Edgar Hoover to Attorney General Robert Kennedy, 10/7/63; memorandum from J. Edgar Hoover to Attorney General Robert Kennedy, 10/18/63.

22 Letter from FBI to Senate Select Committee, 7/24/75, pp. 4-5.

23 See M. L. King Report: "Electronic Surveillance of Dr. Martin Luther King and the Christian Leadership Conference." It should be noted, however, that President Kennedy was assassinated a month after the wiretap was installed which may account for Attorney General Kennedy's failure to inquire about the King wiretaps, at least for the first few months.

24 Memorandum from Frederick Baumgardner to William Sullivan, 1/28/64.

25 The FBI informed the Committee that it has no documents indicating that Attorney General Kennedy was told about the microphones. His associates in the Justice Department testified that they were never told, and they did not believe that the Attorney General had been told about the microphones. (See memorandum from Charles Brennan to William Sullivan, 12/19/66; Courtney Evans testimony, 12/1/75, p. 20; Burke Marshall testimony, 3/3/76, p. 43.)

The question of whether Attorney General Kennedy suspected that the FBI was using microphones to gather information about Dr. King must be viewed in light of the Attorney General's express authorization of wiretaps in the King case on national security grounds, and the FBI's practice -- known to the Attorney General -- of installing microphones in such national security cases without notifying the Department.

26 Memorandum from Director, FBI to Attorney General, 3/30/65, p. 2. The Attorney General's policy change occurred during a period of publicity and Congressional inquiry into the FBI's use of electronic surveillance.

27 Memorandum from Director, FBI to Attorney General, 5/17/65; Memorandum from Director, FBI, to Attorney General, 10/19/65; Memorandum from Director, FBI, to Attorney General, 12/1/65.

27a Katzenbach advised Director Hoover in September 1965 that "in emergency situations [wiretaps and microphones] may be used subject to my later ratification." (Memorandum from Katzenbach to Hoover, 9/27/65.) Nevertheless, there is no indication that these microphone surveillances of Dr. King presented "emergency situations."

28 Katzenbach testified that he could not recall having seen the notices, although he acknowledged the initials on the memoranda as in his handwriting and in the location where he customarily placed his initials. (Katzenbach, 12/3/75, Hearings, Vol. 6, p. 227.)

29 Memorandum from Lawrence Houston to Deputy Attorney General, 3/1/54.

29a Memorandum for the Record by General Counsel, CIA, 1/31/75.

30 The Committee's requests also provided the Department of Justice with the opportunity to see most of these FBI documents for the first time.

31 One cabinet official, when told that the CIA wanted to tell him something secret, replied, "I would rather not know anything about it." The "secret" matter was CIA's illegal mail opening program. (J. Edward Day testimony, 10/22/75, Hearings, Vol. 4, p. 45.)

32 Letter from FBI to the Senate Select Committee, 11/6/75.

45c Memorandum from C. D. DeLoach to Mr. Tolson, 5/17/68. Four days later DeLoach had a phone conversation with Jack Anderson in which, according to partment [sic] official "had advised him concerning specific information involving an old wire tap on King." (Memorandum from C. D. DeLoach to Mr. Tolson, 5/21/68.) Both of these memoranda were initialed by Hoover.

45d U.S. V. U.S. District Court, 407 U.S. 297 (1972).

45e These include the Smith Act of 1940 and the Voorhis Act of 1941. In addition to reliance on these statutes to buttress its claim of authority for domestic intelligence operations, the FBI has also placed reliance on a Civil War seditious conspiracy statute and a rebellion and insurrection statute passed during the Whiskey Rebellion of the 1790's. FBI Director Clarence Kelley, in a letter to the Attorney General, stated that these later statutes were designed for past centuries, "not the Twentieth Century." (memorandum from Director, FBI, to Attorney General, Hearings, Vol. 6, Exhibit 53.) The Committee agrees.

68-72 omitted in original.

73 Memorandum from Brennan to Sullivan, 4/27/71; letter from Director, FBI, to all Field Offices, 4/28/71. Even after the termination of COINTELPRO, it was suggested that "counterintelligence action" would be considered "in exceptional instances" so long as there were "tight procedures to insure absolute secrecy" (Sullivan memorandum, 4/27/71; letter from Director, FBI to all Field Offices, 4/28/71.)

74 See IRS Report: "Operation Leprechaun."

75 The Army made its first effort to curb its domestic collection of "civil disturbance" intelligence on the political activities of private citizens in June 1970, only after press disclosures about the program which prompted two Congressional committees to schedule hearings on the matter, (Christopher Pyle, "CONUS Intelligence: The Army Watches Civilian Politics" Washington Monthly, January 1970.) Despite legal opinions, both from inside and outside the Army, that domestic radio monitoring by the Army Security Agency was illegal, the Army did not move to terminate the program until after the media revealed that the Army Security Agency had monitored radio transmissions during the 1968 Democratic National Convention (Memorandum from Army Assistant Chief of Staff for Intelligence to the Army General Counsel re: UPASA Covert Activities in Civil Disturbance Control Operations.) Department of Defense controls on domestic surveillance were not imposed until March 1971, after NBC News reported that the Army had placed Senator Adlai Stevenson III and Congressman Abner Mikva under surveillance. (NBC News, "First Tuesday", 12/1/70.)

76 This involved nine of the so-called "17" wiretaps in February 1971. (Report of the Committee on the Judiciary, House of Representatives, 8/20/75, pp. 148, 149.)

77 omitted in original.

78 This included nine of the so-called "17" wiretaps in February 1971. In response to the storm of public and congressional criticism engendered by a press account of CIA support for a student organization, President Johnson appointed a Committee, chaired by then Under Secretary of State Nicholas Katzenbach, to review government activities that "endanger the integrity and independence" of United States educational and private voluntary organizations which operate abroad. In March 1967, the Committee recommended "that no federal agency shall provide any covert financial assistance or support, direct or indirect, to any of the nation's educational or private voluntary organizations." The CIA responded with a major review of such projects.

The question of the nature and extent of the CIA's compliance with the Katzenbach guidelines is discussed in the Committee's Foreign Intelligence Report.

79 Response by Richard Nixon to interrogatory Number 17 posed by Senate Select Committee.

80 On January 7, 1966, in response to Associate Director Tolson's recommendation, Director Hoover "reserve[d] final decision" about whether to discontinue all microphone surveillance of Dr. King "until DeLoach sees [Senator Edward V.] Long." (Memorandum from Sullivan to DeLoach, 1/21/66.) The only occasion on which the FBI Director rejected a recommendation for bugging a hotel room of Dr. King's was January 21, 1966, the same day that Assistant Director DeLoach met with an aide to Senator Long to try to head off the Long Committee's hearings on the subject of FBI "bugs" and taps. (Memorandum from DeLoach to Tolson, 1/21/66.) When DeLoach returned from the meeting, he reported:

"While we have neutralized the threat of being embarrassed by the Long Subcommittee, we have not yet eliminated certain dangers which might be created as a result of newspaper pressure on Long. We therefore must keep on top of this situation at all times." (Memorandum, Executives Conference to the Director, 1/7/66.)

Another possible explanation for Hoover's cessation of the King hotel bugging is found in the impact of a memorandum from the Solicitor General in the Black case which Hoover apparently interpreted as a restriction upon the FBI's authority to conduct microphone surveillance. (Supplemental memorandum for the United States, U.S. v. Black, submitted by Solicitor General Thurgood Marshall, 7/13/66; Katzenbach, 10/11/75. p. 58.)

81 In 1965, the Long Subcommittee investigation caused the CIA to consider whether its major mail opening "operations should be partially or fully suspended until the subcommittee's investigations are completed." When the CIA contacted Chief

Postal Inspector Henry Montague and learned that he believed that the Long investigation would "soon cool off," it was decided to continue the operation. (Memorandum to the files by "CIA officer," 4/23/65.)

Despite continued apprehensions about the "flap potential" of exposure and repeated recognition of its illegality, the actual termination of the CIA's New York mail-opening project came, according to CIA Office of Security Director Howard Osborn because: "I thought it was illegal and in the Watergate climate we had absolutely no business doing this." (Howard Osborn deposition, 8/28/75, p. 89.) He discussed the matter with William Colby who agreed that the project was illegal and should not be continued, "particularly in a climate of that type." (Osborn deposition, 8/28/75, p. 90.)

82 Shortly after the Senate Select Committee on Intelligence Activities held hearings on the laxity of the system for disclosure of tax return information to United States attorneys, the practice was changed. In October 1975, U.S. Attorneys requesting tax return information were required by the IRS to provide a sufficient explanation of the need for the information and the intended use to which it would be put to enable IRS to ascertain the validity of the request. Operation SHAMROCK, NSA's program of obtaining millions of international telegrams, was terminated in May 1975, according to a senior NSA official, primarily because it was no longer a valuable source of foreign intelligence and because the Senate Select Committee's investigation of the program had increased the risk of exposure. (Staff summary of "senior NSA official" interview, 9/17/75, p. 3.)

83 Donald Alexander testimony, 10/2/75, Hearings, Vol. 3, p. 8. Alexander testified, however, that in a meeting with IRS administrators on the day after he took office, the SSS was discussed, and "full disclosure" was not made to him. Prior to the Leprechaun revelations, Commissioner Alexander had also initiated a general review of IRS information-gathering and retrieval systems, and he had already suspended certain types of information-gathering due to discovery of vast quantities of non-tax-related material. (Alexander, 10/2/75, Hearings, Vol. 3, pp. 8-10.)

Another termination due to internal review took place at IRS in 1968. The Chief of the Disclosure Branch terminated what he considered the "illegal" provision of tax return information to the FBI by another IRS Division. (IRS Memorandum, D. O. Virdin to Harold Snyder, 5/2/68.) During this same period, the CIA was also obtaining returns in a manner similar to the FBI (though in much smaller numbers), yet no one in the Intelligence Division or elsewhere in the Compliance Division apparently thought to examine that practice in light of the change being made in the practice with respect to the FBI. (Donald O. Virdin testimony, 9/16/75, pp. 69-73.)

84 The CIA suspended its participation in the program as a result of an opinion by its General Counsel, Lawrence Houston, that the intercepts were illegal. (Memorandum from Houston to Acting Chief of Division, 1/29/73.) Shortly thereafter, NSA reviewed the legality and appropriateness of its own involvement in what was essentially a law enforcement effort by the Bureau of Narcotics and Dangerous Drugs rather than a foreign intelligence program, which is the only authorized province for NSA operations. ("Senior NSA official deposition," 9/16/75, p. 10.) In June 1973 the Director of NSA terminated the drug watch list, several months after the CIA had terminated its own intercept program. NSA's drug watch list activity had been in operation since 1970. (Allen, 10/29/75, Hearings, Vol. 5, p. 23.)

In the fall of 1973, NSA terminated the remainder of its watch list activity, which had involved monitoring communications by individuals targeted for NSA by other agencies including CIA, FBI, and BNDD. In response to the Keith case and to another case which threatened to disclose the existence of the NSA watch list, NSA and the Justice Department had begun to reconsider the propriety of the program. The review process culminated in termination. See NSA Report: Termination of Civil Disturbance Watch List.

85 Schlesinger described his review of "grey area activities" which were "perhaps legal, perhaps not legal" as a part of "the enhanced effort that came in the wake of Watergate" for oversight of the propriety of Government activities. (Schlesinger testimony, Rockefeller Commission, 5/5/75, pp. 114,116.) Schlesinger testified that his request for the reporting of "questionable activities" came after learning that "there was this whole set of relationships" between the CIA and White House "plumber" E. Howard Hunt, Jr., about which Schlesinger had not been briefed completely upon assuming his position. (Schlesinger, Rockefeller Commission testimony, p. 115.) "As a consequence," Schlesinger "insisted that all people come forward" with "anything to do with the Watergate affair" and any other arguably improper or illegal operations. (Schlesinger, Rockefeller Commission, 5/5/75, p. 116.)

85a After the Inspector General's survey of the Technical Services Division, he recommended termination of the testing program. (Earman memorandum, 5/5/63.) The program was then suspended pending resolution at the highest levels within the CIA of the issues presented by the program -- "the risks of embarrassment to the Agency, coupled with the moral problem." (Memorandum from DDP Helms to DCI McCone, 9/4/65.) In response to the IG Report, DDP Helms recommended to DCI McCone that unwitting testing continue. Helms maintained that the program could be conducted in a "secure and effective manner" and believed it "necessary that the Agency maintain a central role in this activity, keep current on enemy capabilities in the manipulation of human behavior, and maintain an offensive capability." (Memorandum from Helms to DCI McCone, 8/19/63.) The Acting DCI deferred decision on the matter and directed TSD in the meantime to "continue the freeze on unwitting testing." (CIA memorandum to Senate Select Committee, received 9/4/75.) According to a CIA report to the Select Committee:

"With the destruction of the MKULTRA files in early 1973, It is believed that there are no definitive records in CIA that would record the termination of the program for testing behavioral drugs on unwitting persons. . . . There is no record to our knowledge, that [the] freeze was ever lifted." (CIA memorandum to Senate Select Committee, received 9/4/75.)

Testimony from the CIA officials involved confirmed that the testing was not resumed. (See Foreign and Military Intelligence Report.)

86 Two FBI mail-opening programs were suspended for security reasons involving changes in local postal personnel and never reinstituted, on the theory that the value of the programs did not justify the risk involved. (Memorandum from San

Francisco Field Office to FBI Headquarters, 5/19/66.) The CIA's San Francisco mail-opening project "was terminated since the risk factor outweighed continuing an activity which had already achieved its objectives." (Memorandum to Chief, East Asia Division, June 1973.) The lack of any significant intelligence value to the CIA apparently led to the termination of the New Orleans mail-opening program. (Memorandum from "Identity 13" to Deputy Director of Security, 10/9/57.) Three other programs were terminated because they had produced no valuable counterintelligence information, while diverting manpower needed for other operations.

# INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS

## BOOK II

### FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS

APRIL 26 (legislative day, April 14), 1976

#### I. INTRODUCTION AND SUMMARY

The resolution creating this Committee placed greatest emphasis on whether intelligence activities threaten the "rights of American citizens." 1

The critical question before the Committee was to determine how the fundamental liberties of the people can be maintained in the course of the Government's effort to protect their security. The delicate balance between these basic goals of our system of government is often difficult to strike, but it can, and must, be achieved. We reject the view that the traditional American principles of justice and fair play have no place in our struggle against the enemies of freedom. Moreover, our investigation has established that the targets of intelligence activity have ranged far beyond persons who could properly be characterized as enemies of freedom and have extended to a wide array of citizens engaging in lawful activity.

Americans have rightfully been concerned since before World War II about the dangers of hostile foreign agents likely to commit acts of espionage. Similarly, the violent acts of political terrorists can seriously endanger the rights of Americans. Carefully focused intelligence investigations can help prevent such acts. But too often intelligence has lost this focus and domestic intelligence activities have invaded individual privacy and violated the rights of lawful assembly and political expression. Unless new and tighter controls are established by legislation, domestic intelligence activities threaten to undermine our democratic society and fundamentally alter its nature.

We have examined three types of "intelligence" activities affecting the rights of American citizens. The first is intelligence collection -- such as infiltrating groups with informants, wiretapping, or opening letters. The second is dissemination of material which has been collected. The third is covert action designed to disrupt and discredit the activities of groups and individuals deemed a threat to the social order. These three types of "intelligence" activity are closely related in the practical world. Information which is disseminated by the intelligence community 2 or used in disruptive programs has usually been obtained through surveillance. Nevertheless, a division between collection, dissemination and covert action is analytically useful both in understanding why excesses have occurred in the past and in devising remedies to prevent those excesses from recurring.

*A. Intelligence Activity: A New Form of Governmental Power to Impair Citizens' Rights*

A tension between order and liberty is inevitable in any society. A Government must protect its citizens from those bent on engaging in violence and criminal behavior, or in espionage and other hostile foreign intelligence activity. Many of the intelligence programs reviewed in this report were established for those purposes. Intelligence work has, at times, successfully prevented dangerous and abhorrent acts, such as bombings and foreign spying, and aided in the prosecution of those responsible for such acts.

But, intelligence activity in the past decades has, all too often, exceeded the restraints on the exercise of governmental power which are imposed by our country's Constitution, laws, and traditions.

Excesses in the name of protecting security are not a recent development in our nation's history. In 1798, for example, shortly after the Bill of Rights was added to the Constitution, the Alien and Sedition Acts were passed. These Acts, passed in response to fear of proFrench "subversion", made it a crime to criticize the Government.<sup>3</sup> During the Civil War, President Abraham Lincoln suspended the writ of habeas corpus. Hundreds of American citizens were prosecuted for anti-war statements during World War I, and thousands of "radical" aliens were seized for deportation during the 1920 Palmer Raids. During the Second World War, over the opposition of J. Edgar Hoover and military intelligence,<sup>4</sup> 120,000 Japanese-Americans were apprehended and incarcerated in detention camps.

Those actions, however, were fundamentally different from the intelligence activities examined by this Committee. They were generally executed overtly under the authority of a statute or a public executive order. The victims knew what was being done to them and could challenge the Government in the courts and other forums. Intelligence activity, on the other hand, is generally covert. It is concealed from its victims<sup>5</sup> and is seldom described in statutes or explicit executive orders. The victim may never suspect that his misfortunes are the intended result of activities undertaken by his government, and accordingly may have no opportunity to challenge the actions taken against him.

It is, of course, proper in many circumstances -- such as developing a criminal prosecution -- for the Government to gather information about a citizen and use it to achieve legitimate ends, some of which might be detrimental to the citizen. But in criminal prosecutions, the courts have struck a balance between protecting the rights of the accused citizen and protecting the society which suffers the consequences of crime. Essential to the balancing process are the rules of criminal law which circumscribe the techniques for gathering evidence<sup>6</sup> the kinds of evidence that may be collected, and the uses to which that evidence may be put. In addition, the criminal defendant is given an opportunity to discover and then challenge the legality of how the Government collected information about him and the use which the Government intends to make of that information.

This Committee has examined a realm of governmental information collection which has not been governed by restraints comparable to those in criminal proceedings. We have examined the collection of intelligence about the political advocacy and actions and the private lives of American citizens. That information has been used covertly to discredit the ideas advocated and to "neutralize" the actions of their proponents. As Attorney General Harlan Fiske Stone warned in 1924, when he sought to keep federal agencies from investigating "political or other opinions" as opposed to "conduct . . . forbidden by the laws":

When a police system passes beyond these limits, it is dangerous to the proper administration of justice and to human liberty, which it should be our first concern to cherish.

. . . There is always a possibility that a secret police may become a menace to free government and free institutions because it carries with it the possibility of abuses of power which are not always quickly apprehended or understood.<sup>7</sup>

Our investigation has confirmed that warning. We have seen segments of our Government, in their attitudes and action, adopt tactics unworthy of a democracy, and occasionally reminiscent of the tactics of totalitarian regimes. We have seen a consistent pattern in which programs initiated with limited goals, such as preventing criminal violence or identifying foreign spies, were expanded to what witnesses characterized as "vacuum cleaners," "sweeping in information about lawful activities of American citizens.

The tendency of intelligence activities to expand beyond their initial scope is a theme which runs through every aspect of our investigative findings. Intelligence collection programs naturally generate ever-increasing demands for new data. And once intelligence has been collected, there are strong pressures to use it against the target.

The pattern of intelligence agencies expanding the scope of their activities was well described by one witness, who in 1970 had coordinated an effort by most of the intelligence community to obtain authority to undertake more illegal domestic activity:

The risk was that you would get people who would be susceptible to political considerations as opposed to national security considerations, or would construe political considerations to be national security considerations, to move from the kid with a bomb to the kid with a picket sign, and from the kid with the picket sign to the kid with the bumper sticker of the opposing candidate. And you just keep going down the line.<sup>9</sup>

In 1940, Attorney General Robert Jackson saw the same risk. He recognized that using broad labels like "national security" or "subversion" to invoke the vast power of the government is dangerous because there are "no definite standards to determine what constitutes a 'subversive activity, such as we have for murder or larceny.'" Jackson added:

Activities which seem benevolent or helpful to wage earners, persons on relief, or those who are disadvantaged in the struggle for existence may be regarded as 'subversive' by those whose property interests might be burdened thereby. Those who are in office are apt to regard as 'subversive' the activities of any of those who would bring about a change of administration. Some of our soundest

constitutional doctrines were once punished as subversive. We must not forget that it was not so long ago that both the term 'Republican' and the term 'Democrat' were epithets with sinister meaning to denote persons of radical tendencies that were 'subversive' of the order of things then dominant. 10

This wise warning was not heeded in the conduct of intelligence activity, where the "eternal vigilance" which is the "price of liberty" has been forgotten.

#### *B. The Questions*

We have directed our investigation toward answering the, following questions:

Which governmental agencies have engaged in domestic spying?

How many citizens have been targets of Governmental intelligence activity?

What standards have governed the opening of intelligence investigations and when have intelligence investigations been terminated?

Where have the targets fit on the spectrum between those who commit violent criminal acts and those who seek only to dissent peacefully from Government policy?

To what extent has the information collected included intimate details of the targets' personal lives or their political views, and has such information been disseminated and used to injure individuals?

What actions beyond surveillance have intelligence agencies taken, such as attempting to disrupt, discredit, or destroy persons or groups who have been the targets of surveillance?

Have intelligence agencies been used to serve the political aims of Presidents, other high officials, or the agencies themselves?

How have the agencies responded either to proper orders or to excessive pressures from their superiors? To what extent have intelligence agencies disclosed, or concealed them from, outside bodies charged with overseeing them?

Have intelligence agencies acted outside the law? What has been the attitude of the intelligence community toward the rule of law?

To what extent has the Executive branch and the Congress controlled intelligence agencies and held them accountable?

Generally, how well has the Federal system of checks and balances between the branches worked to control intelligence activity?

#### *C. Summary of the Main Problems*

The answer to each of these questions is disturbing. Too many people have been spied upon by too many Government agencies and too much information has been collected. The Government has often undertaken the secret surveillance of citizens on the basis of their political beliefs, even when those beliefs posed no threat of violence or illegal acts on behalf of a hostile foreign power. The Government, operating primarily through secret informants, but also using other intrusive techniques such as wiretaps, microphone "bugs" surreptitious mail opening, and break-ins, has swept in vast amounts of information about the personal lives, views, and associations of American citizens. Investigations of groups deemed potentially dangerous -- and even of groups suspected of associating with potentially dangerous organizations -- have continued for decades, despite the fact that those groups did not engage in unlawful activity. Groups and individuals have been harassed and disrupted because of their political views and their lifestyles. Investigations have been based upon vague standards whose breadth made excessive collection inevitable. Unsavory and vicious tactics have been employed -- including anonymous attempts to break up marriages, disrupt meetings, ostracize persons from their professions, and provoke target groups into rivalries that might result in deaths. Intelligence agencies have served the political and personal objectives of presidents and other high officials. While the agencies often committed excesses in response to pressure from high officials in the Executive branch and Congress, they also occasionally initiated improper activities and then concealed them from officials whom they had a duty to inform.

Governmental officials -- including those whose principal duty is to enforce the law -- have violated or ignored the law over long periods of time and have advocated and defended their right to break the law.

The Constitutional system of checks and balances has not adequately controlled intelligence activities. Until recently the Executive branch has neither delineated the scope of permissible activities nor established procedures for supervising intelligence agencies. Congress has failed to exercise sufficient oversight, seldom questioning the use to which its appropriations were being put. Most domestic intelligence issues have not reached the courts, and in those cases when they have reached the courts, the judiciary has been reluctant to grapple with them.

Each of these points is briefly illustrated below, and covered in substantially greater detail in the following sections of the report.

## *1. The Number of People Affected by Domestic Intelligence Activity*

United States intelligence agencies have investigated a vast number of American citizens and domestic organizations. FBI headquarters alone has developed over 500,000 domestic intelligence files, 11 and these have been augmented by additional files at FBI Field Offices. The FBI opened 65,000 of these domestic intelligence files in 1972 alone. 12 In fact, substantially more individuals and groups are subject to intelligence scrutiny than the number of files would appear to indicate, since typically, each domestic intelligence file contains information on more than one individual or group, and this information is readily retrievable through the FBI General Name Index.

The number of Americans and domestic groups caught in the domestic intelligence net is further illustrated by the following statistics:

-- Nearly a quarter of a million first class letters were opened and photographed in the United States by the CIA between 1953-1973, producing a CIA computerized index of nearly one and one-half million names. 13

-- At least 130,000 first class letters were opened and photographed by the FBI between 1940-1966 in eight U.S. cities. 14

-- Some 300,000 individuals were indexed in a CIA computer system and separate files were created on approximately 7,200 Americans and over 100 domestic groups during the course of CIA's Operation CHAOS (1967-1973). 15

-- Millions of private telegrams sent from, to, or through the United States were obtained by the National Security Agency from 1947 to 1975 under a secret arrangement with three United States telegraph companies. 16

-- An estimated 100,000 Americans were the subjects of United States Army intelligence files created between the mid 1960's and 1971. 17

-- Intelligence files on more than 11,000 individuals and groups were created by the Internal Revenue Service between 1969 and 1973 and tax investigations were started on the basis of political rather than tax criteria. 18

-- At least 26,000 individuals were at one point catalogued on an FBI list of persons to be rounded up in the event of a "national emergency". 19

## *2. Too Much Information Is Collected For Too Long*

Intelligence agencies have collected vast amounts of information about the intimate details of citizens' lives and about their participation in legal and peaceful political activities. The targets of intelligence activity have included political adherents of the right and the left, ranging from activist to casual supporters. Investigations have been directed against proponents of racial causes and women's rights, outspoken apostles of nonviolence and racial harmony; establishment politicians; religious groups; and advocates of new life styles. The widespread targeting of citizens and domestic groups, and the excessive scope of the collection of information, is illustrated by the following examples:

(a) The "Women's Liberation Movement" was infiltrated by informants who collected material about the movement's policies, leaders, and individual members. One report included the name of every woman who attended meetings, 20 and another stated that each woman at a meeting had described "how she felt oppressed, sexually or otherwise". 21 Another report concluded that the movement's purpose was to "free women from the humdrum existence of being only a wife and mother", but still recommended that the intelligence investigation should be continued. 22

(b) A prominent civil rights leader and advisor to Dr. Martin Luther King, Jr., was investigated on the suspicion that he might be a Communist "sympathizer". The FBI field office concluded he was not. 23 Bureau headquarters directed that the investigation continue using a theory of "guilty until proven innocent."

The Bureau does not agree with the expressed belief of the field office that -----  
24 is not sympathetic to the Party cause. While there may not be any evidence that -----  
--- is a Communist neither is there any substantial evidence that he is anti-Communist. 25

(c) FBI sources reported on the formation of the Conservative American Christian Action Council in 1971. 26 In the 1950's, the Bureau collected information about the John Birch Society and passed it to the White House because of the Society's "scurrilous attack" on President Eisenhower and other high Government officials. 27

(d) Some investigations of the lawful activities of peaceful groups have continued for decades. For example, the NAACP was investigated to determine whether it "had connections with" the Communist Party. The investigation lasted for over twenty-five years, although nothing was found to rebut a report during the first year of the investigation that the NAACP had a "strong tendency" to "steer clear of Communist activities." 211 Similarly, the FBI has admitted that the Socialist Workers Party has committed no criminal acts. Yet the Bureau has investigated the Socialist Workers Party for more than three decades on the basis of its revolutionary rhetoric-which the FBI concedes falls short of incitement to violence-and its claimed international links. The Bureau is currently using its informants to collect information about SWP members' political views, including those on "U.S. involvement in Angola," "food prices," "racial matters," the "Vietnam War," and about any of their efforts to support non-SWP candidates for political office. 29

(e) National political leaders fell within the broad reach of intelligence investigations. For example, Army Intelligence maintained files on Senator Adlai Stevenson and Congressman Abner Mikva because of their participation in peaceful political meetings under surveillance by Army agents. 30 A letter to Richard Nixon, while he was a candidate for President in 1968, was intercepted under CIA's mail opening program. In the 1960's President Johnson asked the FBI to compare various Senators' statements on Vietnam with the Communist Party line 32 and to conduct name checks on leading antiwar Senators. 33

(f) As part of their effort to collect information which "related even remotely" to people or groups "active" in communities which had "the potential" for civil disorder, Army intelligence agencies took such steps as: sending agents to a Halloween party for elementary school children in Washington, D.C., because they suspected a local "dissident" might be present; monitoring protests of welfare mothers' organizations in Milwaukee; infiltrating a coalition of church youth groups in Colorado; and sending agents to a priests' conference in Washington, D.C., held to discuss birth control measures. 34

(g) In the late 1960's and early 1970's, student groups were subjected to intense scrutiny. In 1970 the FBI ordered investigations of every member of the Students for a Democratic Society and of "every Black Student Union and similar group regardless of their past or present involvement in disorders." 35 Files were opened on thousands of young men and women so that, as the former head of FBI intelligence explained, the information could be used if they ever applied for a government job. 36

In the 1960's Bureau agents were instructed to increase their efforts to discredit "New Left" student demonstrators by tactics including publishing photographs ("naturally the most obnoxious picture should be used"), 37 using "misinformation" to falsely notify members events had been cancelled '18 and writing "tell-tale" letters to students' parents. 39

(h) The FBI Intelligence Division commonly investigated any indication that "subversive" groups already under investigation were seeking to influence or control other groups. 40 One example of the extreme breadth of this "infiltration" theory was an FBI instruction in the mid-1960's to all Field Offices to investigate every "free university" because some of them had come under "subversive influence." 41

(i) Each administration from Franklin D. Roosevelt's to Richard Nixon's permitted, and sometimes encouraged, government agencies to handle essentially political intelligence. For example:

-- President Roosevelt asked the FBI to put in its files the names of citizens sending telegrams to the White House opposing his "national defense" policy and supporting Col. Charles Lindbergh. 42

-- President Truman received inside information on a former Roosevelt aide's efforts to influence his appointments, 43 labor union negotiating plans, 44 and the publishing plans of journalists. 45

-- President Eisenhower received reports on purely political and social contacts with foreign officials by Bernard Baruch, 46 Mrs. Eleanor Roosevelt, 47 and Supreme Court Justice William O. Douglas. 47a

-- The Kennedy Administration had the FBI wiretap a Congressional staff member, 48 three executive officials, 49 a lobbyist, 50 and a Washington law firm. 51 Attorney General Robert F. Kennedy received the fruits of a FBI "tap" on Martin Luther King, Jr. 52 and a "bug" on a Congressman both of which yielded information of a political nature. 53

-- President Johnson asked the FBI to conduct "name checks" of his critics and of members of the staff of his 1964 opponent, Senator Barry Goldwater. 54 He also requested purely political intelligence on his critics in the Senate, and received extensive intelligence reports on political activity at the 1964 Democratic Convention from FBI electronic surveillance. 55

-- President Nixon authorized a program of wiretaps which produced for the White House purely political or personal information unrelated to national security, including information about a Supreme Court justice. 56

### *3. Covert Action and the Use of Illegal or Improper Means*

(a) Covert Action. -- Apart from uncovering excesses in the collection of intelligence, our investigation has disclosed covert actions directed against Americans, and the use of illegal and improper surveillance techniques to gather information. For example:

(i) The FBI's COINTELPRO -- counterintelligence program -- was designed to "disrupt" groups and "neutralize" individuals deemed to be threats to domestic security. The FBI resorted to counterintelligence tactics in part because its chief officials believed that the existing law could not control the activities of certain dissident groups, and that court decisions had tied the hands of the intelligence community. Whatever opinion one holds about the policies of the targeted groups, many of the tactics employed by the FBI were indisputably degrading to a free society. COINTELPRO tactics included:

-- Anonymously attacking the political beliefs of targets in order to induce their employers to fire them;

-- Anonymously mailing letters to the spouses of intelligence targets for the purpose of destroying their marriages; 57

-- Obtaining from IRS the tax returns of a target and then attempting to provoke an IRS investigation for the express purpose of deterring a protest leader from attending the Democratic National Convention; 58

-- Falsely and anonymously labeling as Government informants members of groups known to be violent, thereby exposing the falsely labelled member to expulsion or physical attack; 59

-- Pursuant to instructions to use "misinformation" to disrupt demonstrations, employing such means as broadcasting fake orders on the same citizens band radio frequency used by demonstration marshalls to attempt to control demonstrations, 60 and duplicating and falsely filling out forms soliciting housing for persons coming to a demonstration, thereby causing "long and useless journeys to locate these addresses"; 61

-- Sending an anonymous letter to the leader of a Chicago street gang (described as "violence-prone") stating that the Black Panthers were supposed to have "a hit out for you". The letter was suggested because it "may intensify . . . animosity" and cause the street gang leader to "take retaliatory action". 62

(ii) From "late 1963" until his death in 1968, Martin Luther King, Jr., was the target of an intensive campaign by the Federal Bureau of Investigation to "neutralize" him as an effective civil rights leader. In the words of the man in charge of the FBI's "war" against Dr. King, "No holds were barred." 63

The FBI gathered information about Dr. King's plans and activities through an extensive surveillance program, employing nearly every intelligence-gathering technique at the Bureau's disposal in order to obtain information about the "private activities of Dr. King and his advisors" to use to "completely discredit" them. 64

The program to destroy Dr. King as the leader of the civil rights movement included efforts to discredit him with Executive branch officials, Congressional leaders, foreign heads of state, American ambassadors, churches, universities, and the press. 65

The FBI mailed Dr. King a tape recording made from microphones hidden in his hotel rooms which one agent testified was an attempt to destroy Dr. King's marriage.<sup>66</sup> The tape recording was accompanied by a note which Dr. King and his advisors interpreted as threatening to release the tape recording unless Dr. King committed suicide. 67

The extraordinary nature of the campaign to discredit Dr. King is evident from two documents:

-- At the August 1963 March on Washington, Dr. King told the country of his "dream" that:

all of God's children, black men and white men, Jews and Gentiles, Protestants and Catholics, will be able to join hands and sing in the words of the old Negro spiritual, "Free at last, free at last, thank God Almighty, I'm free at last."

The Bureau's Domestic Intelligence Division concluded that this "demagogic speech" established Dr. King as the "most dangerous and effective Negro leader in the country." 68 Shortly afterwards, and within days after Dr. King was named "Man of the Year" by Time magazine, the FBI decided to "take him off his pedestal," reduce him completely in influence, and select and promote its own candidate to "assume the role of the leadership of the Negro people." 69

-- In early 1968, Bureau headquarters explained to the field that Dr. King must be destroyed because he was seen as a potential "messiah" who could "unify and electrify" the "black nationalist movement". Indeed, to the FBI he was a potential threat because he might "abandon his supposed 'obedience' to white liberal doctrines (non-violence)." 70 In short, a non-violent man was to be secretly attacked and destroyed as insurance against his abandoning non-violence.

(b) Illegal or Improper Means. -- The surveillance which we investigated was not only vastly excessive in breadth and a basis for degrading counterintelligence actions, but was also often conducted by illegal or improper means. For example:

(1) For approximately 20 years the CIA carried out a program of indiscriminately opening citizens' first class mail. The Bureau also had a mail opening program, but cancelled it in 1966. The Bureau continued, however, to receive the illegal fruits of CIA's program. In 1970, the heads of both agencies signed a document for President Nixon, which correctly stated that mail opening was illegal, falsely stated that it had been discontinued, and proposed that the illegal opening of mail should be resumed because it would provide useful results. The President approved the program, but withdrew his approval five days later. The illegal opening continued nonetheless. Throughout this period CIA officials knew that mail opening was illegal, but expressed concern about the "flap potential" of exposure, not about the illegality of their activity. 71

(2) From 1947 until May 1975, NSA received from international cable companies millions of cables which had been sent by American citizens in the reasonable expectation that they would be kept private. 72

(3) Since the early 1930's, intelligence agencies have frequently wiretapped and bugged American citizens without the benefit of judicial warrant. Recent court decisions have curtailed the use of these techniques against domestic targets. But past subjects of these surveillances have included a United States Congressman, a Congressional staff member, journalists and newsmen, and numerous individuals and groups who engaged in no criminal activity and who posed no genuine threat to the national security, such as two White House domestic affairs advisers and an anti Vietnam War protest group. While the prior written approval of the Attorney General has been required for all warrantless wiretaps since 1940, the record is replete with instances where this requirement was ignored and the Attorney General gave only after-the-fact authorization.

Until 1965, microphone surveillance by intelligence agencies was wholly unregulated in certain classes of cases. Within weeks after a 1954 Supreme Court decision denouncing the FBI's installation of a microphone in a defendant's bedroom, the Attorney General informed the Bureau that he did not believe the decision applied to national security cases and permitted the FBI to continue to install microphones subject only to its own "intelligent restraint". 73

(4) In several cases, purely political information (such as the reaction of Congress to an Administration's legislative proposal) and purely personal information (such as coverage of the extra-marital social activities of a high-level Executive official under surveillance) was obtained from electronic surveillance and disseminated to the highest levels of the federal government. 74

(5) Warrantless break-ins have been conducted by intelligence agencies since World War II. During the 1960's alone, the FBI and CIA conducted hundreds of break-ins, many against American citizens and domestic organizations. In some cases, these break-ins were to install microphones; in other cases, they were to steal such items as membership lists from organizations considered "subversive" by the Bureau. 75

(6) The most pervasive surveillance technique has been the informant. In a random sample of domestic intelligence cases, 83% involved informants and 5% involved electronic surveillance. 76 Informants have been used against peaceful, law-abiding groups; they have collected information about personal and political views and activities. 77 To maintain their credentials in violence-prone groups, informants have involved themselves in violent activity. This phenomenon is well illustrated by an informant in the Klan. He was present at the murder of a civil rights worker in Mississippi and subsequently helped to solve the crime and convict the perpetrators. Earlier, however, while performing duties paid for by the Government, he had previously "beaten people severely, had boarded buses and kicked people, had [gone] into restaurants and beaten them [blacks] with blackjacks, chains, pistols." 78 Although the FBI requires agents to instruct informants that they cannot be involved in violence, it was understood that in the Klan, "he couldn't be an angel and be a good informant." 79

#### *4. Ignoring the Law*

Officials of the intelligence agencies occasionally recognized that certain activities were illegal, but expressed concern only for "flap Potential." Even more disturbing was the frequent testimony that the law, and the Constitution were simply ignored. For example, the author of the so-called Huston plan testified:

Question. Was there any person who stated that the activity recommended, which you have previously identified as being illegal opening of the mail and breaking and entry or burglary -- was there any single person who stated that such activity should not be done because it was unconstitutional?

Answer. No.

Question. Was there any single person who said such activity should not be done because it was illegal?

Answer. No. 80

Similarly, the man who for ten years headed FBI's Intelligence Division testified that:

... never once did I hear anybody, including myself, raise the question: "Is this course of action which we have agreed upon lawful, is it legal, is it ethical or moral." We never gave any thought to this line of reasoning, because we were just naturally pragmatic. 81

Although the statutory law and the Constitution were often not "[given] a thought", 82 there was a general attitude that intelligence needs were responsive to a higher law. Thus, as one witness testified in justifying the FBI's mail opening program:

It was my assumption that what we were doing was justified by what we had to do . . . the greater good, the national security. 83

#### *5. Deficiencies in Accountability and Control*

The overwhelming number of excesses continuing over a prolonged period of time were due in large measure to the fact that the system of checks and balances -- created in our Constitution to limit abuse of Governmental power -- was seldom applied to the intelligence community. Guidance and regulation from outside the intelligence agencies -- where it has been imposed at all -- has been vague. Presidents and other senior Executive officials, particularly the Attorneys General, have virtually abdicated their Constitutional responsibility to oversee and set standards for intelligence activity. Senior government officials generally gave the agencies broad, general mandates or pressed for immediate results on pressing problems. In neither case did they provide guidance to prevent excesses and their broad mandates and pressures themselves often resulted in excessive or improper intelligence activity.

Congress has often declined to exercise meaningful oversight, and on occasion has passed laws or made statements which were taken by intelligence agencies as supporting overly-broad investigations.

On the other hand, the record reveals instances when intelligence agencies have concealed improper activities from their superiors in the Executive branch and from the Congress, or have elected to disclose only the less questionable aspects of their activities.

There has been, in short, a clear and sustained failure by those responsible to control the intelligence community and to ensure its accountability. There has been an equally clear and sustained failure by intelligence agencies to fully inform the proper authorities of their activities and to comply with directives from those authorities.

#### *6. The Adverse Impact of Improper Intelligence Activity*

Many of the illegal or improper disruptive efforts directed against American citizens and domestic organizations succeeded in injuring their targets. Although it is sometimes difficult to prove that a target's misfortunes were caused by a counter-intelligence program directed against him, the possibility that an arm of the United States Government intended to cause the harm and might have been responsible is itself abhorrant.

The Committee has observed numerous examples of the impact of intelligence operations. Sometimes the harm was readily apparent -- destruction of marriages, loss of friends or jobs. Sometimes the attitudes of the public and of Government officials responsible for formulating policy and resolving vital issues were influenced by distorted intelligence. But the most basic harm was to the values of privacy and freedom which our Constitution seeks to protect and which intelligence activity infringed on a broad scale.

(a) General Efforts to Discredit. -- Several efforts against individuals and groups appear to have achieved their stated aims. For example:

-- A Bureau Field Office reported that the anonymous letter it had sent to an activist's husband accusing his wife of infidelity "contributed very strongly" to the subsequent breakup of the marriage. 84

-- Another Field Office reported that a draft counsellor deliberately, and falsely, accused of being an FBI informant was "ostracized" by his friends and associates. 85

-- Two instructors were reportedly put on probation after the Bureau sent an anonymous letter to a university administrator about their funding of an anti-administration student newspaper. 86

-- The Bureau evaluated its attempts to "put a stop" to a contribution to the Southern Christian Leadership Conference as "quite successful." 87

-- An FBI document boasted that a "pretext" phone call to Stokeley Carmichael's mother telling her that members of the Black Panther Party intended to kill her son left her "shocked". The memorandum intimated that the Bureau believed it had been responsible for Carmichael's flight to Africa the following day. 88

(b) Media Manipulation. -- The FBI has attempted covertly to influence the public's perception of persons and organizations by disseminating derogatory information to the press, either anonymously or through "friendly" news contacts. The impact of those articles is generally difficult to measure, although in some cases there are fairly direct connections to injury to the target. The Bureau also attempted to influence media reporting which would have any impact on the public image of the FBI. Examples include:

-- Planting a series of derogatory articles about Martin Luther King, Jr., and the Poor People's Campaign. 89

For example, in anticipation of the 1968 "poor people's march on Washington, D.C.," Bureau Headquarters granted authority to furnish "cooperative news media sources" an article "designed to curtail success of Martin Luther King's fund raising." 90 Another memorandum illustrated how "photographs of demonstrators" could be used in discrediting the civil rights movement. Six photographs of participants in the poor people's campaign in Cleveland accompanied the memorandum with the following note attached: "These [photographs] show the militant aggressive appearance of the participants and might be of interest to a cooperative news source." 91 Information on the Poor People's Campaign was provided by the FBI to friendly reporters on the condition that "the Bureau must not be revealed as the source." 92

-- Soliciting information from Field Offices "on a continuing basis" for "prompt . . . dissemination to the news media . . . to discredit the New Left movement and its adherents." The Headquarters directive requested, among other things, that:

specific data should be furnished depicting the scurrilous and depraved nature, of many of the characters, activities, habits, and living conditions representative of New Left adherents.

Field Offices were to be exhorted that: "Every avenue of possible embarrassment must be vigorously and enthusiastically explored." 93

-- Ordering Field Offices to gather information which would disprove allegations by the "liberal press, the bleeding hearts, and the forces on the left" that the Chicago police used undue force in dealing with demonstrators at the 1968 Democratic Convention. 95

-- Taking advantage of a close relationship with the Chairman of the Board -- described in an FBI memorandum as "our good friend"-- of a magazine with national circulation to influence articles which related to the FBI. For example, through this relationship the Bureau: "squashed" an "unfavorable article against the Bureau" written by a free-lance writer about an FBI investigation; "postponed publication" of an article on another FBI case; "forestalled publication" of an article by Dr. Martin Luther King, Jr.; and received information about proposed editing of King's articles. 96

*(c) Distorting Data to Influence Government Policy and Public Perceptions*

Accurate intelligence is a prerequisite to sound government policy. However, as the past head of the FBI's Domestic Intelligence Division reminded the Committee:

The facts by themselves are not too meaningful. They are something like stones cast into a heap. 97

On certain crucial subjects the domestic intelligence agencies reported the "facts" in ways that gave rise to misleading impressions.

For example, the FBI's Domestic Intelligence Division initially discounted as an "obvious failure" the alleged attempt's of Communists to influence the civil rights movement. 98 Without any significant change in the factual situation, the Bureau moved from the Division's conclusion to Director Hoover's public congressional testimony characterizing Communist influence on the civil rights movement as "vitally important." 98a

FBI reporting on protests against the Vietnam War provides another example, of the manner in which the information provided to decision-makers can be skewed. In acquiescence with a judgment already expressed by President Johnson, the Bureau's reports on demonstrations against the War in Vietnam emphasized Communist efforts to influence the anti-war movement and underplayed the fact that the vast majority of demonstrators were not Communist controlled. 99

(d) "Chilling" First Amendment Rights. -- The First Amendment protects the Rights of American citizens to engage in free and open discussions, and to associate with persons of their choosing. Intelligence agencies have, on occasion, expressly attempted to interfere with those rights. For example, one internal FBI memorandum called for "more interviews" with New Left subjects "to enhance the paranoia endemic in these circles" and "get the point across there is an FBI agent behind every mailbox." 100

More importantly, the government's surveillance activities in the aggregate -- whether or not expressly intended to do so -- tends, as the Committee concludes at p. 290 to deter the exercise of First Amended Rights by American citizens who become aware of the government's domestic intelligence program.

(e) Preventing the Free Exchange of Ideas. -- Speakers, teachers, writers, and publications themselves were targets of the FBI's counterintelligence program. The FBI's efforts to interfere with the free exchange of ideas included:

-- Anonymously attempting to prevent an alleged "Communist-front" group from holding a forum on a midwest campus, and then investigating the judge who ordered that the meeting be allowed to proceed. 101

-- Using another "confidential source" in a foundation which contributed to a local college to apply pressure on the school to fire an activist professor.

-- Anonymously contacting a university official to urge him to "persuade" two professors to stop funding a student newspaper, in order to "eliminate what voice the New Left has" in the area.

-- Targeting the New Mexico Free University for teaching "confrontation politics" and "draft counseling training". 102

*7. Cost and Value*

Domestic intelligence is expensive. We have already indicated the cost of illegal and improper intelligence activities in terms of the harm to victims, the injury to constitutional values, and the damage to the democratic process itself. The cost in dollars is also significant. For example, the FBI has budgeted for fiscal year 1976 over \$7 million for its domestic security informant program, more than twice the amount it spends on informants against organized crime. 103 The aggregate budget for FBI domestic security intelligence and foreign counterintelligence is at least \$80 million. 104 In the late 1960s and early 1970s, when the Bureau was joined by the CIA, the military, and NSA in collecting information about the anti-war movement and black activists, the cost was substantially greater.

Apart from the excesses described above, the usefulness of many domestic intelligence activities in serving the legitimate goal of protecting society has been questionable. Properly directed intelligence investigations concentrating upon hostile foreign agents and violent terrorists can produce valuable results. The Committee has examined cases where the FBI uncovered "illegal" agents of a foreign power engaged in clandestine intelligence activities in violation of federal law. Information leading to the prevention of serious violence has been acquired by the FBI through its informant penetration of terrorist groups and through the inclusion in Bureau files of the names of persons actively involved with such groups. 105 Nevertheless, the most sweeping domestic intelligence surveillance programs have produced surprisingly few useful returns in view of their extent. For example:

-- Between 1960 and 1974, the FBI conducted over 500,000 separate investigations of persons and groups under the "subversive" category, predicated on the possibility that they might be likely to overthrow the government of the United

States. 106 Yet not a single individual or group has been prosecuted since 1957 under the laws which prohibit planning or advocating action to overthrow the government and which are the main alleged statutory basis for such FBI investigations. 107

-- A recent study by the General Accounting Office has estimated that of some 17,528 FBI domestic intelligence investigations of individuals in 1974, only 1.3 percent resulted in prosecution and conviction, and in only "about 2 percent" of the cases was advance knowledge of any activity -- legal or illegal -- obtained. 108

-- One of the main reasons advanced for expanded collection of intelligence about urban unrest and anti-war protest was to help responsible officials cope with possible violence. However, a former White House official with major duties in this area under the Johnson administration has concluded, in retrospect, that "in none of these situations . . . would advance intelligence about dissident groups [have] been of much help," that what was needed was "physical intelligence" about the geography of major cities, and that the attempt to "predict violence" was not a "successful undertaking" 109

-- Domestic intelligence reports have sometimes even been counterproductive. A local police chief, for example, described FBI reports which led to the positioning of federal troops near his city as:

. . . almost completely composed of unsorted and unevaluated stories, threats, and rumors that had crossed my desk in New Haven. Many of these had long before been discounted by our Intelligence Division. But they had made their way from New Haven to Washington, had gained completely unwarranted credibility, and had been submitted by the Director of the FBI to the President of the United States. They seemed to present a convincing picture of impending holocaust. 110

In considering its recommendations, the Committee undertook an evaluation of the FBI's claims that domestic intelligence was necessary to combat terrorism, civil disorders, "subversion," and hostile foreign intelligence activity. The Committee reviewed voluminous materials bearing on this issue and questioned Bureau officials, local police officials, and present and former federal executive officials.

We have found that we are in fundamental agreement with the wisdom of Attorney General Stone's initial warning that intelligence agencies must not be "concerned with political or other opinions of individuals" and must be limited to investigating essentially only "such conduct as is forbidden by the laws of the United States." The Committee's record demonstrates that domestic intelligence which departs from this standard raises grave risks of undermining the democratic process and harming the interests of individual citizens. This danger weighs heavily against the speculative or negligible benefits of the ill-defined and overbroad investigations authorized in the past. Thus, the basic purpose of the recommendations contained in Part IV of this report is to limit the FBI to investigating conduct rather than ideas or associations.

The excesses of the past do not, however, justify depriving the United States of a clearly defined and effectively controlled domestic intelligence capability. The intelligence services of this nation's international adversaries continue to attempt to conduct clandestine espionage operations within the United States. 111 Our recommendations provide for intelligence investigations of hostile foreign intelligence activity.

Moreover, terrorists have engaged in serious acts of violence which have brought death and injury to Americans and threaten further such acts. These acts, not the politics or beliefs of those who would commit them, are the proper focus for investigations to anticipate terrorist violence. Accordingly, the Committee would permit properly controlled intelligence investigations in those narrow circumstances. 112

Concentration on imminent violence can avoid the wasteful dispersion of resources which has characterized the sweeping (and fruitless) domestic intelligence investigations of the past. But the most important reason for the fundamental change in the domestic intelligence operations which our Recommendations propose is the need to protect the constitutional Rights of Americans.

In light of the record of abuse revealed by our inquiry, the Committee is not satisfied with the position that mere exposure of what has occurred in the past will prevent its recurrence. Clear legal standards and effective oversight and controls are necessary to ensure that domestic intelligence activity does not itself undermine the democratic system it is intended to protect.

#### Footnotes:

1 S. Res. 21, sec. 2 (12). The Senate specifically charged this Committee with investigating "the conduct of domestic intelligence, or counterintelligence operations against United States citizens." (Sec. 2(2) ) The resolution added several examples of specific charges of possible "illegal, improper or unethical" governmental intelligence activities as matters to be fully investigated (Sec. (2) (1)-CIA domestic activities; Sec. (2) (3)-Huston Plan; Sec. (2) (10)-surreptitious entries, electronic surveillance, mail opening.)

2 Just as the term "Intelligence activity" encompasses activities that go far beyond the collection and analysis of information, the term "intelligence community" includes persons ranging from the President to the lowest field operatives of the intelligence agencies.

3 The Alien Act provided for the deportation of all aliens judged "dangerous to the peace and safety" of the nation. (1 Stat. 570, June 25, 1798) The Sedition Act made it a federal crime to publish "false, scandalous and malicious writing" against the United States government, the Congress, or the President with the intent to "excite against them" the "hatred of the good people of the United States" or to "encourage or abet any hostile designs of any foreign nation against the United States." (1

Stat. 596, July 14, 1798) There were at least 25 arrests, 15 indictments, and 10 convictions under the Sedition Act. (See James M. Smith, *Freedom's Fetters: The Alien and Sedition Laws and American Civil Liberties* (Ithaca: Cornell U. Press, 1956).)

4 Francis Biddle, *In Brief Authority* (Garden City: Doubleday, 1962), p. 224; Roger Daniels, *Concentration Camps USA: Japanese Americans and World War II* (New York: Holt, Rinehart, and Winston, 1971), p. 66.

5 Many victims of intelligence activities have claimed in the past that they were being subjected to hostile action by their government. Prior to this investigation, most Americans would have dismissed these allegations. Senator Philip Hart aptly described this phenomenon in the course of the Committee's public hearings on domestic intelligence activities:

"As I'm sure others have, I have been told for years by, among others, some of my own family, that this is exactly what the Bureau was doing all of the time, and in my great wisdom and high office, I assured them that they were [wrong]-it just wasn't true. it couldn't happen. They wouldn't do it. What you have described is a series of illegal actions intended squarely to deny First Amendment rights to some Americans. That is what my children have told me was going on. Now I did not believe it.

"The trick now, as I see it, Mr. Chairman, is for this committee to be able to figure out how to persuade the people of this country that indeed it did go on. And how shall we insure that it will never happen again? But it will happen repeatedly unless we can bring ourselves to understand and accept that it did go on." Senator Philip Hart, 11/18/75, Hearings, Vol. 6, p. 41.

6 As the Supreme court noted in *Miranda v. Arizona*, 384 U.S. 436, 483, 486 (1966), even before the Court required law officers to advise criminal suspects of their constitutional rights before custodial interrogation, the FBI had "an exemplary record" in this area-a practice which the Court said should be emulated by state and local law enforcement agencies." This commendable FBI tradition in the general field of law enforcement presents a sharp contrast to the widespread disregard of individual rights in FBI domestic intelligence operations examined in the balance of this Report.

102 See COINTELPRO Report: Section 111. "The Goals of COINTELPRO: Preventing or disrupting the exercise of First Amendment Rights."

103 The budget for FBI informant programs includes not only the payments to informants for their services and expenses, but also the expenses of FBI personnel who supervise informants, their support costs, and administrative overhead. (Justice Department letter to Senate Select Committee, 3/2/76).

104 The Committee is withholding the portion of this figure spent on domestic security intelligence (informants and other investigations combined) to prevent hostile foreign intelligence services from deducing the amount spent on counterespionage. The \$80 million figure does not include all costs of separate FBI activities which may be drawn upon for domestic security intelligence purposes. Among these are the Identification Division (maintaining fingerprint records), the Files and Communications Division (managing the storage and retrieval of investigative and intelligence files), and the FBI Laboratory.

105 Examples of valuable informant reports include the following: one informant reported a plan to ambush police officers and the location of a cache of weapons and dynamite; another informant reported plans to transport illegally obtained weapons to Washington, D.C.; two informants at one meeting discovered plans to dynamite two city blocks. All of these plans were frustrated by further investigation and protective measures or arrest. (FBI memorandum to Select Committee, 12/10/75; Senate Select Committee Staff memorandum: Intelligence Cases in Which the FBI Prevented Violence, undated.)

One example of the use of information in Bureau files involved a "name check" at Secret Service request on certain persons applying for press credentials to cover the visit of a foreign head of state. The discovery of data in FBI files indicating that one such person had been actively involved with violent groups led to further investigation and ultimately the issuance of a search warrant. The search produced evidence, including weapons, of a plot to assassinate the foreign head of state. (FBI memorandum to Senate Select Committee, 2/23/76)

106 This figure is the number of "investigative matters" handled by the FBI in this area, including as separate items the investigative leads in particular cases which are followed up by various field offices. (FBI memorandum to Select Committee, 10/6/75.)

107 Schackelford 2/13/76, p. 32. This official does not recall any targets of "subversive" investigations having been even referred to a Grand Jury under these statutes since the 1950s.

108 FBI Domestic Intelligence Operations -- Their Purpose and Scope: Issues That Need To Be Resolved," Report by the Comptroller General to the House Judiciary Committee, 2/24/76, pp. 138-147. The FBI contends that these statistics may be unfair in that they concentrate on investigations of individuals rather than groups. (Ibid., Appendix V) In response, GAO states that its "sample of organization and control files was sufficient to determine that generally the FBI did not report advance knowledge of planned violence." In most of the fourteen instances where such advance knowledge was obtained, it related to "such activities as speeches, demonstrations or meetings-all essentially nonviolent." (Ibid., p. 144)

109 Joseph Califano testimony. 1/27/76, pp. 7-8.

110 James Ahern testimony, 1/20/76, pp. 16, 17.

111 An indication of the scope of the problem is the increasing number of official representatives of communist governments in the United States. For example the number of Soviet officials in this country has increased from 333 in 1961 to 1,079 by early 1975. There were 2,683 East-West exchange visitors and 1,500 commercial visitors in 1974. (FBI Memorandum, "Intelligence Activities Within the United States by Foreign Governments," 3/20/75.)

112 According to the FBI, there were 89 bombings attributable to terrorist activity in 1975, as compared with 45 in 1974 and 24 in 1973. Six persons died in terrorist-claimed bombings and 76 persons were injured in 1975. Five other deaths were reported in other types of terrorist incidents. Monetary damage reported in terrorist bombings exceeded 2.7 million dollars. It should be noted, however, that terrorist bombings are only a fraction of the total number of bombings in this country. Thus, the 89 terrorist bombings in 1975 were among a total of over 1,900 bombings, most of which were not, according to the FBI, attributable clearly to terrorist activity. (FBI memorandum to Senate Select Committee, 2/23/76.)

APRIL 26 (legislative day, April 14), 1976

## **II. THE GROWTH OF DOMESTIC INTELLIGENCE: 1936 TO 1976**

### **A. SUMMARY**

#### *1. The Lesson: History Repeats Itself*

During and after the First World War, intelligence agencies, including the predecessor of the FBI, engaged in repressive activity. <sup>1</sup>

A new Attorney General, Harlan Fiske Stone, sought to stop the investigation of "political or other opinions." <sup>2</sup> This restraint was embodied only in an executive pronouncement, however. No statutes were passed to prevent the kind of improper activity which had been exposed. Thereafter, as this narrative will show, the abuses returned in a new form. It is now the responsibility of all three branches of government to ensure that the pattern of abuse of domestic intelligence activity does not recur.

#### *2. The Pattern: Broadening Through Time*

Since the re-establishment of federal domestic intelligence programs in 1936, there has been a steady increase in the government's capability and willingness to pry into, and even disrupt, the political activities and personal lives of the people. The last forty years have witnessed a relentless expansion of domestic intelligence activity beyond investigation of criminal conduct toward the collection of political intelligence and the launching of secret offensive actions against Americans.

The initial incursions into the realm of ideas and associations were related to concerns about the influence of foreign totalitarian powers.

Ultimately, however, intelligence activity was directed against domestic groups advocating change in America, particularly those who most vigorously opposed the Vietnam war or sought to improve the conditions of racial minorities. Similarly, the

targets of intelligence investigations were broadened from groups perceived to be violence prone to include groups of ordinary protesters.

*3. Three Periods of Growth for Domestic Intelligence* The expansion of domestic intelligence activity can usefully be divided into three broad periods: (a) the pre-war -and World War II period; (b) the Cold War era, and (c) the period of domestic dissent beginning in the mid-sixties. The main developments in each of these stages in the evolution of domestic intelligence may be summarized as follows:

*a. 1936-1945*

By presidential directive -- rather than statute -- the FBI and military intelligence agencies were authorized to conduct domestic intelligence investigations. These investigations included a vaguely defined mission to collect intelligence about "subversive activities" which were sometimes unrelated to law enforcement. Wartime exigencies encouraged the unregulated use of intrusive intelligence techniques; and the FBI began to resist supervision by the Attorney General.

*b. 1946-1963*

Cold War fears and dangers nurtured the domestic intelligence programs of the FBI and military, and they became permanent features of government. Congress deferred to the executive branch in the oversight of these programs. The FBI became increasingly isolated from effective outside control, even from the Attorneys General. The scope of investigations of "subversion" widened greatly. Under the cloak of secrecy, the FBI instituted its COINTELPRO operations to "disrupt" and "neutralize" "subversives". The National Security Agency, the FBI, and the CIA re-instituted intrusive wartime surveillance techniques in contravention of law.

*c. 1964-1976*

Intelligence techniques which previously had been concentrated upon foreign threats and domestic groups said to be under Communist influence were applied with increasing intensity to a wide range of domestic activity by American citizens. These techniques were utilized against peaceful civil rights and antiwar protest activity, and thereafter in reaction to civil unrest, often without regard for the consequences to American liberties. The intelligence agencies of the United States -- sometimes abetted by public opinion and often in response to pressure from administration officials or the Congress -- frequently disregarded the law in their conduct of massive surveillance and aggressive counterintelligence operations against American citizens. In the past few years, some of these activities were curtailed, partly in response to the moderation of the domestic crisis; but all too often improper programs were terminated only in response to exposure, the threat of exposure, or a change in the climate of public opinion, such as that triggered by the Watergate affair.

## **B. ESTABLISHING A PERMANENT DOMESTIC INTELLIGENCE STRUCTURE: 1936-1945**

### *1. Background. -- The Stone Standard*

The first substantial domestic intelligence programs of the federal government were established during World War I.

The Justice Department's Bureau of Investigation (as the FBI was then known), military intelligence, other federal investigative agencies, and the volunteer American Protective League were involved in these programs. <sup>3</sup> In the period immediately following World War I, the Bureau of Investigation took part in the notorious Palmer Raids and other activities against persons characterized as "subversive." <sup>4</sup>

Harlan Fiske Stone, who became Attorney General in 1924, described the conduct of Justice Department and the Bureau of Investigation before he took office as "lawless, maintaining many activities which were without any authority in federal statutes, and engaging in many practices which were brutal and tyrannical in the extreme." <sup>5</sup>

Fearing that the investigative activities of the Bureau could invade privacy and inhibit political freedoms, Attorney General Stone announced:

There is always the possibility that a secret police may become a menace to free government and free institutions, because it carries with it the possibility of abuses of power which are not always quickly apprehended or understood. ... It is important that its activities be strictly limited to the performance of those functions for which it was created and that its agents themselves be not above the law or beyond its reach. ... The Bureau of Investigation is not concerned with political or other opinions of individuals. It is concerned only with their conduct and then only with such conduct -as is forbidden by the laws of the United States. When a police system passes beyond these limits, it is dangerous to the proper administration of justice and to human liberty, which it should be our first concern to cherish. <sup>6</sup>

When Stone appointed J. Edgar Hoover as Acting Director of the Bureau of Investigation, he instructed Hoover to adhere to this standard:

The activities of the Bureau are to be limited strictly to investigations of violations of law, under my direction or under the direction of an Assistant Attorney General regularly conducting the work of the Department of Justice. 7

Nevertheless, beginning in the mid-thirties, at White House direction, the FBI reentered the realm of collecting intelligence about ideas and associations.

## *2. Main Developments of the 1936-1945 Period*

In the years preceding World War II, domestic intelligence activities were reinstituted, expanded, and institutionalized. Based upon vague and conflicting orders to investigate the undefined areas of "subversion" and "potential crimes" related to national security, the FBI commenced a broad intelligence program. The FBI was authorized to preempt the field, although the military engaged in some investigation of civilians.

The FBI's domestic intelligence jurisdiction went beyond investigations of crime to include a vague mandate to investigate foreign involvement in American affairs. In the exercise of this jurisdictional authority, the Bureau began to investigate law abiding domestic groups and individuals; its program was also open to misuse for political purposes. The most intrusive intelligence techniques -- initially used to meet wartime exigencies -- were based on questionable statutory interpretation, or lacked any formal legal authorization.

The executive intentionally kept the issue of domestic intelligence-gathering away from the Congress until 1939, and thereafter the Congress appears to have deliberately declined to confront the issue. The FBI generally complied with the Attorney General's policies, but began to resist Justice Department review of its activities. On one occasion, the Bureau appears to have disregarded an Attorney General's policy directive.

However important these developments were in themselves, the enduring significance of this period is that it opened the institutional door to greater excesses in later years.

## *3. Domestic Intelligence Authority: Vague and Conflicting Executive Orders*

The executive orders upon which the Bureau based its intelligence activity in the decade before World War II were vague and conflicting. By using words like "subversion" -- a term which was never defined -- and by permitting the investigation of "potential" crimes, and matters "not within the specific provisions of prevailing statutes," the foundation was laid for excessive intelligence gathering about Americans.

### *a. The Original Roosevelt Orders*

In 1934, according to a memorandum by J. Edgar Hoover, President Roosevelt ordered an investigation of "the Nazi movement in this country." In response, the FBI conducted a one-time investigation, described by FBI Director Hoover as "a so-called intelligence investigation." It concentrated on "the Nazi group," with particular reference to "anti-racial" and "anti-American" activities having "any possible connection with official representatives of the German government in the United States." 8

Two years later, in August 1936, according to a file memorandum of Director Hoover, President Roosevelt asked for a more systematic collection of intelligence about:

subversive activities in the United States, particularly Fascism and Communism.

Hoover indicated further that the President wanted:

a broad picture of the general movement and its activities as [they] may affect the economic and political life of the country as a whole.

The President and the FBI Director discussed the means by which the Bureau might collect "general intelligence information" on this subject. 9 The only record of Attorney General Homer Cummings' knowledge of, or authorization for, this intelligence assignment is found in a memorandum from Director Hoover to his principal assistant. 10

### *b. Orders in 1938-39: The Vagueness of "Subversive Activities" and "Potential" Crimes*

In October 1938, Director Hoover advised President Roosevelt of the "present purposes and scope" of FBI intelligence investigations, "together with suggestions for expansion." His memorandum stated that the FBI was collecting:

information dealing with various forms of activities of either a subversive or so-called intelligence type. 11

Despite the references in Director Hoover's 1938 memorandum to "subversive-type" investigations, an accompanying letter to the President from Attorney General Homer Cummings made no mention of "subversion" and cited only the President's interest in "the so-called espionage situation." 12 Cummings' successor, Attorney General Frank Murphy, appears to have abandoned the term "subversive activities." 13 Moreover, when Director Hoover provided Attorney General Frank Murphy a

copy of his 1938 plan, he described it, without mentioning "subversion," as a program "intended to ascertain the identity of persons engaged in espionage, counterespionage, and sabotage of a nature *not within the specific provisions of prevailing statutes*." 14 [Emphasis added.] Murphy thereafter recommended to the President that he issue an order concentrating "investigation of all espionage, counterespionage, and sabotage matters" in the FBI and military intelligence. 15

President Roosevelt agreed and issued an order which, like Murphy's letter, made no mention of "subversive," or general intelligence:

It is my desire that the investigation of all espionage, counter espionage, and sabotage matters be controlled and handled by the Federal Bureau of Investigation of the Department of Justice, the Military Intelligence Division of the War Department, and the Office of Naval Intelligence in the Navy Department. The directors of these three agencies are to function as a committee to coordinate their activities.

No investigations should be conducted by any investigative agency of the Government into matters involving actually *or potentially* any espionage, counterespionage, or sabotage, except by the three agencies mentioned above. [Emphasis added.] 16

Precisely what the President's reference to "potential" espionage or sabotage was intended to cover was unclear. Whatever it meant, it was apparently intended to be consistent with Director Hoover's earlier description of the FBI program to Attorney General Murphy. 17

Three months later, after the outbreak of war in Europe, Director Hoover indicated his concern that private citizens might provide information to the "sabotage squads" which local police departments were creating rather than to the FBI. Hoover urged the Attorney General to ask the President to request local officials to give the FBI all information concerning "espionage, counterespionage, sabotage, subversive activities, and neutrality regulations." 18

The President immediately issued a statement which continued the confusing treatment of the breadth of the FBI's intelligence authority. On the one hand, the statement began by noting that the FBI had been instructed to investigate:

matters relating to espionage, sabotage, and violations of the neutrality regulations.

On the other hand, the President concluded by adding "subversive activities" to the list of information local law enforcement officials should relay to the FBI. 19

#### *c. Orders 1940-43: The Confusion Continues*

President Roosevelt used the term "subversive activities" in a secret directive to Attorney General Robert Jackson on wiretapping in 1940. Referring to activities of other nations engaged in "propaganda of so-called 'fifth columns' and 'preparation for sabotage.'" He directed the Attorney General to authorize wiretaps "of persons suspected of subversive activities against the Government of the United States, including suspected spies." The President instructed that such wiretaps be limited "insofar as possible" to aliens. 20 Neither the President nor the Attorney General subsequently clarified the scope of the FBI's authority to investigate "subversive activity."

The confusion as to the breadth of President Roosevelt's authorization reappeared in Attorney General Francis Biddle's description of FBI jurisdiction in 1942 and in a new Presidential statement in 1943.

Biddle issued a lengthy order defining the duties of the various parts of the Justice Department in September 1942. Among other things, the FBI was charged with a duty to "investigate" criminal offenses against the United States. In contrast, the FBI was to function as a "clearing house" with respect to "espionage, sabotage, and other subversive matters." 21

Four months later, President Roosevelt renewed his public appeal for cooperation by police and other "patriotic organizations" with the FBI. In this statement, he described his September 1939 order as granting "investigative" authority to the FBI for "espionage, sabotage, and violation of the neutrality regulations." The President did not adopt Attorney General Biddle's "clearing-house" characterization, nor did he mention "subversion." 22

#### *4. The Role of Congress*

##### *a. Executive Avoidance of Congress*

In 1938, the President, the Attorney General, and the FBI Director explicitly decided not to seek legislative authorization for the expanding domestic intelligence program.

Attorney General Cummings cautioned that the plan for domestic intelligence "should be held in the strictest confidence." 23 Director Hoover contended that no special legislation should be sought "*in order to avoid criticism or objections* which might be raised to such an expansion by either ill-informed persons or individuals with some ulterior motive." [Emphasis added.] Hoover thought it "undesirable to seek any special legislation which would draw attention to the fact that it was proposed to develop a special counter-espionage drive of any great magnitude" because the FBI's intelligence activity was already "much broader than espionage or counterespionage." 24

Director Hoover contended that the FBI had authority to engage in intelligence activity beyond investigating crimes at the request of the Attorney General or the Department of State. He relied on an amendment to the FBI Appropriations Act, passed before World War I, authorizing the Attorney General to appoint officials not only to "detect and prosecute" federal crimes but also to:

conduct such other investigations regarding official matters under the control of the Department of Justice, or the Department of State, as may be directed by the Attorney General. 25

After conflicts with the State Department in 1939, however, the FBI no longer relied upon this vague statute for its authority to conduct intelligence investigations, instead relying upon the Executive orders. 26

#### *b. Congress Declines to Confront the Issue*

Even though Executive officials originally avoided Congress to prevent criticism or objections, after the President's proclamation of emergency in 1939 they began to inform Congress of FBI intelligence activities. In November 1939, Director Hoover told the House Appropriations Committee that the Bureau had set up a General Intelligence Division, "by authority of the President's proclamation." 27 And in January 1940, he told the same Committee that the FBI had authority, under the President's September 6, 1939 statement to investigate espionage, sabotage, neutrality violations, and "any other subversive activities." 28

There is no evidence that the Appropriations Committee objected or inquired further into the meaning of that last vague term, although members did seek assurance that FBI intelligence could be curtailed when the wartime emergency ended. 29

In 1940, a joint resolution was introduced by New York City Congressman Emmanuel Celler which would have given the FBI broad jurisdiction to investigate, by wiretapping or other means, or "frustrate" any "interference with the national defense" due to certain specified crimes (sabotage, treason, seditious conspiracy, espionage, and violations of the neutrality laws) or "in any other manner." 30 Although the resolution failed to reach the House floor, it seems likely that, rather than opposing domestic intelligence investigations, Congress was simply choosing to avoid the issue of defining the FBI's intelligence jurisdiction. This view is supported by Congress' passage in 1940 and 1941 of two new criminal statutes: the Smith Act made it a crime to advocate the violent overthrow of the Government; 31 and the Voorhis Act required "subversive" organizations advocating the Government's violent overthrow and having foreign ties to register or be subject to criminal penalties. 32

Although, as indicated, the Executive branch disclosed the fact that the FBI was doing intelligence work and Congress generally raised no objection, there was one occasion when an Executive description of the Bureau's work was less than complete. Following Director Hoover's testimony about the establishment of an Intelligence Division and some public furor over the FBI arrest of several Communist Party members in Detroit, Senator George Norris (R. Neb.) asked whether the Bureau was violating Attorney General Stone's assurance in 1924 that it would conduct only criminal investigations. Attorney General Jackson replied:

Mr. Hoover is in agreement with me that the principles which Attorney General Stone laid down in 1924 when the Federal Bureau of Investigation was reorganized and Mr. Hoover appointed as Director are sound, and that the usefulness of the Bureau depends upon a faithful adherence to these limitations.

The Federal Bureau of Investigation will confine its activities to the investigation of violation of Federal statutes, the collecting of evidence in cases in which the United States is or may be a party in interest, and the service of process issued by the courts. 33

The FBI was, in fact, doing much more than that and had informed the Appropriations Committee of its practice in general terms. Attorney General Jackson himself stated later that the FBI was conducting "steady surveillance" of persons beyond those who had violated federal statutes, including persons who were a "likely source" of federal law violation because they were "sympathetic with the systems or designs of foreign dictators." 34

### *5. Scope of Domestic Intelligence*

#### *a. Beyond Criminal Investigations*

According to Director Hoover's account of his meeting with President Roosevelt in 1936, the President wanted "a broad picture" of the impact of Communism and Fascism on American life." Similarly, the FBI Director described his 1938 plan as "broader than espionage" and covering "in a true sense real intelligence." 36 Thus it appears that one of the first purposes of FBI domestic intelligence was to perform the "pure intelligence" function of supplying executive officials with information believed of value for making policy decisions. This aspect of the assignment to investigate "subversion" was entirely unrelated to the enforcement of federal criminal laws. The second purpose of FBI domestic intelligence gathering was essentially "preventive," in compliance with the President's June 1939 directive to investigate "potential" espionage or sabotage. 37 As war moved closer, preventive intelligence investigations focused on individuals who might be placed on a Custodial Detention List for possible internment in case of war. 38

Both pure intelligence about "subversion" and preventive intelligence about "potential" espionage or sabotage involved investigations based on political affiliations and group membership and association. The relationship to law enforcement was often remote and speculative; the Bureau did not focus its intelligence gathering solely on tangible evidence of preparation for crime.

Directives implementing the general preventive intelligence instruction to investigate "potential" espionage or sabotage were vague and sweeping. In 1939, for instance, field offices were told to investigate persons of German, Italian, and Communist "sympathies" and any other persons "whose interests may be directed primarily to the interest of some other nation than the United States." FBI offices were directed to report the names of members of German and Italian societies, "whether they be of a fraternal character or of some other nature," and members of any other groups "which might have pronounced Nationalistic tendencies." The Bureau sought lists of subscribers and officers of German, Italian, and Communist foreign language newspapers, as well as of other newspapers with "notorious Nationalistic sympathies." 39 The FBI also made confidential inquiries regarding "various so-called radical and fascist organizations" to identify their "leading personnel, purposes and aims, and the part they are likely to play at a time of national crisis." 40

The criteria for investigating persons for inclusion on the Custodial Detention List was similarly vague. In 1939, the FBI said its list included persons with "strong Nazi tendencies" and "strong Communist tendencies." 41 FBI field offices were directed in 1940 to gather information on individuals who would be considered for the list because of their "Communist, Fascist, Nazi, or other nationalistic background." 42

*b. "Infiltration," Investigations* The FBI based its pure intelligence investigations on a theory of subversive "infiltration" which remained an essential part of the rationale for domestic intelligence after the war: anyone who happened to associate with Communists or Fascists or was simply alleged to have such associations became the subject of FBI intelligence reports. 43 Thus, "subversive" investigations produced intelligence about a wide variety of lawful groups and law-abiding citizens. By 1938, the FBI was investigating alleged subversive infiltration of:

- the maritime industry;
- the steel industry;
- the coal industry;
- the clothing, garment, and fur industries;
- the automobile industry;
- the newspaper field;
- educational institutions;
- organized labor organizations;
- Negroes;
- youth groups;
- Government affairs;
- and the armed forces. 44

This kind of intelligence was transmitted to the White House. For example, in 1937 the Attorney General sent the President an FBI report on a proposed pilgrimage to Washington to urge passage of legislation to benefit American youth. The report stated that the American Youth Congress, which sponsored the pilgrimage, was understood to be strongly Communist. 45 Later reports in 1937 described the Communist Party's role in plans by the Workers Alliance for nationwide demonstrations protesting the plight of the unemployed, as well as the Alliance's plans to lobby Congress in support of the federal relief program. 46

Some investigations and reports (which went into Justice Department and FBI permanent files) covered entirely legal political activities. For example, one local group checked by the Bureau was called the League for Fair Play, which furnished "speakers to Rotary and Kiwanis Clubs and to schools and colleges." The FBI reported in 1941 that:

the organization was formed in 1937, apparently by two Ministers and a businessman for the purpose of furthering fair play, tolerance, adherence to the Constitution, democracy, liberty, justice, understanding and good will among all creeds, races and classes of the United States.

A synopsis of the report stated, "No indications of Communist activities." 47

In 1944, the FBI prepared an extensive intelligence report on an active political group, the Independent Voters of Illinois, apparently because it was considered a target for Communist "infiltration." The Independent Voters group was reported to have been formed:

for the purpose of developing neighborhood political units to help in the re-election of President Roosevelt, and the election of progressive congressmen. Apparently, IVI endorsed or aided Democrats for the most part, although it was stated to be "independent." It does not appear that it entered its own candidates or that it endorsed any Communists. IVI sought to help elect those candidates who would favor fighting inflation, oppose race and class discrimination, favor international cooperation, support a "full employment" program, oppose Facism, etc. 48

Thus, in its search for subversive "influence," the Bureau gathered extensive information about the lawful activities of left-liberal political groups. At the opposite end of the political spectrum, the activities of numerous right-wing groups like the Christian Front and Christian Mobilizers (followers of Father Coughlin), the American Destiny Party, the American Nationalist Party, and even the less extreme "America First" movement were reported by the FBI. 49

### *c. Partisan Use*

The collection of pure intelligence and preventive intelligence about "subversives" led to the inclusion in FBI files of political intelligence about the President's partisan critics. In May 1940, President Roosevelt's secretary sent the FBI Director hundreds of telegrams received by the White House. The attached letter stated:

As the telegrams all were more or less in opposition to national defense, the President thought you might like to look them over, noting the names and addresses of the senders. 50

Additional telegrams expressing approval of a speech by one of the President's leading critics, Colonel Charles Lindbergh, were also referred to the FBI. 52 A domestic intelligence program without clearly defined boundaries almost invited such action.

#### *d. Centralized Authority: FBI and Military Intelligence*

The basic policy of President Roosevelt and his four Attorneys General was to centralize civilian authority for domestic intelligence in the FBI. Consolidation of domestic intelligence was viewed as a means of protecting civil liberties. Recalling the hysteria of World War I, Attorney General Frank Murphy declared:

Twenty years ago, inhuman and cruel things were done in the name of justice; sometimes vigilantes and others took over the work. We do not want such things done today, for the work has now been localized in the FBI. 53

Centralization of authority for domestic intelligence also served the FBI's bureaucratic interests. Director Hoover complained about attempts by other agencies to "literally chisel into this type of work." 54 He exhorted: "We don't want to let it slip away from us." 55

Pursuant to President Roosevelt's 1939 directive authorizing the FBI and military intelligence to conduct all investigations of "potential" espionage and sabotage, an interagency Delimitation Agreement in June 1940 assigned most such domestic intelligence work to the FBI. As revised in February 1942, the Agreement covered "investigation of all activities coming under the categories of espionage, subversion and sabotage." The FBI was responsible for all investigations "involving civilians in the United States" and for keeping the military informed of "the names of individuals definitely known to be connected with subversive activities." 56

The military intelligence agencies were interested in intelligence about civilian activity. In fact, they requested extensive information about civilians from the FBI. In May 1939, for instance, the Army G-2 Military Intelligence Division (MID) transmitted a request for the names and locations of "citizens opposed to our participation in war and conducting anti-war propaganda." 57 Despite the Delimitation Agreement, the MID's Counterintelligence Corps collected intelligence on civilian "subversive activity" as part of a preventive security program using volunteer informers and investigators. 58

#### *6. Control by the Attorney General: Compliance and Resistance*

The basic outlines of the FBI's domestic intelligence program were approved by Attorney General Cummings in 1938 and Attorney General Murphy in 1939. 59 Director Hoover also asked Attorney General Jackson in 1940 for policy guidance concerning the FBI's "suspect list of individuals whose arrest might be considered necessary in the event the United States becomes involved in war." 60

The FBI Director initially opposed, however, Attorney General Jackson's attempt to require more detailed supervision of the FBI's role in the Custodial Detention Program. To oversee this program and others, Jackson created a Neutrality Laws Unit (later renamed the Special War Policies Unit) in the Justice Department. When the Unit proposed to review FBI intelligence, reports on individuals, Director Hoover protested that turning over the FBI's confidential reports would risk the possibility of "leaks." He argued that if the identity of confidential informants became known, it would endanger their "life and safety" and thus the Department would "abandon" the "subversives field." 61

After five months of negotiation, the FBI was ordered to transmit its "dossiers" to the Justice Department Unit. 62 To satisfy the FBI's concerns, the Department agreed to take no formal action against an individual if it "might interfere with sound investigative techniques" and not to disclose confidential informants without the Bureau's "prior approval." 63 Thus, from 1941 to 1943, the Justice Department had the machinery to oversee at least this aspect of FBI domestic intelligence. 64

In 1943, however, Attorney General Biddle ordered that the Custodial Detention List should be abolished as "impractical, unwise, and dangerous." His directive stated that there was "no statutory authority or other present justification" for keeping the list. The Attorney General concluded that the system for classifying "dangerous" persons was "inherently unreliable;" the evidence used was "inadequate;" and the standards applied were "defective." 65 Biddle observed:

the notion that it is possible to make a valid determination as to how dangerous a person is in the abstract and without reference to time, environment, and other relevant circumstances, is impractical, unwise, and dangerous.

Returning to the basic standard espoused by Attorney General Stone, Attorney General Biddle declared:

The Department fulfills its proper function by investigating the activities of persons who may have violated the law. It is not aided in this work by classifying persons as to dangerousness. 66

Upon receipt of this order, the FBI Director did not in fact abolish its list. The FBI continued to maintain an index of persons "who may be dangerous or potentially dangerous to the public safety or internal security of the United States." In response to the Attorney General's order, the FBI merely changed the name of the list from Custodial Detention List to Security Index. Instructions to the field stated that the Security Index should be kept "strictly confidential," and that it should never be

mentioned in FBI reports or "discussed with agencies or individuals outside the Bureau" except for military intelligence agencies. 67

This incident provides an example of the FBI's ability to conduct domestic intelligence operations in opposition to the policies of an Attorney General. Despite Attorney General Biddle's order, the "dangerousness" list continued to be kept, and investigations in support of that list continued to be a significant part of the, Bureau's work.

#### *7. Intrusive Techniques: Questionable Authorization*

##### *a. Wiretaps: A Strained Statutory Interpretation*

In 1940, President Roosevelt authorized FBI wiretapping against "persons suspected of subversive activities against the United States, including suspected spies," requiring the specific approval of the Attorney General for each tap and directing that they be limited "insofar as possible to aliens. " 68

This order was issued in the face of the Federal Communications Act of 1934, which had prohibited wiretapping. 69 However, the Attorney General interpreted the Act of 1934 so as to permit government wiretapping. Since the Act made it unlawful to "intercept and divulge" communications, Attorney General Jackson contended that it did not apply if there was no divulgence, *outside* the Government. [Emphasis added] 70 Attorney General Jackson's questionable Interpretation was accepted by succeeding Attorneys General (until 1968) but never by the courts. 71

Jackson informed the Congress of his interpretation. Congress considered enacting an exception to the 1934 Act, and held hearings in which Director Hoover said wiretapping was "of considerable importance" because of the "gravity" to "national safety" of such offenses as espionage and sabotage. 72 Apparently relying upon Jackson's statutory interpretation, Congress then dropped the matter, leaving the authorization of wiretaps to Executive discretion, without either statutory standards or the requirement of a judicial warrant. 73

The potential for misuse of wiretapping was demonstrated during this period by several FBI wiretaps approved by the, Attorney General or by the White House. In 1941, Attorney General Biddle approved a wiretap on the Los Angeles Chamber of Commerce with the caveat:

There is no record of espionage at this time; and, unless within a month from today there is some evidence connecting the Chamber of Commerce with espionage, I think the surveillance should be discontinued. 74

However, in another case Biddle disapproved an FBI request to wiretap a Philadelphia bookstore "engaged in the sale of Communist literature" and frequented by "important Communist leaders" in 1941. 75

Materials located in Director Hoover's "Official and Confidential" file indicate that President Roosevelt's aide Harry Hopkins asked the FBI to wiretap his own home telephone in 1944. Additional reports from "technical" surveillance of all unidentified target were sent to Hopkins in May and July 1945, when he served as an aide to President Truman. 76

In 1945 two Truman White House aides, E. D. McKim and General H. H. Vaughn, received reports of electronic surveillance of a high executive official. One of these reports included "transcripts of telephone conversations between [the official] and Justice Felix Frankfurter and between [the official] and Drew Pearson." 76a

From June 1945 until May 1948, General Vaughn received reports from electronic surveillance of a former Roosevelt White House aide. A memorandum by J. Edgar Hoover indicates that Attorney General Tom Clark "authorized the placing of a technical surveillance" on this individual and that, according to Clark, President Truman "was particularly concerned" about the activities of this individual "and his associates" and wanted "a very thorough investigation" so that "steps might be taken, if possible, to see that such activities did not interfere with the proper administration of government." Hoover's memorandum did not indicate what these "activities" were. 76b

##### *b. Bugging, Mail Opening and Surreptitious Entry.*

Intrusive techniques such as bugging, mail opening and surreptitious entry were used by the FBI without even the kind of formal Presidential authorization and requirement of Attorney General approval that applied to warrantless wiretapping.

During the war, the FBI began "chamfering" or surreptitious mail opening, to supplement the overt censorship of international mail authorized by statute In Wartime. 77 The practice of surreptitious entry - or breaking-and-entering - was also used by the FBI in wartime intelligence operations. 78 The Bureau continued or resumed the use of these techniques after the war without explicit outside authorization.

Furthermore, the installation of microphone surveillance ("bugs"), either with or without trespass, was exempt from the procedure for Attorney General approval of wiretaps. Justice Department records indicate that no Attorney General formally considered the question of microphone surveillance involving trespass, except on a hypothetical basis, until 1952. 79

### **C. DOMESTIC INTELLIGENCE IN THE COLD WAR ERA: 1946-1963**

## *1. Main Developments of the 1946-1963 Period*

The domestic intelligence programs of the FBI and the military intelligence agencies, which were established under presidential authority before World War II, did not cease with the end of hostilities. Instead, they set the pattern for decades to come.

Despite Director Hoover's statement that the intelligence structure could be "discontinued or very materially curtailed" with the termination of the national emergency, after the war intelligence operations were neither discontinued nor curtailed. 80 Congressional deference to the executive branch, the broad scope of investigations, the growth of the FBI's power, and the substantial immunity of the Bureau from effective outside supervision became increasingly significant features of domestic intelligence in the United States. New domestic intelligence functions were added to previous responsibilities. No attempt was made to enact a legislative charter replacing the wartime emergency orders, as was done in the foreign intelligence field in 1947.

The main developments during the Cold War era may be summarized as follows:

### *a. Domestic Intelligence Authority*

During this period there was a national consensus regarding the danger to the United States from Communism; little distinction was made between the threats posed by the Soviet Union and by Communists within this country. Domestic intelligence activity was supported by that consensus, although not specifically authorized by the Congress.

Formal authority for FBI investigations of "subversive activity" and for the agreements between the FBI and military intelligence was explicitly granted in executive directives from Presidents Truman and Eisenhower, the National Security Council, and Attorney General Kennedy. These directives provided no guidance, however, for controlling such investigations.

### *b. Scope of Domestic Intelligence*

The breadth of the FBI's investigation of "subversive infiltration" continued to produce intelligence reports and massive files on lawful groups and law-abiding citizens who happened to associate, even unwittingly, with Communists or with socialists unconnected with the Soviet Union who used revolutionary rhetoric. At the same time, the scope of FBI intelligence expanded to cover civil rights protest activity as well as violent "Klan-type" and "hate" groups, vocal anticommunists, and prominent opponents of racial integration. The vagueness of the FBI's investigative mandate and the overbreadth of its collection programs also placed it in position to supply the White House with numerous items of domestic political intelligence apparently desired by Presidents and their aides.

In response to White House and congressional interest in right-wing organizations, the Internal Revenue Service began comprehensive investigations of right-wing groups in 1961 and later expanded to left-wing organizations. This effort was directed at identifying contributions and ascertaining whether the organizations were entitled to maintain their exempt status.

### *c. Accountability and Control*

Pervasive secrecy enabled the FBI and the Justice Department to disregard as "unworkable" the Emergency Detention Act intended to set standards for aspects of domestic intelligence. The FBI's independent position also allowed it to withhold significant information from a Presidential commission and from every Attorney General, and no Attorney General inquired fully into the Bureau's operations.

During the same period, apprehensions about having a "security police" influenced Congress to prohibit the Central Intelligence Agency from exercising law enforcement powers or performing "internal security functions." Nevertheless, in secret and without effective internal controls, the CIA undertook programs for testing chemical and biological agents on unwitting Americans, sometimes with tragic consequences. The CIA also used American private institutions as "cover" and used intrusive techniques affecting the rights of Americans.

### *d. Intrusive Techniques*

The CIA and the National Security Agency illegally instituted programs for the interception of international communications to and from American citizens, primarily first class mail and cable traffic.

During this period, the FBI also used intrusive intelligence gathering techniques against domestic "subversives" and counterintelligence targets. Sometimes these techniques were covered by a blanket delegation of authority from the Attorney General, as with microphone surveillance; but frequently they were used without outside authorization, as with mail openings and surreptitious entry. Only conventional wiretaps required the Attorney General's approval in each case, but this method was still misused due to the lack of adequate standards and procedural safeguards.

### *e. Domestic Covert Action*

In the mid-fifties, the FBI developed the initial COINTELPRO operations, which used aggressive covert actions to disrupt and discredit Communist Party activities. The FBI subsequently expanded its COINTELPRO activities to discredit peaceful protest groups whom Communists had infiltrated but did not control, as well as groups of socialists who used revolutionary rhetoric but had no connections with a hostile foreign power.

Throughout this period, there was a mixture of secrecy and disclosure. Executive action was often substituted for legislation, sometimes with the full knowledge and consent of Congress and on other occasions without informing Congress or by advising only a select group of legislators. There is no question that Congress, the courts, and the public expected the FBI to gather domestic intelligence about Communists. But the broad scope of FBI investigations, its specific programs for achieving "pure intelligence" and "preventive intelligence" objectives, and its use of intrusive techniques and disruptive counterintelligence measures against domestic "subversives" were not fully known by anyone outside the Bureau.

## *2. Domestic Intelligence Authority*

### *a. Anti-Communist Consensus*

During the Cold War era, the strong consensus in favor of governmental action against Communists was reflected in decisions of the Supreme Court and acts of Congress. In the Korean War period, for instance, the Supreme Court upheld the conviction of domestic Communist Party leaders under the Smith Act for conspiracy to advocate violent overthrow of the government. The Court pinned its decision upon the conspiratorial nature of the Communist Party of the United States and its ideological links with the Soviet Union at a time of stress in Soviet-American relations. <sup>81</sup>

Several statutes buttressed the FBI's claim of legitimacy for at least some aspects of domestic intelligence. Although Congress never directly authorized Bureau intelligence operations, Congress enacted the Internal Security Act of 1950 over President Truman's veto. Its two main provisions were: the Subversive Activities Control Act, requiring the registration of members of communist and communist "front" groups; and the Emergency Detention Act, providing for the internment in an emergency of persons who might engage in espionage or sabotage. In this Act, Congress made findings that the Communist Party was "a disciplined organization" operating in this nation "under Soviet Union control" with the aim of installing "a Soviet style dictatorship." <sup>82</sup> Going even further in 1954, Congress passed the Communist Control Act, which provided that the Communist Party was "not entitled to any of the rights, privileges, and immunities attendant upon legal bodies created under the jurisdiction of the laws of the United States." <sup>83</sup>

In 1956, the Supreme Court recognized the existence of FBI intelligence aimed at "Communist seditious activities." <sup>84</sup> The basis for Smith Act prosecutions of "subversive activity" was narrowed in 1957, however, when the Court overturned the convictions of second-string Communist leaders, holding that the government must show advocacy "of action and not merely abstract doctrine." <sup>85</sup> In 1961, the Court sustained the constitutionality under the First Amendment of the requirement that the Communist Party register with the Subversive Activities Control Board. <sup>86</sup>

The consensus should not be portrayed as monolithic. President Truman was concerned about risks to constitutional government posed by the zealous anti-Communism in Congress. According to one White House staff member's notes during the debate over the Internal Security Act:

The President said that the situation . . . was the worst it had been since the Alien and Sedition Laws of 1798, that a lot of people on the Hill should know better but had been stampeded into running with their tails between their legs.

Truman announced that he would veto the Internal Security Act "regardless of how politically unpopular it was -- election year or no election year." <sup>87</sup> But President Truman's veto was overridden by an overwhelming margin.

### *b. The Federal Employee Loyalty-Security Program*

(1) Origins of the Program. -- President Truman established a federal employee loyalty program in 1947. <sup>88</sup> Its basic features were retained in the federal employee security program authorized by President Eisenhower in public Executive Order 10450, which, with some modifications, still applies today. <sup>89</sup>

Although it had a much broader reach, the program originated out of well-founded concern that Soviet intelligence was then using the Communist Party as a vehicle for the recruitment of espionage agents. <sup>90</sup> President Truman appointed a Temporary Commission on Employee Loyalty in 1946 to examine the problem. FBI Director Hoover submitted a memorandum on the types of activities of "subversive or disloyal persons" in government service which would constitute a "threat" to security. As Hoover saw it, however, the danger was not limited to espionage or recruitment for espionage. It extended to "influencing" government policies in favor of "the foreign country of their ideological choice." Consequently, he urged that attention be given to the associations of government employees with "front" organizations, including "temporary organizations, 'spontaneous' campaigns, and pressure movements so frequently used by subversive groups." <sup>91</sup>

The President's Commission accepted Director Hoover's broad view of the threat, along with the view endorsed by a Presidential Commission on Civil Rights that there also was a danger from "those who would subvert our democracy by ... destroying the civil rights of some groups." <sup>91</sup> Consequently, the Executive Order included, as an indication of disloyalty, membership in or association with groups designated on an "Attorney General's list" as:

totalitarian, fascist, communist, or subversive, or as having adopted a policy of advocating or approving the commission of acts of force, or violence to deny others their rights under the Constitution of the United States, or as seeking to alter the form of government of the United States by unconstitutional means."

The Executive Order was used to provide a legal basis for the FBI's investigation of allegedly "subversive" organizations which might fall within these categories. <sup>94</sup> Such investigations supplied a body of intelligence data against which to check the names of prospective federal employees. <sup>95</sup>

(2) Breadth of the Investigations. -- By the mid-1950s, the Bureau believed that the Communist Party was no longer used for Soviet espionage; it represented only a "potential" recruiting ground for spies. 96 Thereafter, FBI investigations of Communist organizations and other groups unconnected to espionage but falling within the standards of the Attorney General's list frequently became a means for monitoring the political background of prospective federal employees by means of the "name check" of Bureau files. These investigations also served the "pure intelligence" function of informing the Attorney General of the influence and organizational affiliations of so-called "subversives." 97

No organizations were formally added to the Attorney General's list after 1955. 98 However, the FBI's "name check" reports on prospective employees were never limited to information about listed organizations. The broad standards for placing a group on the Attorney General's list were used to evaluate an employee's background, regardless of whether or not he was a member of a group on the list. 99 If a "name check" uncovered information about a prospective employee's association with a group which *might* come within those standards, the FBI would report the data and attach a "characterization" of the organization relating to the standards. 100

(3) FBI Control of Loyalty-Security Investigations -- President Eisenhower's 1953 order specifically designated the FBI as responsible for "a full field investigation" whenever a "name check" or a background investigation by the Civil Service Commission or any other agency uncovered information indicating a potential security risk. 101 President Truman had refused to give the Bureau this exclusive power initially, but he fought a losing battle. 102

Director Hoover had objected that President Truman's order did not give the FBI exclusive power and threatened "to withdraw from this field of investigation rather than to engage in a tug of war with the Civil Service Commission." 103 President Truman was apprehensive about the FBI's growing power. The notes of one presidential aide on a meeting with the President reflect that Truman felt "very strongly anti-FBI" on the issue and wanted "to be sure and hold FBI down, afraid of 'Gestapo.'" 104

Presidential assistant Clark Clifford reviewed the situation and came down on the side of the FBI as "better qualified" than the Civil Service Commission. 105 But the President insisted on a compromise which gave Civil Service "discretion" to call on the FBI "if it wishes." 106 Director Hoover protested this "confusion" about the FBI's jurisdiction. 107 When Justice Department officials warned that Congress would "find flaws" with the compromise, President Truman noted on a memorandum from Clifford:

J. Edgar will in all probability get this backward looking Congress to give him what he wants. It's dangerous. 108

President Truman's prediction was correct. His budget request of \$16 million for Civil Service and \$8.7 million for the FBI to conduct loyalty investigations was revised by Congress to allocate \$7.4 million to the FBI and only \$3 million to Civil Service. 109 The issue was finally resolved to the FBI's satisfaction when the President issued a statement declaring that there were "to be no exceptions" to the rule that the FBI would make all loyalty investigations." 110

#### *c. Executive Directives: Lack of Guidance and Controls*

Two public presidential statements on FBI domestic intelligence authority -- by President Truman in 1950 and by President Eisenhower in 1953 -- specifically declared that the FBI was authorized to investigate "subversive activity," electing the broader interpretation of the directive of conflicting Roosevelt directives. Moreover, a confidential directive of the National Security Council in 1949 granted authority to the FBI and military intelligence for investigation of "subversive activities." In 1962 President Kennedy issued a confidential order shifting supervision of these investigations from the NSC to the Attorney General, and the NSC's 1949 authorizations were reissued by Attorney General Kennedy in 1964.

As with the earlier Roosevelt directives, these statements, orders and authorizations failed to provide guidance on conducting or controlling "subversive" investigations.

Under President Truman, the Interdepartmental Intelligence Conference (IIC) 111 was formally authorized in 1949 to supervise coordination between the FBI and the military of "all investigation of domestic espionage, counterespionage, sabotage, *subversion*, and *other related intelligence matters* affecting internal security." 112 [Emphasis added.]

The confidential Delimitations Agreement between the FBI and the military intelligence agencies was also revised in 1949 to require greater exchange of "information of mutual interest" and to require the FBI to advise military intelligence of developments concerning "subversive" groups who were "potential" dangers to the security of the United States. 113

In 1950, after the outbreak of the Korean war and in the midst of Congressional consideration of new internal security legislation, Director Hoover recommended that Attorney General J. Howard McGrath 114 and the NSC draft a statement which President Truman issued in July 1950 providing that the FBI:

should take charge of investigative work in matters relating to espionage, sabotage, *subversive activities and related matters*." [Emphasis added.]

Despite concern among his assistants, 115a President Truman's statement clearly placed him on the record as endorsing FBI investigations of "subversive activities." The statement said that such investigations had been authorized initially by President Roosevelt's "directives" of September 1939 and January 1943. However, those particular directives had not used this precise language. 116

Shortly after President Eisenhower took office in 1953, the FBI advised the White House that its "internal security responsibility" went beyond "statutory" authority. The Bureau attached a copy of the Truman statement, but not the Roosevelt directive. The FBI again broadly interpreted the Roosevelt directive by saying that it had authorized "investigative work" related to "subversive activities." 117

In December 1953 President Eisenhower issued a statement reiterating President Truman's "directive" and extending the FBI's mandate to investigations under the Atomic Energy Act. 118

President Kennedy issued no public statement comparable to the Roosevelt, Truman, and Eisenhower "directives." However, in 1962 he did transfer the Interdepartmental Intelligence Conference to "the supervision of the Attorney General," 119 and in 1964 Attorney General Robert Kennedy reissued the IIC charter, citing as authority the President's 1962 order and retaining the term "subversion." The charter added that it did not "modify" or "affect" the previous "Presidential Directives" relating to the duties of the FBI, and that the Delimitations Agreement between the FBI and military intelligence "shall remain in full force and effect." 120

None of the directives, orders, or charters provided any definition of the broad and loose terms "subversion" or "subversive activities;" and none of the administrations provided effective controls over the FBI's investigations in this area.

### *3. Scope of Domestic Intelligence*

#### *a. "Subversive Activities"*

The breadth of the FBI's investigations of "subversive activity" led to massive collection of information on law abiding citizens. FBI domestic intelligence investigations extended beyond known or suspected Communist Party members. They included other individuals who regarded the Soviet Union as the "champion of a superior way of life" and "persons holding important positions who have shown sympathy for Communist objectives and policies." Members of "non-Stalinist" revolutionary socialist groups were investigated because, even though they opposed the Soviet regime, the FBI viewed them as regarding the Soviet Union "as the center for world revolution." 121 Moreover, the FBI's concept of "subversive infiltration" was so broad that it permitted the investigation for decades of peaceful protest groups such as the NAACP.

(1) The Number of Investigations. -- By 1960 the FBI had opened approximately 432,000 files at headquarters on individuals and groups in the "subversive" intelligence field. Between 1960 and 1963 an additional 9,000 such files were opened. 122 An even larger number of investigative files were maintained at FBI field offices. 123 Under the Bureau's filing system, a single file on a group could include references to hundreds or thousands of group members or other persons associated with the group in any way; and such names were indexed so that the information was readily retrievable.

(2) Vague and Sweeping Standards.--The FBI conducted continuing investigations of persons whose membership in the Communist Party or in "a revolutionary group" had "not been proven," but who had "anarchistic or revolutionary beliefs" and had "committed past acts of violence during strikes, riots, or demonstrations." Persons not currently engaged in "activity of a subversive nature" were still investigated if they had engaged in such activity "several years ago" and there was no "positive indication of disaffection." 124

The FBI Manual stated that it was "not possible to formulate any hard-and-fast standards for measuring "the dangerousness of individual members or affiliates of revolutionary organizations." Persons could be investigated if they were "espousing the line" of "revolutionary movements". Anonymous allegations could start an investigation if they were "sufficiently specific and of sufficient weight." The Manual added,

Where there is doubt an individual may be a current threat to the internal security of the nation, the question should be resolved in the interest of security and investigation conducted. 125

The FBI Manual did not define "subversive" groups in terms of their links to a foreign government. Instead, they were "Marxist revolutionary-type" organizations "seeking the overthrow of the U. S. Government." 126 One purpose of investigation was possible prosecution under the Smith Act. But no prosecutions were initiated under the Act after 1957. 127 The Justice Department advised the FBI in 1956 that such a prosecution required "an actual plan for a violent revolution." 128 The Department's position in 1960 was that "incitement to action in the foreseeable future" was needed. 129 Despite the strict requirements for prosecution, the FBI continued to investigate "subversive" organizations "from an intelligence viewpoint" to appraise their "strength" and "dangerousness." 130

(3) COMINFIL. -- The FBI's broadest program for collecting intelligence was carried out under the heading COMINFIL, or Communist infiltration. 131 The FBI collected intelligence about Communist "influence" under the following categories:

Political activities  
Legislative activities  
Domestic administration issues  
Negro question  
Youth matters  
Women's matters  
Farmers' Matters  
Cultural activities  
Veterans' matters  
Religion  
Education  
Industry 132

FBI investigations covered "the entire spectrum of the social and labor movement in the country." 133 The purpose -- as publicly disclosed in the Attorney General's Annual Reports -- was pure intelligence: to "fortify" the Government against "subversive pressures," 134 or to "strengthen" the Government against "subversive campaigns." 135

In other words, the COMINFIL program supplied the Attorney General and the President with intelligence about a wide range of groups seeking to influence national policy under the rationale of determining whether Communists were involved. 136 The FBI said it was not concerned with the "legitimate activities" of "nonsubversive groups," but only with whether Communists were "gaining a dominant role." 137 Nevertheless, COMINFIL reports inevitably described "legitimate activities" totally unrelated to the alleged "subversive activity." This is vividly demonstrated by the COMINFIL reports on America's leading civil rights group in this period, the NAACP. 138 The investigation continued for at least twenty-five years in cities throughout the nation, although no evidence was ever found to rebut the observation that the NAACP had a "strong tendency" to "steer clear of Communist activities." 139

(4) Exaggeration of Communist Influence. -- The FBI and the Justice Department justified the continuation of COMINFIL investigations, despite the Communist Party's steady decline in the fifties and early sixties, on the theory that the Party was "seeking to repair its losses" with the "hope" of being able to "move in" on movements with "laudable objectives." 140

The FBI reported to the White House in 1961 that the Communist Party had "attempted" to take advantage of "racial disturbances" in the South and had "endeavored" to bring "pressure to bear" on government officials "through the press, labor unions, and student groups." At that time the FBI was investigating "two hundred known or suspected communist front and communist-infiltrated organizations." 141 By not stating how effective the "attempts" and "endeavors" of the Communists were, and by not indicating whether they were becoming more or less successful, the FBI offered a deficient rationale for its sweeping intelligence collection policy.

William C. Sullivan, a former head of the FBI Intelligence Division, has testified that such language was deliberately used to exaggerate the threat of Communist influence. "Attempts" and "influence" were "very significant words" in FBI reports, he said. These terms obscured what he felt to be the more significant criterion - the degree of Communist success. The Bureau "did not discuss this because we would have to say that they did not hit the target, hardly any." 142

A distorted picture of Communist "infiltration" later served to justify the FBI's intensive investigations of the groups involved in protests against the Vietnam War and the civil rights movement, including Dr. Martin Luther King, Jr., and the Southern Christian Leadership Conference.

#### *b. "Racial Matters" and "Hate Groups"*

In the 1950s, the FBI also developed intelligence programs to investigate "Racial Matters" and "hate organizations" unrelated to "revolutionary-type" subversives. "Hate organizations" were investigated if they had "allegedly adopted a policy of advocating, condoning, or inciting the use of force or violence to deny others their rights under the Constitution." Like the COMINFIL program, however, the Bureau used its "established sources" to monitor the activities of "hate groups" which did not "qualify" under the "advocacy of violence" standard. 143

In 1963, FBI field offices were instructed to report "the formation and identities" of "rightist or extremist groups" in the "anticommunist field." Headquarters approval was needed for investigating "groups in this field whose activities are not in violation of any statutes." 144

Under these programs, the FBI collected and disseminated intelligence about the John Birch Society and its founder, Robert Welch, in 1959. 145 The activities of another right-wing spokesman, Gerald L. K. Smith, who headed the Christian Nationalist Crusade, were the subject of FBI reports even after the Justice Department had concluded that the group had not violated federal law and that there was no basis for including the group on the "Attorney General's list." 146

The FBI program for collecting intelligence on "General Racial Matters" was even broader. It went beyond "race riots" to include "civil demonstrations" and "similar developments." These "developments" included:

proposed or actual activities of individuals, officials, committees, legislatures, organizations, etc., in the racial field. 147

The FBI's "intelligence function" was to advise "appropriate" federal and local officials of "pertinent information" about "racial incidents." 148

A briefing of the Cabinet by Director Hoover in 1956 illustrates the breadth of collection and dissemination under the racial matters program. The briefing covered not only incidents of violence and the "efforts" and "plans" of Communists to "influence" the civil rights movement, but also the legislative strategy of the NAACP and the activities of Southern Governors and Congressmen on behalf of groups opposing integration peacefully. 149

#### *C. FBI Political Intelligence for the White House*

Numerous items of political intelligence were supplied by the FBI to the White House in each of the three administrations during the Cold War era, apparently satisfying the desires of Presidents and their staffs. 150

President Truman and his aides received regular letters from Director Hoover labeled "Personal and Confidential" containing tidbits of political intelligence. The letters reported on such subjects as: inside information about the negotiating position of a

non-Communist labor union; 151 the activities of a former Roosevelt aide who was trying to influence the Truman administration's appointments; 152 a report from a "confidential source" that a "scandal" was brewing which would be "very embarrassing" to the Democratic administration; 153 a report from a "very confidential source" about a meeting of newspaper representatives in Chicago to plan publication of stories exposing organized crime and corrupt politicians; 154 the contents of an in-house communication from Newsweek magazine reporters to their editors about a story they had obtained from the State Department, 155 and criticism of the government's internal security programs by a former Assistant to the Attorney General. 156

Letters discussing Communist "influence" provided a considerable amount of extraneous information about the legislative process, including lobbying activities in support of civil rights legislation 157 and the political activities of Senators and Congressmen. 158

President Eisenhower and his aides received similar tid-bits of political intelligence, including an advance text of a speech to be delivered by a prominent labor leader, 159 reports from Bureau "sources" on the meetings of an NAACP delegation with Senators Paul Douglas and Everett Dirksen of Illinois; 160 the report of an "informant" on the role of the United Auto Workers Union at an NAACP conference, 161 summaries of data in FBI files on thirteen persons (including Norman Thomas, Linus Pauling, and Bertrand Russell) who had filed suit to stop nuclear testing, 162 a report of a "confidential source" on plans of Mrs. Eleanor Roosevelt to hold a reception for the head of a civil rights group, 163 and reports on the activities of Robert Welch and the John Birch Society. 164

The FBI also volunteered to the White House information from its most "reliable sources" On purely political or social contacts with foreign government officials by a Deputy Assistant to the President, 165 Bernard Baruch, 166 Supreme Court Justice William O. Douglas, 167 and Mrs. Eleanor Roosevelt. 168

Director Hoover sent to the White House a report from a "confidential informant" on the lobbying activities of a California group called Women for Legislative Action because its positions "paralleled" the Communist line. 169

As in the prior administrations, requests also flowed from the Eisenhower White House to the FBI. 170 For example, a presidential aide asked the FBI to check its files on Rev. Carl McIntyre of the International Council of Christian Churches. 171

The pattern continued during the Kennedy administration. A summary of material in FBI files on a prominent entertainer was volunteered to Attorney General Kennedy because Hoover thought it "may be of interest." 172 Attorney General Kennedy sent to the President an FBI memorandum on the purely personal life of Dr. Martin Luther King, Jr. 173 Director Hoover supplied Attorney General Kennedy with background information on a woman who told an Italian newspaper that she had once been engaged to marry President Kennedy 174 and on the husband of a woman who was reported in the press to have stated that the President's daughter would enroll in a cooperative nursery with which she was connected. 175 The FBI Director also passed on information from a Bureau "source" regarding plans of a group to publish allegations about the President's personal life. 176

In 1962 the FBI complied unquestioningly with a request from Attorney General Kennedy to interview a Steel Company executive and several reporters who had written stories about the Steel executive. The interviews were conducted late at night and early in the morning because, according to the responsible FBI official, the Attorney General indicated the information was needed for a White House meeting the next day. 177

Throughout the period, the Bureau also disseminated reports to high executive officials to discredit its critics. The FBI's Inside information on plans of the Lawyers Guild to denounce Bureau surveillance in 1949 gave the Attorney General the opportunity to prepare a rebuttal well in advance of the expected criticism. 178 When the Knoxville Area Human Relations Council charged in 1960 that the FBI was practicing racial discrimination, the FBI did "name checks" on members the Council's board of directors and sent the results to the Attorney General. The name checks dredged up derogatory allegations from as far back as the late thirties and early forties. 179

#### *d. IRS Investigations of Political Organizations*

The IRS program that came to be used against the domestic dissidents of the 1960s was first used against Communists in the 1950s. As part of its COINTELPRO against the Communist Party, the FBI arranged for IRS investigations of Party members, and obtained their tax returns. 180 In its efforts against the Communist Party, the FBI had unlimited access to tax returns: it never told the IRS why it wanted them, and IRS never attempted to find out. 181

In 1961, responding to White House and congressional interest in right-wing organizations, the IRS began comprehensive investigation of right-wing groups to identify contributors and ascertain whether or not some of them were entitled to their tax exempt status. 182 Left-wing groups were later added, in an effort to avoid charges that such IRS activities were all aimed at one part of the political spectrum. Both right- and left-wing groups were selected for review and investigation because of their political activity and not because of any information that they had violated the tax laws. 183

While the IRS efforts begun in 1961 to investigate the political activities of tax exempt organizations were not as extensive as later programs in 1969-1973, they were a significant departure by the IRS from normal enforcement criteria for investigating persons or groups on the basis of information indicating noncompliance. By directing tax audits at individuals and groups solely because of their political beliefs, the Ideological Organizations Audit Project (as the 1961 program was known) 184 established a precedent for a far more elaborate program of targeting "dissidents." 185

During the Cold War period, there were serious weaknesses in the system of accountability and control of domestic intelligence activity. On occasion the executive chose not to comply with the will of Congress with respect to internal security policy, and the Congressional attempt to exclude U.S. foreign intelligence agencies from domestic activities was evaded. Intelligence agencies also conducted covert programs in violation of laws protecting the rights of Americans. Problems of

accountability were compounded by the lack of effective congressional oversight and the vagueness of executive orders, which allowed intelligence agencies to escape outside scrutiny.

*a. The Emergency Detention Act*

In 1946, four years before the Emergency Detention Act of 1950 was passed, the FBI advised Attorney General Clark that it had secretly compiled a security index of "potentially dangerous" persons. 186 The Justice Department then made tentative plans for emergency detention based on suspension of the privilege of the writ of habeas corpus. 187 Department officials deliberately avoided going to Congress, advising the FBI in a "blind memorandum:"

The present is no time to seek legislation. To ask for it would only bring on a loud and acrimonious discussion. 188

In 1950, however, Congress passed the Emergency Detention Act which established standards and procedures for the detention, in the event of war, invasion or insurrection "in aid of a foreign enemy," of any person:

as to whom there is reasonable ground to believe that such person probably will engage in, or probably will conspire with others to engage in, acts of espionage or sabotage.

The Act did not authorize the suspension of the privilege of the writ of habeas corpus, and it provided that detained persons could appeal to a review board and to the courts. 189

Shortly after passage of the Detention Act, according to a Bureau document, Attorney General J. Howard McGrath told the FBI to disregard it and to "Proceed with the program as previously outlined." Department officials stated that the Act was "in conflict with" their plans, and was "unworkable." FBI officials agreed that the statutory procedures - such as "recourse to the courts" instead of suspension of habeas corpus - would "destroy" their program. 190 Moreover, the Security Index used broader standards to determine "potential dangerousness" than those prescribed in the statute; and, unlike the Act, Department plans provided for issuing a Master Search Warrant and a Master Arrest Warrant. 191 Two subsequent Attorneys General endorsed the decision to ignore the Emergency Detention Act. 192

*b. Withholding Information*

Not only did the FBI and the Justice Department jointly keep their noncompliance with the Detention Act secret from Congress, but the FBI withheld important aspects of its program from the Attorney General. FBI personnel had been instructed in 1949 that :

no mention must be made in any investigative report relating to the classifications of top functionaries and key figures, nor to the Detcom and Comsab Programs, nor to the Security Index or the Communist Index. These investigative procedures and administrative aides are confidential and should not be known to any outside agency. 193

FBI documents indicate that only the Security Index was made known to the Justice Department.

In 1955, the FBI tightened formal standards for the Security Index, reducing its size from 26,174 to 12,870 by 1958. 194 However, there is no indication that the FBI told the Department that it kept the names of persons taken off the Security Index on a Communist Index, because the Bureau believed such persons remained "potential threats." 194a The secret Communist Index was renamed the Reserve Index in 1960 and expanded to include "influential" persons deemed likely to "aid subversive elements" in an emergency because of their "subversive associations and ideology." Such individuals fell under the following categories:

Professors, teachers, and educators, labor union organizers and leaders; writers, lecturers, newsmen and others in the mass media field; lawyers, doctors, and scientists; other potentially influential persons on a local or national level; individuals who could potentially furnish financial or material aid.

Persons on the Reserve Index would receive "priority consideration" for "action" after detention of Security Index subjects. The breadth of this list is illustrated by the inclusion of the names of author Norman Mailer and a professor who merely praised the Soviet Union to his class. 195

In addition to keeping these programs secret, the FBI withheld information about espionage from the Justice Department on at least two occasions. In 1946 the FBI had "identified over 100 persons" whom it "suspected of being in the Government Communist Underground." Neither this number nor any names from this list were given to the Department because Director Hoover feared "leaks," and because the Bureau conceded in its internal documents that it did "not have evidence, whether admissible or otherwise, reflecting actual membership in the Communist Party." 196 Thus the Bureau's "suspicions" were not tested by outside review by the Justice Department and the investigations could continue. In 1951 the FBI again withheld from the Department names of certain espionage subjects "for security reasons," since disclosure "would destroy chances of penetration and control."

Even the President's Temporary Commission on Employee Loyalty could not get highly relevant information from the Bureau. FBI Assistant Director D.M. Ladd told the Commission in 1946 that there was a "substantial" amount of Communist "infiltration of the government." But Ladd declined to answer when Commission members asked for more details of FBI intelligence operations and the information which served as the basis for his characterization of the extent of infiltration. 198

The Commission prepared a list of questions for the FBI and asked that Director Hoover appear in person. Instead, Attorney General Clark made an "informal" appearance and supplied a memorandum stating that the number of "subversives" in government had "not yet reached serious proportions," but that the possibility of "even one disloyal person" in government service constituted a "serious threat." 199 Thus, the President's Commission chose not to insist upon making a serious evaluation of FBI intelligence operations or the extent of the danger.

The record suggests that executive officials were forced to make decisions regarding security policy without full knowledge. They had to depend on the FBI's estimate of the problem, rather than being able to make their own assessment on the basis of complete information. It is also apparent that by this time outside officials were sometimes unwilling to oppose Director Hoover or to inquire fully into FBI operations. 200

### *c. CIA Domestic Activity*

(1) Vague Controls on CIA. -- The vagueness of Congress's prohibitions of "internal security functions" by the CIA left room for the Agency's subsequent domestic activity. A restriction against "police, law enforcement or internal security functions" first appeared in President Truman's order establishing the Central Intelligence Group in 1946. 201

General Vandenburg, then Director of Central Intelligence, testified in 1947 that this restriction was intended to "draw the lines very sharply between the CIG and the FBI" and to "assure that the Central Intelligence Group can never become a Gestapo or security police." 202 Secretary of the Navy James Forrestal testified that the CIA would be "limited definitely to purposes outside of this country, except the collection of information gathered by other government agencies." The FBI would be relied upon "for domestic activities." 203

In the House floor debate Congressman Holifield stressed that the work of the CIA:

is strictly in the field of secret foreign intelligence -- what is known as clandestine intelligence. They have no right in the domestic field to collect information of a clandestine military nature. They can evaluate it; yes. 204

Consequently, the National Security Act of 1947 provided specifically that the CIA

shall have no police, subpoena, law-enforcement powers, or internal security functions. 205

However, the 1947 Act also contained a vague and undefined duty to protect intelligence "sources and methods" which later was used to justify domestic activities ranging from electronic surveillance and break-ins to penetration of protest groups. 206

(2) Drug Testing and Cover Programs. -- In the early 1950s, the CIA began a program of surreptitiously testing, chemical and biological materials, which included drug testing on unwitting Americans. The existence of such a program was kept secret because, as the CIA's Inspector General wrote 1957, it, was necessary to "protect operations from exposure" to "the American public" as well as "enemy forces." Public knowledge of the CIA's "unethical and illicit activities" was thought likely to have serious "political repercussions." 207 CIA drug experimenters disregarded instructions of their superiors within the Agency and failed to take "reasonable precautions" when they undertook the test which resulted in the death of Dr. Frank Olsen. 208

The CIA made extensive use of the Bureau of Narcotics and Dangerous Drugs in conducting its program of drug testing on unwitting subjects.

Military intelligence also administered drugs to volunteer subjects who were unaware of the purpose or nature of the tests in which they were participating. 209

The CIA's drug research was conducted in part through arrangements with universities, hospitals, and "private research organizations" in a manner which concealed "from the institution the interests of the CIA," although "key individuals" were made witting of Agency sponsorship. 210 There were similar covert relationships with American private institutions in other CIA intelligence activities. 211

### *5. Intrusive Techniques*

Throughout the cold war period, the intelligence agencies used covert techniques which invaded personal privacy to execute their vague, uncontrolled, and overly broad mandate to collect intelligence. Intelligence techniques were not properly controlled by responsible authorities; some of the techniques were misused by senior administration officials. On the other hand, the nature of the programs -- and, in some cases, their very existence -- was often concealed from those authorities.

#### *a. Communications Interception: CIA and NSA*

During the 1950s the Central Intelligence Agency instituted a major program for opening mail between the United States and the Soviet Union as it passed through postal facilities in New York City. 212 Two other short-term CIA projects in the fifties also involved the opening of international mail within the United States, through access to Customs Service facilities. 213 Moreover, in the late 1940s the Department of Defense made arrangements with several communications companies to receive international cable traffic, reinstating a relationship that had existed during World War II. 214 These programs violated not only the ban on internal security functions by foreign intelligence agencies in the 1947 Act, but also specific statutes protecting the privacy of the mails and forbidding the interception of Communications. 215

While their original purpose was to obtain foreign intelligence, the programs frequently did not distinguish between the messages of foreigners and of Americans. 216 Furthermore, by the late fifties and early sixties, the CIA and NSA were sharing the "take" with the FBI for domestic intelligence purposes. 217

In this period, the CIA opened mail to and from the Soviet Union largely at random, intercepting letters of Americans unrelated to foreign intelligence or counterintelligence. 218 After the FBI learned of the CIA program, it levied requests in certain categories. Apart from foreign counterintelligence criteria, the Bureau expressed interest in letters from citizens professing "pro-Communist sympathies" 219 and "data re U.S. peace groups going to Russia." 220

The secret arrangements with cable companies to obtain copies of international traffic were initially authorized by Secretary of Defense James Forrestal and Attorney General Tom Clark, although it is not clear that they knew of the interception of American as well as foreign messages. 221 They developed no formal legal rationale, and their later successors were never consulted to renew the authorization. 222

The CIA sought no outside authorization before instituting its mail opening program. Several Post Office officials were misled into believing that the CIA's request for access to the mail only involved examining the exterior of the envelopes. 223 President Kennedy's Postmaster General, J. Edward Day, testified that he told CIA Director Allen Dulles he did not want to "know anything about" what the CIA was doing. 224 Beyond undocumented assumptions by CIA officials, there is no evidence that the President or the Attorney General was ever informed about any aspect of CIA mail-opening operations in this period. 225

#### *b. FBI Covert Techniques*

##### *(1) Electronic Surveillance.*

(a) *The Question of Authority:* In 1946 Attorney General Toni Clark asked President Truman to renew the authorization for warrantless wiretapping issued by President Roosevelt in 1940. Clark's memorandum, however, did not refer to the portion of the Roosevelt directive which said wiretaps should be limited "insofar as possible to aliens." It stressed the danger from "subversive activity here at home," and requested authority to wiretap "in cases vitally affecting the domestic security." 226 The President gave his approval. Truman's aides later discovered Attorney General Clark's omission and the President considered, but decided against, returning to the terms of Roosevelt's authorization. 227

In 1954 the Supreme Court denounced the Fourth Amendment violation by police who placed a microphone in a bedroom in a local gambling case. 228

Soon thereafter, despite this decision -- and despite his predecessor's ruling that trespassory installation of bugs was in the "area" of the Fourth Amendment -- Attorney General Herbert Brownell authorized the "unrestricted use" in the "national interest" of "trespass in the installation of microphones." 229

From 1954 until 1965, when Attorney General Nicholas Katzenbach reconsidered the policy and imposed stricter regulations, 230 the FBI had unsupervised discretion to use microphone surveillance and to conduct surreptitious entries to install microphones. Thus, the safeguard of approval by the Attorney General for each wiretap had been undercut by the FBI's ability to intrude into other, often more intimate conversations by microphone "bugging."

(b) *Extensive Bugging:* In May 1961, Director Hoover advised Deputy Attorney General Byron White that the FBI was using "microphone surveillances" involving "trespass" for "intelligence purposes" in the "internal security field." He called White's attention to the 1954 Brownell memorandum, although he said microphones were used "on a restricted basis" and cited as examples only "Soviet intelligence agents and Communist Party leaders." 231

In fact, the FBI had already used microphone surveillance for broader coverage than Communists or spies. Indeed, it had "bugged" a hotel room occupied by a Congressman in February 1961. There is no evidence that Attorney General Kennedy or Deputy Attorney General White were specifically informed of this surveillance. But the Attorney General received information which came from the "bug" and authorized a wiretap of the Congressman's secretary. 233

Furthermore, FBI records disclose that the FBI conducted warrantless microphone surveillances in 1960-1963 directed at a "black separatist group," "black separatist group functionaries" and a "(white) racist organization." 234 There may have been others for purely domestic intelligence purposes. 235

The FBI maintained no "central file or index" to record all microphone surveillances in this period, and FBI records did not distinguish "bugs" involving trespass. 236

(2) *"Black Bag Jobs."* -- There is no indication that any Attorney General was informed of FBI "black bag" jobs, and a "Do Not File" procedure was designed to preclude outside discovery of the FBI's use of the technique.

No permanent records were kept for approvals of "black bag jobs," or surreptitious entries conducted for purposes other than installing a "bug". The FBI has described the procedure for authorization of surreptitious entries as requiring the approval of Director Hoover or his Assistant Clyde Tolson. The authorizing memorandum was filed in the Director's office under a "Do Not File" procedure, and thereafter destroyed. In the field office, the Special Agent in Charge maintained a record of approval in his office safe. At the next yearly field office inspection, an Inspector would review these records to ensure that the SAC had secured FBI headquarters approval in conducting surreptitious entries. Upon completion of the review, these records were destroyed. 237

The only internal FBI memorandum found discussing the policy for surreptitious entries confirms that this was the procedure and states that "we do not obtain authorization from outside the Bureau" because the technique was "clearly illegal." The memorandum indicates that "black bag jobs" were used not only "in the espionage field" but also against "subversive elements" not directly connected to espionage activity. It added that the techniques resulted "on numerous occasions" in obtaining the "highly secret and closely guarded" membership and mailing lists of "subversive" groups. 238

(3) *Mail Opening.* -- The FBI did not seek outside authorization when it reinstituted mail opening programs in the fifties and early sixties. Eight programs were conducted for foreign intelligence and counterespionage purposes, and Bureau officials who supervised these programs have testified that legal considerations were simply not raised at the time. 239

Beyond their original purpose, the FBI mail opening programs produced some information of an essentially domestic nature. For example, during this period one program supplied "considerable data" about American citizens who expressed pro-Communist sympathies or made "anti-U.S. statements." 240 Some of the mail-opening by-product regarding Americans was disseminated to other agencies for law enforcement purposes, with the source disguised. 241

### *c. Use of FBI Wiretaps*

The authorization for wiretapping issued by President Truman in 1946 allowed the Attorney General to approve wiretaps in the investigation of "subversive activity" to protect the "domestic security." 242

A wiretap on an official of the Nation of Islam, originally authorized by Attorney General Herbert Brownell in 1957, continued thereafter without re-authorization until 1965. 243 Attorney General Robert Kennedy approved FBI requests for wiretaps on an Alabama Klan leader in 1963 244 and on black separatist group leader Malcolm X in 1964. 245 Kennedy also authorized wiretap coverage requested by the Warren Commission in 1964. 246 Kennedy's approval of FBI requests for wiretaps on Dr. Martin Luther King and several of his associates are discussed in greater detail elsewhere in the Committee's report. 247

In addition, Attorney General Kennedy approved wiretaps on four American citizens during investigations of "classified information leaks." The taps failed to discover the sources of the alleged "leaks" and involved procedural irregularities. In 1961 Attorney General Kennedy told Director Hoover that the President wanted the FBI to determine who was responsible for an apparent "leak" to Newsweek reporter Lloyd Norman, author of an article about American military plans in Germany. 248 But the Attorney General was not asked to approve a wiretap on Norman's residence until after it was installed.

According to contemporaneous Bureau memoranda, wiretaps in 1962 on the residence of New York Times reporter Hanson Baldwin and his secretary to determine the source of an article about Soviet missile sites were also instituted without prior written approval of the Attorney General; and one of them - the tap on the secretary - was instituted without the Attorney General's prior knowledge. 249 Kennedy's written approval was obtained, however, three days after the Baldwin tap was installed and four days after the tap on the secretary was installed. 250

The pattern, including *ex post facto* approval, was repeated for wiretaps of a former FBI agent who disclosed "confidential" Bureau information in a public forum. The first tap lasted for eight days in 1962, and it was reinstituted in 1963 for an undetermined period. 251 Attorney General Kennedy was advised that the FBI desired to place the initial coverage; but he was not informed that it had been effected the day before, and he did not grant written approval until the day it was terminated. 252 It appears that only oral authorization was obtained for reinstituting the tap in 1963. 253

In February 1961, Attorney General Kennedy requested the FBI to initiate an investigation for the purpose of developing:

intelligence data which would provide President Kennedy a picture of what was behind pressures exerted on behalf of [a foreign country] regarding sugar quota deliberations in Congress . . . in connection with pending sugar legislation. 254

This investigation lasted approximately nine weeks, and was reinstituted for a three-month period in mid-1962.

According to an FBI memorandum, the Attorney General authorized the wiretaps in 1961 on the theory that "the administration has to act if money or gifts are being passed by the [representatives of a foreign country]." 255 Specifically, he approved wiretaps on several American citizens: three officials of the Agriculture Department (residences only) ; 256 the clerk of the House Committee on Agriculture who was also secretary to the chairman (residence only) ; 257 and a registered agent of the foreign country (both residence and business telephones). 258 After passage of the Administration's own sugar bill in April 1961, these wiretaps were discontinued. 259

The investigation was reinstituted in June 1962, when the Bureau learned that representatives of the same foreign country again might be influencing congressional deliberations concerning an amendment to the sugar quota legislation. 260 Attorney General Kennedy approved wiretaps on the office telephone of an attorney believed to be an agent of the foreign country and, again, on the residence telephone of the Clerk of the House, Agriculture Committee. 261 The latter tap continued for one month, but the former apparently lasted for three months. 262

These wiretaps in 1961 and 1962 were arguably related to "foreign intelligence" -- but not to "subversive activity" unless that term is interpreted beyond its conventional meaning. 263 More important, they generated information which was potentially useful to the Kennedy administration for purely political purposes relating to the legislative process. 264

The wiretap authorized by Attorney General Kennedy on another high executive official in this period did not relate to political considerations, but to concern about possible disclosure of classified information to a foreign government. 265 There

is no indication that the wiretap authorized by Attorney General Katzenbach in 1965 on the editor of an anti-communist newsletter was related in any way to the book he had written in 1964 alleging personal impropriety by Attorney General Kennedy. 266

#### *6. Domestic Covert Action*

In its COINTELPRO operation, the FBI went beyond excessive information-gathering and dissemination to the use of secret tactics designed to "disrupt" and "neutralize" domestic intelligence targets. At the outset, the target was the Communist Party, U.S.A. But, consistent with the pattern revealed in other domestic intelligence activities, the program widened to other targets, increasingly concentrating on domestic dissenters. The expansion of COINTELPRO began in the Cold War period and accelerated in the latter part of the 1960s.

##### *a. COINTELPRO: Communist Party*

The COINTELPRO program, authorized by Director Hoover against the Communist Party in 1956, had its roots in two lines of Bureau policy going back to the 1940s. The first was the accepted FBI practice of attempting to disrupt "subversive" organizations. A former head of the FBI Intelligence Division has testified:

We were engaged in COINTELPRO tactics, to divide, confuse, weaken, in diverse ways, an organization. We were engaged in that when I entered the Bureau in 1941. 267

The memorandum recommending the institution of COINTELPRO stated that the Bureau was already seeking to "foster factionalism" and "cause confusion" within the Communist Party. 268

The second line of pre-existing Bureau policy involved propaganda to discredit the Communist Party publicly. For example, in 1946, an earlier head of the FBI Intelligence Division proposed that efforts be made to release "educational material" through "available channels" to influence "public opinion." The "educational" purpose was to undermine Communist support among "labor unions," "persons prominent in religious circles," and "the Liberal elements," and to show "the basically Russian nature of the Communist Party in this country." 269 By 1956, a propaganda effort was underway to bring the Party and its leaders "into disrepute before the American public." 270

The evidence indicates that the FBI did not believe that the Communist Party, when the COINTELPRO program was formalized in 1956, constituted as serious a threat in terms of actual espionage as it had in the 1940s. 271 Nevertheless, the FBI systematized its covert action program against the Communist Party in part because the surfacing of informants in legal proceedings had somewhat limited the Bureau's coverage of Party activities, and also to take advantage of internal conflicts within the Party. 272 Covert "disruption" was also designed to make sure that the Party would not reorganize under a new label and thus would remain an easier target for prosecution. 273

In the years after 1956, the purpose of the Communist Party COINTELPRO changed somewhat. Supreme Court decisions substantially curbed criminal prosecution of Communists. 274 Subsequently, the FBI "rationale" for COINTELPRO was that it had become "impossible to prosecute Communist Party members" and some alternative was needed "to contain the threat." 275

##### *b. Early Expansion of COINTELPRO*

From 1956 until 1960, the COINTELPRO program was primarily aimed at the Communist Party organization. But, in March 1960, participating FBI field offices were directed to make efforts to prevent Communist "infiltration" of "legitimate mass organizations, such as Parent-Teacher Associations, civil organizations, and racial and religious groups." The initial technique was to notify a leader of the organization, often by "anonymous communications," about the alleged Communist in its midst. 276 In some cases, both the Communist *and* the "infiltrated" organization were targeted.

This marked the beginning of the progression from targeting Communist Party members, to those allegedly under Communist "influence," to persons taking positions supported by the Communists. For example, in 1964 targets under the Communist Party COINTELPRO label included a group with some Communist participants urging increased employment of minorities and a non-Communist group in opposition to the House Committee on Un-American Activities. 278

In 1961, a COINTELPRO operation was initiated against the Socialist Workers Party. The originating memorandum said it was not a "crash" program; and it was never given high priority. 279 The SWP's support for "such causes as Castro's Cuba and integration problems arising in the South" were noted as factors in the FBI's decision to target the organization. The Bureau also relied upon its assessment that the SWP was "not just another socialist group but follows the revolutionary principles of Marx, Lenin, and Engels as interpreted by Leon Trotsky" and that it was "in frequent contact with international Trotskyite groups stopping short of open and direct contact with these groups. 280 The SWP had been designated as "subversive" on the "Attorney General's list" since the 1940s. 281

## **D. INTELLIGENCE AND DOMESTIC DISSENT: 1964-1976**

### *1. Main Developments of the 1964-1976 Period*

Beginning in the mid-sixties, the United States experienced a period of domestic unrest and protest unparalleled in this century. Violence erupted in the poverty-stricken urban ghettos, and opposition to American intervention in Vietnam produced massive demonstrations.

A small minority deliberately used violence as a method for achieving political goals -- ranging from the brutal murder and intimidation of black Americans in parts of the South to the terrorist bombing of office buildings and government-supported university facilities. But three Presidential commissions found that the larger outbreaks of violence in the ghettos and on the campuses were most often spontaneous reactions to events in a climate of social tension and upheaval. 282

During this period, thousands of young Americans and members of racial minorities came to believe in civil disobedience as a vehicle for protest and dissent.

The government could have set an example for the nation's citizens and prevented spiraling lawlessness by respecting the law as it took steps, to predict or prevent violence. But agencies of the United States, sometimes abetted by public opinion and government officials, all too often disregarded the Constitutional rights of American in their conduct of domestic intelligence operations.

The most significant developments in domestic intelligence activity during this period may be summarized as follows:

#### *a. Scope of Domestic Intelligence*

FBI intelligence reports on protest activity and domestic dissent accumulated massive information on lawful activity and law-abiding citizens for vaguely defined "pure intelligence" and "preventive intelligence" purposes related only remotely or not at all to law enforcement or the prevention of violence. The FBI exaggerated the extent of domestic Communist influence, and COMINFIL investigations improperly included groups with no significant connections to Communists.

The FBI expanded its use of informers for gathering intelligence about domestic political groups, sometimes upon the urging of the Attorney General. No significant limits were placed on the kind of political or personal information collected by informers, recorded in FBI files, and often disseminated outside the Bureau.

Army intelligence developed programs for the massive collection of information about, and surveillance of, civilian political activity in the United States and sometimes abroad.

In contrast to previous policies for centralizing domestic intelligence investigations, the Federal Government encouraged local police to establish intelligence programs both for their own use and to feed into the Federal intelligence-gathering process. This greatly expanded the domestic intelligence apparatus, making it harder to control.

The Justice Department established a unit for storing and evaluating intelligence about civil disorders which was designed to use non-intelligence agencies as regular sources of information, which, in fact, drew on military intelligence as well as the FBI, and which transmitted its computer list of citizens to the CIA and the IRS.

*b. Domestic Intelligence Authority* Intelligence gathering related to protest activity was generally increased in response to vague requests by Attorneys General or other officials outside the intelligence agencies; such increases were sometimes ratified retroactively by such officials.

The FBI's exclusive control over civilian domestic intelligence at the Federal level was consolidated by formal agreements with the Secret Service regarding protective intelligence and with the Bureau of Alcohol, Tobacco, and Firearms regarding terrorist bombings.

#### *c. Domestic Covert Action*

The FBI developed new covert programs for disrupting and discrediting domestic political groups, using the techniques originally applied to Communists. The most intensive domestic intelligence investigations, and frequently COINTELPRO operations, were targeted against persons identified not as criminals or criminal suspects, but as "rabble rousers," "agitators," "key activists," or "key black extremists" because of their militant rhetoric and group leadership. The Security Index was revised to include such persons.

Without imposing adequate safeguards against misuse, the Internal Revenue Service passed tax information to the FBI and CIA, in some cases in violation of tax regulations. At the urging of the White House and a Congressional Committee, the IRS established a program for investigating politically active groups and individuals, which included auditing their tax returns.

#### *d. Foreign Intelligence and Domestic Dissent*

A 1966 agreement concerning "coordination" between the CIA and the FBI permitted CIA involvement in internal security functions. Under pressure from the Johnson and Nixon White Houses to determine whether there was "foreign influence" behind anti-war protests and black militant activity, the CIA began collecting intelligence about domestic political groups.

The CIA also conducted operations within the United States under overly broad interpretations of responsibility to protect the physical security of its facilities and to protect intelligence "sources" and "methods." These operations included surreptitious

entry, recruitment of informers in domestic political groups, and at least one instance of warrantless wiretapping approved by the Attorney General.

In the same period, the National Security Agency monitored international communications of Americans involved in domestic dissent despite the fact that its mission was supposed to be restricted to collecting foreign intelligence and monitoring only foreign communications.

#### *e. Intrusive Techniques*

As domestic intelligence operations broadened and focused upon dissenters, the Government increased the use of many of its most intrusive surveillance techniques. During the period from 1964 to 1972, the standards and procedures for warrantless electronic surveillance were tightened, but actual practice was sometimes at odds with the articulated policy. Also during these years, CIA mail opening expanded at the Bureau's request, and NSA monitoring expanded to target domestic dissenters. However, the FBI cut back use of certain techniques under the pressure of Congressional probes and changing public opinion.

#### *f. Accountability and Control*

During this period several sustained domestic intelligence efforts illustrated deficiencies in the system for controlling intelligence agencies and holding them accountable for their actions.

In 1970, presidential approval was temporarily granted for a plan for interagency coordination of domestic intelligence activities which included several illegal programs. Although the approval was subsequently revoked, some of the programs were implemented separately by various agencies.

Throughout the administrations of Presidents Johnson and Nixon, the investigative process was misused as a means of acquiring political intelligence for the White House. At the same time, the Justice Department's Internal Security Division, which should have been a check against the excesses of domestic intelligence, generally failed to restrain such activities. For example, as late as 1971-1973, the FBI continued to evade the will of Congress, partly with Justice Department approval, by maintaining a secret "Administrative Index" of suspects for round-up in case of national emergency.

#### *g. Reconsideration of FBI Authority*

Partly in reaction to congressional inquiries, the FBI in the early 1970s began to reconsider the extent of its authority to conduct domestic intelligence activities and requested clarification from the Attorney General and an executive mandate for intelligence investigations of "terrorists" and "revolutionaries".

In the absence of any new standards imposed by statute, or by the Attorney General, the FBI continued to collect domestic intelligence under sweeping authorizations issued by the Justice Department in 1974 for investigations of "subversives," potential civil disturbances, and "potential crimes". These authorizations were explicitly based on broad theories of inherent executive power. Attorney General Edward H. Levi recently promulgated guidelines which represent the first significant attempt by the Justice Department to set standards and limits for FBI domestic intelligence investigations.

### *2. Scope of Domestic Intelligence*

During this period the FBI continued the same broad investigations of the lawful activities of Americans that were based on the Bureau's vague mandate to collect intelligence about "subversion."

In addition, the Bureau -- joined by CIA, NSA, and military intelligence agencies -- took on new and equally broad assignments to investigate "racial matters," the "New Left," "student agitation," and alleged "foreign influence" on the antiwar movement.

#### *a. Domestic Protest and Dissent: FBI*

"We are an intelligence agency," stated a policy directive to all FBI offices in 1966, "and as such are expected to know what is going on or is likely to happen." 283 Written in the context of demonstrations over the Vietnam war and civil rights, this order illustrates the general attitude among Bureau officials and high administration officials who established intelligence policy: in a country in ferment, the FBI could, and should, know everything that might someday be useful in some undefined manner.

(1) Racial Intelligence. -- During the 1960s, the FBI, partly on its own and partly in response to outside requests, developed sweeping programs for collecting domestic intelligence concerning racial matters. These programs had roots in the late 1950s. 284 By the early 1960s, they had grown to the point that the Bureau was gathering intelligence about proposed "civil demonstrations" and the related activities of "officials, committees, legislatures, organizations, etc.," in the "racial field." 285

In 1965, FBI field offices were directed to supply "complete," information (including "postponement or cancellation") :

regarding planned racial activity, such as demonstrations, rallies, marches, or threatened opposition to activity of this kind.

Field offices reported their full "coverage" of "meetings" and "any other pertinent information concerning racial activities." 286

In late 1966, field offices were instructed to begin preparing semi monthly summaries of "existing racial conditions in major urban areas," relying upon "established sources," and "racial," "criminal," and security informants." These reports were to describe the "general programs" of all "civil rights organizations" and "black nationalist organizations" as well as subversive or "hate-type" groups. The information to be gathered was to include: "readily available personal background data" on "leaders and individuals in the civil rights movement" and other "leaders and individuals involved," as well as any data in Bureau files on "subversive associations" they might have; the "objectives sought by the minority community," the community reaction to "minority demands;" and "the number, character, and intensity of the techniques used by the minority community, such as picketing or sit-in demonstrations, to enforce their demands." 287

Thus, the FBI was mobilized to use all its available resources to discover everything it could about "general racial conditions." While the stated objective was to arrive at an "evaluation" of potential for violence, the broad sweep of the directives issued to the field resulted in the collection and filing of vast amounts of information unrelated to violence.

Some programs concerning "general racial matters" were directed to concentrate on groups with a "propensity for violence and civil disorder." 288 But even these programs were so overbroad in their application as to include Dr. Martin Luther King, Jr. and his non-violent Southern Christian Leadership Conference in the "radical and violence-prone" "hate group" category. The stated justification, unsupported by any facts, was that Dr. King might "abandon his supposed 'obedience' to 'white, liberal doctrines' (nonviolence) and embrace black nationalism." 289

Another leading civil rights group, the Congress of Racial Equality (CORE), was investigated under the "Racial Matters" Program because the Bureau concluded that it was moving "away from a legitimate civil rights organization" and "assuming a militant black nationalist posture." The FBI reached this conclusion on the grounds that "some leaders in their public statements" had condoned "violence as a means of attaining Negro rights." The investigation was intensified, even though it was recognized there was no information that its members "advocate violence" or "participate in actual violence." 290

The same overbreadth characterized the FBI's collection of intelligence about "white militant groups." Among the groups investigated were those "known to sponsor demonstrations against integration and against the busing of Negro students to white schools." As soon as a new organization of this sort was formed, the Bureau used its informants and "established sources" to determine "the aims and purposes of the organization, its leaders, approximate membership," and other "background data" bearing upon "the militancy" of the group. 290a

(2) "New Left" Intelligence. -- The FBI collected intelligence under its VIDEM (Vietnam Demonstration) and STAG (Student Agitation) Programs on "anti-Government demonstrations and protest rallies" which the Bureau considered "disruptive." Field offices were warned against "incomplete and nonspecific reporting" which neglected such details as "number of protesters present, identities of organizations, and identities of speakers and leading activists." 291

The FBI attempted to define the "New Left," but with little success. The Bureau agent who was in charge of New Left intelligence conceded that:

It has never been strictly defined, as far as I know.... It's more or less an attitude, I would think.

He also stated that the definition was expanded continually. 292

Field offices were told that the New Left was a "subversive force" dedicated to destroying our "traditional values." Although it had "no definable ideology," it was seen as having "strong Marxist, existentialist, nihilist and anarchist overtones." Field offices were instructed that "proper areas of inquiry" regarding the subjects of "New Left" investigations were "public statements, the writings and the leadership activities" which might establish their "rejection of law and order" and thus their "potential" threat to security. Such persons would also be placed on the Security Index (for detention in a time of emergency) because of these "anarchistic tendencies," even if the Bureau could not prove "membership in a subversive organization." 293

A Bureau memorandum which recommended the use of disruptive techniques against the "New Left" paid particular attention to one of its "anarchistic tendencies":

the New Left has on many occasions viciously and scurrilously attacked the Director and the Bureau in an attempt to hamper our investigations and drive us off the college campuses. 294

Later instructions to the field stated that the term "New Left" did not refer to "a definite organization," but to a "loosely bound, freewheeling, college-oriented movement" and to the "more extreme and militant anti-Vietnam war and antidraft protest organizations." These instructions directed a "comprehensive study of the whole movement" for the purpose of assessing its "dangerousness." Quarterly reports were to be prepared, and "subfiles" opened, under the following headings:

Organizations ("when organized, objectives, locality which active, whether part of a national organization")  
Membership (and "sympathizers" -- use "best available informants and sources")  
Finances (including identity of "angels" and funds from "foreign sources")  
Communist Influence  
Publications ("describe publications, show circulation and principal members of editorial staff")  
Violence  
Religion ("support of movement by religious groups or individuals")

- Race Relations
- Political Activities ("details relating to position taken on political matters including efforts to influence public opinion, the electorate and Government bodies")
- Ideology
- Education ("courses given together with any educational outlines and assigned or suggested reading")
- Reform ("demonstrations aimed at social reform")
- Labor ("all activity in the labor field")
- Public Appearances of Leaders ("on radio and television" and "before groups, such as labor, church and minority groups," including "summary of subject matter discussed")
- Factionalism
- Security Measures
- International Relations ("travel in foreign countries," "attacks on United States foreign policy")
- Mass Media ("indications of support of New Left by mass media")

Through these massive reports, the FBI hoped to discover "the true nature of the New Left movement." 295 Few Bureau programs better reflect "pure intelligence" objectives which extended far beyond even the most generous definition of "preventive intelligence." 296

Apart from the massive general reports required on the "New Left," examples of particular investigations included: a stockholders group planning to protest their corporation's war production at the annual stockholders meeting; 297 a university professor who was "an active participant in New Left demonstrations," publicly surrendered his draft card, and had been arrested in antiwar demonstrations, but not convicted ; 298 and two university instructors who helped support a student "underground" newspaper whose editorial policy was described as "left-of-center, anti- establishment, and opposed [to] the University administration." 299

The FBI also investigated emerging "New Left" groups, such as "Free Universities" attached to various college campuses, to determine whether they were connected "in any way" with "subversive groups." For example, when an article appeared in a newspaper stating that one "Free University" was being formed and that it was "anti- institutional," the FBI sought to determine its "origin," the persons responsible for its "formation," and whether they had "subversive backgrounds." 300 The resulting report described in detail the formation, curriculum content, and associates of the group. It was disseminated to military intelligence and Secret Service field offices and headquarters in Washington as well as to the State Department and the Justice Department. 301

#### *b. FBI Informants*

The FBI Manual has never significantly limited informant reporting about the lawful political activities or personal lives of American citizens, except for prohibiting reports about legal defense "plans or strategy," "employer-employee relationships" connected with labor unions, and "legitimate campus activities." 302 In practice, FBI agents imposed no other limitations on the informants they handled and, on occasion, disregarded the prohibitions of the Manual. 303

(1) Infiltration of the Klan. -- In mid-1964, Justice Department officials became increasingly concerned about the spread of Ku Klux Klan activity and violence in the Deep South. Attorney General Kennedy advised President Johnson that, because of the "unique difficulty" presented by a situation where "lawless activities" had the "sanction of local law enforcement agencies," the FBI should apply to the Klan the same "techniques" used previously "in the infiltration of Communist groups." 304

Former Attorney General Katzenbach, under whose tenure FBI activities against the Klan expanded, vigorously defended this decision as necessary to "deter violence" by sowing "deep mistrust among Klan members" and making them aware that they were "under constant observation." 305 The FBI Manual did, in fact, advise Bureau agents against "wholesale investigations" of persons who "merely attend meetings on a regular basis. " 306 But FBI intelligence officials chafed under this restriction and sought expanded informant coverage. 307 Subsequently, the Manual was revised in 1967 to require the field to furnish the "details" of Klan "rallies" and "demonstrations." 308 By 1971, the Special Agents in Charge of field offices had the discretion to investigate not only persons with "a potential for violence," but also anyone else who in the SAC's "judgment" was an "extremist." 309

(2) "Listening Posts" in the Black Community. -- Two special informant programs illustrate the breadth of the Bureau's infiltration of the black community. In 1970, the FBI used its "established informants" to determine the "background, aims and purposes, leaders and Key Activists" in every black student group in the country, "regardless of [the group's] past or present involvement in disorders." 310 Field offices were instructed to "target informants" against these groups and to "develop such coverage" where informants were not already available." 311

In response to Attorney General Clark's instructions regarding civil disorders intelligence in 1967, the Bureau launched a "ghetto informant program" which lasted until 1973. 312 The number of ghetto informants expanded rapidly: 4,067 in 1969 and 7,402 by 1972. 313 The original concept was to establish a "listening post" 314 by recruiting a person "who lives or works in a ghetto area" to provide information regarding the "racial situation" and "racial activities." 315 Such information could include "the proprietor of a candy store or barber shop." As the program developed, however, ghetto informants were:

utilized to attend public meetings held by extremists, to identify extremists passing through or locating in the ghetto area, to identify purveyors of extremist literature as well as given specific assignments where appropriate. 316

Material to be furnished by ghetto informants included names of "Afro-American type book stores" and their "owners, operators and clientele." 317

(3) Infiltration of the "New Left". -- The FBI used its "security" informant program to report extensively on all activities relating to opposition to the Vietnam war. Moreover, informants already in groups considered "subversive" by the FBI also reported on the activities of other organizations and their members, if the latter were being "infiltrated" by the former groups. 318

The agent who handled one informant in an antiwar group believed to be infiltrated by "subversive groups and/or violent elements" testified that the informant told him "everything she knew" about the chapter she joined. 319 Summaries of her reports indicate that she reported extensively about personal matters and lawful political activity. 320 This informant estimated that her reports identified as many as 1,000 people to the FBI over an 18-month period. The vast majority of these persons were members of peaceful and law-abiding groups, including the United Church for Christ, which were engaged in joint social welfare projects with the antiwar group which the informant had infiltrated. 321

Other FBI informants reported, for example, on the Women's Liberation Movement, identifying its members at several mid-western universities 322 and reporting statements made by women concerning their personal reasons for participating in the women's movement. 323

Moreover, as in the case of informants in the black community, efforts were made to greatly increase the number of informants who could report on antiwar and related groups. In 1969, the Justice Department specifically asked the FBI to use not only "existing sources," but also "any other sources you may be able to develop" to collect information about "serious campus disorders." 324 The Bureau ordered its field offices in 1970 to "make every effort" to obtain "informant coverage" of every "New Left commune." 325 Later that year, after Director Hoover lifted restrictions against recruiting 18 to 21-year-old informants, field offices were urged to take advantage of this "tremendous opportunity" to expand coverage of New Left "collectives, communes, and staffs of their underground newspapers." 326

#### *c. Army Surveillance of Civilian Political Activity*

In the early 1960s, after several commitments of troops to control racial disturbances and enforce court orders in the South, Army intelligence began collecting information on civilian political activity in all areas where it believed civil disorders might occur. The growth of the Army's domestic intelligence program typifies, once again, the general tendency of information-gathering operations to continually broaden their coverage.

Shortly after the Army was called upon to quell civil disorders in Detroit and to cope with an antiwar demonstration at the Pentagon in 1967, the Army Chief of Staff approved a recommendation for "continuous counterintelligence investigations" to obtain information on "subversive personalities, groups or organizations" and their "influence on urban populations" in promoting civil disturbances. 327 The Army's "collection plan" for civil disturbances specifically targeted as "dissident elements" (without further definition) the "civil rights movement" and the "anti-Vietnam/anti-draft movements." 328 As revised later, Army intelligence-gathering extended beyond "subversion" and "dissident groups" to "prominent persons" who were "friendly" with the "leaders of the disturbance" or "sympathetic with their plans." 329

#### *d. Federal Encouragement of Local Police Intelligence*

In reaction to civil disorders in 1965-1966, Attorney General Katzenbach turned for advice to the newly created President's Commission on Law Enforcement and Administration of Justice. After holding a conference with police and National Guard officials, the President's Commission urged police not to react with too much force to disorder "in the course of demonstrations," but to make advance plans for "a true riot situation." This meant that police should establish "procedures for the acquisition and channeling of intelligence" for the use of "those who need it." 330 Former Assistant Attorney General Vinson recalled the Justice Department's concern that local police did not have "any useful intelligence or knowledge about ghettos, about black communities in the big cities." 331

During the winter of 1967-1968, the Justice Department and the National Advisory Commission on Civil Disorders reiterated the message that local police should establish "intelligence units" to gather and disseminate information on "potential" civil disorders. These units would use "undercover police personnel and informants" and draw on "community leaders, agencies, and organizations in the ghetto." 332 The Commission also urged that these local units be linked to "a national center and clearinghouse" in the Justice Department. 333 One consequence of these recommendations was that the FBI, because of regular liaison with local police, became a channel and repository for much of this intelligence data.

Local police intelligence provided a convenient manner for the FBI to acquire information it wanted while avoiding criticism for using covert techniques such as developing campus informants. For example, in 1969, Director Hoover decided "that additional student informants cannot be developed" by the Bureau. 334 Field offices were instructed, however, that one way to continue obtaining intelligence on "situations having a potential for violence" was to develop "in-depth liaison with local law enforcement agencies." 335 Instead of recruiting student informants itself, the FBI would rely on local police to do so.

These Federal policies contributed to the proliferation of local police intelligence activities, often without adequate controls. One result was that still more persons were subjected to investigation who neither engaged in unlawful activity, nor belonged to groups which might be violent. For example, a recent state grand jury report on the Chicago Police Department's "Security Section" described its "close working relationship" with Federal intelligence agencies, including Army intelligence and the FBI. The report found that the police intelligence system produced "inherently inaccurate, and distortive data" which contaminated Federal intelligence. One police officer testified that he listed "any person" who attended two "public meetings" of a group as a "member." This conclusion was forwarded "as a fact" to the FBI. Subsequently, an agency seeking "background information" on that person from the Bureau in an employment investigation or for other purposes would be told that the individual was "a member." The grand jury stated:

Since federal agencies accepted data from the Security Section without questioning the procedures followed, or methods used to gain information, the federal government cannot escape responsibility for the harm done to untold numbers of innocent persons. 336

*e. The Justice Department's Interdivision Information Unit (IDIU)*

Joseph Califano, President Johnson's assistant in 1967, testified that the Newark and Detroit riots were a "shattering experience" for Justice Department officials and "for us in the White House." They were concerned about the "lack of intelligence" about "black groups." Consequently, "there was a desire to have the Justice Department have better intelligence, for lack of a better term, about dissident groups." This desire "precipitated the intelligence unit" established by Attorney General Ramsey Clark in late 1967. According to Califano, the President and the White House staff were insisting: "There must be a way to predict violence. We've got to know more about this." 337

In September 1967 Attorney General Clark asked Assistant Attorney General John Doar to review the Department's "facilities" for civil disorders intelligence. 338 Doar recommended creating a Departmental "intelligence unit" to analyze FBI information about "certain persons and groups" (without further definition) in the urban ghettos. He proposed that its "scope be very broad initially" so as to "measure the influence of particular groups." Doar recommended that, in addition to the FBI, agencies who should "funnel information" to the unit should include:

- Community Relations Service
- Poverty Programs
- Neighborhood Legal Services
- Program Labor Department Programs
- Intelligence Unit of the Internal Revenue Service
- Alcohol, Tobacco, and Firearms Division of the Treasury Department
- Narcotics Bureau (then in the Treasury Department)
- Post Office Department

Doar recognized that the Justice Department's Community Relations Service, designed to conciliate racial conflicts, risked losing its "credibility" and thereby its ability to help prevent riots, but he assured the Attorney General that the "confidentiality" of its information could be protected. 339

A later study for Attorney General Clark -added the following agencies to Doar's list:

- President's Commission on Civil Disorders
- New Jersey Blue Ribbon Commission (and similar state-agencies)
- State Department Army Intelligence Office of Economic Opportunity
- Department of Housing and Urban Development (surveys and Model City applications)
- Central Intelligence Agency
- National Security Agency

This study recommended that FBI reports relating "to the civil disturbance problem" under the headings "black power, new left, pacifist, pro-Red Chinese, anti-Vietnam war, pro-Castro, etc." be used to develop "a master index on individuals, or organizations, and by cities." 340

Attorney General Clark approved these recommendations and established the Interdivision Information Unit (IDIU) for:

- reviewing and reducing to quickly retrievable form all information that may come to this Department relating to organizations and individuals who may play a role, whether purposefully or not, either in instigating or spreading civil disorders, or in preventing or checking them. 341

In early instructions, Clark had stated that the Department must "endeavor to increase" such intelligence from "external sources." 342

In fact, according to its first head, the IDIU did use intelligence from the Army, the Internal Revenue Service, and "other investigative agencies." Sometimes IDIU information was used to "determine whether or not" the Community Relations Service should "mediate" a dispute. 343 The Unit developed a computer system which could generate lists of all "members or affiliates" of an organization, their location and travel, "all incidents" relating to "specific issues", and "all information" on a "planned specific demonstration." 344

By 1970, the IDIU computer was receiving over 42,000 "intelligence reports" a year relating to "civil disorders and campus disturbances" from:

- the FBI, the U.S. Attorneys, Bureau of Narcotics, Alcohol, Tobacco, and Firearms Division of the Treasury Department and other intelligence gathering bodies within the Executive Branch. 345

IDIU computer tapes, which included 10-12,000 entries on "numerous anti-war activists and other dissidents," were provided to the Central Intelligence Agency in 1970 by Assistant Attorney General Jerris Leonard, then the Attorney General's Chief of Staff for Civil Disturbance and head of the Civil Rights Division. 346 This list of persons was sent to the Internal Revenue Service where the Special Services staff opened intelligence files on all persons and organizations listed. Many of them were later investigated or audited, in some cases merely because they were on the list.

In 1971, the IDIU computer included data on such prominent persons as Rev. Ralph Abernathy, Caesar Chavez, Bosley Crowther (former New York Times film critic), Sammy Davis, Jr., Charles Evers, James Farmer, Seymour Hersh, and Coretta King. Organizations on which information had been collected included the NAACP, the Congress of Racial Equality, the Institute for Policy Studies, VISTA, United Farm Workers of California, and the Urban League. Ordinary private citizens who were not nationally prominent were also included. One was described as "a local civil rights worker," another as a "student at Merritt College and a member of the Peace and Freedom Party as of mid-68," and another as "a bearded militant who writes and recites poetry." 347

Thus, beginning in 1967-1968, the IDIU was the focal point of a massive domestic intelligence apparatus established in response to ghetto riots, militant black rhetoric, antiwar protest, and campus disruptions. Through IDIU, the Attorney General received the benefits of information gathered by numerous agencies, without setting limits to intelligence reporting or providing clear policy guidance. Each component of the structure FBI, Army, IDIU, local police, and many others -- set its own generalized standards and priorities, resulting in excessive collection of information about law abiding citizens.

#### *f. COMINFIL Investigations: Overbreadth*

In the late 1960's the Communist infiltration or association concept continued to be used as a central basis for FBI intelligence investigations. In many cases it led to the collection of information on the same groups and persons who were swept into the investigative net by the vague missions to investigate such subjects as "racial matters" or the "New Left." As it had from its beginning, the COMINFIL concept produced investigations of individuals and groups who were not Communists. Dr. Martin Luther King, Jr. is the best known example. 348 But the lawful activities of many other persons were recorded in FBI files and reports, because they associated in some wholly innocent way with Communists, a term which the Bureau required its agents to "interpret in its broad sense" to include "splinter" and "offshoot" groups. 349

During this period, when millions of Americans demonstrated in favor of civil rights and against the Vietnam war, many law-abiding citizens and groups came under the scrutiny of intelligence agencies. Under the COMINFIL program, for example, the Bureau compiled extensive reports on moderate groups, like the NAACP. 350

The FBI significantly impaired the democratic decisionmaking process by its distorted intelligence reporting on Communist infiltration of and influence on domestic political activity. In private remarks to Presidents and in public statements, the Bureau seriously exaggerated the extent of Communist influence in both the civil rights and anti- Vietnam war movements. 351

#### *3. Domestic Intelligence Authority*

During this period there were no formal executive directives outlining the scope of authority for domestic intelligence activity of the sort previously issued by Presidents Roosevelt, Truman, Eisenhower, and Kennedy. 352 However, there was a series of high-level requests for intelligence concerning racial and urban unrest directed to the FBI and military intelligence agencies. As with the earlier formal Presidential directives on subjects like "subversion," these instructions provided no significant guidelines or controls.

##### *a. FBI Intelligence*

Since the early 1960s, the Justice Department had been making sporadic requests for intelligence related to specific racial events. For example, the FBI was requested to provide a tape recording of a speech by Governor-elect George Wallace of Alabama in late 1962 353 and for "photographic coverage" of a civil rights demonstration on the 100th anniversary of the Emancipation Proclamation. 354 On its own initiative, the FBI supplied the Civil Rights Division with information from a "confidential source" about plans for a demonstration in Virginia, including background data on its "sponsor" and the intention to make "a test case." 355 The Civil Rights Division prepared regular summaries of information from the Bureau on "demonstrations and other racial matters." 356

A formal directive, for a similar purpose, was sent by Attorney General Kennedy to U.S. Attorneys throughout the South in May 1963. It instructed them to "make a survey" to ascertain "any places where racial demonstrations are expected within the next 30 days" and to make "assessments of situations" in their districts. The FBI was "asked to cooperate." 357

President Johnson ordered the FBI to investigate and report on the origins and extent of the first small-scale Northern ghetto disturbances in the summer of 1964. 358 After the FBI submitted a report on the Watts riot in Los Angeles in 1965, however, Attorney General Katzenbach advised President Johnson that the FBI should investigate "directly" only the possible "subversive involvement." Katzenbach did not believe that the FBI should conduct a "general investigation" of "other aspects of the riot," since these were local law enforcement matters. The President approved this "limited investigation." 359 Nonetheless, internal Bureau instructions in 1965 and 1966 went far beyond this limitation. 360 By 1967 new Attorney General Ramsey Clark reversed the Department's position on such limitations.

After the riots in Newark and Detroit in the summer of 1967, President Johnson announced that the FBI had "standing instructions" for investigating riots "to search for evidence on conspiracy." 361 This announcement accompanied the creation of a National Advisory Commission on Civil Disorders to investigate the "basic factors and causes leading to" the riots, including the "influence" of groups or persons "dedicated to the incitement or encouragement of violence." The President ordered the FBI in particular to "provide investigative information and assistance" to the Commission. 362 Director Hoover also agreed to investigate "allegations of subversive influence, involvement of out-of-state influences, and the like." 363

In September 1967, Attorney General Clark directed the FBI to:

use the maximum resources, investigative and intelligence, to collect and report all facts bearing upon the question as to whether there has been or is a scheme or conspiracy by any group of whatever size, effectiveness or affiliation, to plan, promote or aggravate riot activity. 364

Justice Department executives were generally aware of, and in some cases sought to widen, the scope of FBI intelligence collection. In a lengthy review of Bureau reports, John Doar, Assistant Attorney General for the Civil Rights Division, expressed concern that the FBI had not "taken a broad spectrum approach" to intelligence collection, since it had "focused narrowly" on "traditional subversive groups" and on persons suspected of "specific statutory violations." 365

Reiterating this viewpoint, Attorney General Clark told Director Hoover that "existing intelligence sources" may not have "regularly monitored" possible riot conspirators in "the urban ghetto." He added that it was necessary to conduct a "broad investigation" and that

sources or informants in black nationalist organizations, SNCC (Student Nonviolent Coordinating Committee) and other less publicized groups should be developed and expanded to determine the size and purpose of these groups and their relationship to other groups . . . 366

Clark described his directive as setting forth "a relatively new area of investigation and intelligence reporting for the FBI." 367

In response to the Attorney General's instructions, the FBI advised its field offices of the immediate "need to develop additional penetrative coverage of the militant black nationalist groups and the ghetto areas." 368

#### *b. Army Intelligence*

On January 10, 1968, a meeting took place at the White House for the purpose of "advance planning for summer riots." The White House memorandum of the meeting reported:

The Army has undertaken its own intelligence study, and has rated various cities as to their riot potential. They are making contingency plans for troop movements, landing sites, facilities, etc.

It added that the Attorney General and the Deputy Secretary of Defense "had agreed to coordinate their efforts." 369 The Army General Counsel's memorandum of the meeting stated that Attorney General Clark had "stressed the difficulty of the intelligence effort," especially because there were "only 40 Negro FBI agents" out of the total of about 6,300. Clark added that "every resource" was needed in "the intelligence collection effort," although he asked the Defense Department to "screen" its "incoming intelligence" and send "only key items" to the Justice Department. 370

There is no record that at this or any other similar meeting in this period the Attorney General or White House aides explicitly ordered the Army to conduct intelligence investigations using infiltration or other covert surveillance techniques. However, even though Army collection plans which were circulated to the Justice Department and the FBI 371 did not mention techniques of collection, the information they described could only be obtained by covert surveillance. No objections were voiced by the Justice Department.

Not until 1969 was there a formal civilian decision specifically authorizing Army surveillance of civilian political activity. At that time, Attorney General John Mitchell and Secretary of Defense Melvin Laird considered the matter and over the objections of the Army General Counsel, decided that the Army would participate in intelligence collection concerning civil disturbances. 372 The Army's collection plan was not rescinded until June 1970, after public exposure and congressional criticism. 373

#### *c. FBI Interagency Agreements*

After the assassination of President Kennedy, the FBI and the Secret Service negotiated an agreement which recognized that the Bureau had "general jurisdiction" over "subversion." The term was more narrowly than it had been defined by practice in the past, knowingly or wilfully advocat[ing] overthrow of the Government by "force or violence" or by "assassination." Except for "temporary" action to "neutralize" -a threat to the President, the Secret Service agreed to "conduct no investigation" of "members of subversive WU without notifying the FBI. The Bureau, on the other hand, would not investigate individuals "solely" to determine their "dangerousness to the President." 374

After Congress enacted antibombing legislation in 1970, the FBI was assigned primary responsibility for investigating "offenses perpetrated by terrorist/revolutionary groups." 375 When these guidelines were developed, the FBI shifted supervision of bombing cases from its General Investigative Division to the Intelligence Division because, as one official put it, the specific criminal investigations were "so interrelated with the gathering of intelligence in the racial and security fields that overlap constantly occurs." 376

The agreement with Secret Service and the "guidelines" covering bombing investigations did not give the FBI any additional domestic intelligence-gathering authority. They simply provided for dissemination of information to Secret Service and allocated criminal investigative jurisdiction between the FBI and the Alcohol, Firearms, and Tobacco Division. Nevertheless, both presupposed that the FBI had broad authority to investigate "subversives" or "terrorist/revolutionary groups."

#### *4. Domestic Covert Action*

*a. COINTELPRO*

The FBI's initiation of COINTELPRO operations against the Ku Klux Klan, "Black Nationalists" and the "New Left" brought to bear upon a wide range of domestic groups the techniques previously developed to combat Communists and persons who happened to associate with them.

The start of each program coincided with significant national events. The Klan program followed the widely-publicized disappearance in 1964 of three civil rights workers in Mississippi. The "Black Nationalist" program was authorized in the aftermath of the Newark and Detroit riots in 1967. The "New Left" program developed shortly after student disruption of the Columbia University campus in the spring of 1968. While the initiating memoranda approved by Director Hoover do not refer to these specific events, it is clear that they shaped the context for the Bureau's decisions.

These programs were not directed at obtaining evidence for use in possible criminal prosecutions arising out of those events. Rather, they were secret programs -- "under no circumstances" to be "made known outside the Bureau" 377 -- which used unlawful or improper acts to "disrupt" or "neutralize" the activities of groups and individuals targeted on the basis of imprecise criteria.

(1) Klan and "White Hate" COINTELPRO. -- The expansion of Klan investigations, in response to pressure from President Johnson and Attorney General Kennedy, 378 was accompanied by an internal Bureau decision to shift their supervision from the General Investigative Division to the Domestic Intelligence Division. One internal FBI argument for the transfer was that the Intelligence Division was "in a position to launch a disruptive counterintelligence program" against the Klan with the "same effectiveness" it had against the Communist Party. 379

Accordingly, in September 1964 a directive was sent to seventeen field offices instituting a COINTELPRO against the Klan and what considered to be other "White Hate" organizations (e.g., American Nazi Party, National States Rights Party) "to expose, disrupt, and otherwise neutralize" the activities of the groups, "their leaders, and adherents." 380

During the 1964-1971 period, when the program was in operation, 287 proposals for COINTELPRO actions against Klan and "White Hate" groups were authorized by FBI headquarters. 381 Covert techniques used in this COINTELPRO included creating new Klan chapters to be controlled by Bureau informants and sending an anonymous letter designed to break up a marriage. 382

(2) "Black Nationalist" COINTELPRO. -- The stated strategy of the "Black Nationalist" COINTELPRO instituted in 1967 was "to expose, disrupt, misdirect, discredit, or otherwise neutralize" such groups and their "leadership, spokesmen, members, and supporters." The larger objectives were to "counter" their "propensity for violence" and to "frustrate" their efforts to "consolidate their forces" or to "recruit new or youthful adherents." Field offices were instructed to exploit conflicts within and between groups; to use news media contacts to ridicule and otherwise discredit groups; to prevent "rabble rousers" from spreading their "philosophy" publicly; and to gather information on the "unsavory backgrounds" of group leaders. 383

In March 1968, the program was expanded from twenty-three to forty-one field offices and the following long-range goals were set forth:

- (1) prevent the "coalition of militant black nationalist groups;"
- (2) prevent the rise of a "messiah" who could "unify and electrify" the movement, naming specifically Dr. Martin Luther King, Jr., Stokely Carmichael, and Elijah Muhammed;
- (3) prevent violence by pinpointing "potential troublemakers" and "neutralizing" them before they "exercise their potential for violence;"
- (4) prevent groups and leaders from gaining "respectability by discrediting them to the "responsible" Negro community, the "responsible" white community, "liberals" with "vestiges of sympathy" for militant black nationalists, and "Negro radicals;" and
- (5) "prevent these groups from recruiting young people." 384

After the Black Panther Party emerged as a group of national stature, FBI field offices were instructed to develop "imaginative and hard-hitting counterintelligence measures aimed at crippling the BPP." Particular attention was to be given to aggravating conflicts between the Black Panthers and rival groups in a number of cities where such conflict had already taken on the character of "gang warfare with attendant threats of murder and reprisals." 385

During 1967-1971, FBI headquarters approved 379 proposals for COINTELPRO actions against "black nationalists." 386 These operations utilized dangerous and unsavory techniques which gave rise to the risk of death and often disregarded the personal rights and dignity of the victims.

(3) "New Left" COINTELPRO. -- The most vaguely defined and haphazard of the COINTELPRO operations was that initiated against the "New Left" in May 1968. It was justified to the FBI Director by his subordinates on the basis of the following considerations:

The nation was "undergoing an era of disruption and violence" which was "caused to a large extent" by individuals "generally connected with the New Left."

Some of these, "activists" were urging "revolution" and calling for "the defeat of the United States in Vietnam."

The problem was not just that they committed "unlawful acts," but also that they "falsely" alleged police brutality, and that they "scurrilously attacked the Director and the Bureau" in an attempt to "hamper" FBI investigations and to "drive us off the college campuses." 387

Consequently, the COINTELPRO was intended to "expose, disrupt, and otherwise neutralize" the activities of "this group" and "persons connected with it." 388 The lack of any clear definition of "New Left" meant, as an FBI supervisor testified, that "legitimate" and nonviolent antiwar groups were targeted because they were "lending aid and comfort" to more disruptive groups. 389

Further directives issued soon after initiation of the program urged field offices to "vigorously and enthusiastically" explore "every avenue of possible embarrassment" of New Left adherents. Agents were instructed to gather information on the "immorality" and the "scurrilous and depraved" behavior, "habits, and living conditions" of the members of targeted groups. 390 This message was reiterated several months later, when the offices were taken to task for their failure to remain alert for and seek specific data depicting the "depraved nature and moral looseness of the New Left" and to "use this Material in a vigorous and enthusiastic approach to neutralizing them." 391

In July 1968, the field offices were further prodded by FBI headquarters to:

- (1) prepare leaflets using "the most obnoxious pictures" of New Left leaders at various universities;
- (2) instigate "personal conflicts or animosities" between New Left leaders;
- (3) create the impression that leaders are "informants for the Bureau or other law enforcement agencies" (the "snitch jacket" technique) ;
- (4) send articles from student or "underground" newspapers which show "depravity" ("use of narcotics and free sex") of New Left leaders to university officials, donors, legislators, and parents;
- (5) have members arrested on marijuana charges;
- (6) send anonymous letters about a student's activities to parents, neighbors, and the parents' employers;
- (7) send anonymous letters about New Left faculty members (signed "A Concerned Alumni" or "A Concerned Taxpayer") to university officials, legislators, Board of Regents, and the press;
- (8) use "cooperative press contacts;"
- (9) exploit the "hostility" between New Left and Old Left groups;
- (10) disrupt New Left coffee houses near military bases which are attempting to "influence members of the Armed forces;"
- (11) use cartoons, photographs, and anonymous letters to "ridicule" the New Left;
- (12) use "misinformation" to "confuse and disrupt" New Left activities, such as by notifying members that events have been cancelled. 392

During the period 1968-1971, 291 COINTELPRO actions against the "New Left" were, approved by headquarters. 393 Particular emphasis was placed upon preventing the targeted individuals from public speaking or teaching and providing "misinformation" to confuse demonstrators.

#### *b. FBI Target Lists*

The FBI's most intensive domestic intelligence investigations and COINTELPRO operations were directed against persons identified, not as criminals or criminal suspects, but in vague terms such as "rabble rouser," "agitators," "key activists," or "key black extremists." The Security Index for detention in time of national emergency was revised to include such persons.

(1) "Rabble Rouser/Agitator" Index. -- Following a meeting with the National Advisory Commission on Civil Disorders in August 1967, Director Hoover ordered his subordinates to intensify collection of intelligence about "vociferous rabble-rousers." 393a He also directed a "Key Black Extremist" "that an index be compiled of racial agitators and individuals who have demonstrated a potential for fomenting racial discord." 394

The already vague standards for the Rabble Rouser Index were broadened in November 1967 to cover persons with a "propensity for fomenting" any disorders affecting the "internal security" -- as opposed to only racial disorders -- and to include persons of local as well as national interest. This included "black nationalists, white supremacists, Puerto Rican nationalists, anti-Vietnam demonstration leaders, and other extremists." A rabble rouser was defined as:

a person who tries to arouse people to violent action by appealing to their emotions, prejudices, etcetera; a demagogue. 395

In March 1968, the Rabble Rouser Index was renamed the Agitator Index and field offices were ordered to obtain a photograph of each person on the Index. 396 However, expanding the size of the Agitator Index lessened its value as an efficient target list for FBI intelligence operations. Consequently, the Bureau developed a more refined tool for this purpose—the Key Activist Program.

(2) "Key Activist" Program. -- Instructions were issued to ten major field offices in January 1968 to designate certain persons as "Key Activists," who were defined as

individuals in the Students for Democratic Society and the anti-Vietnam war groups [who] are extremely active and most vocal in their statements denouncing the United States and calling for civil disobedience and other forms of unlawful and disruptive acts.

There was to be an "intensive investigation" of each Key Activist, which might include "high-level informant coverage" and "technical surveillances and physical surveillances." 397

The "New Left" COINTELPRO was designed in part to "neutralize" the Key Activists, who were "the moving forces behind the New Left. 398 One of the first techniques employed in this program was to obtain the Federal income tax returns of Key Activists for use in disrupting their activities. 399 In October 1968, the Key Activist Program was expanded to virtually all field offices. The field agents were instructed to recommend additional persons for the program and to "consider if the individual was rendered ineffective would it curtail [disruptive] activity in his area of influence." While the FBI considered Federal prosecution a "logical" result of these investigations and "the best deterrent," Key Activists were not selected because they were suspected of committing or planning to commit any specific Federal crime. 400

(3) "Key Black Extremist" Program. -- A "Key Black Extremist" target list for concentrated investigation and COINTELPRO actions was instituted in 1970. Key Black Extremists were defined as

leaders or activists [who] are particularly extreme, agitative, anti-Government, and vocal in their calls for terrorism and violence. 401

Field offices were instructed to place all Key Black Extremists in the to priority category of the Security Index and in the Black Nationalist Photograph Album, which concentrated on "militant black nationalists" who traveled extensively. In addition, the following steps were to be taken:

- (1) All aspects of the finances of a KBE must be determined. Bank accounts must be monitored. . . .
- (2) Continuing consideration must be given by each office to develop means to neutralize the effectiveness of each KBE. . . .
- (3) Obtain suitable handwriting specimens. . . .
- (4) Particular efforts should be made to obtain records of and/or reliable witnesses to, inflammatory statements. . . .
- (5) Where there appears to be a possible violation of a statute within the investigative jurisdiction of the Bureau, [it should be] vigorously investigated. . . .
- (6) Particular attention must be paid to travel by a KBE and every effort made to determine financial arrangements for such travel. . . .
- (7) The Federal income tax returns of all KBEs must be checked annually. . . .

Reports on all Key Black Extremists were to be submitted every ninety days, and the field was urged to use "initiative and imagination" to achieve "the desired results." 403 Once again, the "result" was not limited to prosecution of crimes and the targets were not chosen because they were suspected of committing crimes.

(4) Security Index. -- The Agitator Index was abolished in 1971 because "extremist subjects" were "adequately followed" through the Security Index. 404 In contrast to the other indices, the Security Index was not reviewed by the FBI alone. It had, from the late 1940's, been largely a joint FBI-Justice Department program based on the Department's plans for emergency detention. 405 According to FBI memoranda, moreover, President Johnson was directly involved in the updating of emergency detention plans. 406

After a large-scale march on the Pentagon against the Vietnam War in October 1967, President Johnson ordered a comprehensive review of the government's emergency plans. Attorney General Clark was appointed chairman of a committee to review the Presidential Emergency Action Documents (PEADs) prepared under the Emergency Detention Program. One result of this review, in which the FBI took Part, was a decision to bring the Detention Program into line with the Emergency Detention Act of 1950, reversing the previous decision to "disregard" as "unworkable" the procedural requirements of the Act, which were tighter than the standards which had been applied by FBI and Justice. 407

The Bureau also had to revise its criteria for inclusion of names on the Security Index, which since 1950 had disregarded the statutory standards. However, the definition chosen of a "dangerous individual" was so broad that it enabled the Bureau to add persons not previously eligible. A "dangerous individual" was defined as a

person as to whom there is reasonable ground to believe that such person probably will engage in, or probably will conspire with others to engage in, acts of espionage and sabotage, *including* acts of terrorism or assassination and *any interference with* or threat to the survival of and *effective operation* of the national, state, and *local governments* and of the national defense effort. [Emphasis added.] 408

The emphasized language greatly broadened the Security Index standards. It gave FBI intelligence officials the opportunity to include on the Security Index "racial militants", "black nationalists", and individuals associated with the "New Left" who were not affiliated with the "basic revolutionary organizations" as the Bureau characterized the Communist Party, which had previously been the focus of the Security Index. 409 Once again, the limitations which a statute was intended to impose were effectively circumvented by the use of elastic language in a Presidential directive.

Moreover, the Bureau adopted a new "priority" ranking for apprehension in case of an emergency. Top priority was now given not only to leaders of "basic subversive organizations," but also to "leaders of anarchistic groups." 410 It was said to be the "anarchistic tendencies" of New Left and racial militants that made them a "threat to the internal security." 411

Initially, the Justice Department approved informally these changes in the criteria for "the persons listed for apprehension." 412 After several months of "study," the Justice Department's Office of Legal Counsel formally approved the new Security Index criteria. This was the first time since 1955 that the Department had fully considered the matter, and the previous policy of disregarding the procedures of the Emergency Detention Act of 1950 was formally abandoned. If an emergency occurred, the Attorney General would abide by "the requirement that any person actually detained will be entitled to a hearing at which time the evidence will have to satisfy the standards of [the Act]." However, the Office of Legal Counsel declared that the Security Index criteria themselves could be - as they were - less precise than those of the Act because of the "needed flexibility and discretion at the operating level in order to carry on an effective surveillance program." 413 Thus while the plan to ignore Congress' procedural limitations was abandoned, Congress' substantive standards were disregarded as insufficiently "flexible."

#### *c. Internal Revenue Service Program*

(1) Misuse by FBI and CIA. -- IRS information was used as an instrument of domestic intelligence mainly by the FBI. For example, in 1965, the Bureau obtained the tax returns of Ku Klux Klan members in order to develop "discrediting or embarrassing" information as part of the Bureau's COINTELPRO against the Klan. 414 The procedure by which FBI obtained access to tax returns and related information held by IRS was deemed "illegal" when it was discovered by the Chief of the IRS Disclosure Branch in 1968. 415 The FBI had not followed the procedures for obtaining returns which required written application to the IRS Disclosure Branch. Instead the Bureau had arranged to obtain the returns and information surreptitiously through contacts inside the IRS Intelligence Division. The procedure for FBI access was regularized by the IRS after 1968: a formal request on behalf of the Bureau was made to the IRS Disclosure Branch, by the internal Security Division of the Justice Department.

During this same period, the CIA was obtaining tax returns in a similar manner to the FBI, although in much smaller numbers. Yet even after procedures were changed for the FBI's access to tax information in 1968, the IRS did not re-examine the CIA's practices. 416 Therefore, CIA continued to receive tax return information without filing requests as required by the regulations.

Between 1968 and 1974, either directly or through the Internal Security Division of the Justice Department, the FBI requested at least 130 tax returns for domestic intelligence purposes. This included the returns of 46 "New Left activists" and 74 "black extremists," 417 as part of Bureau COINTELPRO operations to "neutralize" these individuals. 418 These requests were not predicated upon any specific information suggesting delinquency in fulfilling tax obligations.

Even after a formal request was required before supplying the FBI with tax returns, the IRS accepted the Justice Department's undocumented assertions that tax information was "necessary" in connection with an "official matter" involving "internal security." 419 Yet in making such assertions, the Justice Department's Internal Security Division relied entirely on the Bureau's judgment. Thus, while the IRS is required by the statute to release tax information only where necessary, it in effect delegated its responsibility to the Internal Security Division which in turn delegated the decision to the FBI. Although most FBI requests for tax information were for targets of various COINTELPRO operations, the Justice Department official who made the requests on behalf of the Bureau said he was never informed of the existence of COINTELPRO. 420

Even after 1968, the Bureau sometimes used tax information in improper or unlawful ways. For example, the Bureau attempted to use such information to cause IRS to audit a mid-western college professor associated with "new left" activities at the time he was planning to attend the 1968 Democratic Party National Convention in Chicago. The FBI agent in charge of the operation against the professor explained its purpose in a memorandum:

if IRS contact with [the Professor] can be arranged within the next two weeks their demands upon him may be a source of distraction during the critical period when he is engaged in meetings and plans for disruption of the Democratic National Convention. Any drain upon the time and concentration which [the Professor], a leading figure in Demcon planning, can bring to bear upon this activity can only accrue to the benefit of the Government and general public. 421

Among the tax returns which the CIA obtained informally from IRS in an informal and illegal manner were those of the author of a book, the publication of which the CIA sought to prevent, 422 and of Ramparts magazine which had exposed the CIA's covert use of the National Student Association. 423 In the latter case, CIA memoranda indicate that its officials were unwilling

to risk a formal request for tax information without first learning through informal disclosure whether the tax returns contained any information that would be helpful in their effort to deter this "attack on the CIA" and on "the administration in general ." 424

(2) The Special Service Staff. -- IRS Targeting of Ideological Groups. -- In 1969, the IRS established a Special Service Staff to gather intelligence on a category of taxpayers defined essentially by political criteria. The SSS attempted to develop tax cases against the targeted taxpayers and initiated tax fraud investigations against some who would otherwise never have been investigated.

The SSS originated as a result of pressure from the permanent Subcommittee on Investigations of the Senate Committee on Government Operations 425 and from President Nixon, acting through White House assistants Tom Charles Huston and Dr-Arthur Burns. 426 According to the IRS Commissioner's memorandum, Dr. Burns expressed to him the President's concern

over the fact that tax-exempt funds may be supporting activist groups engaged in stimulating riots both on the campus and within our inner cities. 427

The administration did not supply any facts to support the assertion that such groups were violating tax laws.

After the SSS was established, the FBI and the Justice Department's Interdivisional Information Unit (IDIU) became its largest sources of names. An Assistant IRS Commissioner requested the FBI to provide information regarding "various organizations of predominantly dissident or extremist nature and/or people prominently identified within those organizations." 428 The FBI agreed, believing, as one intelligence official put it, that SSS would "deal a blow" to "dissident elements." 429

Among the material received by SSS from the FBI was a list of 2,300 organizations categorized as "Old Left," "New Left," and "Right Wing." 430 The SSS also received about 10,000 names on IDIU computer printouts. 431 SSS opened files on all these taxpayers, many of whom were later subjected to tax audits and some to tax fraud investigations. There is no reason to believe that the names listed by the FBI or the IDIU were selected on the basis of any probable noncompliance with the tax laws. Rather, these groups and individuals were targeted because of their political and ideological beliefs and activities. 432

The SSS, by the time it was disbanded in 1973, had gone over approximately half of the IDIU index and established files on those individuals on whom it had no file. Names on the SSS list included Nobel Prize winner Linus Pauling, Senators Charles Goodell and Ernest Gruening, Congressman Charles Diggs, journalists Joseph Alsop and Jimmy Breslin, and attorney Mitchell Rogovin. Organizations on the SSS list included: political groups ranging from the John Birch Society to Common Cause; religious organizations such as the B'nai Brith Antidefamation League and the Associated Catholic Charities; professional associations such as the American Law Institute and the Legal Aid Society; private foundations such as the Carnegie Foundation; publications ranging from "Playboy" to "Commonwealth;" and government institutions including the United States Civil Rights Commission. 433

SSS officials have conceded that some cases referred to the field for tax investigations would not have qualified for referral but for the ideological category in which they fell. While IRS field offices closed out many cases because, of the lack of tax grounds upon which legal action could be taken, referral from the SSS probably resulted in the examination of some cases despite the lack of adequate grounds. Interviews with IRS field personnel confirm that this did occur in several instances. 433a

Upon discovering that its functions were not tax-related, new IRS Commissioner Alexander ordered the Special Service Staff abolished. He testified:

Mr. ALEXANDER. I ordered the Special Service staff abolished. That order was given on August the 9th, 1973. It was implemented by manual supplements issued on August the 13th, 1973. We held the files. I ordered the files be held intact -- I'm not going to give any negative assurances to this Committee -- in order that this Committee and other Committees could review these files to see what, was in them, and see, what sort of information was supplied to us on this more than 11,000 individuals and organizations as to whom and which files were maintained.

I suggested, Mr. Chairman, that at the end of all of these inquiries, I would like to take those files to the Ellipse and have the biggest bonfire since 1814.

The CHAIRMAN. Well, I concur in that judgment. I would only say this to you; in a way, it might be a more important bonfire than the Boston Tea Party when it comes to protecting individual rights of American citizens. I am glad you feel that way. I am glad you took that action. 434

##### *5. Foreign Intelligence and Domestic Dissent*

In the late 1960's, CIA and NSA, acting in response to presidential pressure, turned their technological capacity and great resources toward spying on certain Americans. The initial impetus was to determine whether the antiwar movement -- and to a lesser extent the "black power" movement -- were controlled by foreigners. Despite evidence that there was no significant foreign influence, the intelligence gathering which culminated in CIA's "Operation CHAOS" followed the general pattern of broadening in scope and intensity. The procedure for one aspect of these programs was established by an informal agreement between the CIA and FBI in 1966, which permitted CIA to engage in "internal security" activities in the United States.

###### *a. Origins of CIA Involvement in "Internal Security Functions"*

The National Security Act of 1947 explicitly prohibited the CIA from exercising "police, subpoena, or law-enforcement powers, or internal security functions." But the Act did not address the question of the CIA's authority to conduct clandestine intelligence activity within the United States for what Secretary Forrestal called "purposes outside of this country." 435

Under Director Hoover, the FBI interpreted the term "internal security functions" broadly to encompass almost "anything that CIA might be doing in the United States." 436 Throughout the 1950's and into the early 1960's, Director Hoover's position led to jurisdictional conflicts between the CIA and the FBI.

The Bureau insisted on being informed of the CIA's activity in the United States so that it could be coordinated with the Bureau. As the FBI liaison with the CIA in that period recalled, "CIA would take action, it would come to our attention and we would have a flap." 437

In 1966 the FBI and CIA negotiated an informal agreement to regularize their coordination. This agreement was said to have "led to a great improvement" and almost eliminated the "flaps." 438

Under the agreement, the CIA would "seek concurrence and coordination of the FBI" before engaging in clandestine activity in the United States and the FBI would "concur and coordinate if the proposed action does not conflict with any operation, current or planned, including active investigation of the FBI." 439 When an operative recruited by the CIA abroad arrived in the United States, the FBI would "be advised" and the two agencies would "confer regarding the handling of the agent in the United States." The CIA would continue its "handling" of the agent for "foreign intelligence" purposes. The FBI would also become involved where there were "internal security factors," although it was recognized that the CIA might continue to "handle" the agent in the United States and provide the Bureau with "information" bearing on "internal security matters." 440

As part of their handling of "internal security factors," CIA operatives were used after 1966 to report on domestic "dissidents" for the FBI. There were infrequent instances in which, according to the former FBI liaison with CIA:

CIA had penetrations abroad in radical, revolutionary organizations and the individual was coming here to attend a conference, a meeting, and would be associating with leading dissidents, and the question came up, can he be of any use to us, can we have access to him during that period.

In most instances, because he was here for a relatively short period, we would levy the requirement or the request upon the CIA to find out what was taking place at the meetings to get his assessment of the individuals that he was meeting, and any other general intelligence that he could collect from his associations with the people who were of interest to us. 441

The policies embodied in the 1966 agreement and the practice under 'it clearly involved the CIA in the performance of "internal security functions." At no time did the Executive branch ask Congress to amend the 1947 act to modify its ban against CIA exercising "internal security functions." Nor was Congress asked to clarify the ambiguity of the 1947 act about the CIA's authority to conduct clandestine foreign intelligence and counterintelligence activities within the United States, a matter dealt with even today by Executive Order. 442

Moreover, National Security Council Intelligence Directive 5 provided authority within the Executive Branch for the Director of Central Intelligence to coordinate, and for the CIA to conduct, counterintelligence activities abroad to protect the United States against not only espionage and sabotage, but also "subversion." 443 However, NSCID 5 did not purport to give the CIA authority for counterintelligence activities in the United States, as provided in the FBI-CIA agreement of 1966.

#### *b. CIA Intelligence About Domestic Political Groups*

In the late 1960s, the CIA increasingly was drawn into collecting intelligence about domestic political groups, particularly the anti-war movement, in response to FBI requests and to pressure from Presidents Johnson and Nixon. A principal assistant to President Johnson testified that high governmental officials could not believe that

a cause that is so clearly right for the country, as they perceive it, would be so widely attacked if there were not some [foreign] force behind it. 444

The same pressures and beliefs led to CIA investigations of "militant black nationalists" and radical students.

(1) CIA Response to FBI Requests. -- The FBI was the main channel for mobilizing foreign intelligence resources and techniques against domestic targets. The FBI regularly notified the CIA that it wished coverage of Americans overseas. 444a Indeed, the CIA regarded the mention of a name in any of the thousands of reports sent to it by the FBI as a standing requirement from the FBI for information about those persons. 445 FBI reports flowed to the CIA at a rate of over 1,000 a month. 446 From 1967 to 1974, the CIA responded with over 5,000 reports to the FBI. These CIA disseminations included some reports of information acquired by the CIA in the course of its own operations, not sought in response to a specific FBI request. 447

The FBI's broad approach to the investigations of foreign influence which it coordinated with the CIA is shown by a memorandum prepared in the Intelligence Division early in 1969 summarizing its "Coverage of the New Left:"

Foreign influence of the New Left movement offers us a fertile field to develop valuable intelligence data. To date there is no real cohesiveness between international New Left groups, but ... despite the

factionalism and confusion now so prevalent, *there is great potential* for the development of an international student revolutionary movement. [Emphasis added.]

The memorandum expressed concern that "old line" leftist groups were

... making a determined effort to move into the New Left movement ... [and were] influencing the thinking of the against the police in general and the FBI in particular, to drive us off the campuses; as well as attacks against the new administration to degrade President Nixon. 448

There was no mention of, or apparent concern for, direct influence or control of the "New Left" by agents of hostile foreign powers. Instead, the stress was almost entirely upon ideological links and similarities, and the threat of ideas considered dangerous by the FBI.

The enlistment of both CIA and NSA resources in domestic intelligence is illustrated by the "Black Nationalist" investigations. In 1967, FBI Headquarters instructed field offices that:

... penetrative investigations should be initiated at this time looking toward developing any information regarding contacts on the part of these individuals with foreign elements and looking toward developing any additional information having a bearing upon whether the individual involved is currently subjected to foreign influence or direction. . . .

During your investigative coverage of all militant black nationalists, be most alert to any foreign travel. Advise the Bureau promptly of such in order that appropriate overseas investigations may be conducted to establish activities and contacts abroad. [Emphasis added.] 449

The FBI passed such information to the CIA, which in turn began to place individual black nationalists on a "watch list" for the interception of international communications by the National Security Agency. After 1969, the FBI began submitting names of citizens engaged in domestic protest and violence to the CIA not only for investigation abroad, but also for placement on the "watch list" of the CIA's mail opening project. Similar lists of names went from the FBI to the National Security Agency, for use on a "watch list" for monitoring other channels of international communication.

(2) Operation CHAOS. -- The CIA did not restrict itself to servicing the FBI's requests. Under White House pressure, the CIA developed its own program -- Operation CHAOS -- as an adjunct to the CIA's foreign counterintelligence activities, although CIA officials recognized from the outset that it had "definite domestic counterintelligence aspects." 450

Former CIA Director Richard Helms testified that he established the program in response to President Johnson's persistent interest in the extent of foreign influence on domestic dissidents. According to Helms, the President would repeatedly ask, "How are you getting along with your examination?" and "Have you picked up any more information on this subject?" 451

The first CHAOS instructions to CIA station chiefs in August 1967 described the need for "keeping tabs on radical students and U.S. Negro expatriates as well as travelers passing through certain select areas abroad." The originally stated objective was "to find out [the] extent to which Soviets, Chicom (Chinese Communists) and Cubans are exploiting our domestic problems in terms of espionage and subversion." 452

Following the consistent pattern of intelligence activities, those original instructions gradually broadened without any precision in the kind of foreign contacts which were to be targeted by CIA operations. For example:

--President Johnson asked the CIA to conduct a study of "International Connections of the U.S. Peace Movement" following the October 1967 demonstration at the Pentagon. 453 In response, CIA headquarters sent a directive to CIA stations seeking information on "illegal and subversive" connections between U.S. activists and "communist, communist front, or other anti-American and foreign elements abroad. Such connections might range from casual contacts based merely on mutual interest to closely controlled channels for party directives." [Emphasis added . ] 454

--In mid-1968, the DDP described CHAOS to CIA stations as a "high priority program" concerning foreign "contacts" with the "Radical Left," which was defined as: "radical students, antiwar activists, draft resisters and deserters, black nationalists, anarchists, and assorted 'New Leftists.'" 455

--In 1969, President Nixon's White House required the CIA to study foreign communist support of American protest groups and stressed that "support" should be "liberally construed" to include "encouragement" by Communist countries. 456

--In the fall of 1969, CIA stations were asked to report on any foreign support, guidance, or "inspiration" to protest activities in the United States. 457

Thus, this attempt to ascertain and evaluate "foreign links", was so broadly defined that it required much more than background information or investigation of a few individuals suspected of being agents directed by a hostile power. Instead, at a time when there was considerable international communication and travel by Americans engaged in protest and dissent, a substantial segment by American protest groups was encompassed by CIA collection requirements to investigate foreign "encouragement," "inspiration," "casual contacts" or "mutual interest." Once again, the use of elastic words in mandates for intelligence activity resulted in overbroad coverage and collection.

In addition to their intelligence activity directed at Americans abroad, CHAOS undercover agents, while in the United States in preparation for overseas assignment or between assignments, provided substantial information about lawful domestic activities of dissident American groups, as well as providing leads about possible foreign activities. 458 In a few instances, the CIA agents appear to have been encouraged to participate in specific protest activity or to obtain particular domestic information. 459 The CHAOS program also involved obtain information about Americans from the CIA mail opening project other domestic CIA components 460 and from a National Security Agency international communications intercept program. 461

CIA officials recognized that the CIA's examination of domestic groups violated the Agency's mandate and thus accorded it a high degree of sensitivity. As CIA Director Richard Helms wrote in 1969, when he transmitted to the White House the CIA's study of "Restless Youth:"

In an effort to round out our discussion of this subject, we have included a section on American students. This is an area not within the charter of this Agency, so I need not emphasize how extremely sensitive this makes the paper. Should anyone learn of its existence, it would prove most embarrassing for all concerned. 462

The reaction to such admissions of illegality was neither an instruction to stop the program or an attempt to change the law. Rather, the White House continued to ask for more information and continued to urge the CIA to confirm the theory that American dissidents were under foreign control. 463

Director Richard Helms testified that the only manner in which the CIA could support its conclusion that there was no significant foreign influence on the domestic dissent, in the face of incredulity at the White House, was to continually expand the coverage of CHAOS. Only by being able to demonstrate that it had investigated *all* anti-war persons and *all* contacts between them and any foreign person could CIA "prove the negative" that none were under foreign domination. 464

In 1972, the CIA Inspector General found "general concern" among the overseas stations "over what appeared to constitute a monitoring of the political views and activities of Americans not known to be, or suspected of, being involved in espionage." Several stations had "doubts as to the nature and legitimacy of the program" because requests for reports on "prominent persons" were based on "nebulous" allegations of "subversion." 465 This led to "a reduction in the intensity of attention to political dissidents," 466 although the program was not terminated until March 1974. 467

By the end of the CHAOS program, 13,000 different files were accumulated, including more than 7,200 on American citizens. Documents in these files included the names of more than 300,000 persons and groups indexed by computer. 468 In addition to collecting information on an excessive number of persons, some of the kinds of information were wholly irrelevant to the legitimate interests of the CIA or any other government agency. For example, one CIA agent supplying information on domestic activities to Operation CHAOS submitted detailed accounts of the activities of women who were interested in "women's liberation." 469
